Completing a degree used to guarantee graduate employment but this is no longer the case. In the current economic climate, graduates are required to stand out from the crowd with transferable skills. In an article by the [1]Guardian, Paul Redmond, head of the careers and employability service at Liverpool University said, “the competition for jobs is so intense, and often the differentiators are those so-called soft skills.”

Liverpool University's career service has tackled this issue by running 'graduate boot camps'. So far, 185 graduates have been trained on the 10-day Gradvantage programme. Of those who have been through the course, only 32 had graduated this year. "Once the credit crunch happened we thought 'we've got to start doing different things for graduates',' Redmond says.

The Gradvantage programme is not specifically aimed at graduates from less well-off families as anyone based in Merseyside, with a degree from any university, can participate. The programme's aim is to be as hands-on as possible. Elements from the programme range from mock interviews, group presentations to securing a 14 hour a week (unpaid) work experience lasting 13 or 26 weeks.

1. http://www.guardian.co.uk/education/2011/nov/14/students-networking-skills

I'm currently reading [1]Seven Days In the Art World, by [2]Sarah Thornton, perhaps most well known for her book about [3]sub-cultural capital and the rave scene. Though I've not quite reached the end yet, it's certainly one of the most enjoyable and accessible books by a sociologist I've read in a long time, exhibiting a seemingly endless parade of ethnographic insights into a world I've long been curious about without ever coming close to the turgid prose and insider jargon that characterises so many sociological texts. In part this is down to the book's novel and engaging structure, which the author describes in the video below, as five years of research are condensed into seven 'days' i.e. seven narrative essays eachcentring on a particular 'place' in the art world.
However the book was also notable for the very unusual legal case it gave rise to. The Telegraph journalist Lynn Barber, featuring in the book and described in a critical way, wrote a review in which she made a number of accusations against Sarah Thornton. The sociologist immediately complained before eventually suing for libel and malicious falsehood - an action which she subsequently won and which led to an apology from the Telegraph. Does anyone know of other cases like this? Or is it one of a kind?

[1] Sociological Imagination
What will the future look like? Microsoft and Apple offer some suggestions... (2011-11-27 08:00)

Do you think these are realistic? Are they just advertising or do they point to a world we’re likely to see? What do you think the future will look like?
What gets your paper cited? The clue is in the title. (2011-11-28 08:00)

So, you have some brilliant research. What will get it cited? Apparently, some surprising (and very unacademic) factors come in. Triumph of form over content...

[1] Will asking a question get your science paper cited more?

[2] Amusing titles in scientific journals and article citation
This week I came across two very different works of art which nevertheless have something important in common: they both aim to transcend the shackles of linear time and peak into another historic period with the help of artistic (and sociological!) imagination.

The first one is a now outdated look into the future. It is always fascinating to see how our life today differs (or is similar to) what our great-grand parents imagined it. Think about how you imagine the year 2100. In 1910, the French painter Villemard produced a series of futuristic postcards with his vision of life in 2000. What is most fascinating is that most of his predictions have come true: the imagery is different, but the technical functionality of today’s world is heavily based on the reveries of our Victorian ancestors. The future is to a large extent a self-fulfilling prophecy - at least within a the framework of a modern society!

The second time-erasing magic is in the works of Russian photographer Sergey Larenkov (Сергей Ларенков). He replicates with amazing precision existing images taken during the Second World War by retaking the shots from the same perspective and angle today, and merges the old and new images. (Larenkov is not even a professional photographer: he is a sea pilot whose hobby is history! Check out his website [6]here) Twenty of his photos were initially posted [7]here and a little later the author also gave an interview to the Mymodernnet website which can be read [8]here.

What do you think? Do you have interesting visual materials - yours, or gems that you have found on the web? Email us on s.i.imagery@gmail.com and we'll feature them in our Visual Sociology column!

History of data journalism (2011-11-30 08:00)

The Guardian reminds us that data journalism is a little older than most of us think. Why is that significant? Because our historical memories are very short and it is important to be reminded of history in order to give food to our sociological imaginations! Here is an example of an informative data table on schools in Manchester, from 5 May 1821:

[1]
What you may not know is the amount of education and strict standards carpenters must qualify for to be considered as professionals, especially in Canada. In addition to cutting painting time, there is less set up and clean up involved when you don. The selection of traditional mouldings run the gamut from elaborate to simple, to suit every d.

2.12 December

A 'Plentitude Economy'? (2011-12-01 08:00)

The [1]Center for a New American Dream has created an animation analysing what is wrong with capitalism and explaining how to make the world better. Familiar? There have been quite a few similar attempts recently. As with anything in our hyper-visual age, the animation method of presentation of ideas has gone viral. What is interesting about this one is not so much the engaging package of animation, but the argument: it aims to challenge the traditional economic notion of perpetual growth as a prerequisite for a successful economy. While I very much like the idea that it is time to modify our view of economic growth, I am not so sure about their suggestions. They sound like a peculiar mix of different ideas, each of which, taken separately, is commendable, but how do they fit in one economic programme? I can see unresolvable clashes between traces of individualist liberalism and the early ‘capitalist spirit’ based on a Protestant ethic (we need to take responsibility and spend less); romanticised naturalism (let’s all brew our own beer in our back garden); Durkheimian social policy (‘commitment to social connection and community’); and vulgar Marxism (when people work less, they will have more time for DIY!). The video promotes the lifestyle of a small eco-conscious fraction of today’s young middle class in the USA and Europe as the solution to everybody’s problems all over the world (or even just in the USA). I am also sceptical about some assertions, such as that people consume less when they work less (in fact, it seems to me to be the contrary!), or that benefits are ‘easily solvable’ even if all people worked 80 % of their usual time (and received lower wages, and paid lower taxes, as a result).

With all these criticisms, I still watched this twice, hoping that perhaps it will offer a viable solution to the economic growth conundrum. It is so tempting to imagine a cosy world in which everybody couch-surfs, works part-time, soup-swaps and knits their own socks, but this is ultimately an illusion. Well, see for yourself and let us know what you think:

[EMBED]

My Tram Experience (2011-12-02 08:00)

Warning: the above video is rather offensive. But given that it’s had 4 million views in a little over 2 days, has been picked up by mainstream media and has led to the arrest of the woman in question, we thought we’d post it up.

The November 30th Strike - Hear the Truth (2011-12-03 08:00)

On November 30th, the UK saw the biggest strike in a generation. Perhaps unsurprisingly, the run up to it was marked by an aggressive PR campaign from the government, arguing that the strike was a result of union [1]'militants itching for a fight’. Take a look at this great response video by the Unite union:

Can online gaming save the world? (2011-12-06 08:00)

That’s the rather counter-intuitive position that Jane McGonigal, researcher at the gloriously titled Institute for the Future, puts forward in this thought-provoking TED talk. Are you scoffing at the suggestion that online games can save the world? Well, to be honest, we did too but give her argument a chance.

Apparently 3 billion hours a week are spent worldwide playing online games. Is this too much? No, argues McGonigal, it’s not enough. If we increase this to 21 billion hours a week then we might be able to save the planet. How? By harnessing the psychosocial dynamics of gaming which, she argues, tend to be overlooked in most treatments of it as a social phenomenon.

Online gaming environments are empowering and optimism-maximising. The moment-to-moment feedback the environment gives means that people rarely feel disempowered by challenges they can’t meet. More importantly this empowering and optimism-maximising environment is profoundly collaborative. The things gamers are learning in these online environments could, if we seriously try and harness them, have a real impact on seemingly overwhelming global problems. After all games feel they can change the world and are good at working together to achieve these changes.

Not convinced? Nope, neither are we. But she’s certainly persuasive in her argument that online gaming isn’t taken seriously and perhaps should be. Likewise the solutions on offer are intriguing, as well as an inviting prospect of when the academic term finishes.

Riding the bicycle to freedom (2011-12-07 08:00)

[4]

‘Wheels of Change: How Women Rode the Bicycle to Freedom (With a Few Flat Tires Along the Way)’, by Sue Macy

Over the last few years there has been one passage of academic social science text that has stayed with me more than any other. The issue it raises concerns the way in which the sociological imagination is located and deployed within cultural spheres that we might not necessarily see, at first sight at least, as being at all serious or sociological. This passage, by Osborne et al, goes as follows:

‘Certainly, in the present and the future, inventiveness in empirical social thought will certainly not be the exclusive province of people who call themselves sociologists. Whilst some professional sociologists may claim a monopoly on the right to speak truthfully in the name of society, they are not the only people who investigate, analyse, theorise and give voice to worldly phenomena from a ‘social’ point of view. In fact, today more people speak this social language of society than we might imagine if we took the thesis of the death of the social too literally. Not just statisticians, economists of certain persuasions, educationalists, communications analysts, cultural theorists and others working in the academy who tend to use broadly ‘sociological’ methods but also journalists, TV documentary-makers, humanitarian activists, policy makers and others who have imbibed a social point of view. In many cases it may be that these agents of the social world actually produce better sociology than the sociologists themselves.’ (Osborne et al, 2008: 531-532)

The sentiment of Osborne and his colleagues resonates of course with C. Wright Mills original vision of the sociological imagination and its frequent location outside of academic sociology. This excerpt takes this argument further though by beginning to suggest that the sociological imagination is not just something we might stumble upon on occasion but that it has moved out into the cultural mainstream. The reason it had such a strong impact upon me was because it seemed to speak directly to something that was already bothering me. As a result this passage led me to explore in some detail the kinds of sociological imagination that are to be found within contemporary popular culture. In this brief article I’d like to summarise this work by suggesting that very generally what I began to locate within contemporary popular culture was a much more unconstrained form of the sociological imagination that was brimming with ideas and opportunities if treated with sensitivity and a critical eye.

The style and integrity of the sociological imagination in popular culture is of course highly variable. I’ve noted elsewhere how some forms of TV drama provide us with a highly sophisticated form of the sociological imagination whereas other TV shows, such as reality TV formats of various types, might offer us quite loose and possibly even objectionable attempts to understand the individuals in their social and cultural contexts (Atkinson & Beer, 2010). In general we can note that there is a wide-scale presence of variegated types of the sociological imagination in popular culture that are typified by an interest in consuming aspects of the mundane routines of everyday life, in the attempt to capture and observe social norms and their disruption, in experimentation with social divisions and social ordering, in the asking of questions about moral frameworks and even in some instances in the attempts made to play with and tease out broader social assemblages and lines of causality. These can be found in various forms in social media content and new participatory web cultures, in celebrity culture and gossip, in TV documentaries and reality TV, in film, comedy and drama, in music lyrics and videos amongst others (for an overview and description see Beer & Burrows, 2010). I am not saying that these forms of sociological imagination are better than those found in academic sociology, but what I am saying is that they are different. They may vary in quality and sophistication but
there is a broad sociological sensibility in contemporary popular culture that cannot be ignored and which should be used to inform our critical responses to contemporary culture and which might also, in some instances, be used as a resource for seeing the world in different ways or for developing the conceptual, methodological and communicative repertoire of the academic social sciences.

Let us take the problem of the new forms of digital data as one instance that might help us here to see the advantage of taking the sociological imagination as popular culture seriously. New forms of digital data are proving something of a headache for the social sciences, we have not really got to grips with the potential of this data for social analysis or even with what types of data are being accumulated as a result of the capture and harvesting of data made possible by the digital mediascape. However, if we search around we are able to find innumerable examples of those involved in popular web cultures using new forms of digital social data in creative and innovative ways, creating insights and often visual forms of analysis that provide new perspectives and suggest new ways of seeing or 'telling about society' (Becker, 2007). For some examples the reader need only take a cursory look at sites like flowingdata.com that archive some of the data play that is occurring. It would be unwise of us to overlook such developments. What is needed is a critical engagement with the product of this data play, and, I would suggest, we also need to see if we can draw upon some of the analytical approaches to be found within these lay sociological resources. There are vast possibilities residing there that may enable us to expand our repertoire and re-imagine the social sciences. The difficulty will be finding ways of using such work, shaped by agendas very different to our own, in order to form a critical version of the resources from which we might borrow.

The unconstrained nature of the sociological imagination we might find in popular culture can be understood as both its strength and weakness. Working without recourse to the types of conventions and established practices that we have defined as important in academic sociology means that the possibilities for a sociological engagement in popular culture are far greater in scope, the result is that slick and flashy forms of sociological engagement can emerge that are rapid, responsive and involving. Similarly, we can imagine that removing such conventions may lead to a form of sociology that is not at all appropriate or suited to our tastes, particularly in its possible lack of a critical or reflective edge which in turn may not then allow it to fit with our sentiments, values or critical positionings. My argument is that we should not let our conventions prevent us from extracting and developing new ideas. We need to both respond to these developments in popular culture so as to understand how they shape perceptions of what a sociological approach might be, to think through what the purpose and territory of academic sociology can be where there is this broader cultural presence of a sociological imagination, and we need also then to think about how the social sciences might be improved if we were to treat popular culture seriously and draw upon it for inspiration. The unconstrained sociological imagination found within popular culture may be breaking new ground and developing new approaches that we could incorporate and shape into more considered and critical forms of social insight that are nonetheless exciting, engaging and regenerative.

Russia and democracy: analysis by Mark Harris (2011-12-09 08:00) 

[1]
As someone who is half-Russian, counts Russian as her first language, but who has never set foot in Russia (only to Ukraine), I often find myself torn between a 'Western' and a 'Russian' logic. This is not something I could analyse: for better or worse, sociology does not give you the tools to rationalise your own self; in Marx' expression, I am unable to see underneath my own feet. I seem to understand both, to some extent, but when they clash (and they quite often do), a cognitive dissonance ensues.

Good analyses of Russian affairs by Western authors are few and far between. This is why I was so impressed by [2]Mark Harris' brief but excellent analysis of Russian attitude to democracy, in the context of the recent [3]elections in Russia that took place on 4 Dec 2011 and have not finished yet. Harrison's argument cuts through a usual misunderstanding and a clash in the basic meanings taken for granted by people on both sides of Europe. His analysis also touches on the issue of translation - not only linguistic, but also cultural. In a nutshell: before judging, we need to make sure we are aware what exactly it is that the two sides understand when they use the same term, in this case - democracy and the terminology surrounding it. As Harris argues, and the Russian, Bulgarian, and English sections of my brain all agree, democracy does not necessarily mean the same thing in the different [national, cultural, and political] languages.

Mark Harrison writes about economics, public policy, and international affairs. He is a Professor of Economics at the University of Warwick and a research fellow of the Hoover Institution on War, Revolution, and Peace at Stanford University.

Right, we are going to do something different today. It's called a Reality Check.

[EMBED]

Reality Check – School Portrait « jsalgado1393 (2011-12-12 03:35:14)

[...] This short film tells a short story of a school photographer taking pictures of little elementary school children. Any other photographer just takes a picture of the little school kids and says next over and over again until the last kid in line takes their picture. This photographer, on the other had, is such a downer that he uses his adult problems to smudge away the smiles of the little innocent children's faces and have them repeat things like "university tuition fees" and "the banking crisis means I'll never have a home". He tells them this so the children can hear what their future is going to be like. I think that it almost pleases him that he can wipe the smiles away off the children's faces and make them feel miserable like he is. But then, a little girl with red curly hair comes along and just smiles at all the things he tells her, never frowns. After a while, he just gives up and takes the picture of the little girl. The things he said after he took her picture, "suppose i can get a new house", suggests that the little girl's smile brightened his mood and started thinking positive. (post: Reality Check) [...]

The Sociological Imagination (2011-12-11 16:00)

Mills believed that the diffusion of the sociological imagination within American culture contained the political promise of helping individuals better understand and control the larger structural forces that shaped their lives. Many people, he claimed, failed to comprehend the impact of large-scale social institutions in their lives. They either understood their lives in terms of a local milieu of private troubles or were falsely conscious of their place in society. The sociological imagination would enable them to link their personal biographies to larger historical and structural trends and, in doing so, allow them to translate their seemingly private troubles into public issues. By using the sociological imagination, they could fully participate in making America a more democratic society. Thus, for Mills, the "intellectual promise of social science" was fundamentally related to the "political promise of the role of reason in human affairs."

- from [1]Radical Ambition: C. Wright Mills, the Left, and American Social Thought

914
University life 41 years ago (2011-12-12 08:00)

The sixth former entering university often has difficulty in adjusting to a new academic and social life...

... so this film, made by university of Warwick students back in the 1970s, served to prepare newcomers to university life (with a large pinch of salt). Back then, 8-year-old Warwick university was still in its infancy and far from[1] the leading status and aspirations that it has today. Come to think of it, were there university rankings at all at that time? I am not sure. But there certainly was no Top Banana, Kazbah, Tesco, Costa, [2]Warwick Arts Centre, or horrendous multi-storey car-parks. No one was talking of students as consumers, the 'university experience', or the ever-increasing string of unpaid internships that the luckiest students undergo on their way to the glories of permanent post-degree employment. There were the Beatles and the Stones and traditional lecturers. The campus was a fraction of its today's size, with only a handful of buildings.

But some things haven't changed. The [3]Op Mobile No.10 was already there, as were some of the accommodation blocks (Rootes Halls, named after [4]Lord Rootes, spelt with an "e", and not in reference to a substantial part of the anatomy of a tree, as some of its residents are convinced. Thanks to inflation, its cost has increased 25-fold over the 41 years since the film was made.). Watch and see for yourself!

The 12 Days of a PhD Student’s Christmas (2011-12-16 08:00)

In the spirit of Christmas, we’re delighted to bring you the 12 Days of a PhD Student’s Christmas, courtesy of [1]Anna Mackenzie from the University of Chester. Is anyone brave/foolhardy/drunken enough to perform a rendition of the song? If so, [2]send us an MP3 and we’ll post it up as a podcast.

On the first day of Christmas, my PhD gave to me: 1 thesis to submit.

On the second day of Christmas, my PhD gave to me: 2 supervisions, and 1 thesis to submit.

On the third day of Christmas, my PhD gave to me: 3 conference abstracts, 2 supervisions, and 1 thesis to submit.

On the fourth day of Christmas, my PhD gave to me: 4 hours of teaching, 3 conference abstracts, 2 supervisions, and 1 thesis to submit.

On the fifth day of Christmas, my PhD gave to me: 500 words! 4 hours of teaching, 3 conference abstracts, 2 supervisions, & 1 thesis to submit.

On the 6th day of Christmas, my PhD gave to me: 6 days to edit, 500 words! 4 hours of teaching, 3 conference abstract, 3 supervisions, and 1 thesis to submit!

On the 7th day of Christmas, my PhD gave to me: 7 journal papers, 6 days to edit, 500 words! 4 hours of teaching, 3 conference abstracts, 2 supervisions, and 1 thesis to submit!

On the 8th day of Christmas, my PhD gave to me: 8 hours on EndNote, 7 journal papers, 6 days to edit, 500 words! 4 hours of teaching, 3 conference abstracts, 2 supervisions, and 1 thesis to submit!

On the 9th day of Christmas, my PhD gave to me: 9 cups of coffee, 8 hours on EndNote, 7 journal papers, 6 days to edit, 500 words! 4 hours of teaching, 3 conference abstracts, 2 supervisions, and 1 thesis to submit!

On the 10th day of Christmas, my PhD gave to me: 10 unknown references, 9 cups of coffee, 8 hours on EndNote, 7 journal papers, 6 days to edit, 500 words! 4 hours of teaching, 3 conference abstracts, 2 supervisions, and 1 thesis to submit!

On the 11th day of Christmas, my PhD gave to me: 11 books to order, 10 unknown references, 9 cups of coffee, 8 hours on EndNote, 7 journal papers, 6 days to edit, 500 words! 4 hours of teaching, 3 conference abstracts, 2 supervisions, and 1 thesis to submit!
On the 12th day of Christmas, my PhD gave to me: 12 emails waiting, 11 books to order, 10 unknown references, 9 cups of coffee, 8 hours on EndNote, 7 journal papers, 6 days to edit, 500 words!! 4 hours of teaching, 3 conference abstracts, 2 supervisions, & 1 thesis to submit!

:-) :-) HAPPY CHRISTMAS!!!!!!! :-) :-)

STUCK BETWEEN MODERNITY AND POSTMODERNITY? THE MODERN HISTORY OF COVENTRY
(2011-12-18 22:36)

I’m starting to practically sketch out plans for a project I’ve had in mind for a couple of years now: a social history of Coventry told through life history interviews with life long residents of the city who were born prior to the second world war. I’ve been fascinated by the changes the city has undergone, as I’ve better understood the scale of them with each passing year of living here: the city’s rise and decline as a centre of the car industry, the relative affluence of much of the city in the 50s and 60s, the crime and unemployment which came with deindustrialisation in the 70s and 80s, the destruction of the city centre in the 40s and its reconstruction as a modernist city of the future in the 50s, the mergers and expansions which ultimately led to Coventry University and the foundation of Warwick, the increasing centrality of the universities to the local economy.

My idea is to try and understand these changes through the life histories of people who have lived here since before the war. So, in practice, people who were born in 1935 or earlier, since I’d hope that their memories of the blitz would have at least some (perhaps very fuzzy) memory of pre-WW2 Coventry to counterpose the aftermath to. Which means I’m trying to talk to people who are 76 or over and, obviously, there’s probably not that many of them around (with time obviously being somewhat of the essence here), particularly those who have lived in the city for most of their lives. If this isn’t feasible, I might just try and get in contact with people who’ve lived here for decades but it was an exhibition about the blitz which set me off on these project in the first place.

This project, hopefully intended to form a book in 2013, will be put together in public on SI on a post-by-post basis. Some of the things it’ll include:

- Life history interviews with life-long Coventry residents –> whole interviews or just editing fragments?
- Podcast interviews with academics who’ve worked on the broader themes I’m looking at (deindustrialisation, globalization, neoliberalism) in the UK with the discussion centred specifically around Coventry [obviously going to be easier/better if they’re Warwick / Cov Uni people]
- Podcast interviews with people who’ve specifically studied the history of Coventry (either professionally or as a hobby)
- Reproductions of archive material (etc) which expand upon the above
- Short articles as I get further into the project, stimulated by the interviews and the reading I’m doing
Do schools kill creativity? (2011-12-19 08:00)

If you'd asked me while I was still at school, it’s pretty likely I would have said 'yes'. A decade later, having watched this video, I realise that I feel the same way. Except that having now watched this great TED talk from [1]Ken Robinson, education guru and all round interesting guy, the reasons I’d cite for this are a bit more intellectual than they would have been during my school days.

Robinson argues that the assumptions embedded within prevailing education paradigms are increasingly anachronistic, structuring the education process around an abstracted and inadequate understanding of ‘intelligence’ which leads to students being divided into the ‘academic’ and the ‘non-academic’, frustrating a great deal of human potential in the process. So too the Fordist assumptions underlying school as institutions, arbitrarily dividing students into age cohorts - which, when you think about it, is a bit weird really - before shuttling them, en masse, through the school/factory system. It’s individualising and atomising, with the omnipresence of standardised testing leading to widespread disengagement and alienated learning. If we’re going to prepare students for the 21st century economy we need to do things differently.

What do you think...?

2. [http://www.youtube.com/embed/iG9CE55wbtY](http://www.youtube.com/embed/iG9CE55wbtY)
This is a highly-important message and one I share with many of my students here in New York. It’s a great way to open up a discussion about higher education and the complaints that students have about it. I think they all see themselves in that dancer story Robinson conveys. I know I do. We cannot just convey content and call it a college course. Students will get that the remainder of their lives. What we need to do is develop their talents, and help them to discover them.

I can has language play? Construction of Language and Identity in LOLspeak (2011-12-20 08:00)

I can has language play? Construction of Language and Identity in LOLspeak

Introduction: Oh Hai

1. LOLspeak as Language Play
2. ‘Grammar’ of LOLspeak
   -- this operates across all linguistic levels
3. Using LOLspeak to construct identity
   -- builds up two identities simultaneously via indexicality (Ochs 1992; Bucholtz and Hall 2008)
   -- cat and internet savvy person

A modest proposal for postgraduate education (2011-12-20 19:13)

I just came across a fascinating passage from a lecture given by [1]Carl Rogers, founder of [2]person centered therapy, about the personal and intellectual biography which led him to his life's work. In it he describes an experience as a graduate student at a seminary which had a profound impact on the direction of his life, as well as that of others:

Knowing universities and graduate schools as I do know - knowing their rules and their rigidities - I am truly astonished at one very significant experience at Union. A group of us felt that ideas were being fed to us, whereas we wished primarily to explore our own questions and doubts, and find out where they led. We petitioned the administration that we be allowed to setup a seminar for credit, a seminar with no instructor, where the curriculum would be composed of our own questions. The seminary was understandably perplexed by this, but they granted our petition! The only restriction was that in the interests of the institution a young instructor was to sit in on the seminar, but would take no part in it unless we wished him to be active.

I suppose it is unnecessary to add that this seminar was deeply satisfying and clarifying. I feel that it moved me a long way towards a philosophy of life which was my own. The majority of the members of that group, in thinking their way through the questions they had raised, thought themselves right out of religious work. I was one. I felt that questions as to the meaning of life, and the possibility of the constructive improvement of life for individuals, would probably always interest me, but I could not work in a field where I would be required to believe to believe in some specified religious doctrine. My beliefs had already changed tremendously, and might continue to change. It seemed to me that it would be a horrible thing to have to profess a set of beliefs, in order to remain in one's profession. I wanted to find a field in which I could be sure my freedom of thought would not be limited.

Carl R. Rogers - On Becoming A Person: A therapist's view of Psychotherapy - page 8

So, I wish to suggest, could this ever be a standard part of postgraduate education? Is it feasible to have such a seminar credited as part of a postgraduate qualification, given the need for modularity and standardised assessment in the present system of Higher Education? Even if it isn't, should we be doing this anyway? Perhaps entry to the seminar could be conditional on high performance in more traditionally designed modules? I would have loved this as an MA student (and indeed still would in the final year of my PhD) and, thinking back on my masters experiences in two departments, I could imagine a number of academics - who clearly really enjoyed postgraduate teaching when, perhaps, they enjoyed undergraduate teaching less - also enjoying it and being incredibly effective hands-off facilitators.

I'm intrigued to see if others are as inspired by the passage above as I am - perhaps in part it's because I'm fascinated by Rogers and only just found out about this aspect of his early history - so would appreciate any comments either on the blog or on Twitter. Likewise, does anyone have any ideas about how to make this happen? As I approach what will (hopefully) be my last two academics terms as a postgraduate student, I'm seriously considering approaching my department to see if there's any way to arrange something like this for MA students and PhD students in the summer term. All input appreciated.

As sociologists, we deal with a wide range of empirical and philosophical phenomena, but their scope, in universal terms, is quite narrow: locked somewhere between the individual human and the whole of humanity. With this in mind, the Idle Ethnographer admits to having a hard time justifying this particular post. Initially, I decided to post it just because it is amazing, fascinating, educational, and humbling. It is a visualisation of the universe and its physical scale.

But, being an Ethnographer, albeit Idle, I could not resist racking my brains for potential sociological uses. E.g., in the sociology of science, or that of Western European modernity. A symbolic analysis would reveal what is important enough to be given as an example in a scientific visualisation. The small and large objects are more impersonal, detached and ‘scientific’, while examples closer in size to humans only appear random, but their range is, in fact, highly socially conditioned (HIV virus, red blood cell, coffee bean, Rubic cube, silhouette or a male human being of average (Caucasian) height; Eiffel tower; USA map: length of a marathon). There are also a few hidden jokes: if you watch carefully, you’ll spot them. Or perhaps one can just watch it as a neat visual representation of the physical world in which we live. Or as a cosmology. Or a fairy tale. Or with the reverence of a tiny speck in the face of the universe. I leave this to your sociological imaginations.

Call for Papers - Visual Sociology (2011-12-22 08:00)

For all professional and/or novice visual researchers out there: the Sociological Imagination is pleased to announce its new column dedicated to "Visual Research". To celebrate its beginning, we are launching a continuous call for reader submissions.

The call is open to all our readers. One piece of visual research work will be featured each Friday. The SI reserves the right to use the submissions on the website at any time after they have been sent to us, after explicitly notifying their authors by email. If you've sent us an image and change your mind for any reason, just [1]e-mail us and we promise not to post it. Scroll down for submission guidelines.
How to submit: Please e-mail us with 'SI Visual Sociology' in the subject line.

How many: Authors may submit up to three separate pieces of work (we shall consider more numerous applications on a case by case basis – i.e., if we really like them!).

What information: Every submission must be accompanied by the following information:

- title of the work;
- full name/s, or artistic pseudonym/s, of its author/s;
- contact e-mail address and/or other contact details.

What counts as “a piece of visual research”? What ratio must there be between image/s and text? We side with Becker (1995) in abandoning methodological purism, and leave to your discretion the decision what and why classifies as visual sociology/anthropology (as opposed to documentary, photojournalism, art, or any other visual-based genre). The editorial team also reserves the sole right to decide whether to publish any submission. Submissions may range from image/s with text to text with image/s, as long as images and analysis or story are integral to one another.

Type of image: Any images/photographs are acceptable: black-and-white or colour; new shots or old scanned shots from your archives – as long as you have the rights to distribute them; and there are no restrictions regarding any artistic or photo-processing technologies used in the production of the images.

Format and size:

- JPEG format
- 1:1.5 ratio and any resolution suitable for publishing online (the images the SI normally posts are scaled down to 440x294 pixels, or near)

Legal issues: Any persons present in the photographs MUST be notified, be aware, and not oppose the publication of the images. If in doubt, consult this guide on photographers' rights:

http://www.sirimo.co.uk/2009/05/14/uk-photographers-rights-v2
Sociology song (2011-12-23 08:00)

For a change from the Christmas tunes, here is something, ahem, serious. Professional. OK, only professional and not serious. Anyway - happy Christmas to those of you who celebrate it with this song by [1]Tom Lehrer - an American singer-songwriter, satirist, polymath, mathematician, lecturer, ..., ... - which is, unbelievably, about sociology:

[EMBED]

1.
Over the rest of 2011, we'll be reposting the 10 most popular SI articles in the 1 1/2 years we've been around, in preparation for lots of new stuff next year. Here's #1 - enjoy!

You are not seriously checking out SI on Christmas Eve! Well, if you are - we have to make you laugh. And yes, this is sociological: if knowing about Others makes them less other, more human, there is no better way than sharing their humour. Enjoy this marvellous collection of jokes from many countries: read article by Joris Luyendijk in the Guardian [1]here

[2]

Christmas, consumerism, presents, and gender (2011-12-24 16:42)

A woman walks into a toy shop and asks:
"Do you have a plush Pinko the Pink Panther? Can I have one in sky-blue, for a little boy, please?"
After you have unwrapped your presents, read this light-hearted article in the Sociological Images about the reinforcement of gender stereotypes through consumerism during festive seasons. We deliberately held this one back until it is already too late to buy any Christmas presents:

[1] GENDER STEREOTYPED GIFT GUIDES.

The team at the Sociological Imagination wishes you a Merry Christmas!
In this episode, a sneaky ethnographer of East European origin embarks on a quest to deconstruct one of Britain’s informal institutions: The Local Bank Holiday Sunday Car Boot Sale. Below are her unabridged and unabashed field-notes.

Rather than participant observation, this is an exercise in observant participation. Observant participation is a variant of the ethnographic method of participant observation, first described by Polish researcher M. Kaminski who wrote a book based on his experience in as political prisoner (Kaminski, Marek M. (2004) Games Prisoners Play: The Tragicomic Worlds of Polish Prison). Now, you might think that a car boot sale is no prison, even though you are confined to a narrow patch of a few square feet. But the ethnographic method works, regardless.

Background

(locals may skip this section)

The car boot sale (hereafter CBS) is a curious local custom in the UK. Its role is to construct a temporary space-time continuum for exchanging small-scale goods outside the remit of the official market. Goods sold or acquired on a CBS are not subject to any local or government tax and are tacitly exempt from customer protection regulations. They are also extremely cheap compared to similar items available through the official market. The only (potentially) formally recorded monetary exchange taking place is a small fee paid to the owner/manager of the place in which the sale takes place (usually a local sports pitch) by salespeople arriving in their personal vehicles. The fee is paid for each sales vehicle regardless of any profit made, amount of goods, size of vehicle, number of salespeople, or any other criteria. It simply gives the payer the right to establish a temporary ‘sales-pitch’.

The CBS obeys the cyclical nature of social time: it always takes place on a non-working day, customarily occupying the first half of the day on a Sunday or Bank holiday Monday (Bank holiday Mondays are another peculiar UK custom: they are Mondays de facto treated as weekend-days on which banks and most other commercial establishments and institutions are closed, happen several times a year).

The origins of CBS were unknown at the time of participation and writing – perhaps some of the readers could shed light on them?

Field notes

My first car boot sale ever began with a dream and a fiasco. Fortunately, the fiasco was contained in the dream, and the dream itself was not a nightmare. In my dream, I was desperately trying to sell my car to someone for a pound. They thought it was a rip off.

Luckily, when I woke up, I still possessed a car (which I needed for going to the car boot sale in), but it was also 8 am. Just like most people, normally I subscribe to the view that 8 am on a Sunday is, in fact, ungodly early. However, CBS-goers are a special breed of people akin perhaps to hill-walkers, morning-joggers and horse-racers. So don’t be shocked to find out that by waking up at 8 am I had massively overslept by about two hours. Thanks to my
bargaining with the other ignoramus in my dream, I was now too late to be able to use the limited time-slot of CBS. The window of opportunity was mercilessly closing up on me.

The cold shower and an inhumanly strong cup of black Turkish coffee woke me up somewhat, but I was still hesitating whether to go, or to devote my morning to more intellectual pursuits. A mundane detail swept away my last hesitations in favour of the less honourable pursuit. There was no milk left in the fridge and I was forced to consume my cereal drenched in hot water. This was too much even for a poor grad student. I now had two clear goals ahead: to make at least as much money as to buy two pints of milk and cherry scones from Sainsbury’s (in addition to making some interesting ethnographic observations).

I loaded the car, marvelling at the amount of stuff I had accumulated within twelve months. For two months now, random objects that I didn’t really need had been slowly finding their way into various containers scattered around my room. All three containers – a grey suitcase (itself acquired on a boot sale for a pound), a reusable shopping bag with an elephant on it, and a large cardboard box, were now full to the brim.

I also filled a rucksack with provisions, water, a bottle of sun-screen and a book (not for sale), and poured all my loose change in a fanny pack (don’t ask me why I own a fanny pack). The rucksack and fanny pack together weighed probably half as much as the items for sale, but I wasn’t going to allow my first (and probably last) experience as a saleswoman to be darkened by ridicule. Of course, I also took a straw hat – for looking professional; and a jacket – for British summer weather.

I drove out at 8.50 am: far too late for a responsible salesperson. My slackness confirmed the first rule of the market in reverse: profit drives action (or, in my case, my un-reliance on profit had allowed me to slack off). This observation was an important reminder of a key trap of qualitative studies: unless you are very invested in your field, you risk slacking off and allowing your fieldwork to become un-rigorous; yet, if you are too invested, you risk “going native”. As a field researcher, you just can’t win. Unless of course you research car boot sales – then you could at least earn some money.

The sale took place at a rugby field only 0.160 km away from my house, but I had to drive through five sets of traffic lights in order to get there (this made the journey almost a mile long). I also had to go around the junction twice, until I mustered enough courage to break the rules and drive a ten feet stretch in the forbidden green bus lane. I was immediately followed by four other cars. This excessively quick normalisation of deviance took me by surprise (being in Britain, I did not expect so many cars to break driving regulations). I did not know whether to rejoice or to worry: the good news was that even as late as 9 am, I was not the latest seller to arrive at the pitch; the bad news was that the pitch was full and I was also in direct competition with those four naughty cars (all brimming with goods for sale).

Having driven 1.5 km instead of 160 metres, and stopped at ten red traffic lights, I confidently drove into the rugby field that hosted the sale. ‘Is it too late to get a sales pitch?’, I asked the three blokes who were standing at the gates, holding plastic buckets full of bucks. I had been practising this phrase in my head ever since I had got in the car and the butterflies in my stomach had been practicing ever since, too. They (the blokes, not the butterflies) said ‘It’s alright’, and told me to drive to pitch 65. I had no idea where that was, so I just drove all around the field until I saw the end of a row. There I parked in the grass, next to a large family who were unloading a mountain of really good books for sale. I had to force myself to turn a blind eye to all the books on history and art, all sold for one or two quid. The two pints of milk and the cherry scones beckoned and grinned at me. I had no choice but to show endurance in the face of the luring jackets of the books.
I took my stuff out of the car and spread it on a blanket on the ground, then perched myself on a softer blanket and began waiting for the crowd to invade my little pitch at the very end of the line. A small stream of people stopped by. Those who did, probably did so out of pity: “Let’s stroll past that girl at the end of the line, she must feel lonely. Ah, and she hasn’t got anything interesting to sell. Poor darling”. Not a minute had passed when an old gentleman appeared, armed with a notebook, pencil tucked behind his ear, entirely unimpressed by the lack of customers and my blatant lack of profit. I disarmed him by offering to voluntarily part with £7, in contribution towards the sales pitch. He snatched the money and evaporated. He also seemed to give me a receipt for the seven quid, but it must have been made out of fumes, because it also evaporated.

The wind wasn’t on my side: it was obviously backing up the customers, and trying to lift things from my improvised stall without paying for the purchase. The four books I had managed to tear off my bookcase and put up for sale were flapping their pages like fat domestic chickens forced by a strict mummy-chicken to attend Sunday flying classes. Worse still, the wind was about to lift off the ground the determined saleswoman herself. My propensity to fly created some funny chat-up situations with potential clients. The cheeky bastard actually earned me a few pence, so in the end I didn’t report the wind to the police.

At 9.20 am I made my first sale (ever!). Unfortunately, I have no recollection of the item I sold, but I do recall receiving a pound coin from an itinerant tradesman with a busy expression on his Ethiopian face. I’d seen him before (and heard him mention Ethiopia to a customer). He earns his bread and beer by buying and re-selling things at car boot sales. How many people are out there, for whom car boot sales are a key way of earning money? I also wonder why I forgot what I actually sold. Perhaps, that is my psychological defence against disappointment, because the item probably cost more than a pound.

Then I sold a few more things. An intergenerational conglomerate (grandmother, mother, and ten-year-old daughter) critically examined my four old pairs of shoes and after a deliberation lasting about a quarter of an hour bought the old pair of black pumps for a quid. I had got them four years ago for £10 (a lot of Bulgarian money at the time) from a very cheap shop in Coventry, so selling them made me feel a bit nostalgic. I played at my first piano concert wearing those shoes (the quality of the music was the same as that of the shoes, but the memory is just as dear, too). It was no surprise that the young girl hated them. I had worn them out and they were not very comfortable and did not look very cool; worse still, according to the mother, they were going to be worn during the following school year. The mention of the word "school" killed all signs of potential pre-teen enthusiasm. However, she yielded to parental pressure and handed me the pound with a guilty smile.

A tiny jubilant lady bought Al Pacino’s 88 minutes for £0.50. I convinced her that it was a thriller (even though I had never watched it). She was delighted – that was exactly what her grandson liked...oh, these boys – well, he’s a young man now, at 18. She was so lovely that I’d have given her the thriller for free. I would never make a good salesman. I’d be too tempted to rip off noxious people and give presents to lovely ones.

Someone took advantage of the familial humdrum around the black shoes and snatched my brand new ballet pumps for £1... they had cost me 10 pounds. But I couldn’t care less, because I had now made broken even and even made a profit of £0.70 and could finally commence working for myself!

At 10 am my smiling muscles were hurting, but I continued smiling and saying 'Hi', 'Hello there' and 'Morning, Sir' (to the rare surly-looking male). My sales continued with variable success. There was no crowd, but I was rewarded – not financially – by numerous awkward ‘Hi’-s and ‘Hello’-s, as well as a variety of half-embarrassed, half-treasure-hunting glances. An old biker, melting in the sun in heavy black gear and clutching a helmet with clumsy charm, said I smiled beautifully and that I should continue doing so, because I was cheering everyone up. I thanked him and followed his advice – not out of duty to the unknown leather-clad knight, but because the smile was now glued to my face and my mandibular joint refused to move.
Soon thereafter, I sold the Merchant of Venice for £0.50 (what irony). Still not sure why, though, because now that I think of it, I was intending to see the film again. (now that I think again, it also has Jeremy Irons in it. Damn.) Still, that was an interesting example of a purely impulsive purchase on part of the customer, and of an exercise in emotional manipulation on my part. I put on my cheeky hat and chatted up a young man passing by. After a brief exchange concerning the weather, I bribed him a McVitie’s chocolate digestive biscuit. After that he was ready for anything, but I had already changed into my Scrooge hat and was more than content to let him off with all jeremyironeses and venetian merchants, after I had got my fifty pence.

I received another, more direct proposition from an ageing Irishman who said I should accompany him to Dublin. He bought something minute for ten pence and stayed on for a chat for far longer than needed. While I laughed and tried to explain to some impatient customers how much my coca-cola glasses cost, he elaborated on his plan. He was going to Ireland in September and would stay for three months, and I was very welcome and there was nothing I should be afraid of. The rugby pitch in-house harassment officer was not in, so I couldn’t report the overly zealous Mr Patrick, and I had to deal with the matter myself. I said he was very kind but I didn’t think I could do that. To my surprise, that was enough to make him bid a very polite farewell and clear off. This incident convinced me that I would never venture to the equivalent to an English CBS in a less civilised country where a brusque ‘thank you’ would not be so easily recognised as an outright refusal.

A few quiet minutes, and the juggernaut of profit took me up again. A well-dressed lady took my wacky red hat for £0.50. I had fallen in love with the hat and rescued it from the Cat Protection charity shop in Kenilworth once, but the hat WHISPERED when worn, and I didn’t want to go mad. Now this lovely lady with a penchant for bright hats will have go mad instead.

Then my big moment came in the face of a lady wearing a traditional blue dress and blue head-ribbon. She bought various stuff for £5. I was chuffed to get rid of the junk and even get £5 for it - while she was pleased with an amazing bargain. She also asked whether I spoke French. I didn’t wish to subject her to my French for fear that she would return the stuff and run away, but it turned out that she came from France and just thought I was French. So much for my typical Slavic accent. By the way, in the course of the day, at least ten people asked me where I was from, so I also managed to make some geopolitical progress on behalf of my country. I told them and showed them photos of green mountains and monasteries printed on a set of Bulgarian coasters which no one had bought. (I also had to say one too many times that yes, UK is nice, but yes, of course I miss my home-country - which, to be quite honest, I don’t, but there was no use trying to convince anybody of this, especially when you want them to buy your stuff). Perhaps now a few more people in the world know where Bulgaria is. This might help them feel better the next time the country crops up on ‘Who Wants To Be A Millionaire’.

By 11.30, everyone seemed to have started packing their unsold goodies in the boots of cars. The previously buzzing rugby pitch was looking rather dead. I said goodbye to the book-loving family on the neighbouring pitch, bought a book about samurais from them (goodbye, two hard-earnt quid!) gave their kids a box of crayons, and drove off. I tried to give it another shot, so I stopped next to the gates and managed to sell ‘What women want’ to an aged Irish couple. They are guaranteed a good laugh and some embarrassment with their favourite Mr Gibson.

So, what is today’s balance?

All in all, I made £19.15; subtracting £7 paid for the sales pitch makes 12.15; minus another £2 for a book I bought from my neighbours (naughty me!). So, not counting petrol, I made a mere £10.15 in one whole morning (not counting the hours spent slowly amassing the stuff for sale, and any loss made by not selling the stuff for more money on e-bay). The meagre pecuniary gain is offset by a most peculiar finding: a simple lunch never tasted as good, as it did that day, after wasting away a whole morning just sitting in the sun... It also felt good to pay for my
milk and cherry scones with a handful of coins.

Perhaps I shall see you on your local rugby pitch one Sunday (but I am most definitely not going to Ireland to hang out with elderly philanderers).

PhD Candidate and Sessional Teacher

SI Top 10 #3 - Charles Wright Mills’ Sociological Imagination and why we fail to match it today
(2011-12-26 14:00)

Charles Wright Mills' body of work was substantial by any standards but for someone who died at the age of forty-five it was remarkable. The range and substance of Mills’ work is impressive but even more so is its originality, vitality and humanistic motivation: in short, its sociological imagination. In his still celebrated if now less influential work, *The Sociological Imagination* (1959), Mills addresses issues of sociological theory and method and particularly the practical application of the subject. However, in this piece I refer to a wide range of Mills’ work to illustrate that he was not only a great sociological mentor but also practised what he advocated.

Mills’ own sociological imagination was inspired by what he referred to as the classic sociological tradition the main feature of which is ‘the concern with historical social structures: and that its problems are of direct relevance to urgent public issues and insistent human troubles (*S I*: 28). Mills links personal troubles with public issues and
threads biography into the historical structural dynamic. The achievement of the classic tradition lies in the creation of models of society that illuminate the impact of social change on people and on their potential for response. These models generate and inform theory but are developed at a more general level than specific theories. Thus Marx's dialectical model of historical change and Weber's concept of the role of ideas in history give orientation to theory and research. For Mills the issue is not about which model is 'correct' but their ability to illuminate large vistas of the social landscape. In addition to clarifying the relationships of the triad of social structure, historical change and biography, Mills argues that sociological imagination necessarily generates political perspective because of the understanding it gives of the human condition (SI chapter 10). Mills himself was emphatic in drawing practical conclusions from his sociological work. This brought him into sharp conflict with what he referred to as the 'crack-pot realism' of managerial liberals such as Daniel Bell whom he felt were reducing social issues to mere matters of 'expert' planning and administration. Similarly, he attacked 'abstracted empiricism' within sociology - the gathering of facts with little reference to their wider meaning or application. Mills' Ph.D. was on American pragmatism and all his work carries the tone of someone who intended to make a difference.

Mills' work amply demonstrates the principles underpinning his concept of the sociological imagination. In less than ten years he published three books that substantially analysed the social structure of the United States. The first, New Men of Power (1948) presented the leadership of the American trade union movement as integrated within rather than a challenging the American economic establishment. The second, White Collar (1951), analysed the rise of the new American middle class largely employed in the proliferating offices of the public and private sectors. This was followed by his magnum opus of structural analysis The Power Elite (1956) that remains a standard reference for understanding the workings and overlaps of the American economic, military, and political elites. This triad of publications had almost an anticipatory as well as contemporary relevance. It describes a declining and weakened industrial working class with an increasingly self-interested leadership; a white-collar class cemented within a still highly unequal occupational structure by media-led consumerism and its own desire for security; and a substantially autonomous elite only marginally disrupted in its pursuit of power, wealth and status by democratic processes. This was a very different vision of the United States and of Western societies than that adopted by those he saw as 'conservative liberals' such as Talcott Parsons and Daniel Bell who declared an 'end of ideology' long before Francis Fukuyama made the same mistaken judgement.

As Mills' edited collection of classic sociological reading, Images of Man (1960) shows, he particularly admired European sociology. He was less impressed with his contemporary American colleagues. The one structural model that Mills found utterly wanting was Parsons' social systems theory which he saw as prime example of 'grand theory'. Mills' ridiculing of Parsons' abstract style had a serious point behind it – that such abstraction can take on a life of its own, divorced from the realities of everyday social life. More substantively, Mills argued that Parsons' emphasis on consensus legitimised the social status quo and failed to address what for Mills is fundamental to the social dynamic – power conflict. In contrast to Parsons, he focused on who takes decisions and in whose interest and argued that elites invariably pursue their own self-interest ('the idea of the responsibility of the powerful is foolish’ SI: 213). As he succinctly observed: 'Men (sic) are free to make history, but some men are freer than others' (SI: 201).

Mills regarded 'abstracted empiricism' as the mirror opposite of 'grand theory' but as having a similar outcome – a failure critically to address the status quo and therefore a tacit endorsement of it. He associated abstracted empiricism with the proliferation of bureaucracy and what he saw as the reduction of social and moral matters to issues of management. Mills was as suspicious of 'experts' and 'managers' as of the elites they served arguing – again contra Daniel Bell – that fundamental matters of domestic and foreign policy should be widely debated. Like Habermas, and perhaps a little romantically, he occasionally harked back to a period when better-informed 'publics' debated key issues of policy. Mills certainly made his contribution to re-igniting such debates.

Mills' model of society was an elites/mass rather than a class one. It is very much the first part of this dual model that Mills is remembered for – whether or not one agrees with it. A problem with the elites/mass model is that it tends to see the 'mass' as somewhat inert. In fact, Mills did share the view of many of his 'conservative liberal'
antagonists as well as that other luminary of the left, Herbert Marcuse, that the masses were indeed rendered dully somnolent by the tedium of routine work and the soporific effect of the mass media. However, unlike his liberal critics, Mills embarked on an intellectual struggle to produce a new radical analysis of social change in the distinctly discouraging context of the conservative and reactionary nineteen fifties. His own analysis precluded him from privileging the traditional working class or, still less, the new white-collar class in the search for a key agency for change. However, Mills demonstrated a consistent concern for both the new poor of mature capitalist society and for those of the emerging world. As far as the former are concerned he had a prescient understanding of how what came to be referred to variously as ‘the dependent population’, ‘the underclass’ and ‘the marginal’ would become perceived as almost the residual ‘problem’ of modern society – resistant to endless plans to organise them. About the poor of the emerging world Mills was able in his later writings to be more optimistic. Although he railed against what he saw as the abuse of power in the bullying of Castro’s Cuba (Listen Yankee, 1960) and American militarism (The Causes of World War Three, 1958) he realised that in time the balance of power would shift – as, indeed, we are now seeing.

In so far as Mills did tentatively observe an emerging agency for change in Western societies, it was among intellectuals, particularly young intellectuals. This was not mere wishful thinking on his part as he lived long enough to witness the stirrings of radicalism among young people in higher education both in the United States and Europe. As the following quotation from Mills’ Letter to the (British) New Left shows, he was sensitive to the need to re-explore the ethical and cultural values of radicalism: ‘As for the articulation of ideals, there I think your magazines have done there best work so far. That is your meaning – is it not – of the emphasis on cultural affairs.’ Mills had an enormous influence on the values and thinking of American student movement of the early nineteen sixties and had he lived might have been able to guide it away from the excesses of the late sixties. The Port Huron Statement (1962), the manifesto of the newly formed Students for a Democratic Society (SDS) amply reflected Mills’ belief in participatory democracy and practical humanism.

It is not difficult to imagine that Mills might have found himself at odds with the dominant contemporary state and corporate directed regimes of research and of the constraints they put on young scholars. His comments in The Sociological Imagination on research and the problem of funding remain relevant. He of course recognises the need for funds but also warns against the conditions that can come with it. He suggests that sometimes it may be better to work small-scale but independently rather than chase expensively funded research whose findings and interpretation may be ‘managed’ by the funding agency. What he MIGHT have made of the current state dominated research regimes is anybody’s guess. In a piece of advice that may seem trite and simplistic in the light of the complexity of the contemporary context of research, Mills’ advocates that the researcher should think and observe. But it is precisely because Mills’ makes what he terms ‘the craft of sociology’ accessible that is his genius

Mills’ book, The Sociological Imagination, has inspired generations of young and not so young social scientists. This is partly because he wrote a great book – once voted the second most important sociological book of the twentieth century after Weber’s Economy and Society, partly because he practised what he advocated, but also because he was an inspiring and, in the best sense of the word, idealistic human being. Mills the sociologist, campaigner and character fused to generate a charisma to which there is no recent or present comparison in social science. He retained a grounded utopianism that he defined as a commitment to an attainable but radically fairer and more equal future. His message is no less relevant now.

SI Top 10 #4 - Null Set (2011-12-27 08:00)

[1]
(15 April 2013, Editor’s note: As a reader has kindly pointed out, the author of the diagram is David Shrigley who does lots of awesome things: [3]David Shrigley. The editors apologise for not giving a reference in the publication!)

Matt (2013-04-12 18:53:32)
Please email me. I have a question about this venn diagram.

Milena Kremakova (2013-04-12 21:52:56)
Is it a secret question?

Matt (2013-04-12 22:09:49)
Would you, or anyone viewing this happen to know who made this Venn diagram? I’d like to ask it’s maker a question.

James Barron (2013-04-13 10:34:19)
It’s pinched from David Shrigley.

Matt (2013-04-14 17:36:03)
Thank you!

Thanks! I’ll include a reference.

SI Top 10 #5 - Response to George Monbiot’s Rant against Academic Publishers (2011-12-27 14:00)

In the US, we have the phrase ‘waving a flag and kissing a baby’ for somebody who plays to the gallery. And this is exactly what George Monbiot has done in his [1]Guardian rant against academic publishing houses. Running neck-and-neck with the various teaching quality assurances and research assessment exercises we routinely undergo in the UK, publishers must lead the academic hate list. And while I don’t wish to defend – or even explain – the sort of profit margins that Monbiot cites, I do want to defend publishers as an important counterbalance to the inherently conservative character of such time-honoured academic institutions as peer review.

For his own part, Monbiot appears to be a blind believer in the value of peer review. Indeed, his article appears to have been triggered by the costs to his readers who want to check whether the peer-reviewed research he cites in his articles says what he claims it does. This suggests that if Monbiot’s readers trusted him more, he probably wouldn’t have been moved to rail against publishers in the first place. But I digress.

No one doubts that commercial publishers are in the business of making money. But the way they make money is by doing something that academics value but that they would not do for themselves, left to their own devices. What I mean is captured in two words: ‘innovation’ and ‘extension’.

938
Innovation: Peer review processes are about insuring the quality of knowledge, which is ultimately a backward-looking exercise – i.e. do the results follow from what is presented as evidence and what we already know? In contrast, innovation is about risk-taking, i.e. arguing that if you suspend or replace some of the old assumptions, you get more interesting results. This is classic entrepreneurship (a la Schumpeter) and publishers are always on the lookout for people who can write books and edit journals that will reconfigure the knowledge system in such innovative ways, resulting in new income streams. The success of cultural studies and gender studies in the 1980s was due more to visionary commissioning editors than the then-dominant academic gatekeepers. I speak from experience. Towards the end of that period, I founded a journal, [2]Social Epistemology – still in existence after 25 years – that depended on just such an editor, since I had proposed the new journal while waiting to defend my Ph.D. (i.e. as someone with hardly any academic status).

Extension: Publishers, not academics, drive the textbook market. It seems that if academics had their way, textbooks would be abolished altogether as failing to contribute to how either teaching or research are assessed. Yet, textbooks remain very important symbols of the integration of teaching and research that is supposed to distinguish academic life from other forms of knowledge production. They are the most convincing indicator that academics produce a body of knowledge that a larger public should find out about. While it is fashionable to mock Anthony Giddens for having spent his career as a glorified sociology textbook writer, nevertheless that skill made it easy for him to speak to larger publics, thereby demonstrating the relevance of sociology. Indeed, I wonder had commercial publishing not played such a large role in steering the course of British sociology, would a public figure like Giddens have ever emerged, given the relatively parochial character of the discipline as it is institutionalised in this country.

Once again, I do not mean to justify Elsevier’s profits. But simply letting academics self-organize their knowledge flows is no panacea. Publishers provide an important counterbalance.

Steve never mind Monbiot’s "rant" (nice balanced language here) - Try looking up social epistemology article prices and journal costs ...now that is truly taking the e...piss temology over £100 for a journanal unbelievable ....almost fell like ranting myself!

SI Top 10 #6 - Anarchism and The Sociological Imagination: An Interview with Dana Williams
(2011-12-28 08:00)
I first came across Dana Williams and his work on an anarchist academics email list about three years ago. I was excited to find another person bringing anarchism and sociology together! There were, I believe, literally only a couple that I knew of already (Jonathan Purkis and Ian Welsh). Over the last couple of years, that number has expanded steadily and I now see that there is quite an upsurge in interest in bringing anarchism and sociology together. Dana’s talk at the North American Anarchist Studies conference last year particularly interested me in this regard. I wasn’t brave enough to travel to Toronto in February and am very appreciative to have been able to take in the talk in comfort via YouTube ([Part 1 http://www.youtube.com/watch?v=AZBtTj2dB4c] & Part 2 http://www.youtube.com/watch?v=OpENVcrgf5s]. Entitled "Defining an Anarchist-Sociology (A Long-Anticipated Marriage)", Dana’s argument intrigued me and I wanted to find out more. The following interview took place by email between March and July 2011.

My first question is, what connections do you already see existing between anarchism and sociology?

I think there are quite a few connections between the two, some major and better made, while other connections are a bit more tenuous and ambiguous. First, both anarchism and sociology are very interested in this thing called “society”. That itself is impressive, given how hard it is to often even think about something as complex and abstract as society. Both also agree that societies affect individuals. Within the sociological ranks, this was put most eloquently by C. Wright Mills and his analytical device of the “sociological imagination”. But, anarchists have also regularly considered large, macro-scaled institutions like capitalism, states, White supremacy, patriarchy, heteronormativity, etc., rarely losing the forest for the trees. In other words: anarchists are not apt to dwell on how bad a certain president is for a society or how evil a particular corporation is behaving, but instead call-out the entire system for its negative consequences on society. If this sounds a lot like Mills' sociological imagination, it might not be much of a coincidence. The same Mills who coined the phrase "new Left"—that early-1960s, anarchistic impulse that rejected state-socialism for participatory democracy—also called himself a "goddamn anarchist". So, sociologists do much the same thing as anarchists and focus on society as their unit of analysis (while appreciating it is composed of individuals, groups, and organizations). In fact, sociologists
very consciously eschew efforts to develop idiosyncratic theory based on particular people, situations, or events, and instead try to consider general patterns. This focus on society unites the two endeavors in a very immediate way.

Second, I think anarchism and sociology—in their better moments—do a bit of each other’s "typical" work. Anarchism has busied itself with attempts to transform society. Often this transformation is pursued through initially small acts of agitation (the formation of labor unions, community organizations, revolutionary cells and affinity groups), but also the encouragement of and participation in mass social movements, and broad insurrections and revolutions. Sociology, on the other hand, has for much of its history (and definitely during its periods with the greatest commitment to positivism) has tried to merely understand society, sometimes in the broadest, more "grand theory" strokes, sometimes in meticulous detail. Yet, anarchists have regularly pursued some of these more sociological endeavors, engaging in a rigorous critique of society, often very similar to sociologists. Much of the great classical-era anarchist theorists—such as Proudhon, Bakunin, and Kropotkin—were essentially thinking about sociological questions, having to do with social problems that people and groups in societies face. It’s one thing to desire change, but another thing to have a good, solid understanding of why that change is so necessary—anarchists are generally very thoughtful, well-informed individuals, who tend to think sociologically and just happen to want revolutionary change. And, sociologists have occasionally (but with astonishing regularity) wanted to go beyond mere analysis and participate in advocacy and even efforts to change society. Granted, most of the change sought assumes a liberal-reformist character, often focused on changes to particular laws. But, the very fact that sociologists are usually able to (sometimes with great prodding) draw conclusions and personal inspirations from what they study and eventually act, is important. Thus, sociologists do not necessarily always have their noses stuck in books, data, and abstract hypotheses.

A third connection I see is there has often been fraternization between anarchists and sociologists; they have read and considered each other’s ideas, and, occasionally, they have been some of the same people. Consequently, their ideas have—whether the purists in each camp wish it or not—influenced each other. For example, Bakunin intensively studied Comte’s positivism (liking his general impulse, but rejecting Comte’s more messianic pretensions). Weber spent time vacationing around anarchists, especially Europe’s more libertine cultural anarchists. Pitirim Sorokin—the first chair of Harvard’s sociology program—personally knew and admired Kropotkin. Kropotkin himself translated some of Herbert Spencer’s work and later Spencer signed a petition to the French government demanding Kropotkin’s release from prison. More recently, the rebellious tendencies of earlier radical culture—infused with anarchism—inspired numerous sociologists, perhaps most important Mills who often wrote favorably of rebels, like the Wobblies. Today, the connections between anarchists and sociologists are much more muted, but maybe even more widespread than at any time in the past. The movements of the 1960s and 70s reinvigorated radical sociology and, especially in the United States, led to an explosion in self-identified “Marxist sociologists”. The radicalism of the Black Power and anti-war movements inspired young people with rediscovered/recycled Marxist ideas, some of whom chose to enter graduate school (or who were already there). This new generation of sociologists, helped shift the discipline back towards its progressive roots and (at least partially) away from instrumental positivism and structural-functionalism. Given that many of today’s popular and radical social movements are strongly inspired by and designed on anarchist principles (with a significant collection of actual anarchist participants), there has been a similar in-fill of anarchists into sociology in the last decade and a half. I have heard that approximately one million people in the US take sociology classes each year and surely a few thousands of those people are anarchists (or anarchist-friendly). Hundreds of anarchists are potentially majoring as sociologists and dozens are likely in graduate school. This has resulted in an up-swell of university-trained anarchist-sociologists (whether self-identified as such or not). I am one of that increasing number of people. Consequently, due to this influx of anarchist-movement-inspired personnel into the academy, I do not, universally, receive blank-looks when discussing anarchism or the anarchist movement amongst sociologists. Although there is often still some confusion and misunderstanding as to what anarchism is, many sociologists now acknowledge anarchism as a legitimate school of ideas and the movement as something real that is having a definite impact on the world. This is a clear change of earlier generations (especially from the dismissive generations of Albion Small or Talcott Parsons). As time goes one, I assume and hope that anarchism and sociology continue to learn more from each other.
Following on from that, what connections between anarchism and sociology would you like to see developed further?

All sorts of closer connections could be developed! And, I think these two different things—anarchism and sociology, whether we consider them to be disciplines, ideologies, or approaches—can also be grown together, in-tandem. Let me tell you a story that I think illustrates this: near where I used to live there was a tree close to a chain-link fence and at some point, the tree began to grow into and through the fence. Not just a branch going through the fence, but the actual rings of the tree merging with the fence! Each new years’ worth of tree-growth emerged, in part, on the other side of the fence. The fence supported and redirected the trees’ growth, and the tree has now sturdied an otherwise rickety fence. Today, that tree and fence are hopelessly intertwined with each other, you couldn’t take down one without affecting the other. That’s sort of how I’d like anarchism and sociology to become (and I won’t say which is the fence and which is the tree!). I think each could not only benefit from the other, but also they could grow stronger together. This is sort of how Marxism and feminism are today for sociological theory. It’s hard to imagine talking about social change, class inequality, gender, and so forth without directly referencing the contributions of those two philosophies (which are of non-sociological origins). And Marxism and feminism have gotten all sorts of validation, institutional support, and proliferation due to their affiliation with sociology. I think it’d be great if anarchism were to intertwine itself, strategically, with sociology. And I think—in my more optimistic moments—that might already be starting to happen.

But to more specifically answer your question: I would like to see a certain sociological appreciation become more commonplace within anarchist circles. In other words, it’s be great if sociological ideas could help support and strengthen anarchist theory and the anarchist movement. For example, anarchists could benefit from an understanding of how people learn, adopt, and maintain their commitments through socialization. Since anarchists want to help people find pathways to a more liberatory future, dealing with all the practices that inhibit better social relations is going to be necessary. It’ll be important for people to more widely adopt radical social norms, which will require intensive resocialization—something anarchists already do, instinctively, but maybe not as reflectively as necessary. Knowing what socialization is and how norms work will help anarchists think more critically about their self-education strategies and also appreciate how really hard long-lasting social change is to achieve. Even insurrections and open-revolts can easily roll-back into counter-revolutionary and reactionary behaviors if a period of resocialization doesn’t occur. I think that’s an important lesson to be learned from the Russian and Spanish revolutions during the twentieth-century. I suppose another level of sociological understanding that anarchists could benefit from is a deeper understanding of how formal organizations (especially bureaucracies) work. They are neither completely inefficient, nor completely rational. Instead, bureaucracies are somewhere in-between. And since the majority of people in modern societies are trapped somewhere within multiple such organizations, it seems crucial for anarchists to know how this embedding works, the best ways to extricate folks from hierarchical structures, and why radical movements like anarchism meet resistance when trying to do so.

Or, anarchists—and social movements more generally—could benefit from knowing a bit of social movement theory, the kind of stuff that sociologists study about social movements. And, although this research is often imperfect, there’s a lot to potentially learn from it. There’s certain aspects of movement-building and movement-work that activists ought to at least reflect upon in a systematic fashion. For example, questions about framing, resources, political opportunities, and so on. But, as my co-author Jeff Shantz has said, the attention given to radical movements that see the entire social system as inherently off-kilter, self-destructive, brutal, etc., is almost non-existent. So, sociologists ought to start thinking about and studying those social movements that have no interest in influencing the state (except to dissolve it)!

Then, the flipside of this coin is where things might get even more interesting: taking anarchist concerns or subjects, and inserting them into Sociology. I think it would be great to have anarchist ideas pop-up more regularly in sociology classes, within sociology’s many subfields, or be included as references in journal article literature reviews.
And, most importantly, have those ideas treated as the serious intellectual traditions they are! What if all those aforementioned college students started encountering anarchist ideas in their introduction to sociology classes or if sociology majors started to discover a highly-libertarian form of socialism that has valid ideas and precepts, that are independent of Marxism?

Imagine if sociological theory classes taught Bakunin alongside his intellectual and activist counterpart in the First International, Marx. Both crafted their words from ideas being generated in the same radical labor milieu, but Bakunin’s warnings turned out to be more prophetic than Marx’s musings, when he predicted Marx’s socialist vision (led by and encapsulated in the state) would become as bureaucratic and tyrannical as state capitalism. Or, more interestingly, imagine Kropotkin’s ideas of “mutual aid” being treated as seriously as Durkheim’s ideas of solidarity. The similarities are, at points, astounding, and to have Kropotkin’s politically-infused analyses of survival, sociability, and justice presented with the same worth as Durkheim, would be an amazing step forward for both anarchism and sociology. Heck, most classical-era anarchist thinkers still, even today, sound like and share a lot of the same concerns as sociologists: folks like Emma Goldman, Gustav Landauer, Voltairine de Cleyre, Errico Malatesta, and Elise Reclus, and so on...

Or, more recently in the anarchist tradition, consider how devastating Murray Bookchin’s focus on hierarchy and domination as the ultimate engines of inequality (not just economic exploitation) would be for students of social inequalities, or students of modern conflict theory. And I think it is high-time to give proper credit to the anarchy-feminists of the 1970s for their role in influencing feminism’s “third wave” (as learned about by countless sociology majors in contemporary theory and gender classes). The crossover between anarchy-feminists, black feminists, black anarchists, and others in nurturing a radical, intersectional approach to inequality is a linkage still begging further exploration.

I suppose another thing that could result from drawing anarchism and sociology closer together would be an appreciation of the horizontal, cooperative social organization that is needed for social transformation. Some of this is being considered along the lines of network theory, but something more deliberate (and, frankly, more anarchist) needs to be considered here. To me, this seems to require a pro-active/positive form of sociology that studies the best avenues for social transformation, with a vested-interest in seeing those changes come to pass!

Those are just some immediate ideas of how anarchism could be sociologized and sociology could be anar-chized—if those are even appropriate words! Otherwise, some anarchists working in (and around) sociology have already started to consider what an “anarchist social science” would be: Would it be “applied”? Radical? Self-critical? Maybe decentralized and autonomous from the academy? Or perhaps it’d be directly in the hands of everyday people? A lot of these intellectual efforts (both epistemological and ontological) are trying to consider the revolutionary pathways of social change and how anarchism (and maybe sociology) plays a role in that. So, on one hand, an anarchist-sociology could illuminate society—as it presently is—for us, but it could also light the way towards practical solutions for overcoming all the hierarchical crap that keeps people from taking control of their lives and communities.

You’re in the process just now of writing a book with Jeff Shantz exploring anarchism and sociology. Could you tell us a bit about it?

I don’t want to speak for Jeff and put words in his mouth, so I’ll just tell you my thoughts about the book. (But, I think Jeff and I are in very strong agreement about what we’re doing, and I’ve been a big fan of his writing for years. Both of us have had lengthy activist experiences and both of us are working professionally at mainly teaching-oriented schools, teaching heavy course loads, but still trying to remain active with research (and with politics)!) I think
anarchism and sociology are both central commitments that we share and we’ve been fascinated at all the points of 
overlap. And for me, I’m sort of amazed that these overlaps don’t get talked about more regularly.

At a recent conference presentation to the North American Anarchist Studies Network in Toronto, I joked that 
our book—which we are calling *Anarchy & Society*, I suppose in a sort of bemused homage to Weber’s *Economy & 
Society*—is akin to a blind date. Our book is essentially organizing a blind date, in this case between two very different 
perspectives: anarchism and sociology. I think the book is gently encouraging sociology to meet anarchism (“Hey, 
you should get to know anarchism. They’re passionate and not nearly as crazy as everyone says they are...”), and also 
telling anarchism a similar message about sociology (“Yeah, sure, they’ve dabbled in Marxism in the past, but their 
heart is in the right place...”). So, in part, it’s a sort of easing one into the conversation of the other. Conceptually, 
anyway. More, practically, for me, I wanted to write the kind of book that I wish existed when I first started graduate 
school in sociology. This book didn’t exist then for me! And, I know it’s a bit presumptuous to think a book of yours 
will have a big impact in an area, but wouldn’t it be wonderful if it could be a sort of lighthouse, helping to guide 
along new anarchist-inclined sociologists or sociologically-minded anarchists? In comparison, Marxist sociologists 
can turn to “Capital” or Gramsci’s “Prison Notebooks”. Since we (when I say “we”, I mean all those self-identified 
anarchist-sociologists out there) don’t have anything like this that is all nice and neatly prepared for us, we’re going 
to have to create it ourselves. There’s a long-history of do-it-yourself politics with anarchists. We’re always starting 
up small newspapers, mutual aid projects, collectives and cooperatives, or organizing unions—and I think the same 
thing is going to have to be necessary for those working in academia, too.

And, I’m sure Jeff would agree with me when I say that I don’t want our book to be the last thing said about 
anarchist-sociology”. For me, that would mean the book has been a complete failure! Even if thousands of people 
read it and like it. Books only have an impact when they inspire lots of other people to respond to them, to critique 
them, to carry-on a conversation. I’d like for there to be an explosion (and I think that growth in anarchist-sociologist 
 scholarship will come soon enough) of folks writing books like this, who bring their own notions of what anarchist-
sociology is to the table. At the present moment, I don’t think there’s any strategic value in anyone declaring 
definitively what the hell anarchist-sociology is... we haven’t explored all the intellectual possibilities yet! We 
haven’t thought through all the practical and political consequences. We definitely haven’t experimented enough in 
classrooms with students (let alone in the so-called “real world”) to know all the ways in which such ideas could be 
used. So, we want our book to be a provocation, a conversation starter.

If I could, I’d like to compare some of what our book does to Colin Ward’s book *Anarchy in Action*. It’s an 
amazing work of sociology—or, dare I say, anarchist-sociology! For me, it’s the most important modern work in 
anarchism (“modern” referring to the post-1960s era, after the Golden Age of Anarchism, with Kropotkin, Goldman, 
Malatesta, and all the rest). All sociologists (and anarchists, of course) should read it. It might be a bit primitive for 
some, but it really captures the core impulse of the sociological imagination. And, like any good work of sociology, 
it destroys a lot of people’s preconceptions and makes you think differently about the world. In my opinion, it’s a 
sociological work on par with Berger and Luckmann’s *The Social Construction of Reality* or Goffman’s *The Presentation 
of Self in Everyday Life*. It ought to be read and debated in theory classes... well, that’s what I think about it anyway. 
Others should read it and decide for themselves! I’d like to hope that our book continues the mission Ward set out 
with—to point out examples of anarchy happening around us, regularly in society—by also incorporating a bit more 
consciously sociological theory and research, all with an anarchist aesthetic and commitment.

Specifically, in the book we try to a number of things. Most importantly, we stake-out a “big tent” called 
anarchist-sociology, which we think lots of folks—even with completely divergent orientations and projects in-
mind—could huddle underneath. Then, we do some basic contrasts between anarchist thinkers and sociological 
thinkers. Here, obviously, the anarchist ideas of Kropotkin, Gustav Landauer, and Ward are key. Jeff has written a 
great chapter considering Proudhon’s unique criminology, which in some ways presages today’s “restorative justice” 
movement. From the sociologist side, there’s a new take on Ferdinand Tönnies and others. We also have chapters 
dealing with core sociological topics, like social norms and socialization, and social inequalities. In each, we’re trying
to synthesize the unique thoughts and contributions together. Then, there's some lengthy discussions on social movements. Fortunately, both anarchism and sociology have a lot to say to each other.

The book is going to be published by Brill, as part of their Studies in Critical Social Sciences series. It's a great, critically-oriented series. And, we're also very excited about the prospects of an accessible version (in terms of cost) being released in paperback on Haymarket Books, so activist and non-academic folks can more easily get their hands on it.

**Can you think of any particular examples of ways in which aspects of anarchist traditions have, or might, contribute to sociological imagination?**

Sure, there's lots of ways in which anarchism contributes to the sociological imagination—but I don't know how conscious anyone has been with it. For example, anarchism's strong allergy to social hierarchy and domination affects the sociological imagination (nay, improves upon it). Or, its activist or agent-orientation. The sociological imagination itself, as defined by Mills, may be one of the most anarchistic ideas ever developed by sociology. I think this is because the sociological imagination is best seen as a tool (or at some moments, a defensive weapon) to be used practically, strategically—as opposed to a forceful prescription of "you should do this" or "you should do that". The whole character of the sociological imagination implies that individuals are going to figure out for themselves what social phenomenon has affected them most and how. Being able to realize that, understand that, and hopefully do something about it all, well, it's classic anarchism! It implicitly trusts individuals to know what's best for themselves, once they have the capacity to understand their circumstances.

Anarchism has often been bad-mouthed by its leftist cousin, Marxism, for being practice-heavy and theory-light. I'm pretty sure that's not true, but even if it were, I think anarchism has always been sensible and ethical for placing a strong emphasis upon means. How something gets done is often as crucial to the outcome as is the end itself. In other words: we have to pay attention to how we pursue our objectives and avoid trying to meet our goals at any costs. Sometimes the costs are far too high and violate our principles! Anarchists have always taken for granted the idea that having people in control of their own lives will create a better society than any centrally-planned Utopia designed by a few bright minds. If Mills was asking us—asking all free individuals, not just the sociologists—to think critically about our lives, personal troubles, and struggles in a sociological fashion, then he was obviously not asking sociologists to tell the masses what their problems are. Yes, sociologists have some mighty fine and sophisticated tools for exploring society, but these tools ought to be popularized, democratized, and turned-over into the hands of everyday people. People can make good decisions—and will probably act justly, too—if they are given the means to do so. In this respect, the sociological imagination is a tool for participatory democracy and liberation, and its notion of justice and freedom is deeply indebted to anarchist notions of self-determination, autonomy, and anti-authoritarianism.

Unlike many reform movements, which sometimes utilize paid campaigners to stir-up dissent and often must go somewhere very specific, anarchists can act nearly anywhere. There's always something for an anarchistic-minded individual to do, even in their own milieu, regardless of how progressive it is. A quick look around our workplaces, neighborhoods, popular cultures, or even families will show there's a lot of authoritarianism and inequality around. Thus, we can always start where we are. What neighborhood isn't in need of more active nurturing around issues of justice? What workplace—except the rare producer cooperative—isn't run autocratically, by a small handful of people who do a very narrow amount of the actual necessary work? Or, since a lot of professional sociologists work as teachers, what classroom isn't in need of radical democratization? I agree with Michael Burawoy here: students really are the first "public" to encounter professional sociologists. But, we spend so very little time actually considering how despotic universities and schools can be, how disempowering the life of an undergraduate can be, especially in a college classroom.
Let me tell a short story that conveys this real need. A year and a half ago I taught a student-requested course, called the “Sociology of Anarchism”. Some students approached me about teaching it and I agreed, since I like both sociology and anarchism quite a bit. Then, I realized that it would be pretty disingenuous to teach about anarchism in a hierarchically-organized classroom. So, I turned the class into a mini-laboratory, a social experiment on how to learn without authority figures (i.e. students acting as anarchists to learn about anarchism). I was still responsible for giving a grade to the students at the end of the semester, but I decided that they should be in charge of deciding how that was to be done. The students were the ones who wanted to learn about anarchism, so they should be in control of that learning. And, since they were all going to be sharing the experience with each other, the class should be democratically-managed. Thus, from the first moment of the class, I turned over the reins to the students. It wasn’t perfect, and my hierarchical-socialization got in the way of the project more than once, but it was an amazing experience. Students designed the syllabus. They spent the first weeks of the semester laying out for themselves what they wanted as learning objectives, what they would require of themselves and each other, how I should give out grades, and so on. They did all of this democratically, and achieving a near-consensus (with a class of over 40 students)! They acted completely different from any other collection of students. They were literally in charge of the class and they took seriously my promise to not act as their boss. Consequently, the students were excited, engaged, and felt in control of their learning.

My little experiment was not perfect, of course, and there’s lots of things I would do differently next time. But, it changed my entire perspective on what is possible (and, judging from exit surveys the students filled out, it changed them, too)... students can be trusted with control over their educations. But, it can be scary, since it puts teachers outside of their safe space. I was in a learning environment that all my professionalization suggested shouldn’t be allowed to exist. I haven’t done a class like that since, although I’ve thought seriously about how to democratize many aspects of certain classes. Turns out that I, like most of my colleagues (and higher education itself), are just too invested in hierarchical social forms. But, as an anarchist, I’m trying my best to grow my pedagogical approach and teach more anarchistically, more regularly.

But, if most sociologists are using their sociological imagination to help them teach (and I think the good ones do this), then anarchism definitely has a lot to offer in the classroom. Transparency in the classroom is essential for students to be informed and brought in to the mechanics of a course structure. Giving students the opportunity to practice new, liberatory skills (especially those they can use later, outside the academy) is important—my classes have used online collective decision-making software, to help prioritize projects, rank preferences, debate options, and so on. Students used all sorts of anarchistic organizing models—from small/affinity groups and large assemblies to formal consensus decision making techniques—to accomplish otherwise formidable, complex tasks. Exposing students to new worlds and new ideas is crucial. As a feminist colleague of mine tells her classes: she’s not there to make students feel comfortable in their old beliefs, but to provoke critical thought, reflection, and action. A sizable minority of my students were often visibly uncomfortable with the control they were given—a few times throughout the semester there were subtle requests to end all the democracy and revert back to a typical, predictable course... with me making all the decisions. But, in the midst of those discomforting moments, students learned a lot about education, a lot about the subject of anarchism, and even a lot about themselves and their own collective potential. Creating a memorable class is important; in the same way that anarchist artists have introduced giant puppets, stencil graffiti, or guerrilla theater into stagnant protest, anarchist teachers need to create novel environments that will create lasting impressions. Doing something anarchistic (or democratic, or justice-oriented) is going to leave a stronger mark upon students and influence them to think differently in the future than just learning about anarchism (or democracy or justice). To follow this logic, civics or political science classes would be better taught as active democracies, just like most sociology classes would be best structured as practical exercises in creating social justice. One last, crucially important thing for teachers would be finding a way to de-center their own roles and voices, especially that as “bosses” and “experts”. This doesn’t mean pushing volumes of empirical research aside or allowing an “anything goes” environment. The best way for a teacher to self-de-center would be to create a more horizontal, democratic course framework. Allow students to select topics that they find more interesting (within the reasonable
confines of the course subject, I suppose), let them pick or create projects or assignments that interest them most, and when there are discussions happening in the classroom, especially between students themselves, a teacher ought to play more of a "facilitator" role than that of a "final arbitrator". The amazing thing is, that any of these things can be done without even mentioning the word "anarchism" (but talking about anarchism wouldn't necessarily hurt either). In other words, acting anarchistically is often more important to anarchists than self-identifying as such.

Maybe the best anarchist tweaking of the "sociological imagination" is to speak of an "anarchist imagination". Undoubtedly, lots of anarchists have spoken of such a thing in the past, but I use the phrase in a very sociological sense. The "anarchist imagination" is the capacity for people to correctly identify the structures of domination and hierarchy that they are personally embedded in, and to have strategies in mind for how to extricate and remove themselves from those structures. In other words, it is an anarchist appreciation of the role that structures play in our lives—the impact of capitalism in imposing class hierarchies upon us, patriarchy in imposing gendered roles and sexual inequality. Or, White supremacy's racial-based caste system, heterosexism's privileging of straight folks, or any other institutionally-supported system of domination. The position of an employee in relation to their boss, a citizen (or worse, non-citizen) to police, a religious layperson to a religious authority, a child to a parent, an "average" person in relation to a celebrity, and so forth. Once the tight, dense network of these systems are understood, and how they affect even the most mundane part of our daily affairs, then do we have any actual ideas that can help to emancipate ourselves (and, hopefully, others in a similar position)? It's one thing to know that you are facing the sharp-end of a sword, but another thing altogether to imagine a different sort of social relations and the strategies to pursue them. A key difference here, for anarchists, is to not think in terms of social mobility, like most sociologists do. There's little justice in finding a way for some women (for example, White, straight middle-class women) to improve their lot in relation to men. Instead, how could the entire ugly, warped table of patriarchy be completely overturned? Thus, how can women (as well as queer and intersexed folk, but also men) find better ways of existing in the world? These are tough questions, often only answerable on a small, intimate micro-level at the outset. But, this is the beginnings of the anarchist imagination.

Thank you, Dana, for taking time to share your thoughts on anarchism and sociology.

My pleasure, Jamie!

Dana M. Williams works as an assistant professor in the department of sociology at Valdosta State University. His research has appeared in a variety of journals including *Race, Ethnicity, & Education, Sociology of Sport Journal, Working USA: The Journal of Labor and Society*, and *Contemporary Justice Review*. He is currently writing a book with Jeff Shantz entitled *Anarchy & Society* (forthcoming, Brill).

Jamie Heckert holds a PhD in sociology from the University of Edinburgh and currently serves as an interdependent scholar in the south of England. His writings on ethics, erotics and ecology have appeared in a number of books, journals and other publications. He is editor of a special issue of *Sexualities* and co-editor (with Richard Cleminson) of *Anarchism & Sexuality: Ethics, Relationships and Power* (2011, Routlege).

---

tuli (2011-12-28 09:57:30)

yeah, this was an interesting article. Could you email the email-adress of Dana Williams, as an sociology student and an anarchist, I would like to get contact to likely minded people.
Dose not anarchism being reassessed to re-position this as to what was thought outcast has always been for the new social order? Domination of exploiters can only be removed by mass praxis of exploited classes.

‘Lady Di’ and Kim Jong-il: weird affinities... (2011-12-29 08:00)

Since the death of Kim Jong-il, the world’s media has been voyeuristically fixated on the scenes of public mourning gripping North Korea. As a sociologist, I’ve found some of this footage fascinating. So too the way in which these scenes of extreme public mourning are frequently being framed, at least by the UK media.

IFRAMEx: [1]http://www.youtube.com/embed/mSLJYbhXCKE

But is this kind of public mourning really so alien? The point was well made in a tweet by the political journalist [2]David Torrance yesterday:

Look at all those crazy N Koreans weeping & wailing over a hereditary state figure they'd never met. We Brits wouldn't do anything like that

I had just turned 12 when Princess Diana died. I remember being told, "you’ll always remember where you were when you found this out". For what it’s worth, I don't remember where I was though, as a 12 year old during the summer holidays, I assume I was at home. I remember the [3]funeral, mostly for [4]Elton John’s song which, in my 12 year old way, I found quite moving (whereas I now find it mawkish and weird). Most of all though I remember images of the crowds, the endless seas of teddy bears and flowers. It’s only looking back on this time as an adult that I can understand quite how bizarre it really was, as ‘an entire nation’ was ‘united’ in mourning for the ‘people’s
princess’. As the comedian Mark Thomas reflected on the funeral, "it was almost like a Soviet leader had died and they had put on the martial music, except it was images of Diana and her children”.

My point is not to suggest that ‘Lady Di’ represented a cult of personality analogous to Kim Jong-il. Rather that it represented something much more insidious and all the weirder for the widespread blindness to the sheer ludicrousness of it, as well as the nakedly commercial and political uses to which this was put (with many of the emerging chroniclers of New Labour reaching a rare consensus in recognising the effectiveness with which Tony Blair sealed his early bond with the nation by orchestrating public mourning after her death).

If you think I’m over-stating my case, watch this video of P Diddy / Sean Combs (a.k.a. the richest man in hip-hop) at the Diana memorial concert, with such obvious happy-clappy Christian revivalist orchestration that it must have been entirely conscious and deliberate.

Some of these issues are explored in greater depth, albeit not in terms of Kim Jong-il for obvious reasons, in an excellent documentary by the late Christopher Hitchens:

The asexual community has only existed for about ten years, and its existence is due in large part to the growth of the internet. The center of the community is the Asexual Visibility and Education Network (AVEN, asexuality.org), which defines an asexual as “a person who does not experience sexual attraction.” The site contrasts this with celibacy, which it asserts is a choice, whereas asexuality is a sexual orientation. The main political goals of the asexual community are visibility, acceptance, and understanding. One major means for this involves academic outreach and our representation in academic discourse.
I first discovered the asexual community in fall 2007, my first semester of graduate school. Even before I eventually decided to identify as asexual, I have wanted to find out as much as I could about the subject. My own attempts to understand the matter, as well as the realization that I had substantive contributions to make, have led to my involvement in academic outreach. (For instance, I run the site [asexualexplorations.net, which "exists to provide promote the academic study of asexuality."]) I have taken a particular interest in the diagnosis Hypoactive Sexual Desire Disorder (HSDD) in the American Psychiatric Association’s *Diagnostic and Statistical Manual of Mental Disorders*, which led to my involvement in the "AVEN DSM Taskforce," a group that lobbied the DSM-5 Sexual Dysfunctions Subworkgroup trying to make DSM-5 more asexual-friendly. I have remained interested even after we completed that project.

**Asexuality and the Question of Pathology**

After the formation of the asexual community, it was not too long before the community became aware of the fact that in the DSM, there is a disorder about not being interested in sex. (The diagnosis is also in the ICD, but the ICD attracts less controversy). As one of the major political goals of the community is to convince people that there is nothing wrong with not being interested in sex, this diagnosis is not especially helpful for that goal.

In considering what kind of approach the asexual community should take toward the matter, one question that seems like a good starting place is whether asexuality is a sexual dysfunction. I have sometimes seen the question posed as an either/or: Is asexuality a sexual orientation or a sexual dysfunction? Some authors (e.g. Prause & Graham, 2007) have done data collection regarding asexuality and claimed that their results suggest that asexuality is not a sexual dysfunction. Such claims are likely good for our politics, but they make absolutely no sense to me.

There is a considerable literature on defining disorder, a task known to be difficult (many authors think impossible). Most authors, however, agree that at least some amount of value judgment is involved. Often these value judgments are quite uncontroversial: death, pain, and inability (or greatly increased difficulty) in accomplishing everyday tasks, are fairly universally regarded as negatives that, if possible, should be prevented. For the ones other than death, if they are not prevented, they should be cured if possible, and if not, treated to make the problems more manageable and/or to slow/prevent worsening of the condition. With regard to asexuality, there is the question of what harm it causes. It does not cause death or pain, and it only causes disability if we define it as such. This was, in fact, part of the rationale for including the sexual dysfunctions in DSM-III (Spitzer, Williams, & Skodol, 1980; Spitzer,
1981) without a requirement of distress—the complete sexual response cycle was regarded as normative such that any "inability" to experience such was defined as an impairment in an important area of functioning (c.f. American Psychiatric Association, 1980, p.6).

A core part of people's intuitions about what is a disorder (including sexual dysfunctions) is that something has gone wrong in the individual. Something is not working how it ought. In my own view, the oughtness inherent in this question means that science cannot answer it (though it can inform an answer.) This view is controversial—some consider function of some part of an organism to be objectively definable (e.g. the heart is for pumping blood.) While I am skeptical,[1] even if we accept that, objectively, the heart is for pumping blood, what is sexual attraction for? What is sex for? The main answers I've seen are a) procreation/finding a partner for such, b) pair-bonding, and c) declaring agnosticism with a skeptical attitude towards those who presume to know [2] My own view, option (c), renders problematic the entire notion of "sexual dysfunction." A further issue is what I call “the brute fact of the optionality of sex.” Having sex and being interested in sex are optional in a way that eating, breathing, and having a heart that pumps blood are not. It is possible to never have sex and never want sex and it not create any problems in a person's everyday life. This renders problematic the whole notion of functional oughtness for sexual attraction/interest, making problematic the very notions of "sexual function" and thus "sexual dysfunction."

As I do not think that asexuality objectively is or is not a sexual dysfunction, the question I think we should be asking is whether regarding it as such makes sense conceptually and pragmatically. Conceptually, I do not think that it does. Pragmatically, we need to be cautious—what effect, if any, this diagnosis has on asexuals is unknown. We simply do not have the data. Posing the question in this way motivates us to ask another essential for asexual politics: how is asexuality different from HSDD? There are two kinds of answers to this question: extensional and valuational/practical. Extensional differences—who fits which group—are often the only ones that come to mind. They are, for instance, the only ones addressed in Bogaert's (2006) discussion of the matter. This line of thinking seems to stem from treating asexuality and HSDD as somehow "objectively existing" rather than as more nominalist type categories. I am more interested in valuational and practical differences.

One such difference is that HSDD focuses on lack of sexual desire, and asexuality on lack of sexual attraction. HSDD is a more negative valuation of sexual disinterest and asexuality a more neutral/positive one. HSDD was created by physicians (Kaplan, 1977; Leif, 1977) and is diagnosed by clinicians. The conceptualization "asexuality" was created by asexuals, and the designation—an identity—is self-assigned. Moreover, the conceptualizations HSDD and asexuality will give rise to very different research questions. However, one important similarity should be noted: lack of interest in sex often causes difficulties in people's lives that they want help with. [3] Both asexual identity and HSDD are conceptualizations that exist to try to help people deal with these issues.

Asexuality vis-à-vis Pathology

In discussing how asexuality is different from HSDD (i.e. why the DSM does not say asexuality is a disorder), perhaps the most commonly raised point concerns the fact that since DSM-IV (American Psychiatric Association, 1994), for a diagnosis of HSDD to be made, the lack of sexual interest must cause "marked distress or interpersonal difficulty," although the second half of the disjunction is often ignored. Asexuals are not distressed about it, therefore they do not have this disorder, therefore the DSM does not say that asexuality is a disorder. Some people seem satisfied with this, but others do not. I can think of three reasons that one might not consider this sufficient. First, many people are distressed about their asexuality before identifying as asexual, and there is concern for these people. Second, not every condition that can potentially cause distress or interpersonal difficulty is included in the DSM. Including some but not others creates a real asymmetry and a sense of negative valuation (even if not a "mental disorder" label) for those that are included. Many in the asexual community are concerned about mental health professionals who will try to "treat" the asexuality of asexuals who are seeking out therapy for some unrelated issue. Third, as long as HSDD remains on the books, there is fear that the pharmaceuticals will someday get the FDA (Food and Drug Administration) to approve a drug for it (that probably will have small, but statistically significant,
A political question that those challenging the pathologization of asexuality must ask is whether to challenge the pathologization of asexuality only or whether to challenge the pathologization of sexual disinterest more generally. This is an important question because asexuals seem to be a small minority of the people not interested in sex [5]. This question parallels two general approaches I have seen among those supportive of asexuality. The first is to limit the domain of “sexual dysfunction” and to distance asexuality from it. This approach often involves placing strong emphasis on the requirement of distress (e.g., Brotto, 2010) and claiming that some data supports the view that asexuality is not a sexual dysfunction (e.g., Prause & Graham, 2007). Also falling in this approach is a suggestion by Brotto (2010), who proposes adding a comment in the DSM that this diagnosis does not apply to asexuals. The second approach is to question the notion that lack of interest in sex is dysfunctional or to question the very notion of sexual dysfunction. To date, the second of these has not been given much voice from within the asexual community, but there are some outside of the asexual community who have been advocating a similar position (e.g., Tiefer, 2004).

For those favoring this second option, I recommend three approaches:

1. Make alliances with people in and supportive of the New View Campaign (newviewcampaign.org), which focuses on sexual problems rather than sexual dysfunctions and rejects any kind of universal sexual norm.

2. Use asexuality as a wedge for highlighting existing problems with HSDD. This includes the fact that HSDD is such a diverse group, it almost certainly fails Spitzer and Endicott’s (1978) requirement that a disorder be a syndrome rather than a symptom. I know of only a few authors who have even dared to raise this question (e.g., Leiblum & Rosen, 1988), likely because the answer is intuitively obvious and unfavorable for HSDD. However, I would go farther and argue that sometimes lack of interest in sex is a symptom of some disorder, sometimes is “normal variation” and sometimes is an adaptive response to a negative situation (e.g., as a response to relationship problems; see Bancroft, Graham, & McCord, 2001). Another line of argument is to highlight DSM-IV-TR’s (American Psychiatric Association, 2000) absurd suggestion that the difficulty in distinguishing between pathologically low levels of sexual interest and “low normal” levels of sexual interest is the lack of “normative data.”

3. Do qualitative research on asexuals experiences in therapy (for issues related to or unrelated to their asexuality), on people’s experiences of sex-therapy getting treatment for HSDD, and on the effects of this diagnosis in personal conversations and in educational settings. This research is vitally important for asexual endeavors. It is entirely possible that the situation is not as serious as some may think. In any research project, the results virtually always prove more complicated than whatever hypothesis the researcher first had in mind.

Conclusion

The questions of the relation between asexuality and HSDD are likely to remain important to the asexual community and our allies, and there are multiple approaches that can be taken that are worth exploring. Because of the pragmatic issues involved and the lack of available data, caution is needed, as is research on the effects of this diagnosis. Also, it must be recognized that the situation is complicated by the fact that the DSM-5 Sexual Dysfunctions Subworkgroup is proposing to replace HSDD with Sexual Interest/Aversion Disorder (SIAD), possibly splitting it into one diagnosis for men and other for women, [6] and what these changes would mean for the asexual community are unclear. Further, asexual are not the primary group HSDD/SIAD is intended for. Given that there are many non-asexuals who may qualify for this diagnosis, their good must be considered in whatever strategy is taken. There are no easy answers, but it is important to ask the right questions.

References:

[1] I doubt it is possible to go from “in living organisms the heart pumps blood; if the heart does not pump blood the organism dies” to “the heart is for pumping blood” without regarding being alive as normative.)

[2] The difference between (a) and (b) can be seen with homosexuality, which is a dysfunction according to the former, but not the latter.

[3] If asexuality never caused anyone any difficulties, there would be need to discuss these issues, nothing for people to try to figure out, no political goals to accomplish, and thus no asexual community. Likewise, HSDD/ISD were first regarded as disorder in part because of people presenting to clinicians with this issue.
[4] In the US, pharmaceuticals can advertise directly to the general public.

[5] The impression is that most asexuals' have always not been interested in sex, whereas most people with HSDD have not, although I am not aware of any data confirming these impressions.

Rethinking Asexuality as a Disorder | The Asexual Agenda (2012-10-20 18:11:03)

[...] Asexuality shows some superficial similarity with Hypoactive Sexual Desire Disorder (HSDD) in the DSM-IV. It’s a similar situation to when homosexuality was classified as a mental disorder in the 70s. Many asexuals argue that HSDD should be more narrow so as to definitively exclude asexuals. Others argue that the validity of HSDD itself should be questioned. [...]

SI Top 10 #8 - In Pictures: 50,000 March for Higher Education in London (2011-12-30 08:00)

An estimated 50,000 university and college students and academics marched in Westminster yesterday. They were protesting against the raising of tuition fees to £9000 per student per year of study and the cutting of government funding for teaching in the arts and social sciences. Protestors marched down Whitehall, past parliament, before taking over Millbank House, the Conservative party headquarters. Some made it to the roof of the building, being watched by thousands on the ground chanting and burning placards. The media are reporting that this is the largest student demonstration in a generation.

Nina Power has written a brilliant article in the Guardian today about the protests and media response. Read it [1]here.
1. [http://www.guardian.co.uk/commentisfree/2010/nov/10/student-protests-conservative-party-hq-occupation](http://www.guardian.co.uk/commentisfree/2010/nov/10/student-protests-conservative-party-hq-occupation)
Is feminism as a movement no longer indispensable? Is it redundant or too aggressive for contemporary society? In The Aftermath of Feminism Angela McRobbie argues that the contemporary social and cultural landscape (especially in the global North) could be called post-feminist, an era marked by "anti-feminist sentiment".

Through the book, McRobbie explores contemporary society of the United Kingdom and argues that we are currently witnessing a post-feminist condition; a condition that sees feminism taken for granted in the belief that gender equality has been achieved. McRobbie states that feminist values have indeed been incorporated into governmental policies and popular culture, but those values that have been incorporated stem from liberal feminism, which has eroded feminism(s) related to social criticism. McRobbie successfully highlights her argument through exploration of glossy magazines, popular television shows, films like "Bridget Jones’ diary" or the "Ten Years Younger" Channel 4 series, and offers an analysis of how obsession with femininity and middle-class whiteness in popular programmes undermines feminism as a whole.

Slogans such as "woman have made it" or "freedom of choice" are contested by McRobbie, who instead argues that contemporary society has created a 'successful and individualistic female' who is able to compete in education and work as a privileged subject of the gender mainstreaming policies adopted by the UK's New Labour Government. Based on the work of Ulrich Beck and Anthony Giddens, the author draws on the concept of "female individualization", which suggests that the contemporary young woman is now in possession of greater agency allowing her to have an impact on society. McRobbie names this greater female opportunity and choice the 'post-feminism masquerade'. The post-feminist masquerade, she argues, is a new form of gender power which re-establishes the heterosexual matrix in order to secure masculine hegemony. This new form of gender power is particularly insidious, as it takes place under the pretence of "women’s own choice". Furthermore, McRobbie states that the post-feminism masquerade also works as a mechanism of exclusion and helps re-establish colonisation by restoring whiteness as the cultural dominant discourse (69).

To make her point, McRobbie focuses on four key areas: the fashion beauty industry, education-employment opportunities, sexuality-reproduction and globalization. These areas highlight the so-called successes of feminism, whereby women today are able to validate and demonstrate their "own lifestyles choices". However, while women have progressed in education and employment, the global fashion and communication complex make sure that white, masculine hegemony is reassured. In this case, these industries work to re-establish racial hierarchies by undoing multiculturalism – in the case of Black and Asian woman – and, instead, advocate integration and assimilation into white dominant society.

Drawing on Butler’s concept of "illegible rage", McRobbie argues that feminine melancholia is incorporated into current definitions of what it is to be a normal female. In other words, the struggle faced by women in order to represent and emulate the modern woman, well depicted in glossy-fashion magazines has produced a "pathological" young woman (e.g. anorexia, drug and alcohol abuse, mutilation). Such pathology is normalised and glamorised by the fashion industry through extra-skinny and sad-faced models (110).

McRobbie perceives a "movement of women" which she recognizes as a requirement of the contemporary socio-economic system. To contextualize her argument, McRobbie takes the genre of 'make-over' television programmes where women are transformed in order to be full participants in contemporary labour market and consumer culture, especially the fashion industry. Through examining Bourdieu and Butler, McRobbie questions the assumption that social divisions are nowadays increasingly feminised. In a detailed analysis of 'make-over’ programmes she finds that female solidarity is broken along other divisions, such as the global North and South. Such divisions among women are characterised by "intra-female aggression" in a post-feminist climate filled with
competitiveness, bitchiness and violence.

In *The Aftermath of Feminism* McRobbie gives a wake-up call to those who celebrate gender equality and argue that women have achieved the same level of education and work-labour participation (or in some cases better, according to statistics) as their male counterparts. To those who assume that feminism is an obsolete movement, McRobbie presents a well-written work which demands that we pay attention to the inequalities women continue to face. In this case, McRobbie attempts to ‘de-mask’ the masquerade of equality supported by a “gender mainstreaming” discourse.

Regrettably, McRobbie’s argument seems to ignore and in some cases demonize the pleasure that women might actually find in choosing a ‘kind of fashion style’. McRobbie tends to generalize women that enjoy opportunities hard fought for by feminist movements as ‘cultural dopes’ unwittingly subjected by the fashion industry. *The Aftermath of Feminism* is presented in a highly-sophisticated and theoretically complex form leaving room for scholars to further analyze post-feminism and its several representations not only in Britain but also in social arenas around the world.

SI Top 10 #10 - Comics and Censorship: Is It Really about You? (2012-01-01 08:00)

[1]News broke this past Friday of an American citizen arrested by a Canadian Customs officer at the US-Canada border after manga deemed to be child pornography was discovered on his laptop. Although no real children were harmed in the creation of drawn images such as those possessed by this man in his mid-twenties, he faces a minimum of a year in prison if convicted.

The US-based Comic Book Legal Defense Fund (CBLDF) is currently raising funds for his legal defense. This is the second time they have rallied around the legal plight of a private US citizen caught with 'obscene' manga in the past five years. The CBLDF was also involved in the case of Christopher Handley, an Iowa man who ultimately [2]pleaded guilty and was convicted for 'possession of obscene visual representations of the sexual abuse of children'.

It is no secret that some Japanese manga (i.e. comic books) can be pornographic in the extreme and that adult-oriented genres such as [3]lolicon, [4]shotacon, and [5]moé can feature children in sexually explicit—and sexually violent—situations. Even characters who are technically adults are sometimes drawn to look like children, for both stylistic and fetishistic reasons.

And it should likewise go without saying that obscenity laws and the ways in which they are enforced differ from country to country. What is permissible in Japan might not be permissible in the United States, and what is permissible in the United States might not be permissible in Canada (or the United Kingdom, for that matter).

I do not want to argue here about whether or not this manga should be illegal. Hopefully it goes without saying that I think we should be worrying about real children, not cartoons. But I do think that we ought to be talking a
bit differently about these cases because, really, it is not about the comics.

Here's an example of the sort of CBLDF-approved rallying cry you hear amongst fans:

If you are a fan of any manga or anime, if you are a fan of comics, if you have even one comics page, anime clip, or “dirty” picture on your computer, tablet, or phone, this is about you (my emphasis).

I do not mean to pick on this particular blogger here—similar examples have spilled from the virtual inks of the likes of writer Neil Gaiman or been published in the e-newsletters of New York publishing houses—but it's a succinct example of the dominant discourse, which is: This man could be you. Yes, you.

If 'you' are a man who reads comics, then this in fact could be you. By all means, watch out. But if you aren't, and many readers of sequential art in the Western world aren't, then this probably isn't you...even if you happen to read precisely the same comics he does. Over the years I have noticed a distinct pattern: The person facing jail time is always a man, and those who have already been convicted are all white men.

Why? One simple explanation is that white men are more likely to possess pornographic manga. This is possible, but I suspect that something else is also at play here. Why were they even looking through Handley's international post or this latest man's laptop files? Perhaps they thought they had found what they were already half-looking for. Pedophiles, after all, are known to be mostly men, and among those imprisoned for sexually assaulting children, the vast majority are Caucasian. (This, despite the underrepresentation of Caucasians in the prison system generally.)

In other words, I would argue that reading manga as a white man is rather like driving an expensive sports car as a black man. You are always already a suspect in the eyes of law enforcement authority—not because the car or the comics in themselves are necessarily a problem per se, but because your possession of said items seems to indicate, to our prejudiced little minds, far more serious criminality involving the harm of real people. Do not think for a moment that these cases are only about comics and censorship.

Interestingly, Canadian Customs has also garnered a reputation for being especially hostile to materials of interest to the LGBT community. The feminist bookstore Little Sisters endured a series of court cases over what can only be called institutionalized homophobia.

In any case, this brand of prejudice, the attendant possibility of discrimination, and the way discovery of the already-anticipated misdeed becomes a self-reinforcing cycle—these all need to be discussed at length. Furthermore, we need to talk about how our sociocultural anxieties victimize certain groups under certain circumstances. But that discussion won't happen as long as comics fans of both genders and all stripes devolve into telling each other scare stories about how it could have been you.

On the Impossibility of Being Original (2012-01-03 08:00)

[1]

When observing humankind there are two outstanding characteristics that never fail to reveal themselves; the desire to stand out, and the need to fit in. Of course, these are both highly contradictory, as are many of man's traits. Just as we yearn for exciting, novel experiences, while also requiring safe and familiar surroundings, and we desire both lust and friendship in relationships that inherently undermine the existence of both, the struggle for originality, in tandem with that of conformity, is similarly problematic.

In public spaces – especially those of schools and town centres – this process is frequently seen. The sporty types, usually those of football fans, are often together, and are usually the norm by which others in this generation establish themselves around. Whether a sportsman themselves, a casual football fan (of which most Brits naturally become, often without any conscious decision), or just wanting to be part of the group, the number of this type thrives wherever you go in this country. I would argue that by adhering to this overwhelming cultural standard the individuals are still seeking originality, by their endeavours to be the most athletic and most passionate sports person of them all (as is an integral part of sporting culture, on and off the field). But for the purpose of this argument, this – as is often labelled - 'jock' will be used as the cultural norm, of which to become one of is to conform to society.

Against this social standard arrives numerous social groups of which any person tends to fit into. For example, hardcore rock fans (sometimes labelled ‘metal heads’) can still be seen in groups of pierced, tattooed, long-haired, middle-aged men. The artsy types are spotted by their colourful, abstract or often retro hairstyles, make up and clothing (depending on whether they play music, dance or act), and the self-believed intelligent, middle-class, or intensely fashionable (by which I mean those who care and invest immensely into the latest fashion trends) types can currently be identified by knitwear, trousers and other very ‘British’ things. Of course, such groups are not as clearly identified or as stereotypical as I have portrayed, nor are they as simple. However, for the sake of this argument such generalisation is required. So, indeed, society is therefore trying to be themselves, and, against the sporting cultural standard, perhaps they are going some way to achieving this. But, crucially, the fact remains that each 'individual' has still found solace and conformity within its own ranks. The metal head found other metal heads, allowing their behaviours and appearance to naturally gravitate towards an established norm of their own and, therefore, neutralising the uniqueness that was the initial driving force behind their new persona. Seeing others may have even influenced the individual to take on the role in the first place.

If one is to be truly original such negotiation must be avoided; which, perhaps, is an impossible idea. I do not
believe for one second that should a person decide to take on a personality that is rejected by everyone he/she knows that they would persist. What is more likely is that they would tailor their individuality in line with more accepted characteristics; as seen by the modern obsession for unique phone covers and wallpapers for example. The popular mobile phone satisfies the requirement to conform with others, while the colourful, funky cover or personalised wallpaper allows the individual to feel unique. Clothing, music and hairstyle choices (to name a few) – particularly among our current generation of youths – follow a similar trend. Consequently, people’s individual urges and passions hardly ever reach any further than the tattoo, or the slightly more outrageous hairstyle; resulting in a failure to ever break out of the barriers of conformity that control how far one is allowed to go in order to be different. This is the reason why rap music and hip-hop is an infinitely more popular way of speaking one’s mind than poetry is among the youths of today, and why graffiti is the preferred choice of art for young adults. Both of which allow for individual expression while still adhering to the popular social trends of today.

The fact still remains, however, that a person’s individual ideas and thoughts can survive this cultural scrutiny as they are not easily seen, and therefore judged, by others. In this sense, within one’s own mind, true originality perhaps can be accomplished. It is when such ideas are put into practice that their individuality and – I would argue – true ‘value’ is compromised. It takes a special, and indeed very rare, type of person to keep faith with and demonstrate one’s views in a room full of those that think the opposite; and an even rarer type when the opposition is fuelled with hatred for, or is motivated against, those views. I have lost count of the number of times I have remained silent or renegotiated my response in times of disagreement or – which is usually the case – naivety or ignorance on the part of others. That is not to say that one’s individual thoughts are not often naïve or misunderstood also, but if it is truly one’s unaltered viewpoint then they should be, at least partly, commended.

It is therefore apparent that originality, particularly through actual human behaviours – crucially, the only avenue for such ideas to be applied anyhow - perhaps does not, and cannot, exist. The important conclusion that should necessarily be underlined is that every being, I feel, is indeed fantastically original, but painfully deprived of other, equally as inherent, qualities that are needed to realise and convey such expression. Particularly through one’s own cognitive conflicts, our inevitable consciousness of others and, more importantly, their moral judgement, and the humanistic need to navigate our true selves in line with others, this struggle is highly visible. In essence, we are programmed to gain acceptance from, and model, others. Consequently, our own desires, beliefs and, in turn, our actions must be compromised. Indeed, civilisation would perhaps not be able to function without this process.

Through a sociological lens, I believe this battle for true individual expression can be further explored and, potentially, swayed; such is the power of social structure and its effect on our innate selves.

On The Impossibility Of Being Original – A Sociological Perspective | The Sociological Imagination (2012-05-02 08:01:03) [...] is a follow up to this earlier [...]
In this video, Surrey psychologist Dr Peter Hegarty discusses whether sex offenders and lads' mags are talking the same language. His findings shed a rather worrying light on the rise of lad's mags in the UK culture. How could we respond to this? Should we respond to it? Are these just the chance findings of one study? Or does it shed a light on the broad effects which the mainstreaming of soft core pornography is having on young men in the UK?

Imagining the human: new media tools (2012-01-05 08:00)

This is something about which you could only dream in the 1980s (and we did dream of it): being able to see how a human being changes through the years. Not that it was impossible, but it belonged to the realm of professional photography and required the resources, skill, and patience that very few could afford. Now that many have access to digital cameras and computers, it is possible, and less skill and patience is needed. Yet how many of us - just humans, and sociologists in particular, are taking advantage of the new tools?

Here are two lovely examples:

2. http://www.youtube.com/embed/1llHXUFdrl
A quick flag up to any interested readers that the Sociology Department at the University of Warwick now has a blog and twitter feed. Although Sociological Imagination has no formal connection to the department, a number of people involved in the site are based there & many of the SI podcasts have been with academics in the department. So do check it out!

(Also out of interest does anyone know of other UK sociology departments that have blogs? If so please let us know either in comments below or via e-mail. Thanks!)

4. mailto:mark@markcarrigan.net

Our readers favourite sociology & theory quotes (2012-01-07 08:00)

Just before Christmas we asked readers on Twitter for their favourite sociology and theory quotes:

"The tradition of the oppressed teaches us that the "emergency situation" in which we live is the rule." - Walter Benjamin (from @Rykalski)

"The old world is dying, and the new world struggles to be born. Now is the time of monsters." - Gramsci (from @mark_carrigan)

"Whatever sociology may be, it is the result of constantly asking the question, what is the meaning of this?"
C. Wright Mills (from @Dunk_West)

"Ass hat" - @TroyMcGinnis (from @SociologyGirl)

"Reflexiveness...is the essential condition, within the social process, for the development of mind" G.H. Mead (from @Dunk_West)

"All that is solid melts into air, all that is holy is profaned...man is...compelled to face...his real conditions of life." Marx (from @Cybernoelie)

"The risk climate of modernity is thus unsettling for everyone: no one escapes." Anthony Giddens (from @ChrisOrbit-group)

What are your favourite quotes? tweet [2]us or [3]e-mail and we’ll compile them in a few weeks

3. mailto:mark@markcarrigan.net

Who is Barack Obama? (2012-01-09 08:00)

I’m someone who is far from sympathetic to postmodernism, seeing it as, at best, mildly interesting observations couched in a silly insular language and, at worst, reactionary attitudes presenting themselves as radical intellectual chic. Yet I find it difficult to watch a video like the one below and not feel compelled to go running back to Baudrillard. News just in: the President swatted a fly! Isn’t that cool? Well, to be entirely honest, I think it is. Or at least I did when I first saw the video. Yet I also find it absurd that I had that reaction. Even more so the fact that this act (so fitting for a POTUS who chose the [1]Secret Service codename Renegade) was covered so widely in the media. So what’s going on?

IFRAME: [2]http://www.youtube.com/embed/ORZ00OyKp0I
In his book [3]The Obama Syndrome: Surrender at Home, War Abroad Tariq Ali, the 'urbane, Oxford-educated polemicist', sheds some light on these questions. This short book, which has the air of an essay project which spiralled out of control once Ali got writing, has a twin focus: the underlying continuities which can be witnessed in Obama’s domestic and foreign policy, in relation to what went before, as well as the spirited and incisive attempts made by the administration - and its defenders - to present these continuities as anything but. Ali’s writing is, as always, thorough and pointed, continually substantiating his claims without losing the flow of his polemic. However he is at his most adept when it comes to picking apart the prevailing narratives about the President which abound in the contemporary United States:

"on Fox television and right-wing radio, where these venues’ shallow, coarse and swaggering rabble regularly present Obama as a ‘socialist’ who is soft on Islam, not sufficiently pro-Israel, and may not even have been born in the United States and therefore may even be an ‘illegal president’ but in any case certainly remains an out-of-control radical. If only. None of the right-wing hysteria bears any relation to reality."

But we know all this, don’t we? Obama himself tore this idiocy apart with genuinely impressive comic timing (another example of how cool Renegade is) at the 2011 White House Correspondents’ Dinner:

If we reject this view, it still begs the question of who Obama is and how he fits into the current politics of the US. Ali also takes aim at the common liberal doxa of Obama as an (overly?) consensus-orientated politician, a good and intelligent man in a wicked and corrupt system:

"The portrayal of Obama as a good man in a bad world is no more convincing. The argument that compromises are sometimes essential to achieve limited progressive aims is correct. The problem is that
Obama, while an extremely intelligent human being, is not a progressive leader by any stretch of the imagination. Wishing that he were is fine but does not bring about the required transformation.

In reality, Barack Obama is a skilful and gifted machine politician who rapidly rose to the top. Once that is understood there is little more about him that should surprise anyone: to talk of betrayal is foolish, for nothing has been betrayed but one’s own illusions.

So if neither of these prevailing views are correct then who is Barack Obama? The difficulty of answering this question is why I presaged this post with a couple of sentences about postmodernism. We know Obama, intimately, yet we don’t. He’s written a genuinely engaging, multi-million selling memoir. He’s done talk show appearances (complete with all-too-human gaffes) in a way no other President has done. Yet the man is a chimera, an empty signifier onto which an entire country’s dreams and nightmares can be projected. It would be naïve to think that Obama, as well as his team, are anything other than intimately aware of this fact. Nonetheless, the question remains: who is Barack Obama? I can’t answer that question. Nor can Tariq Ali. But he does compile some interesting quotes from former acquaintances of Obama when he was embedded in the brutal machine politics of Chicago. While not answering the question, they left me with the thought that the answer lies in the memories of those who knew the man behind the renegade in his earlier career:

"He’s a vacuous opportunist. I’ve never been an Obama supporter. I’ve known him since the very beginning of his political career, which was his campaign for the seat in my state senate district in Chicago. He struck me then as a vacuous opportunist, a good performer with an ear for how to make white liberals like him. I argued at the time that his fundamental political center of gravity, beneath an empty rhetoric of hope and change and new directions, is neoliberal." - Adolph Reed, African American scholar and activist

"Barack leaned over and stuck his jagged, strained face into my space and told me in an eerie, dark voice that came from some secret place within the ugly side of him, 'You embarrassed me on the Senate floor and if you ever do it again I will kick your ass!' I said, 'What?' He said, 'You heard me, [expletive], and if you come back here by the telephones, where the press can't see it, I'll kick your ass right now!' - Rickie Hendon, African American politician during Obama’s time in the Illinois state senate.

"’It’s amazing how he formed a black identity,’ Rush said, rising from his desk and starting, theatrically, to sashay across his office, mimicking Obama’s sinuous walk. ‘Barack’s walk is an adaptation of the strut that comes from the street. There’s a certain break at the knees as you walk and you get a certain roll going. Watch. You see?’ Rush laughed at his own imitation. ‘And he’s the first president of the United States to walk like that, I can guarantee you that! But lemme tell you, I never noticed that he walked like that back then.’" - former Black Panther Bobby Rush who beat Obama in a 2000 congressional primary.

Spotlight on Asexuality Studies (2012-01-10 08:00)

"Spotlight on Asexuality Studies" was a groundbreaking event hosted by the Identity Repertoires/Mind the Gap research group in the Department of Sociology at the University of Warwick, UK. Academics, activists, community members, therapists and students gathered in the university library and online to discuss contemporary asexual research, with papers presented both in-person and from the United States and Canada via video-conference.

For more information about the event, see the [1]website.

If you're interested in asexuality, take a look at some of the posts in the archives.
New 'iconic' image of 9/11? Photographs and meanings (2012-01-11 08:00)

A newly popularised photograph from the bombing of New York on 9/11/2001 has caught the attention of the media and the public. The image, taken by photographer Thomas Hoepker, has stirred up controversial opinions. Perfect example of the ambiguity of images: never take an image for granted.

Do 'prestigious' journals make academics lazy? An unlikely parallel with the art world (2012-01-12 08:00)

In a [1] recent book economist Don Thompson explores the crucial role that branding has in the contemporary art market. With the market skewed by an influx of the ultra-rich seeking something to do with their money, a strange dynamic emerges. As the author was told by a former specialist at Sotheby's auction house, you should "never underestimate how insecure buyers are about contemporary art, and how much they always need reassurance". This widely recognised, though little discussed, characteristic of the contemporary art world massively expands the power of brand name auction house, galleries and collectors. The obscenely wealthy but time-poor rely on such brands to guarantee the virtues of the art they invest in, assuaging the insecurities about their purchases which are only sustained because "they are not willing to spend the time required to educate themselves to the point of overcoming insecurity".

For instance, as the author observes, "[2]Larry Gagosian's clients can simply substitute his judgement or that of his gallery for their own, and purchase whatever is being shown". How different is this from the prestige conferred upon an academic publication by its inclusion within a well-respected journal? Simply denigrating the lack of taste shown by ultra-wealthy art collectors misses the point. Unless one wishes to descend into facile subjectivism (or conversely argue that his corporate operation indelibly corrupts his aesthetic judgements) it stands to reason that Gagosian's judgements do function, as well as pretty much anyone's could, as a cypher for distinction. It's perfectly possible some complete crap occasionally finds its way into his galleries but, in terms of the unavoidably intersubjective normative standards which prevail at a given point in time (and which everyone must engage with even if they reject them) his judgements will tend to point to high quality work. Similarly, rigorous blind peer-review, conducted by a pool of top academics, within the traditions of a long-standing and well respected journal will tend to identify high quality papers. In both cases the additional competition which prestige generates, as many try to occupy a space which can only hold a few, entrenches this capacity to bestow a perceived distinction.

In both cases the task of filtering, sorting a range of cultural products in terms of their quality, takes place through bureaucratic processes. Particular institutions become able to invest cultural products with the feel of quality, a process which sits elusively between genuine normativity and contingent power, tending towards success in its aims but also shaping the wider social context within which such 'success' can be judged. Within the art world "the dealer brand often becomes a substitute for, and certainly is a reinforcement of, aesthetic judgement". Is it the case that within the academic world, inclusion in a prestigious journal becomes a substitute for, and certainly is a reinforcement of, intellectual judgement? As a thought-experiment: how would academic life differ if these status hierarchies weren't available to help us navigate the knowledge system? How would we respond? I suspect that activities which are already everyday features of the academic world (particularly dialogue and debate within communities of practice) would take on a newfound importance. What else would be different? Answers on the back of a postcard please.

Universities cashing in on library fines (2012-01-13 08:00)

Universities across the UK have collected almost £50m from fining students for overdue library books in the past six years, the Guardian reports.

Some of the top universities, who have accrued the most money from overdue books, include Leeds University, Manchester University and the University of Wolverhampton. Exact figures for the top ten fine raising universities are as follows:

**University of Leeds** – £1,869,340  
**University of Manchester** – £1,299,342  
**University of Wolverhampton** – £1,252,253  
**King’s College London** – £1,197,715  
**University of Hertfordshire** – £1,147,238  
**University of Birmingham** – £1,114,863  
**University of Plymouth** – £1,058,777  
**University of Nottingham** – £1,025,560  
**Kingston University** – £1,020,753  
**University of Durham** – £1,005,426

With university library fines as little as 10p for each day a book is overdue, it demonstrates the growing tendency for students to return books library books late. Worse still, many books are never returned – more than 300,000 university library books remain unaccounted for.

Some of the worst offenders include Bucks New University, Oxford University and the University of Kent. The top 10 universities with the most unaccounted for library books were:

**Bucks New University** – 30,540  
**University of Oxford** – 20,923  
**University of Kent** – 19,613  
**University of Sunderland** – 17,650  
**University of Teesside** – 15,815

Recognising the people who make it all work (2012-01-16 08:00)

In a recent [1]article in the Times Higher, the registrar of the University of Nottingham calls attention to an important and often overlooked dimension to the politics of the UK government’s higher education ‘reforms’: the role of support staff. As pro-marketization ideologues clamour for the out sourcing out of ‘back office’ services to private contractors, the people who perform these roles, often deeply entrenched in their home institutions, are treated as the most easily replaceable cogs in University PLC. He suggests that this reflects a wider under appreciation of a large swathe of the university’s staff:

Too often, their somewhat anonymous roles mean that they are treated as third-class citizens in the university context. Because they are out of sight and largely out of mind, most people really don’t know what they do; as a consequence, it becomes much easier for others to write them off and offer them up as the first to be sacrificed when cuts have to be made. Back-office staff do not have an obvious income line and can easily be regarded as expendable. The attitude is resonant of the Victorian view of those "below stairs". This perception (or lack of perception) is unhelpful, and not terribly good for morale - particularly among those who are so casually dismissed as being "just back office".

Furthermore, it suggests that such staff have no role in the 'front line' operations of the university. This is patently absurd. Such 'front line' operations are endlessly reliant on 'back end' staff. To such an extent that teaching and research couldn’t function without them and the entire dichotomy is revealed as misleading. As he writes:

But in any position, people - whether they are employed by a university or by a private-sector company - must be treated properly. Universities are special places. Interactions with and understanding of academic staff and students are a key part of every job throughout the organisation. Lock people away in the back office and they might as well be working for a paper wholesaler in Slough.

In a theatre, the front-of-house and back-of-house personnel have different roles and different talents; nonetheless, all are vital in supporting the performance. In universities, all professional services staff, whether in direct contact with academic staff and students or not, contribute to institutional success. Casual talk of outsourcing or downsizing back-office functions undermines this contribution.

So please choose your words carefully. Better still, let’s just ban the term "back office".

Here at SI we agree completely. But let’s not just ban the term ‘back office’. Let’s also make more of an effort to recognise the hard and sometimes thankless work of those whose skill and diligence daily prevents the intrinsically chaos-prone institutions that are universities from spiralling into chaos.
Hip-Hop or Shakespeare? (2012-01-17 01:24)

I realise this won’t be to everyone’s tastes but, given how fascinating I found it, I couldn’t resist posting it up. Three of the most talented young artists outside the mainstream gathered last year at the British Library to discuss the ills and myths of contemporary Hip Hop. Even if this isn’t a style of music you like, it’s worth listening to the discussion simply for the plethora of sociological insights it offers into youth culture, gang violence and the intersections of capitalism and music.
I needed to share this blog post, "The Sociology of Hip Hop | The Sociological Imagination" along with my own buddies on facebook or twitter. I only desired to pass on your great posting! Many thanks, Damion

Tending your 'ideas garden' (2012-01-18 08:00)

Do you value your ideas? If you’re reading this website then chances are you answered ‘yes’ to that question. Yet unless you record all your ideas I’d argue that you don’t value them. At least not as much as you could. It’s a difficult habit to acquire and it can be time-consuming. But technology is making it so much easier. If you have a smart phone, use twitter or blog then you have easy outlets for both recording your ideas and making them publicly available.

In the appendix to Sociological Imagination, entitled On Intellectual Craftsmanship, C. Wright Mills advocates keeping a file or journal within which to record your ideas. He argues that doing so:

encourages you to capture ‘fringe-thoughts’: various ideas which may be by-products of everyday life, snatches of conversation overheard on the street, or, for that matter, dreams. Once noted, these may
lead to more systematic thinking, as well as lend intellectual relevance to more directed experience...

by keeping an adequate file and thus developing self-reflective habits, you learn how to keep your inner
world awake. Whenever you feel strongly about events or ideas you must try not to let them pass from
your mind, but instead to formulate them for your files and in so doing draw out their implications, show
yourself either how foolish these feelings or ideas are, or how they might be articulated into productive
shape.

So why not start? Tools like [1]Posterous or [2]Tumblr can be great places for ‘online scrapbooks’ or ‘ideas gardens’. Though of course not all our ideas are good. But I take Wright-Mills to be saying that it’s only through recording our ideas in such a file that we become able to properly evaluate them and that, in doing so, we learn to keep ourselves intellectually alive.

[3]

Deborah Lupton (2012-06-22 08:25:24)
I agree that when you have an idea, it should be written down. Most pieces of writing, big or small, can be used for something, now that there are so many ways of sharing ideas. I keep a document on my computer in which I jot down ideas for writing, whatever form this may take, as soon as these ideas come to me. As these ideas grow, I make separate documents for each one. Some will result in tweets, some in blog posts, some in journal articles, some in books.

Are you interested in being a Postgraduate Forum Convenor for the British Sociological Association? (2012-01-20 08:00)

[1]
Are you interested in being a Postgraduate Forum Convenor?

Our existing team work together to make sure that student members of the Association are kept up-to-date with matters of specific interest to them. They will also facilitate contact between student members and the BSA Council. In return for their hard work and dedication.

Postgraduate Forum Convenors are offered a free place at BSA events and all travel expenses are reimbursed.

The Convenors’ tasks include:

- Circulating information to other postgraduates via the PG Forum email distribution list
- Maintaining the PG Forum pages of the BSA website & the Facebook fan page.
- Supporting and hosting PG Focus podcasts
- Making contributions to Network
- Assisting with the processing of BSA Support Fund applications by joining the panel of members who grant awards from the Fund
- Helping organise the Postgraduate workshops/events at the BSA Annual Conference
- Representing the interests of Postgraduate members at Council meetings

Since the PG Focus podcasts were launched to great success in 2009, they have become an increasingly important part of the PG Forum activities. We are therefore particularly interested in having someone join us who has knowledge about, or an interest in learning, skills relating to the compiling, editing, uploading, and online maintenance of the blog and PG Focus podcasts.

The successful applicant will work with current convenors to become proficient at assisting with the online and media aspects of the PG Forum’s activities. The new convenor(s) will also share other duties, including attending on average one Council meeting and two PG Forum meetings per year; quickly and efficiently dealing with email correspondence regarding Support Fund applications and other business; overseeing the organization of a session for the PG Day and spearheading new initiatives that will benefit the PG Forum community.

While the time commitment for this role is flexible, with responsibilities shared between convenors, and the workload varies over the year, applicants can expect to devote between 4 and 16 hours per month to PG Forum responsibilities.

If you have questions about what being a convenor entails, please contact us at PGForum@britsoc.org.uk

Include a letter explaining why you think you are suitable for this role.

Zygmunt Bauman on How to Survive Death (2012-01-21 08:00)

Zygmunt Bauman will be keynote speaker at this year's [2]British Sociological Association conference in Leeds this April. He will also speak to postgraduates at the BSA Postgraduate Day which is the day before the start of the main conference. There will also be a number of showings of the [3]Bauman documentary at the conference.

1. [http://www.youtube.com/embed/NWaOqThdAs4](http://www.youtube.com/embed/NWaOqThdAs4)
2. [http://www.britsoc.co.uk/events/conference/](http://www.britsoc.co.uk/events/conference/)

Why does the link related to Bauman’s documentary take me to a website about running and foot therapy, but not to a page that has something to do with the documentary?

Because you're looking at a post from 2 1/2 years ago and, as much as it may stun you to learn this, web pages don't stay online for ever.
Sociology@Warwick (2012-01-22 08:00)

A quick flag up to any interested readers that the Sociology Department at the University of Warwick now has a blog and twitter feed. Although Sociological Imagination has no formal connection to the department, a number of people involved in the site are based there & many of the SI podcasts have been with academics in the department. So do check it out!

(Also out of interest does anyone know of other UK sociology departments that have blogs? If so please let us know either in comments below or via e-mail. Thanks!)

4. mailto:mark@markcarrigan.net

Nick Crossley on Relational Sociology (2012-01-23 08:00)

In this podcast Mark Carrigan talks to Nick Crossley about his recent book Towards Relational Sociology. The interview covers relational sociology, interdisciplinary approaches to social theory, the future of social theory and the contested status of quantitative methods.

Prickles and Goo (or Quals versus Quants) (2012-01-25 08:00)

A new video of an old talk by philosopher [1]Alan Watts (1915-1973) perfectly illustrates the falsity of the quantitative vs qualitative sociology divide:

[EMBED]

The best of Sociological Imagination (2012-01-26 08:00)

Check out what we’ve been making with Bundlr, a new online curation tool:

- [1]The Sociological Imagination
- [2]Public Scholarship and Private Commitments

What do you think? We’re still in the early stages of figuring out Bundlr but expect to see much more of these. We’d also like to get more people involved in the curation: themes to be suggested by readers and then curation for a bundle on that theme would take place through open-ended collaboration?

Our most popular posts in January (2012-01-27 08:00)

1. [1]Charles Wright Mills’ Sociological Imagination and why we fail to match it today
2. [2]Who do you think you are, Richard Sennett???
3. [3]A Mexican, a Kiwi and a Nigerian walk into a bar... a dose of (sociological) Xmas humour
Social Class and Educational Aspiration (2012-01-27 10:07)

The BSA postgraduate forum is sponsoring an event of Social Class and Educational Aspiration for postgraduates involved in this area of research. The Conference and Workshop will be hosted by the University of East London on Tuesday 20th and Wednesday 21st March 2012. The event is structured around five keynote lectures by leading social class and education academics alongside two tutorial PhD workshops, conducted by the academic speakers. Conference abstracts are sought from 18 postgraduates; eight of whom will be selected to give a 20 minute talk and the rest will be invited to give a poster presentation. There is an option to only give a poster presentation but you must still send an abstract. It is intended that the conference theme is interpreted widely, however the following themes in relation to social class are of particular interest:

- Educational aspiration,
- Educational attainment/achievement,
- Access to higher education,
- Recent changes in educational policies,
- Theoretical and methodological discussions on social class and education.

If you are interested in taking part in this event please see [1]http://www.britsoc.co.uk/events/postgrad.htm for further details on how to apply. You will need to complete the application form and write an abstract of no more than 250 words on how your research demonstrates a sociological and/or educational critical engagement with
social class and education – in particular educational aspiration.

If you have any further queries please contact Jenny and Tamsin at: [2]sceaevent2012@gmail.com. The deadline for applications is Monday February 6th 2012. Please note that this event is free for all participants who are BSA members and £25 to all non-BSA members. All participants are expected to be present for the full two days.

Are you interested in being a Postgraduate Forum Convenor for the British Sociological Association? (2012-01-28 08:00)

Are you interested in being a Postgraduate Forum Convenor?

Our existing team work together to make sure that student members of the Association are kept up-to-date with matters of specific interest to them. They will also facilitate contact between student members and the BSA Council. In return for their hard work and dedication.

Postgraduate Forum Convenors are offered a free place at BSA events and all travel expenses are reimbursed.

The Convenors' tasks include:

- Circulating information to other postgraduates via the PG Forum email distribution list
- Maintaining the PG Forum pages of the BSA website & the Facebook fan page.
- Supporting and hosting PG Focus podcasts
- Making contributions to Network
- Assisting with the processing of BSA Support Fund applications by joining the panel of members who grant awards from the Fund
- Helping organise the Postgraduate workshops/events at the BSA Annual Conference
- Representing the interests of Postgraduate members at Council meetings
Since the PG Focus podcasts were launched to great success in 2009, they have become an increasingly important part of the PG Forum activities. We are therefore particularly interested in having someone join us who has knowledge about, or an interest in learning, skills relating to the compiling, editing, uploading, and online maintenance of the blog and PG Focus podcasts.

The successful applicant will work with current convenors to become proficient at assisting with the online and media aspects of the PG Forum’s activities. The new convenor(s) will also share other duties, including attending on average one Council meeting and two PG Forum meetings per year; quickly and efficiently dealing with email correspondence regarding Support Fund applications and other business; overseeing the organization of a session for the PG Day and spearheading new initiatives that will benefit the PG Forum community.

While the time commitment for this role is flexible, with responsibilities shared between convenors, and the workload varies over the year, applicants can expect to devote between 4 and 16 hours per month to PG Forum responsibilities.

If you have questions about what being a convenor entails, please contact us at PGForum@britsoc.org.uk

Include a letter explaining why you think you are suitable for this role.
Deadline for applications: 1 March 201

Add SI on Twitter and Facebook (2012-01-29 08:00)

This is a reminder that the Sociological Imagination has a presence on facebook. Please do add us as a friend and feel free to get in contact. We’re always open to ideas and suggestions so please don’t hesitate if there’s anything you would like to say!

Breaking the ‘Fukuyama taboo’— a journey through the global crisis with Slavoj Žižek. (2012-01-30 08:00)

Love him or hate him, Slavoj Žižek is no ordinary thinker, with a reputation for his always provocative and take-no-prisoners approach to social analysis. In an interview for Al-Jazeera released at the end of the year just passed, the Slovenian philosopher takes the audience through an intellectual journey across the momentous changes and the subsequent upheavals that have shaken the global financial and political system. As ever, his analysis is controversial and yet fascinating. It starts from the protests movements, and goes on touching the widest possible span of issues, from the Israeli-Palestinian conflict to the rise of China, challenging our understanding of the world order as we (think we) know it.

In the wake of the most severe global crisis of our times, Žižek suggests that the much needed ‘revolutionary change’ will not come about in the form of a miraculous solution. Change is already taking place, and it is manifesting itself though the growing, fast-spreading awareness that the difficulties we are all confronting are neither temporary nor compartmentalised. The current global issues have not been merely caused by some bad, greedy guys operating in an otherwise good system—they are part and parcel of the system itself, and the recent protest movements have clearly shed light on this. Hence, what really matters in this specific conjuncture is not to find fast solutions, but to break what Žižek calls ‘the iconic Fukuyama-taboo’ — the so far largely unquestioned “unabashed victory of economic and political liberalism” and its assumed irreplaceability.

From this angle, the very remarkable achievement of the protests lies in the way in which they have exposed how the system is not simply ‘faulty’ and needing fixing but, rather, it is likely to implode— because it has lost its self-evidence and ‘automatic legitimacy’. This is why, in Žižek’s view, it is beyond the remit of protest movements such as ‘Occupy’ to make realistic demands or to suggest for stable solutions to the global crisis. Their truly revolutionary aim has been fulfilled: they have removed the lid of one of the most cumbersome Pandora’s boxes of our age—they have revealed the limits of the “End of History”, and released a large flux of energy of protest in this way. However, Žižek concludes, what the future has in store for us is uncertain, because it will depend on the result of the final and most difficult of the battles — the struggle for who will appropriate such great energy.
Has the snow revolution donned a mink coat? (2012-01-31 08:00)

Elena Omel’chenko and Nastya Min’kova, MYPLACE team members at Centre for Youth Research, Higher School of Economics (St Petersburg) on the latest from Russia’s ‘Snow Revolution’ (27th December 2011)

This article was initially posted to the [1]MYPLACE blog. For more information on the MYPLACE project, follow them on [2]Twitter or visit the project’s website: [3]HERE

The snow revolution in Russia continues. The pro-Kremlin movement activists are still searching for evidence of the involvement of the US State Department and the residents of Russia’s cities are attending protest meetings for the third Saturday in a row. Among them are many young people. Among them are many who regularly engage in street politics. But among them too are many who have never taken to the streets before. The following blog collates links to all communications about protest meetings in Russia and abroad which took place on 24 December:

50-100,000 people gathered. The figures provided by the city police and the by the meeting’s organizers vary significantly and this has become the source of much humour. The web columnist (at ru.net), Aleksandr Plushchev, published in his blog photographs of various events from Sakharov Square ([6]http://www.flickr.com/photos/plushev/6564495887/). In the first case, the police estimated that there were more than 50,000 participants of the pro-Kremlin movement ‘Nashi’ while in the second, they claimed there were 29,000 participants at the opposition meeting.

The Moscow protest set the town for people’s creative input. Many placards took up the theme of ‘Putin and his condoms’ because, a day earlier, the Prime Minister had likened the white ribbons, which have become a symbol of protest against the dishonest elections, to contraceptives. On the 15th December, during a live TV broadcast and in response to a question about whether the ribbons might become a symbol of a new ‘colour’ revolution, Putin said: 

On the tide of these feelings, there appeared on the official Russian prankster site, a recording of a conversation conducted by the prankster nicknamed Vovan222 with the head of the Central Electoral Commission, Vladimir Churov. The young man introduced himself as a well known Kremlin official and, on behalf of the ‘twins’ [Medvedev and Putin], told Churov he had been sacked. Judging by the conversation, the prank worked; Churov, whose responsibility it was to deliver the vote count at the elections, believed he had been fired. The audio file was quickly disseminated via the diaries of Live Journal contributors ([8]http://www.livejournal.ru/themes/id/42793?from=twitter ). The authorities have responded already; some representatives of the Presidential administration have called people attending protest meetings ‘sympathetic’ or ‘worthy’. And recently Putin’s deputy, Sergei Ivanov, declared recent events to indicate ‘genuine freedom of speech’ in Russia. However, despite the protestors finally having been noticed, and even shown on central TV channels (previously the subject had been ignored), the authorities remain deaf to their demands. Dmitrii Medvedev has promised the people that he will restore some of their power to elect regional governors, but so far nothing more.

3.2 February

Tales of Christmas past #1 The Invisible Christmas (2012-02-01 08:00)
The building looked different to how I’d seen it previously.. that is before the guests had arrived. The hall was large and it was the only area that both guests and volunteers had access to. In the corner a TV blared. Groups of tables and chairs were set out, next to areas for clothing distribution and a hatch were guests were given hot drinks and food. Bowls of crisps, sweets and biscuits were everywhere. This felt slightly odd. Creating a party atmosphere was perhaps well intended but seemed a little disingenuous to the reality of the circumstances.

Regardless of the training sessions I’d attended I felt apprehension. The situation, we had been warned, could be unpredictable. Violence sometimes occurred but this was usually outside and between guests. The biggest threat was overdose. The year before a guest had died at the shelter on New Years Eve. Although beds were checked every 15 mins the wheezing ‘or death rattle’ had not been identified in time. Most guests I’d been told, had been philosophical about this. ‘He had died with a warm meal inside him in a safe bed surrounded by his mates’. ‘God bless’ they wrote in the art workshop the next day.

I was working front of house – so this meant companionship, tea fetching and board games although my first official task was toilet duty. Drugs and alcohol were not permitted but addiction, I witnessed, was a relentless master. Toilet checks were performed under the neon lights every 15 minutes for substance use, overdose or other illicit activity. There was no real bother on any of my shifts.

The volunteers were plenty. They outnumbered the guests on some evenings and encompassed a wide range of people. Food was donated generously, was in excess at times and of top quality. Some of Bristol’s best chefs were doing shifts in the kitchen. Three meals a day were given out, sweets crisps and biscuits in-between and the shelter tried to ensure that no one was turned away from the 50 beds available. Most guests moved in and stayed for the two week Christmas period. This was usually the most stable place they had been for the entire year normally moving on every night.

The guests were of all ages, and came from all walks of life. Some were local residents who were alone at Christmas and wanted company. Some were 'hidden homeless' – who survived by kipping on mates sofas and gave their usual hosts a break over the festive period. Most though were homeless the year through and stuck in unbreakable cycles of addiction, unemployment, mental health illness and prostitution.
It was a Christmas bubble. We all knew that the situation wasn’t real. That nothing would change. But for those two weeks of the year, life was made more bearable for the guests. Jokes were exchanged, games were lost and won. Second hand clothes were traded. Tea was drunk and songs were sung.

It was difficult to see how some of the guests had ended up there. Clever, funny, personable, educated. Others illustrated the miserable and mostly hopeless reality of those living in the grip of addiction. Missing person cards were handed out to us at the beginning of the shift in the hope that amongst the guests a specific friend or loved one could be identified. Occasionally people were recognised, but often they didn’t want to be found ‘Give them the message I’m alright’ They would say.

Nicholas was seventeen. He had problems with his family and at school and had been crashing on mate’s sofas for over a year. The first thing I noticed about him was how clever he was. If he was engaged in something he was really bright. He would win at nearly all the games he played and would teach others. He was extremely patient at my totally inability to pick up a lot of the games we played. Nicholas didn’t have an obvious class A or alcohol addiction (although I’m not medically qualified to make any kind of assessment especially given it was only three shifts I volunteered). He talked about wanting to go to college and said he spent most of his time smoking weed. I saw so much potential there. Don’t drop anchor here, I thought.

Edward and Rosa seemed to be a couple - both alcoholics. They were in their forties would have once been well dressed had it not been for the dirt and tatter of their clothes. I found them the most difficult to sit with. He would insult her constantly, both to her face in front of other people. A consistent barrage of verbal abuse. She had swollen ulcers on her hands and feet – infected track marks. She seemed indifferent to the constant degradation.

Alan scared me. He was very tall, he may have been in the forces once. He observed the room and stood apart from everyone. He was always watching. Always looking for an opportunity, assessing the power relationships and dynamics in the room. Street life teaches you a different set of survival skills. There was something intimidating which overwhelmed me yet in a flash it was gone and he was crying like a baby.

Ricardo was from Brazil. I spent my first evening almost exclusively with him. He was in his twenties. He was a rent boy – and extremely distressed. I held his hands as he cried for hours. He told me stories of life on the streets, of rape. Of concerns over HIV and the stigma amongst homeless communities about homosexuality. He had been a dancer. He delighted at dressing up and ransacked the clothing piles for fuchsia fur coats and sequin handbags which quickly got traded for cigarettes and other favours. The only thing I could do was be with him and see him and hear him for who he was and what he had been through. He cried so many tears that night. I really felt that I had helped. The next day I was happy to see him again and bounced over to catch up on how he was doing. He didn’t remember me.

It was a year ago I volunteered. I know I helped but ultimately found it hard to feel good about my contribution. The shelter was over staffed – some shifts even had waiting lists. Food flowed as did the goodwill to almost obscene amounts...what a lot of Christmas spirit... But where are we the rest of the year I wondered? The shelter struggles to find staff outside of Christmas. Sure. A brief respite from the trauma and danger of life on the street, but the ‘guests’ in reality were lost. This was a bitter pill to swallow. The experience stayed with me but it was a good lesson. Anyone can be homeless. Anyone can be the victim of abuse or suffer mental illness or become an addict. And it happens all year round. I decided that it’s more important to contribute in a way which were sustainable and longer term. But I guess most of us didn’t get around to being that altruistic yet.

There are other stories from the shelter of course, but its Christmas and there is shopping to be done and I guess you won’t have much time to read them all.. I’m lucky that I get to choose not to be at the shelter this year. I’ll never forget my experience. I’d like to think that the same ‘guests’ will make it through to 2012 but then ....I will
A round up of recent social media & academic publishing articles (2012-02-02 08:00)

2. [2] The advent of online dissemination techniques allow academics to focus just on developing great ideas, without needlessly trying to play the system
3. [3] Five minutes with Conor Gearty: “It is very frustrating that my online project The Rights’ Future counts for nothing in my professional life. It is not teaching; it is not scholarly research; and it does not have impact”.

What are universities? (2012-02-03 08:00)

Note the date...

Up to now the universities have been the secular refuge of mediocrity, the salary of ignorance, the safe hospital for all intellectual invalids and—what is even worse—the place where all forms of tyranny and insensitivity
found the chairs where they could be taught. The universities have thus become faithful mirrors of these decadent societies which offer the sad sight of a senile immobility. That is why science, facing these closed and shuttered houses, remains silent or mutilated and grotesque, merely serves bureaucracy. When in a fleeting period of liberalism the university opened its doors to some loftier minds, it very soon repented and made the existence of those minds within its walls impossible. That is why under such regimes the dominant forces carry education towards mediocrity and that is why the vital development of our universities is never the fruit of an organic process, but only the result of revolutionary upsurges.

(from Student Power in Latin America: The Cordoba Manifesto 1918, (Transl & reprinted in Minerva, 1968))

FROM PROTEST TO POWER: A PROPOSAL FOR A NEW DEMOCRATIC INSTITUTIONAL REVOLUTION (2012-02-07 08:00)

[1] 1002
It would seem that the travails of contemporary capitalism offer the left a huge opportunity to present a comprehensive alternative analysis and programme of action to neo-liberalism. Yet this has not proved to be the case. There has been protest a plenty and a deluge of moral and economic critiques but no comprehensive theoretical analysis integrated with an alternative political programme. When asked what is their alternative to capitalism, radical activists and intellectuals tend to offer specific suggestions rather than a blueprint for change. To be fair many social movement activists have taken an informed decision to seek change from the grass roots upwards rather risk a preconceived top downwards approach that ends up merely replacing one elite with another – and sometimes not even that. This blog argues that it is possible to combine a ‘bottom upwards’ approach to radical change with party politics. However, for this to be successful the flow of influence would have to be predominantly from the social movement activists to a political party rather than the other way round. The key lies in clarifying what the central principle of the new radicalism is and how it can be effectively implemented. The argument here is that the social activist left and ultimately a major political party of the left should put the idea of a second phase of democracy at the centre of a worked out political programme leading to a national institutional revolution. Currently the social movement activists provide the dynamism for change but they lack the power of implementation.

While this blog goes beyond piecemeal suggestions it does not pretend fully to solve the problem indicated above. The argument put forward is that the most convincing and effective route to a genuinely different society is through a radical implementation and extension of institutional democracy linked to an increase in material and cultural equality. The two goals of democracy and equality are conceived of as complementary but it is argued that a substantial shift towards equality is highly unlikely to occur unless the main beneficiaries of such a shift are in a position to implement it. I expand on this central point to the blog later.

Perversely the widespread consensus that capitalism is seriously malfunctioning has hindered the left from achieving a distinctive alternative position clearly perceived as such by the public. David Cameron has referred to ‘a crisis of capitalism’ and David Miliband distinguishes between predatory and productive capitalism stressing that there is far too much of the former. While there is considerable agreement that capitalism is unstable, erratic and opaque there is much less so about what to do about it. For all their criticisms of capitalism, centrist politicians are
fundamentally pro capitalist and their limited suggestions for reform would leave the elites well in control. Essentially their motivation is to save capitalism rather than make the socio-economic system more radically democratic and fairer. They come up with various suggestions as to how this can be done: Cameron wants shareholders to get a grip on executive pay and bonuses; Miliband pushes for employee representation on company boards; Clegg weighs in praising the John Lewis model, particularly in respect to employee shareholding. It is likely that if all or most of these reforms were implemented, especially in a robust form, capitalism would become somewhat fairer and less out of control. However, for the left this is not remotely enough.

The problem though is that the extra parliamentary left is unclear about its own programme. While many radicals reject or are deeply sceptical about a capitalist driven model of society there is uncertainty about what might challenge or replace it. Social movement activists and radical intellectuals want to go further than the piecemeal reform of capitalism but often struggle to articulate even the basic framework of a radical alternative let alone the detail. This is not the case for unreconstructed state socialists but few contemporary radicals are much attracted to that ‘solution’, although many envisage a greater socio-economic role for the state than is currently the case. For those radicals committed as much to democracy as to equality a genuinely alternative society to liberal capitalism remains illusive. Most want to see more mutuals and cooperatives established but when a critic as rightwing as Simon Heffer states that he has no problem with this and Cameron himself is in favour, a more comprehensive and thought through programme seems necessary. No doubt the left regards the mutualist and cooperative movements as much more fundamentally significant than the likes of Heffer and Cameron for whom they are of marginal importance. However, the strategy and scale of implementation has not been adequately addressed.

The left will continue to lack conviction until it revisits its basic values and extrapolates from them the kind of society it wants – always granted that reality, including the process of democratic negotiation itself, imposes limits on the achievement of ideals. Specifically the left needs to redefine or, at least, rearticulate the relationship between democracy and equality, giving far more emphasis to the former. A new democratic revolution is needed that goes beyond both the democracy of direct action and parliamentary democracy. Historically the socialist and communist lefts have identified primarily with the achievement of greater equality - materially and also substantially, culturally – ‘bread and roses’ (even though the majority have barely had a sniff of the ‘roses’). Democracy has often run a poor second to equality in theory and certainly in practise. Even so, given the appalling industrial conditions of poverty that gave rise to socialism, the emphasis on equality was understandable. This is less so now although even in the developed world it remains a priority for those in acute need. However, I propose that what will most empower the majority is a democratic institutional revolution on a massive scale. Such a revolution would almost certainly stem the trend to greater inequality and lead to greater social equality and equality of cultural access.

Democracy is, of course, itself a form of equality in the minimal sense that (nearly) all citizens have an equal right to vote and to that extent express an opinion. However the practical point about democracy relates to power. Democracy empowers individuals and groups either to maintain or change things. Political democracy is important for many reasons but it is not the only form of democracy. Nor should it be. While supporting political democracy, Wright Mills argued that in the United States and by implication in other Western democracies decisive power was in the hands of the military, economic and political elites. Whether or not Mills overstates the case it is worth considering how the majority of citizens might be more substantially empowered. The American New Left in the early sixties focused on this issue as central to the development of a new radical politics. The term they used to express this was ‘participatory democracy’ by which they meant that people should have the right to be involved in those decisions that affect their lives. Today radicals might take the view that the concept of participation is too weak a term to describe the kind and extent of social democracy they support. ‘Democratic control’ might be preferred. Here I intend to defer consideration of this admittedly crucial issue by simply using the term ‘institutional democracy’ by which I mean a substantial and ultimately a decisive shift in organisational power to the majority of people at the national and local levels. This can only be achieved if ‘ordinary’ people acquire institutional power. Much of the work to achieve this can be and to some extent is being done by social movement activists and some NGOs. However the scale of change suggested here is such that at some point it would require a major programme of national
legislation. Such legislation would codify what has already been achieved in this direction but would also expand on it.

Economic democracy would be central to any plan to put democracy at the centre of a revived ideology and programme of the left. Large firms should have not just one but two or three or more employee delegates on the board, proportionate to the size of the organisation. These should not be merely consultative but have a major share in decision-making power. The principle that members of an organisation should also be involved in running it should be widely extended. Thus parents and students should have the right to be involved in the running of educational institutions. The particular importance of democracy within education is that it would provide a learning ground for democratic practice in the wider society. Given that employees, parents and students have other major commitments they should have time made available for their organisational work and be allocated an appropriate level of payment. By definition, delegatory positions would be elected rather than appointed and also be subject to recall and rotation – in the later case periods of office holding would need to be of a practical length.

The relationship between democracy and equality that the above suggestions reflect is that democratic empowerment is almost certain to lead to a demand for greater equality but that it is otherwise unlikely to occur. The political power of the working class preceded the welfare state and was instrumental in its development. The current level of power of the less well off and progressive middle class is probably just about enough to ensure the survival of at least a minimal welfare state. However currently these groups lack the power to achieve significant further progress towards social justice and equality. A second surge of democracy is likely to facilitate further equality. If the poorly or moderately paid acquire a significant or decisive say in the distribution of pay and rewards they are surely likely to reduce the staggering inequalities that have developed in recent years. Further, the experience gained by ‘ordinary’ people through organisational democracy should over time erode the gap in skill and confidence between them and professional management enabling some to take on more demanding roles.

The left, including the Labour party once it is persuaded, needs to put a second phase in the extension of democracy at the centre of its ideology and policy. On the scale argued for here this becomes a change not merely of degree but of kind and quality. Protest is not enough although the right do so is fundamental. What is needed is a democratic institutional revolution. But first it has to be imagined and then spelt out in some detail. There is no shortage of ideas about how democracy might be extended but they tend to be seen in isolation rather than integrated into a theoretical and programmatic whole. The left needs to adopt the perspective of Weber and Wright Mills that bureaucracies, including industrial and financial corporations, tend to develop hierarchically and undemocratically. If the socialist and communist parties of the early and mid-twentieth century had done this they might come much closer to creating the kind of societies aspired to. However as Milovan Dilas pointed out over half a century ago many of these parties themselves became blighted by the curse of bureaucracy. These insights do not undermine Marx’s vision of greater social equality and equality of cultural opportunity. Properly understood and implemented they make its achievement more likely. It is not a question of Marx or Weber. We need them both.

Podcast: late capitalism and a/sexual culture (2012-02-08 12:00)

The next sexual revolution...?

Memories of a ‘Ghost Town’: the George Shaw exhibition in The Herbert Museum, Coventry, UK (2012-02-09 08:00)

Dr Anton Popov, University of Warwick MYPLACE team member, on the new exhibition by Turner Prize nominated local artist George Shaw at the Herbert Museum and Art Gallery in Coventry, and its particular relevance to the work of MYPLACE.

This article was initially posted to the [1]MYPLACE blog. For more information on the MYPLACE project, follow the project on [2]Twitter or visit the project’s website: [3]HERE

On 18 November, the George Shaw exhibition [4]‘I woz ere’ has been opened for the public in the [5]Herbert

1007
Art Gallery and Museum. Among those invited to the exhibition launch event on 17 November were a number of VIPs (from different art councils, Coventry City Council, etc) but also many ‘ordinary’ people from Coventry and its Tile Hill area in particular. A Turner Prize nominated artist, George Shaw was born in 1966 and grew up in Tile Hill, a predominantly white, working class and rather poor area of the town. He left home in 1986 to do his formal art training in Sheffield, but he stayed in touch with the place through frequent visits to his parents who continued to live in Tile Hill. What was left behind is the place and time from which he grew out as an artist – something which is material and, therefore, perishable, but also social – being embedded in the fabric of everyday relationships between people in this neighbourhood in the late 1970s-early 1980s. The exhibition is an attempt to come back to that time and place on the Tile Hill housing estate, to remember what is forgotten, or as George Shaw put it ‘to paint what you don’t remember’.

The key theme of the exhibition and George’s works presented there is memory. The visitors from Tile Hill many of whom were people in their 40s, 50s, or even 70s were looking at the paintings of pubs and social clubs which had been demolished for some years as a reminder of the time when they were young. I heard phrases like ‘I remember the stuff we were doing there...’ One man told me pointing on the painting of the pub ‘New Star’ with excitement as if he had just met an old friend, ‘It’s flat now there, know, this place’s gone.’ Two elderly ladies were talking to each other while looking at this painting and almost touching it with their fingers pointing on different part on the building depicted as if they were looking at the old photograph of a family home and remembering what flowers or trees used to grow in which corner of the yard.

In his speech before the opening of the gallery for visitors, George, however, warned an audience that his works were not photographic representation of the past but rather pictures from his imagination that represented the places to which he felt connected. In a way this was his way of saying ‘I was there’ (hence the title of the exhibition), to add his mark to the walls that are already heavily covered with graffiti in the places... which are not there anymore. Therefore, these paintings access the past and memory through emotional engagement with the special realm of the urban landscape. In our brief conversation, George said that for him memory is not textual but emotional, something which you can feel and painting is the way to do it. When he was painting these places the details that he did not remember (did he forget them, or were they there at all?) started emerging. These details are essential for his memories but before they materialised through the bodily work of painting they were not there. For me this captures perfectly the sense that social memory is a sensorial process which might be expressed through text, narrative, image, sound, etc – representing the past, the meanings of which are socially constructed. But it also has to be felt emotionally and therefore awaken physical responses of your body, becoming part of your bodily experience. It is this emotional and sensorial nature of memory that makes it possible to connect paintings representing George Shaw’s memories of growing up in Tile Hill in the 1970s-80s with other individual recollections of that place and time or even with recollections of other places and other times. Looking at George’s paintings of dilapidated garages on the town outskirts, I suddenly realised that I was familiarising this strange landmarks with my own memories (something which I was not aware, or remember, before) of hanging out around old sheds and garages in my ‘block’ in the 1980s in Krasnodar, Russia. As children we were attracted to these secluded places (in the rather busy centre of the big city) covered with strange graffiti, old domestic stuff and litter.

In their attention to details and implicit presence of the social context, the works presented in the exhibition are very ethnographic. The paintings are devoid of any human presence in them, but yet one can feel that something is going on there, which makes sense in this particular place and time. George often depicts the ordinary places as if they were just left by people (residents, random passers-by, adolescents socialising there, children rushing to and from school). This interest in memories of ‘ordinary’ brings his paintings closer to ethnography with its preoccupation with building insightful interpretations of the everyday, mundane and ordinary. One of the paintings presented in the exhibitions ‘Details of untitled’ is particularly striking in this respect. It shows the part/corner of the red brick wall with a very violent splashes of paint on it. In his comments to this painting Shaw writes:

‘I used to see these paint incidents all the time when I was growing up. They always struck me as being very violent or the gesture of violence or a symbol or drawing of a violent thought. They appear in tucked away places or
in the old places that buildings have appeared around. Such places hang on to their savage and brutal origins before
time and drag half-innocents into a magical alliance involving ritual and transformation. Participants would no doubt
have returned home with telltale signs of gloss paint on their clothing or hands – shame on a shirt sleeve or shoe –
to be ignored most likely, excused, forgotten like the thousand tiny crimes of all our growing up. The getting caught
was always the real blunder. How many of those tiny crimes grow up with us, becoming the tragic horrors we read
about or have the misfortune to meet. Of course like most violence it has a beauty all of its own...

This almost ethnographic contextualisation of landscape and its meanings with violence as part of it (broken-
in garages, violent graffiti on the walls, secluded paths, and piled old furniture on the edge of the wood) sometimes
is interpreted by observers as a reference to the particular period in the UK, and more precise Coventry, past.
The 1970s-80s is the period which in British history is associated with the name of Margaret Thatcher and radical
transformations in the social, political and economic life of the country. With economic recession at its background,
the conservative government attempted a restructuring of industry that led to closure of many factories, plants
and collieries. Driven by the individualist, neo-liberal in its core ideology, the government launched its attack on
'society' (Thatcher stated that ‘there is no such thing as society’). The state was withdrawing in different ways its
support for the most vulnerable. The tenants of council houses were encouraged to buy their homes in pursuit of
the ‘homeowners’ democracy’ ideal. The social tensions grew resulting in the deterioration of inter-racial relations
and popularity of far-right groups and movements such as the National Front, and street violence (in which police
took active part) manifested in racial riots and miners’ strike in the early 1980s. The Falkland War, to some extent
was instrumental for the government to resurrect an ‘imperial nostalgia’ in response to the public discontent with
the economic and political climate. Thus in his recent article Stuart Hall defines that period as an ‘authoritarian

This atmosphere had been captured and expressed in the music of the Coventry Ska band The Specials. Perhaps their most famous 1980 song '[6]Ghost Town' (it is sometimes seen as a song about Coventry)

Clip from EMI records official Youtube channel

raises the issue of the growing violence in the fragmented society of the increasingly deindustrialised British
cities. As a true Two Tone band, The Specials were driven by both white and black music heritage and British working
class culture. They were essential for the revival of the traditional skinhead scene in the late 1970s and early 1980s
(songs like 'Skinhead Moonstomp' (1979)) singing about the problems which British society faced including racial
violence perpetrated by the National Front supporters and nazi-skins ('Why?' (1981)).

The cross-references to the George Shaw paintings and The Specials music are not surprising therefore. Growing
up in the 1970s, George Shaw could directly relate his experience of living in working class housing estate on
the outskirts of Coventry to The Specials’ songs. Some of his early paintings from that period (before he did any
formal fine art training) presented at the exhibition in The Herbert depicted young skinheads and punks as well as
scenes of street violence. One or two of these early paintings look as if they were snapshots from the film 'This is
England', the film which was shot in 2009 but tells the story of a skinhead group in the early 1980s. (The soundtrack
to this film includes The Specials’ songs). In fact George Shaw mentioned The Specials and the impact which

At the same time, during his recent appearance on Radio 4 Loose Ends programme, Jerry Dammers (The Specials) talked about George Shaw and how his art (the paintings from 1990s-2000s rather than the earlier works)

In his speech at the exhibition launch, George Shaw said that as a kid he saw The Herbert as an opportunity to encounter a ‘real culture’ beyond watching TV and listening to The Specials. Ironically, he has his first single exhibition in this museum on its first floor exactly above The Herbert’s history galleries where The Specials and Two Tone music are displayed on the permanent stands (see photo above). This brings me to my final point about the way in which memories and representation of the past and particular periods of history are transmitted and, at least partly, shaped by museums. In agreement with Kirschenblatt-Gimblett, Scott points out that the museum displays of culture require deliberate ‘fragmentation’ of ethnographic objects as they are detached from their larger context in order to be later ‘reconceptualised’ through the recreation of the absent context but within a theoretical frame of reference which provides viewers with explanations, comparisons and historical background (Scott, J. (2002) ‘Mapping the Past: Turkish Cypriot Narratives of Time and Place in the Canbulat Museum, Northern Cyprus’, History and Anthropology, 13: 226).

The Herbert is a museum of the people of Coventry and it represents a particular vision of these people and their city’s history and culture. Thus the current George Shaw exhibition can be interpreted as a celebration of something which people of Coventry are proud of. Together with The Specials and the Coventry City FC FA cup victory in 1987 (both stands are situated side by side in the history galleries, and the 35th anniversary of the Coventry City FA cup victory was mentioned by several VIPs in their speeches at the launch event), the work of a 'Cov kid', George Shaw, is something which put Coventry on ‘the map’. The Coventry accent, so to speak, here is particularly important. After all the exhibition is a collection of the paintings from the artist’s different series on which he was working during last 15 years, but it is framed by the above mentioned early works and a series of very recent watercolours commissioned by The Herbert especially for this exhibition, acquiring its historical context which links the artist’s biography with Coventry’s (in fact, rather, Tile Hill’s) history. At the other level, ‘I woz ere’ represents a political position of The Herbert; that is to promote diversity and multiculturalism (something which current government is rather sceptical of, if not hostile to). Therefore, memories of Tile Hill, a marginal area, both in terms of the city’s geography and socio-economic demographics, are put forward and in the focus of this exhibition, and indeed of the museum as a whole. To draw a parallel with The Specials’ representation in the museum’s historical galleries, the extract from filmed interview with members of the band on the growing inter-racial violence in the UK in the early 1980s is demonstrated there on a monitor placed under a big "Coventry Colliery Miners’ Wives Group" banner together with other short clips about the people of Coventry in active political participation (see photo below). Interestingly politicians present at the launch event (in this case the representative of the city council) formulated the purpose of the George Shaw exhibition as to ‘bring the people of Coventry together at this difficult time’. Perhaps it is too naïve to expect that paintings representing personal memories of the vanishing places would fulfil such an ambitious political task. However, George Shaw paintings being contextualised within a particular historical and cultural perspective can be an invitation for reflections on why and how society has changed. To some extent it provides the space for ordinary people to voice their memories which might or might not resonate with the ones of George Shaw. I heard, for example, how an elderly man was saying to his much younger friend, looking at the drawings of skinheads, ‘At that time many kids were dropping out...’ The Herbert museum is Warwick University’s partner within the MYPLACE project’s ‘Interpreting the past’ work package. Our colleagues in the museum are very enthusiastic about the project and proactively search for possibilities to explore how historical memories influence the young people’s political participation and civic engagement. The George Shaw exhibition presents a great opportunity for us to address the issue of memories of the 1970s-80s as the ‘difficult past’ in both the local (Coventry) and national (Britain) context. The exhibition contains the watercolours which George painted during one of his most recent visits to the area. By his own admission, they represent the places which used to be familiar but now almost alien. Maybe because of this they are more document-like than his more memory-based paintings. These watercolours, however, document the presence of the same anger and violence and frustration manifested through burned down signposts in the park, expressive graffiti, decaying furniture in the woods, etc. On one picture, an empty road corner can be identified as a site of the ‘New Star’ pub – one of four pubs in the area that have vanished
since 1986. It would be interesting to see what young Coventry people would make of these memories of the ‘ghost town’ – memories of disappearing places, stories and ways of living.

The future of the university (2012-02-10 08:00)

Over the last year Sociological Imagination has published a range of podcasts exploring the future of the university. We thought it might be useful to round them up and post them together in one convenient place:

1. [2]Engaging with the media as a PhD student
4. [5]Campaigning for the Public University
5. [6]The Impact Agenda in the Arts and Humanities
6. [7]The Future of the University
8. [9]The University Project

BSA Annual Conference - Pre Conference Postgraduate and Early Career Day (2012-02-10 16:55)
BSA Annual Conference

Pre Conference
Postgraduate and Early Careers

Our PhD’s: Our Future

10 April 2012, 12-6pm
The University of Leeds

With special guest lecture from
Zygmunt Bauman
‘sociology as a vocation in liquid modernity’
Q+A

Followed by workshops and parallel sessions that include:
ESRC representative: applying for grants;
Creative Teaching Methods; Podcasting;
Getting Published.

Your chance to meet other
researchers in a friendly, informal environment.

Cost: £10 members £20 non members, this includes lunch.
Book online: www.britsoc.co.uk/events/conference/

Please book in advance to avoid disappointment!

Are you interested in being a Postgraduate Forum Convenor for the British Sociological Association?

(2012-02-11 08:00)

Are you interested in being a Postgraduate Forum Convenor?

Our existing team work together to make sure that student members of the Association are kept up-to-date with matters of specific interest to them. They will also facilitate contact between student members and the BSA Council. In return for their hard work and dedication.

Postgraduate Forum Convenors are offered a free place at BSA events and all travel expenses are reimbursed.

The Convenors’ tasks include:

- Circulating information to other postgraduates via the PG Forum email distribution list
- Maintaining the PG Forum pages of the BSA website & the Facebook fan page.
- Supporting and hosting PG Focus podcasts
- Making contributions to Network
- Assisting with the processing of BSA Support Fund applications by joining the panel of members who grant awards from the Fund
- Helping organise the Postgraduate workshops/events at the BSA Annual Conference
- Representing the interests of Postgraduate members at Council meetings

Since the PG Focus podcasts were launched to great success in 2009, they have become an increasingly important part of the PG Forum activities. We are therefore particularly interested in having someone join us who has knowledge about, or an interest in learning, skills relating to the compiling, editing, uploading, and online maintenance of the blog and PG Focus podcasts.

The successful applicant will work with current convenors to become proficient at assisting with the online and media aspects of the PG Forum’s activities. The new convenor(s) will also share other duties, including attending on average one Council meeting and two PG Forum meetings per year; quickly and efficiently dealing with email correspondence regarding Support Fund applications and other business; overseeing the organization of a session for the PG Day and spearheading new initiatives that will benefit the PG Forum community.
While the time commitment for this role is flexible, with responsibilities shared between convenors, and the workload varies over the year, applicants can expect to devote between 4 and 16 hours per month to PG Forum responsibilities.

If you have questions about what being a convenor entails, please contact us at PGForum@britsoc.org.uk

Include a letter explaining why you think you are suitable for this role.
Deadline for applications: 1 March 201

Extreme Bodybuilding (2012-02-12 08:00)

BSA Conference Event - C Wright Mills, 50 Years On (2012-02-13 08:00)

C. Wright Mills: Legacies and Prospects - 50 Years On
Friday 13th April, 11-12.30pm
In March 2012 it will have been 50 years since the death of C. Wright Mills. In that time the world has changed beyond recognition: the Cold War ended, the Keynesian consensus broke down, a globalizing neoliberalism rose to the ascendancy and the internet began to transform human communication and culture. In recent years, with 9/11 and then the financial crisis, it seems that history has returned with a vengeance.

This panel will explore the relevance of C. Wright Mills' ideas 50 years on, considering the value of his legacy and the resources his work offers to understand the rapidly changing social world of the 21st century.

Introduction by Mark Carrigan (University of Warwick)

Prof Mike O'Donnell (University of Westminster) - “Charles Wright Mills and the (Continuing) Problem of Radical Agency”.

Prof Liz Stanley (University of Edinburgh) - TITLE TBC

Prof John Holmwood (University of Nottingham) - Sociology’s 'moments': C. Wright Mills and the critique of professionalism

Tyler Cowen: Be suspicious of stories (2012-02-14 08:00)

[EMBED] In recent years narrative has become a central concept within significant areas of the humanities and social sciences. Yet in this provocative TED talk, the economist [1]Tyler Cowen argues that we ought to be suspicious of stories. It’s a thought-provoking argument and we’d love to get your views - get in touch via [2]e-mail or [3]Twitter if you would be interested in writing a short response piece. Anyone care to offer a defence of stories in light of Cowen’s criticisms?

2. mailto:mark@markcarrigan.net
Some favourite sociological quotes from SI’s facebook friends (2012-02-15 08:00)

• "Deviance is not a quality of the act the person commits, but rather a consequence of the application by others of rules and sanctions to an 'offender'. The deviant is one to whom that label has successfully been applied; deviant behavior is behavior that people so label." [1]Howard Becker in [2]Outsiders (submitted by Yaz Osho)

2. http://books.google.co.uk/books/about/Outsiders.html?id=QFYrAAAAAYAAJ&redir_esc=y
4. http://books.google.co.uk/books?id=nYaS6gS9Jz4C&printsec=frontcover&dq=bourdieu+1984&hl=en&sa=X&ei=9XonT5Sml0KS8QWLa5zX8&ved=0CDMQ6AEwAA#v=onepage&q=bourdieu%2C
7. http://books.google.co.uk/books?id=9cR2kQ9-6egC&printsec=frontcover&dq=the+normal+chaos+of+love&hl=en&sa=X&ei=pXsnT9e2JMSo8QDQxampA&redir_esc=y#v=onepage&q=the

Yaz Osho (2012-02-15 08:31:54)
The Becker quote was one of the first quotes that stayed with me when I was doing A-level Sociology. How ever many years later, it’s still around in my mind and is certainly relevant today.

Discourses of Dissent Part 1 - Social Theory and the Politics of Austerity (2012-02-16 08:00)

Discourses of Dissent was a one day symposium organised by SI’s editor in February 2011. The website hosting them is soon to lapse so SI will be the new home for the videos from the day. In light of the coalition government’s austerity agenda and the emerging movement against it, Discourses of Dissent asked how academic research can help inform and sustain political resistance

A round table session exploring how social theory can help us understand the politics of austerity. How do theoretical justifications of austerity work to constrain public debate? How does the current government’s incongruous blend of neoliberal realism and superficial progressivism relate to what went before it? What resources...
can we find in social theory to critique the coalition's agenda and its relationship to the wider crisis of late capitalism?

*Ruth Levitas, University of Bristol - The necessity of utopian thinking*
Sasha Roseneil, Birkbeck, University of London - Criticality, not paranoia: Registers of critical social theory
Karen Rowlingson, Institute of Applied Social Studies, University of Birmingham - Why doesn’t the British public seem to care about inequality or the cuts in public spending?

The Divided Self (2012-02-16 18:38)

This lovely video is based on an RSA talk by David Brooks about his great book The Social Animal.
Discourses of Dissent Part 2 - Public Universities and Public Futures (2012-02-17 08:00)

Discourses of Dissent was a one day symposium organised by SI's editor in February 2011. The website hosting them is soon to lapse so SI will be the new home for the videos from the day. In light of the coalition government's austerity agenda and the emerging movement against it, Discourses of Dissent asked how academic research can help inform and sustain political resistance.

A round table session investigating how academic research, with a particular focus on social theory, might help us articulate and work towards a positive vision of shared futures which escape the discursive constraints which have defined the public life of the UK since the 1980s.

The session will also explore the practical resolution of the tensions facing the university system. What are the most pressing issues faced by universities? Is a satisfactory resolution of these tensions possible without radical reform? Is there a need to move beyond critique?

Steve Fuller, University of Warwick - What are we defending when we defend public universities?

"All human knowledge begins with intuitions, proceeds from thence to concepts, and ends with ideas" - [5]Immanuel Kant (from @nmcinroy)

"Sociology is something that you do, not something that you read" - [6]Erving Goffman (from @joremification)

"The philosophers have only interpreted the world. The point is to change it" - [7]Karl Marx (from @Stuart_Hepburn)

"It is the role of ideas in politics and society, the power of intellect, that most fascinates me as a social analyst" - [8]C. Wright Mills (from @mark _carrigan)

When riots have colour (2012-02-22 08:00)

What happens to a dream deferred?

Does it dry up
like a raisin in the sun?
Or fester like a sore-
And then run?
Does it stink like rotten meat?
Or crust and sugar over-
like a syrupy sweet?

Maybe it just sags
like a heavy load.

Or does it explode?

- Langston Hughes

Allowing a poem to do the conceptual groundwork for a sociological article published at an academic journal, amounts to relegating yourself in the dustbin of scholarly prestige and inviting endless scoffing from your interlocutors; yet this is precisely the risk I'm wholeheartedly taking in the remainder of this paper. What follows should be read as a civic and not an academic response to this summer's social unrest, following BSA's laudable initiative to devote an open forum for sociological perspectives on the recent English riots.

Borrowing Langston Hughes' evocative imagery of a dream being deferred; that dream being the ambition to escape the institutionalised abbreviation of citizenship that Black Britons routinely face in their interaction with the police, I advance the intentionally loaded proposition that the wave of civil unrest that gripped English cities in August, was racial and political and not the arbitrary and unfortunate by-product of consumerism's allure on disenfranchised youth, living under the spectre of neo-liberal economy's tyrannical excesses. To do so, the article is divided into four parts, each addressing the following questions; (a) why race? (b) just race?, (c) why politics?, (d) just politics? , presided by a brief overview of the recent Guardian/LSE study, aptly entitled; Reading the Riots: Investigating England's summer of disorder.

According to the first round of reports on the findings of that study, published on last Monday's edition of The Guardian, the riots allegedly captured a 'widespread anger and frustration at the way in which police engage with communities' and columnist Gary Younge (2011b) was quick to single out 'indifferent elites', 'economic hardship' and police brutality' as reasons to riot based on the study's findings. What is startling about these comments is a noticeable discomfort and a conceptual mismatch between envisaging the riots as an emotive revenge, driven by
opportunism and consumerist greed on the part of the summer looters; accusations that featured rather widely and sonorously in the immediate aftermath of the events, and a newly discovered acknowledgement of 'deep seated and even visceral antipathy of the rioters towards the police'. Additional mention was surprisingly reserved in the report for issues of race and politics which was rather conspicuous in its absence in the initial outbreak of commentary following the riots. 'Race was never far from the surface of the first person accounts of rioters. The most acute sense of a longstanding mistrust was among black interviewees' writes Raekha Prasad (2011), reiterating black interviewees' descriptions of incidents that involved being 'handcuffed, beaten, kicked, spat on and called 'nigger' and 'black bastard', or episodes of stop and search operations where one police officer asked a colleague 'Mate why don't you ask him where Saddam [Hussein] is. He might be able to help out.' On the statistical side of things, Younge (2011b) cites a 75 % of the respondents who considered the fatal police shooting of Mark Duggan as 'an important or very important cause of the riots', with additional figures of stop and search operations, revealing that 73 % of the respondents reported that they have been stopped and searched in the last 12 months, while an additional chart in the study shows a 28 % of London's black population to have been stopped and searched by the police.

If race came as a surprise to the Guardian/LSE study on the riots, it is also intriguing to notice its accompaniment by a cameo appearance of politics too, in the critical delineation of the study by the newspaper's commentators. Gary Younge (2011a), in keeping with an earlier article of his in The Guardian, finds the rioters to be 'far more politically conscious than even many of the left' and finds politics to be the first of the 'two particular themes [that] have helped correct some initially flawed impressions', the second being the 'contempt between rioters and police with tales of petty harassment, abuse and humiliation' appearing commonplace and, I would add, racially driven.

Why Race?

In my emotional and intellectual memory of the riots, race starred as 'the elephant in the room', impossible to ignore yet largely unaddressed. Let us retrace the steps of this gigantic omission in the initial reporting of and media, political and expert discourses on the outbreak of the riots, by means of rendering race as a visible cause for the incidents that shocked and awed many, commentators and pundits featuring large among them.

On Thursday, 4th of August, Mark Duggan, a black kid from Tottenham was killed as a result of a terrifying shoot-out with the police. A few days later, Sunday, 7th of August, Stafford Scott, a consultant on racial equality and community engagement and co-founder of the Broadwater Farm Defence Campaign in 1985, was interviewed on Sky News where he saw the spark of rioting as both a response to the Duggan killing and a lingering coda of a similar incident, involving the death of Cynthia Jarett during a police raid in 1985 also at the Broadwater farm estate in Tottenham. In his Guardian article published the next day, Scott (2011) made a comment that is impossible to ignore; 'if the rioting was a surprise, you weren’t looking’. It is this degree of inattention and pathological degree of amnesia that I should wish to highlight in my reading of the riots as triggered by the fatal shooting of Mark Duggan; insisting that no other ‘cause’ adequately explains them. Before pleading for recognition of a link between the riots and issues of race and racism, it seems vital to give more insight into the immediate aftermath of the Duggan killing and its lamentable if not unpardonable treatment by the police. Defying normal police procedures, the police failed to send out a family liaison officer to inform Duggan’s relatives about his death on Thursday, 4th of August (they found that out from the media) and the family did not receive an apology about this until Monday, 8th of August. Stafford Scott (2011) recalls that the family was disgusted by the complete disregard to their feelings by the police and along with other members of the community, went to the police station to speak to a senior officer demonstrating peacefully until that would happen. Scott adds that the police kept ‘prevaricating’; “The most senior person they gave us was a chief inspector. We said that person wasn’t senior enough - we wanted a senior ranking officer of superintendent or above. Eventually they sent for a superintendent, but by then it was too late. We'd told them: don’t prevaricate, we wanted to hear what was happening so we could explain to the community what was taking place. [...] had they dealt with us earlier in the day, we would have removed ourselves from this area, we would have gone back to Broadwater Farm", and had that happened, the streets of London would probably not have erupted in violence. In the light of such testimony, it seems timely and relevant to argue that the police shooting of
Duggan is by no means new nor does it amount to an isolated incident or a historical first, if one is willing to follow both the history of rioting in Britain and the uneasy relationship between Black British citizens and the(ri) police; the names of Joy Gardner and Roger Sylvester, killed in police custody in the recent years come immediately to mind not to mention reggae star Smiley Culture’s death in police custody under the most mysterious of circumstances earlier this year. To make matters (appear) worse, it could be provocatively argued that a historical account of Black British experience can indeed be narrated along the lines of racism and violent clashes with the police and many literary and non-literary landmarks of Black British Culture could be mobilised to testify that; be it Trevor and Michael Phillips’ historical Windrush: The Irresistible Making of Multi-Racial Britain, Paul Gilroy’s sociological classic There Ain’t No Black in the Union Jack, Winston James and Clive Harris’ polemical Inside Babylon: The Caribbean Diaspora in Britain, Philip Cohen and H.S. Bains’ poignant Multi-Racist Britain, Courtia Newland and Kadija Sessay’s playful IC3 anthology of New Black Writing in Britain borrowing its name from the police identity code for ‘black’ (IC3), Alex Wheatle’s transfusion of rioting into writing in Brixton Rock, Linton Kwesi Johnson’s ferocious dub poetry, Trinidadian calypso’s biting and piquant social commentary of London scenes, or the very lived experiences and oral testimonies of the Windrush pickney themselves. To witness the riots of 2011 in the light of earlier disturbances is to allow oneself to guide the ‘how’s’ and the ‘why’s’ through a moment’s recollection of some key moments in black British history where the police has clashed violently with the public with the common thread of such animosities being the social, cultural and political signifier of race. In 1959, Kelso Colchrane’s unsolved murder in the streets of Notting Hill sparked tensions in London; setting the scene for what James Whitfield (2004) would refer to as the ‘unhappy dialogue’ between the Metropolitan Police and Black Londoners in post-war Britain. In 1976, Notting Hill carnival, a key cultural institution of (Black) Britain, ended in riot and violent clashes with the police, followed by the 1977 National Front March, described as ‘deliberately provocative’ by the NF itself and in that spirit renewed its rendez-vous with racism in 1979 leading to the Southall riots. In 1981 the notorious Brixton riots broke out aggravated by “Operation Swamp” and persistent stop and search operations in the area, while later that year in the tragic New Cross Fire in Deptford 13 young, black people died in a house fire set ablaze by racists. 1985 saw the Broadwater Farm riots triggered by Cynthia Jarett’s death in a police raid, spreading contagiously to Brixton, Toxteth and Peckham, while in 1999 the murder of Stephen Lawrence re-introduced the term ‘institutional racism’ and sparked the most profound re-appraisal of race relations and the justice system, since Brixton 1981, leading to the MacPherson report on racist attitudes within the Metropolitan Police force. What these incidents have in common is the lived experience (not any abstracted narrative) of race as and by means of exclusion and that in a rather alarming sequence of events, the effect of which is impossible to ignore, even if we allude to those events as cacophonous exceptions in an otherwise smooth-running multicultural society which condemns such incidents and provides for their extinction from public life ever after. Just race? Envisaging the 2011 English riots solely through what W.E. Du Bois (1920 and 1961) articulated as the ‘racial veil’ may appear problematic, yet looking through that veil has its respective merits, if a broader definition of race is put in motion. Race is not skin colour but a social division that is better understood alongside other insignia of social distinction such as class. In other words, I interpret race as class given that both share an exclusionary life in British political life. To detach race from other social divisions is to render its understanding almost impossible, as social divisions more often than not come in a bundle, as if zipped together, making our understanding of them possible only if we use the right software to unzip and unpack these notions and examine their antagonistic interdependence as belonging to the exclusionary spectrum of political and civic life. Jonathan Rutherford’s (ed.) (1998) excellent book on Identity is a laudable work in this direction of understanding social divisions together in our effort to understand the social life of difference in a political community with race being no exception and rarely being just race. Race itself, in the context of the riots, functions less a veil and more as a mirror if not a probing X-ray, attesting bitterly to the lack of tolerance, acceptance and positive identification; values that otherwise constitute the nuclear weaponry of multiculturalism and cosmopolitan citizenship, defying neo-racist proclivities reminiscent of Powells’sm, ‘grinning picanninies’ and ‘Rivers of Blood’. Why Politics? In the time that has elapsed since The Guardian/LSE study on the riots, the mainstream punditocracy attributed the riots to some superficial criminality, mindless looting, disenchanted youth otherwise dominated by torpor and apathy, scenes of urban pathology, ideological orchestration with the use of new social media and technologies (Twitter, Blackberry),
and predominantly to the tyranny of the market celebrated by a neoliberal agenda and consumer society as the loving flower of the romance between market despotism and state ideology/power. Such explanations of the riots as apolitical manifestations of the homo consumans and neo-liberalis however seem rather vague and only marginally attentive to what these riots may mean. To say that citizenship has been eroded making way for consumer society and that the market economy is to blame for the waste of human potential, is to state the obvious. Online journals like Prof. Ben Agger’s Fast Capitalism prove themselves to be righteous scholarly custodians of this intellectual position. A recurrent complaint was that this summer’s civic unrest had ‘no cause’, an argument that re-appears in times of crisis, austerity and trouble with the riots of 1976, 1981 and 1985 being no exception. What can be learned from it though is our sclerotic outlook of politics; what counts as and what is political? Could rioting itself not fare as a form of disruptive protest? Paul Gilroy (1987) reserves some room for this, with reference to the radicalism of Black Power, while the Situationists (1965) also noted the militarization of elements within the Black Power movement exploding in the Watts riots of 1965 in Los Angeles with the question of ‘How do people make history under conditions designed to dissuade them?’ as their motto. While not celebrating violence or advocating a position that defends looting as a political practice, it would be unwise to discard such views irrespective of our views on using violence to express civil disobedience, political defiance or to respond to police harassment and the repressive use of the legal system as has been the case in Britain and the US respectively. Like race, a political cause is not singular, not one but many; multi-dimensional, complex, interdependent and multi-directional. A cause can be as blurry as to even make towering historical figures of Western political philosophy appear vague in their efforts to pin it down; for Hobbes it was ‘Leviathan’, for Adam Smith it was an ‘invisible hand’, for John Locke it was ‘the identity of interests’ and for Marx it was ‘class struggle’. It becomes rather clear that, perhaps with the exception of Marx, neither of those necessary evils is recognisable and ‘tactile’ so that we can work on them and re-model them politically in some direct manner. If that zigzag into political philosophy shows anything it is that a political cause is very hard to capture and is by no means a moral absolute that is set in stone, but a dialogic and interpretive experience even for those participating in the deliberation of any political cause. In the case of the recent riots that political cause may not be the attempt to win or seize state power, as this was not the case in either 1848 or 1968, but an emotive response of the ‘unclassed precariat’ facing a floating, fleeting and ‘liquid’ world as Bauman (2007 and 2011) would have it. Just politics? Having politicised the seemingly apolitical we now need to depoliticise the political, by arguing that what may count as a political stance may be a symbolic, personal and ritualised affair; thus not exclusively mediated by or situated in the ballot-box but rather based on the routine, everyday management and negotiation of our daily lives. The trivial, the mundane, the banal can give rise to sentiments and affiliations that can be politically expressive with mugging and looting seen as acts of resistance through rituals to quote a sociological classic. In the words of Simon Winlow and Steve Hall (2006) ‘the rapid emergence of diverse forms of the political in a world in which the reproductive momentum of old class cultures appeared to falter, allowed new interstitial opportunities for the creative construction of identity and meaning. As the rather awkward mixture of consumerism, radical politics and the libertarian insinuations of the transatlantic ‘counterculture’ began to encroach upon traditional forms of enclassed identity; spaces appeared to be opening up in which young people could explore new forms of individuality and small-scale collectivism by adopting and reworking the rich symbolism of consumer styles’. My admittedly risky proposition here is that if the riots were political they might also be suspected for consolidating a ‘new’ form of politics, one that does not deny our social and political participation as citizen-consumers but rather affirms it in our symbolic and branded political sphere. Politics is not just politics but graduates to an extension of our participation in the turbo-capitalist polity. In that context, rioting, even if interpreted exclusively through acts of foraging for i-pads and branded footwear, appears political by means of a consumerist expression of political values. In the light of the above and to filter the article’s title through the veil of Langston Hughes’ poem; when the riots have colour they do not simply amount to the inarticulate bravado of swaggering street toughs but rather testify to a tuneless second class citizenship and a deferral of a civic dream seething on the edge of an explosion. -[1] Lambros Fatsis Notes (i) Lambros Fatsis is a final year DPhil student at the School of Law, Politics and Sociology at the University of Sussex. His doctoral thesis concentrates on discussions of public sociology, the role of the University and intellectuals, while other research interests include black music, urban culture and the history and sociology of the Jamaican soundsystem. He also performs as a reggae selector/radio presenter under the name Boulevard Soundsystem and is a contributor of Billboard magazine on reggae music. (ii) The initial reporting of the riots came under the heading
‘UK riots’ which was then changed to ‘English riots’ as England and not the rest of the UK was affected by them: [2]http://www.bbc.co.uk/ariel/14488492

Fantastic Monsters Protecting Morality (2012-02-23 08:00)

MYPLACE team members at Centre for Youth Research, Higher School of Economics (St Petersburg) present their latest blog on the passing of a new law against the propaganda of homosexuality and pedophilia.

This was originally posted on the [1]MYPLACE blog. Follow MYPLACE on Twitter [2]here. For more information on the MYPLACE project, visit the project's website [3]here.

On the 8th February, the St Petersburg parliament adopted a law at second reading directed against the propaganda of homosexuality and pedophilia. In his Twitter post on the 8th of February ([4]http://twitter.com/stephenfry) Stephen Fry responded to the deputies' decision thus: "God damn it! We need to do something to stop these fantastic monsters! They mean that Tchaikovsky will be prohibited?", The law caused protest among the LGBT community and mass media at the end of last year when it was proposed for discussion by Vitaly Milonov, a deputy of the ruling party "United Russia". Sexual minority groups organized several street protests, signatures were collected against the law and expert opinions mobilized to critique the claim that gays are the same as pedophiles. Since the scandal coincided with the eve of Parliamentary elections, the further progress of the law was postponed until a more appropriate moment. Vitaly Milonov, having secured his place in the Saint-Petersburg Parliament, returned to this subject during the first session of the renewed parliament and clarified what is supposed to be the "propaganda" of homosexuality. It was defined, specifically, as the uncontrolled and purposeful distribution of information which creates the "distorted perception of the social equivalence of traditional and non-conventional marital relations". "Fontanka," the news agency journalist that was present during the second reading mentioned that the deputies preferred to discuss not the wording but the topic of the bill itself ([5]http://www.fontanka.ru/2012/02/08/156/). As a result the bill was adopted by 31 votes to 6. After the third reading the bill will need to be signed by the Government who was the main initiator for its discussion in the Parliament, according to the political analyst Stanisl Belkovsky. Whether by accident or design, during the discussion of the projected law, the Agency of Social Technologies "Politekh" distributed the results of a phone survey that was commissioned by the Public Chamber in 149 cities in Russia in November 2011([6]http://www.interfax-religion.ru/?act=news&div=44164. According to the data, 74 % of respondents regard homosexuality as a vicious perversion of human nature. 79 % consider that same-sex marriages should not to be allowed in Russia. 87 % support the prohibition of gay-parades. 82 % think that homosexuals should not be allowed to teach and work with children or young people. The "Politekh" report indicates that one of the purposes of the survey was to analyze which views – secular liberal or traditional religious – are supported by Russian people. The results of other sociological research are given (a quantitative survey) showing that Russians think that morality has declined in comparison to the USSR period. The opponents of the proposed law discussed in the Parliament also mention the USSR but in another context – they reminded us that during this period gays were considered criminals and jailed.

In my Introductory Sociology course, It’s Not Rocket Science, students create faux Facebook profiles of people who are their exact social opposite, then interact with one another for ten weeks, (as well as observe and analyze these interactions), finally revealing their true identity to one another on the very last day of the course.

Called The Facebook Project, you can hear some of my Fall 2011 students from the College of Mount Saint Vincent (CMSV) and the State University of New York-Orange (SUNY-Orange) talk about the project [2]here. Be sure to listen for Patricia Cook (State University of New York-Orange) and Dina Napolitano (SUNY-Orange), who describe their social opposites, respectively, as “someone who loves (the movie) Twilight” and as “a roller derby
Listen also for Nicholas Doran (SUNY-Orange), who created Laura San Pedro, pictured above and Tessa Schmidt (SUNY-Orange), the only student out of sixty who changed her sexual preference.

This semester, you can follow The Facebook Project [3] as it develops live! and in real time starting around February 29, 2012. In the meantime, more audio comments from students who participated in the Fall 2011 run of the project, as well as some screen captures from their faux profiles, are posted below. Please be aware that some students use some mild profanity in their comments.

Click here for Part 1 – On the practical difficulty or ease of figuring out what counts as your exact social opposite. It is interesting to note that my students at the College of Mount Saint Vincent in the Bronx, an urban campus, expressed more reservations about pretending to be a different race or ethnicity than students at the State University of New York-Orange, a rural, state-community college in upstate New York and that all students [with the exception of one, see/hear Tessa Schmidt (SUNY-Orange), above] expressed difficulty in changing their sexual preference or identity. A screen capture of Shijin Jose (CMSV) who speaks fourth on this audio clip, is posted directly below.
[6] Click here for Part 2 – On some of the cyber flirtations and romances that developed or didn't develop. Nicholas Stucko (SUNY-Orange) opens this audio clip. Listen for his comments about what it was like to change his racial identity. Screen captures of Nicholas as Reese Ryerson and, also, Shannon Malloy (CMSV) as Mike Sommers are posted directly below.
Click here for Part 3 – On how to make a fictive cyber life seem more real. A screen capture of Dale Partridge’s “big day,” as mentioned in the audio clip is posted directly below. Dale was created by Diego Pimentel (SUNY-Orange).
Click here for Part 4 – On what people felt they could make their faux personas say or not say in cyberspace and on how weight is an important social marker, even in a fictive cyber community. Listen especially for the comments made by Steven Barchow (SUNY-Orange), Olivia Brooks (SUNY-Orange) and Ashley Torelli (CMSV), the fourth, fifth and sixth voices on the clip. An image of Ashley’s cyber personae, Eva Jones, is posted below and you can hear Ashley say more about Eva here.
Click here to listen to Part 5 – On trying to figure out people’s true identities.

Click here to listen to Part 6 – Some closing remarks.
End Note: An earlier post on "The Sociological Imagination" about "The Facebook Project" is [16]right here.

Spotlight on Asexuality Studies (2012-02-28 08:00)

"Spotlight on Asexuality Studies" was a groundbreaking event hosted by the Identity Repertoires/Mind the Gap research group in the Department of Sociology at the University of Warwick, UK. Academics, activists, community members, therapists and students gathered in the university library and online to discuss contemporary asexual research, with papers presented both in-person and from the United States and Canada via video-conference.

For more information about the event, see the [1]website.
If you're interested in asexuality, take a look at some of the posts in the archives.

The cultural significance of asexuality (2012-02-29 08:00)

Until people started calling themselves *homosexual*, it didn't make much sense for anyone to refer to themselves as *heterosexual*. Up until that point, it had simply been taken for granted and, as such, escaped scrutiny either by individuals or by society more widely. As adjectives both homosexual and heterosexual were coined in 1892, in an English translation of work by the early sexologist Kraftt-Ebing. However, as a noun heterosexual didn't enter common usage until the 1960s. The Google Ngram viewer illustrates the relative occurrence of each term within their (enormous) corpus:

[2]
To put it bluntly: people write more about *homosexuality*. The argument I’m making certainly doesn’t entail the view that there weren’t heterosexual people until homosexual people but rather that the visibility of sexual difference (slowly) made heterosexuality an object of deliberate reflection. I included *asexuality* as well as *bisexuality* below but the former is pretty meaningless given its prevalence as a biological term. Nonetheless, it seems interesting and arguably inverts a common way of understanding the relationship between sexualities i.e. *homosexuality* \(\rightarrow\) *heterosexuality* \(\rightarrow\) *bisexuality* rather than *heterosexuality* \(\rightarrow\) *homosexuality* \(\rightarrow\) *bisexuality*. In a sense heterosexuality, as a *concept* in itself rather than the characteristics of person referred to by that concept, should be understood as *derivative* from homosexuality, again understood as a *concept* rather than set of imputed characteristics.

[3]

1050
So what effect would a much increased visibility of asexuality have? Following through the line of thought above, it would make being sexual an object of deliberate reflection. This is certainly my own experience in three years of studying asexuality and it’s been a pretty interesting one. It seems likely that a widespread acquaintance with asexuality, even if it is entirely mediated, would bring being sexual into discursive awareness in a way that hasn’t previously been the case. Quite simply: you’re more likely to reflect upon a personal characteristic if you’re aware that there are people who don’t share it. Furthermore, although I think internal conversation is important to this process, there’s also a vast dialogical element to it. Or to put it simply: you’re more likely to talk to others about a personal characteristic you share with them if you are aware that there are other people who don’t share it.

Within the asexual community, once technology enabled people to conduct dialogues about their shared experience of being asexual in a sexual world, a rich and differentiated language quickly emerged. [4]In spite of this commonality, there were also differences within the asexual community and, as people continued to discuss them, language began to ‘catch up’ to experience. Conversely I wonder whether, once sexual people begin to reflect upon being sexual as something more than a biological characteristic construed in terms of the entirely vacuous notion of a ‘sex drive’, will a rich panoply of sexual difference similarly begin to emerge? So sexual difference might come to be construed not in terms of object choice (i.e. hetero/bi/homo) but in all manner of complex idiosyncrasy which, at present, only very tangentially finds any sort of discursive expression,

C. Wright Mills: Legacies and Prospects - 50 Years On (2012-03-03 08:00)
C. Wright Mills: Legacies and Prospects - 50 Years On
Friday 13th April, 11-12.30pm
BRITISH SOCIOLOGICAL ASSOCIATION CONFERENCE

In March 2012 it will have been 50 years since the death of C. Wright Mills. In that time the world has changed beyond recognition: the Cold War ended, the Keynesian consensus broke down, a globalizing neoliberalism rose to the ascendancy and the internet began to transform human communication and culture. In recent years, with 9/11 and then the financial crisis, it seems that history has returned with a vengeance.
This panel will explore the relevance of C. Wright Mills' ideas 50 years on, considering the value of his legacy and the resources his work offers to understand the rapidly changing social world of the 21st century.

Review of Precious (2012-03-05 08:00)

A word of warning: this is not an uplifting film. It is however one of the rare films worthy of the epithet "unmissable". Set in 1987, it tells the story of Claireece Precious Jones (usually known simply as Precious): a 16 year old black girl who is obese, illiterate and pregnant for the second time by her father. She lives in Harlem with her physically and emotionally abusive mother, while her first child ('Mongo', short for 'Mongoloid', who has Down Syndrome) lives with her grandmother. We never see Precious's father, aside from a solitary flashback to his rape of her – presumably one of many such occurrences – while she is briefly unconscious after being knocked out by her mother, who lashed out in rage as a consequence of what she saw as Precious's culinary inadequacies. As I said, this is not an uplifting film.

We first meet Precious in her class room, as she slaps a student disrupting her maths class and fantasises about the future she hopes to share with her handsome maths teacher. This is soon shattered and she is called to the Principal's office to discuss her second pregnancy. Though she is suspended from school, her Principal (prompted by the handsome maths teacher who says he sees promise in Precious) arranges for her to attend an alternative school. Her mother is, to say the least, scathing about these new educational prospects: "you're a dummy, bitch. You will never know shit. Don't nobody want you. Don't nobody need you." In spite of this, Precious goes on to the new school ("Each One Teach One") which, along with the birth of her son, sets into motion the chain of events which will ultimately take her out of her mother's house.

[EMBED] An undercurrent of fantasy pervades the film, as Precious periodically escapes from the grim particularity of her circumstances into fabulous dreams of recognition and happiness. However even in these fantasies, Precious can never entirely escape: nightmares about rape drift seamlessly into fantasies of celebrity and fame. Similarly at one point she looks into the mirror and sees a pretty slim white girl of a similar age and yet seeing herself in these terms gives her the confidence to go out and face the world. This ambiguity, as reality and fantasy never stand entirely apart, sums up the film as a whole: there's simply too much to it for it to be neatly encapsulated in simple terms. The film seems like this should feel manipulative, given the ambiguous mix of pity and admiration it provokes, however somehow it just doesn't: this is a testament to the quality of Lee Daniels' direction and the performance of Gabourey Sidibe as Precious. The quiet power and earnest defiance which she brings to the character leaves the audience rooting for her in the most genuine way, without ever reducing the film to the level of sentimental fable. [spoilers ahead: stop now if you want to avoid them] This avoidance of sentimentality continues right until the end, as Precious stands up to and overcomes her mother. I found this the most upsetting scene in the film by far, largely because it was so difficult to know what to ultimately make of it. As Precious walks confidently off into the distance, mother to two children, what are we to make of her mother? Neither contempt nor pity seem appropriate and yet we are left with these and much else besides. Then the credits roll... and the only thing I'm sure of is that I want to see the film again...

What does the Sociological Imagination mean today? (2012-03-05 12:00)

[1]
It has been over 50 years since C. Wright Mills wrote the Sociological Imagination. In that time the world has changed beyond recognition: the Cold War ended, the Keynesian consensus broke down, a globalizing neoliberalism rose to the ascendancy and the internet began to transform human communication and culture. In recent years, with 9/11 and then the financial crisis, it seems that history has returned with a vengeance. Is Wright Mills' notion of the 'Sociological Imagination' still pertinent today? How can Sociology help shed light on the rapidly transforming world around us and the consequences of these transformations for the people who inhabit it? What does the 'Sociological Imagination' mean today?

Short articles are invited which engage with these themes, or particular aspects of them. Submissions should be 500 – 1500 words and [2]e-mailed as a Word document. There is no deadline for submissions.

**An information diet? (2012-03-06 08:00)**

Maria Popova of Brain Pickings has written an excellent review in the Atlantic. While the case he makes is a compelling one, is it really the whole story? Or is there a risk that framing information consumption through the lens of health, as Johnson suggests, leads us to lose sight of the some of the more radical and collective solutions to the problems he identifies? Such as collective filtering, which is particularly pertinent for academia.

How much sleep? (2012-03-12 08:00)

In 2001, Roger Ekirch (historian at Virginia Tech) published an important paper that revealed a wealth of historical evidence that throughout our history humans used to have a different sleeping pattern from us today. They used to have a "first sleep" which began about two hours after dusk, after which they woke up for an our or two, followed by "a second sleep". However, this remains largely unknown to the general public.

During this waking period people were quite active. They often got up, went to the toilet or smoked tobacco and some even visited neighbours. Most people stayed in bed, read, wrote and often prayed. Countless prayer manuals from the late 15th Century offered special prayers for the hours in between sleeps.

And these hours weren’t entirely solitary - people often chatted to bed-fellows or had sex.

A doctor’s manual from 16th Century France even advised couples that the best time to conceive was not at the end of a long day's labour but "after the first sleep", when "they have more enjoyment" and "do it better".

The Hacktivist Imagination (2012-03-13 08:00)

[1] X

In The Sociological Imagination, C.W. Mills set out the essential task for sociology as he saw it. His call was simple: to search for and articulate those (casual) connections between individual social environments (what he called 'milieux') and the wider socio-historical forces in which they were entwined. This short article reappropriates C.W Mills' staunch warning to sociology with a particular social phenomenon in mind – 'hacktivism'.

Hacktivism may be broadly defined as the emergence of popular political action, of the self-activity of groups of individuals, in cyberspace (Jordan and Taylor, 2004, p.1). It can be considered 'the merging of hacking activity with an overt political stance', where grassroots political protest is combined with the intrusion of computer systems (Jordan and Taylor, 2004, p.12). Yet, delve a little deeper and it soon becomes clear that there are biographical departures within hacktivism. Fifty years on and C.W Mills continues to provide a valuable insight; that at the juncture between ‘troubles’ and ‘issues' lays an immediate and everyday biographical motivation. This biographical
motivation is not only a site for differences within a wider 'hacktivist' community, but also a potential site for the interference and criminalisation of young men.

Whether a hacktivists motivation is to challenge the ethical and practical malevolence of neoliberal doctrine, or whether it's just about doing it for the "lulz" (a laugh), C.W Mills' ontological realism - or 'promise' to sociology - reminds us of the important connection between individual and society.

The Sociological Imagination

"No social study that does not come back to the problems of biography, of history and of their intersections within a society has completed its intellectual journey". (Mills, [1959] 2000, p.6)

To study the relationship between the lives of ordinary people and large scale social organisations was fundamental to what he termed The Sociological Imagination. In was within his 'Promise' that Mills would seek to enable each sociologist to grasp history and biography, to shift between the two without losing sight of either (Mills, [1959] 2000, p.7). To capture these (causal) relations, Mills set out what he felt was a 'fruitful distinction' between 'the personal trouble of milieu' and the 'public issues of social structure' (Mills, [1959] 2000, p.8). This became Mills' 'essential tool' (Mills, [1959] 2000, p.8) for grasping the contemporary climate, for it not only excavated the individual from 'Grand Theory' (Mills, [1959] 2000, p.25-49), but recognised each individual as 'minute points of the intersections of biography and history within society' (Mills, [1959] 2000, p.8; emphasis added). As Mills distinguished between 'troubles' and 'issues' (Mills, [1959] 2000, p.8), he recaptured biography from 'Abstracted Empiricism' (Mills, [1959] 2000, p.50-75), and kept sight of the wider sociological context within which individuals shape and were shaped by society.

"We have come to know that every individual lives, from one generation to the next, in some society; that he lives out a biography, and that he lives it out within some history sequence. By the fact of his living he contributes, however minutely, to the shaping of this society and to course of its history, even as he is made by society and by its historical push and shove". (Mills, [1959] 2000, p. 6)

The distinction for Mills was an important one. Troubles were considered to occur within the character of the individual and his or her immediate relations with others. This was a limited area of social life which the individual was directly concerned. Any statement or resolution of these troubles meant appreciating the individual as a biographical entity, but an entity who existed within the scope of his immediate milieux. An individual's immediate relations were considered a 'social setting' directly open to personal experiences and 'wilful activity' (Mills, [1959] 2000, p.8). Issues, alternatively, had to do with matters that transcended these 'local environments'. As a public matter, an issue had to do with the organisation of many milieux into the institutions of a historical society (Mills, [1959] 2000, p.8). To witness issues was to witness the values of particular publics under threat; publics which had emerged from various overlapping and interpenetrating milieux. The sociological imagination, then, was comprised in large part by the ability to show how personal milieux could be rendered into the societal issues of the day. Rather than polarising between grand theory and the minutiae of personal experience, Mills sought to define social issues through their emergence out of personal troubles.

This perspective is critical at a time when the landscape of hacktivism is changing (Ruffin, 2011). To recognise that there are different even divergent biographies within the hacktivist community is to recognise that individual motivation gives rise to different social issues and, potentially, different repertoires of contention (Tilly, 1986; Traugott, 1995, Rolfe, 2005).

Hacktivism

That the individual resides in a causal relationship with society is an important departure point on which to
critically consider ‘hacktivism’: for virtual politics has often been found upon attempts to defy state sponsored censorship of the Internet (Ruffin, 2011). As more and more individuals recognise the ‘political genealogy of technology, of virtual reality, or reality of virtuality’ (Armitage, 1999 cited in Jordan and Taylor, 2004, p.29), the hacktivist imagination may play a role in understanding the wider ideological struggles currently taking place within the realm of virtual politics (Allnutt, 2011). Indeed, it is within Mills’ own ‘fruitful distinction’ that the hacktivist imagination plays out, most notably, between ‘the personal troubles of milieu and the public issues of social structure’ (Mills, [1959] 2000, p.8).

In the broadest sense, hacktivism penetrates public discourse intermittently as social movements and popular protest "go online" in a variety of ways in the twenty-first century. Most recently, hacktivism has exploded into the public domain with the actions of the hacking collective known as Anonymous. News stories are now replete with examples of Anonymous’ efforts (Gizmodo, 2012; Guardian, 2012; New York Times, 2012), as this decentralised collective declares cyber war on a number of operational targets including, most recently, the U.S Government (International Business Times, 2012).

Emerging as the new face of hacktivism, Anonymous’ amorphous structure makes them particular hard to describe (Guardian, 2011; Ruffin, 2011). As a structurally disarticulated network of hackers, each collectivity that exists within Anonymous may have a different ideology or cause. What is easier to categorise, however, are their tactics, which can be roughly broken down into three different repertoires: (a) web site defacement; (b) distributed denial of service (DDoS) attacks; and (c) data theft. Each exploit now regularly reported on within world news (Guardian, 2011; Forbes, 2012; Washington Post, 2012).

There are many sides to hacktivism and the tactics of Anonymous are not “typical”. Political activism in cyberspace is a broad field and should be recognised as such. For example, not everyone agrees with the nature of Anonymous’ activities. Oxblood Ruffin, a Canadian hacker and member of a computer underground group known as ‘Cult of the Dead Cow (cDc)’, has detailed the word ‘hacktivist’ (Ruffin, 2004). For Ruffin, hacktivism has an altogether different philosophy: a way of thinking bolstered by some definite tactics (Ruffin, 2004). ‘Using technology to improve human rights’ (Ruffin, 2011), Ruffin realised the potential to shape and maintain human rights discourse through the development of technologies in line with Article 19 of the Universal Declaration of Human Rights (Ruffin, 2011; Hacktivism FAQ, Undated). Ruffin makes two things plain: (a) that there are differences within hacktivism; and (b) that the activities of Anonymous are illegal (Ruffin, 2011).

"Some Anons have claimed that DDoSing is a form of civil disobedience but that argument is difficult to swallow. Civil disobedience entails breaking the law for a higher good; placing a burden on the system to arrest and process dissidents; and having one’s day in court …Far from being civil disobedience, Electronic Frontier Foundation co-founder John Perry Barlow has described DDoSing as "the poison gas of cyberspace". (Ruffin, 2011)

It is Anonymous’ theft of data which is seen by Ruffin as the ‘game changer’ (Ruffin, 2011). Where he derides the hijacking of information for its ‘pyrrhic’-like politics, and argues that Anonymous represent nothing but an ‘excrecent trend in cyber-espionage’ (Ruffin, 2011).

"Already the clouds are forming. The OECD is seeking tighter regulatory control on the internet. And the UK is seeking stricter laws to deal with cybercrime And when the whip comes down – and down it will come – Anonymous will have to accept part of the blame when online privacy rights are scaled back even further”.

‘Hacktivism, real hacktivism’, argues Ruffin, is done with ‘accepted rules of engagement’ in mind.

"There’s a reason why the Geneva Convention exists. Hacktivists need to be careful about the tactics they choose".
So there can be serious consequences to forms of protest online. Hacktivism (and its tactics) are not homogenous, but heterogeneous when different ways of thinking are properly considered. But what does C.W Mills offer to this understanding? There are two points need to be made.

The Hacktivist Imagination

The first important consideration is that an individual’s biography, as his or her experiences relate to their immediate milieu, plays a role in the implementation and execution of particular forms of online protest. Moving beyond personal minutiae, hacktivists develop values, ideas, beliefs and tactics in correspondence with others. In The Sociological Imagination, C. W. Mills provides the framework needed to do this. In asking sociology to recognise the importance of personal troubles, of an individual’s biography, sociology may be able to begin to gain a wider grasp on how and why particular forms of political activism emerge online. Suffice to say, that in appreciating the divergent nature within hacktivism, sociology may also appreciate that wilful activity stands in juxtaposition to wider societal issues. To witness hacktivists taking their troubles online is to witness the values of particular publics, however disarticulated, defend notions such as privacy and freedom of speech (Electronic Frontier Foundation, 2010). To witness hacktivists take their troubles online is to witness the societal issues of day in contention. Whether it be on piracy law, or the trial of Bradley Manning; hacktivists exist within a wider dialogue that sociologists can capture. And this dialogue is about how human activity continues to shape the institutions of a historical society.

Where there is a difference within hacktivism, a second (criminological) consideration is necessary. The tactical repertoires of hacktivists are considered emergent causal entities of their personal troubles and their immediate milieu. But what gives rise to those tactics which are considered particularly nefarious? At a time when the term hacktivism has been colonized and is even synonymous with cyber terrorism (GlobalPost, 2012), how appropriate is it to proceed without a careful articulation of biography. Criminological research now considers peer-influence and self-control as major factors fuelling juvenile cybercrime (Holt, Bossler and David, 2011). If the activities of young men on the internet are to be defined, regulated and increasingly policed (BBC News, 2012), then one must recognise that young men have circumstances, pressures and ‘troubles’ which lead them to forge solidarities and pursue forms of resistance online. These considerations are central to a critical appreciation of the depth that exists between individual circumstance, motivation and the collective forms of political protest.

Dr. Thomas Brock is currently a postdoctoral research associate at Durham University. His research interests lie in realist social theory, histories of radical thought and movements of political action”.

Bibliography

It's tough being a man these days... (2012-03-14 08:00)

We first meet Detective Tommy Craven greeting his daughter at Boston station. He's clearly a loving but overprotective father, a man subtly ill at ease with the modern world. His daughter chides him for 'always' being early, and on the way home answers his probing questions by suggesting he needs a relationship: he wears a ring yet we never discover what happened to his wife. He demurs, saying she's 'my girl'. The pair return home where she is violently sick and, cast in the role of father, he tries to rush her to hospital...only for her to be shot and killed the moment they set foot out of the house, thus setting in motion the mystery which drives the film.

It would be easy to dismiss this piece, all the more so given the critical acclaim received by the BBC television drama on which it was based. In fact, most critics have done just that, often making reference to the quality of the original in the process. However, such repudiations ironically foreground, though fail to acknowledge, what's most interesting about the film. A large part of what makes it such a tempting target for critical ire is its casual regurgitation of overly familiar Hollywood clichés: the last honest man, the hardboiled and incorruptible detective, a father struggling on behalf of his children.
We've seen this story a million times before. Or have we? The obvious points of reference are films like Taken and television programs like 24. Yet unlike Bryan Mills or Jack Bauer, who never stumble or display weakness, Tommy Craven struggles from the point of his daughter's death; we see that behind the icy exterior of a man who knows what do and how to do it there is weakness and doubt. Throughout the film he imagines conversations with his daughter and we see his resolve falter on more than one occasion. We also see him throw up through fear and grief, as a visceral representation of his weakness (vomit plays a strangely prominent role in the film).

In its final scene he stumbles, as if drunk, through the house of the malevolent CEO and what might have once been justice is now simply revenge. Despite being a military veteran and a police detective of 30 years with, we learn earlier in the film, an impeccable record (thus he is an unblemished upholder of the Law) he's been pushed too far and seen too much to think that justice can be done. He doesn't aim to bring the perpetrators to justice but simply to end them so he can die knowing he has done something.

He says to the CEO before he makes the kill shot, 'deep down you know you deserve this': a man who has dedicated his life to the law, in both the political and psychoanalytical sense of the term, ultimately finds himself appealing to the private conscience of his enemy as he extra-judicially executes him.

In Ransom, a similar film of the mid 90s, the multimillionaire father (also played by Mel Gibson) was reunited with his son after ultimately killing the corrupt cop who'd kidnapped him and demanded a ransom. Killing was involved, as a troubled father redeemed himself through action facilitated by sheer resolve and unwavering integrity. However, this killing was defensive and against a corrupt cop, thus recovering the law rather than undermining it. Most of all it led to his reconciliation with his son. His previously neglectful parenting was forgotten as his performative enaction of the role of father, which had previously eluded him, washed away all sins.

In contrast, Tommy Craven's killing is offensive, involving a pre-emptive assault on the CEO's house, against a man whose activities were sanctioned at the top levels of the federal government, Ultimately, the reconciliation it facilitates is fantasistic and confined to the afterlife. The film ends with his dead daughter embracing him and leading his spirit out of the hospital. The only point in which we see him as the protective father occurs at the start of the film (as he attempts to rush his sick daughter to hospital) and it quickly ends with her being blown apart with a shotgun.

For all its cinematic clichés, the Edge of Darkness represents something new and, well, dark. While once the redemption of the father played itself out through conservative fables of resolve, integrity and justice, now it ends in three murders and no redemption nor justice.

In the 1990s stories such as this worked to sustain the integrity of American masculinity in social conditions which seemed to perpetually undercut and disorientate it: the inadequate father eventually found redemption through rediscovering those qualities (strength, bravery, courage) which society had obscured. Now however those qualities don’t facilitate redemption; only revenge. They don’t fix what is broken. They simply allow one ultimate and final act: not to set things right, not for justice but simply because acting is better than doing nothing.

A narrative form which once rested on the sublimation of masculine rage through the reestablishment of the law has transmuted into a form which permits no sublimation. Now there is just rage and the expression which can be found for it prior to death.

Harry’s revenge (2012-03-18 08:00)

This film tells the story of Harry Brown, a pensioner living on a decaying housing estate in South London. Formerly a marine, Harry now lives a lonely life, with his wife on death’s door in hospital and few friends in an area increasingly plagued by drugs and crime. The film tells the story of Harry’s stand against the anarchy he perceives around him and the events that forced him to take action. While his friend Len lives in a state of constant fear unknown to Harry, he himself is not immune to it. Time after time, fear of the ‘hoodies’ in the subway by his estate forces him into taking the long route over the dual carriageway. Over and over again the film bombards the viewer with this message that we live in a broken society where the criminal leave the law abiding at best inconvenienced and disgusted, at worst terrified and broken. At times it’s difficult not to wonder if the film was produced in alliance
with the Conservative Research Department given its continual graphic illustration of the Tory 'Broken Britain' theme.

In spite of my distaste for its implicit politics, there's something I found oddly compelling about this film. Perhaps even more so than, say, The Wire because this film possesses a hyperbolic and compulsive grittiness which something like The Wire is simply too refined to exhibit. It's a striking example of what philosopher Mark Fisher calls the 'machismo of demythologisation'. The film makes a virtue of its own unflinching engagement with social decay and, in doing so, it becomes a caricature of the social realism it purports to embody. The scene where Harry visits a local criminal to buy a gun is the most egregious example of this. Leaving aside the implausibility of the interaction itself (would these large scale criminals really be so willing to immediately bring a stranger from the street into their cannabis factory to sell him a weapon?) it is an enormously powerful scene replete with the sort of grinding tension that leaves the viewer increasingly unnerved. Yet the drug dealer himself is absurd, almost Gollum-like, in his affectations and sheer weirdness. It should detract from the scene and yet somehow it doesn't.

Harry Brown has enjoyed its fair share of liberal critics, as its blatant disregard for any notion of social causation means that it ignores the 'why' questions about the apparent evil it portrays. It never asks why the young people in the film act this way. However I'd suggest such a criticism misses the point. I think the more pertinent question is why so many people find a film like this compelling. After all it won a significant though modest degree of critical acclaim. Perhaps more importantly though it enjoyed positive review after positive review on the usually rather polarised Internet Movie Data Base (IMDB). It's difficult to avoid the conclusion that the gritty ultra-violent and moralising revenge ethos of this film speaks to a significant number of people (at least those moved to write online review). I certainly found it a gripping film and yet feel unsettled by this.

In a sense Harry Brown is a postmodern moral fable. It is compelling simply because it speaks to a pervasive moral experience within contemporary society albeit one founded on tabloid scaremongering, political rhetoric and the aesthetic of social decay rather than any day-to-day reality. Perhaps the most telling scene comes when the well meaning, though socially aloof, female detective notices Harry's gun and has her suspicions of his vigilantism confirmed. As a riot rages on the estate around them (with the unfeasibly neat counterposition of the riot police and black-clad rioters being the one weak point in the film's otherwise accomplished cinematography) the defining exchange of the film takes place within the local pub. Having previously been told that Harry served in Northern Ireland, she implores that 'It's not Northern Ireland, Harry'. He retorts that 'No, it's not... those people were fighting for something. To them out there, this is just entertainment'.

Could there be a more emphatic statement of postmodern decay? Whereas once his drive to follow orders and obey the law led him to fight men who believed in something, now when that law has betrayed him (the ineffectualness of the police and judicial system is portrayed through the film with an incongruous degree of subtlety) he is forced to struggle against teenagers who believe in nothing. Yet he himself is equally diminished by these circumstances: while their world burns around them, good men are forced into violence for their survival (or at the very last their freedom to use the local subway).

The detective then asks pointedly asks Harry, 'Where does it end?'. In this sense she could be taken as the voice of reason within the film. Yet her character is stilted, aloof and unsympathetic. Furthermore she has been cast out from the preferred role in the police as a result of her perceived awkward ways. This incisive question and her moral example suggests that the only way to abate this moral decline (which Harry's actions only further) is to take a personal stand. Yet in and of herself this stand seems worthless, valueless and unattractive. At the end of it all she wins a medal but loses any possibility of closure or resolution, as the film implies (though interestingly never states) that her conscience left her unable to arrest this gun-toting pensioner. Her stand is a largely subjective affair, lacking in efficacy beyond her own sense of righteousness.

In fact the only person in the film who enjoys a moral victory is Harry himself. After all he has been through and all he has done, the film closes with him striding confidently through the subway near his estate, for the first
time free from the fear of the attack. Why bother with woolly minded limp-wristed reformism? If the film is to be believed, all it takes for the ‘silent majority’ to win is a gun, some barbed wire and a whole series of extra-judicial killings.

These are essentially brief phrase loans that do present you meet your fiscal troubles within a desired precise time period. Contemplating time limitations these loans are especially intended above an obligation totally free platform. As such, these are kept completely absolutely free from credential checksums. Problems such as defaults, arrears, bankruptcy, CCJs and even IVAs are not deemed here. Additional, there are also no collaterals associated with these loans. There is minimal paper operate necessary on the component of borrower. There are also no hidden or added documentation or faxing necessary here. Applying for these loans is also rather convenient. Folks simply call for filling an on-line type and once this gets authorized money is received inside 24 hours time frame. These loans are in general offered beneath practical terms and situations. The general standard applicant criteria here is that they should certainly be a UK resident and of 18 years of age.

How our society got so fucked up about sex: a brief tour through history... (2012-03-19 08:00)

Prayers for Bobby (2012-03-20 08:00)
If you had asked me a few days ago, I would have assumed it was obvious that a film about gay teen suicide could not also be morally inspiring. Yet this is precisely what [1]Prayers for Bobby achieves. It tells the true story of a religious mother in small town America whose picture perfect life is shattered when she finds out that her teenage son Bobby is gay. Mary, played superbly by Sigourney Weaver, simply cannot accept her son's sexuality and sets out to cure him of his ‘sickness’. This encompasses prayer groups, hard exercise and psychotherapy as Bobby, desperate to restore his once close relationship with Mary, throws himself into these treatments in a fruitless bid to restore his life to the normality he enjoyed prior to his inadvertent outing. Ultimately though he can’t do this and he finds himself drifting into the small gay world of his home town. This only deepens the divide between himself and Mary before he finally heads out into the local city to live with his sympathetic cousin for a couple of months. This opens up a new life for Bobby and, initially, he finds peace with himself through his first relationship.

1072
As you may have guessed from the opening line of the review though, this peace does not last. Bobby finds himself caught between two worlds; his sexuality renders him a sinner to his conservative mother but his internalised sense of sin prevents him from embracing his sexuality. Ultimately the weight of this ambivalence proves too much to bear and he throws himself off a motorway bridge into the path of an oncoming truck. The rest of the film follows Mary’s struggle to come to terms with her guilt and, although the film up to this point is certainly compelling, it is what follows that makes Prayers for Bobby such an astonishing achievement. Her attempts to make sense of Bobby’s death lead her to question her fundamentalist interpretation of the Bible and her submissive relationship to God. She finds a new purpose and meaning to her life as she comes to campaign against the very bigotry which drove such a wedge between herself and her son that he chose to end his life. The film ends with her making an impassioned speech at the seat of local government in favour of gay rights. You can watch it below. The clip may seem a bit cheesy but it really isn’t in the context of the film.

[EMBED] In the events following the film Mary became a highly visible spokeswoman for the Diablo Valley chapter of Parents, Families & Friends of Lesbians and Gays. She also appeared frequently on television talk shows and campaigned for public schools to introduce counselling for gay teenagers. While the events of the film are certainly tragic I found this trajectory from intolerance to activism profoundly inspiring. It showcases the ineradicable human capacity for renewal and understanding, as well as the ever present possibility of solidarity in the face of ingrained intolerance. At a time of political and economic uncertainty, while gay rights are under renewed attack, it offers a potent antidote to circumstantial pessimism. Much of the critical acclaim received by the film seems to have been directed at Sigourney Weaver’s portrayal of Mary. The stunning quality of her performance can be seen both in the sympathy which she engenders in the audience for the bigoted Mary and the sense of plausibility which she inspires in relation to Mary’s seemingly unlikely transition from bible thumping homophobe to prominent gay rights campaigner. However in many ways I felt she was over shadowed by Ryan Kelley’s earnest performance as Bobby. The simple humanity which he brought to the role stayed with me after the film. He offers a beautiful though tragic portrayal of a young boy trapped within circumstances he did not choose and ultimately unable to negotiate a path beyond them. While these are the two outstanding performance in the film there are any number of touching though low key performances throughout the cast. Astonishingly Prayers for Bobby was actually produced as a TV movie. Could there be a more powerful retort to those who bemoan the contemporary state of American television? This film is a wonderful achievement, imbued throughout with pathos, which exhibits admirable insight into its topic area (sexuality, bigotry, exclusion) while also reaching beyond it and touching ineffably upon the most profound aspects of the moral experience of being human.

What does the Sociological Imagination mean today? (2012-03-23 08:01)

It has been over 50 years since C. Wright Mills wrote the Sociological Imagination. In that time the world has changed beyond recognition: the Cold War ended, the Keynesian consensus broke down, a globalizing neoliberalism rose to the ascendancy and the internet began to transform human communication and culture. In recent years, with 9/11 and then the financial crisis, it seems that history has returned with a vengeance. Is Wright Mills’ notion of the ‘Sociological Imagination’ still pertinent today? How can Sociology help shed light on the rapidly transforming world around us and the consequences of these transformations for the people who inhabit it? What does the ‘Sociological Imagination’ mean today?

Short articles are invited which engage with these themes, or particular aspects of them. Submissions should be 500 – 1500 words and e-mailed as a Word document. There is no deadline for submissions.

£9,000... and the costs keep rising (2012-03-27 08:00)

With the tuition fees price hike around the corner, thousands of students across the country have boycotted lectures in a campaign of action organised by the NUS. The protest is part of the NUS's fight against the government's higher education reforms.

The protest also aims to bring attention to the hidden costs of studying as the [1]Guardian reports. Besides the obvious costs of going to university, students can expect to stump up the costs for anything from exam fees, Criminal Record Bureau (CRB) checks to lab coats, field trips and printing.

Critics have warns that costs such as these are inevitable and are usually disclosed by universities in their prospectuses. Nonetheless, the NUS urges for universities to provide greater transparency to students.

"We’re calling on universities and colleges to urgently commit to absorb essential costs... and provide complete transparency on all costs pre-application," says the NUS.

Students protesting about the add-on costs included those at the University of Warwick and the King’s College London.
It is difficult as sociologists to disentangle ourselves from the real world; we lose our sense of reality and become immersed in a constant state of abstract analysis. As a final year Sociology student I no longer sit and mindlessly watch catch up TV, I dissect it, I comment, I angrily shout at the screen. But never, however hard I try, am I able to dull the sociologist in my head.

His name is Ernest. I imagine him as a chaotic academic, the kind I sort of wish I was but will never be due to an obsession with stationary and plastic folders. He stacks books up on the floor, wears large, rounded, gold rimmed glasses and has tufty, windswept hair. He is in a constant state of disarray, my Ernest, and yet, like most brilliant academics, is a chaotic muddle of genius. He spends his days critiquing gender, posing questions and generally preventing me from being a mindless drone, which sometimes, such as when Sex and the City is on, I kind of want to be. It’s difficult to enjoy Sex and the City when the sociologist in your head is screaming about supposed female empowerment, sexual liberation and the politics of fashion.

I fear the only way Ernest can be tamed is to allow him some space in which to sound off, a point at which I can say: ‘hey Ernest, remember earlier when you told me I shouldn’t have stepped across the road from that bloke because my preconceived ideas of him are socially constructed in gender, race and class and I am allowing myself to be shoved by the capitalistic, conservative hand towards stereotyping, yeah? Well now I am allowing you to actually tell me about it and I’ll write it down, sound fair? I can have some me time and you can have some you time and just hopefully we can create some kind of a compromise…’
Ill Manors: Politics, youth, engagement.... and pop music? (2012-03-29 08:00)

MYPLACE Project Manager, Martin Price, University of Warwick, on UK artist Plan B’s new single and how it relates to the work of the project.

This was originally posted on the [1]MYPLACE blog. Follow MYPLACE on Twitter [2]here. For more information on the MYPLACE project, visit the project’s website [3]here.

In a recent [4]music blog on the Guardian newspaper’s website, Dorian Lynskey described Plan B’s latest single “Ill Manors” as “the greatest British protest song in years.” The single, together with its striking video (see below – from Plan B’s official Youtube channel) are blunt and direct in their confrontation of political and social issues facing British youth. The video, in particular, draws heavily on imagery from the riots and looting in British cities in August 2011, which formed the subject for the [5]first post to the MYPLACE blog – in fact keen observers might spot the image used in that blog appearing in the Ill Manors video.

While the video emphasises the riots, the lyrics themselves are more generally about social alienation, class and a swathe of British society left feeling increasingly disenfranchised by the government and mainstream media:

“Who closed down the community centre?
I kill time there used to be a member
what will I do now ’til September?
Schools out, rules out, get your bloody tools out
London’s burning, I predict a riot"

As the artist himself has observed in interviews with the BBC, the portrayal and alienation of this group is encompassed in the name “chav” which is popular in the media: “For me that term is no different from similar terms used to be derogatory towards race and sex, the only difference being that the word chav is used very publicly in the press ... When you attack someone because of the way they talk, the way they dress, the music they listen to, or their lack of education, and you do it publicly and it’s acceptable to do that, you make them feel alienated. They don’t feel like a part of society ... For every person who uses the word chav there is a less educated person ready to embrace it. They say, well, look, I’m never going to change the way you think of me so actually I’m going to play up to it and fuel the fire. In essence that’s what Ill Manors is about.” (as quoted in Dorian Lynskey’s Guardian blog)

What has this to do with our project, MYPLACE? Arguably, everything. Ill Manors speaks to and about a youth disillusioned and disengaged from formal politics, a youth which policy makers appear to have little interest in understanding. MYPLACE speaks directly to these issues, seeking to explore how, when and if young people engage in social, political and civic systems, but just as importantly to understand the reasons why. What motivates (or demotivates) young people? This song and its video address the situation in the UK directly, but how many of the other countries in MYPLACE will recognise some of this sentiment in their own field sites?

It will certainly be interesting to find out. Using those findings to inform policy will also be a key challenge.

In this [2]RSA Animate video, the RSA’s Chief Executive [3]Matthew Taylor, explores the significance which ground-breaking research in neuroscience and behavioural economics has for politics and policy. His biography gives him an interesting perspective on these issues: as a former key advisor to Tony Blair and former director of the establishment think tank IPPR, as well as his work with the RSA, his academically well-informed critique of contemporary politics is that of the consumate insider.

“Kony2012” — the potential of weak ties in the age of the Internet. (2012-04-03 08:00)

Over the past month, much has been written about the Invisible Children’s campaign "Kony2012” and the 30-minute film made to raise awareness of the activities of the Ugandan warlord Joseph Kony. Leaving aside comments on its content and the ends, from a sociological perspective a very interesting aspect of the video concerns its virality, and how this unveils the potential of weak ties in network in the age of the Internet. In a recent [1]article published on the Guardian, John Naughton reflects on this.

Certainly, viral dissemination has always been one of the key features of the Internet, but it is only in recent times (e.g. with the launch of YouTube in 2005) that its deliberate exploitation has been reached. On the one hand,
the ‘explosion’ of the Internet has allowed for any kind of information to be virtually available to anyone across the globe. However, in the midst of such abundance of inputs, ‘attention’ and the ability of ‘getting noticed’ have become two of the scarcest and most sought after commodities in the cyberspace, and ‘virality’ something that every hackers, politicians and advertisers long for, but only few achieve. In this sense, the “Kony2012” meme stands out possibly as one of the most successful cases of exploitation of virality to date.

As Naughton aptly reminds us, the viral dissemination of the video can be understood looking back at one of the precepts of network theory developed over 30 years ago by the sociologist Mark Granovetter—the strength of weak ties in networks. This refers to the crucial role played by links among people who are not closely bonded, to spread ideas and help people join together for action. From this angle, the prominence reached by the “Kony2012” video seems to owe much to one particular weak tie—a tweet by Oprah Winfrey in support of the film. Having 9.7 million (!!) followers on twitter, her comment created a chain of reactions (or, better, twits and YouTube clicks) amongst her ‘virtual acquaintances’ which boosted the dissemination of the video and its message, allowing it to reach 26 million views in less than six days.

Such level of dissemination has exposed the film to all sorts of criticisms, especially due to the rather simplistic ideology and analysis behind it. In spite of this, what is truly remarkable about the “Kony2012” meme is how it has exposed the power of the weak ties in networks, and the way in which these can allow for an idea (good or bad) to spread across the globe via channels beyond the reach and control of established media outlets. This raises crucial questions not on the content of this specific campaign, but rather for the future diffusion of ‘alternative information’ by any campaign able to instigate such virality. Following the view of positive hyperglobalisers, this kind of development could put pressure on democratic politicians, opening up the way to morally driven interventionism. As in the case of the Arab Spring, there comes a point when unremitting shouting that “something must be done” can no longer be ignored. In practice, however, it still remains to be seen whether this great potential will be fulfilled, unleashing an era of network power where the weak ties that populate the Internet can successfully spread across the globe not only videos of cats and celebrities, but democracy.

What is public sociology? (2012-04-05 08:00)

[EMBED]
All going to plan, we’ll be interviewing Michael Burawoy on this topic at the BSA conference next week - watch this space for more details!
I’m not really sure why it popped into my head really. I’ve never really spoken much about it to anyone. I guess as my nan is so poorly now I’m a little preoccupied with death – also when you are studying ageing you come across the topic quite a bit..
It was a year after I’d left uni (2005) and there was a bit of a hoo ha about whether I should even be allowed to attend or not. The tutor organising the Poland trip was all for it though so I managed to sneak a place on the small group. I don’t know why I asked to go I just felt that I really had to experience it. Heritage and tourism was something I’d spent a lot of time studying as an undergrad and ‘dark tourism’ was something I was really interested in. I had little knowledge of the time in history at the start as I never took it beyond Tudors and Stuarts when I was at school.

[3]

1090
We were there for a week and travelled to various Auschwitz sites across Poland. I wanted to understand these events but also how they could be communicated and represented. How after such a tragedy do you deal with the scars that are left?

[4]
Places such as The Killing fields in Cambodia, Ground Zero in New York and other war/disaster sites often attract a high number of visitors…. both those that have some personal connection with the place or family ties as well as those wanting to understand historical events or how they have shaped the identity of people and place. It’s often a complex, contested, and ideological thing – the representation of history.
Many people, who may not have a direct link to the events often see it as weird or morbid – to visit a place such as Auschwitz. A place where unspeakable things happened. For me it serves as an acknowledgement to those who were affected – a way to understand the impact of such events and a reminder of how atrocities can happen if we let them. It was at times a difficult journey – to be confronted with the images and experiences the sites/museums portrayed, but it was an important one and one that I would never forget. It is also incredibly important for those who do have direct connections to the events. Many families were visiting the site, having made a pilgrimage in memory of loved ones or relatives lost. To make meaning and sense of their identity. The site was flooding at the time of my visit and I found the below note in the grass... I don’t know anything about the person who left it. I wonder who they were and how these events connected us in this really remote way? The other clear memory I had was of the ash. It was still evident, all around Auschwitz II Birkenau even in 2005.
Even though I caused a bit of controversy by attaching myself to the trip.. I still believe that it was the right
ing thing to do, and I am still really grateful that I got the opportunity. People generally think that death is something
we shouldn't really ever contemplate..but thinking more widely however, we can see from other cultures that this is
not always the case. For in understanding and embracing the certainty of death we can simultaneously find greater
reason to embrace and celebrate life and the living. If you ever have the chance to visit – go. Poland is a fantastic
country with a lot to offer for many types of travel.

The Importance of Being Ernest #2 (2012-04-10 08:00)

[1]
Like many unmotivated undergraduates with plenty to do, I have been procrastinating by watching the channel four ‘gypsy weddings’. Now this show provides anyone with food for thought. But for sociologists in particular, each episode is crammed with deliciously engaging sociological issues. I personally have found the response to the programme particularly significant. Each episode has some small, rather rotund looking gypsy child in a bikini top, hotpants and heels (with the obligatory diamante) contorting their body into a pose which, frankly, I would feel uncomfortable doing on a dance floor, let alone on television. You can see the camera has aimed to illustrate the mature behaviour of these young children and shock the viewer into western, civilised horror at the mere idea of their own blessed children being so revoltingly adult. Yet I find the images interesting simply because we do find them so shocking. It was not so long ago that we shoved our darling children up chimneys or dragged them into factories to work and yet now we’re faced with a similar scenario, with far less brutality, we recoil at the awfulness of it all.

The concept of childhood was only created in the Victorian period and was used to keep the idle rich women occupied (because of course they would have struggled to entertain themselves with anything like a book). Now that there is a culture which has many similar foundations, its gender roles and its work ethic, we are mortified. We appear repulsed by the adult child shaking their behinds at the camera along to Shakira. Yet what is it we have moved towards? As many of the gypsy women in the programme have noted, we have pregnant teens with fatherless children and a state which struggles to cope looking after them. Now by no means am I suggesting that all of society is like this, furthermore I do not believe that the gypsy way of life is any better necessarily. Yet there are certain fundamental beliefs that they seem to have got right. The emphasis on family, friends and culture is one which we could use in an increasingly individualistic society. It seems interesting to me that so many of us feel we can look down in snobbery at these people, watching the programme with a sense of superiority when we are hardly perfect ourselves. Untill we begin to eliminate many of our own social problems, I do not think we are in a position to look on in distaste at a group of people whose culture celebrates the very same things we are losing.

The word ‘blogging’ often has negative connotations. Yet blogging can be understood both as an output and as a platform. Many negative views about blogging are connected to a certain idea of what it is: a single author, using it as a forum to express their views to a world which, in my cases, isn’t particularly interested. However this is only one kind of output which the platform can be used to publish. Increasingly, popular and successful blogs are taking on a new form: the multi-author blog. As the LSE's Chris Gilson and Patrick Dunleavy have argued,

The truth is that the single-author blog model has already gone out of fashion, and is in rapid decline. A blog is only as good as its readership and without consistently strong posts, and an easy way of finding them, there will be no readership. In the modern world of web 2.0, RSS feeds, Facebook and Twitter, it simply is not very effective to have a single author, single issue, rarely updated blog; all the effort made in writing and posting will be typically wasted.

Even creating a combined blog portal for a whole university is no guarantee of success. For instance, the Warwick University blog portal lists over 7,000 blogs which in combination have over 140,000 entries. But there are no indications of which are the popular or timely blogs, nor even a separation of staff and student work.

These considerations help explain why the vast majority of popular political blogs are now multi-author blogs (MABs); that is, themed and coherent blogs run by a proper editorial team and calling on the services of multiple authors to ensure that the blog remains topical, can cumulate a great deal of content and can ensure a good ‘churn’ of high quality posts. We believe that MABs are a very important development, and they can be an assured way for an academic institution to become more effective in the context of the web.

Such websites function more like online magazines and take full advantage of the power of modern blogging platforms: free, instantaneous, collaborative publishing of a kind which has never previously been possible. While the uptake of such tools within academia is still relatively new, there are already countless examples of ongoing successes, such as the LSE Impact Blog, the LSE Politics & Policy Blog and the Sociological Imagination. As Gilson and Dunleavy argue later in the article above:

We believe that there is a huge untapped market for well-informed, continuously updated and varied academic blogging. Academics are already writing content and universities already function as huge dynamic knowledge inventories that insiders know about, but the wider public cannot access. The difficult creative job is therefore already done. Multi-author blogs are a fantastic, easy, and moreover, cheap way for academics and universities to get their research out to what is essentially an unlimited audience. From this process, we can all benefit.

Perhaps the most exciting aspect of such tool is that they require little technical knowledge to utilise. If you are capable of using Microsoft Excel or Microsoft Word, you’re capable of using these tools. Furthermore, the extremely sophisticated collaborative functions built into them enable projects to be maintained without the need for regularly scheduled meetings or large amounts of communication. They enable an entirely new form of academic communication: a kind of ‘middle-range publishing’ that falls between books/journals & conferences/seminars.

Over the next couple of months, the Digital Change GPP will be supporting Multi-Author Blogging activities.
at Warwick. There will be an initial 1 hour session on **April 19th (12pm to 1pm in the Research Exchange Seminar Room 1)** which will offer an overview of Multi-Author Blogging, examples of its successful use and advice on planning potential projects. If there is enough interest, there will then be a longer ‘hands on’ session in May intended for people who want to get a project started.

All are welcome on the day but it would be appreciated if you could flag up your attendance via e-mail.

‘I’m Russian, that means I’m sober’: Riding the ‘new wave’ sweeping St Petersburg’s streets (2012-04-11 08:00)

MYPLACE Project Coordinator, Hilary Pilkington, and Aleksei Zinoviev of HSE, St Petersburg provide notes from the field on the “Russian Run” in St Petersburg.

This was originally posted on the [1]MYPLACE blog. Follow MYPLACE on Twitter [2]here. For more information on the MYPLACE project, visit the project’s website [3]here.

As part of the scoping for ethnographic case studies for MYPLACE, Aleksei Zinoviev has been talking to organisers of the informal youth movement ‘Russian Run’ (Русская пробежка). While in St Petersburg Hilary Pilkington joined him for some participant observation as they hooked up with more than 90 young people (and two police 4×4 escorts) to make a 5km run through the city’s streets.

The ‘Russian Run’ movement (which has branches across Russia: [http://rusbeg.ru/](http://rusbeg.ru/)) emerged spontaneously following the death of the Moscow Spartak fan, Egor Svirdov, on 6 December 2010; he was shot during a fight between Spartak fans and a group of recent migrants to Moscow from the North Caucasus. The subsequent release without charge of the main suspect led to a mass demonstration in Manezh Square, Moscow on 11 December which ended in rioting and violence including 4 deaths. Similar demonstrations took place in St Petersburg and other cities across Russia. The nature of the death of Svirdov – reportedly the fans’ opponents were skilled fighters – as well as the failure of the authorities to prosecute anyone for the killing led to a feeling among young Russians that they should unite in support of one another and fight the image of the Russian as 'lazy drunkard', according to one of the St Petersburg organisers talking in an earlier interview with Aleksei. It was this desire that brought people out across Russia for the first ‘Russian Run’ on 1st January 2011. ‘Russian Run-St Petersburg’ is an informal (unregistered), grassroots movement of young people. It has no commercial or political sponsors and considers itself to be, first and foremost, an anti-alcohol (or more accurately 'pro-sobriety') movement that promotes its message by encouraging young people to take active part in sport. Much of the organisation is conducted via the social networking site ‘vkontakte’ ([http://vk.com/rusbeg _spb](http://vk.com/rusbeg _spb)) including promotion of Its regular Sunday midday ‘runs’. The first of these took place on 1 January 2011 and attracted just 35 people; by 18 September 2011, the movement had gathered...
800 runners. Organisers believe this reflects a ‘new wave’ of young people who have woken up to the fact that not smoking, drinking or taking drugs is a better and more correct way of life. This is the historic task of youth today, it would seem, and runners reflect this in their chants, which call on young people to respect the memory of what past generations have done for them in their own action; ‘Your grandfather didn’t fight in order that you could drink’, they shout as they run. Today (18th March 2012), 93 people took part in the run. They gathered at the metro station Sportivnaiia just before midday and completed a 5km circular route stopping only for a bout of collective exercise in front of the Planetarium. But it’s not about the running. The endless waits at traffic lights, negotiations of unfathomably wide and deep ‘puddles’ that mark the beginning of the thaw in the city and the need for punctilious observation of traffic and public order regulations (the beady-eyed police stopped at every junction in hope of spotting a transgression) would make any serious runner head for the hills. No. It is all about the shouting. As the runners set off, the shouters begin, ‘What do Russians choose?’ comes the call, and in chorus the reply, ‘Russians choose sport’. The chants continue throughout the run, the noise level rising as the most lyrically resonant ‘Sport – sila. Alkogol – mogila’ (‘Sport is strength. Alcohol is death’) takes hold of the crowd. There are three words at the heart of this movement, ‘Russkii – znachit trezvii’ (‘I’m a Russian, that means I’m sober). They are emblazoned on t-shirts and stickers but, more importantly, with every collective step, they become more deeply rooted in the hearts and minds of the runners. As one of the organisers noted in an earlier interview, ‘When you’re running and shouting ‘Russkii – znachit trezvii’, you convince yourself that this is exactly what you should be.’ Of course there are lots of questions to ask. Why should a grassroots sports and sobriety promotion organisation single out ‘Russians’ (russkie) rather than citizens of Russia (rossiiane) as its target group? Why adopt the Russian imperial flag alongside the current Russian Federation flag to rally people to its cause? And why, given the movement’s patriotic and pro-healthy living message, should its leader, Maxim Kalinichenko, find himself unpopular with the authorities?[5][2] Whether ‘Russian Run’ will succeed in turning this ripple of interest among young people in promoting healthy ways of life into an unstoppable wave, remains to be seen. That it is a genuine bottom-up initiative by young people to respond to what they consider to be one of the country’s most serious problems, however, is without doubt. [6][1] Literally ‘alcohol is the grave’ – ‘death’ here gets slightly closer to the rhyme of the Russian original. [7][2] Kalinichenko remains in prison after being arrested following an ‘unsanctioned march’ by the group on Nevskii Prospekt on 10th December 2011.

Rene . (2012-04-14 09:50:59)
I think the answer to the question about singleing out Russians as its target group is that the movement started because, supposedly, a person from another ethnic group killed the Russian.

Fried tarantula (2012-04-12 08:00)

[1]
We were travelling overland on a group tour. A small party of international travellers of varying ages, sizes and descriptions, united by a love of adventure, the unexpected and a curiosity for different cultures. We were strangers on arriving in the country, but had become a happy unit by the time we left it.

It was toward the end of our experience. We had negotiated canals by dugout boat, cities, historic ruins and jungles, temples, beaches, swam in forest rivers, discovered deserted hill forts and learnt of the genocide and regime which had scarred both a people and land. The journey took us by train, boat, public bus, and in the back of pickup trucks which transported us far and wide across Cambodia.

We had been travelling for many hours by mini bus across treacherous dirt tracks and uneven broken highways. It was early April and nearing the end of the dry season. The air conditioning unit had long since broken, and relief from the heat was occasionally brought through the open windows along with views of dusty fields, shacks, ploughs, occasional cattle and waving children along the roadside. Lorries frequently passed us, precariously piled
high with goods or stock, mountains of cargo which were often double the size of the vehicle carrying them and were sometimes topped off by sleeping human bodies or roped, bewildered looking animals.

Our tour demanded a twelve hour journey that day, and we were relieved when the bus pulled in for a break at a roadside cafe/interchange. It was a square concrete looking building, which was offset with brightly coloured plastic tables and chairs. It was busy with a number of (mostly) men eating, gambling, or conducting business as traders would meet at the 'half way point' between towns to exchange/buy goods and other matters.

Tumbling wearily out of the bus I was immediately conscious of how strange we looked to the locals. Our dress, our manner or gadgets and adornments, all seemed alien in this world despite the fact these were 'simplified' versions of ourselves so as to accommodate our travels. Reactions to our party were different all around Cambodia and often related to the level of tourism development which had taken place. It was curious and beneficial to experience life as a kind of 'other' an alien in a foreign land. Sometimes it was curiosity, indifference, annoyance, frustration, fascination, but usually we were greeted with compassion and with a warm generosity. Having recently recovered from such tragic events, the Khmer people seemed to usually find something to smile about regardless of their circumstances. People here though, seemed a little less trusting of strangers.

During the regime many people were sent out to work the land and forced to live in poverty (and still do). Most Khmer people learnt to survive on whatever they could find, which is how the local snack of fried tarantula came to be popular in this particular area we passed through. Usually at 'service stations' you could pick up essentials – bottles of water, fried rice, mango, salt and chilli pineapple, everything always wrapped in tiny plastic bags, but it was the only time I ever saw anything like this on my travels there.

The sight of the spiders was fascinating. To see them all together was, essentially, your worst nightmare realised. Even dead they look pretty formidable given their size. I was interested in how something which people were usually so afraid of could actually nourish them. So I bought one. I was the only person to go for it. Most of the others were so frightened of spiders it was just too gross to be considered.

It tasted mainly of garlic. The legs were furry and on the ends were charred, sort of like a burnt furry twiglet. They were hard to swallow at times and got stuck in my throat. There was a small amount of firm meat on the body. I can’t really remember what it tasted of now – I think mostly garlic and woodsmoke. I think I had a good go at it and ate most of the body. Might have left a few legs though. The other travellers were impressed/repulsed.

I felt strangely proud in that moment.

We continued on the journey by bus and in the evening finally reached the capital Phonm Penn. The idea of the tour experience overall was a deliberately 'local' one and for most of the holiday we camped, stayed with local families, used "very" basic guesthouses or overnight transport.

The hotel in the capital was our one night of luxury.. but by then it seemed almost obscene that after our extraordinary backpacking adventures we now stayed in a palace of chrome and glass complete with running water, air conditioning, toilets with seats and neatly ironed pristine white sheets. I felt perfectly fine for the entire night but it wasn’t until getting up the next day that I began to feel queasy.

My roommate said she was sure it was the spider that did it.

We got up a little late for breakfast and rushed to make the sitting. It was a weekday and the prestigious hotel was bustling with high end tourists and Khmer business executives. By then I realised I felt rough, really rough. We were quite high up in the building, perhaps on the top floor and we both managed to squeeze into the busy mirrored lift right by the doors.
It must have been the motion of the lift dropping that made my queasy stomach turn so violently. I held on as the lift began to sail steadily downward. Floor 8, floor 7, floor 6, (I needed the get to a toilet pronto) floor 5, floor 4, (just hold on, I thought). What happened next was some kind of unfortunate miracle of timing.

The lift reached the ground floor and I can remember thinking as I heard the familiar ‘ding’ that I was going to make it. (I am definitely going to make it) I thought.

Wrong.

The doors swung back and in almost perfect synchronicity, as I stepped out through them, I vomited violently (perhaps in the manner of the exorcist film or similar) straight out across the lobby in front of the reception desk, a queue of guests waiting to check out, most of my fellow travellers and several tables of nearby breakfast diners. I can still remember the look of shock on the receptionist’s faces as my body wretched involuntarily and dramatically to expel (possibly the spider but we don’t know) whatever it was that poisoned it (Which I then helplessly deposited in the middle of the posh reception).

Once people had gotten over the shock, it seemed that no lasting damage was done. Things were cleared away, and I, after a few days, recovered.

People have since asked me, if I had the choice again, would I still eat the spider?

Every.

Single.

Time.

Is Precautionary the New Reactionary? (2012-04-12 20:03)

In recent months, both sides of the Atlantic have witnessed renewed calls to apply the so-called Precautionary Principle to limit, if not outright, stop a variety of publicly and privately funded research and development projects around the topic of ‘synthetic biology’, an umbrella term for all attempts to redesign life, either by altering existing organisms or introducing new ones. The UK’s Green Party, currently enjoying its first Member of Parliament, has even proposed a permanent precautionary branch of government with the power to refer any legislation back to committee if it fails to be properly cognizant of its potential effects on future generations. You can find out more about it [1]here. However, the most ambitious attempt to enforce the Precautionary Principle will be unveiled in one week’s time (18th April) at Washington’s Wilson Center. 113 NGOs from across the world have signed a statement that would effectively impose enough regulations on the pursuit of synthetic biology to make it unfeasible. If you’re interested in finding out more or attending the event, go [2]here.

Generally speaking, the Precautionary Principle proposes a version of the Hippocratic Oath for the entire planet: i.e. above all else, do no harm. At first hearing, who could disagree? However, in practice, it turns out to be a radically 1106
risk-averse strategy that mistakenly sees the wholesale arresting of scientific and technological innovation as the solution to genuine problems of social injustice, poverty, inequality, insecurity, etc. I say ‘wholesale’ quite deliberately because, while Precautionaries have been traditionally preoccupied with stopping the spread of ‘genetically modified organisms’, their arguments are typically pitched at such a level of generality and abstraction that they could be easily extended to any genuine innovation in the Schumpeterian sense – that is, a market game-changer. In short, Precautionaries are completely blind to the positive character of risk-taking, even when the risks fail. Indeed, the failures may teach us more, if the data they provide are collected and made publicly available so that others may learn and take more informed risks in the future. A truly progressive society insures against the inevitable negative outcomes of risk-taking without discouraging the taking of risk altogether.

Behind this last sentence is an alternative to the Precautionary Principle, namely, the Proactionary Principle, which has been so far promoted only in transhumanist circles. You can read its latest version [3]here. The Proactionary Principle ties our distinctiveness as creatures to our proven capacity for taking calculated risks from which we emerge not dead but stronger as a species. The trick is to provide a normative framework that makes the Proactionary Principle attractive not only to self-styled heroic entrepreneurs and libertarians but also to ordinary, often vulnerable people who are not normally inclined to risk so much of themselves and the world for some unknown future. At the moment, Veronika Lipinska and I are writing a book that will sketch out the basis for a new sort of welfare state that is not so much focussed on preventing worst outcomes but rather encourages the taking of risks from which all of society may benefit.

An introduction to Margaret Archer’s under-appreciated work on culture (2012-04-15 08:00)

The term ‘culture’ carries considerable intellectual baggage yet is rarely subject to extensive conceptual scrutiny. Our use of it is simultaneously everyday and abstract, concrete yet nebulous and, as a consequence, operationalizing it within the context of research necessitates a degree of specificity which it profoundly lacks when utilised within lay discourse. Therefore drawing on Archer (1996) I wish to distinguish two specific aspects of culture which play related though distinct roles in the formation of identity: the socio-cultural context and the cultural system. The former refers to the webs of relationships within which every individual is entwined within a range of geographical, familial and institutional contexts. These relationships are causal and pertain to interpersonal interaction. The latter relates to the ideas existent within society or, as Archer puts it, the "corpus of existing intelligibilia [...] all things capable of being grasped, deciphered, understood or known by someone" (Archer 1996: 104). Intelligibilia of this sort is to be distinguished from expressive aspects of human cultural production i.e. it relates to those ideas susceptible to propositional understanding rather than, say, aesthetic expression. As Archer explains this point:

"Obviously we do not live by propositions alone (any more than we live logically); in addition, we generate myths, are moved by mysteries, become rich in symbolic and ruthless in manipulating hidden persuaders. But all of these elements are precisely the stuff of Socio-Cultural interaction. For they are all matters of interpersonal influence, whether we are talking at one extreme of hermeneutic understanding (including religious experience at the furthest extremity) or of the manipulative assault and battery of ideas used ideologically." (Archer 1996: xviii-xix)

Ideas of this sort stand in logical relations to each other in virtue of their intelligibility and truth-functionality: in so far as they implicitly or explicitly make claims about what is or is not the case then these claims stand in relations of contradiction or agreement with each other. For example while the schools of thought they represent may enjoy little or no acquaintance, a work of postmodern philosophy and a physics text book might assert contrary propositions about the nature of the physical world and, through doing so, implicate themselves in a reciprocal logical relationship in virtue of what they argue is or is not the case.

Existence within the cultural system is not dependent upon human awareness, acknowledgement or understanding of an idea. In this claim Archer is developing Karl Popper’s account of ‘world 3’ as the domain in which the products of the human mind (such as scientific theories and scientific problems) take on an objective existence vis-à-vis their creators (Gorton 2006: 32-34). For instance the propositional content of this chapter continues to exist even if the chapter itself is neither read nor valued, as do the logical relations in which this content stands vis-à-vis that of other academic books and papers. However unnoticed they may contingently be at a particular point in time, the products of the human mind retain their capacity to be understood. One particularly striking instantiation of this capacity was the recovery of largely forgotten classical texts which are generally deemed to have been a crucial driver of the renaissance. Line spacing needs to be made consistent

It is self-evident that these two areas of cultural life "do not exist or operate independently of one another" but rather "overlap, intertwine and are mutually influential". As such we can acknowledge that access to the cultural system is always socio-culturally mediated, through institutions such as libraries and publishing houses, while still retaining a distinction that is fundamentally analytical. Rather than implying some radical separation of the two domains (clearly they are distinguishable without being distinct) it asserts that distinguishing between them facilitates an explanation of cultural processes which would otherwise escape us. Through drawing this distinction between the socio-cultural context and the cultural system it is possible to isolate dynamics which pertain to each in turn, as well as second-order interactions between the two.

If you found this introduction interesting (taken from an unpublished paper by SI’s editor) you might want to read Archer’s work first-hand:
Now this is how you do public engagement online... (2012-04-15 15:20)

The girl on the stairs (2012-04-16 08:00)

It was a time in my life where I moved around quite a lot... Stayed in a lot of short term room rentals that sort of thing. The standard of accommodation could often be patchy. Sometimes when you are young, things seem like a good idea at the time. Or when you are looking so hard to escape from one situation that you don’t actually notice where it is leading to? ‘Out of the frying pan into the fire’ my Nan used to call it.

You’d often see them in the high street. The smack heads. It was easy to tell from their white or slightly yellow skin colour....The pinched face, hollow eyes and sunken cheek bones. .. Thin bodies. You could even tell how long they had been on it sometimes. The teeth often gave it away. .. well it was either that or the fact they would often be seen cycling around the town centre with a TV set strapped across the handle bars.

It wasn’t a massive building but I can remember at least three floors. We found out later, that the place was under surveillance. The police kinda knew about the activity there. The comings and goings. The flats were in the middle of town close to the river Medway.

You could tell we were by the water by the size of the rats that would visit at night. Not in the flats but outside by the bins. Water rats. They seemed bigger than regular rats. Like small dogs almost. Often at the weekend –
when we were coming back from a night out or just chilling in a parked car as the sun rose....we would sit and watch them scurry about.. Determinedly dragging out the remnants of burgers and kebabs from the bins. Climbing vertical surfaces like they had super powers or something.

I was ready for the weekend. I was young. Self obsessed. Bleach blonde. Clubbing was all there really was at that time. Every Saturday. Lilac strappy mini dress, glossy tan tights and white platform knee boots. Wonderbra with extra oomph. I was the kind of girl that wore designer clothes that she ordered off the catalogue.

The stairwell was always the scariest place to be at night. So when we would go out we would try and leave before it got too dark. The dealers preferred the darkness, so what used to happen is that the light bulbs got broken or nicked. In the end the council installed push button lights that lit up the halls for a few minutes to allow you to get to the door. Even these didn't always work though and the security door was always wedged open so people could get in and out.

The worse thing was not knowing who you were going to bump into in the darkness.

It was summer and around 9.30pm. We were off to the usual place. Usual scene. Have a few bottles of hooch and then get a taxi over to Strood to Medway's biggest club. We did it every week. It was always the highlight.... well It was the most important thing to us really. What our weekly wages went on.

We left the flat, locked the door and clip-clopped our way in heels across the faux floor covering to the end of the corridor, bracelets jangling, and the smell of cheap perfume lingering in the air.

It wasn't even anything dramatic. It's just one of those things that stay with you. Just a weird inexplicable moment. Did you ever get that? When suddenly for an instant you look at someone, a stranger and you share something?

A moment. A knowing?

The stench of piss and faeces would hit you head on as soon as you were on the stairs. It was almost overwhelming. You would have to get out of there and into the open air was soon as possible.

I opened the door to the stair well and stepped through it.

She was sitting on the stairs. She was around 14 years old. Pretty. Jeans. Plain t-shirt. Mousy brown greasy hair, slightly built. Huddled over something. Engrossed.

I looked more closely.

Her right hand held the lighter which was carefully heating the heroin in a spoon. The needles were spread out on the floor beside her, waiting.

She looked up.

Our eyes met. Hers were big and blue. She smiled. A genuine, broad , and friendly smile. She had a warmth about her. An innocence. It was like I could see her. I mean really see her. She was just so young. She was just sitting there. Like it was perfectly normal. She held my gaze for a split second.

‘Alrite’ she nodded and smiled.
I hesitated. ‘Alrite’ I replied.

She smiled again. Then went back to the spoon.

[1]

I walked on. Didn’t say anything. Went for a few beers, got in a taxi and went to the club.

I looked for her, when we got home, I hoped she might be there but I never saw her again.

It’s just one of those things that stay with you. Just a strange inexplicable shared moment. A connection you can’t explain. Did you ever get that?

It wasn’t even anything dramatic

The Importance of Being Ernest #3 (2012-04-17 08:00)

[1]

It’s dissertation week and, no, I’m not handing it in carefully bound with a sense of relief attached to it. It’s the week that the dissertation nightmares begin. They were bound to happen and were lurking in the perimeters of my mind, just waiting to leap out and attack. I had felt them venturing in closer when I woke up at five am to do some ‘light reading’ for it, closer still when I was counting up the books for my bibliography before even being half way through the thing itself. Yet I had not anticipated them this early. There is still a month or so left and I had assumed I would get some respite until at least the end of April.

Alas it is not to be. Ernest finds it hilarious and attempts to goad whatever form the dread of dissertation takes in my mind. He’s something like a cross between a sarky Jack Black and a cartoon devil. He even encourages its behaviour during the day which, frankly, I could do without. He raises the questions that I know I will never answer or even attempt to address in my dissertation yet sit there like the black crow in the back of my mind, a ‘what if’ of dissertations. I wonder if I will still get that 2:1 if I don’t answer them and Ernest shakes his head mis-erably. I wonder if I just read five more books would my bibliography look more impressive and boost me up a grade?

Ernest tuts and looks pityingly at me. He knows how this works, he knows the score, he will stress me until essays are over, until everything is done and I can do nothing about it. Then he will look at me and say, “you know, you couldn’t have done much more” and I’ll think, “yeah, he’s right, this fictional and probably unhealthy character in my mind, he’s bloody well right”. We’ll form an alliance again, be best buds, probably around the time I start
interviewing for jobs. But right now, during the dissertation nightmare period, I hate him.

Mark Hawker, a first-year MPhil/PhD Sociology student at the University of Sheffield, reflects on his first BSA conference... (2012-04-17 15:00)

I have just got back from attending my very first [1]conference hosted by the British Sociological Society. I have to say, the title didn't really appeal to me that much ("Sociology in an Age of Austerity") but I went for the experience as I have enjoyed attending conferences in the past. The first thing I shall say is that the conference programme was huge. It took place over three whole days including paper sessions across at least fifteen streams, stream plenaries, roundtable sessions and study group meetings. I found this a bit daunting but, thankfully, took my time to highlight the sessions that I was most interested in and made sure that I attended them all. I say “all” in the loosest sense as there were just two presentations that I was actually interested in! The first was on "ageing in the Age of Austerity" and looked at the body in terms of physical activity; the second was on "older people, assistive technology and the Age of Austerity?". The latter was presented by [2]Gary Pritchard who works at the [3]Culture Lab at Newcastle University. Gary also works with [4]Dr. Katie Brittain who I have read quite a bit on so was great to pick up his details and hopefully go to visit them some time in the future!

I came away from the conference feeling pleased that I’d met and talked to Gary and was thankful that his presentation didn’t cover too much of the ground that my PhD will! Mind, although I can’t quite put my finger on it I found the conference lacking a “personal” touch even though it was jam-packed full of both people and sessions. It felt like I was alone but together (borrowing a Turkle-ism) with a group of people who shared a common interest in "sociology” and whatever that entailed. The “other” sessions that I went to were heavily theoretical and I almost felt out of place listening to both them and the 5-minute long questions that came at the end of them.

Don’t get me wrong, I really enjoy sociology but every day I struggle with what it “is” and what I want it to be. This conference showed me that while it is diverse it is also exclusive. But, is anyone listening to it?

I disabled my facebook profile (call the police!) (2012-04-18 08:00)

Last week I did something radical...

I DISABLED MY FACEBOOK PROFILE!!!!!!!

And so far – it’s been interesting.

Facebook has experienced huge growth since its launch in 2004 with a reported 845 million active users in February 2012. The social networking site provides a shared online webspace for individuals and their friends to chat, post messages/email and share uploads /activities relating to their interests.

I’ve been a member of the site since around 2007/8. Since I joined I’ve spent a good amount of time using the site. I currently have around 250 friends (although at one stage I was hitting 700). I have been in contact with old friends from school, joined groups for events, shared photos and communicated with friends across the world both whilst at ‘home’ and whilst abroad travelling. I can literally communicate ‘on the move’ picking up facebook from my smartphone at any time where I have a signal. It has had some positive impact on my life, increased my online presence and connection with others. So why the change?

It’s difficult to pinpoint exactly where the tipping point was that made me want to take a step back from it. From a practical level the site has been subject to constant upgrades and re-designs with privacy rules and process changing frequently. This unsettles me as I feel less in control of the data that I share. The most frequent introduction ‘timeline’ encourages you to input all your personal history and it got to a stage where I didn’t understand why that was really necessary. The accuracy of the targeted marketing on facebook is frightening (with ‘bots’ often picking up key words from status updates etc ) and whilst its great to share info on line this can also backfire with the world being informed of your relationship breakup or latest family drama. This is pretty rubbish if it’s something serious such as a hospital emergency or similar.

One of the key things I have noticed is the more that I have shared on facebook the less people in my life have felt it necessary to actually to talk to me. Being a research student can be a lonely process at times, and whilst other people have felt that they are up to date with my goings on via facebook, I’ve really missed having face to face contact with them. My main resolution is to try and get back into the habit of having actual conversations with people and hopefully encourage them to do the same.

I started to also wonder what the implication was in terms of emotional investment in the past. Having your entire life history mapped out in front of you may not be the best thing in terms of relationship break up or family dispute and who really needs to be reminded of certain past events? I know several of my friends who have completed the obligatory ‘facebook stalk’ of their new partners torturing themselves with photos of their current beau in previous relationships. I was also contacted by a ‘bully’ from years gone by who seemed to have no recollection of what she put me through. So I silently ignored her friend request and the more I ignored her well guess what? She attempted to bully me again via the internet. Not really sure I needed that... is it really necessary to get back in touch with everyone from our past.. maybe if we’ve not kept in touch it’s for a reason and it’s better to let them go?

I noticed other changes in social activity too. One of my interest is photography and lately I have been making greater attempts to understand and document different aspects of social life. I want to understand and represent social issues (by social I mean those concerned with society) using photography to try and do that. So I am trying to think more about the meanings of the photos that I take. I’ve been on a few nights out recently where the activity seemed to be taking photos for facebook. Not enjoying the moment, or celebrating a specific event but for taking photo after photo of ...well..not a lot really. The whole dynamic of an evening out seems to be shifting from enjoying the moment to documenting it. Performing it even. Don’t get me wrong I’ve been just as guilty of this in the past.
as others have. I guess from my clowning training I am learning to try and live in the moment, but I witnessed how
facebook is changing our sense of ‘being there’ with people posting on facebook groups about the night out whilst
all being on the night out and a few metres away from each other. I started wondering if this was quite right. Also
my research is concerned with the older people and they highlight so much the need for ‘being there’ with others. It
made me more aware of my own absence in the present through technology/facebook.

I’ve been having these thoughts for a while and Shelly Turkle’s book ‘Alone Together’ has been on my ama-
zon wish list since last year. Recently I picked up on a TED talk via Twitter (Oh the irony) given by Sherry regarding
her research which discuss this concept of almost individual/group isolation. Have a look and see what you think.

One of the most interesting things is the way people react when I tell them. It’s become such a social norm
that most people think I am bonkers. In addition more and more activities are being organised via facebook and my
lack of an account has been seen as a real inconvenience. Also interesting to note is that a lot of people weirdly
assumed they had done something to me personally and that I had singled them out for deletion rather than
cancelling my own account.

I didn’t delete my facebook profile as I have lots of info I need to pull off as well as contact details of friends
and family. I can go back in at any time and restore things if I want to, it has had some great benefits and in the past
I have enjoyed sharing certain things with my friends and family. I guess what I’m doing currently is taking stock.
Trying to exist in the moment and rekindle the physical co-present aspects of my relationships. Although people
think I’m weird I’ve felt a lot better. Maybe I will re-boot the profile at some point in the future, but currently I am
enjoying a new kind of freedom, – one of privacy, of acting in a different way, of trying to be in the here and now….and to be honest the strongest feeling I have is a strange sense of relief.

Terry Wassall, Principal Teaching Fellow in the School of Sociology and Social Policy at the University of Leeds, reflects on #britsoc12 (2012-04-18 14:15)

I enjoyed the BSA 2012 conference in Leeds that finished yesterday and came away re-enthused about sociology as a vocation and as a political project and mildly optimistic about its future. I have come away with my head buzzing with half formed ideas, fragments of talks and conversations, pages of barely legible notes and a dozen or more issues I want to follow up and projects I want to start or be involved in. It seemed to me that in the presentations I went to and in conversations I had a few interconnected themes kept recurring – the problem of sociology’s publics, the necessity for sociology to de-objectify society and social actors, and the practice of sociology as a normative and politically engaged vocation. While I can still remember them, these are a few initial notes and observations around these topics.

Zygmunt Bauman in his talk to the PG Forum on Tuesday and in his keynote on Wednesday acknowledged there is the perception of a crisis in sociology. This is usually construed as sociology losing touch with its public. For Zygmunt this is a due to the public that sociology emerged historically to serve – legislators, managers, bureaucrats, administrators, more generally those concerned with and responsible for social control, social order, making people and processes predictable – having changed so that it no longer requires the services of a sociology of order and control, or as Zygmunt termed it, a sociology of unfreedom. Without going into much detail, he puts this down to some key aspects of what he calls liquid modernity. This includes a growing awareness of the fact that change is the only constant and the only certainty is the permanence of uncertainty. This has had a profound effect on institutions and organisations, effects that can be evidenced and demonstrated in many ways. It has also had a profound effect on individuals. Organisations deal with uncertainty by developing new organisational forms and management techniques. These are based on strategies that externalise aspects of organisation, risk and responsibility coupled to what Zygmunt calls ‘the managerial revolution Mark II’ and new forms of social control and domination. The effect of outsourcing, contracting out, off shoring and subsidiarising shifts responsibility to often far flung complex chains made up of units of ever diminishing power and control. This was amply demonstrated by the last keynote where we were told how financialisation has led to virulent forms of profit seeking and has changed the way businesses are structured and organised and their relation to their employees. The shift indicated in this presentation from ‘managerial capitalism’ to ‘financial capitalism’ seems to map quite nicely onto Zygmunt’s claimed shift between the first wave of ‘scientific’ management to the less easily characterised managerial revolution Mark II. Somewhat flippantly, I tend to think of this as, let a thousand flowers bloom (to slightly misquote Mao Zedong) and we will find a way of making money out of all of them, passing as much risk as possible to suppliers, labour, governments and the public. It is evident that not everyone is equal in a world of
uncertainty. Those closer to the sources of uncertainty have greater risks and more precarious lives. In the corporate and financial world this is signalled to some extent by a shifting emphasis from the ‘sustainability’ of business and operations to their ‘resilience’, a rather less inclusive term that implies processes of casting adrift and sacrificing in order to protect the ‘core’ business and key objectives – basically to extract profits and preserve shareholder value.

Business now is geared to an operational environment and a world of uncertainty that does not require explicit micromanagement of populations. Individuals, faced with uncertainty, with no guarantees of a final destination or happy ending, the withering of public goods like the welfare state, etc. relate to this new world as competitors seeking security as best they can. Social control is now largely exerted through a combination of fragmentation, individuation, debt and fear alongside forms of persuasion and the manufacture of desire. As Burawoy pointed out in his talk, many of the precariat and unemployed are seeking opportunities to be exploited. Trades Unions are fighting on behalf of their members to be exploited. Zizek, in a recent article, described this as being one of the main driving concerns of recent student protests. To a certain extent, historically, the middle classes have been incorporated and controlled by being given a reasonable share of the surplus and secure employment. Increasingly sections of this class have seen their job security diminished, their wages and conditions of work eroded and are, in short, becoming part of the precariat. Precariousness is not new. It’s just novel for a much larger section for the population who have not experienced it and don’t expect it. According to Zizek, student protest can be seen as a reaction to and a resistance against the attack on the sections of the occupational structure they assumed they were destined for and its, up to now, taken for granted privileges. In other words, an attack on their futures. I would say there is some evidence of this from my own experience and observations but personally I am much more hopeful of the sorts of politised consciousnesses and concerns that I see in play. This, I think, points to the continuing and growing importance of encouraging the spread of a sociological imagination.

On the question of the public, John Holmwood made some interesting observations in one of the sessions drawing on, I think, the ideas of Dewey. Publics are not a given. They are in any case, intrinsically, or at least originally, passive, made as they are by forces external to individuals that create the conditions for them to form a public, recognise themselves as members of that public and therefore have the potential to become active citizens. (This sounds a bit like Marx’s ideas on the socialisation of an industrial proletariat and the development of class consciousness in the context of factory organisation and work, etc. A problem today is that with the shift to a society of individualised consumers and a fragmented competing precariat, the conditions for developing forms of solidarity are much harder to identify). Citizenship in this (Dewey’s?) view depends upon individuals coming to see themselves as members of a public with interests in common with other members. If this is the case sociology by itself cannot conjure up its putative public but must look for trends and circumstances where publics are being formed and hitch their wagon to these as partners. I guess this is tantamount to looking for processes of politicisation where individuals and groups, through force of circumstance, are developing a reflexive and reflective capacity to confront their problems and issues. Then the question is how to engage with these individuals, groups and processes.

Several things follow from this that are worth thinking about. Seeing yourself as a member of a public, the notion that your individual worries and problems are in common with others in a similar position and are linked to conditions you have in common and that your fate as an individual is tied up somehow with other members of that public is itself an act of sociological imagination. Everyone has the potential to be, in fact is to some extent, a sociologist in this sense. Taken further, a sociological imagination can be seen as a requirement of citizenship, in fact is a constitutive component of citizenship. This has implications for professional and institutionalised sociology and the teaching of sociology. Whatever else we do as teachers of sociology, we are sending tens of thousands of individuals each year into the world of work and, hopefully, active citizenship, whatever they end up doing for a job. Employability is important and it would be a dereliction of duty not to help students prepare for the world of work. But with the ever increasing colonisation of the public by the private, the uncoupling of power from politics that so many people spoke about at the conference, the hollowing out and destruction of our democratic institutions and processes, and the rapid destruction of spaces and forms of public discourse and/or their hijacking by the neoliberal agenda and ideology, active citizenship informed by sociological imagination is more important than ever. To end
for the moment on a more optimistic note, according to Zygmunt Bauman, the decoupling of sociology from its old public of legislators, bureaucrats and managers, far from being a crisis is a great opportunity for sociology to rediscover its true vocation as a science of freedom. Rather than seeing sociology as in crisis he sees it as having a crucial role in relation to what he calls the current ‘crisis in agency’. He claims, and who am I to disagree, that in his over 60 years of being a sociologist, this is the most exciting and important time for sociology he can remember. I have been a sociologist for 34 years and the statement certainly rings true for me. Obviously there is a lot more that needs to be said about what sort of sociology he and/or we are talking about, its practice, its relation to the experience, the commonsense and knowledge of the public we wish to engage with and how that engagement can take place. For the moment I will be pursuing this personally through Zygmunt’s ideas on what sociology should be and its role today. He certainly sees sociology as a vocation and a way of being in the world. To repeat one of his favourite quotes from Jeffrey Alexander – “sociology’s future, at least its immediate future, lies in an effort to reincarnate and re-establish itself as a cultural politics in the service of human freedom”. But I would add to this, as Burawoy stated at the beginning of his talk, we need a theory of capitalism. To be of service in the cause of human freedom we need a pretty good understanding of the causes of unfreedom.

Teaching Through Rocky: Stratification and the American Dream, Race, and Gender (2012-04-19 08:00)

*Rocky*. An American classic. The epitome of the American Dream through a rags-to-riches story (in a documentary on the making of *Rocky*, Sylvester Stallone describes the writing and making of the film as its own real-life American Dream as well). A well-made film that won Best Picture in 1976 along with several other awards. Largely considered to be not only one of the great sports films of all time, but a great film of all time for any genre.

Along with its renown as a classic, award-winning film illustrating cultural values and beliefs that many Americans hold dear, the movie also happens to be quite useful and valuable as a teaching tool. It’s one that I like to use in my Sociology of Sport class, though it could easily be applied to a non-sport sociology class as well. There are several different areas in which *Rocky* may be usefully applied. Here I focus on stratification and the ideology of the American Dream, race, and gender.

*Rocky, Stratification, and the American Dream*

As previously mentioned, Rocky embodies the American Dream and our belief in rags-to-riches stories. This is
the idea that in America, thanks to our system of open mobility (the ability to move freely between different social classes - though take note that we do not live in a perfectly open system!), anyone with the right amount of hard work and determination can "make it." In the beginning of the film, we see Rocky’s current situation - fighting in cheap clubs in the slums of Philadelphia while working on the side as a collector for a local bookie. From these humble beginnings, we can track Rocky’s improbable (and lucky) shot at the heavyweight boxing title (and especially as the movies go on, we are made aware of the wealth that Rocky has accumulated).

Our belief in the American Dream as realistic relies on the ideas of competitive individualism and meritocracy. The idea of competitive individualism is that a person’s successes are due to that individual's hard work, determination, and skills/abilities, while any failures must result from laziness or a lack of determination and skills/abilities of the individual (effectively ignoring any larger, structural forces at play). This is the main thrust behind each of the films in the Rocky series: Rocky’s heart, determination, and incredible work ethic lead him to improbable victory. He is willing to give whatever it takes - clearly illustrated through the grueling training montages that are a centerpiece of each of the films. This is closely related to what we think of as a meritocracy - that individuals end up where they "should be" based on their individual merit; they earned it (or failed to earn it).

In a system designed this way, we can look directly to the individual to understand why he/she did or did not succeed. Indeed these rags-to-riches stories are exemplars that show us that hard work and determination can pay off. In fact, it’s quite important for these rags-to-riches stories to be highly visible and well-known for us to maintain our strong belief in the American Dream and "opportunity for all."

However, what many conflict theorists argue is that the high visibility of these *very rare and improbable* rags-to-riches stories have created a sense of false consciousness where those who are actually systematically harmed and disadvantaged by the system, actually believe in the system and do not realize their own disadvantaged structural location within it. In fact, when Rocky is asked by Adrian why he fights, he quips, "because I can’t sing or dance." This illustrates the idea that he views sport and entertainment as his only two ways of escaping life in the slums. He has internalized this and sees the system that promotes it as legitimate and normal - thus adding to the sense of false consciousness. It’s absolutely certain that we do not live in a complete meritocratic system. One’s race, class, gender, sexual orientation, and network ties (among other things) shape opportunities and advantages/disadvantages.

In the case of Rocky, there was a great deal of luck involved. Rocky was chosen largely because Apollo wanted to put on a show - he liked the public relations gimmicks that could come from fighting the "Italian Stallion" (Rocky’s nickname). This would be a great representation to show that an immigrant could make it in the "land of opportunity" (said several times in the film!) on America’s bicentennial birthday. However, people tend to ignore the luck and other factors involved (other fighters being injured, Apollo’s thirst for a good story, etc.), and focus on Rocky as an individual - how all of his hard work paid off.

While there’s no doubt that Rocky worked hard, we cannot neglect the broader context in our hurry to pin all of his success on his own individual hard work and determination. There were plenty of other individuals who were working just as hard and had just as much skill/talent (and likely many who were working even harder with more skill/talent), yet did not get a shot at the title. Did Rocky truly _merit_ this opportunity more than anyone else? Was it all based on his _individual_ hard work and achievements?

**Rocky and Race**

In the movie, Rocky’s opponent is the current heavyweight champion, Apollo Creed. Creed is an African-American - not at all uncommon for many heavy-weight boxers over the years. However, his portrayal and some of the themes we may see are not inconsequential when thinking about race.
While Rocky’s story focuses on his intense training and hard work to overcome his clumsiness and lack of "natural ability," Apollo’s is the direct opposite. We do not see any of Apollo’s training regimen - we are actually led to believe that there probably wasn’t much of one at all!

Apollo is portrayed as a naturally gifted and extremely arrogant athlete. His first priority is to put on a "show" for the fans. This was what inspired his decision to select Rocky as a challenger; we see him ignore his trainer’s advice to take Rocky seriously because he is more concerned with planning the event; and we can see his emphasis on putting on a show at the actual fight when he shows up dressed as Uncle Sam alongside the Statue of Liberty.

This feeds into common stereotype that many have: that when it comes to sport, African-Americans are simply "naturally gifted" and are able to be lazy at times because of this extra skill/talent they have been endowed with. The white athlete, on the other hand, has to make up for this lack of "natural ability" through extra hard work, or "knowing the game" better (designing some sort of superior strategy - relying on intellect). This downplays the amount of work and effort that African-Americans do put into particular sports, instead relying on these ideas of "natural" or "genetic" ability.

We can see variations of this theme over and over throughout the subsequent films. In Rocky III in particular, Rocky fights Clubber Lane (Mr. T), another African-American fighter. Though not portrayed as arrogant as Apollo Creed was, Lane is the epitome of the stereotype mentioned above: the black man as naturally gifted and a physical specimen. Many early sportswriters (especially those covering boxing) explicitly described black boxers as being "instinctual," "coming straight out of the jungle with other wild animals," and other similar metaphors. Again, this characterizes the black male as a physical specimen born to fight - it is a part of his intrinsic nature.

In fact, the only reason that Rocky is able to defeat Lane in their second matchup (Rocky loses the first), is because Rocky outsmarts him. He sets a "trap" by allowing Lane to dole out some heavy punches anticipating that this will "tire him out." Again, this puts emphasis on using his superior strategy in order to "keep up" and eventually win the fight.

The final point of interest with respect to race that I’ll point out here also comes from Rocky III. After Rocky initially loses to Lane, Apollo and his trainer decide to take Rocky under their wing and train him to fight. Rocky accompanies them to their gym and there is some immediate racial tension as Rocky enters the gym with Adrian and Paulie to see only African-Americans there. Paulie also constantly remarks that Rocky "can’t be trained like a colored fighter because he’s got no rhythm." Again, this reinforces the idea that African-Americans have these types of physical abilities come to them much more naturally and without the amount of hard work and effort it takes others.

**Rocky and Gender**

When it comes to Rocky and gender, this may seem like a moot point to some - "this is a film about boxing, it’s not supposed to have anything to do with gender." Well, that very idea explains one reason exactly why it does matter with respect to gender. The idea that we don’t expect (or perhaps don’t want) a boxing film to have any type of gender dynamics is telling. This is a sports-film that centers on the experience and identity of *surprise* a male. Check out [2]this link for an interesting analysis of the lack of female-centered award-winning films in general.

In fact, the only real female role in the film is that of Adrian, Rocky’s eventual girlfriend and wife. And Adrian does not embody a strong, independent, important female character. Exactly the opposite, in fact. Adrian embodies the ideals of very traditional femininity: passive, shy, timid, dependent, frail, unable to take care of herself, nurturing, supportive, and not especially financially successful.

Adrian is viewed in two main ways in the film by men: as an obstacle, and as a source of social support. Adrian is
viewed as an obstacle by both Mickey (Rocky’s trainer), and Paulie (Rocky’s friend and Adrian’s brother). According to Mickey, “women weaken legs,” showing his belief that she is only in the way of Rocky’s training. Paulie claims that Adrian cannot survive on her own and is thus his responsibility, which has limited his options in life (a rather far-fetched claim coming from a raging alcoholic who has trouble himself of maintaining a job). For Rocky, Adrian is there to support him, both emotionally and physically. While this is helpful for Rocky, it still clearly places Adrian in the role of care-giver while Rocky’s career and well-being takes precedent. Both her role as an obstacle and as a source of support display her as status as a woman as being of secondary importance to the men in the film.

Gender analysis, however, should not be limited to looking at how females and femininity are often marginalized in society. We can see the characterization of masculinity (a specific kind of masculinity) and how that is portrayed as well. First of all, it is a film about boxing; it doesn’t get much more masculine than that. Secondly, we can see Rocky’s identity as a fighter as central to him. Males have a tendency to create their sense of self and identity to be closely tied to athletics and sport. This can be detrimental to other aspects of one’s life as different relationships and other areas take a backseat to the importance of sport. Finally, Rocky gets the girl (in large respect by ignoring Adrian’s initial refusals to his advances). What is more masculine than a male, heavy-weight prize fighter, who is heterosexual and ends up getting the girl? I don’t have an answer for that.

I have used Rocky mainly to illustrate a rags-to-riches story and tie it in with stratification while also attempting to touch on at least a couple of salient points on gender and race mentioned here. It is worth noting that there are other aspects of the film that could be equally fruitful to examine, as well as some of the other films from the series (Rocky III, and Rocky IV immediately come to mind).

The Importance of Being Ernest #4 (2012-04-20 08:00)
A week in hospital has been like placing Ernest in a sociological sweet shop with a months worth of pocket money. The mentally unwell, the fights, the nurses, the elderly – it’s all there, like a box of quality street waiting for Ernest to unwrap with his sociological analysis, each one a shiny coloured nugget of the distress of humanity.

Being placed on an observation ward is like being plonked right in the middle of every social class, gender, culture, ethnicity, age and mental state available. What was most interesting to me was the mentality of the patients and nurses. During a four day stay, six people were dragged in having overdosed or self harmed. Of these six people two were taken on to a mental institution instantly, the rest waited for a bed for several days, after which a psychiatric assessment revealed them to be of no threat to themselves and they were released from section and allowed home. Of course the six day wait for one bed clearly had nothing to do with the number of those patients sent home... however, it seems to be that anyone who has recently been in such a state of distress that they are willing to take their own lives is probably not in a great state of mind.

Speaking to one of these patients, a drug addict struggling with withdrawal who had overdosed several times, I realised just how dire the mental health system is. This woman knew the tricks of the trade, how to appear the exact level of normal in a psychiatric assessment, how to self harm in a ward and how to hide your tools. Yet she was deemed well enough to leave the hospital and resume a life she clearly could not cope with. Why is it that self harm is not enough? It appears that it is only when the extreme occurs that anyone is taken seriously and yet we wonder why we have such high rates of suicide? Why is it that a broken bone is worse than a hurt mind and that it takes a suicide attempt (although only the right kind mind you!) for someone to listen? Why is a psychiatric assessment needed to decide if our own bodies are struggling? Who decides who is mad and who is sane?

Until we start listening to the mentally unwell, assume their minds are not broken but different and their voices have equal status to that of a psychiatrist, we will never create a system which serves the needs of mental health patients.

BSA Teaching Group – Call for micro-lectures To all Postgraduates in Universities local to Birmingham
(2012-04-21 08:00)

BSA TEACHING GROUP

Call for micro-lectures

To all Postgraduates in Universities local to Birmingham

At the

BSA TEACHING GROUP ANNUAL CONFERENCE

BIRMINGHAM, 29th SEPTEMBER 2012

Do you want to:

Enhance your profile?

Keep sociology teachers up-to date?

Talk to the people who will be writing the next generation of textbooks for A level?

Reach an audience of potentially 35,000 A level students a year?

Increase sociology’s wider knowledge base?

Maybe influence wider society?

Then come and deliver a micro-lecture [about 15 minutes] on your research to a group of committed sociology teachers who are eager to discover what the new research is showing.

We are looking for updates in all the fields covered by the current sociology syllabi from both OCR and AQA. These cover such areas as: culture and identity creation; differentiation; inequality and stratification; demography; welfare and government policy in most fields of life; family and households; the role of women; minority groups; aging; youth culture; all aspects of education especially potential changes and their effects on different groups within society; health and welfare; wealth and poverty and welfare provision; politics and power; globalisation in all its many aspects; religion; crime and deviance; methodology; theory and the role of research. If in doubt that your field would be relevant to us consult the syllabus at [1]www.aqa.org.uk or [2]www.ocr.org.uk

Interested? Then contact Rachel Jones, conference organiser: [3]jonesr@tauntons.ac.uk

1. http://www.aqa.org.uk/
3. mailto:jonesr@tauntons.ac.uk

Yesterday... (an ode to essay marking) (2012-04-22 18:30)

Yesterday*

Yesterday, all the students seemed so far away.
Now a bunch of essays block my way,
My desk is now in disarray.

Don't get me wrong, marking can be fun... but it is usually rushed and the marker feels a stab in the heart every time s/he reads something that is wrong... or worse: something that is not even wrong.

Suddenly, I avoid the university,
There's a shadow hanging over me.
The end of term came suddenly.

Why they write so bad? Not a clue, I wouldn't know.
I taught something wrong, now the errors overflow!
Yesterday, I was free to work on my research;
Now I need a place to hide away.
Instead, I am marking night and day.

All the same mistakes written time and time again!
[2] Seventeen-point scale, fail or pass, but all in vain!

Yesterday, I avoided research like the plague,
All I did was file my notes away...
I want to do the same today.

What will happen now, all the scripts have coffee stains?
Even if they paid, that would not alleviate the pain!

Yesterday...

*A Sunday evening tribute to the genius of [3]Sir Paul McCartney, written by one Idle Busy Ethnographer lost among empty cups coffee and red pens.*

Paola Tubaro, Senior Lecturer in Economic Sociology at the Business School of the University of Greenwich, reflects on #BritSoc12 (2012-04-23 08:00)

[3]
1130
Overall, however, a sense of unease prevailed. Perhaps it was the very theme of the conference: "Sociology in an age of austerity". Though not too strictly applied to all sessions (fortunately, a variety of issues and topics found a place in the various streams), it gave the general tone to discussions. Participants repeatedly voiced concerns about the current government's policies – privatizations, reforms of the University system and the NHS, reduced welfare benefits. Many raised the question of the role of sociologists in this context – all the more so as funders, regulators, and the government itself tend to increasingly make sociologists (and generally speaking, academics and intellectuals) accountable for the "impact" of their work. Is impact the right measure of the contribution of sociology to society – or should we rather think in terms of "value", as John Brewer (outgoing president of BSA) suggested? Is the notion of "public sociology" of Michael Burawoy (a keynote speaker at the conference) still practicable, and how can it be adapted to today's challenges?
It is indeed an important question. Yet I’m afraid there weren’t many answers around. (I was particularly happy of something that Burawoy said – we need a new theory of social movements – but it’s just because it’s one part of my research). By and large, nobody had a clue.

Still, there are some directions to explore. With the few who, like me, tweeted intensely during the conference, a sort of implicit consensus emerged that sociology should engage more with social media. To be part of an important development of today’s society, and most of all, to engage with wider publics than just academia, policymakers or business “clients” of sociological insight. The traditional press is no longer enough. Our bunch of tweets is a small step in this direction – we should now jump to a larger scale to make a difference.

Another direction for development is more openness to junior researchers. It was a bit sad that many
delegates left the auditorium after the [11]Burawoy-Bauman plenary, before the [12]prize ceremony that was to reward two “newer generation” sociologists. More generally, there should be more to support junior participants, be they PhD students, post-docs, or freshly appointed lecturers. If we need novel ideas, it is only from them that we can expect them. The Burawoys and Baumans have already done their job, and outstandingly so—we can’t ask them more.

Finally, I’ll draw on Burawoy (again!) for an appeal to method:

"we desperately need methodology to keep us erect, while we navigate a terrain that moves and shifts even as we attempt to traverse it."

The conference saw the usual quarrels between the qualitative and quantitative camps, but that’s not the point. Both methods have their legitimacy and usefulness, and so do all their variants and combinations (I’ll write more about this). What matters is that in all cases, methods should be applied seriously and rigorously: I regret to say, it was not always the case in Leeds. We need to be more careful about that. If we fail to stay erect, no notion of “impact”, “value” or “being public”, however innovative, can come to our rescue.

Open access is no more than academic consumerism. It neither democratises knowledge production nor communication (2012-04-23 13:51)

The Open Access movement should be seen for what it is – nothing more but nothing less than a consumerist revolt, academic style. No one in this revolt is calling for what is sometimes called 'extended peer review' (whereby relevant non-academic stakeholders operate as knowledge gatekeepers), let alone the abandonment of science's normal technicality. In fact, the moral suaviness of a journalist like the Guardian's George Monbiot rests on his support of BOTH science's normal authorising procedures AND the free distribution of their fruits. In short, it's all about making research cheaper to access by those who already possess the skills to do so but are held back by such 'artificial' barriers as publishers' paywalls.

Nothing in this dispute bears on questions concerning how one might democratise knowledge production itself (e.g. how research credit might be distributed across students, informants, etc.; how one might select research topics that people find worthwhile; how impact across many audiences might be made a desideratum for securing a research grant).

Certainly there is no reason to believe that science communication/engagement is served by an open access policy to commercial scientific publications, if the target body of knowledge remains encoded as it has for the last 100 years. I take it that this is the message that [1]Alice Bell is trying to send, perhaps too politely.

J Britt Holbrook (2012-04-23 14:29:12)
Actually, I think that the question of who ought to count as a peer is THE question surrounding open access (http://cas-csid.cas.unt.edu/?p=2816), as well as the introduction of impact criteria into the peer review of grant proposals. Both are signs of the growing demand for accountability on the part of the public. Researchers will no longer be given free reign to determine what counts as valuable research on their own (academic, disciplinary) terms. Focusing on the business/consumer/producer angle of this distracts us from this fundamental point. If academics want to maintain a sense of autonomy, then they ought to own impact requirements (http://scienceprogress.org/2012/03/owning-the-national-science-foundation%E2%80%99s-broader-impacts-criterion/). The point is not, however, simply to attempt to protect the Academy from "outside" interference. Instead, the point is the begin to find ways to respond to the demand for greater accountability in ways that also enrich the idea of academic autonomy. Open access could be part of that new sense of autonomy – but, paradoxically, perhaps, only if academics will take seriously their accountability to society. This means that those thinking about open access policy ought also to take seriously the question of who ought to count as a peer. Likewise, they should think about who the audience for research papers will be under the rubric of open access.

Gloria Origgi (2012-05-03 21:03:40)
I think that there is more than a consumers’ revolt in the open access movement. What we all know today that we are preferring a low-quality mode of dissemination of information (slow, biased, run by cartels of disputable authorities) to a
high-quality one. Nobody wants the elimination of peer-review, but the way in which peer-review is done today, especially for journals of humanities and social sciences, is just less efficient than many ways that are technically available now (like: early sharing of drafts and collaborative peer-reviewing). Look at the interesting post of Richard Price on the price we pay to old practices of filtering science: http://techcrunch.com/2012/04/29/the-future-of-science/ Actually, I think we all know tacitly that we need a change, that the way in which academic work is done now is too sub-optimal to survive in the long run, but, of course, a lot of reflexion is still needed on alternative modes of peer-review and publishing that will assure in the future the same stability of content and editorial quality that is still assured by journals these days and that we terribly fear to lose (I like this blog and I like mine, but really don’t know if tomorrow they will be still there: my blog at http://www.gloriaoriggi.blogspot.com is owned by a private company and may disappear overnight.....)

The question of who ought to count as a peer is THE question surrounding open access | The Sociological Imagination (2012-04-23 14:48:54)
[...] Britt Holbrook in response to Steve Fuller’s post here [...] Mike Taylor (2012-05-07 22:34:47)
This article is flat-out wrong: there are plenty of applications of academic research outside of academia, and plenty of people keen to use that research. For just a few examples of non-academics keen to access research, see http://whoneedsaccess.org/ - fossil preparators who need research to avoid damaging specimens, parents of children with rare medical syndromes who have more time to invest in learning than their physicians do, teachers wanting to bring up-to-date knowledge to their students, small business founders needing research for the consultancy reports they sell, and many more. Steve Fuller is correct that this is an aspect of open access that certainly needs more publicity. But to suggest it’s been ignored communicates nothing more sinister than a lack of reading around the subject.

Kaveh Bazargan (2012-05-08 01:18:43)
I can’t see the connection of Peer Review to Open Access. One can continue the traditional methods of PR, but use the OA commercial model. On the point of "encoded" knowledge, that is largely due to the fact that unless submitted papers are full of jargon, they will not be taken seriously by the peers in the "club". Try submitting a Physics paper with no equations, even if these are not needed. I have seen many examples of equations needlessly inserted in to make a paper look more serious. So we need Open Access, and more papers more accessible to the non-specialist.

Aalam Wassef (2012-05-08 10:59:22)
Hi Steve, I find this piece interesting because you’re putting Open Access and Open Science (OS) side by side, pointing out aspirations they seem to have in common and (unless I misunderstood) what they don’t have in common yet. The Open Access movement is indeed eager to clarify that OA only describes scientific literature that is 1/Peer reviewed, 2/Digital, 3/Available online, 4/For free. To me, the question is: will Open Science – defined as 1/Open, public, collaborative research 2/Relying on a completely different conception of scientific validation 3/Relying on publisher-driven, institutional and/or social dissemination – will help Open Access achieve its two main goals: greater access to reliable scientific literature. I definitely believe that with the right infrastructures, with open source reputation models (on top of H Index and citation counts), and with innovative credit attribution, OS will indeed take science and access to science to a completely different level.

chris bowen (2013-06-08 00:06:40)
Try checking out Merton's CUDOS criteria ....it contains some useful ideas
The question of who ought to count as a peer is THE question surrounding open access, as well as the introduction of impact criteria into the peer review of grant proposals. Both are signs of the growing demand for accountability on the part of the public. Researchers will no longer be given free reign to determine what counts as valuable research on their own (academic, disciplinary) terms.

Focusing on the business/consumer/producer angle of this distracts us from this fundamental point. If academics want to maintain a sense of autonomy, then they ought to own impact requirements. The point is not, however, simply to attempt to protect the Academy from "outside" interference. Instead, the point is the begin to find ways to respond to the demand for greater accountability in ways that also enrich the idea of academic autonomy. Open access could be part of that new sense of autonomy – but, paradoxically, perhaps, only if academics will take seriously their accountability to society. This means that those thinking about open access policy ought also to take seriously the question of who ought to count as a peer. Likewise, they should think about who the audience for research
papers will be under the rubric of open access.

Sarah Burton, a postgraduate student at Cambridge University, reflects on her first BSA conference (2012-04-24 08:00)

Having spent nearly a decade with English literature as the prevailing academic thrust of my studies I’ve recently been exploring other avenues of research. During my Master’s I got very interested in social history, psychology and various aspects of the social sciences in terms of how they relate to literary studies. In particular I’ve become fascinated by social theory and even more so by the people who write it. I’m intrigued by the notion of sociology as an ‘improving’ discipline, to quote Zygmunt Bauman, especially in terms of the idea that it should be freely and easily accessible to the ‘ordinary man’. My experience of social theory is very much that it is rather inaccessible, indeed in discussion with other academics this idea seemed to be prevalent.

So it was with this burgeoning interest in social theory that I decided to jump headlong into the sociological community and join the British Sociological Association. I figured (hoped) that it would help me meet similar lost souls suffering from the most dire of imposter syndrome because they had never actually done a degree in sociology but were nevertheless engaging academically with it. Fortuitously I was right, an event remarkable in itself for its sheer rarity. The annual conference held last week was one of the most enlightening experiences of my recent education – personally, politically, socially and academically. To detail the events of the conference in detail would be prosaic and tiresome so in order to be brief and hopefully witty, à la Polonius, I will concentrate on the standout moments.

I’d like to say that these came in the plenaries, roundtables, lectures, keynotes, streams etc but it would be a lie. Many were very good, introducing me to new thinkers, new faces, new thought connections and were absolutely worthwhile. But really, they made very little impact on my thinking aside from: ‘Nice, well done you. Very clever.’

What made a massive difference was talking to everyone that I possibly could – bunking off all of the organised stuff in order to sit in the hall drinking endless cups of coffee and talking about whatever came to mind with whoever crossed my path. The most common question of the conference was surely an enquiry into your area of study and as a literature student I think they found me curious but were always very open to my particular reasons for an interest in sociology. I found it interesting that so many current PhD students or early careers people had come into sociology from such a wide background: art, music, sport science, history, literature to name but a few. I noticed too a certain surprise at anyone wanting to write a purely theoretical PhD and couldn’t help thinking of the apparently arse-over-tit way they must see me approaching my proposal, though coming from literary studies it feels entirely natural to do wholly library based research.

Particular highlights for me academically were the Race and Violence stream plenary which being the last thing on the last day did well to keep our attention and enthusiasm; several papers on feminist activism, access to higher education and Bourdieu were really interesting and done well; the podcasting session on the PG day
was possibly the most enlightening and really got me thinking about what I could do with that and how it could be usefully used to engage with sociology. I think, considering the nature of my investigation, that it could be an especially worthwhile format to learn. Zygmunt Bauman’s talk on the PG day was inspiring, there was a definite sense of optimism in his rhetoric. Strangely for something attended by nearly 700 people it didn't feel enormous and overwhelming. On the other hand the catering was “ahem” questionable which would be fine and expected if the conference fees weren’t so high. But I achieved my objectives - I regaled most current sociologists with my PhD idea and took on their feedback, I met far too many brilliant new people and I learned things about how sociologists do stuff and how it’s different to literature. I even came away wanting to read a book on Italian football....

New NCRM funded network of methodological innovation - New social media, new social science? (2012-04-24 12:00)

NatCen Social Research, Sage and the Oxford Internet Institute will be launching our new network for methodological innovation at the end of May. The network will explore whether social science researchers should embrace social media and, if we do, what the implications are for our methods and practice? We know that social media tools are increasingly being used in social science research. The nature of these tools means that it is a fast changing environment, with new practice emerging all the time. Despite this, there is limited interaction of practitioners or synthesis of these methods; there are also few opportunities to reflect on the implications of social media tools for research participants, methods and ethics. Our network of methodological innovation will bring together academics, researchers and research stakeholders from all sectors. The aim is to develop a community of practice with members drawn from the cutting-edge of academia, market research and applied social research.

Our community will be launched with a 1-day conference at the end of May 2012 with four further knowledge exchange e-events and a closing event across the next 12 months. We are hoping to live stream our events to enable the participation of network members from across the UK and internationally. We will build a collaborative online platforms to co-create think pieces, blogs, practitioner guides and develop lively discussion forums.

Social Class and Life Chances as seen through Survivor Rates on the Titanic (2012-04-26 08:00)

We have just eclipsed the 100 year anniversary of the sinking of the Titanic - an incredibly horrific tragedy that resulted in the deaths approximately 1,500 individuals. Astonishingly, this accounted for over two-thirds of the
individuals onboard. This from the ship that was dubbed "unsinkable" and was so confident in its invincibility that its lifeboat capacity could accommodate only about half of the individuals on the ship (they decided that they didn't want the "extra lifeboats" to ruin the aesthetic beauty of the ship's decks). In short, the Titanic was not well-equipped for a possible tragedy, which ensured that a great deal of individuals were to be doomed when tragedy did strike. While this means that most of the individuals wouldn't have survived (which the survival numbers verify), it does not mean that everyone on the ship had an equal chance at surviving. In fact, quite the opposite was true.

This real-life occurrence can be a useful starting point for instructors trying to introduce the concept of social stratification (inspired by David M. Newman's *Exploring the Architecture of Everyday Life* textbook). The Titanic represents a very clear-cut example where social class divisions provided different opportunities to individuals occupying different classes (you can use "life chances" quite literally in this instance). An individual's odds of survival were greatly shaped by his/her structural location aboard the ship (i.e. your social class, gender, and age).

Here is an interesting chart illustrating the survivor rates by gender and class:

![Survivor Rates Chart](image)

This chart is the official report from the [1]British Board of Trade on the survivors. Clearly, members of some social classes were more likely to survive than others.

While I have yet to use this specific example in class, I am sure that it can be effectively utilized to illustrate structural location and access to resources and one's "life chances." The survivor rates are so stark and pronounced when broken down by social class that it makes for a very clear example of differential access to resources. This is why this chart is so powerful.

I would imagine that a couple of potential challenges you may encounter are “That’s just the way it was back then,” or “That was just one specific instance onboard a tragic ship’s sinking at sea.” While it’s true that social class probably isn’t quite as rigid now as it was in the days of Titanic, it should make for smooth transition to social class as a means to greater access to resources (i.e. better school systems or nicer neighborhoods). These more modern
examples can help to show that social class remains an important consideration when thinking about one’s access to resources and how this may shape life chances.

The movie, *Titanic*, could obviously be used or shown in clips in conjunction with the official report. Throughout there are many examples of differences in treatment, expectations, and norms of individuals based on social class. It may also be fruitfully analyzed as an illustration as to women’s "second-class status" and treatment (at times being treated as property). The main female character, Rose, is presented as a strong and independent female, though it is made obvious throughout the movie that she is the exception to the norm (all for a good storyline!).

Whether you choose to use the actual film or simply the above survivor statistics, this can be a powerful example and metaphor; it takes some pieces of information that students are probably aware of, but perhaps have never thought about sociologically – a powerful tool to use when teaching.

Black and ethnic minority university staff continue to face disadvantage (2012-04-27 12:00)

Measures to promote race equality in higher education have had very "little impact".

Speaking at the British Sociological Association’s annual conference in April, Andrew Pilkington, professor of sociology at University of Northampton, said the impact of race equality initiatives in academic recruitment under the Labour government had been "short-lived".

In an article by [1]Times Higher Education, it is argued that diversity issues have "fallen down the agenda" in the last ten years. Priority has arguably been focused on gender equality rather than reducing racial disadvantage.

Professor Pilkington continues that, "evidence [pointed] to failures in data gathering and target setting, [which] suggests that many universities have not taken equal opportunities policies seriously".

On The Impossibility Of Being Original – A Sociological Perspective (2012-05-02 08:00)

This is a follow up to [1]this earlier post

When analysing anything through a social lens, an important understanding I believe is needed; that is of the true impact of social structure on individuals. While the chosen form of functioning – easily recognised by the terms Communism, Socialism or Capitalism for example – can be naively viewed as causing isolated forms of behaviours by those within that society, a more accurate and proven understanding is that the system in place merely accentuates and brings to light certain innate human characteristics more than others; all of which are a part of every human
being. For example, the Communist Nazi regime didn’t turn German citizens into blindly obedient tools for the exploitation of Jewish people, but instead created a context in which fear and a lack of social capital among the masses resulted in those behaviours being carried out. More importantly, just as there were such practices as concentration camps and gas chambers, individual and, at times, even collective examples of love and self-sacrifice also existed – as have been brilliantly documented in numerous films, such as The Pianist and The Great Escape, of which there are probably too many to count. Therefore, through this rational idea of social influence, originality can be further explored.

As goes the well-known cliché, money makes the world go round; and it is this ‘fact’ that largely deprives us of our originality. The vast majority of individuals in both Western and developing countries almost always have to consider their economic situation with every decision they make, without having the luxury of inherited or fluked wealth. Indeed, except for the lucky – or some would argue unlucky – few, money permeates every aspect of life: family, work, leisure and, most crucially, art. Art is, and should be, in my opinion, a reflection of one’s self. Therefore, what one creates is a true testament to their honesty and passions. On the surface this might be seen as a deliberate effort to avoid originality, as many people share similar views, passions and flaws, and all humans are generally driven and inspired by similar themes. Thus, without the conscious effort to deviate from the typical trends of fiction, music, fashion and film (to list four popular means of artistic expression), one’s creations will be seen in those of others. However, while ignoring the lengthy nature/nurture debate that would be required to truly explore such an issue, I believe that anything created solely through one’s own desires is true art, and is therefore evidence of originality. The problem arises when external influences come into play; of which I believe have never been so dominant as they are in today’s world.

It has already been mentioned that money is the most powerful of all, and this should not be understated or assumed to be a universal clique that has always existed and has therefore become an organic and, therefore, irrelevant issue. With the Industrial Revolution and, in turn, the growth of, and migration of, people towards large cities all over the world, has arrived an almost universal form of comparison – that of financial capital. 150 years
 ago, and still just about existing in very isolated villages and, of course, more so in the underdeveloped regions of the planet, each member of the community had their own unique value adding to that of the society; usually a trade, skill or responsibility cast upon them. This allowed every citizen to be both unique in their contribution to the community, but also of equal social capital to everyone else. The farmer would have been in his own way as invaluable as the baker, the builder and the tool maker for example. Of course, in the 21st century, population growth in cities across the world and policies of free enterprise and open markets, particularly in the Western world, has meant that every field of work is immensely competitive, has the scope for huge gains in wealth, but also the likely chance of complete failure. The spread of wealth in America – that of 99% of the population owning 1% of the wealth, and 1% owning 99% - underlines the resulting effects on society. Crucially, one's originality naturally suffers from this. While before the baker, being the only one in his small village, had guaranteed – if not booming – business, now he would have dozens of other bakeries to compete with; and with such a large population living in such a small area (think Tokyo or Beijing for example), it is quite possible for just 2 or 3 of his rival businesses to reap the overwhelming share of customers. Within this climate, the constant fight to survive financially means that money must take priority ahead of any artistic motives; whether they are ethical, goal-oriented or just one's personal interests that they wish to carry out. Not only this, but the results of the chosen practices are now, for the first time, universally measurable – economy being the only detail compared and, essentially, the only factor that ever can be compared (because any form of art is inevitably subjective and, therefore, incomparable). The resulting awareness of one's competition, their judgement of, and potential success over, one's self further negates any ability to carry out artistic practices. Furthermore, work that was once a means to make a living while the remaining leisure time could still be spent on a person's interests and hobbies has necessarily become a life-investment, with working hours increasing to the extent of leisure time being almost non-existent for millions of people, particularly in large, modern cities. Indeed, it is not uncommon for bankers to work for 12 hours a day, 6 or 7 days a week. As a result, the overwhelming majority live their lives through their work: work in which becomes the same generic practices – usually through systematic, hierarchical institutions - that everyone else takes part in. Consequently, the industrial working world has become a means of trying to carry out the same proven, standardised procedures more efficiently and intensely than everyone else. Modern capitalist methods have further heightened the difficulties caused by our human tendencies; particularly for those that are socially aware or rely on cultural acceptance in order to live even the most trivial of lifestyles. Indeed, this is inherent among the vast majority of society anyhow, due to the immense, unjustifiably wide gap between the rich and poor that exists synonymously in both developed and developing nations around the world. This social hierarchy, while inevitably causing a handful of National, and global, role models to be idolised beyond belief, and broadening the numbers that follow a particular idolised fashion trend, music genre or political belief for example, has two particularly significant, and largely unrealised, properties. Firstly, the extreme bottom-heavy structure of such hierarchies is such that those few remaining at the top avoid the intense struggle that persists beneath. As seen by youth football academies in England, or the hip-hop gangs that continue to battle in the suburbs of large American cities, this ruthless battle is almost always underneath the person or institution that they are trying to associate with or overtake. Of course, there may be small windows of opportunity (trial days, book signings, talent contests etc.), but just as you throw your dog a bone so he will keep coming back to you, human beings also react to that small slice of hope. Inevitably, and tactically on behalf of the dominant institutions, they will stay inspired and motivated towards their targeted goal, no matter how unrealistic. Indeed, the individuals responsible for the idolised message have the money and social capital to ensure things stay that way. Secondly, and crucially for the first property to be seen as both pertinent and ridiculous, the wave starters at the hierarchy's peak need the brawl beneath if they are to stay on top. It is the cd's, merchandise, packed stadiums of fans, and giggling swarms of girls that gift their idols their superhero status and, unfortunately, their financial and social capital needed to float above the social majority. Of course, as Karl Marx has dramatically underlined, the vast majority of society therefore have the opportunity to rise up against the minority in power and, consequently, are able to become themselves, at least to a greater extent than at present. Unfortunately, the whole process becomes a never ending cycle, with superstars becoming has-beens, up-and-coming others replacing them and the new batch of young hopefuls imitating their new heroes once again. If this is indeed the case then originality – while ignoring the initial social influences on the individual – can perhaps exist in a very short, temporary form. Essentially, just until the masses listen, read, watch or understand the message and, in turn, absorb, copy and spread similar themes
elsewhere. Of course, it is not unknown that this is a significant part of human nature. The music industry, for example, regularly demonstrates this process, with fresh new artists releasing a first record and rising to global fame and success in just a few months before never being able to have the same effect on their audience during their second or third attempts. It’s incredible how so few musicians have been able to consistently release music that is both original and successful. As already explained through ‘social hierarchies’, the nature of such institutions means that the two are almost always mutually exclusive anyhow. Consequently, the ‘artist’, through almost any possible form, either conforms to the label that is first placed upon them or gravitates to other popular trends in order to stay relevant; negating the artist’s uniqueness when compared to the social majority, but also in the falseness of their expression – their ‘art’. Through various processes within our modern social structure, as explained, our originality can be largely undermined. Predominantly through the emergence of new standards of living, working and, in turn, treatment of our lives and others, our time, opportunities and motivation for artistic endeavours and, in general, behaviours stemming from our true personal make-up has become severely restricted. I am, however, confident – or should I say hopeful – that we will break through this stagnant period and rediscover our individuality and, more importantly, confidence to express it. The clear niche in industrial markets for more humanistic means of working practice suggests that it could also be a largely profitable, as well as refreshing, way of functioning. It is perhaps these solutions that are more realistic and, therefore, required for change to take place. As for the dominance of financial capital and the ‘celebrity’ over our everyday lives, we can only hope that more artistic and - I would argue - more fulfilling avenues in life can eventually overcome their presence. The recent economic recession and continued exploitation of celebrity icons could surely pave the way for change, even if our wonderfully original selves somehow fail.

Money with morals in the Rhondda Valley (2012-05-03 22:29)

[EMBED]
On Tuesday 21 June 2011 six photographers were assigned different areas of the City to photograph. Some used tripods, some went hand held, one set up a 5 x 4.

All were instructed to keep to public land and photograph the area as they would on a normal day. The event aimed to test the policing of public and private space by private security firms and their reaction to photographers.

All six photographers were stopped on at least one occasion. Three encounters led to police intervention.

This is what happened.

Directed and Produced by Hannah White for the London Street Photography Festival

“Members of the ‘Golden Dawn’ passing in the street”: The emergence of far right extremism and the elections of the 6th of May in Greece (2012-05-06 14:00)

The Greek MYPLACE team at Panteion University Of Social And Political Sciences on the forthcoming Greek elections and the emergence of the extreme right “Golden Dawn.”

This was originally posted on the [1]MYPLACE blog. Follow MYPLACE on Twitter [2]here. For more information on the MYPLACE project, visit the project’s website [3]here.

Less than a week before the most crucial elections in Greece after the restoration of democracy in 1974 it seems that far-right extremism, as it is expressed by the organization ‘Golden Dawn’, is going to be part of the forthcoming parliament assembly for the first time in almost forty years. This extremist organization was founded in the first place as a periodical in 1980 by his current General Secretary. In 1983 stops its publication and it reappears next year (1984). The General Secretary of the Golden Dawn, Nikolaos Michaloliakos, was the leader of the party the Dictator G. Papadopoulos founded while he was in prison after the fall of the military junta and he founded the political party National Popular Movement – Golden Dawn in 1985. The first activities of the movement were the participation in the rallies about the so called ‘Macedonian issue’, i.e. the name of the Former Yugoslavian Republic of Macedonia and of course the participation in the civil war in Yugoslavia supporting the Serbs. It is very interesting, that Golden Dawn did not participate in the elections of 2007 and in 2009 received 19,624 votes (only 0.29 % of the votes). However, in the local elections of 2010 in Athens received 10,222 votes (5.29 %) and managed to elect its General Secretary as a local counselor, who in one of the first assemblies of the municipal council gave the fascist salute (they argue that this is a ancient Greek salute and not a fascist one), something that almost all the members do in their gatherings. Today, all the polls agree that Golden Dawn is going to receive between 4 and 7 % of the votes and it is almost certain that approximately 15 PMs are going to be elected.

Even though the Golden Dawn begun as a Nazi organization, also supporting ancient Greek civilization and religion, during the last two years and in order to gain the support of the Greek society it denounces its Nazi past and declare its Greek-Orthodox character. They are against globalization, against the corrupted political system and of course against the troika and the austerity measures imposed on the Greek society. However, their main interest is immigrants (legal and illegal), because according to their ideology the Greeks belong to Arian race and as a consequence all other races are considered inferior.

Furthermore, they argue that unemployment is caused by the too many illegal immigrants who take the jobs of the Greeks and that criminality is in such high rates only because of the immigrants. In many cases, they have attacked immigrants, who in their majority are afraid to press charges against them, they have attacked leftists and members of anti-racist/ anti-fascist organizations, and also they have attacked politicians of the main political parties. Recently, they started to give food supplies to those who are poor, homeless and unemployed and they are very proud that they managed to ‘clean’ of the immigrants the square of Aghios Panteleimon of Athens in the center of the city. In addition, some of the organization’s members have been convicted for participating in activities of the common
penal law (e.g. robberies, murders, etc.). During, the last days they attacked many left-wing electoral stands in many regions of Athens and they were also accused of attacking immigrants, who were begging for some money in Crete.

They are very active in a local level, but they are considered a dangerous and closed organization. Recently, [4]Reuters and the Associated Press did some research about them but they were not willing to answer questions about the issue of violence against the immigrants. They argue that if they are elected they will bring back the minefields in the borders with Turkey in order stop immigration and also that they will abolish the ‘alternative military service’ for those denying it because of conscience reasons. Additionally, those denying the military service will lose their citizenship. It is evident, that the reason of the increase of their percentages is the immigration issue.

They are also very active in the internet, and even though they accuse the mainstream media of preventing their public presence they themselves ask the Greek citizens to close their TVs because they can find them on the internet, where they have their blogs, their websites, their twitter account, special sites for the youth division ([5]http://www.resistance-hellas.blogspot.com/) and special sites for women ([6]http://whitewomenfront.blogspot.com/).

However, one of the specialists we interviewed for WP 3 said that there is no special participation of youth in this organization to the point that it would be worth mentioning it or at least to the point that it is different from youth participation in other parties and coalitions.

Loneliness in Japan (2012-05-07 08:00)

Japan is facing a decline in community spirit. Recent studies have shown that for the first time in history, the average number of people in a Tokyo home has dropped below two. While this is nothing new if we look at the rest of the industrialised world, Japanese sociologists are worried that this is becoming an acute problem in the context of an ageing society, and is creating new responsibilities for which the state and local authorities are simply not suited. Government Still failing to address racism in Northern Ireland (2012-05-10 08:00)

A decade and a half ago, racial equality and anti-racism were non-existent in Northern Ireland and important attempts have been made to address racism. But multifaceted and deep-rooted racism is manifest at the individual, institutional and state levels of Northern Ireland society.

Earlier this year two people were convicted for murdering Marek Muszynski in 2009, a Polish man beaten to death in Newry Northern Ireland. The case serves as a potent reminder of the most extreme outcomes of racism and demands that attention should be drawn to how the whole phenomenon is addressed and responded to, not only by the criminal justice system, but by government as well.

Since the murder of Stephen Lawrence in 1993, the UK Institute of Race Relations [1] has documented 96 deaths ‘with a known or suspected racial element’. Two of these deaths were recorded in Northern Ireland, including the recent murder of Marek Muszynski in 2009. According to Detective Chief Inspector Gareth Talbot ‘Marek was a Polish national who came to Northern Ireland to explore the opportunities this country could offer him.’ Instead, Marek
was robbed, allegedly [2] racially taunted with ‘go back to your own country, you’re not wanted in Ireland,’ and then subjected to a brutal attack. In January a young man was sentenced to eleven years for the murder and weeks later a [3] young woman was given a life sentence for the [4] same crime.

Earlier in the trial attention was brought to the racially aggravated circumstances of the murder in which one of the perpetrators admitted to racially taunting the victim. In more recent media reports, there is no mention of a racial motivation and it does not appear that racially aggravated circumstances were taken into consideration in the [5] passing of the sentences.

In another case in 2004, Brij Brushan Sharma was killed in the aftermath of a dispute on the street, the year in which Northern Ireland was hailed the ‘race hate capital of Europe’. However, the courts did not recognise the racially infused context of the killing. Convicted of manslaughter, one of the perpetrators was sentenced to 17 months in prison while his brother was given 100 hours of community service for intimidation. While racist remarks had been made, it was revealed in an investigation by the Police Ombudsman of Northern Ireland that this was not taken into consideration by the prosecution, much to the dismay of the deceased’s family who were upset at the brevity of the sentence and felt that it should have reflected the fact that the killing was racially motivated. Overall a report by the Police Ombudsman revealed that the criminal justice system had made a number of errors in the investigation and prosecution of the case. The family of Brij, supported by the Northern Ireland Council of Ethnic Minorities, have [6] since called for a public inquiry into institutional racism within the criminal justice system of Northern Ireland.

More recently the case of Simon Tang, a restaurant owner who was robbed and beaten to death in 1996, was re-opened on the basis of new evidence. Police are now suggesting that this murder was also racially motivated (BBC News 2012).

The deaths of Marek Muszynski, Brij Brushan Sharma and Simon Tang highlight the continuing problem of racism in Northern Ireland and its most extreme outcome. At the same time, the deaths of these men demand that attention should be placed on how the criminal justice system responds to racism and prosecutes it. Back in 2006 a [7] report entitled ‘The Next Stephen Lawrence’ by Robbie McVeigh argued that the criminal justice system, particularly the police, were inadequately responding to a growing problem of racist violence, which according to McVeigh, was tantamount to institutional racism.

Surprisingly, the police only began to record racist incidents in 1995; largely as a result of Black and Minority Ethnic (BME) people putting pressure on the police to recognise that racially motivated crime was a problem in Northern Ireland (White 1998). Despite BME people living in Northern Ireland for over a century, Race Relations legislation was only passed in 1997, again this was largely as a result of lobbying and campaigning by BME people in partnership with human rights’ organisations, which now meant, for the first time, individuals had legal redress for acts of racial discrimination. It [8] has been argued that the slow move towards recognising the existence of racism was down to a combination of flagrant denial and sectarian conflict, which not only obscured the reality of racism but also meant that many issues affecting minority ethnic people living in Northern Ireland were rarely taken into consideration. This denial and focus on sectarian issues meant that agencies and policymakers displayed a lack of awareness around issues pertaining to racism and the promotion of racial equality, and as such, their policy responses were non-existent (Mann-Kler 1997).

Since then, racist incidents have increased considerably over the years. In 1996 41 incidents were recorded; by 1998, this had risen to 106 and, in the year 2009, 990 incidents were recorded (PSNI 2011). The most recent figures in 2010 reveal a slight decline whereupon figures now stand at 842 incidents. It has [9] been suggested that the increase in race-hate crime, overall, is partially down to people being more willing to report racism, better recording
practices by the police, a change in the definition of a racist incident as a result of the Stephen Lawrence Inquiry, and a real increase in racist incidents. Indeed, the figures could be far greater as race hate crime is usually underreported.

This means that a great deal of racist hate crime falls under the radar. This was confirmed at a [10] meeting of the All Party Group on Ethnic Minority Communities, a group that lobbies politicians on issues affecting BME communities, in which one minority ethnic representative argued that 95% of race hate crime is unreported. Consequently this issue is reflective of one of the biggest flaws with race-hate crime statistics; that is, they do not capture the true extent of racist harassment because a great deal of it remains under-reported for a variety of reasons. The most predominant factors that inhibit reporting include: fear of retaliation if the crime is reported to the police; a belief that there is no point reporting as nothing will be done; and [11] poor experiences with the police. On a closer examination it is clear that a lack of trust in the police is a considerable problem, especially for the Travelling community. It has also [12] been revealed that BME people who have had contact with the police, were more likely to say that the police were racist. This issue is, perhaps, reflective of a much wider problem of institutional racism.

Overall, it is clear that institutional racism is deeply embedded in the architecture of society resulting in a panoply of discrimination and disadvantages for BME people. Recent cases of police racism in the UK, including alleged racist texts sent by the Police Service of Northern Ireland, draws attention to the widespread nature of this problem despite policy changes (BBC News 2012, Channel 4 News 2012).

In relation to the police response to race hate crime, problems have also been encountered by BME people in regard to an inadequate investigation of racist attacks, deficient support, at the time, or soon after reporting a racist incident, as well as poor relations between the police and minority ethnic communities. Overall, a lack of positive engagement with BME people and a lack of confidence in the police service has proved to be a consistent problem, which in the recent past, has been [13] expressed by various regional minority ethnic organisations such as the Northern Ireland Council for Ethnic Minorities, the Belfast Islamic Centre, and the Chinese Welfare Association. In addition, the Northern Ireland Council for Ethnic Minorities has raised concerns about the treatment of minority ethnic communities at the hands of the criminal justice system, stating that:

"Among the ethnic minority population in Northern Ireland there are strongly held beliefs, based on their daily experiences, that they are treated unequally and less favourably by the Northern Ireland criminal justice system."

The low clearance rate for race hate crime is also problematic. In 2005-2006 the clearance rate stood at 20.5 percent. However since then the rate of clearance has fallen to 12.5 percent between 2008-2009. While some argue that such figures, alongside low prosecution figures, epitomise the inability of the criminal justice system to successfully respond to race-hate crime (McVeigh 2006), [14] it is clear that this also sends out the message that there is no point in reporting race hate crime as a criminal prosecution is unlikely.

In the face of such criticisms [15] it has been argued that the police are making improvements in the recording of race hate crime, and that the appointment of Minority Liaison Officers (MLOs) has helped to alleviate problems associated with engagement. Yet, Patel's [16] research in 2011 reveals that ‘operational officers tended to equate policing in a racially diverse society, with the need to police BME people themselves. Here, there was a tendency to view the BME communities, especially newer (economic) migrants, as largely deviant and problematic. This was done via a process of ‘criminalisation’ (Patel 2011).

Therefore, it is clear that race hate crime remains a considerable problem in Northern Ireland, which the criminal justice system has ‘failed to address or resolve’ (McVeigh 2006:54). This year, a follow up to ‘The Next Stephen Lawrence’ will be published by the Northern Ireland Council of Ethnic Minorities. The research report aims to
examine all criminal justice agencies in Northern Ireland in relation to how they process and respond to racist hate crime. According to [17] preliminary findings there have been few, if any, improvements in the system.

It is worth noting that the impact of race hate crime on BME communities in Northern Ireland is far-reaching. Each attack not only harms individuals, but it also impacts upon an entire community. In a study by Chahal and Julienne in 1999, which focused on four areas in the UK (including Belfast), it was found that the impact of racism goes well beyond the actual event itself. Fear of being targeted shapes how Black and Minority Ethnic people interact with the wider community; for instance, BME people reported that they were apprehensive about leaving home or going out at night. Racism and the fear of racism also have a negative impact upon the health and well being of minority ethnic people.

A similar story is to be found in a study carried out by [18] Connolly and Keenan (2001) and McVeigh (2006); both of which provide an in-depth insight from the perspectives of BME people in regard to how racist harassment is experienced and its impact on a daily basis. Overall, it was found that the impact of both direct and indirect racist harassment is profound, and one tends to feed into and reinforce the other. Direct racist harassment creates fear which restricts freedom of movement, and the unprovoked and random nature of incidents means that minority ethnic people 'can never feel totally relaxed and 'at home' within wider society'.

Meanwhile, the Northern Ireland government have failed to take racism seriously as evidenced in the fact that a high profile policy framework (The Racial Equality Strategy) designed to address racism from 2005-10, was never implemented.

In the research I carried out between 2008-10 which specifically investigated government attempts to address racism, it was clear that moves towards tackling racism in Northern Ireland were largely impeded by a lack of policy and legislative implementation. Ultimately this contributed to a lack of co-ordination in relation to how racism was tackled across local government, resulting in the employment of weak measures to address racism in the majority of councils studied.

More specifically, a number of obstacles also stymied efforts to successfully challenge racism. These included:

- An absence of strategic policy direction and leadership from central government in relation to tackling racism.

- A lack of capacity and confidence within local government to address ongoing racism and put into action strategic policy to tackle the problem.

- Continued poor engagement between local government and minority ethnic people, especially via elected representatives.

- Under-funding and poor management of resources by central government for minority ethnic groups, inhibiting the sector from building capacity - a central aim of the Racial Equality Strategy

- A narrow conceptualisation of racism has, and continues to, limit how racism is tackled, in effect addressing racism on a superficial basis through good relations rather than a strong-anti-racist approach.

- The continuing legacy of sectarianism is also shaping how racism is dealt with. Moreover, the main political parties
have sectarianised the debate on racism as divisive, contributing to stalling efforts to address racism.

In 2011 government ministers proposed that a new updated Racial Equality Strategy would be published, broadly similar to the original strategic framework, by March 2012. According to the All Party Assembly Group for Ethnic Minority Communities, [19] this has been delayed and will not be implemented this year as originally planned.

A decade and a half ago, racial equality and anti-racism were non-existent in Northern Ireland and today Northern Ireland has made important moves in aiming to address racism, but these have been foreshadowed by a lack of implementation. Granted, Northern Ireland has moved away from denial to recognition that racism is a problem, yet at the same time its extent is often downplayed or minimised. It is abundantly clear that racism in Northern Ireland is multifaceted and deep rooted. Racism is manifested at the individual, institutional and state levels of Northern Ireland society. For instance, racism at the individual level reveals itself as racial prejudice and race hate crime, as evidenced in surveys, research reports and police statistics. Yet this is only the tip of the iceberg. Perhaps more tellingly, research that has focused on the perspectives of minority ethnic people, reveal more subtle forms of everyday racism that are not amenable to measurement through surveys. These include racist banter or jokes, staring and racial distancing (Connolly and Keenan 2001). The cumulative effect of this type of racism, alongside more overt forms of racism, can be devastating. It has also been found that racism in Northern Ireland tends to be more covert and hidden. In addition, institutional racism is an issue across a broad range of services. This is often compounded by hostile and condescending attitudes, expressed by public sector staff. And finally, racism is also found at the state level; evident in repressive policies on immigration; ineffective responses to race hate crime (as discussed previously); as well as the poor treatment of asylum seekers and refugees.

The quandary remains, racism in Northern Ireland is evidently a widespread problem but so far it is not being strategically addressed by government and difficulties remain in regard to how race hate crime is processed and tackled within the criminal justice system.

manjeet chaturvedi (2012-05-10 08:31:18)
It is easy to find a 'cause' for ills in society, mainly economic deprivation, resource sharing and job scarcity, in the presence of outsiders who belong to other races and ethnic groups. Thus a micro number of native people form a prejudice on racial basis which sometimes snowballs. Sometimes, the local law and order does labeling of outsiders and protects those who indulge into minor hate crimes like social ridicule, pushing out from a queue. Ignoring minor incidents encourages racism. Denial of racist bias in day-to-day affairs may lead to petty crimes or even to major attacks on people belonging to other races.

Window on Research: Dave O'Brien on Cultural Consumption in Contemporary Society (2012-05-17 08:00)

This podcast discusses cultural consumption in contemporary British society, exploring who does what and why, against the backdrop of the ethos of creative workers. The cultural 'omnivore' thesis is outlined and critiqued, suggesting the importance of expertise, social status and social class to understand cultural consumption.

The podcast links consumption to production by linking creative industries to the rise of entrepreneurialism and the importance of the concept of the creative worker as a response to ongoing dilemmas within the British economy. It unpacks the ambivalences of creative labour, outlining issues of exploitation, self-management and conceptions of failure associated with precarious labour, but contrasts these issues with the pleasures of creative work and the idea of 'good' work as a way to understand the emancipatory potential offered by creative work.

Running throughout the podcast is a description of the limits of social scientific attempts to measure participation and consumption of culture in Britain today, how those attempts may constitute as well as describe our understanding of cultural consumption, and the effects of the digital revolution in distribution on measuring participation.
The issue in the media

Cultural consumption and the omnivore

Cultural work:

The uncertainty of contemporary Higher Education (2012-05-18 08:00)

I wanted to draw attention to a great chapter that I came across on Twitter recently that puts into words really well some of my more troubled feelings about my work life post PhD. Predominantly I try and remain positive about my situation because I enjoy both research and teaching, and feel very privileged to be able to contribute to generating and sharing knowledge. However, I have also had many ups and downs, particularly in my last Teaching Only post, and have sometimes felt trapped by an on-going cycle of short term contracts that have been both rewarding, but very difficult.

In her chapter ‘Breaking the silence...’, Rosalind Gill shares qualitative data from colleagues in academia about their experiences of contemporary academic work, moving away from what might be viewed as ‘moans’ about the job, to a more critical investigation contextualised by relevant literature. Like one of her participants I am now on my third short term academic post since completing my PhD and can strongly identify with the stress of balancing heavy and sometimes unforgiving work loads with finding ‘another’ new job. I still also frequently deal with the same questions; Will I ever get a long term post? What else do I have to do to get there? How much more uncertainty do I have to deal with? I am pleased that Rosalind is trying to put academic work life on the agenda, because as she rightly argues, it is woefully under researched, there are significant structural issues and changes affecting contemporary academics (especially early career) and it really does help to know that my troubled feelings are not purely my own failing.
I am currently really enjoying a new post at Open University which is a 2 year contract and is research only. I hope that this will allow me to develop my career and to capitalise on my teaching only post, which I admittedly found detrimental to my publishing capacity and also very time consuming. I wouldn’t want to deter early career academics from short term posts because often needs must and they can look great on a CV and plug significant gaps, but it is important that these are considered critically, both in terms of their value to students and to early career staff.

Anna Tarrant is a Social Scientist and Human Geographer currently working at the Faculty of Health and Social Care at the Open University. This article was originally posted on Anna’s [2] blog.

Does eugenics have contemporary relevance? (2012-05-21 08:00)

by Chi Chi Shi
Do the ideas associated with [2]eugenics have contemporary relevance?

Eugenics is often regarded as a purely historical phenomenon, popular for a brief period at the beginning of the twentieth century, but not regarded as a contemporary issue. However, the ideas associated with eugenics still hold contemporary relevance, in both overt and subtle forms. Eugenics, as defined by Francis Galton (1904), is ‘the science which deals with all influences that improve the inborn qualities of a race’.

While since the mid-twentieth century the name ‘eugenics’ has been tainted with the brush of Nazi eugenic experiments, the advancement of work in genetics and the potential of genetically engineered ‘designer’ babies has renewed interest in the possibility of improving the genetic makeup of a population. There is a modern branch of eugenics which favours an environmentalist approach, advocating the use of eugenics not necessarily to better the population, but to save the earth from the problems of overpopulation: ‘the world has a cancer, and that cancer is man’ (Lambert in Hall, 2008).

However, in this essay I would like to focus on the more mainstream manifestations of eugenics and the ideas behind it in contemporary political, social and scientific thought and policy.

Genetic research is a contemporary area of science where the spectre of eugenics still lingers (Kevies, 1995: vii). The relationship between the past and the present is complicated; advocates of genetic research emphasize the differences and developments that have occurred between ‘then’ and ‘now’ (Kerr, 2004: 12), but a more sociological approach sees the dangers in dismissing the past as history. Science is always conducted in a social environment, and science cannot be completely separated from the social structures in which it is practiced. However, the failure of eugenics is often explained in comparison to the superior genetic research of today; while eugenics in the past is
seen as being inseparable from the social prejudices of the time and, far from being scientifically objective, grounded in bias and subjectivity, contemporary genetics is seen in contrast as objective and neutral (Kerr, 2004: 11). While the way genes were understood in the past is seen to be dangerously reductionist, with eugenics having no true grounding in science, today, the complexity of the issue is thought to be understood (Kerr, 2004: 11). However, many today still see danger and bias in genetic research, with new technologies reinforcing old cultural values and societal arrangements, rather than challenging them. Genetic screening of foetuses arguably reflects the negative views of disability such as Down’s syndrome (Kerr, 2004: 5). Criticism comes from the disability rights movement, which sees the sanctioning of late abortion in the case of genetically defective foetuses as a form of modern eugenic policy (Bailey, 1996). It is impossible for science to be achieve complete objectivity because the values taken as given are socially determined and goals considered desirable are only so because of their social setting.

The ideas associated with eugenics go far beyond the definition of eugenics as the ‘science’ of breeding. Eugenics is concerned with improving the health of the population; breeding can be seen as the method through which this is done. In this way, government policies that seemingly have no connection with eugenics can be seen as descended from eugenics and working towards the same idea. UK's Department of Public Health illustrates this idea; their focus is not on the health of individuals but on the health of communities. The ban on smoking in enclosed workplaces in the UK has been claimed to promote ‘a healthier England’ (UK Department of Health, 2007); the law is directly concerned with, not the health of individuals, but the health of the population in general. Rather than focussing on the health of individual English (or British) citizens, the policy is focused on England; it is collective health which is targeted: ‘everyone in England can benefit from healthier environments and better quality air’ (Donaldson, 2007). Science is used as a political weapon; the dangers, both real and exaggerated, of second hand smoke, have been used to justify government policy.

Similarly, the government drive against obesity can be seen to operate in the same manner; obesity is considered a matter of public health rather than merely affecting obese individuals. This can be seen in the case of four obese children being taken away from their parents and placed into care after failing to lose weight (Collins, 2011; Hull, 2011), though the parents ‘are not guilty of any crime and have faced no accusations of deliberate cruelty or abuse.’ (Collins, 2011). This bears shadows of Karl Pearson’s ideas to provide state support to poor parents to help with the costs of bringing up children, but that ‘the provision for motherhood would be limited to cases of ‘sound parentage” (Porter, 2004: 282). Parents who produce obese children are seen to be unfit parents because obesity is seen as a threat to the population. The case reflects the contemporary acknowledgement that nurture, as well as nature, is central to the formation of a person, but the prevailing idea is very similar. Taking away obese
children from parents, from the environment which is seen to foster obesity, is akin to the eugenics idea of breeding out the unfit; without preventing breeding, it prevents parents from raising their children to be unfit. Dividing the binary categories of 'fit' and 'unfit' is a central concept in eugenics; this is still being done today in various guises, and the marking out of obesity, smokers, the disabled, and various other stigmatised groups as 'unfit', and unacceptable, is an example of this. They remain under the obligation to conform to society's interests (Kerr, 2004: 21).

Although genetic deficiencies that can cause obesity are considered rare (Lee, 2009), obesity is still often seen as caused by genetic factors, as pre-determined rather than purely environmental (BBC, 2007). This correlates with the common understanding that genes are the bedrock of genetic disease and the focus on an 'obesity gene', despite the fact that an underlying genetic susceptibility to obesity does not pre-suppose obesity (Lee, 2009: 34), emphasizes how obesity and overweight are seen in the same manner as disease rather than purely physical attributes. This is similar to the way that eugenics advocates and Social Darwinists saw human traits as genetic, fixed and unchangeable. Obesity has become a social deviance under the disguise of disease, and there are inevitably socioeconomic implications (Maddox et al, 1968: 290); fat has become associated with the lower classes and with certain moral qualities: laziness, lack of discipline, and the absence of qualities that would 'make upward social mobility possible' (Bordo, 1993: 195). Here there is a clear and worrying similarity to the eugenics thought to be a historical phenomenon: the drive against obesity can be seen indirectly as a manifestation of disdain against a certain social class. Science still resolutely remains a social practice; the justification of the wish to eradicate obesity is on scientific grounds, but the desire itself is social in its formation, working against the lower class and towards their eradication.

It is still a common view, often seen on the right of the political spectrum, that poverty is caused by fixed character attributes, that the poor are pre-destined to be poor. This is evident in ex-Republican state representative John LaBruzzo’s recent 2008 proposal for voluntary sterilization of poor women in an effort to stem generational welfare in Louisiana (Baram, 2008). Other proposals by LaBruzzo include paying poor men to get vasectomies and tax incentives for wealthy, college-educated couples to have more children (Baram, 2008). This is a clear effort to change the genetic makeup of the population, and to breed out those who LaBruzzo determines to be the weak: poverty is seen to be genetic and fixed, unchangeable. A similar idea was suggested in 1991 by Louisiana state representative David Duke, who proposed offering $100 a year to welfare recipients using the long term contraceptive implant Norplant (Lewin, 1991). This approach ensures minimum responsibility for the eradication of poverty and shows the prevalence of the idea of fixed categories; by seeing poverty in this way, there is no way of helping the poor or of preventing poverty and so eradication of the poor must be the only way to eradicate poverty. Although these ideas proved controversial, they are reflections, albeit extreme reflections, on the kind of thinking that is widespread in the Republican party.

Although in the present day, much emphasis is placed on nurture rather than inborn qualities, the idea that some traits are genetically inherited and unchangeable still proves popular and persistent. Sterilisation programmes remain popular in many countries, and in a more subtle way, government concerns with the health of communities rather than the health of individual citizens can also be seen as traceable from the ideas behind the eugenics movement. However, this is not to say that everything today that can be traced or linked to the eugenics movement should be immediately discredited; eugenics can be seen as a shameful origin, but this does not automatically make everything that can be associated with it shameful as well. Constant reflection and re-evaluation on what we believe to be right and how we express our beliefs, as well as an understanding of the socially shaped aspect of science, rather than taking science for granted as unquestionable, is needed in order to truly learn from the mistakes of the past.

Bibliography
Britain is gaining a reputation abroad for being a “no-go” zone to international students – potentially losing billions of pounds to the economy and to universities. In an article by the [1]Independent, the restrictions on visas, the well-documented rise in tuition fees for European Union students at English universities and the murder of a student from India at Christmas are posing a threat to the future of Britain’s universities.

Quantitative qualifiers are not the only thing that could suffer - UK universities' reputation as being world-class institution to study could be affected. One estimate, in a report by the consultants London Economics, calculated that Britain could lose out on nearly £8bn in income.

Recent figures from the Universities and Colleges Admissions Service (UCAS) indicate that the number of EU students applying to British universities has dropped by 11 %. EU students face the same fees increase of up to £9,000 a year as English students – and are finding it cheaper to study in their own countries.

In numbers

1178
£830m Cuts to university teaching funds from central Government this year – reducing places by 15,000

9.9 % Fall in applications to English universities this year as tuition fees treble

2.3bn Potential loss of revenue over next decade from fall in EU students put off by higher fees and tighter controls on study visas

In measures to try to make sense of the new rules and regulations, universities and colleges are digging deep and spending millions of pounds trying to navigate the government’s new student visa rules.

For example, the LSE according to the [2]Guardian spends £250,000 a year trying to understand regulations governing the entry of non-European Union students. Medium-sized colleges have had to recruit more than a dozen members of staff to ensure that they are correctly complying with the rules.

In another article by the [3]Guardian, it found that scores of genuine international students have been left stranded and penniless as a result of genuine private colleges closing down with ever more stringent regulations to weed out bogus colleges and students.

Timothy Blake, principal of the London School of English, said his college had to have 16 staff that needed to understand the regulations brought in by the coalition government. "The rules have gone too far," Blake told MPs. "Legitimate students are being seriously affected by rules designed to take out bogus students.”

Overseas Students Uncertainty | The Sociological Imagination (2012-09-07 13:52:14)
[...] stated elsewhere, overseas students have become a vital source of income for universities – and blocking them will [...]
If there is anything you remember from school Physics lessons, there's a good chance it's the maxim speed = distance ÷ time. For most of us, this equation is no more useful in daily life than the molar mass of carbon, or anything else we forgot from that class. It is though one worthy of recalling, for its speaks of a dominant trend in contemporary life, namely the pursuit of speed and the simultaneous destruction of its co-variables, a process described by the geographer John Adams as 'hyper-mobility'. A recent paper in the Journal of Modern Transportation suggests where this trend may take us in the near future: 'evacuated tube transport technologies', otherwise known as vacuum mag-lev trains. Travelling through airless tunnels and supported on magnets, speeds of 4000mph are envisioned, using only one quarter the energy required by modern passenger jets. It’s a science fiction dream that might soon become reality.

Some are already celebrating this as an eco-friendly future for hyper-mobility. At any point of embarkation however, a moment’s pause is called for, to ask how we got here, and where we might be going.

Our grinding daily commute is itself a marvel of the modern age, hard as that may be to believe. In 1800 America, the average daily commute was 50 metres – it’s now 50 kilometres. Globally, we travel 23 billion kilometres a year; by 2050 it is predicted that that figure will have increased fourfold to 106 billion.

The systems of hyper-mobility have negated the cost of distance. Today one can travel from the UK as far as the Red Sea on low cost airlines. For those on middle incomes and above, almost any human settlement on Earth is reachable for the cost of a few days wages.

The logic of speed ensures that the journey – that is the experience of time through space – is itself ever diminished, as distance slips by 36,000ft below, or is smeared across the train window at 200mph (come 2035 and High Speed 2). The proposed maglev vacuum is surely the logical end-point of this process: hurtling through a black, airless void at multiples of the speed of sound.
There is undeniably something thrilling about disconnecting oneself from the contemporary world with its ever more invasive technologies and persistent networks; to arrive unencumbered in an unknown place; to take a breath that feels like it might be your first. In such moments it is not difficult to believe in a world of infinite possibilities, and a chance for reinvention (if only for 14 nights semi-catered).

The Price of a Ticket

Of course the easier it becomes to reach a destination, the more that destination begins to resemble the point you started from. The economic value of meeting the dictates of the novelty-seeker, of selling exoticism to the jaded traveller, may ensure that traditional customs remain, but as performances for the dollar-carrying crowd, rather than expressions of cultural identity. What was a way of life becomes a poolside bar design-theme. Inevitably, over time the process of globalised tourism destroys the very thing it seeks. The adventurous have to push ever further off the beaten track, as the track becomes a road becomes a motorway.

Distant indigenous cultures are not the only human victims of this high mobility system of course. Out of town retail parks have seen our own high streets reduced to a spectacularly inane vision of dystopia, with an economy that revolves around The Big Issue; second-hand clothes that are more expensive than they were in Primark the first time around; and plywood boards, which have made great inroads into a market previously dominated by plate glass.

The high street does not suffer alone. A study in suburban Los Angeles comparing the number of neighbours residents knew, with the traffic on that street, found that increases in the latter inflict a equivalent decline in the former. Studies in London have found strong correlations between heart disease and noise pollution from air travel. Worldwide, over 1 million people a year die in car accidents, with 50 million injured.

Access to this world’s benefits is limited, yet the costs are not. As society adapts to the possibilities offered, those that cannot travel are abandoned by the roadside. The land use configurations created by the dominance of the car mean that those without one – predominantly the elderly, the young, and the poor – find their lives correspondingly more difficult. Whose houses hug the sides of busy carriage ways, and hunker under airport flight paths? Certainly not the same people who benefit most from these infrastructures. If the mag-lev vacuum train ever comes to pass, what do you suspect would be the socio-economic characteristics of the neighbourhoods that lie in the shadow of the raised 15m diameter concrete tube running over their heads?

The environmental cost of hyper-mobility is devastating. In the UK transport-related carbon emissions are second only to those from power stations. Attempts at ‘greening’ fuel by adding biofuels have led to deforestation to make way for plantations in the Global South, and been linked to price hikes in food. The 2011 Gulf of Mexico oil spill is simply the most high profile of a century of such disasters, and tens of thousands of hectares of pristine Canadian wilderness are currently under threat from plans to expand oil sands extraction.

The destruction inherent in hyper-mobility is perfectly captured in a picture book I enjoyed as a child, called Dinosaurs and all that Rubbish. A man gazes up into the night sky at a distant star, dreaming of the wonders he might find there. Driven by wanderlust, he builds a rocket, destroying his home planet to feed the smoke-belching factories which churn out the rocket’s parts. His plan is successful, but on reaching the star he finds a barren wasteland. His eyes return to the sky, and spy a new star, with new possibilities. Once again he streaks into space, sure that this destination will be worthy of his dreams. On arrival however he discovers to his horror... You can guess the rest. Well, actually you probably can’t, as this is a children’s story and prone to questionable leaps of logic. He does indeed wind up on the very planet he started from, the planet he destroyed, but in the meantime dinosaurs have emerged from the rubbish tips he left, and somewhat put out by what they find, have cleaned the whole place up. But as
Bertie the triceratops is unlikely to solve our current environmental troubles, I think we can disregard this element of the analogy.

Of course, there are also a great many positives to high mobility. Along with the opportunity to escape our own lives, tourism offers us the chance of experiencing others’. On a shrinking, interconnected planet, this can’t be a bad thing. More fundamentally, the West’s affluence is underpinned by high mobility. Kunstler’s The Long Emergency details how intrinsic it is to almost every aspect of contemporary society. The defining characteristic of the 20th Century was the consumption of cheap oil – an unparalleled source of easily-accessible, concentrated energy – allowing the near frictionless movement of people and goods around the planet. This has allowed the creation of economies of scale that have washed away traditional forms of community. On the tidal wave of oil rides Walmart; Tesco; McDonalds and the other poster boys of contemporary economic success.

The entwining of late-modern capitalism, mobility, and oil, reaches its apotheosis in places like Las Vegas and Dubai: what are known in the sociological literature as places of excess, though I prefer to refer to them as masturscapes. Masturscapes exist for the pursuit of fleeting pleasures and the theatrical squandering of resources; their unsustainability appears a badge of pride. How else to justify the construction of Dubai’s World Islands at a time of rising sea levels? With its vertiginous towers built on slave labour just as Egypt’s pyramids were, this desert monument appears to be putting its faith in Mammon to hold back the waves. Their physical existence in such inhospitable locales is impossible without the easy fix of cheap energy, and it is this borderlands existence, beyond the reach of civilisation, which allows them to offer up a netherworld of unhindered desires. “What happens in Vegas, stays in Vegas” goes the ad slogan, but of course only the most unfortunate stay in Vegas: the stripper, the croupier, the bellhop that – Groundhog Day like – are tasked with endlessly acting out the ephemeral fantasy. For the traveller its purpose is to exist momentarily, and to be departed from before the cost can be counted, as if some Air Miles collecting locust.

Rebalancing the Equation

Contemporary concerns ensure that techno-utopian dreams like that of the mag-lev vacuum train are sold to us as offering ever greater speeds but at decreasing environmental cost. It’s claimed that the train will travel eight times faster than planes, at a quarter of the environmental cost. So what’s the problem?

The problem is that the easier travel is, the more people travel. The ‘predict and provide’ model underpinned transport planning for the second half of the 20th century: figure out where a road would be beneficial, build it. Infrastructure does not simply respond to our needs however, it also shapes them. Motorways that began as gushing arteries of goods and people begin to clog up, even become blocked entirely, as society reconfigures itself around this new possibility. New roads create new traffic, and for that reason the predict and provide approach has fallen from favour amongst policymakers. We don’t have the space or the cash to meet its demands indefinitely. Similarly, if people can get from London to New York or Moscow or Cairo in less than an hour, more people are going to do it. A lot more.

Of course this may provide an economic boost, and the other benefits that mobility brings, but the costs cannot be escaped from, and the world’s carrying capacity for such costs is at breaking point. It’s worth considering the UK Government’s own Foresight report entitled Intelligent Infrastructure Systems (2006). It puts forward four mobility-focused scenarios describing life in 2050. What is perhaps most striking is that not one of the scenarios tries to suggest a world in which we have managed to both address our environmental challenges and maintain hyper-mobility. It’s simply not plausible.

I do not mean for this excursion to resemble an advanced single to Skegness: I would like there to be some light at the end of the tunnel. For this we must return to where we started out from, that is speed = distance ÷ time. The
alternative to our speed fixation is to reassert balance to the equation, to restore the value of time and distance. We must start by asking what the purpose is of all this travel? At the danger of sounding like a Christian billboard – where are we rushing to all the time? The vacuum mag-lev train promises to render distance and time inconsequential, yet is there any intrinsic value in being able to physically move through space at such speeds (in an airless black tunnel)?

What happened to the pleasure of the journey? It was lost in the indignity of airport security’s molestations; in budget airline seats that would contravene livestock welfare guidelines; on groaning draughty train carriages and in carbon monoxide infused traffic jams. Now we simply wish to get as far from where we started as possible, hoping that our iPads block out as much of the intervening period as possible. Yet the system that offers this possibility of escape is the same one that kills it: with identikit high streets and homogenous cultures. If distance and time are allowed back into the picture, less (speed) can indeed be more. Those faraway places we value so highly might take longer to get to, but when you get there, you’ll actually be there.

Murray Goulden has a background in sociology and STS, and is a Research Fellow at the Horizon Institute, University of Nottingham. Having written his PhD on scientific and popular constructions of human ancestors ('missing links'), his current (eminently more fundable) research interests concern energy and transport in the context of climate change and emerging digital technologies.

Using visual metaphor to explain how stuff works: what theorists can learn from beatboxing?

In this video [2]Beardyman, UK [3]beat boxer renowned for his use of [4]live looping, collaborates with the visual artist mr _hopkinson to visually describe the practice. As someone who is fascinated by this kind of music but had never understood how it works, I was incredibly impressed by the articulacy of the visual message. The video communicates embodied practical knowledge through a metaphor which communicates the essence of the practice: using the technology at a given moment to assemble and coral an army of performance fragments (fragmented performers?) which can be arranged into a performance over time which is much more than the sum of its parts. While I'm obviously not suggesting that social theorists try and take up beatboxing (the image makes me shudder) I do think there's a prodigious creativity in this video's use of visual description which can, in an indirect way, be learned from.

Although vivid metaphorical language can be found in some areas of social theory, it is far from consistent and, in my experience, there's little reflective dialogue about how such communicative techniques can and should be used effectively. Too often visual metaphors in social theory simply don't work. Likewise, when they do the lack of deliberate reflection about the pedagogical dimensions to their use often means that their success in illuminating ideas to people already inhabiting that conceptual landscape goes hand-in-hand with the emergence of further barriers to people outside that approaching coming ot understand the ideas within it. Which I write having finally got my head around Deleuze after years of being scornful. Given the increasingly imperilled place of theory in the academy, there's an important conversation to be had about rhetorical and pedagogical innovation.

Beatboxing and social theory | Thinking culture (2012-05-24 09:41:34)

[...] short but very suggestive post here that suggests that theorists could learn from the way that beatboxers bring together fragments. [...]

The Arrogance of Publishers vs. Academic Culture – Why the Outcome Is Virtually Certain (2012-05-25 08:00)

"Technologists also believe that publishing is transportable — anyone can be a publisher. All you need are some basic skills, access to a blogging platform, and some determination. While for certain forms of expression this can be true — this blog is an example — for a complex organism like an academic press or an academic journal, much more is needed, including people with the talent and experience to get it right. I may think I'm a good cook because I can occasionally prepare a surprisingly tasty meal on a Sunday night by following someone else's recipe and using the right ingredients, but that by no means translates into my ability to create, finance, run, and manage a restaurant. If you're a “cooking technologist,” you think all you need is an oven, pans, and ingredients."

Imagine a situation where homes had no kitchens and utensils were unavailable. We would all be dependent on cafes and restaurants to eat and, it follows, our idea of what it is to prepare food would be exhausted by those working in such a capacity within these establishments. Now introduce kitchens into homes and affordable utensils into shops. Suddenly we can cook meals at home. Obviously the quality of the infrastructure is lower and there’s less expertise. For the sake of the thought-experiment, assume kitchens and utensils appeared suddenly, to an extent profoundly disruptive of established practices of going out for every meal. The meals cooked at home would be of poor quality, probably pragmatically orientated and often imitating (poorly) the meals available in restaurants and cafes.

With time, hobbyists become more adept at imitating such meals and, as cooking becomes an everyday activity, new kinds of meals emerge because the practical intent behind cooking is no longer constrained by the economics of the restaurant. Then the utensils get ever better and cook books become a market in their own right, with expert guidance being commercially (and sometimes freely) available to anyone who wants it. The gap between the professional chefs and enthusiastic amateurs becomes ever narrower. Likewise, the vast majority of the populace becomes capable of cooking in a purely functional way, with a range of outcomes shaped by personal preference. People can even, god forbid, cook for each other. Those who put the effort in are able to cook very well.

None of this means that restaurants go out of business. But it does mean the economics of the restaurant business change profoundly. What was once, in the thought-experiment, a position of hegemony where everyone is reliant on the restaurant for all their meals becomes a position where the restaurant must offer some additional value vis-a-vis the meals people are able to cook at home. If everyone can cook in a way which is good enough for everyday purposes, the restaurant must offer something else. For a while, it might get by on the social convention that you don’t socialise or celebrate with meals at home. It might also get by on people either being unable to cook
or choosing not to cook once they have that capacity. But once the infrastructure and the expertise is distributed widely enough, it simply has to innovate or its position will eventually become untenable. The fact the populace is able to cook for themselves doesn’t mean the restaurateur has no future, far from it. However if they spend this time arrogantly dismissing the pretensions of the amateur cooks rather than creatively redefining their role to take account of the fact they no longer have a monopoly on cooking, then, frankly, they’re screwed and, more over, they deserve their fate.

The analogy needs some tweaking. DIY cooking preceded restaurants, for example, not the other way round, and while few of us could compete with the world’s top chefs at the best restaurants, a great many restaurants and fast food joints cannot compare for health values or taste with home cooking. Scholarly publishing is analogous, it is the commercial sector that emerged from the amateur scientists. Outsourcing publishing has always been a nice to have, not a need to have. There will continue to be a role for professional publishers if the services are attractive and good for us (don’t lock up our work), and the cost reasonable. If not, well there really is nothing better than mom’s apple pie!

You have got (2012-05-30 17:49:52)
Superb Web-site, Keep up the great job. With thanks.

Laura Lee (2013-06-02 14:31:13)
Cooking is essentially a solitary activity. The quote at the beginning does note that having access to technology does work for certain types of writing. What it is talking about is the teamwork aspect of traditionally published academic material. So while it is easy to publish a novel, which is essentially the product of one mind, like the cook in the kitchen in your analogy, (although it benefits greatly from professional editors, layout artists and so on) it is more difficult to achieve something like the academic press does with a team, for example, having peer review that is recognized as expert or technical editors who not only know the language but know the field who can double check your conclusions and wording. So while the home cook may become as expert as the chef at producing great meals, this does not mean that he or she will have the ability to do everything that a whole team of specialists can do. The original quote may have been worded unfortunately in saying that you need people “who know what they’re doing.” But the point is that if you wanted to, say, cater a wedding, you would probably need some help and that this is an area where it might be more useful to just go to professionals who do it all the time than to take the time to learn all of those skills. An academic writer may study his subject every day, but he probably does not have to be expert in book publishing on a regular basis and may find that skill set less necessary to develop when he can hire others to do it for him. (By having them act as publisher and giving them a percentage.) It seems as though getting the kind of peer review that instills confidence for a self-published venture might be more time consuming and difficult than just using the publishing structure that exists. This could change if academic writers came together and built networks to serve that need. At the moment, though, it seems as though using the existing structure rather than building a new one that serves a similar purpose is more practical. So this would be the “value added” that restaurants have to offer over cooking in the home in your analogy. It seems to me that the quote above (I didn’t read the full article) and the response are actually in agreement. Both say that there is a place for the self-published and that there is a place for the traditional publisher.
It has been over 50 years since C. Wright Mills wrote the Sociological Imagination. In that time the world has changed beyond recognition: the Cold War ended, the Keynesian consensus broke down, a globalizing neoliberalism rose to the ascendancy and the internet began to transform human communication and culture. In recent years, with 9/11 and then the financial crisis, it seems that history has returned with a vengeance. Is Wright Mills’ notion of the ‘Sociological Imagination’ still pertinent today? How can Sociology help shed light on the rapidly transforming world around us and the consequences of these transformations for the people who inhabit it? What does the ‘Sociological Imagination’ mean today?

The [1]Sociological Imagination website is seeking short articles which engage with these themes, or particular aspects of them. Submissions should be 500 – 1500 words and [2]e-mailed as a Word document. There is no deadline for submissions.

This is the story of a town-planning cock-up known as the Northern Heights Plan which, if completed, would have meant miles of extra houses and tube stations to the North West of London. Produced by [2]Jay Foreman and Paul Kendler.

Time Management Tips for Academics (2012-05-28 08:00)

Inspired by this [1]Guardian article, we asked followers on Twitter and Facebook what time management tips they had for other academics. These are some of the responses we received:

- Zotero, pomodoro’s, task lists, coffee shops and a ruthless use of the delete button on emails! ([4]@JonTulloch)
- empty your life of friends hobbies and external interests ;-) ([5]@weaver _beth)
• have an interactive academic calendar on your VLE. Students can sign up to slots, talks/teaching programmed ([8]@justyael)

• Buy a good diary - something to visualise. Weigh up time estimates of tasks & assign deadlines accordingly ([9]@PostPhDoc)

• Nota bene the line between time-saving use of Twitter and twittering time away. It’s a slippery slope ([10]@Ros-Burnett)

Do you have some more you’d like to add? If so then leave them in the comments box below or [11]tweet us and we’ll compile another list.

Thanks for the tips. for me I use : www.wunderkit.com and www.paymo.biz

Mikołaj (2012-08-28 00:16:09)
I use SelfControl - it can be downloaded from here: selfcontrolapp.com You write URL of sites you don’t want to be able to visit (like all those very distracting social stuff), and then simply set the timer. And then you click on ‘start’ button. After that, whatever happens you won’t be able to get access to chosen sites for the time you set. Closing app, restarting your computer won’t help. You have to wait, and in the meanwhile you have that very rare opportunity to do something productive :) I think it may be a good idea to work simultaneously with rescuetime and self control - first, rescuetime will show you what kind of internet sites distract you most and after that you may put them on SelfControl blacklist. enjoy :)

An Open Letter to English-Canadians, who might be feeling that Quebeckers have taken leave of their senses. (2012-05-29 08:00)

An open letter to my English-Canadian friends. Please circulate in your networks as you see fit.

You may have heard that there has been some turmoil in Quebec in recent weeks. There have been demonstrations in the streets of Montreal every night for almost a month now, and a massive demonstration will be happening tomorrow, which I will be attending, along with my wife, Elizabeth Elbourne, and my eldest daughter Emma.

1190
Reading the Anglo-Canadian press, it strikes me that you have been getting a very fragmented and biased picture of what is going on. Given the gulf that has already emerged between Quebec and the rest of Canada in the wake of the 2011 election, it is important that the issues under discussion here at least be represented clearly. You may decide at the end of the day that we are crazy, but at least you should reach that decision on the basis of the facts, rather than of the distortions that have been served up by the G &M and other outlets.

First, the matter of the tuition hikes, which touched off this mess. The rest of the country seems to have reached the conclusion that the students are spoiled, selfish brats, who would still be paying the lowest tuition fees even if the whole of the proposed increase went through.

The first thing to say is that this is an odd conception of selfishness. Students have been sticking with the strikes even knowing that they may suffer deleterious consequences, both financial and academic. They have been marching every night despite the threat of beatings, tear-gas, rubber bullets, and arrests. It is, of course, easier for the right-wing media to dismiss them if they can be portrayed as selfish kids to whom no one has ever said "no". But there is clearly an issue of principle here.

OK, then. But maybe the principle is the wrong one. Free tuition may just be a pie-in-the sky idea that mature people give up on when they put away childish things. And besides, why should other people pay for the students' "free" tuition? There is no such thing as "free" education. Someone, somewhere, has to pay. And the students, the criticism continues, are simply refusing to pay their "fair share".

Why is that criticism simplistic? Because the students' claim has never been that they should not pay for education. The question is whether they should do so up front, before they have income, or later, as taxpayers in a progressive taxation scheme. Another question has to do with the degree to which Universities should be funded by everyone, or primarily by those who attend them. So the issue of how to fund Universities justly is complicated. We have to figure out at what point in people’s lives they should be paying for their education, and we also have to figure out how much of the bill should be footed by those who do not attend, but who benefit from a University-educated work force of doctors, lawyers, etc. The students’ answer to this question may not be the best, but then it does not strike me that the government’s is all that thought out either.

And at least the students have been trying to make ARGUMENTS and to engage the government and the rest of society in debate, whereas the government’s attitude, other than to invoke the in-this-context-meaningless "everyone pays their faire share" argument like a mantra, has been to say "Shut up, and obey".

What strikes the balance in the students’ favour in the Quebec context is that the ideal of no up-front financial hurdles to University access is enshrined in some of the most foundational documents of Quebec’s Quiet Revolution, in particular the Parent Commission Report, which wrested control of schools from the Church and created the modern Quebec education system, a cornerstone of the kind of society that many Quebeckers see themselves as aspiring to. Now, it could be that that ideal is no longer viable, or that we may no longer want to subscribe to it. But moving away from it, as Charest’s measures have done, at least requires a debate, analogous to the debate that would have to be had if the Feds proposed to scrap the Canada Health Act. It is clearly not just an administrative measure. It is political through and through. Indeed it strikes at fundamental questions about the kind of society we want to live in. If this isn’t the sort of thing that requires democratic debate, I don’t know what is.

The government has met the very reasonable request that this issue, and broader issues of University governance, be at least addressed in some suitably open and democratic manner with silence, then derision, then injunctions, and now, with the most odious “law” that I have seen voted by the Quebec National Assembly in my adult memory.
It places the right of all Quebec citizens to assemble, but also to talk and discuss about these issues, under severe limitations. It includes that most odious of categories: crimes of omission, as in, you can get fined for omitting to attempt to prevent someone from taking part in an act judged illegal by the law. In principle, the simple wearing of the by-now iconic red square can be subject to a fine. The government has also made the student leaders absurdly and ruinously responsible for any action that is ostensibly carried out under the banners of their organizations. The students groups can be fined $125000 whenever someone claiming to be “part” of the movement throws a rock through a window. And so on. It is truly a thing to behold.

The government is clearly aware that this "law" would not withstand a millisecond of Charter scrutiny. It actually expires in July 2013, well before challenges could actually wind their way through the Courts. The intention is thus clearly just to bring down the hammer on this particular movement by using methods that the government knows to be contrary to basic liberal-democratic rule-of-law principles. The cynicism is jaw-dropping. It is beneath contempt for the government to play fast and loose with our civil rights and liberties in order to deal with the results of its own abject failure to govern.

So that is why tomorrow I will be taking a walk in downtown Montreal with (hopefully!) hundreds of thousands of my fellow citizens. Again, you are all free to disagree, but at least don’t let it be because of the completely distorted picture of what is going on here that you have been getting from media outlets, including some from which we might have expected more.

- [1]Professor Daniel Weinstock

"Technology will not advance democracy and human rights for (and instead of) you". Zygmunt Bauman on the use and mis-use of new media. (2012-05-30 08:00)

In a recent [1]article published by the Social Europe Journal, Zygmunt Bauman reflects on the use we make of new media and social networks and how this can be exploited to control us, rather than increasing our freedom of expression.

More and more world politicians have now started to publicly promote the use of such platforms as Twitter and Facebook, portraying them as critical tools for organising resistance, spread democracy and advance human rights.
i.e. in the Arab Spring). However, Bauman’s analysis sheds light of a much ‘darker’ use that can be made of social networks—a use that is more instrumental to the advance of surveillance than democracy, and that benefits political powers rather than people.

In Bauman’s words, “we live in confessional society, promoting public self-exposure to the rank of the prime and easiest available, as well as arguably most potent and the sole truly proficient, proof of social existence”. By using social networks we voluntarily put on public record ‘who we are’, ‘what we do’ and ‘what we think’, disclosing in this way our identity and the most intimate aspects of our lives—making them available at a click. In this sense, social websites can be understood not as tools for the advance of democracy and human rights—but rather as instruments that allow a cheap, quick, thorough and easier surveillance. This is made even more effective by the voluntary cooperation of its intended targets, who happily (and deliberately) fill in pages with private information and personal data to build their profiles and express their views.

This system of do-it-yourself surveillance beats any specialist professional agency on costs and results, and can provide a great source of power and control. In this way, for example, authoritarian regimes may beat the supporter of freedom and rights in their own game, by exploiting for their own benefit the very technology in which new-media apostles put their hopes for advancing democracy.

After all, as Bauman reminds us, this is an old story told over again: one can use axes to cut either wood or heads. The choice does not belong to axes but to those who hold and handle them. Whatever the holders’ choices, the axes won’t mind...

Imaginative sociology and talking things (2012-05-31 08:00)

How far does your (sociological) imagination stretch? Let’s find out by considering the following question: Imagine that things could speak – what would they say?

This question was put to 42 persons between the ages of 18-50 years old in Tokyo (Japan), San Jose (USA) and Beijing (China) in a recent photo-dairy study conducted by Ericsson User-Experience Lab, which I took part of. The task was to take a photo of one or more things and state what the things was saying.
So, what kind of things were you thinking of? If you thought of a technological thing you did like most respondents in this study. Lamps, Computers, Laptops, Mobile Phones, TVs, Ovens, Fridges, Laundry machines - all frequent talkers in the study. In fact, the most frequent talkative things were consumer electronics and home appliances - things that carries out something and which people frequently use and interact with. The rest of the respondent’s chose various things like figurines, dolls, food, containers, furniture or clothes. From what the respondents told us it seemed like these things were perceived as more passive compared to technological devices which were perceived as more "pushy" (Whiteheads’ notion), actively calling out for their owners’ attention.

Furthermore, if you imagined that your selected thing said something reprimanding about yourself, your habits, or the way you treat it, then you are in good company. The majority of the respondents did just that. But many things expressed encouraging and reassuring words as well. The answers to the task had strong similarities. In general the things were either criticizing their owners’ personality or habits, or they said something encouraging and reassuring. It seems that the respondents’ used things both in motivating and regulating ways in various aspects of their lives.

Most narratives in the study are about leisure. For hard working citizens, the back regions of a home is naturally dedicated to the art of relaxing. One respondent told us about their couch left by the landlord. It was too small for the saloon so they bought another and moved the old one to the balcony. The old couch says: "I know I’m unworthy, but in a sunny afternoon after a long winter you can enjoy your life with me.

However, not all things speak nicely. Another respondent’s TV says "Sorry, I’m finished showing TV programs, but I’m sure you watched enough, right?".

Work is such an important aspect in peoples’ lives, so naturally many things speak of work. Most narratives in the study convey feelings of self-pity and comfort in relation to too much work. One respondent submitted a figure saying: "Relax! Relax!" because it’s calm and smiling face made her feel as if it is talking to me when working hard.

And on the other side of the coin are things speaking in benign voice. One respondent had a teddy bear which she imagined to be much more demanding. She imagined that with its hands on its waist, it seemed to be saying: "study hard, don't be lazy!"

The more personal and intimate aspects of the respondents life are conveyed through the narratives about body and health. Several respondents imagine talking food and refrigerators, talking about best before dates, available food of the season, shopping lists and reminders, for example, “It will be grateful if a fridge reminds me what are left in the fridge and when the best-before dates are, because I forget what I bought when I am busy”.

But there are also things that induce guilt when they say that the respondents shouldn't eat too much, or healthy stuff, like fruit that shouts 'eat us, not that candy bar!!', or vitamins saying: 'Don't eat too much. I'm tasty, gummy-like vitamin supplements. You always eat too much.'

Things are also good at scolding their owner when something had been purchased but never used. One respondent bought had bought a fan a year ago, and it said: "Sell me or use me! Don't leave me here to be dusty!".

There are many stories from respondents imagining talking things. Illustrated in the narratives, personal things are used by the respondents in both motivating and scolding ways. However, the most fascinating is that no respondent had any trouble imagining that things could talk. (Did you?)
I like to think of my home as my castle and oasis – a secure place where I can let my guard down and behave in ways I don’t always do in public places. In line with Goffman’s logic, I put my private and intimate stuff in back regions, and the fancier stuff in front, sending out the proper signals to others in relation to how I want to be perceived. However, domestic things are more than props, used to reinforce the presentation of the self. The things you surround yourself with will evoke thoughts, associations, and realization of normative expectations. They can act as active partners in motivating and regulating people’s actions and sense of self. When the stage curtain has dropped, and the audience has gone home, the things in my home are still there and their presence encouraging me to play my role in certain ways and scolding me when I don’t. My things have colonized my private realm. Luckily, it is only in my imagination.

Marcus Persson, PhD, received his doctoral degree in sociology from Lund University in 2007. ‘Generation Normal’—alternative views on politics in the Eurozone. (2012-06-01 08:00)

As the European Union is navigating through the troubled waters of the financial crisis, with the Greek ship on the brink of sinking, and many other countries at risk of following the same fate, new political currents are emerging—calling for a more gradualist response to the economic storm. Their success sheds light on how people across Europe (the European society, one would be tempted to say, if only there was such thing...) are increasingly dissatisfied with politicians who are solely concerned with the arid diktats of global economics, financial markets and banks, whilst losing touch with the needs of their electorates.

In a recent [2]article published on the Observer, Peter Beaumont reflects on the rise of European anti-austerity parties and movements. Throughout Europe, and especially in the countries that are struggling the most in the context of the financial crisis such as Greece and Italy, the tension between citizens and the political class is mounting, and the austerity measures endorsed by their governments do nothing but boosting dissatisfaction, fears and uncertainty about the future amongst the population. As a response, citizens are not only protesting and taking to the streets, but also more and more overtly turning their backs on the established system and the austerity politics this promotes. In this sense, their votes and protests represent a public outcry over a political class which has over-promised and under-delivered for way too long—and is now being kindly shown the door.

This attitude is epitomised by the election of Francois Hollande at the Elysium, but also the success of Hannelore Kraft in Germany, the ascent of leftwing coalition party Syriza led by Alexis Tsipras in Greece, and the substantial gains of the Five Star Movement in the recent local election round as well as the increasing prominence of the Italy of Values anti-corruption mayor of Palermo Leoluca Orlando in Italy. The common denominator of these movements is that they represent a clear break with the establishment—epitomised by their sober, ordinary leaders (hence the epithet ‘Generation Normal’), who dare to speak the unspeakable, opposing those austerity measures that have been long portrayed as the one and only lifeline for the Eurozone. In essence, their success lies in their ability to remind the electorate of a ‘different way of doing politics’, by overtly criticising and distancing themselves from the dominating European political culture perceived as elitist, technocratic and, crucially, too distant from the concerns of the ordinary citizens.

The emergence of ‘Generation Normal’ signals therefore a growing desire across Europe for a more competent, down-to-earth, attentive political class—led by politicians who may be less glamorous in their appearance and lifestyle, but are more concerned with effective means to alleviate the day to day struggle of their people. The gradualist strategies they propose as an alternative to the harsh austerity measures so far endorsed by the EU countries certainly resonate with the electorate, and seem to give voice to their hope for a better future—in the short, rather than in the long term. This is an interesting phenomenon because it could pave the way for a new era of European politics. What remains to be seen, though, is whether this new generation of politicians will manage to flourish and, crucially, to save the Eurozone from its fate.

I was told that kettling is quite rare in the anglosaxon region, at least compared to Germany and Austria, where you can get quite used to it. I even remember a demonstration, where we (the protestors) were stupid enough to start the demonstration in a kettle...

Sociological Imagination (2012-06-02 17:10:10)
I’m not sure about elsewhere but it’s become ever more common in the UK over the 10 years or so I’ve been going on protests. It also pisses me off a lot more now than it used to when I was a teenager :-/
Would C Wright Mills have kept a blog? (2012-06-04 08:00)
After a particularly inspiring session at the BSA Conference this year to celebrate the 50th anniversary of C. Wright Mills’ death, I have started to read The Sociological Imagination again. It was a standard introductory book for sociology students and I first read it when I was studying for A Level sociology at an adult education centre as a mature student in 1977. I have used the famous quote about private problems and public issues on many occasions over the years as a teacher. In fact the opening lecture of a research methods course I taught for 22 years used this quotation alongside a passage from H G Wells’ History of Mr Polly that beautifully illustrates, in the context of the desperate fate the bewildered Mr Polly was experiencing in common with much of the Victorian petty bourgeoisie, the sociological imagination.

I re-read the opening chapter of the book, The Promise, and then turned to the appendix, On Intellectual Craftsman-ship. I’m not sure I’d read it before as it didn’t ring any bells but to my surprise I found myself reading a strong rationale and recommendation to keep a blog. It is essential, he claims, to not keep your scholarly work and your life separate. You must learn to use your life experience in your intellectual work, to continually examine and interpret it. To this end you should keep a file. ”The sociologist’s need for systematic reflection demands it”. It is worth reading the detailed account he gives on how the file should be used to achieve this. In almost every particular he is describing why and how I and others I know use a blog.

The file should contain as separate items records of personal experiences relevant to self and sociological reflection, ‘fringe’ thoughts, snatches of conversation, half formed ideas, notes on current and possible projects and plans, quotations from and reviews of books and articles, biographical items, all filed under various headings. Even in his time he identified the stultifying affects of putting together research plans to satisfy funders and how the planning is geared up to attracting money. In addition to this (necessary) pursuit the social scientist should find time to review ‘the state of my problems and plans’ and think in broader terms than the agenda as specified by the available funding opportunities. As projects take shape and firm up various items in the file can be re-ordered in terms of relevance for the projects. Items can be re-categorised and reordered as necessary. “The file will contain a growing store of facts and ideas, from the most vague to the most finished”. One key organising principle of the file is to pay attention to the stratified nature of society – history, structure and processes but also individual experience, understandings and problems, your own and others’. As your sociological imagination develops, so does your intellectual capacity. He recommends writing a reasonably substantial piece at least once a week. For students and early career sociologists the file is a way of developing a writing style, finding a voice and gaining confidence.

Many reading this will recognise the similarity of this account with discussions of why use a blog. It certainly coincides with my own practice. This blog is full of the items listed above. It also has over 40 draft and private entries that are work in progress or items waiting to become parts of a more polished post to share with readers. Some will never see the light of public day. The facility to categorise and tag posts makes a blog an ideal tool for flexibly re-ordering and associating different items. Obviously text can be cut and paste from posts at will. One advantage of using a blog that was not available to C. Wright Mills is the ability to have a public aspect to engage with a broad readership and exchange comments on items and pieces of writing, or for others to discover you via overlapping readerships and social networking, and to develop a digital presence and identity. I would guess that, if C. Wright Mills was alive today he would at least be encouraging his students to keep a blog and probably be keeping one of his own.

Didn’t realize how important it is to keep a blog of your sociological findings/observations.

**Double disadvantage: Black graduates face difficulties in finding jobs and lower pay (2012-06-05 08:00)**

A report by the Higher Education Statistics Authority (HESA) has revealed that just four out of ten black students are in full time employment six months after leaving university. The HERA report concludes that black students do not face a “level playing field” in educational and employment opportunities. HERA has urged the government to develop a "coherent strategy" to tackle this inequality.

The unpublished material from the HESA comes weeks after Andrew Pilkington professor of sociology at the University of Northampton argued in the [1]THES, that efforts to promote race equality in higher education have had "little impact".

It was also found in another study featured in the [2]Telegraph and [3]Independent (by the Bow Group and Elevation Networks), that black graduates can expect to earn as much as 9 % less than their white counterparts for the same work over five years.

Samuel Kasumu, founder of Elevation Networks, said: “We found black students are concerned about what their future once they graduate, many of them believe the odds are firmly stacked against them. With the increase in tuition fees, there has never been a more important time to ensure all graduates have an equal chance in the employment market.”

**In numbers**

60 % - proportion of black graduates not in full time employment six months after leaving university

40 % of black students who expect racial discrimination from employers

30 % - proportion of black graduates less likely to find work than their white counterparts
Dr Yaz Osho specialises in the politics of 'race' and racism, SME entrepreneurship, media representation, the sociology of work and racialized offline vs online identity politics. She has taught at Middlesex University, UEL, Goldsmiths, University of Westminster and was a Senior Visiting Fellow at the University of Sussex.

The Quebec Student Strike (2012-06-06 08:00)

![A lone bagpiper plays traditional tunes during the Québec students strike protest march that took place on Monday May 7th, 2012](http://www.youtube.com/embed/10ENoHW2GOU)

First of all, I wish to thank you for the interest that you are taking in our movement. In these difficult times, it is always reassuring to know that our movement is known in other countries. As I write you, we are at the one hundredth day of our strike: excuse me then of an excessive partisanship. I will try to present the 2012 Quebec student strike as
The last great student strike dates from 2003: at stake was the disposition of 103 million dollars in scholarship loads that had been voted by the Jean Charest government. The participant student groups were the same as today: the Federation of University Students of Quebec (FEUQ); the Solidarity Union of Students (ASSE) and the Federation of Secondary School Students of Quebec (FECQ). The strike came to a bitter conclusion due a too-hasty agreement of the two national student federations and the government. The ASSE, as the association of the most militant members of the student movement, understood very poorly that fact that the agreement should have been be made in a consultative cooperative manner, given that it advocated a combative syndicalist posture and direct democracy.

In 2008. The Charest government announced a small increase in university fees. An attempt at an unlimited general strike was undertaken by the ASSE, without, however, much success. The strike project was thus aborted and the increase was instituted. In 2010, the government announced its intention to raise the costs of higher education by 75% over a five year period. It called for a meeting of those concerned parties in order to consider the practical details of this increase. The union of professors and the student associations refused to participate in this meeting given the refusal by the government to consider any alternative to a fee increase.

At the beginning of February, the ASSE launched a mobilization under the name of the Large Coalition of the Association for a Student Solidarity Union (CLASSE). Peaceful civil disobedient actions began to occur as the strike votes came at the end of the month. In a few weeks, the movement was strong by several tens of thousand students for an unlimited general strike.

March began on a big scale when the government, having tried in all sorts of ways to discredit us, had to confront events in Montreal of an economically disruptive nature. On the 7th of March, a peaceful blockade of the head office of Loto-Quebec becomes a confrontation of the forces of order. The Police Force of the City of Montreal (SPVM) violently represses the students with clubs, shields, tear gas bombs and deafening noise bombs. This was the first real excessive moment of a long series. Still the mobilization did not crumble: by the 12th of March, 196380 are on strike and by the 22nd, we were close to 300 000 – about three quarters of the university and secondary school students of Quebec.

April begins with a change for the worse as the university administrations and certain students who oppose the strike try to obtain injunctions permitting the resumption of courses. Nonetheless, most of the injunctions are ineffective as large scale blockades oblige the administration to close down institutions for reasons of safety. The FEUQ and the FECQ are now the principal players and all the national associations support their policies. For the FEUQ-FECQ, the policy is to clean up the poor administration of universities and thus to finance a freeze in costs, while the CLASSE proposes a reestablishment of the 4% tax on banking institutions in order to finance a freeze in support of free education. During this time, by calling attention in particular to acts of vandalism committed by certain students, the government holds to its hard line and undertakes a public relations campaign in order to convince the population of the reasonableness of its proposals. On the street, police repression increases the anger of the students who have been radicalized by the refusal of the Charest government to negotiate the question of the increase. This anger reaches its height on the 21st of April when the demonstrators attempt to shut down the room of the Plan Nord that was to be used for recruiting applicants for jobs in a large project to develop the mining and hydroelectric potential of northern Quebec. The demonstration rapidly turns into a riot and the pictures of violence and vandalism seriously trouble the population at large. This development is not without a relation to an unfortunate attempt at a joke by the Prime Minister, mocking the students by suggesting that one might find them a job in the north in the company of a crowd of businessmen. April ends with an offer on the part of the government raise the increase to $1778, now spread out over seven years. This extension is also accompanied by an enhancement of the scholarship and loan system, as well as by a plan for a payback rate proportionate to the income of student who had received support.
When the student association collectively refused the government offer, negotiations were opened at the beginning of May. Accompanied by the presidents of the three major Quebec unions, the negotiating committee of the FEUQ, the CLASSE and the FECQ engage in discussion for twenty-two consecutive hours. An agreement is achieved: a provisional committee of the universities will be formed in order to evaluate the administration of universities so as to identify possibilities of economizing administrative costs and the money thus saved will be deducted from required institutional fees. This offer, however, is refused by the group of local student assemblies on the grounds that students were in a minority on the committee and because of remarks by the Prime Minister reported in the media that seem to downplay the importance of the university committee. May also sees regular nocturnal demonstrations that often end in numerous arrests. Finally the National Assembly passes Law 78 in order to control the crisis. This law suspends the assembly of secondary school and university students on strike; it forbids student associations from interfering with or stopping courses for those students who wish to attend; lastly, it severely restricts the right to demonstrate. Rather than putting an end to this affair, the law has rather the effect of revitalizing the mobilization and the movement is today stronger than ever.

Guillaume Bertrand is a student of political philosophy at the Université de Montréal. He is finishing his senior year there, preparing to write a master’s thesis.

They call the students ‘terrorists’ ‘thugs’ ‘criminals’ – but they are themselves the criminals (2012-06-07 13:00)

The thing is, you must remember how the newspapers are demonizing the students; there have been known incidents of agents provocateurs from the police who are stirring up violence, as well as a disaffected fringe element using the strike to cause trouble – but the students have been extremely organized and very peaceful in the face of brutal police force. It all began about 4 months ago, when Quebec announced a tuition rise. It quickly escalated because the students understood that if they give in to this, eventually everything will become more and more privatised, as in the U.S., and their quality of life will continue to go down as jobs and opportunities go only to the richest.

1204
So this strike really represents a commitment to Quebec values, to freedom and liberty and the right to protest. The students are really making me proud (they’ve been out every night for a month, despite absurdly proscriptive new laws), and eventually I do believe the government – which has behaved like an intransigent ass in the person of Charet – will have to begin negotiating in a realistic way (so far they’ve handed down pompous and insulting proposals that are more provocative than serious).

The most important thing is that, as good a job as the student leaders have done until now, the unions are taking over the strike and launching legal challenges to the new laws and taking on the negotiations with their own, much more sophisticated representatives. That’ll teach ‘em to mess with les gens! The students know they are going to be disenfranchised by oil billionaires if they don’t preserve their place in society – there’s nothing evil about that. They call the students ‘terrorists’ ‘thugs’ ‘criminals’ – but they are themselves the criminals, trying to steal the future from citizens – and popular opinion is with the students. Don’t believe the trolls on every newspaper, or the fake polls; everyone knows this battle must be won.

The Crisis of the Red Square

The present crisis is the result of a long fermentation of a set of complex and multiple ideas. These are derived from the interconnection of the life-experiences of two generations – over a period of almost twenty years – with the death of the welfare state and the neoliberalization of the education industry.

The once almost "free" education that benefited students at all levels of university education during the 1970's has been reformed many times – most importantly in 1966, 2002 and most recently. University fees have continually raised the level of student debt, debt that now amounts to $25000 for a BA, $35000 for a Masters and $55000 for a PhD. Interest rates range between 4 % and 12 %.

The professional and working class population of Quebec – the largest portion of those who vote – is in majority composed of baby-boomers [sic], a generation of a sealed-off mentality and a paternalistic attitude, condescending towards those younger, and self-sufficient in its social and cultural undertakings. In general, the baby-boomers did not undertake post-graduate work and easily acquired jobs that became permanent and were filled with social advantages. They continue to occupy these positions today, positions that are abolished when they retire. This is
probably one of the reasons that this working generation is in conflict with present-day demonstrators.

Today's youth gains an education at extraordinarily high cost, all the while knowing that its chances of employment and for a career are continually lessening.

The last ten years have seen a progressive increase in the tension between on the one hand the various student groups and, on the other, the various governments, whatever the political position of the latter might have been. This winter, university and pre-graduate students were hit by – or rather had imposed on them – a substantial increase in fees, this without any consultation of warning.

"Enough" – this was the reply of the most important student associations. "We categorically refuse to accept this increase." It was considered to be a totalitarian decree, especially as the government imposed increase was of 75%.

In light of these governmental acts, acts we considered totalitarian, we engaged in discussions, consultations and meetings both inside and outside the universities. Motivated in particular by an urgent need to conserve and validate our fundamental rights and liberty, we were pushed to elect – not without consequence and not without compromise – to undertake a general and unlimited strike at all levels of post-secondary education and to engage in demonstrations and necessary means to make ourselves heard, respected, and allow us to set forth our intentions.

A certain part (let us say a little more than half) of the population does not support this strike; it questions the legitimacy of the refusal to accept the increase in university fees and blindly accepts the arguments fabricated by the State. Here there is the outline of an intergenerational conflict that lies outside the contours of the present crisis and in the fundamental values and beliefs of each group.

On the other hand, that 250000 students have gone on strike also arouses the admiration of many free-thinking citizens; powerful and varied expressions of support have caused the issue to spill over the boundaries of a purely educational issue. Indeed, unions of professors, of artists, of certain service unions as well as those groups that support freedom of thought, social justice and so forth, have transformed the educational crisis into a crisis of liberty, of justice, and of equity. The Red Square movement is now spread across innumerable sectors of society.

In these last weeks, all of these outsiders [sic] have collectively extended the strike movement, which on its 96th consecutive day had imposed on it a special law (Bill78) forbidding all manner of demonstration, requiring students and professors to return to class in order to begin catching up for the lost weeks of strike. It also foresees the imposition of severe fines.

This cavalier and totalitarian misstep deepens even more the pit that separates the thin hope for mediation between the two principle parties.

Yesterday evening I once again participated in one of the innumerable spontaneous demonstrations. One feels there the urgent necessity for change that goes beyond politics and education. One feels nauseous.

(note: Striking students identify themselves by wearing a red square)

**Call for Contributions: what does the Sociological Imagination mean today? (2012-06-09 08:00)**

It has been over 50 years since C. Wright Mills wrote the Sociological Imagination. In that time the world has changed beyond recognition: the Cold War ended, the Keynesian consensus broke down, a globalizing neoliberalism rose to the ascendancy and the internet began to transform human communication and culture. In recent years, with 9/11 and then the financial crisis, it seems that history has returned with a vengeance. Is Wright Mills’ notion of the ‘Sociological Imagination’ still pertinent today? How can Sociology help shed light on the rapidly transforming world around us and the consequences of these transformations for the people who inhabit it? What does the ‘Sociological Imagination’ mean today?

The [1]Sociological Imagination website is seeking short articles which engage with these themes, or particular aspects of them. Submissions should be 500 – 1500 words and [2]e-mailed as a Word document. There is no deadline for submissions.

The Financial Crisis: A Way Out for Irish Youth? (2012-06-11 08:00)

David Cairns, MYPLACE Project team member at Centro de Investigação e Estudos de Sociologia, Lisbon, Portugal and Work Package Leader on his recently published paper on youth in Ireland in the economic crisis.

This was originally posted on the [1]MYPLACE blog. Follow MYPLACE on Twitter [2]here. For more information on the MYPLACE project, visit the project’s website [3]here.

This article was based around a recently published paper by the author available [4]HERE.

One of the key contexts for the MYPLACE project is the importance of the financial crisis in young people’s lives. That youth face economic problems is evident in many of our partner countries, most obviously, Spain, Portugal and Greece, but what of the potential impact being made by the crisis upon the future direction of young people’s lives, particularly where there has been a dramatic collapse in the range of life chances?

Our recently completed study, now published on-line in Journal of Youth Studies, looked at the reactions of young people in two cities in the Republic of Ireland, Dublin and Cork, to the crisis. We asked a number of important
questions, including whether or not they were contemplating leaving the country. Youth migration is an important, and emotive, subject in Ireland, a phenomenon which was for decades associated with economic failure and cultural backwardness; hence, there is a political meaning to such movement, perhaps not present in other regional contexts. All this was thought to have changed in the 1990s, with the advent of the “Celtic Tiger” boom. This boom was founded not so much upon government policies, but rather the existence of an unusually large youth population, who were not only tertiary educated and English language-speaking but also relatively free of dependents; one reason for this, incidentally, was the removal of restrictions on purchasing contraceptives. For over a decade, GDP soared, as did salaries and the personal prosperity of some, if certainly not all. This ended in 2008, with the arrival of the financial crisis in the wake of the collapse of Lehmann Brothers bank. The Irish property bubble burst, and the local banks who had lent recklessly were left to pay the enormous bill, or rather the Irish population were left to pay the banks’ enormous bill, which was passed onto them courtesy of the Irish government. When it realised that this wasn’t going to be enough, this government then called in the International Monetary Fund, and the rest you probably know already.

So what of youth during this economic crisis period: do they intend to stay or leave? The general assumption, certainly in the Irish media, has been that a new wave of youth migration is imminent. Many local politicians were also no doubt wishing that all those without jobs would simply fly off to places where they would no longer be a burden on the tax payer. This of course, has not happened. While there has been some increase in outward migration, most of this movement can be attributed to return migrants, particularly those going back to Poland and other Central and Eastern European countries. The youth population has for the most part remained in Ireland. Our research, with a sample of 200 tertiary educated young people, confirms this finding, also illustrating that while the financial crisis may be generating an understandable desire to leave, this is not translated into large numbers of exiting young people. There are many reasons why Irish youth don’t, or don’t feel able, to leave, ranging from a dependence upon the resources embedded in their family relationships and friendship ties, i.e. social capital, to a perception that the situations facing them abroad would be no better to what they would encounter at home. Others lack internationally transferrable skills or are limited by their lack of fluency in foreign languages.

There are nevertheless a few isolated cases emerging from our research, which show that some young people are on the verge of moving abroad, mostly to Great Britain, but occasionally to more distant places like Canada, the US and Australia. And as other researchers in the field of youth mobility have shown, it tends to be the best and brightest young people who leave, particularly those from relatively well-off family backgrounds. The family is in fact the most important factor in explaining why young people choose to leave or stay, with friends often proving instrumental.

While Ireland may not be witnessing a mass youth exodus, it still faces the prospect of losing many young people with valuable skills and marketable qualifications. This may not be as politically embarrassing as watching an entire generation of young people fly away across the Atlantic Ocean or drift across the Irish sea, but there is still a sense of young people having been let down by an older generation, who were more concerned with the prices of their properties than the future of their children. What the future hold for those left behind remains to be seen, but the results on the imminent referendum on the Treaty on Stability, Coordination and Governance in the Economic and Monetary Unions should be interesting.

C. Wright Mills at work (2012-06-12 08:00)
Dear colleagues, fellow students and friends,

I don’t know if you are aware of the looming redundancies in the University of Salford, and the process for weeding out staff. People in most schools and departments (including sociology and politics) are having to reapply for their jobs (Professors are not included in this procedure, but in a different one whereby they are asked, among other things, to take a cut in salary).

It seems only few people know about the redundancy plan going on, or rather about the current phase, since there have already been previous waves of sackings in the last months and years, and a new phase is announced for next year. The Union has organised a petition calling on management to reconsider. The petition is quite weak and does not explain the process, which is very appalling, but still you might want to sign it (https://www.ucu.org.uk/nosalfordcuts), or perhaps take a more robust kind of action, e.g. through the national
associations.

About the process: people are forced to re-apply to their jobs in competition with one another (and in some cases in competition with external candidates). In sociology and politics, for example, the reapplication process consists of

· a written submission providing evidence that what people do meets a post specification recently developed by the university (15 % - deadline 31 May, when people are at the peak of marking!)

· an oral presentation on ‘strategy’ prepared during one hour and presented in ten minutes (35 %). All we know about this is: “The reference to ‘strategy’ in the context of the academic presentation has to do with the approach adopted by the School and/or its directorates in view of achieving success as an academic and financial unit”

· and a ‘competency based interview’ (50 %). About this we have been told: &lt; &gt;

NO COMMENT!

Presentation and interview will take place, it seems, around middle June. The members of the tribunal-panel are also unknown.

This will create a precedent – the managers who have taken over the university can do all this with total impunity, as this process is not a typical redundancy procedure (which for them is clearly not good enough), so through this procedure they need not agree almost anything with the unions and can make sure they scare people to death and definitely commodify and managerialised education.

It is obviously a total disgrace. Please circulate this information as widely as you can.

No nation now, but the imagination (2012-06-13 08:00)

Celebrating the 50th anniversary of C. Wright Mills’ death, [1]Sociological Imagination pays a respectful and moving tribute to the man who gave this forum its name through the legacy of his classic 1959 book, The Sociological Imagination, a veritable manifesto for the moral canon of radical sociology in America during the roaring 1960s and 1970s. Considering ‘the life, legacy and ideas of this unique man and what they mean for Sociology in an age of austerity’, my modest contribution to this homage to C.W.Mills is not merely a love-letter to an inspirational role model but an excuse to tease the contents of the book in order to shake up a few virtues and vices of the sociological discipline today as I witness them daily in the process of performing a biopsy on (public) sociology through the writing of my PhD. The inspiration that established the ferment for this article originates in [2]Aditya Chakrabortty’s search for ‘fresh voices’ in political science and sociology and my personal suspicion that Mills’ Sociological Imagination stands as graceful interlocutor in (any) debate on what sociology is about, what it is for, what does it do and what it may mean, especially in times of austerity; a theme that was in fact addressed in the [3]2012 BSA conference hosted by the University Leeds last April. Instead of reviewing the outburst of controversy that Chakrabortty’s [4]Guardian article sparked however, the focus here is on the discussion it opens up and the lessons that Mills’ grand oeuvre might have to offer, not didactically but experientially.
As a rhetorical preamble to my argument, I submit that A. Chakrabortty’s inflammatory remarks about sociology and political science are true or false, justified or unfair, timely or irrelevant depending on what we think sociology is for, about and what it might mean for us and others. I therefore take the liberty to offer some thoughts off the top of my head and from the bottom of my heart about how I think sociological imagination fits into the questions raised above, guided by a personal, perhaps idiosyncratic, possibly eccentric but certainly passionate reading of Mills’ book.

My personal exposure to The Sociological Imagination coincides with my sociological adolescence, skimming the book distractedly during a train journey, never expecting that I would stumble upon a powerful vision for sociology that had more to do with the alchemy of the vocation rather than the text-book science of sociology. To make matters worse, reading Mills presented me with an opportunity to treat sociology as a comment about the very process of doing sociology as well as inspiring an understanding of the discipline as a creative, imaginary pursuit, and not a dry, computational model of research. Sociology immediately appeared as an intellectual endeavour that could do things not through its science but through its imagination urging sociologists to be ‘intellectual craftsmen’, not ‘cheerful robots’ to pick two popular quotes from the book.

**But what is sociology for?**

Mills’ book provides no direct answer to this question, but it does inspire a way of answering it if one is to embrace the intellectual craftmanship of playful experimentation with ideas rather than succumbing to the incipient robotism of absolute facts and iron certainties. Following that playful route, we may suggest that sociology is the intellectual enterprise which mobilises sociological imagination as the fuel for understanding what society is. Sociological imagination then becomes exactly what Mills’ dreamed it would be; a community medium of exchange, wedding ‘private troubles’ with ‘social issues’. For the purposes of this article then sociology and sociological imagination become Siamese twins, inseparable from each other like Aristophanes’ androgynous in Plato’s Symposium. If sociology then is sociological imagination's better-half, what does their marriage look like? Paraphrasing Henri Bergson’s famous quotation in Pierre Hadot’s (2009) exposé on philosophy, sociology becomes not the construction of a system of knowledge but ‘the resolution made once to look naively at the world’. Sociology then, like philosophy becomes a tool for imaginative day-dreaming of ‘the possibility of living together differently, with less misery or no misery’ and ‘developing an art of living permanently with uncertainty’ as Bauman (2000) hopes for both ‘writing sociology’ and dealing with [5]’the trouble of being human these days’. Sociology, dressed in its most imaginative clothes ceases to be a discipline, or a science but gradually also becomes what it imagines itself to be; a space, a culture, an attitude, a lifestyle, a stage, a ritual, an institution, a movement, a profession, a brand name, a community, a tool for articulation of human concerns.

**But what is sociology about?**

Sociology-as-sociological-imagination is about satisfying the curious impulse to ask questions similar to the one’s torrentially posed by Sam Selvon’s flâneurian narrator in the short story My Girl and the City; ‘What is all this, what is the meaning of all these things that happen to people, the movement from one place to another, lighting a cigarette, slipping a coin into a slot and pulling a drawer for chocolate, buying a return ticket, waiting for a bus, working the crossword puzzle in the Evening Standard’. What seems to be a literary departure from sociological matters however, couldn’t fit better Mills’ very own contention that ‘whatever sociology may be, it is the result of constantly asking the question, what is the meaning of this?’ Vague though this may sound, Mills insists that ‘Sociologists of my sort would like to study what people want and what people cherish’ and viewed this way sociology becomes the private detective and the architect of our social life; that very shaky edifice we build out of scraps, dogmas, childhood inquiries, chance remarks and anything our imagination might compel us to add to this perfunctory list.
So what does sociology do?

Sociology does what we ask it to do with the sociologist faced with the dilemma that Mills poses between acting as ‘philosopher king’ or ‘advisor to the prince’. With sociological imagination as its code, its software and its politics, sociology not only defamiliarises the familiar, excites the routine, unsettles the prejudicial, shows what we live by, what we want, what the passage of time has showed we wanted, if we want now what we wanted then but also aspires to become what C.L.R. James (1963) called ‘the welfare state of the mind’; acting as society’s very ambassador, its spokesperson, its legislator and interpreter, to borrow from Zygmunt Bauman’s (1989) homonymous book. Sociologists such as Michael Burawoy (2005) have gone as far as to consider sociology the very defender of civil society so would it be too risky to toy with a view of sociology as the author of society’s imaginary constitution? Merging Mills’ ideas to Cornelius Castoriadis’ (1998) The Imaginary Institution of Society, would it go too far to suggest that if we are the society drafting its very constitution, dreaming up its institutions, deciding upon its future through our established rites, reflexes and norms, sociology might be our vehicle for doing so? Would it be too much to argue that sociology becomes society’s user manual, our guide to the labyrinth of human affairs?

And what does sociology mean?

Sociology means what we want it to mean, it can mean an imaginary craft or a research technique, it can inspire and contribute to the world through the flowering of its imagination, or it can raise funds, it can defend higher education from the salivating jaws of unbridled corporatism or it can facilitate it, it can teach experientially and interpret critically, or it can conform, it can look at holistic massage through a Foucauldian lens or it cannot overlook sociological imagination as a way of looking at things through one’s own lens, it can support austerity or it can promote prosperity not of any nation now, but the imagination.

"...promote prosperity not of any nation now, but the imagination": that’s great, thanks, Lambros! Do you perhaps allude with this to any citation?

Lambros Fatsis (2013-04-22 13:57:00)
Hi Harald, Many thanks for your comment as well as for the query! The quote is from part 3 of St Lucian poet Derek Walcott’s ‘The Schooner Flight’...hope that helps! best, l.

Vernon Goddard (2012-10-12 11:32:52)
Hi There & thanks for your thoughts on Mills. I’m just embarking on studies at the Lincoln Social Science centre which is a radical set-up introducing students to a variety of “imaginations”. We’re just tackling Mills & it’s proving quite difficult to get to the essence of his work.....so your article has been quite useful. Regards Vernon Goddard

Sociological Imagination (2012-10-12 12:30:24)
Hi Vernon, Glad you liked the article. You might find these materials about Mills interesting: http://bundlr.com/b/c-wright-mills
Hope things are going well at the SSC. It’s a fantastic project. Cheers, Mark

Hi Vernon, I just came across your comment, months after you first posted it but thought I’d send you a comment to express my gratitude for reading the piece as well as expressing my joy for its usefulness as an in(tro)duction to C.W.Mills, a constant inspiration for sociologists of the kind I (and I presume you also) like... You might also find our new series interesting too? I
certainly hope so anyway! Stay in touch and many thanks again for your graceful comments! I.

John Holmwood on Markets, Expertise and the Public University, 28 June at the OU (2012-06-15 14:00)
Markets, Expertise and the Public University: A crisis in knowledge for democracy?

Wednesday 28 June 2012, 14.00-17.00

Open University, Milton Keynes, Library Seminar Rooms, 1 &2
The Creating Publics project was launched in March 2012 with the aim of innovating new ways of engaging publics in the on-going processes of social science research and public life. For the 3rd Creating Publics keynote lecture we are delighted to welcome Professor John Holmwood (University of Nottingham).

Programme:

14:00 Welcome and introduction: Prof. Jef Huysmans & Dr. Nick Mahony (CCIG)

14:10 Keynote lecture: Prof. John Holmwood (University of Nottingham)

15:00 Response by Prof. John Clarke and Dr. Vron Ware (CCIG)

15:30 Q & A and collective discussion

The event will be followed by a drinks reception.

In the spirit of public experimentation that this project promotes, the event will be webcast live and accessible [1]here.

Those viewing online will be able to post questions and comments, which will be relayed live to the event.

To register, to attend in person please email [2]socsci-ccig-events@open.ac.uk

For further information on the event and an outline of Prof. Holmwood’s lecture, please go to [3]our website.

The Conspiracy Conspiracy? (2012-06-18 08:00)
Away from the gaze of mainstream media and politics, there is a vibrant subculture which holds these very institutions responsible for the most heinous acts of brutality and deceit. It is political movement that, in size, likely dwarfs anything that might traditionally be labelled 'radical'. The numbers in its ranks are impossible to know, but the youtube videos through which it channels its messages receive hits in the millions, as do the multitude of websites around which it is organised. The level of popular acceptance of some of its key tenets are known however, and they are striking. An Ohio University poll in 2006 found that a third of American's believed the events of 9/11 were in some way abetted by the federal government, about the same percentage of American's that voted Bush in for his second term two years earlier. Amongst young adults polled, those believing the official account of what happened on 11th September 2001 were actually in the minority. The 'Truther' movement, as they call themselves, is an elephant in the halls of power; a mainstream radical movement.

For those who are used to occupying the fringes of political thought, these are astonishing figures. Truthers do not limit themselves solely to the events of one day in September either; under the New World Order (NWO) mantle they have assembled a dense scaffold of conspiracies encompassing all the major events of modern history, the current economic troubles included. The mainstream media's unwillingness to report this phenomenon is perhaps understandable. Their discomfort in dealing with Truther groups should be no surprise, for Truthers hold dear assumptions that deny the media establishment its legitimacy. The reliance of the media on 'official' sources of information – politicians; security services; lobbyists; PR spokespersons – all are, by definition, rendered suspect by conspiracists. The media organisations themselves are too a part of this self-serving elite whose interest is not in justice or truth, but merely the promotion of the status quo.

In this, the Truther movement has much in common with other radical political movements, yet the radical should be careful of celebrating the success of it. Whenever one stops to consider the apparently concrete walls between the concepts by which we order society, one quickly finds the immutable to be nothing more solid than sand. Such is the case when separating the different systems thorough which we create, and act upon, knowledge. A religious church can quickly become a political movement; a political idea rapidly transformed into a scientific fact. Watching celebrity atheist Richard Dawkins, haranguing a Christian with fevered conviction as only a man witness to the One Truth can, one quickly beings to question who amongst the participants is the man of reason, and who the religious fanatic.

The appearance of the Truther cause as a political movement is similarly fluid. At the heart of all Truther accounts is, it seems, an overarching, invisible, omnipotent elite, engineering building collapses as easily as they engineer global economic collapse (of which they are also accused). These superhuman individuals appear to be gods in all but name. Truthers readily engage in scientific analyses of the events of 9/11, yet such is the power and reach of the controlling elites, that any evidence contradictory to the Truther can be dismissed as lies, its proponents mere pawns of the powerful. In light of these characteristics, the Truther movements appears more as a secular, scientific religion.

We live in a time when mainstream political ideology encompasses nothing more inspirational than 'triangulation' and the race for the middle ground. Radical politics, meanwhile, is hamstrung by the complexities demanded by the numerous challenges it finds itself in opposition against. This at least in part explains the refusal of the Occupy movement to elect spokespeople. The Truther movement is different however. The young, angry and inquisitive are easily drawn to revolutionary political movements, but here there is no abstract, nebulous 'system' tackle; no ghost to try and hurl one's self against. Here, the bad guys are easily identifiable, for the secrecy in which they operate is paradoxically no barrier to their unmasking, whether it be the Bilderberg Group, Illuminati, Elders of Zion, or any of the other shadowy actors leading the march of the NWO. For such individuals, the Truther movement
offers the authority of science and the certainty of religion to create a compelling ideology, and so its success in
drawing activists away from more traditional radical movements is unsurprising. It has no need for the difficult
questions of what should come instead of the status quo, for it only exists in opposition to what is. To offer answers
to such questions would seem impossible, for the political and economic landscape which the traditional radical
seeks to challenge is here rendered nothing more than a puppet show, a shadow on the cave wall. The true power is
unseen. Furthermore, and of particular worry to the radical, in its invocation of adversaries of supernatural ability,
it serves only to entrench the established order. How does an individual even begin to challenge a group capable of
orchestrating what these elites are accused of, a group which exists outside the reality of mainstream culture, and
so beyond its reach?

Truther accounts of 9/11 feed on any perceived coincidence, mistake or unknown. Why was the US airforce running
war games on the day of the attacks which confused efforts to respond to the hijacks? Why did the towers fall as they
did, and when no skyscrapers have previously collapsed due to fire? Why was so little debris visible at the Pentagon
-crash site? The key assumption underpinning these questions, as one might expect from a religious account, is that
-complete knowledge of an event is possible, and that everything happens for a reason. There is little sign here of
postmodernism; of Heisenberg’s Uncertainty Principle, or of Chaos Theory’s irreducible complexity. Instead we have
only the ordered execution of labyrinthine plans. That many Truther explanations are in themselves more incredible
than any official version seems to go unremarked. Is an account in which the towers were secretly wired with
-explosives really more plausible than the version which holds the impact of jumbo jets laden with fuel responsible
for the collapses?

The actual specifics of Truther claims of 9/11 are more multifarious than is possible to detail here. I myself cannot
claim it impossible that elements of the US security services had foreknowledge of the attacks, and chose to let them
happen to further their ideologies, or – more likely – mistakes were made that have since been covered up. This
is, however, a world away from the idea of a fully orchestrated 'inside job', and the superhuman elite required to
achieve such a feat. Regardless, I am more of the opinion stated by Chomsky: that in a sense it doesn’t really matter
if 9/11 was an inside job. The conspiracy claims will never be satisfactorily answered, and merely distract from what
we do know, which is that the Neo-Conservatives exploited the attacks to pursue their policies with lethal conviction
for seven disastrous years, whilst a supine media did little more than flag-wave from the sidelines. Besides, as Adam
Curtis’ Power of Nightmares shows so well, ultimately there is little more to separate Neo-Con statesman from
Al-Qaeda operative than conventions of dress, and more comfortable living arrangements.

There is, however, one particular element of the 9/11 attacks that does stand out from all the smoke and debris of
that day. Over a decade on from the attacks, we still await the release, by the US government, of footage showing
the plane hitting the Pentagon. Given that this is one of the most secure facilities on Earth, one would imagine
that such footage must exist. The 2006 decision to show the comically ambiguous two frames of footage from a
nearby carpark security camera, which may or may not show the nose of Flight 77, only adds to the confusion. It
may be that this is evidence, as Truthers state, that it was in fact a missile, not a plane, that struck the Pentagon.
More likely, the US security establishment is unsold on the idea of showing the world its most potent symbol being
struck a fearsome blow by a group of Muslim fanatics armed with Stanley Knives. If so though, why release even the
peek-a-boo footage?

There is a third explanation for the non-appearance of these tapes, which brings us conveniently full circle. That some
clear sighted individuals in the halls of power recognise that the Truther movement is a dead end, a useful sideshow
with which to distract those most sure to be its critics. Truthers are of course no homogeneous entity – there is no
single Truther account, and there is no archetypical adherent. The Ohio University poll found though that “Members
of racial and ethnic minorities, people with only a high school education and Democrats were especially likely to
suspect federal involvement in 9/11.” One more easily associates these groups with radical than Republican politics,
so why not allow the disaffected to disenfranchise themselves? Hand them the means to convince themselves of the unerring control with which you orchestrate events, whilst you in truth ham-fistedly bumble from one crisis to the next.

We have then a conspiracist conspiracy, designed to both depoliticise potential radicals, and leave them so far outside the mainstream that they are considered untouchable. Indeed following the Iraq War we have already seen a similar process take place in the UK with Muslims, where for years the political and media establishments have sought to blur the boundary between radical politics and terrorism, the [2]'Nottingham Two' being just one example. A similar story can be told of environmental activists, and the surveillance of their democratic activities by police [3]FIT units.

Unlike other theories, the conspiracist conspiracy does not require a God-like marshalling of events by the state security apparatus, only a breathtaking level of cynicism.

It’s still pretty farfetched, but hey, it’s more plausible than the missile theory.

Who will recognize Humanity 2.0 and will it recognize us? (2012-06-19 08:00)

If 'Humanity 1.0' is the proverbial 'normal human being' that our laws have been traditionally designed to empower and protect, then who is 'Humanity 2.0'? For the most part, the prospects for 'Humanity 2.0' largely replay in a new key what I call in my new book the 'bipolar disorder' that has always accompanied the human condition: Are we 'glorified animals' who should become more embedded in nature or 'minor deities' with the potential to achieve full godlike powers? Until the modern period, theology was the natural home for this discussion. But nowadays it is increasingly the subject of public debate. On the one hand are those – often called 'posthumanists' – who believe that anthropocentrism is a dangerous conceit. They typically adopt a Darwinian view that we are just one amongst many species who cohabit the planet and who eventually will become extinct and replaced by something perhaps quite unrecognisable. On the other hand are those – often called 'transhumanists' – who believe in humanity's unique ability (if not obligation) to take control of evolution and steer it in directions that project our most desirable features (usually our minds) into perpetuity, even if it means abandoning our biological bodies. While both views may seem wildly futuristic, in fact people are already beginning to live lives that assume one or the other future will come about.

Just not that into you (2012-06-20 08:00)

New Faculty Majority Board Member Jack Longmate, writing in the NFM blog this week, thinks that there are fresh signs of "[1]potential for traction in public policy thinking" in relation to the conditions faced by academics working off the career track in America’s higher education system.

His optimism has been sparked by Robert Reich, Professor of Public Policy at UC Berkeley, who’s been speaking out against [2]“casino capitalism”. Reich was Secretary of Labor in the Clinton Administration, and he writes on the multiple conflicts of interest between public policy and the freewheeling trade of paper assets for short-term gain. Specifically, he’s suggesting at the moment that there’s something wrong with a vision of economic recovery that doesn’t include some means of [3]valuing and protecting fair distribution.

For graduate students and others who are trapped in the adjunct/tenured/casualised/precarious/what-have-you economy, the prospect of impact on public policy is a far horizon. The fairness or otherwise of the deal on offer is much more directly affected by swamp level policy, made by those who manage the divisional budget out of which their wages are paid. This is where it can look as though Jack Longmate is right when he says that the calculation of risk to the employer goes like this:

... if we can sucker people into taking a bunch of part-time, temporary jobs, with lousy pay, working conditions, no offices or professional development (because let’s say we don’t consider them professionals) and spotty benefits on a permanent basis, let’s go for it

Ouch. If you’re an administrator who sets the terms for pay and conditions for the casually hired, please don’t write in. Sadly for everyone, it doesn’t matter how nice you are, or how hard this is for you. None of these actual thoughts need to have been said out loud in an actual policy-setting meeting, for it to feel this way to someone on the sharp end of a decision to cut hours or courses, or redefine tasks, in a way that leaves them doing more for less. In a really tight budget, your needs and theirs seem pretty irreconcilable.

But it’s not all about the money. The part that I think will resonate with Australian casual academics relates to the times that hiring practices and working conditions send the strongest possible signal that universities “don’t consider them professionals”.

This might not be a public policy matter just yet, but is it good institutional policy? Institutions that are comfortable outsourcing core customer relations work to casual workers have made a three-part risk assessment: firstly, how low can service costs go before they flow through to customer satisfaction? secondly, how much additional management work can the minority permanent staff pick up without negative impact on other business? and thirdly, how reliable is the locally available supply of suitably qualified replacement workers, if morale drops below a level that the current workforce will tolerate?

The risk for Australian universities is that their casual academics are among the most skilled and educated in the workforce. Unlike university students, who really are stuck with low-paying casual work because they aren’t yet qualified to escape, casual academics are at minimum degree-qualified. They’re experienced, informed, adaptable and
exceptionally professional; they're communicators, researchers, writers and project-managers; they have excellent teamwork skills; they're used to working without supervision; they can handle difficult people and challenging situations, and they're legislation compliant; they can lead and they can support; they deliver on task, on time, every time; and they're really smart. Oh, and they're also experts in their fields, some right up to the level of being PhD-qualified.

But they don't leave. Why is this?

I've been thinking about this since I got caught up briefly this week in a brisk and difficult exchange of views between Amanda Krauss ("[4]Worst Professor Ever") and Karen Kelsky ("[5]The Professor is In"), over whether or not the current adjunct culture in the US is a "martyr culture", or whether adjuncts are genuinely "oppressed". Both are recovering academics who've gone on to start different businesses on the basis of their experience and expertise, and both offer the advice that "it's OK to quit". Both are active in commenting on the state of higher education in the US.

The exchange also pulled in [6]Cedar Reiner, [7]Lee Skallerup, [8]Melonie Fullick and [9]Vanessa Vaile of the [10]New Faculty Majority. I'm sure Jonathan Rees was in there at one point. The gist is this: despite the fact that many academics with tenure are lobbying hard to improve the working conditions of their untenured colleagues, some are also wondering how to ask: what if it would be better for you to walk away?

The answers are consistent, and sad. Here's my observation from conversations with casually hired colleagues in Australia. They're accepting long-term but perversely insecure work on the off-career track for a mix of three reasons: they're asked to stay, and this feels good (especially at times when PhD progress doesn't); they're calculating that their commitment will somehow pay out in the end; and they feel that there's nowhere else to go in the local job market (this is especially tough for casual academics supporting families and dependent children).

Does their situation amount to exploitation, abuse of trust, or codependency? Amanda Krauss' tough love position is that "people with choice need to stop feeding themselves into an exploitative system"; Cedar Reiner takes a different view: "how do we choose not to do what we love?" I'm not sure what I think, but I do know that every time I've found myself justifying something in terms like these, the situation I've been in hasn't really been all that healthy for me.

But how do you judge, in the middle of the push-pull self-esteem mess you find yourself in, whether or not things might really be about to get better? Here's a test casuals might like to apply. Does the institution asking you to come back have a strategic planning document in which it sets out its institutional aspirations for doing things well and enhancing its reputation, and does this include a clear plan for the development and career management of its academic and professional staff? That's not the question, though. This is: does this same strategic planning document, which will have gone through multiple working groups and committees and consultation processes and been signed off at a high level, also explain how it intends to support, develop and respect your professionalism as a seasonally hired academic worker?

If it doesn't, then you can make your decision to stay, go, or try to achieve a better deal on an informed basis, because now you know one thing (and so do your tenured allies): at the highest level, where resourcing decisions are aligned to the institutional strategic plan, they're just not that into you.

That's the part that it will help us all to change.

Sociology is a Martial Art (2012-06-23 08:00)

SOCIOTHERY IS A MARTIAL ART, a new documentary about Bourdieu's life, became an unexpected hit in France just prior to his death. Filmed over three years, director Pierre Carles' camera follows Bourdieu as he lectures, attends political rallies, travels, meets with his students, staff, and research team in Paris, and includes Bourdieu having a conversation with Günter Grass.

Watch the rest of the documentary and read more about it [1]here.

Call for Contributions: what does the Sociological Imagination mean today? (2012-06-24 08:00)

It has been over 50 years since C. Wright Mills wrote the Sociological Imagination. In that time the world has changed beyond recognition: the Cold War ended, the Keynesian consensus broke down, a globalizing neoliberalism rose to the ascendancy and the internet began to transform human communication and culture. In recent years, with 9/11 and then the financial crisis, it seems that history has returned with a vengeance. Is Wright Mills’ notion of the ‘Sociological Imagination’ still pertinent today? How can Sociology help shed light on the rapidly transforming world around us and the consequences of these transformations for the people who inhabit it? What does the ‘Sociological Imagination’ mean today?

The [1]Sociological Imagination website is seeking short articles which engage with these themes, or particular aspects of them. Submissions should be 500 – 1500 words and [2]e-mailed as a Word document. There is no deadline for submissions.

Warnings: statistical inaccuracies in Microsoft Excel 2007 (2012-06-25 08:00)

Thanks to mathematician-friends and social networking sites, today I encountered this 2008 article by McCullough and Heiser on the statistical inaccuracies of Microsoft’s package Excel. What is so striking about the article is not merely the angry tone in which it is written - something rather unusual for academic publications, but the fact that the authors’ anger is entirely justified. As they write,

Excel's statistical distributions have always been inadequate. Over the years, Microsoft has fixed some distributions, fixed others incorrectly, and failed to fix others.

And more:

Microsoft occasionally fixes errors, more often ignores them, and sometimes fixes them incorrectly. Consequently, every time there is a new version of Excel, the tests must be repeated. Indeed, every time a new version of Excel is released, we receive emails asking, "Is it safe to use Excel?" There appears to be a sentiment that if only Excel would pass the intermediate tests, then it would be safe to use. Nothing could be farther from the truth. Microsoft has not even fixed all the flaws identified by Sawitzki (1994) over 15 years ago (his paper took a couple years to be published).

There are scores of statistical functions in Excel, and we have benchmarked only a fraction of them. In the fraction that we have examined, we have found enough unfixed/incorrectly-fixed errors to cast grave doubt on the above-mentioned sentiment. To wit, we write this paper in part to warn members of the statistical community that even should there come a day when Microsoft can fix enough of the errors in Excel that Excel can pass these intermediate-level tests, it will not necessarily be safe to use.

And even more:

What is particularly pernicious, at least so far as consumers of statistics are concerned, is that Microsoft seems to take the approach that specialized domain knowledge is not necessary to the production of statistical code, i.e., that the entire field of statistical computing has no merit.

The article is available [1]here. Please, read it, even (or especially) if you, like many sociologists, rely on software packages for your work - or ignore it and use Excel for statistical analyses at your peril...
P.S. the authors do not recommend other packages explicitly.

Happy international seafarers’ day! (2012-06-25 18:41)

Today the world celebrates the incredibly important, yet often overlooked, contribution of seafarers to our daily lives. This address by the president of the International Maritime Organisation (IMO) reminds us that our modern lives without seafarers’ labour would be unthinkable - and also that there is a worldwide shortage of seafarers.

Thank you, former, current, and future seafarers!

I read [2] this book as a treat after two week's marking. At this point I should stop because the state of higher education in Ireland so presciently described by Deirdre McArdle-Clinton and published in 2008 has become the new order in England today, one consequence being a rigid policing of largely imaginary 'standards'. In the competitive isolation with which English HEIs are meeting the market in tripled fees, no one must therefore bring their institution into disrepute by admitting – or exposing, as this book does – that things are not as they appear to be. So, let me quickly clarify that in agreeing with her diagnosis of the consequences of what DM-C calls Capsule Education, I am not attributing anything she says to my own institution because her diagnosis applies to all HEIs and, indeed, and perhaps even more presciently, to schools and colleges also.

Just yesterday, for instance, I met a Cambridge University tutor who told me she instructs her tutees in the correct use of apostrophes. Perhaps it does not matter that undergraduate essays are randomly sprinkled with apostrophes and that, as every marker sees, students rarely spell, punctuate or paragraph properly and often have only a shaky grasp of grammar. For McArdle-Clinton, these are symptoms that result from not reading, or, rather, from reading only 'bits' from the internet cut and pasted together with inevitable plagiarism. Despite the widely recognized need for a foundation year to sort this all out, especially in subjects necessitating the understanding and application of mathematics, leave alone to induct students into an academic culture that has not (yet) completely abandoned its struggle to survive, and to give students – and often staff – time to read, the delusions of Vice-Chancellors, exam boards and recent governments in ever rising standards are sustained. Critics are derided by e-enthusiasts as grumpy, old and soon-to-be-retired under-raters of all the 'experiences' students/customers are consuming on-line; or denounced as elitists seeking to revert to minority HE. Meanwhile, students remove themselves from any meaningful involvement in an education become increasingly instrumental: 'Let's pretend like I give a shit!' as a student T-shirt proclaims. Staff participate in the charade and at worst share the illusions in the simulacrum of quality they maintain, pandering to parents 'less concerned with what their children learn than with the certificate and what they will earn' (p.48).

Deirdre McArdle-Clinton punctures this pretense. Hers is a general cultural critique, sparked by the observation of pre-packaged potatoes in a supermarket 'presented for sale in capsule form'. Like medicine 'absorbed without the distress or effort of chewing or tasting' (p.2), learning is sugar-coated and drip-fed fed to customers/students through notes instead of books. ‘This realization was the beginning a journey from potatoes to postmodernism.’ (p.1) While blaming neo-relativist twaddle for this descent into the ubiquitous irony of the new postmodern orthodoxy, what McArdle-Clinton describes is an outcome of commodification for which she offers no historical account but which in England is about to take a great leap forward with Students at the heart of the system. Nor does she provide evidence for it beyond unspecified surveys of staff and students, undertaken for this revamped PhD and anonymised for probably the same precautionary reasons indicated above. This does not matter!! The book will provoke the same strong reactions as in this reviewer so that, before it is too late and new and younger dispensers of capsule education, graduate through a system they accept as normal, or with which they have no opportunity but to comply in desperate economic times, those who can still understand will endorse the recommendation with which the book closes by calling for a national commission on Irish higher education.

Given all the other problems facing Ireland, this is unlikely to happen; or make much difference if it did. However, there are similar calls in England for an independent inquiry into – hopefully – the whole of education from postgraduate to primary schools. Perhaps especially in the latter, synthetic phonics exemplifies ‘capsule education’ and will have the same predictably disastrous consequence of constricting the ability to make meaning by making
connections, imposing instead a tyranny of transparency that explains to students/customers/consumers exactly what they have to do so as to turn their outcomes into quantifiable and thereby comparable commodities for audit and sale. This behavioral training effectively dumbs down learning to reduce rather than raise the standards it claims to save. Teachers and students can use the critique this book presents against the current knee-jerk reaction to traditional rote-crammed academicism.

Forthcoming in Higher Education Review

Patrick Ainley is Professor of Training and Education at the University of Greenwich.

The Permeation of Technology in Everyday Life (2012-06-27 08:00)

Sorry
This video does not exist.

Sarah Kember’s research covers many aspects of the relation between technology and life, from the centrality of new media in everyday life to scientific projects such as Artificial Life which redefines life as information and seeks to both simulate life-as-we-know-it and synthesise life-as-it-could-be. Sarah’s approach to developments in science, technology and new media is critical, curious and often playful. Her talk will reject dominant ideas that technology has specific effects on our lives (such as shortening our attention spans, alienating us from other humans, turning children and adults into facebook addicts). Instead, it will explore the extent to which technology was always already vital, or life-like and the extent to which life has become a technical process. This dynamic connection between life and technology has marked implications for our modes of critique and requires, the talk will suggest, an intuitive philosophy and a creative theoretical approach.

“We all know bankers are greedy bastards!” Ideological dimensions to the financial crisis (2012-06-28 08:00)

Think back to 2007. Did you believe the end of neoliberalism was nigh? I must admit I did. It seems rather naive in retrospect. Yet fast forward five years and consider the political terrain: we have witnessed a massive consolidation within the financial sector and an unprecedented attack on the welfare state across Europe. As if by magic, a crisis of the financial system has been reframed as a crisis of sovereign debt, with ‘austerity’ (in essence the [1]structural adjustment programmes that the organs of international capitalism have long imposedelsewhere) being pursued with breathtaking alacrity, accompanied by the continual refrain that there is no alternative.

So what happened? This question is one which will undoubtedly preoccupy large swathes of the academy for decades. However I do want to offer a quick observation about theideological dimensions to a set of processes which are reshaping global society to an extent which I suspect is still not entirely understood. This concerns what the financial crisis established for the population as a whole. What did we learn from it? Oddly, I think the answer is very little. How were ‘bankers’, as the pantomime characters to whom financial capital is reduce, perceived prior to the crisis? As greedy bastards. How were ‘bankers’, as the pantomime characters to whom financial capital is reduce, perceived after the crisis? As greedy bastards. I’m generalising wildly here before anyone feels the need to point it out. Likewise, if you know of any longitudinal polling data about attitudes towards bankers, I’d love to see it. Without doubt, there are significant numbers of people who either approve of bankers or regard them as a necessary evil.

1234
My point is simply that the discursive construction of 'the bankers' (rather than more or less well-informed propositional claims about the actual characteristics of specific people working in a specific industry) really hasn't changed as much as one might expect. Although of course the social significance of the negative characteristics imputed to bankers has increased: after all THEY broke THE ECONOMY because of THEIR GREED. But the general perception of the financial system has changed much less than would seem likely given that, well, it almost collapsed. In a sense, the financial crisis represented an affirmation of what we all already knew.

The moral failings of the financial elite were widely recognised prior to the crisis and no one did anything because we couldn't and/or because we benefitted from its continuation. But a lack of illusion about the nature of the people in charge, with the accompanying cynicism about their motives, facilitated a widespread disjuncture best represented by the weird position of the traditional Labour supporter during the Blair years: subjectively critical but objectively complicit in the reproduction of the social structures which were the object of their criticism. The apparent absence of ideological illusion about the nature of finance capitalism itself, as well as the political pragmatism and turn away from 'idealism' which naturally accompanies it, functioned as a form of ideological control. As Žižek puts it, "a cynical non-identification with the ruling ideology’s explicit content is a positive condition of its functioning: the ideological apparatuses 'run smoothly' precisely when subjects experience their innermost desire as 'oppositional', as 'transgressive'". We all knew that bankers are greedy bastards before the financial crisis. Then after the crisis this shared recognition becomes an object of public debate. Bankers are 'bashed'. Then everything 'returns to normal'?

Some quick thoughts about sociological realism and digital life (2012-06-29 08:00)

What do we do online? This is an issue I've pondered in a variety of guises but I've been thinking about it today as a result of running a fun (though badly attended) workshop about 'demystifying social media'. As someone who runs social media workshops in universities, I've become ever more convinced that many of the confusions which surround digital activity stem from a basic ontological misunderstanding of what online activity is. It's too frequently construed as something distinct from the 'real' world.

The reasons for this distinction, which has pithily been named digital dualism, are a fascinating question in their own right. In part I think it stems from the phenomenology of the internet. Until the recent proliferation of mobile devices, it was necessary to sit down at a computer and stare at a screen to use the internet. This helps creates a sense of the internet as a 'virtual' space which is in some way disembodied. As someone who has had unpleasant back and neck problems from my posture when using a computer in the past, it's always been obvious to me that using the internet is not at all disembodied. Though the obviousness of this has become utterly glaring, to the extent that I can't quite take those who disagree seriously, since I started using an iPad and iPhone. Similarly the cyberpunk romanticisation of the 'virtual' plays a cultural role in propping up this ontological assumption.
If people see the internet as a distinct ‘world’ disconnected from the ‘real world’ then it becomes normatively and practically confusing. The tacit and explicit guides to action, the criteria we use to judge experiences, don’t seem to apply. When I run workshops I try to ‘reembody’ digital activity, encouraging people to incorporate digital tools into their wider lives. The concerns, projects and plans which unproblematically apply to every other sphere of life also apply to digital activity. Digital tools are only contingently different to other tools. If we treat them as something other, as mysteriously distinct from the stuff of day-to-day life, our practical engagement with them is unavoidably inhibited. It’s necessary to understand the tools but, in a way, this is secondary. It’s much more important to understand how we might use these tools as part of the wider projects and practices which stem from our lives beyond them.

The sheer newness of the digital tools we are presented with impedes the common sense sociological realism which guides us in other aspects of our life. Too often we fail to see (though we may retrospectively reflect in an intellectual manner) that the people we encounter ‘online’ are, well, people. Who are using tools to communicate for a whole range of reasons. If we artificially delineate ‘the digital’ as a distinct sphere of human activity we deny ourselves the possibility of properly understanding what people do online. Likewise we preclude the possibility of participating in the ‘online world’ with the same degree of practical poise with which we engage with much, though not all, of our ‘real lives’.

Big Thinkers - Sherry Turkle (2012-07-01 12:00)

[IFRAMEx1]http://www.youtube.com/embed/oyHZYqgRY4k

1. [http://www.youtube.com/embed/oyHZYqgRY4k](http://www.youtube.com/embed/oyHZYqgRY4k)
The Greek MYPLACE team at Panteion University of Social And Political Sciences present their latest blog on the political background to Greece’s Euro 2012 football quarter final against Germany. For more information on the MYPLACE project, visit the project’s website [2]HERE or the project’s blog [3]HERE. You can also follow MYPLACE on [4]twitter.

Last Saturday, when Greece defeated the Russians 1-0 everybody was thinking of the following opponent (i.e. Germany) of the Greek national team. The next day’s sport newspapers referred to this possibility with front pages and headlines like: “Bring us Merkel now!” And “This is the way how they qualify those who owe you!”

The whole week before the game all the Greek media mentioned the way the German media talked about the match, referring to all their humiliating comments about the Greek team. Huge discussions took place regarding the ‘spy’ Bildsent to our team’s hotel and his criticism, for example on the fact that our manager is smoking too much and that the only thing that is working in our hotel is the percolator! These kinds of provocations caused many reactions. However, the official and genial stance of the German government was also presented and positively commented. One thing that was highly commented was the fact that German workers in almost all the factories could leave their workplace earlier on the day of the game in order to watch it. This, of course, had to do with the accusations that Greeks are lazy and that they do not want to work and it was immediate connected with that.

Before the game all the evening television broadcasts dedicated about 20 minutes for the game and many of them as their first issue! In fact the sport caster of the Greek public television (NET) when she appeared before game she had painted the Greek flag on her face!
We should also mention that when she presented the German team she commented the fact that too many of the players are not of German origin (they come from Poland, Spain, Turkey, Armenia, Bosnia, Ghana, Brazil, Tunisia and Nigeria). Finally, the Neo-Nazi party, "Golden Dawn", made a public announcement wishing good luck to the Greek team and arguing that the Greeks owe nothing to the Germans, on the contrary they owe us, implying the German occupation during the WWII and the compensation they should pay for the destruction they caused.

It should be noted that thousands of people watched this match due to its symbolic character in apartments, coffee houses and restaurants, because as it was said this game was like the battle between David and Goliath. No need to mention that Portuguese and Spaniards were supporting the Greek team! Furthermore, the manager of the Greek team participated in a spot claiming that during the 90 minutes of a football match it doesn’t matter if you come from a powerful or a weak state, from a rich or a poor people, from a small or a great country, passion is what matters against any opponent.

The day after the game all the media acknowledged Germany’s superiority and argued that along with Spain they are the best teams in Europe and one of the best teams in the world. However, everyone felt proud for the Greek players and the two goals they scored against the Germans.

Of course, as it was mentioned in one television broadcast before the game, the Greeks have defeated the Germans in the most famous football match in the history of sport and of philosophy too! (Monty Python). See the video below:

Sociology@Warwick (2012-07-03 08:00)

A quick flag up to any interested readers that the Sociology Department at the University of Warwick now has a blog and twitter feed. Although Sociological Imagination has no formal connection to the department, a number of people involved in the site are based there & many of the SI podcasts have been with academics in the department. So do check it out!

(Also out of interest does anyone know of other UK sociology departments that have blogs? If so please let us know either in comments below or via e-mail. Thanks!)

Animal Liberation and Direct Action (2012-07-04 08:00)

A fascinating snipped of recent protest history in this lively debate on BBC. [1]Keith Mann spent years in prison as a result of his actions as part of the [2]Animal Liberation Front. With social unrest on the rise throughout Europe, as economic crisis continues to deepen with no end in sight, the social questions raised in the interview about the limits of acceptable direct action seem unlikely to go away.

The Americans (2012-07-04 17:45)

1242
The first Americans I ever met were Anna and Katie Klein, who, were the only kids in my grade two class at [2]Queen Mary School in Peterborough, Ontario to have traveled to places like New England and New York and could list all the famous American presidents by name. "Have you ever heard of the Boston Tea Party?" I remember Anna quizzing me the fall after she returned from her summer vacation south, standing in line after the school bell rang to walk into class. "Have you ever heard of Thomas Jefferson?"

I hadn't, but would, years later, in the [3]Hall of Presidents exhibit at Walt Disney World, where I got to see Thomas Jefferson live. Still by that time [4]I knew more Americans than Anna and Katie Klein anyway. I knew the gas station attendants and waitresses and store clerks along the highways I traveled with my parents several times a year since I was seven. I knew the kids and their parents from the Florida beach where I grew up who were visiting there from Minnesota and Michigan. And I knew the hair dressers who worked in my parents salons, women who's voices were so Southern they seemed to me almost famous, since they sounded like people on American TV. By the time I figured out who Thomas Jefferson was, Anna and Katie Klein weren't the only Americans I knew.

Still, they were my first. And so I think of them today as I follow US politics and wonder about the US presidential election and worry that so many of my American cousins don't know their American history like Anna and Katie Klein did.

End Note: Next to Anna and Katie Klein, the person who taught me the most about American politics was Hunter S. Thompson. Some if what he taught me is [6]right here.

Social theory and social research – what went wrong? (2012-07-05 08:00)

Underlying much sociological explanation is an attempt to bridge the gap between the 'micro' and the 'macro' within the context of a specific empirical inquiry. As the authors put it, "in the human and behavioural sciences, the analytical connection or co-relation between individual and social processes, between cognitive (mental) and social (group) structures, or between 'habitus' and 'field' ... is often understood and elaborated as the big problem of bridging the 'micro' and 'macro' levels" (Lydaki and Tsekeris 2011: 68). The apparent diversity with which this 'gap' is characterised within social theory points to the intractability of the underlying issue: how do we make sense of the relationship between the individual actors we see around us and the wider social order which appears to shape but also be shaped by their actions? The dualisms which proliferate within social theory do so, in part, as a result of a failure to resolve this underlying question. An inability to establish consensus on the underlying explanatory question posed by social research has, as its flip side, the continual elaboration of a sometimes strikingly imprecise conceptual vocabulary which attempts to come to terms with various aspects of this foundational challenge: "constructivism-positivism, subjectivism-objectivism, intentionalism-functionalism, agency-structure, individual-society, or micro-macro" (Lydaki and Tsekeris 2011: 70). Depressingly large tracts of sociological discourse have proceeded from the personal investments and logical entailments which stem from occupying one side or another of these dualisms. Even as the last couple of decades have seen a variety of attempts to bridge these dichotomies, or even abandon them entirely as terms of reference, these moves have in turn bred new dichotomies (e.g. structurationist and post-structurationist) which, perhaps as the one last sign of my past life as a Rortyean philosophy student, never cease to appal me on an aesthetic level.

Drawing on the work of Nicos Mouzelis, Lydaki and Tsekeris argue that this "pluralization of approaches seriously impeded the epistemologically healthy capacity for meta-theory - that is, for a sincere, uninterrupted and open-ended dialogue between opposing worldviews and paradigms" (Lydaki and Tsekeris 2011: 71). The proliferation of competing paradigms, often driven by technical polemics rather than practical disagreement over shared aims, worked to erode the common frame of reference within which sociologists were able to evaluate 'theories' as competing ways of making sense of underlying practical questions of explaining the social world. It contributed to a ghettoization of social theory, with its practical implementation too often limited to those who, having seen the explanatory gains which emerged from a particular approach, ensconced themselves within it and worked with others to elaborate it within its own theoretical terms of reference e.g. bourdieusian theory. As a consequence, social theory ossifies as, with the conceptual logics of particular theoretical approaches increasingly insulated from the practical logics encountered in the practice of social research, the point of social theory becomes increasingly unclear. Likewise the uses to which social theory is put within social research become less helpful than they would otherwise be because of this broader lack of clarity. It almost seems, perhaps, that social theory becomes something which sociologists are self-conscious about. In a way it should be. The characteristics which many find frustrating about contemporary social theory are, I wish to argue, indicative of things having gone badly wrong. They are a sign of people having talked too much, for too long, about predominately practical issues which, it seems, we might have come to some sort of working agreement on if circumstances had been different. My point is not that we should all agree on one 'paradigm' but simply that the fixation on 'paradigms' has precluded a consensus about the practical purposes which these sorts of discussions should serve.

Online Communities and Digital Research Methods: a cautionary note (2012-07-09 08:00)

One of the most exciting things about the internet from a sociological perspective is the impact it has on the formation of communities – groups who might otherwise be too geographically dispersed are able to come together, often elaborating some degree of collective identity from the dialogues which ensue as they gather in this ‘virtual’ space. Furthermore the same process which enables the community to form also enables it to be studied. Online communities represent potent sites in which digital research methods can be used to study groups who, again, might previously have been too geographically dispersed to be studied and/or would not even be recognisable as a group prior to their coming together online. From the perspective of someone who has done this sort of study (in my case on the [1]asexual community) it really can be quite exciting. However I’m increasingly aware of the risks inherent in such approaches which, as digital research methods solidifies as a distinct specialism, look set to grow.

1. The actors you find in online communities are, well, actors. The specificity of their personhood is not reducible to their participation in the community. The community might be hugely significant to them or, conversely, it might not be significant at all – more likely any given individual will occupy some point on this spectrum. Exactly what point this is remains, unavoidably, an empirical question. It is a mistake to infer past motivations and history on the basis of present participation in an online community.

2. Similarly participation of individuals in an online community is not reducible to their activity as actors. Someone might read a forum daily, never posting, yet define the contours of their identity in terms of what they read. Thanks to [2]Jon Hickman for pointing this out to me: lurkers are participating too! It is a mistake to reduce participation in an online community to observable ongoing activity.

3. Online communities regularly have ‘offline’ outgrowths and the two spheres, which can seem distinct from the perspective of the researcher, might in reality interpenetrate in complex and messy ways. Granted it might be difficult to study the offline aspects of the community but be creative! It is a mistake to reduce online communities to the collective activity which takes place online.

4. The fact that online communities allow geographically dispersed individuals to congregate around a given shared characteristics often leads to the formulation of some apparently shared identity. Furthermore, given the nature of the online vehicles which host such communities, this shared identity often pervades the ‘online space’ itself. However just because people participate in a community doesn’t mean they partake in a shared
identity. This seems an obvious point but, I fear, it is easy to ignore because it is often this apparently shared identity which motivates the research into a given group online. It is a mistake to infer a collective identity on the basis of prima facie empirical evidence: this is often an artifact of the research design and/or the process which allowed the community to form.

What's 'honorary' about an Honorary Research Assistant? (2012-07-10 08:00)

Last week the University of Birmingham advertised for an [1]Honorary Research Assistant to work in its School of Psychology. It looks to be quite interesting work - two or more days a week clinically assessing adolescents who are seeking help with mental health issues. Great!

Oh – hang on it doesn't pay anything and you have to have a car. Not so great. In fact, appalling.

This is simply an exploitation of the current graduate job market. With high levels of [2]graduate unemployment and a specific challenge in finding higher-skilled jobs, there is a large pool of graduates desperate to kick start their career. Birmingham has higher-skilled work that needs to be done, but presumably because they consider there to be a labour excess have decided to let someone do it for free.

As well as a basic moral argument that people should be paid for their labour, this 'job' clearly discriminates against less affluent students (by which we generally mean 'students from less affluent families'). Without parents to support them, which graduates can afford to work for free and run a car? Putting this kind of barrier up against a significant segment of potential applicants undermines their social mobility and potentially reduces the overall quality of the applicant pool. [3]The University and College Union today commented on how this position undermines principles of equal pay and is discriminatory.

Let’s not get confused and think “Oh, but there have always been unpaid internships”. The idea of people somehow supporting themselves whilst going to companies and charities for a few weeks or months to enhance their CV is
damaging in itself; the NUS, TUC, Intern Aware, Interns Anonymous and Graduate Fog are [4]campaigning against
unpaid internships and lay out the impact this type of work experience has. In contrast though, this is NOT an
internship – it is open-ended, not for a fixed period of time and has all the appearances of fee-earning work. It looks
just like a job, only you probably don’t get a contract or any statutory rights and you don’t get paid.

The work appears to be associated with a specific project and you do wonder who is funding it and on what basis.
Are they a grant-giver interested in legacy and graduate employment? Was this unpaid labour an integral part of the
bid? Is this how Birmingham will apply for all their grants now, and does this mean all other Universities will start
removing costs associated with the lowest level of labour just so they can compete? Will Professor Wood get a pat
on the back at his annual appraisal for his attempt at commercial acumen? Maybe I’m worrying about nothing, so
I thought I’d submit a Freedom of Information request and find out who was funding the research. You can do the
same [5]here, maybe someone could ask them how many other unpaid, non-contracted researchers they have. To
get a sense of perspective here, this 40 % Research Assistant might cost £10,000 a year, and the School of Psychology
boasts a [6]£8M pa grant portfolio. Times must be hard.

Birmingham can only offer this unpaid post because they claim it is carried out on voluntary basis, which means it
will not have any form of contract of employment. Is this really the most appropriate model of employment for a
researcher who will be carrying out initial and ongoing assessment of young people seeking help with their mental
health? Is this what state-of-the-art psychology looks like .... a highly vulnerable group being dealt with by a transient
uncontracted worker?

We’ve argued against unpaid commercial internships for a while now, and seemed to be starting to make some
progress. This disingenuous -“Honorary”- job is not only a step backward but is much, much worse because
Birmingham is one of our leading Universities. A producer of job-hungry graduates. A place of learning. A place of
thoughtfulness. A place of reason. An institute to be trusted, not a shady second-hand car business working under
the railway arches trying to cut every corner it can.

Beverley Gibbs started her career in engineering, moving onto business and research management. She is cur-
cently completing a PhD with the University of Nottingham looking at issues relating to science in society. Follow

Public Scholarship and Private Commitments (2012-07-11 08:00)

A very brief critique of happiness studies (2012-07-12 08:00)

The NYTimes recently published yet another intriguing article, one of many, on the topic of happiness and the links between happiness and money: [1](you can read the article here), by Elizabeth Dunn and Michael Norton.
"Don't Indulge. Be Happy."

However, as a researcher of working lives, I cannot help but point out two rotten premisses of rational choice theory (RCT)-informed happiness research (e.g. happiness/money correlation).

The first one is that the definition of "happiness" is terribly reductionist. In reality people often don’t know whether they are "happy" or not, and this also changes when you look at past events (see[3] Daniel Kahneman's TED talk from 2010. Kahneman is a Nobel laureate and founder of behavioural economist).

Even more problems arise when we look at work and employment. Happiness research seems to assume that people work predominantly for rational reasons, such as "money" or "happiness"; and that they are in full control of their work-related choices. But surely people cannot always regulate the amount which they work. And surely they also do what they do, and as much as they do, for a plethora of other reasons. Because of contractual obligations. Because they have started a job and feel some kind of moral duty to keep doing it. Because they are fearful of change. Because working less might invite their boss to make them redundant. Because of general inertia. Because they’re used to a working environment/team. Because they haven’t had time to think what else they can do. And because we are generally bad at deciding what we really want e.g. sorting out our own priorities. Even in RCT’s own terms, it is accepted that people often shun changes due to the high exit costs: making changes involves too much investment, and the longer you have spent doing X (e.g. sticking to a particular career plan), the higher the cost of initiating a change.

Said simply, work, employment, and labour are far more complex social activities than they are portrayed in this type of research. So is happiness. The link between the two is exponentially more complex.

2. [http://sociologicalimagination.org/archives/10543/08cover-articlelarge](http://sociologicalimagination.org/archives/10543/08cover-articlelarge)
Experiencing sociology’s midlife crisis? (2012-07-13 08:00)

Is it possible for an academic discipline to experience a midlife crisis? The recent exchange in the British Journal of Sociology on ‘sociology’s misfortune’ (Holmwood, 2010; Savage, 2010a; Rosenfeld, 2010) was just the most recent of a raft of work exploring the peculiar contemporary challenges and difficulties that face British sociology. This growing set of literature has come to exemplify and define what Savage (2010a: 659) has referred to as the ‘sense of malaise that currently hovers over British sociology’. But in response, can this sense of malaise be understood as a type of disciplinary mid-life crisis?

The story of sociology’s establishment as a discipline is likely to be relatively familiar to most readers of this journal. In his history of British empirical sociology Raymond Kent makes the following observation:

‘The 1950s…saw the beginnings of the institutionalisation of sociology on a new footing and its gradual acceptance as an academic discipline in the universities. Both the old Institute of Sociology and the LePlay House found themselves in financial difficulties after the war...The Institute itself was finally dissolved in 1955...Meanwhile the British Sociological Association had been established in 1951. The 13 founders – six of whom held chairs at the LSE at the time and included Glass and Ginsberg who acted as chairman – did not see the new body as a professional association. Rather, one of its major purposes was to encourage contact and co-operation’ (Kent, 1981: 140)

Kent goes on to note that there were those in the association who were keen to promote sociology as a unique specialism, but that these sentiments were really quite marginal at that time. Kent (1981: 141) acknowledges that the membership of the British Sociological Association (BSA) grew to 600 by 1960 but that at the same time there were fewer than 40 sociologists teaching in British universities with only 12 offering degree courses (this contrasts sharply with the 305 sociology courses listed on UCAS for 2013 entry, and the 1045 courses listed under the ‘all sociology’ courses classification). Clearly the BSA as playing its part in expanding sociology although not necessarily as a discrete discipline, rather in its early years it contributed to shaping sociology as a space for collaboration between social science disciplines (see also Savage, 2010b: 106).

Sociology remained throughout the 1950s to be an area of synthesis in the social sciences rather than a discipline in its own right – in support of this observation Savage (2010b) points towards the early synthetic articles in the British Journal of Sociology. Savage’s (2010b) core argument on this matter is that sociology established itself as a discipline in Britain in the 1960s by claiming its own jurisdiction through the focus upon novelty and by claiming particular methodological resources as its own, this operated alongside its integration into the developing university infrastructure of the 1960s (see also Halsey, 2004). Wherever we might choose to place the exact moment of conception of a discrete British sociology it is safe from this to conclude it is a discipline in its middle age.

So, if sociology can be said to be middle aged can it also be said to be suffering a midlife crisis of any sort? We might point here towards what can be understood to be a heightened sense of crisis in British Sociology over the last few years. To give one prominent instance, Halsey’s famous history of British sociology claims that, ‘[t]here is no doubt that sociology is in peril in the twenty-first century, at least in Britain and America’ (Halsey, 2004: 206). Halsey is far from being alone in drawing such bleak conclusions. We might contend that sociology is the victim of a perpetual sense of crisis, with narratives of critical and precarious moments littering its history. Despite this ongoing narrative of crisis, this sense of disciplinary uncertainty in British Sociology seems to have been even more acute in recent
years (Gane, 2012).

The midlife crisis type preoccupations that we might point to in recent sociological literature include the searching for a sense of disciplinary identity and purpose, the thinking through and reflecting upon a relatively halcyon past and imagining a more difficult and problematical future, uncertainty about past achievements and the value of our ongoing contribution, the need for reinvention and a new start, worry about our decreasing impact and chances of impact upon the world, worry about and a sense of the need to redesign our appearance, and finally an increasing sensitivity towards outside perceptions (for a fantastic sociological account of the midlife crisis from which these core themes can be extracted see Hepworth & Featherstone, 1998). A selective list of the wide range of literature that covers these types of issues with regard to the discipline of sociology would include Mike Savage and Roger Burrows' (2007) influential article (this article must have tapped into a sense of crisis as it has already accumulated 152 citations according to Google Scholar), John Holmwoods' (2010) aforementioned reflections on the audit culture and sociology's misfortune, Harriet Bradley's (2011) response to the international benchmarking review of British sociology, and many other examples that includes work by Liz Stanley (2008; see also Hollands & Stanley, 2009), Rosemary Crompton (2009), the introduction and all of the papers collected in Osborne et al (2008), Richard Webber (2009), Les Back (2007), Holmwood & Scott (2007) and Lisa Adkins and Celia Lury (2009 & 2012; again see a number of the papers gathered in both of these collections as well as the introductions). This is really only the tip of the iceberg of a broader literature that engages in different ways with our current challenges and which are evoking, perpetuating and debating a sense of crisis. We are forced to ask if these kinds of narratives and reflections upon the discipline would have been possible before it reached its 50s?

When considering the possibility of thinking of British Sociology as being in the grips of a midlife crisis we should of course show some caution, we might well wish to heed Walter Benjamin's (2002: 481) warning that we have an overwhelming tendency to place ourselves in the ‘midday of history’. We might also point toward the large number of sociologists who clearly aren’t feeling any real sense of crisis but rather regard their discipline to be in rude health. On reflection though, and if you will indulge me for the moment, given the weight of the literature and the wide engagement with themes of crisis and renewal it seems fair to conclude that British sociology is viewing itself increasingly as being in a state of crisis. This crisis might be a product of our times or of the atrophy of our discipline, of both or maybe of neither. The question we might want to consider though is whether these worries and preoccupations are just a product of our over-active self-reflective tendencies or whether we have something more substantive to worry about? A reading of the outputs which directly consider the future of sociology indicates that responses to this question are likely to be very mixed. It seems though that whether we are in the grip of an imagined crisis or not, we now need to look at ways of relieving the anxiety that we have produced for ourselves.

There is clearly a tension in contemporary academia between fostering a critical discipline and the public relations activities that are necessary to protect the academic and social standing of the discipline. To be a viable discipline critique and debate are crucial but these do not mesh well with the need to present a united front in the face of the externally manifest changes we are experiencing. For those, like myself, at a relatively early career stage it is a bit of a baffling time to be a sociologist, what look to have been the certainties of the past seem to have slipped away into this sense of crisis. The debates I have outlined here are really exciting and encouraging but they do contribute to a sense of anxiety.

Call for Contributions: what does the Sociological Imagination mean today? (2012-07-14 08:00)

It has been over 50 years since C. Wright Mills wrote the Sociological Imagination. In that time the world has changed beyond recognition: the Cold War ended, the Keynesian consensus broke down, a globalizing neoliberalism rose to the ascendency and the internet began to transform human communication and culture. In recent years, with 9/11 and then the financial crisis, it seems that history has returned with a vengeance. Is Wright Mills’ notion of the
‘Sociological Imagination’ still pertinent today? How can Sociology help shed light on the rapidly transforming world around us and the consequences of these transformations for the people who inhabit it? What does the ‘Sociological Imagination’ mean today?

The [1]Sociological Imagination website is seeking short articles which engage with these themes, or particular aspects of them. Submissions should be 500 – 1500 words and [2]e-mailed as a Word document. There is no deadline for submissions.

**Why Academic Sociology Does Not Deserve The Hatchet** (2012-07-14 20:44)

Note: *This list was written as a quick response [2]to this post on Freakonomics, "Sociology and Political Science Deserve The Hatchet." The photograph above is of one of the very first American sociologists, Anna Julia Cooper, who received her doctorate from the University of Paris-Sorbonne in 1924.*

1. Sociology has a remarkable canon of classic writings, which, when dug out of the library as archeological artifacts, assembled in chronological order and read in snippets, (i.e., read the opening, closing and some random pages in the middle), are not only an interesting *product* of modernity (i.e., academic social science), but, also, a story about modernity – see, quite simply, [3]Durkheim’s *Suicide* (1897); [4]W.E.B. Du Bois’ *The Philadelphia Negro* (1899),
W.I. Thomas & Florian Znaniecki's *The Polish Peasant* (1920); Anything from the 1920s *Chicago School*; William Foote Whyte's *Street Corner Society* (1948); *The Kinsey Report* (1961); *The Stanford Prison Studies* (1972); Harold Garfinkel's *Studies In Ethnomethodology* (1991); Dorothy Smith's *The Everyday World as Problematic* (1987); Patricia Hill Collins' *Black Feminist Standpoint Theory* (2008); Avery Gordon's *Ghostly Matters* (2008); and Charles Lemert's *Dark Thoughts* (2002); 2. American academic sociology was founded by an African American (again, see [5]W.E.B. Du Bois) and rooted in Critical Black Theories and Methods, however, at the same time, has also documented and represented the lives of African Americans in highly distorted ways [i.e., see *The Moynihan Report* or even better [6]*This American Life*, Episode 142, *Barbara* (1999)], creating the paper trail and space to truly confront and study the sometimes hard to pin down elitism of higher education and the social sciences in general – see also the life and work of one of the first American sociologists and, also, one of the first female and African-American Ph.Ds, sociologist and social worker Anna Julia Cooper, pictured above; 3. Sociology, historically, has been the only discipline in the academy to seriously and actively consider and employ the methods and theories of thinkers engaged in more practical kinds of social *writing* and social *work*, (i.e., like social workers and nurses, investigative reporters and [7]tabloid journalists, natural scientists, school teachers, lawyers, judges, police officers and reality TV producers); 4. The [8]back stories of a few prominent and popular sociologists are rife with interesting and/or sexy gossip, which blatantly contradict their theories and analyses – find out, for example, about [9]Talcott Parson's relationship with his brilliant anthropologist daughter Anne or the romantic life of W. I. Thomas; 5. Harold Garfinkel and his theory, *ethnomethodology*, is far more engaging and fun that reading translations of Foucault, Deleuze, Derrida or Kristeva; 6. Good sociologists [10]truly understand the narrative boundaries of the fictive and the real (i.e., [11]sociological analyses, by definition, must be locatable in the world, but also allow for expansive story-telling and setting and character development); 7. Sociology is the only academic discipline to require its students already at the undergraduate level to thoroughly learn the language and stylings of research methods, making it not just a discipline people learn and master, but practice and do (i.e., good sociologists don't just analyze stuff, they *make* stuff, i.e., like ... knowledge or, even better yet, [12]stories); 8. Noone, (especially no working sociologist), would ever dream of suggesting taking a hatchet to sociology if [13]C. Wright Mills were still alive.

**Note 2: More lists by [14]Audrey Sprenger about sociology and other things are [15]right here.**

Sociology@Warwick (2012-07-15 08:00)

A quick flag up to any interested readers that the Sociology Department at the University of Warwick now has a [2]blog and [3]twitter feed. Although Sociological Imagination has no formal connection to the department, a number of people involved in the site are based there & many of the SI podcasts have been with academics in the department. So do check it out!

Generation Y doctoral students (2012-07-16 00:50)

[1]JISC have recently released the findings from the [2]Researchers of Tomorrow study they conducted in association with the British Library. This three year longitudinal study explored the research behaviour of Generation Y doctoral students (those born between 1982 and 1994) and has thrown up some interesting findings. You can read the report [3]here.

We were particularly interested in some of their findings concerning digital technology:

- Take-up of most institutionally-provided and open web technology tools and applications is low among doctoral students overall
- Generation Y doctoral students are more likely than older doctoral students to use technology to assist them in their research
• Generation Y doctoral students tend to use technology applications and social media in their research if they augment, and can be easily absorbed into, existing work practices.

• Levels of use of social media and other applications helpful in retrieving and managing research information are steadily rising among Generation Y doctoral students, but those applications most useful for collaboration and scholarly communications remain among the least used.

• Fellow students and peers are the major influence on whether or not Generation Y doctoral students decide to use a technology application and are their main source of hands-on help.

‘Academic spring’ or media hype? The open access debate and what it means for researchers
(2012-07-20 08:00)

This session will explore the profound changes currently taking place within academic publishing and address their implications for researchers. Debates around ‘open access’ have recently entered mainstream debate, with the Guardian talking of an ‘academic spring’ building around the world. However the issues at stake go beyond open access and a focus on the technical details of particular proposals can often obscure the broader questions which the academic community, scholarly publishers and funding bodies are currently attempting to address. By putting currents debates in context, as well as exploring their practical consequences for those either undertaking or seeking an academic career, this talk aims to help move beyond headlines and bring some more clarity to the debate.

BSA TEACHING GROUP Inaugural Conference (2012-07-22 08:00)

28th - 30th September 2012

Menzies Strathallan Hotel, Birmingham

Speakers:

Professor John Holmwood (University of Nottingham),

Former Chair of the Council of UK Heads & Professors of Sociology,

Fellow of Academy of Social Sciences & the incoming
President of the British Sociological Association

**Professor Corrine Squire** (University of East London), Humanities & Social Sciences

Author of ‘Women & AIDS: Physiological Perspectives’

**Dr Paul Bagguley** (University of Leeds)

Researcher in the Sociology of Protest

Author of ‘Riotous Citizens: ethnic conflict in multicultural Britain’

**Exam Training Sessions** - delegates will be able to attend exam training sessions, select from workshop sessions to match specific career development targets and see recent subject specific resources.

**Workshops** will include sharing Ofsted experiences, Differentiation, Gifted & Talented and ICT in the Classroom.

**Postgraduate Micro-lectures** covering areas such as: culture & identity creation; differentiation; inequality & stratisfication; demography; welfare & government policy in most fields of life; family & households; the role of women; minority groups; aging; youth culture; all aspects of education especially potential changes & their effects on different groups within sociology; health & welfare; wealth & poverty & welfare provision; politics & power; globalisation in all its many aspects; religion; crime & deviance; methodology; theory & the role of research.

**Conference Registration Cost:**

**Full Conference** (including accommodation & food):

BSA Members £260; BSA Teaching Group Members: £285; Non-members: £350
Towards a Comtean Revival in Sociology (2012-07-22 19:28)

I have been closely associated with the field of science and technology studies (STS) since my graduate student days, nearly thirty years ago. In 1984, as a PhD student in history and philosophy of science, I published the first piece in a major positivist journal to extol the virtues of the field. In fact, my experience of writing the piece inspired me to develop 'social epistemology'. But even back then I had my doubts about where the field was going with its critical re-appraisal of the nature of science and its place in society. In a Comtean spirit that I had picked up from my undergraduate days at Columbia, I always envisaged that 'sociology' would eventually take over the natural sciences and focus them in a humanly beneficial direction. Moreover, I imagined this happening in a quite material way - that is, sociologists would not simply be offering advice from the sidelines (which nowadays looks ambitious) but the scientists themselves would be sociologically trained.

To be sure, I realized even as a callow youth in the 1970s and 80s that such ideas were bound to be tainted with the brush of Nazi and Soviet eugenics. At Columbia I benefited from a course in history of science by Loren Graham, the leading US expert in Soviet science, who had us read E.O. Wilson’s *Sociobiology* shortly after it was
published in paperback. For those too young to remember, this book – and the very idea and person behind it – was trashed in terms reminiscent of how ‘intelligent design’ is treated today. (Much of this trashing happened in the pages of The New York Review of Books.) And the trashing continued for another ten years or so, until the hot button term ‘sociobiology’ got replaced by ‘evolutionary psychology’, where the original research programme thrives today. (This was also the time when Stephen Jay Gould was seen as speaking ‘correctly’ and Richard Dawkins ‘incorrectly’ for evolution. My, how times have changed! Does anyone under 40 even know who Gould was?)

In any case, as the years have gone on, STS has made a good living from inhibiting any large-scale, long-term planning for science and society. This fits the tentative, hypersensitive, neo-liberal world in which we live. As soon as ‘heterogeneous’, ‘contingent’ and ‘uncertain’ are strung together in a sentence, the natural conclusion is to commission more (STS) research rather than enact legislation that might alter the terms of the problem. (Note I did not say ‘offer a solution’. But equally I said ‘enact legislation’ rather than simply write a journal article saying how we need to change the question – I mean to encourage political risk-taking rather than academic one-upmanship.)

The resulting research invariably tells us that while we are naïve to think that a clear distinction can be drawn between X and Y – where X = things as they are and Y = things as we might wish them to be – because Y was always already present in X, we should remain wary of entirely embracing Y because it is unlikely to be as we envisage it to be. Armed with this neat formula, you can, in one fell swoop, outflank both the reactionaries and the utopians – while committing yourself to absolutely nothing. I suppose if you are mainly concerned about not offending prospective employers and funders, championing ambivalence must look like genius. To my mind, however, it’s the sort of reductio ad absurdum that shows why we need more permanent posts in academia – so as to encourage people in what I have called ‘the right to be wrong’ (Fuller 2000).

However, recent works like Chris Renwick’s (2012) British Sociology’s Lost Biological Roots show how biological considerations ran deep in the original conceptualisation of sociology as a discipline, and it was only for reasons relating to the academic politics of the UK, France, Germany and the US (different in each case) that biology and sociology did not develop more in sync with each other. I believe that the time once again has come to re-negotiate that boundary (Fuller 2006). We can do much more than simply provide ‘biopolitical critiques’ a la Foucault or Latour that in the end simply champion ambivalence. Rather we can follow the model for more constructive engagement that sociologists have had in recent years with economics. Of course, there are the useful critiques of neo-liberalism in abundance, but above and beyond those are also more-and-less interesting attempts to understand social phenomena through rational choice theory and, still more ambitiously, attempts (typically under the rubric of ‘economic sociology’) to reconstruct the science of economics in sociological terms.

An analogue to this last project is an especially needed form of engagement between biology and sociology – which would mean inter alia treating genetic information more as a form of capital than, say, a foundation for evolutionary theory. To be sure, the very idea that sociology might ‘own’ biology will strike many as scary and outrageous. It would certainly require that sociologists develop their own expertise in biological phenomena, as they have in economic phenomena. Truth be told, eugenics as originally conceived by Francis Galton had just this aim in mind – and it was usually how eugenics was understood in the period leading up to the Second World War. Given the ease with which historical memory fades unless actively maintained, it is no longer clear that ‘eugenics’ strikes the sort of fear in people’s hearts as it did when I was a student. Certainly the molecular revolution in biology means that the terms of engagement have changed radically. Still, re-branding is probably not a bad idea: Anyone for a course in ‘bio-sociology’?

Can the "impact of research" be measured? (2012-07-23 08:00)

Those working in academic institutions are by now all familiar with the new power-acronym: the REF (research excellence framework 2014). Even though its aim is commendable - to assess how good is the research done by universities, faculties, and departments - there are doubts in the academic community about whether this task is at all feasible, or, less fundamentally, about the appropriateness of the chosen methods to the task in hand. One fifth of the REF will specifically assess the "impact" of research - similarly to the way many research grants already do. Professor Johathan Wolff gives a sceptical view:

Influence in sensitive public-policy areas rarely leaves an audit trail. And if this is true of work directly commissioned by a public authority, what chance for work published in academic journals?

(read full article in [1]the Guardian)

As a friend noted sarcastically today, the REF could have been named an "Framework for academic excellence", but presumably that formulation was not chosen, because the acronym would have erroneously resembled the word "free".

What Oprah’s Research Staff Failed To Inform Her About India (2012-07-23 18:17)
Note: This list was written as a quick response to [2]Oprah Winfrey's visit to and report on South Asia in the Summer of 2012.

1) Yes, it is customary in (most parts) of South Asia for people to eat with their hands, as well as practice other forms of practical everyday environmentalism like wrapping food in banana leaves rather than plastic and using water instead of toilet paper; 2) [3]Slumdog Millionaire is a fictive, narrative movie not real life or, even, a realist documentary; 3) Far from being shy or inarticulate, most South Asians speak in at least three languages fluently and many read and write in as many languages; 4) [4]Before you let the concept of arranged marriage shock you consider
the US Wedding/Bridal Industry and read Bharati Mukherjee's great 2002 novel, [5]Desirable Daughters; 5) Be sure to sample the true tastes and smells of India: Limca, Thums Up ("Taste The Thunder"), Maaza, any brand of soda water, Marie biscuits, Cadbury eclairs, pan, train station coffee and, my favourite, Washing Powder Nirma (for one man's ode to Washing Powder Nirma [6]go here); 6) Yes, study the teachings of Mohandas Gandhi but also, at the very least, read the writings of [7]Badshah Khan and Rabindranath Tagore – an excerpt from his beyond remarkable 1913 collection of poems, Gitalgili, is above; 7) Bollywood is important to Indians, but regional cinema (i.e., Tamil, Telugu) glitters even brighter

Prakash Kona (2012-07-26 16:52:42)
If Oprah Winfrey had called Indians a bunch of racists and classists - believe me, that's closer to the truth about "we" South Asians. But, how unintelligent! What's wrong with eating with the hands! People have always eaten with their hands since the days of the hunting and gathering tribes and earlier. That's the original function of hands - to make food and eat it. You don't need to go to the university and get a degree to know that much. Not to mention we are a nation of more than a billion! Where on earth are we supposed to get the spoons and the forks from! It's a short-sighted reading of another culture. On a more serious note, I would be a fool to expect anything different from Oprah Winfrey - a media puppet of the American corporate world.

Soham (2012-09-17 21:41:33)
It's not gitangili but gitanjali (etym: gita(song)+anjali(offering), the offerings of song) Come on Prakash, you didn't apply your reflexivity but just toed the Marxist line... Ethnomedology is actually a beautiful thing

Third Culture Kids (2012-07-24 08:08)
Did you know what a [1]Third culture kid (TCK, 3CK) is? There are more and more of them about! Perhaps you are one?

1268
I must confess a certain ambivalence about posting something which is basically an advert for (crap) pizza. Nonetheless, here's a visual mapping of the Domino's pizza supply chain. Does the visual representation of the scale of it all convey the internal complexity of this sort of capitalist enterprise more effectively than words or numbers could? I certainly thought so.
The 2011 UK Census: five fascinating facts (2012-07-26 08:00)

1> Why are there so many more women than men recorded in the Census? Are there really more women - or are other factors also in play, such as who fills in the Census forms?

2> Did you know that the median age in the UK in 2011 was 39, compared to just 25 in 1911?

3> Which is the quietest town in the UK?

4> Is inequality disappearing or deepening between the adjacent London boroughs of Kensington & Chelsea and Tower Hamlets?

5> Why is everyone flocking to Manchester and leaving Barrow?

To find answers to these and more interesting questions related to the 2011 census, read the full [1]article on the BBC news website by Lucy Townsend and Kathryn Westcott.

the median age is not the most common age but the one separating the data in two equally large halves, the most common age would be the mode.

Wanted: Ph.D. student to put Harriet Martineau back in the sociological canon (2012-07-26 19:52)

Harriet Martineau (1802-1876) was one of the most remarkable women of letters – perhaps ever. Her body of work ranged across the social and biological sciences and even theology. [1]Wikipedia gives a good introduction to the breadth of her writing. However, if Martineau is remembered at all today, it is as the English translator of Auguste Comte’s work. But Martineau was a sociological pioneer in her own right, a friend of John Stuart Mill and the Utilitarians, as well as a correspondent with all the major intellectuals of the mid-19th century, on both sides of the Atlantic, and including Charles Darwin. By all accounts she was a formidable personality (a Germaine Greer-like figure perhaps) who stood out in her day for being able to earn a living from her writing without ever having to get married.

The person who appears to be the leading living scholar of her work is [2]Deborah Logan, an American specialist in Victorian literature. This leaves plenty of scope for a sociological interpretation of Martineau’s oeuvre. As it happens, many of Martineau’s papers are housed at the University of Birmingham. Based on a twitter exchange yesterday between Jo VanEvery (@JoVanEvery), Mark Carrigan (@mark_carrigan), and myself, it dawned on me that Warwick (only 20 miles from Birmingham) would be a great place for someone to do a Ph.D. on Martineau’s significance in her own time and her continuing legacy, both in sociology and for feminism more generally.

I would welcome a student interested in undertaking this project. I think such a Ph.D. could be easily turned into a timely book. But keep in mind that you will need funding! I am happy to work with students interested in applying for funds but I have none at my disposal. (When approaching me (s.w.fuller@warwick.ac.uk), please already have a funding source in mind that you have good reason to believe would support this project. This means doing some homework about funders!)

Finally, a few years ago, I staged a play in which the main female role was that of Harriet Martineau. [3]You can have a look here.

Kill The REF in Complex Circumstances (2012-07-27 08:00)

If you read one polemic about higher education this year, make sure it is this one: [1]KILL THE REF IN COMPLEX CIRCUMSTANCES.

7 - 27 / 455 (Overpunctuated Autobiographical Sketch in 455 Words) (2012-07-27 13:39)

Happy birthday, Idle Ethnographer!

27 July 2012: 13 again

Tips for writing deadlines (2012-07-29 08:00)

This is a post not restricted to sociology and not even related to imagination... Instead, it offers a few crunch time tips for those of our readers who are struggling with deadlines and are here to procrastinate! [1]Do check them out (and then log off and GET IT WRITTEN!)

Privacy? What is that? (2012-07-30 08:00)

This [1]article is a nice reminder of exactly how much we all share about ourselves through our mobile phones. It is very hard, if not impossible, to not leave a trace in this digital age; and these data remain recorded forever. Some of that data are given away voluntarily, some we give, because we don’t realise it is being collected, and most of all we don’t give this problem any consideration in our daily lives. The very definition of the term 'privacy' is shifting, and with it - what Norberto Bobbio (1997) famously called one of the grand dichotomies of the Western civilisation, the private/public dichotomy.

Olympic controversies (2012-08-01 08:00)

Have the London Olympic games brought regeneration - or degeneration? This documentary explores the viewpoints:

Value-Added Study: University students call for a real relationship with tutors (2012-08-02 08:00)

With the tuition fee hike coming into effect in September, students now more than ever are looking for excellent value for their hard-earned money. Choosing the right university and the right course has never been more so important in the current economic climate. Students awaiting their A-Level results will certainly have the quality of teaching on their minds, which has led the National Union of Students to question if universities are working its members hard enough.

"The quality of education at university is becoming more and more of an issue," says Rachel Wenstone, NUS vice-president. "Contact hours don’t mean anything unless they are high quality, and you have a real relationship with your tutors."

In an article by the Guardian, the number of contact hours receive from their tutors has been questioned. The government has responded by calling for universities to publish information about course contact-hours from this September, as part of new standardised key information sets for prospective students (KIS).

The NUS call for students to have much needed face-to-face time with tutors in smaller groups to develop and test their understanding. The union calls for greater transparency about the number and size of seminars and tutorials, and assurances that students' main experience of university will not be sitting amongst a sea of students taking notes in a lecture theatre.
The NUS wants universities to give prospective students much more detail on what they can expect when they arrive. David Palfreyman, bursar at New College Oxford, agrees with this sentiment:

"The massification of higher education means that you can do a degree at some universities without really talking to anyone. Where’s the chance to experiment, to try something out and have a conversation about it?" He adds: "There is nowhere to hide in a tutorial of two. If you’ve not done anything, there is pressure from your mates as well as your tutor."

However, the union stresses that class sizes and false expectations are only part of the problem. The union urges universities to be clearer on what their course demands - workload, coursework, structure etc. and for this information to be made available to prospective applicants.

"It is really worrying that information on what work your course will contain and exactly how it will be assessed is so vague for undergraduates," Wenstone says. "And it is the poorer students who are most likely to be let down, as they don’t have friends and family telling them what to expect."

Whatever the case may be – students starting university in September will experience not only a leap in work-effort expectations, but will also expect a very good ROI (return on investment).

Dr Yaz Osho specialises in the politics of ‘race’ and racism, SME entrepreneurship, media representation, the sociology of work and racialized offline vs online identity politics. She has taught at Middlesex University, UEL, Goldsmiths, University of Westminster and was a Senior Visiting Fellow at the University of Sussex.

Pussy Riot – the End is Coming (2012-08-03 08:00)

The MYPLACE research team at HSE St Petersburg in Russia send this blog on the latest developments following “Pussy Riot’s” imprisonment for their [1]punk protest. This was originally posted on the [2]MYPLACE blog and you can also follow the project on [3]Twitter. For more information about MYPLACE, visit the project’s website: [4]HERE

The headline-making case of 2012 is going to the end. The lawyers of the three young women accused were convinced that the trial would begin soon and they were not mistaken, basically - a hearing is scheduled for July, 20. Probably, the situation was provoked by the letter signed by 200 masters of Russian culture, headed to the Supreme Court asking to free the girls ([5]http://pussy-riot.livejournal.com/27740.html)
One needs to mention that the defendants did not have time to familiarize themselves with the investigation because they were not given enough time to do so. However, this is not the worst thing in the situation. Neither the fact that the court extended the time of the girls’ arrest several times, and they went on a hunger strike in response. It is not so terrible even to hear the maximum sentence of seven years, to which everyone is used to – because they were talking about it right from the first day of the commitment.

The thing that really sounds terrible is the accusation itself confirmed by the prosecution. It is reported that Pussy Riot «caused significant damage to the sacred values of the Christian church and encroached on the sacramental mystery of the church, having humiliated secular foundations of the Russian Orthodox Church in an aweless way.”

In Pussy Riot’s blog there are some documents. Among them – that very scanned copy of the indictment. Lines in red appeal to the rules adopted by church councils during the IV and VII centuries that the investigator uses as arguments proving the guilt of the girls ([6]http://pussy-riot.livejournal.com/27607.html)

The girls’ lawyers are right: the accusation is not based on the canons of the Criminal Code asthere are no such terms in it. This is the lexicon of the church documents. And how rational is it to follow the laws and regulations of religious institutions in the XXI century in secular state courts? The accusation was the last straw that forced the lawyers to appeal to international legal authorities ([7]http://freepussyriot.org/)

The complaint to the Strasbourg Court has already passed the first formal stage, it was assigned a number and it will be considered in a priority order. Pussy Riot’s case should also be considered in the Committee of the UN Human Rights – a letter to Ban Ki-moon has already been compiled and sent to international human rights activists, who repeatedly offered assistance to the girls through their lawyers.

Experts believe that Pussy Riot’s verdict may concern the actual terms of imprisonment. Of course, not seven years but three years of the colony – completely. It is also possible that the girls will be sentenced to the term they had already served to release them in the courtroom. In any case, the sentence must be rigid and create a precedent for the future.

The Counterfeiters (part 1) (2012-08-09 08:00)

‘As I write, highly civilised human beings are flying overhead, trying to kill me. They do not feel any enmity against me as individual, nor I against them. They are “only doing their duty”, as the saying goes. Most of them, I have no doubt, are kind-hearted men who would never dream of committing murder in private life’. Thus wrote George Orwell in his 1941 book-length essay The Lion and the Unicorn, and although I am not scribbling away in times of war nor am I threatened to be killed, much of Orwell’s sentiment abides in me with respect to notions of ‘enmity’, ‘duty’ and virtuous ‘private lives’ that turn sour in the public domain each time the ‘Greek crisis’ debate unfolds in its various guises. What follows is not so much a sociological analysis of the ‘Greek crisis’ per se but rather an account of a young sociologist and a Greek citizen writing about a ‘crisis-ridden warzone’ like a frustrated NASA team member observing a precarious space shuttle before lift-off. The title of this article is borrowed from another novelist across La Manche; symbolist André Gide whose 1925 Les faux-monnayeurs (The Counterfeiters), has been playing second fiddle in my mind as I write. Gide’s tormented prose lends a literary metaphor and a double perspective for us to interpret a phenomenon that is neither ‘Greek’ nor ‘European’ in its origin but both in its manifestation; a global financial bubble which has burst open and spread like a ‘spectre that hangs over Europe’ as Marx and Engels would have it in the preamble of [1]The Communist Manifesto.

The main theme of Gide’s novel revolves around a plot of counterfeit gold coins on one hand and the portrayal of the characters’ feelings and relationships on the other often allowing an external and an internal reading of the book, very much like a novel-within-a-novel. This is potentially a good way to relate to the Eurozone crisis as a phenomenon that unmasks a double process of counterfeit, one European and one Greek. The position held here is that both Europe and Greece are guilty as charged for actively pursuing a politics of brinkmanship, pushing dangerous events to the verge of, or rather brink of catastrophe in order to achieve an advantageous outcome which is no other than the cheap purchase of power at a rather heavy cost. In order to substantiate such a claim an analysis of the argument is attempted, first at a European level and then at a specifically Greek context in the hope that the dialogue that has been avoided in the parliamentary corridors of Brussels and Athens can occur in a sociological forum instead.

Too big to fail?
Is Europe too big to fail, both as an idea and as a political institution? To paraphrase the Latin poet Virgil; fortunate is she who is able of things to know the answers and the causes too. Economists and political commentators alike may not have the solution to the enigma of causes but they have luxuriated playfully in asking, like Shane Swift has, When Does Too Big To Fail, Become Too Big To Bail?, an existential question that has become part of the problem of Europe, and its financial wing (the Eurozone) since the first signs of recession manifested themselves in 2008. The residual sociologist in me compels me to steer away from an economistic view of what we have come to routinely call the Eurozone crisis and rather favour a more social and political interrogation of whether Europe is failing and if so why. My disciplinary education and sensibility reveal an understanding of the EU crisis as fundamentally if not intrinsically socio-political, and one that dates back to its very formal formation in the Maastricht Treaty of 1992 which created the European Union and led to the creation of the single European currency, the (now deflated) euro. The problem of course is not the drafting of the Treaty but rather the belated realisation that the European Union and its currency were launched with a huge democratic deficit; what seemed like a rose-coloured, romantic union now appears more like a felony and betrayal turning much too quickly from infatuation to disillusionment, seeking composure but not finding equanimity.

This cannot be more clearly manifested than in the embittered character and brisk tone of reaction towards the sudden emergence of ‘our’ Union’s failing currency, a moment which revealed deep cracks and fissures in the European dream and led to stark, irreconcilable divisions where it should have shown power in unity. The very orientation of the whole ‘crisis’ debate on a European level as a purely economic, financial and fiscal one automatically projected veritable weaknesses in marshalling the political in the aid of the financial, resorting instead to managerial solutions to a broader problem than mere number-crunching. Out of such an atmosphere of miscommunication arose a ‘chaos according to plan’ paving its way through bailout agreements, austerity measures and memoranda which were at the outset morally reprehensible and therefore naturally destined to fail. The fiscally strong North harassed the Union’s Southern weaklings demanding that they kick themselves into shape through a series of abominable formulae passing on as solutions eventually becoming the current nightmare of member states who fear contagion and the breaking up of the euro. The dominant narrative explained this new toxic state of affairs in divisive and oppositional terms alluding to Aesopian moralising tales of frugal ants such as Germany, France, Netherlands and Belgium lending frivolous grasshoppers such as Greece, Italy, Portugal, Ireland and Spain.

The problem with this story-telling is that it forgets how little sense it makes to operate on a binary logic within a monetary union, a paradox identified by a host of Nobel Prize winning economists from Joseph Stiglitz to Paul Krugman who poignantly described Greece as a ‘victim’ in a recent op-ed of his for the New York Times explaining how ‘the origins of this disaster lie farther north, in Brussels, Frankfurt and Berlin, where officials created a deeply — perhaps fatally — flawed monetary system, then compounded the problems of that system by substituting moralizing for analysis. And the solution to the crisis, if there is one, will have to come from the same places’. Krugman is not alone in decrying this bailout regime nor does he stand out as a solitary voice in identifying the paradox of agreeing to operate within a monetary union but at the same time seeming unwilling and uncooperative in finding imaginative and mutually beneficial solutions for helping not just the fellow members of your union but that very union itself. Yanis Varoufakis, Professor of Economics at University of Athens and Visiting Professor at the Lyndon B. Johnson Graduate School of Public Affairs at The University of Texas at Austin, has repeatedly asked the vexing question of whether other monetary unions such as the US dollar have ever, in times of prosperity and/or crisis, witnessed accusations where New York would, say, criminalise Ohio for being a fiscal burden and therefore threaten with scenarios of exit from the union and disorderly default. The answer comes from Paul Krugman who invites us to ask ourselves; ‘why does the dollar area — also known as the United States of America — more or less work, without the kind of severe regional crises now afflicting Europe? The answer is that we have a strong central government, and the activities of this government in effect provide automatic bailouts to states that get in trouble’.

What is at stake here is not a problem of remuneration and book-keeping but rather an inability to reach political consensus preferring instead methods of racketeering by means of extortion and loan-sharking, thus creating a
threat and then charging for its reduction through a series of unsustainable political decisions that memoranda and bailouts have proven to be. The framing of the story of the failing euro in such terms soon morphed into everyday rhetoric influencing popular attitudes where habitual disparagement of Europe’s southern states as ‘PIIGS’ as an acronym used to refer to the economies of Portugal, Italy, Greece and Spain becomes a common joke graduating to even more abusive terms employed in the mainstream media like Jeremy Paxman’s allusion to Greece on BBC’s Newsnight as a ‘bad kebab being vomited up’ or Christine Lagarde’s differential sympathy for victims of poverty in sub-Saharan Africa but not for Greeks hit by the economic crisis. This insensitive mud-stream of slander towards and renunciation of 31-year old EU member states, cannot be interpreted merely as exaggerated, offensive and distasteful satire alone, but rather denotes a profound deficiency in the European identity where Union members feel less like beneficiaries in a common socio-political enterprise built on trust and more like opponents occupying a space of ethnic bigotry, public misapprehension and moral usury.

Only a shift in the European political imaginary would usher in a period of more harmonious coexistence where consensus is made out of consent and dissent locked in their interdependence, where synergy and not rivalry justifies their union with the powerful acting in similar ways to Karl Marx’s observation in the preface of Das Kapital that ‘[t]he country that is more developed industrially only shows, to the less developed, the image of its own future’ celebrating a unity that produces and is based on community of interests, objectives, and standards. Yanis Varoufakis and Stuart Holland’s Modest Proposal for resolving the Eurozone crisis works towards this direction where the crisis is envisaged as an intrinsically European problem which can be reframed as a European political and civic asset by treating any debt as commonly European and not exclusive to any member state while at the same time setting up a mechanism of surplus recycling where the strong would aid the weak precisely in the fashion that Krugman suggested with reference to the American example. Any such paradigm shift would not only lift the Eurozone’s civil mood up but would radically lead to a re-interpretation of the terms of discussing the crisis where the strong don’t throw loans at the problems of the weak, nor do they behave hegemonically by setting the tone and wielding the decisive power at the expense of the benighted Eurozone members who fear any deviation from the dictates of their northern neighbours. Krugman, Varoufakis and Holland are not solitary exceptions in opposing the savage squeezing of wages and livelihoods in favour of faulty rescue plans and profit-making machinations; from Slavoj Žižek’s depiction of Greece as a ‘humanitarian victim’ and Die Linke’s Sahra Wagenknecht opposition to the European fiscal treaty as ‘an enemy to democracy’ to Amartya Sen’s warning that ‘austerity is undermining Europe’s grand vision’, not to mention the numerous petitions and statements of solidarity from Europe’s intelligentsia influencing the ‘We are all Greeks’ rallies.

This climate of political disjunction amounts to the first existential crisis of post-modern Europe since the profound shock on the Old Continent’s conscience facing the rubble of World War Two. The implicit agreement in the upshot of the war then was the recognition that ‘we, as Europeans do not wish to re-live history in such a light ever again’ coupled with the romantic vision of a united avowal to that promise. The cultural and socio-political climate in whose orbit we find ourselves twirling today however, feeds precisely on the raw materials that inspire discrimination, prejudice and hostility on the brink of warfare, not by ammunition but by a cold and calculating militarisation of the European spirit mediated and serviced by financial institutions. Europeanness seems to be running low on imaginative and institutional resources in upholding its exalted image of oneness, nor does it seem to democratically celebrate its diversity in the way that Henri Cartier-Bresson’s photographic portrait of ‘The Europeans’ found and showed evidence of a greater identity, a family likeness shared by the people and the landscape beyond nationalism and the particular characteristics of each nation. Cartier-Bresson’s Europeans are seen at work, in the streets, travelling and gossiping. Sometimes they are lone figures; a photograph may show only a single gaze, a glimpse of a face. Often, however, Cartier-Bresson turns his camera to couples, mirrored individuals, linked solitudes or crowds, gathering to celebrate or to protest. Is this image relevant, applicable or representative of today’s lived reality of and in Europe?

A cursory re-reading of Gerard Delanty’s (1995: 1) Inventing Europe helps us orient ourselves around the mirage of our Europeanness by recognising that ‘every age invented the idea of Europe in the mirror of its own identity:
Europe is as much an idea as it is a reality, but it is also a contested idea and it was in adversity that European identity was constructed as a dichotomy of Self and Other. My personal reading of Delanty’s book isolates a number of cautionary points that I feel are useful nodes towards a brief commentary on the current existential crisis of the European experiment. The first is that Europeanness probably never managed to forge emotional ties analogous to the imaginary idea of nationhood. In its effort to overcome nationalism and mould a sense of identity and community, Europe used the same tools (flag, anthem, passport, common/shared history) but without much success. The second point is that the process of unification in the name of Europe and its associated ideology arrived with a top-bottom configuration by means of political decisions (of an elite) and not through social, political and civil struggle, thus showing a remarkable gap in political representation. The third ambition of the book seems to be the deconstruction of the idea of Europe as ‘one’, interpreting its identity not simply as an [12]imagined community but as intrinsically divided. That point is advanced further with the claim that the reality of the European continent has at the outset been the preparation for war, not representing unity but opposition and conflict expressed by means of racial, religious, cultural and ideological exclusion of ‘the other’ be it heretics, Muslims, Jews, Slavs or unwelcome arrivals from the New World. Communism was also featured in this gallery of evils upgrading to the threat of Islam(ism) in the post 9/11 climate.

This bleak or crudely realistic, depending on viewpoint, image of Europe, compels us to imagine Europe more as a Union of profound divisions rather than a romantic project inspired by a strong sense of unity. The recognition of the above leads us to an image of Europe as a phantom category a zombie political realm to which we still remain faithful for no apparent reason, save for its dissolution which we are witnessing today. If we are to agree with Delanty’s analysis of the idea of Europe ‘judged by how it treats its minorities and not by reference to ambivalent notions of unity’ and recognise the need for any idea of Europe to be ‘linked to a new politics of collective responsibility based on post-national citizenship’, it may be worth to risk the assumption that the PIIGS start looking very much like the minorities of which Delanty speaks about, and it is to one of those domestic omnivores that we shall devote the remainder of this text.

Lambros Fatsis is a final year DPhil student at the School of Law, Politics and Sociology at the University of Sussex. His doctoral thesis concentrates on discussions of public sociology, the role of the University and intellectuals, while other research interests include black music, urban culture and the history and sociology of the Jamaican soundsystem. He also performs as a reggae selector/radio presenter under the name Boulevard Soundsystem and is a contributor of Billboard magazine on reggae music.

The Counterfeiters (part 2) (2012-08-10 08:00)

Too much for sale?

The myth of Europe is a Greek invention and so is tragedy and drama. What follows, amounts to no more than dramaturgical field-notes from the country's trials, tribulations as well as its responsibilities and duties, not so much in the writing of the European myth but in the staging of its own role, its costume and political choreography. "Woe betide she who chooses to dwell on this issue", I hear the chorus scream, yet I'm happy to do so as a curious insider/outsider hybrid with respect to Greek socio-political affairs; insider because I am of Greek descent and outsider because I live abroad, a curious position that could be likened to a schizophrenic telescope lens that zooms in and out depending on circumstances, events and moods even. This form of 'double-consciousness', to paraphrase W.E.B Du Bois, was exemplified by Greek sociologist [1]Constantine Tsoucalas, back in 1969 in the writing of his seminal book The Greek Tragedy, where he identified Greece as European but not Western, Balkan but not Slavic and Oriental but not Muslim, a complex cultural mosaic of identity sculpted by centuries of occupation, civil wars and military coups d'état, leaving its sense of self-orientation fundamentally divided and erratically arranged throughout the course of its (national) history. The cultural dowry of this traumatic process of constant decimation either by external threats or internal divisions, still survives today in the voting culture, ideology, party formation, political participation and national identity of 21st century Greece. In fact a deep sense of injustice has inculcated early on in the collective psyche of the country and this is reflected in many of today's cultural patterns; convulsed by the aftermath of such tragic historical events and scourged by the current climate of recession, contemporary Greece exhibits certain peculiarities that I have isolated into four main categories, in order to render them intelligible and useful/pertinent to the discussion here, followed by a few modest suggestions of possible ways out from the country's socio-cultural and political labyrinth. These four areas of Greek political default revolve around (a) voting culture, (b) party formation, (c) civic comportment/political behaviour and (d) ideology, while the proposed ways-out are inspired by a personal interpretation of a [2]televised interview of Cornelius Castoriadis to the Greek National Broadcasting Corporation filmed in 1984.

Hailed as [3]'the most important elections since the return to democracy', May 6th and June 17th have proven to be 'hot' dates on the global journalistic calendar so much that The Guardian has devoted a whole section of its online edition to [4]them. The reasons for such media attention however have very little to do with Greece itself or its 1284
political standstill but rather with the witch-hunt of scenaria predicting ‘disorderly default’, ‘exit from the Euro’ and ‘fear of contagion’ in European and global markets. Leaving such fear-mongering aside, it is important to bring to the surface the hidden text of voting and electoral processes in Greece in the hope that the paradoxical re-run of the May elections in June may start making some sense to the uninitiated in Greek political affairs.

Voting culture in Greece is an act of fandom as a big part of political behaviour (t)here is. The reason for that is not mere infantilism of the Greek public, but rather the very fragmented history of the country’s politics which has not known and therefore does not recognise a smooth-running electoral process, but rather resembles a smouldering volcano of impassioned political choices made in critical times resulting in the complete and utter disaster of embittered factionalism. To understand voting in Greece it might be useful to allude to the morale of José Saramago’s novel, [5]’Seeing’, where he describes a fictional occasion of voting in a political culture that has rendered the very process of voting meaningless. In Saramago’s book the ultimate evil is the plague of blank ballots, also a common pastime in Greek elections, but in the Greek case the whole edifice of voting amounts to a problematic process given that elections resemble, more often than not, veritable battlefields of emotion with the ballot boxes playing the role of animated repositories of discontent. This may be applicable to other countries too of course, yet in the very last elections abstinence featured as the preferred choice of the electorate climbing up to 40 % when the first party won just a 29,66 % of total votes. I am making no recriminatory argument against abstinence however, nor am I condemning voting choices, instead the emphasis here is on an alarming statistical result, not on finger-wagging a choice that often makes sense if one considers the second fault-line of Greek politics; party formation.

Political parties in Greece often occupy the position that football clubs hold in other national cultures though overt hooliganism is not absent from the country’s stadia either. Because of its fragmented political culture, a direct result of multiple historical traumas which have enforced deep divisions in the political imaginary of the nation, Greece’s political parties fish for votes by playing cheap vaudeville with a populist orientation and gusto marshalled by party leaders as a way of securing public approval and appeal. This is understandable but often borders on the tragicomic in the Greek case as the rhetoric, the public orchestration and display of the party leaders themselves often reminds one of a Tsarist image of holy men and healers who by means of triumphalist and apocalyptic verbiage alone will soothe all social ills offering Messianic pronouncements and promises to a helpless crowd, provided that they are endowed with peoples’ votes of course. [6]Greek cinema abounds with satirical representations of this venerable tradition, but so does current political reality too (here’s just a [7]sample of Greece’s PM on a recent pilgrimage to a church in a troubled neighbourhood of Athens, the body language and the staging of the scene is, I believe, telling).

This type of fanciful political gesturing speaks volumes about patterns of political behaviour and civic comportment in Greece relying heavily on cronism, clientelistic politics and populism, sustaining and maintaining a political enterprise that does not listen to itself but only to its narrow self-interests and motives. This is also witnessed in the support that the electorate has vouchsafed for two rivalling political families; the Papandreou on the democratic-socialist front and the Karamanlis representing the centre-right, who have been succeeding one another in power from 1944 until Papandreou the third’s downfall in November 2011. This continued support is emblematic of a peculiar faithfulness not to an evolving political force which renews itself but to an uncritical auto-da-fé support which allows the country’s political ghosts to loom around the parliament and make key decisions on matters that they and their predecessors have consistently failed to resolve during their respective political careers. Peoples’ wants are very much linked to party promises, making politics seem like a mediator between these two impulses rather than a process of negotiation and agreement on how to run a country. This clustered view of political participation transforms voting into tokenism where each vote matches a personal favour made by a politician of the old guard thus creating a climate where voters depend at large on favours and expect these to be delivered by the state, when they aren’t revenge is taken in the next elections as if the whole process of democratic voting is not the common agreement on some key social needs to be catered for by elected representatives of the public but rather a regime of favouritism that replicates itself ad aeternum. A veritable crucible of activity in the preparation of such political alignment is the University where political groups have immense influence not only in attracting prospective
party supporters but even in the running of the institution itself not to mention their function as the prime site of catechism to each party’s political doctrine. This political ethic of alignment-for-benefit and the choice of politics with desirability of the favourable outcome as its sole purpose may seem exaggerated and far-fetched and it is, but it also explains why people expect and demand so much of the state and its appointed functionaries.

Ideology constitutes the prime ingredient that sugar-coats political belief, given that the political parties’ programme and ethos is of course represented not by announcements that publicly declare favouritism, but by reference to sensitive ideas that have inspired hateful clashes in Greece feeding on the traumas of the Civil War from 1946 to 1949 and the military junta of 1967-1974. Memories from such incidents are tattooed to the country’s conscience and are often evoked to provoke reaction which erupts in a furtive terrain of battling political sentiments, living off rage and fostering a cultural climate of bitter misrecognition and incomprehension. This highly polarised struggle between left and right still targets the current political vacuum in Greece with slogans that often remain virtually unchanged and sometimes still remind both sides of their mutual disparagement in times of war. This never-ending rivalry provides political parties with a rich emotional reserve with which to mould their politics and excite their audience reflecting the narrowness, immaturity and carelessness of the political mainstream in Greece. Such an ideological divide could have been smoothed out during the transitional period of metapolitefsi (regime change) from the fall of the dictatorship to the legislative elections of 1974, ushering in the democratic period in the history of modern Greece, in an effort to consolidate rather than further segment the existential map of the country.

Instead, heretics on the left continue to hurl abuse to schismatics on the right in a herostratic political exchange that does not envision consensus as the embattled hybrid of political dissent and consent brought together, but prefer outright clash, destruction and the legitimisation of violence towards ‘the other’ and towards democratic institutions too, be it listed buildings, statues, public thoroughfares and pedestrian pavements. Ideology is the fuel of such enmity amounting to little more than a wilful suspension of scepticism based on selectivity of perspectives, Manichean moralism and absolutism. Politics done this way inevitably degenerates into flat-footed verbalisations of campaign slogans where there is urgent need for negotiating differences to resolve them, always with passion but never with violence. This hotbed of ideological warfare facilitates the lamentable and quite unpardonable 7% that Greek voters secured for [8] Golden Dawn, a volatile neo-Nazi garrison formed by knife-wielding vigilantes, now democratically elected in parliament promising to ‘clear’ the streets of Athens from the Untermenschen. A most sober reader could attribute this to the mushrooming of [9] ‘angry, white men’ in times of crisis but my analysis is less sympathetic primarily because Golden Dawn is closer to EDL than it is to BNP (to use two British examples), with militias that patrol its political strongholds and unleash anti-immigrant pogroms [10] as I write, but also because it is hard for me to imagine the rise of such a phenomenon as unrelated to a failing political mainstream and an incompetent opposition movement which opposes everything and suggests very little with extremists occupying the gap in-between.

This heritage of selfish voting, nepotism, civil disassociation and ideological chasm has bequeathed the social scientist to the role of a light-house keeper who battles the elements in solitude to shed some light on the rocky edges of the sea for the adventurous explorers out there. Luckily, I can rely on Cornelius Castoriadis’ long exploration of the [11] crossroads in the labyrinth for a guided tour to some distinct features of the Greek polity and what can be done to creatively engage with them. Departing radically from a simplistic ‘blame-game’ or a logic of ‘excuse-all’ in relation to the political turbulence of his time, Castoriadis emphasised on a psychosocial by-product of the country’s fractured political culture, that being the deferral of responsibility for the country’s malaise to a fictional ‘other’, be it the state, an ideological opponent or the spurious intervention of a great power from abroad looking to impose its expansionist politics on Greek soil. He therefore identified how, we are our society, our institutions and our politics, echoing Bertolt Brecht’s (1972: 17) familiar urge to ‘make clear how the net of fate is knotted and cast, cast and knotted by men’. Castoriadis is known for his ideas on the self-constitution of society, resulting in his world-famous The Imaginary Institution of Society on which he draws to describe how institutions are born and made in society by society and do not land from an unidentifiable mysterious nowhere; rather we are the very makers of our institutions.
A paradox follows however, this being his observation that although self-made, our institutions need to be treated as if they were created elsewhere by others or we would not conform to them, were we to recognise them as the products of our own imagination. In the course of his [12]televised interview Castoriadis expands this thought by adding that rules ought to be seen as modes of self-regulation that facilitate and do not obstruct our participation in society; rather they provide agreed-upon codes that enhance our co-existence and offer a mutual understanding of each other by means of established cultural habits and social reflexes. Armed with this view of society as the imaginative product of humankind exercised every time we make a choice over how to participate in this realm we have designed and built for ourselves, it is tempting to offer a few thoughts on what can be done to circumvent the current political habits and experiment with a more open-ended articulation of our polity. This would require an experiment both in terms of thinking and in terms of social participation as politics would need to locate a different power source from which to draw its resources; not from a party to which one is aligned for personal gain, not from an ideology used as a rulebook for everything, and certainly not reliant on the state to provide for social practices that we can institute ourselves.

What is profoundly lacking is civic capital, this abstract notion that brings together values and attitudes, institutions and rules, leadership and decision-making. Appropriating the [13]Annales School approach to the study of history, which gives priority to long-term historical structures over events, we can arrange the ingredients of civic capital chronologically with values and attitudes occupying the longue durée, institutions and rules the intermediate durée and leadership and decisions acting in the short durée of political action and decision-making processes. To enhance a society’s civic capital means to boost civic engagement, secure political equality, foster solidarity, inspire trust and work towards building a strong associational life as the basis of the writing of a new social contract where the personal shoulidingering of responsibility plays a pivotal role, not in the notably cruel form of ‘you are responsible for what is happening to you’ but rather in its more humanistic version; ‘I alone will save the world, if it vanishes, I am to blame’. The difference between these two slogans may at first appear minimal but on closer look it isn’t; the first inspires guilt at the outset while the second puts forward one’s willingness to lend oneself in the (re)making of his/her social world. Apart from a difference of tone and priorities, these two slogans differ in terms of origins too, the first expresses a neo-liberal sentiment, and the latter comes from the grand humanistic poetry of Nikos Kazantzakis; in a strong civil society however the ideological provenance of both propositions should matter very little. What ought to be at stake is the message that each phrase articulates and our willingness or not to act upon it or reject it; for what it says and not for where it comes from.

A political culture that wilfully hands over its fate to consistently and repeatedly failing political groups, shows unwillingness to assume commonly shared civic responsibilities and duties, and a deferral of these to the closest political relative who will then be blamed for making a mess. This observation paradoxically guards us from the realisation that we base our interests and motives on these chosen political groups to generate favourable outcomes for us, be it favours or what have you, and when they fail we feel doubly cheated; first of all by ourselves and second by our elected representatives. Old habits die hard however and despite the brief stint of the [14]indignants’ protests in Syntagma Square in Athens which inspired romantic paeans of self-rule, the 2012 elections saw the country’s voters marching on what Bertolt Brecht ,again, would call ‘the parade of the old new’. There were [15]no indignados to decry the elections’ outcome, instead the majority of votes went to the two traditional political families of left (12.28 %) and right (29.66 %) with a surprising rise of SYRIZA (26.89 %), a coalition of the radical left which rejected its participation in government and subsided instead to the role of the opposition allowing for the more moderate DIMAR (6.26 %) to form government with PASOK and New Democracy (the traditional poles of leftists and rightists in Greece), with the remainder of parliamentary seats distributed to the right wing Independent Greeks (7.51 %), the neo-nazi Golden Dawn (6.92 %) and the Greek Communist Party (4.50 %). This is hardly a revolutionary outcome of elections held (twice!) in times of crisis but a rather conformist and backwardly mirroring of traditional voting practices and trends making Brecht’s aforementioned poem sound chillingly appropriate;
I stood on a hill and I saw the Old approaching,

but it came as the New.

It hobbled up on new crutches which no one had ever seen before

and stank of new smells of decay which no one had ever smelt before.

(Bertolt Brecht, 1939)

If the result of the 2012 elections was an accident, then this whole article loses its currency, if however it can be explained through the lens of the four political ills that I identified earlier (voting culture, party formation, civic comportment/political behaviour and ideology), then we might fear their transformation into the five giant evils in society identified by [16]William Beveridge as squalour, ignorance, want, idleness and disease. Squalour because the country is in financial trouble and those who are poorer cannot afford to seek medical attention, and thus cannot work, which furthermore creates less income, and leads to lack of labourers available. Ignorance which feeds on the political mainstream and the electorate’s ignorance to their role in a community that is not run in terms of factionalism and the granting of favours. Disease linked to financial trouble because sickness forces people to discontinue working. Want because it is ill-represented in individual and not in collective terms despite the [17]very many efforts towards this direction, and Idleness enforced or chosen starving the country from its creative potential.

What this catalogue of evils makes clear is not that such an analysis is correct and that it contains the seed of change but that the existential anxiety and the insecurity felt by crisis-ridden Greeks amounts to a daily climate of political fear bred externally by laughable memoranda and internally by the emotionally charged political void that Greece finds itself unhappily married to. The solution lies neither in the tutelage from the ECB and the IMF nor in the demagoguery and the sophistry of our native imposters, but in a concerted effort to strive for our polity ourselves by means of our imaginative powers and a careful management and mobilisation of (a) our voting as an exercise of reason, (b) the transformation of our political parties into representatives of our collective decrees, (c) the end of ideology as dogmatic confines and (d) the emergence of a civic and political behaviour that draws not on the fossilised embittered divisions of the past but on the common struggles of the present addressed with faith in civic capital and collective, associational social life.

If there’s one ambition to this article that is to show how the EU and Greece alike are seeking stability on shifting sands by enforcing a politics of counterfeit where the aspiration ought to be in the imagining of a new credible fiction, narrative, story text, to bind itself together in unitary terms and not by sustaining a climate of divisive betrayal of its ideal.

Sociological Imagination and #UKRiots (2012-08-11 08:00)

[1]"Sociological Imagination and UK Riots" on Bundlr

It has been over 50 years since C. Wright Mills wrote the Sociological Imagination. In that time the world has changed beyond recognition: the Cold War ended, the Keynesian consensus broke down, a globalizing neoliberalism rose to the ascendancy and the internet began to transform human communication and culture. In recent years, with 9/11 and then the financial crisis, it seems that history has returned with a vengeance. Is Wright Mills’ notion of the ‘Sociological Imagination’ still pertinent today? How can Sociology help shed light on the rapidly transforming world around us and the consequences of these transformations for the people who inhabit it? What does the ‘Sociological Imagination’ mean today?

The [1]Sociological Imagination website is seeking short articles which engage with these themes, or particular aspects of them. Submissions should be 500 – 1500 words and [2]e-mailed as a Word document. There is no deadline for submissions.

Paths in the fog – Milan Kundera and Zygmunt Bauman (2012-08-13 08:00)

Norbert Elias writes, I think in his book [What is Sociology], that it is only with hindsight that we can see that A led to B to C and so on because the contingency and uncertainty of how myriad actions and consequences, intended and unintended, worked out to produce what actually happened are open to historical and sociological investigation. However, in the present, as we stand today, in conditions of endemic and permanent uncertainty (to paraphrase Zygmunt Bauman’s description of liquid modernity) we cannot know for certain how things will turn out. The best
we can do is to map out possible more and less likely future scenarios and, as actors and citizens, be as informed as possible in what direction we as individuals and collectively strive for. Certainly a starting point for this would be the unmasking of the ideological myth that there is no alternative.

One of Bauman’s favourite authors is Milan Kundera. Bauman has a particular view on the relationship between literature and sociology, or more precisely a certain sort of literature as sociology, that I find very interesting and will post about later. Here is an extract from one of Kundera’s essays that expresses well what Elias was saying about retrospective certainty versus forecasting uncertainty. The list of intellectuals and literary figures he refers to in this quote are all individuals who have been put on trial by history for supporting the wrong side, fascist or communist and some for both at different times. His argument is that looking at the present and future from their position and perspective might produce a very different appraisal of their character and their work. We are looking back with the clarity of hindsight; they were looking forward through the fog. The references to Tolstoy all relate as far as I can tell to War and Peace.

Tolstoy looks back on the Napoleonic Wars from a distance of fifty years. In his case, the new perception of history not only affects the structure of the novel, which has become more and more capable of capturing (in dialogue, in description) the historical nature of narrated events; but what interests him primarily is man’s relation to history (his ability to dominate it or to escape it, to be free or not in regard to it), and he takes up the problem directly, as the very theme of his novel, a theme he explores by every means, including novelistic reflection.

Tolstoy argues against the idea that history is made by the will and reason of great individuals. History makes itself, he says, obeying laws of its own, which remain obscure to man. Great individuals “all were the involuntary tools of history, carrying on a work that was concealed from them.” Later on: “Providence compelled all these men, each striving to attain personal aims, to combine in the accomplishment of a single stupendous result not one of them (neither Napoleon nor Alexander and still less anyone who did the actual fighting) in the least expected.” And again: “Man lives consciously for himself, but is unconsciously a tool in the attainment of the historic, general aims of mankind.” From which comes this tremendous conclusion: “History, that is, the unconscious, general herd-life of mankind…” (I emphasize the key phrases.)

With this conception of history, Tolstoy lays out the metaphysical space in which his characters move. Knowing neither the meaning nor the future course of history, knowing not even the objective meaning of their own actions (by which they “involuntarily” participate in events whose meaning is “concealed from them”), they proceed through their lives as one proceeds in the fog. I say fog, not darkness. In the darkness, we see nothing, we are blind, we are defenseless, we are not free. In the fog, we are free, but it is the freedom of a person in fog: he sees fifty yards ahead of him, he can clearly make out the features of his interlocutor, can take pleasure in the beauty of the trees that line the path, and can even observe what is happening close by and react.

Man proceeds in the fog. But when he looks back to judge people of the past, he sees no fog on their path. From his present, which was their faraway future, their path looks perfectly clear to him, good visibility all the way. Looking back, he sees the path, he sees the people proceeding, he sees their mistakes, but not the fog. And yet all of them–Heidegger, Mayakovsky, Aragon, Ezra Pound, Gorky, Gottfried Benn, St.-JohnPerse, Giono–all were walking in fog, and one might wonder: who is more blind? Mayakovsky, who as he wrote his poem on Lenin did not know where Leninism would lead? Or we, who judge him decades later and do not see the fog that enveloped him?
Mayakovsky’s blindness is part of the eternal human condition.

But for us not to see the fog on Mayakovsky’s path is to forget what man is, forget what we ourselves are.

Inspiring (!?) corporate theme songs (2012-08-14 08:00)

The private security company G4s, already subject to wide ridicule for their [1]handling of the Olympics security contract, have received even more for their 80s Rocky-esque corporate theme song. But it turns out they’re not the only corporation to try and find artistic expression for their organisational ethos.
From PriceWaterhouseCoopers
Since returning northwards, and knowing that it would only be temporary, I’ve made the decision to try and get out into the Northumberland countryside as much as possible. It’s not going well, largely owing to my reluctance to leave my desk having begun to believe (erroneously of course) that no one will ever employ me if I take a day off. Anyway, after it was pointed out that I hadn’t left the house in several days and there was the possibility of furnishing my new flat with some charity shop antiques I set off on a jaunt to Wooler and Powburn with my Ma. Wooler, for those not in the know, is the real life setting for Postman Pat. Close to my heart! We chose to go by the twisty-windy countryside roads and so I had ample time to listen to [1]Saturday Live on Radio 4. One of the items was about Georgina Blackwell, a beautician who successfully took on a development company in the High Court to stop them building over her mother’s home. Close to my heart! We chose to go by the twisty-windy countryside roads and so I had ample time to listen to [1]Saturday Live on Radio 4. One of the items was about Georgina Blackwell, a beautician who successfully took on a development company in the High Court to stop them building over her mother’s home. Throughout the item Sian Williams (who I adore) focused very heavily on the disparity between the well-trained middle class professional lawyers working for the development company and that fact that Georgina was ‘only’ a beautician with the clear implication that she was out of her depth intellectually, professionally and socially. But the thing that really stuck out to me was the attention paid to Georgina’s physical appearance, namely the fact that she is blonde. Constant repetition was made of the fact that she was ‘a blonde
Now I'm well aware that all shapes and forms of women can suffer from stereotyping and that there's nothing new in aligning being blonde with being an airhead. But I had rather thought (hoped?) that this link had gone out of fashion in recent years. After all in our WAG/celebrity/reality star culture it doesn’t seem that being blonde makes you any more desirable than being brunette. But apparently being blonde still connotes being dumb. In light of this I began musing on my on blondeness and the extent to which I play to the stereotype…

I've been blonde for years – fake but I had very blonde hair as a child so I assert a pseudo-naturalness to it. Some things I notice as a blonde – compared to having brown/red/black hair:

- People (and by this I mean predominantly men) stare at me more often and for longer in the street
- More cat-calling in the street
- People think I'm vulnerable and weak – physically and emotionally
- I'm spoken to more slowly than to my brunette (or male) companions
- People are surprised (but not shocked) when they discover I'm a postgraduate student. Even more so when they find out I'm at (or was at) Cambridge
- People think I'm really young
- Men think I'm completely sexually available

When I say 'people' or 'men' I'm aware I'm making a massive generalization. These observations are based on my perception of my experiences and occur in probably around 70 % of passing interactions as well as some work relationships and a tiny bit in academia. And not all of them happen all at once. Now, admittedly, not all of this is because I’m blonde. I’m also quite slender which probably goes to being seen as physically weak and I do look kind of young. But not that young. Sadly.

Recently, lacking the necessary readies to keep regular appointments with the goddess that dyes my hair I’ve been resorting to home colouring with the resulting problem of not quite getting the perfect shade. Consequently I've been contemplating going brunette. But something has stopped me...

Upon thinking things through I find that I’m rather sentimentally attached to being blonde – and I’m going to admit that part of this is the assumption by others that I’m younger than I am and a certain perverse delight in being initially approached as dumb and the ensuing damage to those assumptions that revelation of my academic work brings. Though it’s frustrating to be so frequently engaged with on a level of 'Bless, she must be quite thick', sometimes it feels like an advantage. I wrote my Master of Letters dissertation on different kinds of femme fatale in British detective fiction and one such type was what I referred to as the 'disguised' woman – a character who looked like the innocent flower but was in fact the serpent under it, to paraphrase Shakespeare. She used her innocent blonde vulnerability, the fact that others (except Poirot, of course) took her to be silly and weak, in order to manipulate the world around her to her own benefit. Whilst I'm not claiming any sort of femme fatale status, not least because they always die, I do sometimes wonder if there's a certain gain in confounding expectations. More often than not I find
that it's other people, rather than me, that fall into the gap between what is expected of me as a 'dumb blonde' and what I actually am. If you're believed to be less capable and demonstrate yourself to the contrary, it's not your judgement that is questioned. Despite a preference for not assessing people based on appearances I'm both certain that we all do it, and secure enough in myself that I can weather others thinking me an idiot. That opinion doesn't ever last beyond my first sentence.

Moreover this has got me thinking about my position as a feminist and any tension between my engagement with – and I suppose some my say my manipulation of – the stereotypes of being blonde. All of these markers of blonde identity link in so clearly with female identity and femininity. Your archetypal blonde, busty airhead is everything we're taught not to aspire to as young feminists. But then is gaining advantage from taking the piss out of the image not just me buying into a hegemonic norm and reinforcing it? Or am I subverting and manipulating it – beating gender stereotyping at its own game? I really don't know. All I do know is that when people see me the first thing they see is blonde.

The Libertarian Con? (2012-08-16 08:00)

Warning: if you regard yourself as a 'libertarian', in the American sense of the term, it might be best if you avoid reading this strident critique of the role libertarianism is coming to play in contemporary political culture. But we're sure you support our right to post links to articles which deride your politics.

At a time in which our society has never been more interdependent in every possible way, libertarians think they're John fucking Wayne looking out over his ranch with an Apache scalp in his belt, or John fucking Galt doing...whatever it is he does. (Collect vintage desk toys from the Sharper Image?)
Their whole ideology is like a big game of Dungeons & Dragons. It's all make-believe, except for the chain-mail—they brought that from home. Elves, dwarves and fair maidens for capital. Even with the supposedly "good ones"—anti-war libertarians—we're still talking about people who [1] think Medicare's going to lead to Stalinism.

So my advice is to call them out.

Ask them what their beef really is with the welfare state. First, they'll talk about the deficit and say we just can't afford entitlement programs. Well, that’s obviously [2] a joke, so move on. Then they'll say that it gives the government tyrannical power. Okay. Let me know when the Danes open a Guantánamo Bay in Greenland.

Here's the real reason libertarians hate the idea. The welfare state is a check against servility towards the rich. A strong welfare state would give us the power to say Fuck You to our bosses—this is the power to say "I'm gonna work odd jobs for twenty hours a week while I work on my driftwood sculptures and play keyboards in my chillwave band. And I'll still be able to go to the doctor and make rent."

Sounds like freedom to me.

'Red Army 2.0': human-flesh search engines in China (2012-08-17 08:00)

Western understanding of China's 'socialist market economy' leaves a lot to be desired. The phenomenon of renrou sousuo yinqing, human-flesh search engines, sheds some light on the predominant values in contemporary Chinese society:

'*...they are a form of online vigilante justice in which Internet users hunt down and punish people who have attracted their wrath. The goal is to get the targets of a search fired from their jobs, shamed in front of their neighbors, run out of town. It's crowd-sourced detective work, pursued online — with offline results....'*

For me, good urban sociology reminds us that cities are small, intimate things that won’t be around forever. They might seem vast and tall and solid and permanent, but they’re not. Cities are living, breathing organic matter, like a flower or a tree, which get experienced up close and under our feet; and that fact is precisely what sparked Americans to start doing sociology in the first place.

It’s what compelled (historian) W.E.B. Du Bois to leave his office at the University of Pennsylvania and go out into the neighborhoods of South Philly to document the lives of African-American men; and (literary critic and language specialist) W.I. Thomas to rifle through Polish immigrants’ trash on the South side of Chicago so he could find and curate their tossed off letters; and (journalist) Robert Park to, also in the city of Chicago, gather together an entire team of really smart, socially minded graduate students so he could map, well, pretty much every(social)thing.

[6] Arun Venugopal’s WNYC’s series Micropolis, and, especially, his Tumblr, is this kind of sociology. Random and fragmented glimpses of what he, personally, stumbles upon in New York City everyday, his depictions and stories are also, (as academic urban sociology requires), locatable and makes me really wonder and care about things like [9]this, [10]this or [11]this.

Saudi Arabia’s women: small steps for change (2012-08-21 08:00)

How do working women get to work in Saudi Arabia - where there is no public transport and they are not allowed to drive because of their sex? How do women who do not have a male guardian live without an ‘official identity’? What would you need to wear if you went to Saudi Arabia - if you are/were a woman?

[1]

In [2]this short documentary, Sue Lloyd-Roberts exposes how some women rebel against being 'treated like children' and the lack of dignity that they experience in daily life.

An Introduction to Asexuality: An information pack for teachers, journalists, activists and researchers (2012-08-22 08:00)

An Introduction to Asexuality on Bundlr

If your bottom line as an academic is that the world is a complicated and uncertain place, then expect job replacement by a smart search engine (2012-08-22 11:31)

Case in point: [1] A bad analogy between UK Olympic funding and UK science policy funding. Clearly the author hasn’t thought through the idea that in a neo-liberal political economy, targets make all the difference - and the Olympics provided those, whereas those who call for greater national science policy funding don’t. Science policy advocates merely talk about how far the UK’s science funding has fallen below its competitors, how many British scientists have emigrated, how low certain university science enrolments have become and how few science jobs there are. Not good news, to be sure, but not quite the issue that needs to be addressed.

Of course, the neo-liberals may be wrong to demand targets in the first place, though I find that hard to believe. Socialists were the great champions of targets, and no private investor dumps unrecoverable money into
scientific projects for very long. Long-term private investment tends to be justified by deliverables that are largely by-products of the original plan. 'Blue sky' research advocates – and I include myself – need to provide an economic strategy that takes into account that today the cost of potentially failed/useless research is much higher than in, say, Faraday's day, 150 years ago, from which economists tend to take the examples of success.

But then we hear the more general complaint that 'the very idea' of international comparisons is fraught with untold difficulties, at both a conceptual and an empirical level. At that point, you know the postmodernist has come to lunch.

One of the least attractive features of our postmodern condition is the tendency for otherwise well-educated academics to contradict every general statement not with a direct falsification but with a broad range of circumstantial evidence that in some combination may falsify the statement in question, depending on how it's taken. In this respect, they mimic Google's search engines that can be easily consulted with a modicum of web competence. As long as that competence is generally lacking, those academics remain secure in their jobs – but for how long?

There are two problems with the postmodern approach – however intellectually honest it may appear. (1) It turns the critic into a wild card who may be used by whomever stands to gain by casting doubt on the general statement in question. (2) It abandons the classical academic ideal of 'judgement', whereby someone steeped in learning resolves the various claims in question while remaining open to a reversal or his or her judgement in the future.

Tenure was originally designed to enable academics to exercise 'judgement' in the above sense, and thereby provide a role model for students (and the general public) of what it's like to resolve contradictory testimonies in a rational fashion that can then be made a basis for further reflection and action. Max Weber, the great champion of this perspective, thought that its main threat came from dogmatists who refused to admit contradictions. Nowadays the threat comes from the other side, the professional sceptics.

Get on the way, Pussy Riot! (2012-08-23 08:00)

This article was originally posted on the [1]MYPLACE blog. The MYPLACE blog first reported on "Pussy Riot's" anti-Putin [2]punk prayer protest, in March. Now, as 3 members of the group have been [3]sentenced to 2 years imprisonment for "hooliganism," the University of Warwick's Dr Ivan Gololobov writes on the scene in Moscow which forms the background to Pussy Riot's rise to infamy.

For more information on the MYPLACE project, visit the project’s website: [4]HERE. Or follow the project on Twitter: [5]HERE.

In the last few months a lot of media attention in Russia and abroad was drawn to the trial over three members of the feminist punk-band Pussy Riot arrested and charged with hooliganism for their performance 'Punk-prayer' that took place inside of the Christ the Saviour, the biggest Orthodox cathedral in Russia on the 21st of February 2012. Musicians all over the world from Madonna, Paul McCartney and Peter Gabriel, to Bjork, Red Hot Chilli Peppers and
Faith no More expressed their clear disagreement with the proposed sentence and showed their support to the arrested girls. Russian musicians, however, expressed surprisingly little interest to this affair. And if the silence of pop and rock stars whose careers vitally depend on good relations with the authorities is more than understandable, the absence of vocal response from underground musicians looks pretty strange.

It would be wrong to say that such reaction is completely absent, but interestingly enough it comes from rather unexpected corners of the scene. The first song produced in support to Pussy Riot was recorded by a well-known rapper Siava, famous for his colourful portraits of yobs' life. The song was called Maliava Pussy Riot [A prison letter to Pussy Riot], it was released in April 2012 shortly after the arrest.

Since then, no one really added to this single voice until in August 2012 Elizium, an emo-core band from Nizhniy Novgorod came forward with the slogans of support to Pussy Riot on Kubana, the biggest open-air festival Kubana in the South of Russia, and BARTO, a feminist electro-punk band from Moscow recorded a track called Kis’ia eres’ [Heresy of little cats]
The silence of the Russian music underground, and what is more surprising – punk scene is, however, not that unpredictable. As a matter of fact Pussy Riot, although calling themselves a punk-band and using the sign of punk in their performances, never belonged to the Russian punk scene. They consider themselves as art-actionists, clearly place themselves in the context of contemporary Russian actionism, quoting the names of Prigov, Brener, Kulik and other art-provocateurs of the 1990s.

From the very beginning Pussy Riot was an art-project and their personal connection to the famous art-group Voina is not an accident in this regard. Ideology and actions of Pussy Riot are clearly oriented towards media reaction. The songs which appear in the internet are pre-recorded in studio, their actions are pre-rehearsed and sometimes include several takes, like the one in the Christ the Saviour, where footage from an identical action in a smaller church performed earlier was mixed in the main clip. This is, somehow, not particularly punky. In the same way as it is not particularly punky to stage a gig and to play without any audience, just for the cameras, portraying it later as a ‘concert’.

The punk-prayer is not over, it is being written now, and its after-effect appears to be much more important than the performance itself. Performance itself was not that interesting and, moreover, many found it appalling, but what happened next is by far much more appalling. This however made Russian music underground silent as it did not find the ways of reacting on this performance which appeared to be much more real than any ‘real’ punk concert, ironically suggesting that probably the only true rock and punk musician in Russia appeared to be rapper Siava, previously known for his hit Bodriachkom, patsanchiki [Get on the way, lads], caution, explicit lyrics!!!

Chomsky vs. Foucault (2012-08-27 08:00)

We suspect many readers will have already seen this video, recorded at a 1991 debate between Michel Foucault and Noam Chomsky. But if you haven’t then you’re in for a treat: two of the finest radical minds of the 20th century debating human nature, political change and the role of theory in crafting a more just society. There is a full transcript of the debate online [1]here. If you’re interested in Chomsky’s political thought, we can’t recommend the site in this link enough.

Human nature and social change (2012-08-28 08:00)

Our concept of human nature is certainly limited; it’s partially socially conditioned, constrained by our own character defects and the limitations of the intellectual culture in which we exist. Yet at the same time it is of critical importance that we know what impossible goals we’re trying to achieve, if we hope to achieve some of the possible goals. And that means that we have to be bold enough to speculate
and create social theories on the basis of partial knowledge, while remaining very open to the strong possibility, and in fact overwhelming probability, that at least in some respects we’re very far off the mark.

- Noam Chomsky from the debate with Foucault posted yesterday

The crisis of empirical sociology: against defeatism and rethinking the public role of the qualitative researcher (2012-08-28 16:25)

As [1]Savage and Burrows (2007: 894) point out, the popularity of the in depth interview in British sociology stems from an intellectual reaction to the excesses of Parsonian functionalism: responding to talk of reference groups, norms and values with the valorization of intensely ideographic methods which are geared towards the elaboration of people’s own values in their own terms, seen as particularly significant when dealing with marginal or oppressed groups liable to be squeezed out of the functionalist world view. While they are certainly correct to say that the value of such in-depth interviews needs justification once it is removed from this initial context of critical reaction, I’m less convinced of the arguments they cite for its diminishing relevance. They argue that,

Not only are the world-views of diverse populations now routinely presented to us in the popular and new media in such a manner that their summary characterization by sociologists is no longer as necessary (or as interesting) as once it was, but some of the social transactional research technologies discussed above are now also able to produce nuanced representations of the lifeworlds of quite specific populations groupings, for example (Savage and Burrows 2007: 894-895)

The ubiquity with which ‘everyday life’ is presented in a situated way within popular and new media surely represents, if we step back from the urgency which understandably animated their argument, an opportunity for the rethinking (rather than the move away) from in-depth interviews and other methods animated by an impulse to capture the particularities and nuances of situated lives. Perhaps I’m being hopelessly optimistic (it happens) but the same state of affairs which Savage and Burrows cite as indicative of the growing irrelevance of in-depth interviewing instead indicates to me that the potential public interest in the results of such research has never been higher. Furthermore, in a complex and confusing world increasingly characterised by what seems likely to become endemic economic and political instability, I’d suggest this public interest might extend to work which traces out the linkages between private troubles and public issues... with the essential caveat that linking one to the other, while presenting the findings of research in a way that interests and influences diverse and overlapping publics, necessitates a rethinking of the public role of the sociologist. Perhaps involving a generalisation of the orientation of the public intellectual, adapted for a digital age and thus freed from any grandiose pretensions and removed as far as possible from its
The Internet, however, can make these connections because it permits economical, finely calibrated "narrowcasting," that is, the transmission of specific information to specific interest groups. Of course print and – to a much lesser extent – radio and television also allowed some narrowcasting. Academic journals and industry newsletters are perhaps the best examples. But the scale of narrowcasting on the Internet is orders of magnitude greater than anything known before. Take the blogosphere for example. Here tens of thousands of interest-specific public intellectuals talk to tens of thousands of interest-specific publics concerning every imaginable interest. If you want to know about it – beer brewing, Italian shoes, organic chemistry — you can probably find someone with considerable expertise blogging about it. That’s truly remarkable.

The university presses are well-positioned to take advantage of Internet narrowcasting precisely because they essentially manage a group of experts — authors with books — who are very motivated to reach their publics. Every author wants an audience, even academic authors. The university presses have traditionally helped their authors find their audiences by publishing and promoting books. It’s time to admit that they largely failed, not for any lack of trying, but because the book was the wrong tool. Blogs, podcasts, videos, and types of "programming" not yet conceived or invented offer a much better method of reaching the myriad of communities of interest. If university presses use these methods, everyone wins: the author gets an audience, the audience gets a public intellectual, and the university press fulfills its public-spirited mission. ([2]Poe 2012)

Poe's essay makes a broader point about the role for university presses in 'narrowcasting' research communication by academics within an institution. But I think it also highlights the manner in which digital tools mean that 'public engagement' (for all the baggage that term carries within the modern academy) could become ubiquitous. Whether it or not it should remains a contested question. But where I do agree with Savage and Burrows is that empirical sociology in general, as well as certain qualitative approaches in particular, faces an unprecedented crisis. Without some creative attempts to rethink the public face of such activities in view of the challenges which confront them, irrelevance and decay surely beckons. However the 'descriptive turn' advocated by Savage and Burrows strikes me as defeatism. We can surely do better. We can at the very least try.

1. http://soc.sagepub.com/content/41/5/885.abstract
Eoin O’Mahony (2012-09-10 09:23:57)
Any claim made to expertise by sociologists or other social scientists surely negates the purpose of that discipline. Savage and Burrows are setting up a straw man? A good review Mark.

Sociological Imagination (2012-09-10 10:23:04)
Thanks! Not sure what you mean by claims to expertise negating the purpose of the discipline though?

A guide to curation tools for researchers (2012-08-30 08:00)

Do you suffer from information overload? Do you find it difficult to organise and process the things you find online so that you can apply them productively in your day-to-day working life? If so then *curation tools* could transform your experience of the digital world. Increasingly seen as the ‘next big thing’ of social media, the last year has seen an explosion of different tools which can be used to manage, sort and catalogue material. However the novelty, as well as the choices available, render them confusing – what tool should you use and how should you use it? Furthermore what are the specific uses to which academics can put these tools?

Curation is the broader concept behind [1]Pinterest, by far the most famous of these tools, which was the subject of Deborah Lupton’s great [2]article a few weeks ago. She notes how Pinterest;

> "draws upon the idea of older techniques of collage or scrapbooking: collecting interesting images, grouping them together under a theme and displaying them to others."

It allows the user to go round the internet, collecting images they find through the use of a convenient browser button (in a similar way to creating new browser bookmarks) and make these titled pinboards available online. Crucially, it also allows users to add a commentary to each ‘pinned’ item and, I would argue, this is where *collating* online material becomes *curating* in the proper sense of the term. As Lupton says, few academics seem to have heard of Pinterest. Yet even fewer academics, as well as internet users more broadly, seem to realise how many curation tools are out there. I briefly discuss four I’ve experimented with below though, I should stress, there are others out there. At the heart of all these tools are the same core practical tasks which anyone working in an information rich environment faces: *collecting, sorting, evaluating and sharing information*.

While Pinterest is primarily focused on images, the others are, arguably, more versatile. Furthermore as Lupton astutely points out of Pinterest and its ‘pinboards’, these tools tend to be structured around some central embodied metaphor e.g. ‘bundling’ up a range of things you find online or ‘scooping up’ things you find online and pasting them into your ‘magazine’. Beyond the practical features of each, for instance the centrality of images in Pinterest, I would suggest that these metaphors are actually a key factor in why particular individuals will take to particular services e.g. without realising it I’ve been thinking in bundles for a long time and just got the point of the service instantly when I used it. So it’s definitely worth experimenting with them and seeing which one you’re most intuitively comfortable with. Much as with other digital tools, there’s no ‘right’ or ‘wrong’ way to use these – it all comes down to your practical purposes, how they unfold as you experiment with different tools and which ones you ultimately find most
useful for your personal needs.

1. [3] Storify is perhaps the mostly widely known of these four. It allows you to search multiple social networks and knit together items you find into sequential stories. I’ve found this useful for preserving Twitter debates that I’ve particularly [4] enjoyed. However I’m aware this only represents part of what the tool is capable of if you combine a sufficiently diverse range of elements, whereas my uses have merely been reconstructing conversations on one medium that I was actively involved in. The most impressive uses I’ve seen have tended to revolve around [5] covering events either retrospectively or live.

2. [6] Bundlr is my personal favourite and I can’t recommend it enough. As with the others, you use a browser button to ‘bundle’ content. When you’re on a web page which you want to curate, press the button and either choose an existing bundle or make a new one. What’s most impressive about Bundlr is how it combines the ability to handle many types of content (e.g. youtube videos, images, tweets, presentations, web pages) with effortlessly making the finished product look aesthetically appealing. With their latest update this became particularly true of [7] embedding bundles in webpages. It’s also incredibly easy to pick up. Within a few hours of signing up to Bundlr I had multiple bundles which had collectively received hundreds of hits. I honestly don’t understand how I kept track of things I wrote and read online prior to using the service.

3. [8] Scoop.It allows you to publish [9] ‘magazines’ based on content you scoop through a browser bookmark. Whereas some of the other tools focus more on collating items, Scoop.It offers more room for curation: it gives you more opportunity than the other tools to control what aspects of your ‘scooped’ items are highlighted and what commentary you offer about them. It also has an interesting, though in my experience not quite perfected, tool which offers you ideas about things to ‘scoop’. One feature I particularly like about Scoop.It is that it lets you tweet whenever you scoop a new item. In this way it integrates the curation process with managing twitter accounts. Though this might not be appealing to everyone, it’s a potentially invaluable time saver for those who manage multi-author blogs and multiple social media accounts. I like Scoop.It a lot and, if I had more time, I’d use this. Although I’d qualify this by saying I’d use it in my capacity as a social media manager rather than as an academic researcher.

4. [10] Pearl Trees is perhaps the most intriguing and yet, in my experience, the least practical. It takes a mind-mapping approach to curation, enabling you to collect ‘pearls’ (webpages, text notes or photos) and arrange them into hierarchical structures. I found it fascinating to explore and the interface is very different to anything else I’d come across. Nonetheless, I just didn’t ‘get’ it, beyond my abstract curiosity. It’s worth trying though and, even if your reaction is the same as mine, it’s definitely one to watch. When researching this article, I discovered that since I last used Pearl Trees they’ve introduced ‘bi-directional’ synchronization with social media. So rather than just auto tweeting when you add an item to your Pearl Tree, it can also add a pearl whenever you tweet a link. In practice I suspect this might not work as it should but, nonetheless, it has certainly induced me to give Pearl Trees another go.

Secret cinema found beneath Paris. (2012-09-01 00:18)

In September 2004, [1]French police discovered a hidden chamber in the catacombs under Paris. It contained a full-sized movie screen, projection equipment, a bar, a pressure cooker for making couscous, a professionally installed electricity system, and at least three phone lines. Movies ranged from 1950s noir classics to recent thrillers. When the police returned three days later, the phone and power lines had been cut and there was a note on the floor: “Do not try to find us.”

Call for Papers: Digital Methods as Mainstream Methodology Showcase Event (2012-09-03 15:55)

Friday 7th December 2012, British Library, London

We would like to invite PhD students and early career researchers in the field of digital social research to present their work at the latest event by the Digital Methods as Mainstream Methodology network. The seminar series is funded by the National Centre for Research Methods Networks for Methodological Innovation. The event will present case studies from researchers at a variety of career stages and from a variety of disciplines, alongside keynote speakers and a talk from Head of Social Sciences at the British Library on their web archiving project.

This is an exciting opportunity to present your research at a showcase event designed to highlight best practice and critical issues in digital social research.

In order to give as many researchers as possible the chance to share their work, and to keep the event lively and focused, accepted presentations will take the form of short 'PechaKucha'style talks. The format will consist of 10 slides showing an image (or a small piece of text), each displayed for 20 seconds, or 3 minutes and 20 seconds in total. Slides advance automatically to complement your talk. Further details and examples are available from [1]http://www.pecha-kucha.org (please note that due to time constraints, we have halved the time allowed and number of slides).

Eligibility Criteria:

* PhD students or early career researchers (within 3 years of PhD completion) and based in the UK.
Research utilises 'digital methods', broadly defined as ‘the use of online and digital technologies to collect and analyse research data’ in any social science discipline.
Please send us your abstract of no more than 200 words to contact@digitalmethodsnmi.com by 1st October 2012. Your abstract should highlight what you consider to be innovative about your research.

Part 5

[EMBED] Part 6 [EMBED] Part 7 [EMBED]

Why sexual people don’t get asexuality and why it matters (2012-09-05 08:00)

I had three initial aims with my asexuality research: mapping out community in a ideographically adequate way, understanding the role the internet played in the formation of the community and exploring what the reception of asexuality reveals about sexual culture. There’s still more I want to write in relation to the first two points but I’ve basically drawn my conclusions at this point. Which means that my interest in asexuality has basically transmuted into an interest in how sexual people react to asexuality. This sounds much more obscure than it actually is.

In essence I’m arguing that the reactions of sexual people to asexuality reveal the architectonic principle of contemporary sexual culture, namely the sexual assumption: the usually unexamined presupposition that sexual attraction is both universal (everyone ‘has it’) and uniform (it’s fundamentally the same thing in all instances) such that its absence must be explicable in terms of a distinguishable pathology. This is instantiated at the level of both the cultural system and socio-cultural interaction: it’s entailed propositionally, even if not asserted outright, within prevailing lay and academic discourses pertaining to sexuality but it’s also reproduced by individuals in interaction (talking about sex, either in the abstract or in terms of their own experience) and intraaction (making sense of their own experience through internal conversation).

Until the asexual community came along, the ideational relationship (the logical structure internal to academic and lay discourses about sex) and patterns of socio-cultural interaction (the causal structure stemming from thought and talk about sex) reinforced one another. Or to drop the critical realist terminology: the sexual assumption got reproduced at the level of ideas because nothing conflicted with it at the level of experience. But when something comes along which empirically repudiates it (namely the asexual community) the underlying principle suddenly becomes contested. This doesn’t mean discourse ‘makes’ sexual people not get ‘asexuality’ but it does mean that, given the centrality of the sexual assumption to our prevailing ways of understand sexuality, being confronted with asexuality immediately invites explanation. One such explanation is to drop the ideational commitment but, given that its usually tacit, few people (including myself) can do this immediately - though many, it seems, do so once they’ve reflected upon it. Instead the usual response is to evade the logical conflict by explaining away asexuality: its
a hormone deficiency, the person was sexually abused, they’re lying, they’re gay but repressed, they’ve just not met the right person yet (etc).

The empirical evidence of quite how pervasive, indeed near universal, this kind of reaction is seems increasingly conclusive. What I am suggesting is that the sexual assumption is what explains this being a 'kind' of reaction i.e. all the explanations, in spite of their superficial differences in content, involve a reassertion of the uniformity and/or universality of sexual attraction. I'm not saying people are deliberately or consciously defending the sexual assumption (though I'm not categorically saying no one will ever be doing this) but rather that it is this, as the foundational assumption 'holding together' the conceptual architecture of the sexual culture which has emerged from the mid/late 20th century onwards, which asexuality renders problematic. The precise content of any given individual's attempts to explain away asexuality varies depending on the specifics of their personal and intellectual history within this sexual culture (i.e. it's not a homogenous thing) but the shared form of the response is explained by the architectonic principle of that culture and the logical relation of contradiction in which it stands to the empirical observation of asexual individuals who are 'normal' (i.e. non pathological). Logical relations don't force people to act (some people don't try and explain it away) but everyone who has not experienced what David Jay calls the 'head-clicky thing' has the same initial reaction. The above is my first attempt to offer a convoluted social theorists explanation of what I mean when, in interviews, I talk about sexual people not 'getting' asexuality. If you follow my chain of reasoning then, I ask of you, test it out: go and read the comments on the Guardian article I linked to and think about the reactions of people on there and what they have in common. Or do the same with pretty much any news article which has comments that I've encountered. There is something really fucking interesting happening there.

Why have other VCs not been making the case for UK higher education in the media over the last two years? (2012-09-05 15:40)

Prof Malcolm Gillies, VC of London Met, [1]appeared on Radio 4's Today yesterday morning and aggressively challenged the [2]recent controversial actions of the UKBA. This appearance was also picked up in the [3]Guardian and no doubt in other places as well. Leaving aside the particular details of this case, an obvious question occurs: why have other VCs not been making the case for UK higher education in the media over the last two years? Presumably Malcolm Gillies perceives the UKBA's actions as an existential threat to London Met. But as as the [4]Campaign for the Public University's John Holmwood [5]put it at the British Sociological Association conference earlier this year, people are going into their offices and going into classes every day as if it's business as usual. But 'business as usual' is the complete undermining of higher education. The sector as a whole has been confronted with an existential threat and yet the VCs have been silent. It's a complacency which is paralleled throughout UK
higher education. But it’s much more problematic in their case both because of the failure of leadership it represents and the strikingly obvious fact that, as Gillies has demonstrated, VCs can get into the media to push a political case contrary to government policy if they are actually willing to try.

Overseas Students Uncertainty (2012-09-07 08:00)

London Metropolitan University has set up a help-line for overseas applicants as uncertainty still hangs over its right to recruit international students. With just weeks before the start of the term, London Met does not know whether it will be permitted to teach new or even existing overseas students. In an article by the [1]BBC, the university has already said that this lack of certainty has cost it £10m and risks sending “panic” among students. As a former “highly trusted sponsor”, London Met has had its status suspended in July – which has prevented it from being allowed to recruit overseas students.

At present, there has been no decision on whether the licence will be revoked or reinstated – leaving the university in a state of limbo. Among other Higher Education providers, there have been other suspensions, but so far no UK University has been fully stripped of its ability to recruit overseas students. Recent Tory sanctions on overseas students have not only impacted new applicants, but will also affect thousands of existing international students at university, who might be in their second or third year.

According to information published by the UKBA, if a university has its licence withdrawn, overseas students have permission to stay in the UK for 60 days. During this period, students would have to find another university or college to sponsor them.

As stated [2]elsewhere, overseas students have become a vital source of income for universities – and blocking them will have serious financial implications. The National Union of Students has called for immediate clarification about the consequences for students "plunged into disarray" by reports that London Met’s licence would be withdrawn. "This situation is already costing real students, real money and real distress," said NUS president Liam Burns.

London Metropolitan University vice chancellor Malcolm Gillies said: “To learn that we might have our highly trusted sponsor status revoked via a newspaper, with the panic that this can cause for thousands of students, is outrageous." University leaders have called for students to be removed from the immigration figures, but this has been rejected by Tory ministers.

Dr Yaz Osho specialises in the politics of ‘race’ and racism, SME entrepreneurship, media representation, the sociology of work and racialized offline vs online identity politics. She has taught at Middlesex University, UEL, Goldsmiths, University of Westminster and was a Senior Visiting Fellow at the University of Sussex.

IFRAMEx 1.http://www.youtube.com/embed/j-5y1QoswKo

1. http://www.youtube.com/embed/j-5y1QoswKo
"The independent artist and intellectual are among the few remaining personalities equipped to resist and to fight the stereotyping and consequent death of genuinely lively things. Fresh perception now involves the capacity continually to unmask and to smash the stereotypes of vision and intellect with which modern communications swamp us. These worlds of mass-art and mass-thought are increasingly geared to the demands of politics. That is why it is in politics that intellectual solidarity and effort must be centred. If the thinker does not relate himself to the value of truth in political struggle, he cannot responsibly cope with the whole of live experience."

- C. Wright Mills in 'The Social Role of the Intellectual'

Tanguerramama (2012-10-04 16:58:10)
What is the full citation for this quote (e.g. page number)?

Sociological Imagination (2012-10-05 11:25:30)
I assume the essay has probably turned up in more than one book! My version is in the Politics of Truth (which I don't have with me). The essay is not v long so if you find it, you'll easily find that extract and it's worth reading the whole thing!
**Call for Micro Podcasts** *(2012-09-09 17:54)*

Over the last couple of years we've hosted a lot of [1]podcasts on Sociological Imagination. However thus far all of them have been produced by us. We'd like to host some by you as well! Specifically micro podcasts on any sociological topic.

For instance this 1 min podcast we recorded with Les Back at the British Sociological Association conference earlier this year:

It was recorded with [3]Audioboo which is a free smart phone app that records podcasts of 3 minutes and under. It is entirely free and incredibly easy to use. It requires no technical knowledge whatsoever and allows you to publish your podcast online with a couple of clicks.

If you go through with this and post a micro podcast on your Audiboo account, we can quickly post it up on SI. All you need to do is [4]e-mail or [5]tweet us with the address of the podcast.

Why not give it a go...?

2. [http://audioboo.fm/boos/753951-les-back-is-sociology-a-job-or-a-vocation/embed](http://audioboo.fm/boos/753951-les-back-is-sociology-a-job-or-a-vocation/embed)

**Internet Social Media Addiction: 20 Symptoms?** *(2012-09-10 08:00)*

We all make so many excuses for spending so much time online. For many people this is not a cause for anxiety at all. We are increasingly cyborgian, and any wish to return to the old ways (3-5 years ago) is nothing but a futile, hopeless and romantic nostalgia.

But what are the warning signs that we have been *imprisoned* by our screens? Is it possible that the addiction to social media could be harming our physical, mental and spiritual world. I would be the first to admit that there are worse activities such as mindlessly TV channel-surfing.

Having allocated myself a timetable that now stipulates a progressive increase in my time away from the screen I have noticed an improvement in my general health and sense of well-being. Perhaps the experience of having recovered from cancer last year has led me to rethink the primacy of direct interaction with people, rather than digital mediation. I’m certainly not a luddite by any means, but I may well be an online social media recovering addict.
Don’t take this too seriously.

So here is my personal and rather intuitive list of symptoms that might be associated with an unhealthy addiction. Have you experienced any of these symptoms in the last year? Or perhaps you have noticed these characteristics in other people?

- Repetitive Strain Injury
- Back Pains and other discomfort associated with a screen-based lifestyle
- Delusional sense of exhilaration associated with the online flow of interactions
- Being online is my first activity of the day
- Being online is my last activity of the day
- Spending an hour or more online without being aware of the passage of time
- Less comfortable with face-to-face encounters
- Sense of being awed or overwhelmed by the abundance offered by the internet
- Being online while you are speaking to friends or family on the phone
- Being online while watching TV, or listening to music
- Convinced that multi-tasking is an effective way to work
- Decreased length and frequency of direct encounters with people
- Increase in weight, BMI, or change in body shape and general fitness
- Constantly mobile connected and status updating
- Missing deadlines for work, or failing to meet your own objectives
- Increased tendency to procrastinate, with less efficient productivity
- Increase in irritability, stress, and anxiety; decrease in patience and listening skills
- Frequently checking in online, at every opportunity
- Sense that life is becoming fragmentary or hollow
- Decreased attention span and ability to focus on major project requiring sustained effort
- Preference for micro-engagement rather than in depth reflection.

CfP: Centre for the Study of Women and Gender @SocioWarwick Seminar Series 2012/2013 (2012-09-11 13:00)

The Centre for the Study of Women and Gender at the University of Warwick will host a Graduate Seminar Series in the academic year 2012/2013. We would like to invite postgraduate students working in, but not limited to the following areas:

- Media, Culture and Gender Representations
- Work and Family
- (Trans)national Gender
- Intersections of Gender, 'Race', Class, Disability and Age
- Gender, Transgender and Sexualities
- Feminism and Women’s Rights
- Men and Masculinities
• Feminist Methodologies
• New Media and Digital Technologies

We welcome submissions, both conventional and innovative, from any disciplines on gender related topics. Seminars will take place on two or three Wednesdays per term in the afternoon (dates and timings TBC). Each presenter will be allocated 30 minutes: 20 minutes presentation and 10 minutes discussion. Attendance is open to everyone.

The seminar series aims to:

• Foster discussions on topics of gender
• Provide a safe and comfortable space for students to present their research
• Create an opportunity to fine-tune presentation skills

Abstracts should be:

• Maximum 200 words
• Submitted along with a brief biography of the author; including their institution, department, and research interests
• Submitted by Friday the 14th of September, 2012

Please email abstracts to [1]cswgseminarseries@gmail.com. Abstracts will be peer reviewed. If successful, you will hear from us by Friday the 28th of September, 2012 and will be allocated to a seminar between October 2012 and June 2013.

If you have any further questions, please do email us.

Yours sincerely,

CSWG Organising Committee

So it looks as though Wal-Mart started out as a red-state phenomenon before spreading to the rest of the country?

BSA Presidential Event: ‘Understanding the financial crisis: sociology, political economy and heterodox economics’ (2012-09-13 14:26)

BSA Presidential Event, together with FESSUD and the British Library:

‘Understanding the financial crisis: sociology, political economy and heterodox economics’
The event will take place at the British Library Conference Centre, London on Monday 8th October 2012 between 10am - 4.10pm

Speakers include: Andrew Brown (Leeds University Business School), Mathew Bond (London South Bank University), Julie Froud (Manchester Business School), Juan Pablo Pardo-Guerra (LSE), Malcolm Sawyer (Leeds University Business School), David Spencer (Leeds University Business School), Alberto Toscano (Goldsmiths University of London), Zsuzsanna Vargha (LSE)

The financial crisis of 2008 has been longstanding in its consequences and seemingly intractable in its resolution. It is widely understood to have arisen from the de-regulation of financial institutions and the emergence of increasingly complex financial instruments as well as a culture of risk associated with high rewards. The crisis took the discipline of economics by surprise leading to the Queen’s question of why there had been a failure to predict it. One response from a seminar organised by the British Academy concluded that it was "principally a failure of the collective imagination of many bright people, both in this country and internationally, to understand the risks to the system as a whole" ([1]http://media.ft.com/cms/3e3b6ca8-7a08-11de-b86f-00144f0eabd0.pdf). The present seminar is an exercise in alternative imaginations, both in accounting for the crisis and in providing alternatives.

**Accidental sociologists (2012-09-14 08:00)**

Today I stumbled across an interesting biographical account by Sarah Burton, sociology postgraduate researcher, entitled [1]The Accidental Sociologist. Sarah writes that she - as, it seems, a great many other sociologists - ended up in sociology 'by chance'. She wonders whether 'sociology is where people go when they simply want to delve into ideas that fascinate them'. It was great to read someone else asking the same question that I have asked myself, so perhaps I ought to take the chance to share my own answer to it.

[2]

1334
To me, sociology is far more than a place just reserved for fascinating ideas. It is where people go to ask questions and seek answers not simply to fascinating questions, but to important questions that otherwise remain hidden from us. Sociology is a toolbox for answering questions that we are not supposed to ask or know about - because the way society functions obscures them from us in daily life. Some of these questions can initially seem dull or boring, but can be immensely important, yet others are fascinating for their own sake. Sociology is a meeting place for important questions that concern all of us and that we, as participants in society, have a hard time even noticing: to paraphrase Marx, it is hard to see the ground beneath your own feet. And it is these questions that hide the potential for social change. I suppose, Marx must have influenced my particular way of seeing sociology because I cannot help but recall another phrase of his: that philosophers have hitherto interpreted the world, while the point (of sociology) is to change it. The amazing thing is, that 'let's change the world' is not the only type of sociology out there. There is space for observation, analysis, change, calculation, provocation, images, art, and anything else you can think of.

Now, how did I end up in sociology? Just like Sarah, accidentally, thanks to a peculiar constellation of personal and institutional reasons, and as a result of being fascinated by too many things. Thinking back, all those reasons seem far less compelling than they seemed at the time.
Tracing my academic path leads me back to high school in early post-1989 Bulgaria, where my favourite subjects were mathematics and English. If asked what I wanted to be, I would hesitate, but in all honesty I would probably admit that I would most enjoy studying either linguistics (especially English or Scandinavian), or math. However, everyone I spoke to seemed convinced that studying English philology would amount to becoming an unemployed English teacher, and studying math for the math, and not as part of, say, a course in economics, somehow did not even cross my horizon. Economics didn’t seem very interesting. Being an unemployed English teacher seemed a less dull, but more frustrating and frowned upon by my family, career choice. After much hesitation in my last year of school I chose to specialise in Bulgarian literature and History (the equivalent of UK A-levels) in order to study law. I did not know what sociology was. Well, I did, in a way... I thought it was election polling and questionnaires and pie charts. Little did I know that sociology was nothing of the kind!
My exam grades were not enough to get me into either Law or International Relations. I ended up in a close third, the then new subject European Studies. In 2000, Bulgaria was an European Union accession country and this was a popular new course aimed to prepare much wanted specialists for many areas in which knowledge of EU-integration and the way the EU works were required. But I didn't know that we were prepared to be Eurobureaucrats. I had misinterpreted the course outline and had assumed that it would focus on philosophy, literature, and European languages. Its actual focus on law, economics, and the history of the EU came as something of a surprise. As sociology would later confirm, institutions are never what they say on the tin, but are inhabited by people, defined by conventions. Despite my initial dismay (and the decision to always from then on read at least the large print carefully), the European Studies degree turned out to be a very good course. Although it was new (I was part of only the second year in which the course ran), it had attracted an ambitious group of some 40 students, some fantastic teachers and professors, and an amazing head of department. I enjoyed the studies and the crowd. My favourite subjects were taught by sociologists and a cultural studies professor. We could also study two or more languages, so I took up advanced English and medium German, as before, but my time was devoted to beginners French, at which I did very fervently and equally badly. Knowing when to give up has never been my strength - c'est la vie! I also worked part-time: in several small NGO projects funded by the EU's accession funds, as a PHARE project assessor, and as audience in a TV debate show. But something was missing. I really don't know how to put it better: most subjects I studied seemed to give answers and shape my world, but what I wanted was to ask questions and break it all down. This is exactly how I think I ought to have ended up in sociology - if the world were a rational place. But it wasn't quite that straight-forward.

Anyway, I decided to take on a second university course in parallel with the first one. The university allowed two options: a partial second specialism in addition to your main degree, which for some unbeknownst to me reason was unavailable that year; and a full second degree in parallel. English and psychology, my first two choices, were both unavailable as second options due to oversubscription. This left sociology or philosophy, the next items on my list. After much agonising, I took up sociology - partly because of my favourite lecturers, and partly in a joint decision with my then partner, thanks to a complicated but seemingly convincing constellation of family and personal details. By the way, we are no longer an item, but both of us still work in sociology.

But this was not all. In the next four years, I completed my second degree in sociology, in parallel with finishing my first BA in European studies and a masters in the same. Although I did very well in all exams and really enjoyed the course, I never wrote a dissertation, so I don't actually have a BA in sociology - something I have to keep explaining on my CV! Six years after having started my studies, I finally really faced the job market. I worked 4h a day as a news abstractor, translating business news from German into English for one of Reuters' subsidiaries. It was a fun, but exhausting and badly paid job, which left me with very fast typing skills, the ability to translate from a language I don't know that well, and a lingering Internet addiction which I am still fighting. And then, in another strike of biographic accident, my former English teacher and friend nudged me to apply for a scholarship to study in a UK university. I did - by the time I applied, the only available place was Warwick. Well, I thought - Warwick seems pretty cool, so I applied, even though chances were very slim. I got to the interview stage, but the interview went, I thought, really badly: I had got myself into an argument over social policy towards ethnic minorities with the interviewer. Unexpectedly, I got the place. Perhaps the argument hadn't been that bad. In the autumn of 2006, still an overseas student as my country was not in the EU, I found myself studying Social and Political Thought at Warwick with an Open Society Institute / Chevening scholarship. This was far too amazing not to make good use of it. I loved the course, the department, the university, and the country, so I decided to stay. In another stroke of luck and university funding, I had the chance to continue with a PhD in sociology for which - using another 'accidental' configuration of personal and institutional opportunities - I returned to Bulgaria to do a study of the careers and experiences of seafarers and transformations of the post-socialist maritime labour market.
In other words, 'me and sociology' really was not a rational, thought through, straight-forward encounter. It was all stumbling in the dark, and never finding quite the right alley, and yet moving forward somehow. And yet, it now seems like the best place for me - that is, the most intellectually uncomfortable, uncertain, and baffling subject imaginable.

How did YOU end up in Sociology - as a researcher, university student or even in school? Did you always know that you wanted to study sociology? Was it curiosity? Or was it 'by chance'? Comment on this post, [17]tweet your thoughts or [18]email us your story and we will post it on SI.

Editor’s note: Mark also stumbled across the same post, also thought it was great and asked Sarah to write for the site. Her new column, The Accidental Sociologist, starts on Monday.

Assistant Editor’s note: Fantastic news! Welcome, Sarah!

Eugene Borys (2012-10-15 14:16:34)
I am 45 years old and when I decided to go back to school and get my GED, I did so passed with flying colors. I was accepted to Penn State University, accidentally I came across Sociology. I am now in my 2nd semester as a Sophomore and I have been on the Deans list ever since. I couldn’t imagine doing anything else.

Milena Kremakova (2012-10-15 14:47:46)
Hi Eugene, Inspiring story, thanks for sharing! And well done. I wonder, what is it that you like best about your sociology course? And how do you find being back in school - does it feel like it is it the right time, or do you wish you’d done it earlier on? I often wish I had worked for a few years rather than going to university straight after school.

Sociology@Warwick (2012-09-14 15:30)

A quick flag up to any interested readers that the Sociology Department at the University of Warwick now has a [2]blog and [3]twitter feed. Although Sociological Imagination has no formal connection to the department, a number of people involved in the site are based there & many of the SI podcasts have been with academics in the department. So do check it out!

Les Back on the 2011 riots in the UK (2012-09-15 16:08)

We now have a Facebook page... (2012-09-16 08:00)

And we'll be ever so offended if you don't like it:

[1]The Sociological Imagination

And of course there's always Twitter:
And the Newswire and CWrightMills.

This is The Accidental Sociologist – a place in which I will be holding court on the wonderful myriad of ways in which getting somewhere entirely by happenstance can result in great things. The column has its origins in a [1]blog post I wrote explaining my inadvertent but fortuitous stumbling upon the discipline during my postgraduate studies. Before falling (occasionally literally, I am rather clumsy) into sociology I was spending my time working on a assortment of haphazard creative projects including novel editing, band promo, theatre production, e-learning, and reading. I think in some circles this last item is referred to as a Master’s in English Literature.

I was well on my way to being a PhD in English Literature: I had a project, a supervisor and a bit of funding. All that stood between me and a completed thesis on the femme fatale in second wave British Golden Age detective fiction was three years of graft and a modicum of starvation. If I’d taken that road I’d be done by now.

Chilling thought. Ultimately I decided that my heart wasn’t in it – that while the project was intriguing, it just wasn’t something that I could really be passionate about. It’s akin to the kind of date you enjoy but who doesn’t get invited in for wine and extras. Instead of that I decided to get a proper job. That didn’t go so well either. By the point at which I’d set myself up for said proper job (being an English teacher) I was aching to be back in academia. Teacher training left me with brilliant stories - mostly involving teenage boys and libido – and the desire to finally get my thesis written. I decided that I needed to be more adventurous in order to find the right place for my work and the right topic to carry me through the gruelling years ahead. Somehow, through a process of cataloguing Stuff I Like Reading and people who’s work I was jealous of them having done, and sifting through supervision areas of academics across history, philosophy, politics, law, psychology - the list continues - I ended up in sociology. Entirely by accident. It means that I sort of have to start over – my new department has this notion that I should learn some actual sociology before they let me loose on a doctorate. So from next week I’m doing (another) Master’s in Sociology and Research Methods, followed by PhD.
This blog has two functions. Firstly, it’s going to feature my forays into formal study of sociology and map out the voyage from arts education to being a true social scientist (bearing in mind that I’m not even certain this will happen). It will embrace all areas of academic development including conferences, publishing and professional development. It will also be a place to find advice on postgraduate study in sociology. I’m going to be writing some surgery-style pieces on topics such as finding the best conferences to present at, writing an abstract, getting your presentation skills sharpened and keeping your sanity intact. I’m also going to be putting your questions to academics in the field and getting expert, tried-and-tested answers.

My academic interests centre around narratives of the grotesque body and their relationship to sexual citizenship. I spend a fair portion of my time thinking about vagina dentatas, leakiness, obstinacy, wilfulness and all things queer(ed). I’m fascinated by how we go about writing our own sociological narratives – how intimate imagination becomes theory and where the self goes when you write in the objective third person. Outside of academia I privilege decadence in all its forms. I like my steak blue and my vodka martini dirty. So, pull up an easy chair, pour a dram of your particular poison and feel free to get in touch with your questions and stories. The Accidental Sociologist doesn’t stand on ceremony.

Sarah Burton is a postgraduate student at the University of Glasgow and has research interests in narratives of the grotesque body, especially in relation to power. She is also Co-Convenor of the British Sociological Association Postgraduate Forum.

Can Google Autocomplete Tell Me .... (2012-09-18 08:00)

As the psychologist Meg Barker suggests in her new book, [1]Rewriting the Rules, looking at the most common words which Google uses to complete the phrase "how can I get my boyfriend/girlfriend to ... " can be a fun way of examining pervasive ideas about gender and relationships:
It also offers an interesting perspective on the US elections:

However it gets downright weird when applied to UK politics. Or at least when applied to leader of the opposite Ed Miliband. Addicted to Wigwams? Made of Magnets? Perhaps we shouldn’t take this too seriously. Either the autocomplete algorithm can be gamed or there are some extremely strange politically themed web memes out there. Google are, perhaps unsurprisingly, [2]rather vague about the specific factors determining autocompletion results.
Using NVivo: a one day crash course for qualitative researchers, Fri 9th Nov (2012-09-18 14:00)
9:30am to 5:30pm, Friday 9th November at the [1]Manchester Digital Laboratory

Suitable for complete beginners or those who need a refresher, this intensive one day course will cover all the core functionality of NVivo:

- An overview of the software
- Managing and importing your data
- Coding strategies and techniques
- Analysing visual and multimedia data
- Using memos effectively
- Using annotations and see also links
- Relationships and modelling
- Querying your data
- Managing the complexity of your project

£50 for PhD Students, £100 for all others

Press below to go to the booking form:

All participants will receive an electronic resource pack which covers the material from the course and provides guidance on continuing to develop proficiency with the software. To take part you will need a laptop with NVivo installed. A 30 day free trial of NVivo 10 is available from the [3]QSR website.
To keep costs down lunch is not included. But the venue is in the heart of Manchester’s famous Northern Quarter and is surrounded by excellent cafes and bars. There will also be LOTS of tea and coffee.

If you are a wheelchair user and are interested in this training event, please contact me and I’ll try to arrange a session which can accommodate you.

Mark Carrigan has taught NVivo extensively at the University of Warwick and acted as a NVivo trainer and consultant for the EU FP7 funded MYPLACE project. For more information see his [4]website. Please feel free to get in touch via [5]e-mail or [6]twitter if you have any questions.

Twitter for academics (2012-09-20 08:00)

What’s the point of Twitter?

Twitter has an image problem. It first penetrated the public consciousness in a way which has left it defined by celebrities and, particularly for academics, this is unattractive. However the academic twittersphere (for lack of a better term) is a relatively self-enclosed ecosystem. While you’ll undoubtedly find a bit of celebrity gossip and X-Factor chat, this is strikingly absent in comparison to Twitter more broadly. In fact, academics are using Twitter in all manner of creative and useful ways. These are some of the responses I received when I posed the question “why do you find Twitter useful as an academic?” to my followers on the service:

- Quick answers to questions on things like ... where do I find this tool or that tool .. (@rjhogue)
- We discuss concepts (@Annlytical)
- There are people who are practicing what I’m researching academically and give me a reality check (@Annlytical)
- Twitter is brilliant for keeping up with things, networking, finding new ideas, people’s blogs and publications (@BenGuilbaud)
- meeting new people (in all disciplines), academic support, public engagement, increased visibility, filtered news (@Martin _Eve)
It’s difficult to convey the point of Twitter. Partly this is a result of the inadequacy of ‘micro-blogging’ as a concept: it doesn’t get across what such a service is, how it can be used or what value these uses have. Twitter is a profoundly practical service and yet it is difficult to convey this because much of the terminology, interface and minutiae of Twitter are inherently confusing until you have engaged with the service. Furthermore, the somewhat steep learning curve isn’t a very attractive proposition to time-poor academics.

So why should you make the leap? The only reason I can give is that people just like you are finding the service astoundingly useful. The reasons cited above represent a small fraction of the uses to which academics are already putting Twitter and, at present, academic usage of the service is still in its infancy. Why not give it a go? All the evidence suggests you’ll find at least some uses for it.

The LSE Impact Blog has created a list of active academic tweeters. If you want to see for yourself what all the fuss is about, sign up and follow all the people you can find in these lists who work in your area, as well as any others who look interesting. Say hello, post some links to your work and explore a bit. It’s possible that you’ll find Twitter simply isn’t for you. In which case, what have you lost? However it’s much more likely that you’ll join the ever-growing numbers who are finding that Twitter is the most natural social networking service for academics.

How academics should use Twitter

The fact Twitter offers no real tools to control who follows you is a source of concern for some academics. In part this might be a function of a broader reticence towards online publishing. However I think it also stems from how Twitter is conceived as a medium. If you are presenting at a conference, you wouldn’t obsess about the identity
of each person in the audience. There might be a variety of reasons why you are presenting: sharing your ideas, promoting your work, connecting with others in your field. At any conference, these motives only partially overlap. The reasons for each individual being there varies but nonetheless everyone is working within the same constraints of how the sessions are organised within a physical venue.

Twitter is no different. It’s a spot on the internet that’s staked out as yours. What you do with it is up to you. Some people choose to wander over to their podium every now and again, make an announcement and then wander off. Some people give their presentation at the podium and then leave, only returning when they want to give another. Some do their presentation but thrive on the Q &A afterwards. Some might not like the feel of the podium and eschew a formal presentation to go and chat more directly with their audience. Likewise some people just want to listen and ask questions of other speakers. Others would rather ditch the conference and go straight to relaxing at the pub.

Most academic users of Twitter fall into one or more of these categories. Likewise people move between categories. But the interpersonal dimensions of it are fundamentally no different to a conference. It’s just that the form of communication is so dramatically concise, as well as lacking any direct parallel other than the text message, that until you’ve been using it for a long time, it’s difficult to see quite how much like everyday life it is. So don’t be anxious about it. If you want to use it to draw attention to your work then stop worrying about who follows you and just restrict your tweets to topics you would discuss in a formal work setting. If you want to connect with other people who have similar interests then just tweet about the things that interest you and respond when others do the same, just as you would in any other setting. If you want to get drunk and gossip then go ahead, just remember that people might overhear you and that, on twitter, what you’ve said echoes in the room for a little while before it dissipates.

The same rules of interaction apply on Twitter as they do offline. If someone habitually goes over time for their talk, monologuing at an increasingly bored audience then people in the audience will eventually leave and new audience members won’t stay for long. If someone gives a good talk but obviously resents the Q &A afterwards, people might sit in the audience because of intellectual interest but they’ll think the speaker is a bit rude. If someone turns up, loudly and briefly announces their new book/paper/insight and then leaves the conference, people won’t pay much attention, unless they’re a globe trotting academic superstar. While the norms of interaction which apply to Twitter as a medium are still in their infancy, the nature of that interaction isn’t radically new.

 [...] Twitter for academics [...]
Call for Micro Podcasts (2012-09-20 16:00)

Over the last couple of years we’ve hosted a lot of podcasts on Sociological Imagination. However thus far all of them have been produced by us. We’d like to host some by you as well! Specifically micro podcasts on any sociological topic.

For instance this 1 min podcast we recorded with Les Back at the British Sociological Association conference earlier this year:

It was recorded with [Audioboo](http://audioboo.fm/boos/753951-les-back-is-sociology-a-job-or-a-vocation/embed) which is a free smart phone app that records podcasts of 3 minutes and under. It is entirely free and incredibly easy to use. It requires no technical knowledge whatsoever and allows you to publish your podcast online with a couple of clicks.

If you go through with this and post a micro podcast on your Audiboo account, we can quickly post it up on SI. All you need to do is e-mail or tweet us with the address of the podcast.

Why not give it a go...?

2. [http://audioboo.fm/boos/753951-les-back-is-sociology-a-job-or-a-vocation/embed](http://audioboo.fm/boos/753951-les-back-is-sociology-a-job-or-a-vocation/embed)

What about the authors who can’t pay? Why the government’s embrace of gold open access isn’t something to celebrate (2012-09-21 08:00)

Sometimes I worry that Twitter is an echo chamber, reflecting my own prejudices back at me and shielding me from contrasting views. On other occasions though, I find this same characteristic immensely comforting. Such as when reading that the government has officially embraced the recommendations of the Finch report and finding that other PhD students and early career researchers were just as dismayed by this news as I was. Leaving aside the broader issues pertaining to gold open access, which in practice simply redistributes costs within a broken system without challenging the underlying commercial premise, there’s one particular question posed by this chain of events which is the cause of my current dread about the future of academic publishing: what about the authors who can’t pay?

I fear that academic publishing could come to resemble the perilous landscape that PhDs and ECRs are only too familiar with at present. The competition for postdoctoral funding is ever increasing, leading to continual inflation of the things you need on your CV to stand a chance, yet without funding it’s very difficult to actually achieve these
prerequisites. Or in other words: the best way to get postdoctoral funding is to already have it. Could we see something similar happening with publications? If authors are dependent on their institutions and/or funding bodies to pay the substantial fees required under gold open access then those who already have a job and funding will find it easier to publish and thereby increase their chances of getting another job and more funding. Much as the post doctoral funding climate creates virtuous cycles, so too will the publishing climate, as a whole swathe of early career academics will find themselves untroubled by article processing charges. From their perspective, open access of this form will be great: it doesn’t pose problems and it means their research is freely available. On the other hand, what of those who find themselves excluded? If your funding is patchy or non-existent how can you compete? Is it even going to be possible to be an independent researcher in any meaningful sense?

In a climate where freelance, part-time and fixed term contracts are increasingly the norm within academia, the extent to which the government’s announcement is retrograde cannot be overstated. Such a radical increase in the dependence of researchers upon their institution has profound consequences for those who do ‘make it’, leaving aside the many who seem likely to be wholly or partially swept aside for the reasons discussed above. With funding bodies increasingly focused around narrow priority areas, often tied to short term political whims to a truly abominable degree, themselves falling into homology with priority areas within universities, naturally aiming to increase their success in winning funding from these bodies, what becomes of research that falls into a non-priority area? What becomes of independent research full stop? Will there be funding available to cover author fees? Will there be conditions attached to it? How will the inevitable rationing work?

Even assuming the best will and highest managerial acumen in the world, these yet unanswered questions paint a picture of the future university, which I find far from appealing. What of the willingness to dissent and speak up at a time when economic instability looks set to continue indefinitely? With academics even more reliant on universities, as one of the two potential sources of author fees, will they be willing to resist? Or will the disciplining of academic labour, already entrenched in multifaceted ways with many personal consequences, simply continue?

BSA Theory – Early Career Theorists’ Symposium, Apr 2013, London (2012-09-21 14:00)
BSA Theory Study Group: Early Career Theorists’ Symposium

2nd April, 2013, London

Call for Abstracts

1352
The Early Career Theorists' Symposium is a special one-day symposium for up-and-coming theorists, organized by the Theory Study Group of the British Sociological Association. This symposium aims to bring together sociologists at a relatively early stage in their careers who work on theory or are engaged in original theoretical work as part of their ongoing research. We invite early-career sociologists, across all research areas, to submit abstracts. Submissions from advanced PhD students are also welcome.

**Professors Mike Savage, Celia Lury, and John Holmwood** will comment on the presentations.

Complete information for submitting the abstract will consist of:

1. name and contact information of the author;
2. title of your presentation;
3. a 500-word abstract of the presentation;
4. three or more keywords descriptive of the presentation.

To encourage a wide range of submissions, we have not pre-specified a theme for the conference. Instead, papers will be grouped into sessions based on emergent themes.

Please send submissions to the organizers: Dr Gurminder K Bhambra, University of Warwick ([1]G.K.Bhambra@warwick.ac.uk) and Dr Monika Krause, Goldsmiths College, ([2]m.krause@gold.ac.uk).

The deadline for submission is **1st November 2012**.

Invitations to present will be extended by 15th November. Please plan to share a full paper by 10th March, 2013. Registration for the event will be free for BSA members or for anyone already registered for the BSA annual conference; there will be a charge of £20 for all other attendees.

This event is timed to coincide with the BSA annual conference and is a supplement to it in terms of providing a dedicated space for early career theorists to meet and discuss their research. For more information about the BSA annual conference and to also submit an abstract to the main conference, see here: [3]http://www.britsoc.co.uk/events/bsa-annual-conference.aspx

[1]“SI weekend reading: Golden Dawn” on Bundlr

Call for Contributions: what does the Sociological Imagination mean today? (2012-09-23 08:00)

It has been over 50 years since C. Wright Mills wrote the Sociological Imagination. In that time the world has changed beyond recognition: the Cold War ended, the Keynesian consensus broke down, a globalizing neoliberalism rose to the ascendancy and the internet began to transform human communication and culture. In recent years, with 9/11 and then the financial crisis, it seems that history has returned with a vengeance. Is Wright Mills’ notion of the 'Sociological Imagination' still pertinent today? How can Sociology help shed light on the rapidly transforming world around us and the consequences of these transformations for the people who inhabit it? What does the 'Sociological Imagination' mean today?

The [1]Sociological Imagination website is seeking short articles which engage with these themes, or particular aspects of them. Submissions should be 500 – 1500 words and [2]e-mailed as a Word document. There is no deadline for submissions.

2. mailto:m.a.carrigan@warwick.ac.uk

1354
Using NVivo: a one day crash course for qualitative researchers, Fri 9th Nov (2012-09-23 14:00)

9:30am to 5:30pm, Friday 9th November at the [1]Manchester Digital Laboratory

Suitable for complete beginners or those who need a refresher, this intensive one day course will cover all the core functionality of NVivo:

- An overview of the software
- Managing and importing your data
- Coding strategies and techniques
- Analysing visual and multimedia data

Podcasts are a natural fit for communication of academic ideas (2012-09-24 08:00)

I first encountered the idea of academic podcasting when working for a University of Warwick based project a few years ago. It gave a small stipend to PhD students in exchange for producing a short podcast profiling the research of someone within the university, which was then edited and posted online by myself and the other conveners. This was the first time I’d ever considered the notion of podcasting about academic topics and I was instantly struck both by how fun it sounded and what a natural form of communication it was for academic ideas. Since my work on the project ended, I’ve continued to podcast as a hobby. As I’ve gone on, I’ve become ever more convinced that this is something which more people, particularly PhD students, would benefit from doing.

I’d undoubtedly be unsuccessful if I e-mailed a distinguished researcher to ask if we could meet up for a chat about their most recent book. Yet in the time I’ve been podcasting, I’ve sent precisely this sort of e-mail to scores of academics and none of them have turned me down. In some cases it has taken quite a long time to actually schedule the interview but all have, at least in principle, been willing to meet. It’s a chance to meet academics whose work you admire and explore the thinking behind their publications. It’s also a chance to range beyond your own research area, exploring topics you’d love to know more about if you had unlimited time to sit and read.

In this article I’ll focus on podcast interviews because it’s the type of podcast I’m most familiar with. It also requires the most thought. If you’re capable of successfully recording a podcast interview then you’re perfectly capable of recording a lecture, or anything else, as long as you think carefully about how to position the recorder and consider the more complex issues of consent involved, for example, I’m personally uncomfortable with recording questions from the audience, even if you ask at the start of the session whether this is ok.

How do you plan a podcast?

If you’re engaging intellectually with someone’s book or paper, it makes you the most natural interviewer in the world. Every question, idea and comment that’s occurred to you while reading someone’s work constitutes the raw material for an interview. Although it’s important to structure the podcast in a way which makes it accessible and enjoyable for the listener, what you need more than anything else is enthusiasm and engagement. If those conditions
are in place then the whole process will come to feel entirely natural, at least after you've done it a few times. If you have an idea for someone you’d like to interview then send them a quick e-mail, explaining what you want to do and why, then take it from there.

Reflecting on what I do when planning a podcast, I came to the eight questions below:

1. Who do you want to interview?
2. What do you want to interview them about?
3. Will you interview them on person or on Skype?
4. How long do you want the interview to be?
5. What topics do you want to ensure you cover?
6. Given your answer to (4) and (5), what questions do you need to ask?
7. Will you stick rigidly to the questions or ask follow ups on the spot?
8. Is your interviewee ok with your planned questions?

It’s worth noting that these are just suggestions. There are no rules to this, particularly given how new the format is. It is however worth thinking about what you want to achieve with the podcast. If you intend the podcast to be an exploration of specialist issues then it’s fine for it to be lengthy and even obscure. I’ve recorded some fairly substantial social theory interviews which, though not of interest to the vast majority of people who might stumble across them on my websites, nonetheless interest others who work in the area.

However if you intend to disseminate a set of ideas to as wide an audience as possible, it’s best to restrict the length of the podcast (e.g. 10 minutes), to not assume prior knowledge and to avoid specialist vocabulary. How you approach the podcast depends on what you want to achieve with it. Try not to obsess too much about form, after all this is effectively just an academic chat with an unusual degree of structure, just consider what the end result will be like and how it will be engaged with by others.

What do you need to podcast?

The technical skills involved in podcasting are minimal. Though, it should be noted, getting podcasts into iTunes is something which I’ve found fiddly and frustrating as someone who isn’t particularly technically minded. However the other aspects of the process are astoundingly quick and easy once you get to grips with them.

- Do you have a voice recorder? If not is there one you can borrow in your department? It's possible to podcast with a very basic voice recorder. Or indeed a smart phone: [1]www.audioboo.fm is great fun. Read the manual and explore the settings, as once you understand how to calibrate the recorder in the way most suitable for podcasting, you can largely forget about the technical side of the process and get on with the fun bit.
• If you’re recording a podcast via Skype then you need call recording software. I personally use the unimag-
inatively named Call Recorder which is simple and reliable. I’m sure there are also freeware alternatives available online. The advantage of a Skype podcast is, unsurprisingly, the ability to interview anyone anywhere in the world. Similarly, the flexibility it affords makes scheduling a lot easier. The downside is that a certain element of rapport is invariably lost, as there simply isn’t the same kind of interaction taking place without physical presence in the same space.

• I must admit that editing is the only part of the process I don’t enjoy. It’s not particularly demanding though. Audacity is free software which, though packed with features, remains easy to pick up as long as you screen out the 99% of the software which you won’t need to use as an academic podcaster. There are many video guides to using the software on Youtube. The only functionality I regularly use is deleting sections of the audio and amplifying the volume.

• If your voice recorder or Skype recorder doesn’t export files in MP3 then you’ll need a piece of software that can do this. There a range of options available online.

• If you are interviewing in person then you need a quiet space. In practice most academic offices can serve this purpose but it’s best to avoid conducting interviews at a particularly busy time of day and/or year. Likewise in summer it might be necessary to shut the windows in the office. The better the environment in which you record the interview, the less hassle you’ll have with the editing afterwards. The same point applies to positioning the voice recorder. Try and get the placement equal between the two speakers, as well as cautioning people to avoid moving too much if possible (chairs on wheels can be a bit of a danger here). If you’re new to the process and/or you’re using a lower-end recorder then it’s best to test the sound levels to save yourself difficulty later.

• Finally you need a place to host the podcast. It’s worth checking if your institution offers a way of uploading audio to your webpage, as many will. Likewise if your institution has a presence on iTunes U or any other central repository. Podcasts can also be posted easily on blogs and increasing numbers of multi-author blogs are hosting podcasts.

What else do you need to consider?

The sense that your podcasts need to be slickly produced can be a huge barrier to getting started. While some people may disagree with me, I think functional adequacy is the key here. We’re not media professionals, we’re researchers and the aim of academic podcasting is to communicate ideas rather than to impress the wider world with our flashy production skills. By all means do record elaborate introductions with jingles if it’s appealing to you to do so. My point is solely that these are in no way mandatory. Explore podcasting and find what works for you.

As someone who had done a lot of research interviews prior to starting podcasting, I’d already got past the stage of being unnerved by the sound of my own voice. However if this is new to you, don’t let it put you off. If you listen back to the podcast and think you sound silly/ponderous/strange (insert negative epithet here) it is completely normal and it goes away. Listening back can also be a good way to gauge if you are talking too quickly. If you think this might be a problem for you then practice with your voice recorder to get the pace right prior to your first podcast. Likewise avoid talking too much (unless the podcast is deliberately intended to be a dialogue rather than an interview). Use your questions as prompts to get the interviewees talking in the way want about the subjects you’re interested in. Avoid the temptation to cut in too frequently because the content is getting so interesting. I have to admit I don’t always manage to avoid doing this.
Finally, although norms of consent and ownership about academic podcasts are yet to be firmly established, remember to be respectful to your interviewee. Offer to let them check the podcast before you publish it and remind them that you an easily cut out sections they are unhappy with. Even if this means more editing work for you, it’s the least you can do given that they’ve offered their time & attention for the interview.

If you want a bit more guidance about podcasting, I’ve collected resources specifically geared towards academic podcasting [4]here. I’d particularly recommend the BSA PG Forum podcasting handbook. There’s also a lot of generic podcasting resources available online.

Call for Micro Podcasts (2012-09-30 08:00)

Over the last couple of years we’ve hosted a lot of [1]podcasts on Sociological Imagination. However thus far all of them have been produced by us. We’d like to host some by you as well! Specifically micro podcasts on any sociological topic.

For instance this 1 min podcast we recorded with Les Back at the British Sociological Association conference earlier this year:

It was recorded with [3]Audioboo which is a free smart phone app that records podcasts of 3 minutes and under. It is entirely free and incredibly easy to use. It requires no technical knowledge whatsoever and allows you to publish your podcast online with a couple of clicks.

If you go through with this and post a micro podcast on your Audiboo account, we can quickly post it up on SI. All you need to do is [4]e-mail or [5]tweet us with the address of the podcast.

Why not give it a go...?

4. mailto:mark@markcarrigan.net
Shannon Meehan is a high school wrestling star and local hero in a home town struggling to retain its blue collar pride in the face of unceasing deindustrialisation. Meehan felt pushed towards leadership and heroism from an early age and with a proud veteran for a father he also felt, as he got older, pushed toward serving in the US army. Beyond Duty tells the story of Lieutenant Shannon Meehan’s tour of duty in Iraq.

Any reader will come away from Beyond Duty with a newfound appreciation of the complexities and ambiguities of warfare in the late modern world. One of the most harrowing stories recounted in the book is that of a raid on a house in Baqubah which goes tragically wrong; the American troops enter the house only to find that it was wired with a house-borne improvised explosive device (IED). Most of the troops that entered the house are severely injured by the explosion and the ensuing collapse of the roof. This however is not the end game, as the retreating Meehan finds himself under small arms fire and is, ultimately, victim to another IED from within the relative safety of his tank. He poignantly describes the simmering undercurrent of rage finally brought to the surface through the last attack in a night of personal tragedy,

"The enemy was far better organized than most people imagined, and they waited for us to leave to hit us one more time, to try to kill us with a final blow as we headed back to base to heal and recover. They were doing their jobs […] nonetheless I hated them. I hated them more than the men who planted the bomb in the house, and I wanted them dead. I did not want to be here. I simply wanted whoever had killed our men to be killed." (Meehan 2009: 129)

The reader is left with a profound sense of the extent to which the realistic appraisal of a complex situation can
co-exist with a primal desire for revenge. Meehan struggles throughout to reconcile his cultivated awareness of the complexities of the conflict, as ordinary and desperate Iraqi men are drawn into the resistance through varying promises of food, security and vengeance, with the inevitable emotional corollaries of his men being injured and killed.

He powerfully depicts the emotional toll of, as he puts it, “fighting to do the right thing in the face of uncertainty and the terrible truths of war” (Meehan 2009: 180). The most tragic element of the book is Meehan's dawning realisation that this difficulty is not some timeless truth of war but, in its sheer arduousness, relatively unique to contemporary conflicts like Iraq. The circumstances they confront mean that, with all the will in the world, ‘fighting to do the right thing’ embroils them in self-contradiction, as their moral intuitions are exhausted in the face of the grim realities of late modern warfare.

This is conclusively and crushingly brought home to Meehan towards the end of Beyond Duty when, in an attempt to avoid another encounter with a house-borne IED, he orders a missile strike on a house believed to have been wired as a trap. He is in full compliance with protocol and yet moments later he finds that the intelligence on which his assessment was predicated is flawed and that his orders have killed eight children within the house. The brutal reality of the moral situation Meehan and those like him face is encapsulated in the disturbing finality of the episode. Their intentions as moral actors tragically outstrip their capacities, as neither following protocol nor being committed to aiding Iraqi civilians precludes their inadvertent participation in the injustices which critics of the war accuse them of complicity in. Earlier in the book Meehan recounts an angry letter in which he rebuked such critics and yet, as the war progresses, he finds that his heroism and his ideals cannot, ultimately, escape the horrific situation which he confronts.

It is easy to dismiss the idea that first person accounts such as this can be a source of moral or political insight. However Beyond Duty offers just such insights, as Meehan produces a profound and moving commentary on the defining war of the twenty-first century thus far. It is an honest and touching memoir of personal struggle and a potent accompaniment to more intellectualised and analytical treatments of contemporary conflict.

The man who wanted to change the world: RIP Eric Hobsbawm (2012-10-01 11:37)

He was a true encyclopaedic mind: as the [1]Independent once wrote, ‘No historian now writing in English can match his overwhelming command of fact and source.’ Many could disagree with his leaning to the left, but none could
ignore his arguments. Although he is most famous for other books, to me his study of [2]Nations and nationalism was a colossally important revelation which helped comprehend the emergence of nationalist sentiments in the post-socialist world in Eastern Europe. At 65 he was Britain’s most respected Marxist historian. At 93, he published his last book, [3]How to change the world: Tales of Marx and Marxism (here is a good [4]review by Terry Eagleton, and another good [5]review by Steffan Collini). It saddened me to read today’s [6]obituary in the Guardian. It reveals an inspirational life story of a great mind. RIP, Professor Hobsbawm.

Eric Hobsbawm (1917-2012)

[...] (more on C. Wright Mills – cwrightmills.org - The Sociological Imagination Blog) [...] 

Using NVivo: a one day crash course for qualitative researchers, Fri 9th Nov (2012-10-01 17:00)

9:30am to 5:30pm, Friday 9th November at the [1]Manchester Digital Laboratory

Suitable for complete beginners or those who need a refresher, this intensive one day course will cover all the core functionality of NVivo:

- An overview of the software
- Managing and importing your data
- Coding strategies and techniques
- Analysing visual and multimedia data
- Using memos effectively
- Using annotations and see also links
- Relationships and modelling
- Querying your data
- Managing the complexity of your project

**£50 for PhD Students, £100 for all others**

Press below to go to the booking form:
All participants will receive an electronic resource pack which covers the material from the course and provides guidance on continuing to develop proficiency with the software. To take part you will need a laptop with NVivo installed. A 30 day free trial of NVivo 10 is available from the [3]QSR website.

To keep costs down lunch is not included. But the venue is in the heart of Manchester’s famous Northern Quarter and is surrounded by excellent cafes and bars. There will also be LOTS of tea and coffee.

If you are a wheelchair user and are interested in this training event, please contact me and I'll try to arrange a session which can accommodate you.

Mark Carrigan has taught NVivo extensively at the University of Warwick and acted as a NVivo trainer and consultant for the EU FP7 funded MYPLACE project. For more information see his [4]website. Please feel free to get in touch via [5]e-mail or [6]twitter if you have any questions.

Towards Digital Sociology: an interview with Deborah Lupton (2012-10-02 08:00)

To start the interview, could you say a little about how you came to be so professionally active online?
It was a combination of factors, some going back a long time, some more recent. I have been interested in the sociology of computer use and cyberspace for quite a while. In the mid 1990s and into the early 2000s I conducted several studies examining the embodied nature of computer use, people with disabilities’ use of computer technologies (with Wendy Seymour) and the use of PCs in the academic workplace, including how people personalised these technologies (with Greg Noble). More recently I have become interested in researching how digital and social media are used in the medical and public health arenas. So it’s an area I have been pursuing in terms of research for many years.

My interest in using social media myself for academic purposes began with a desire to engage more with the general public. I had been thinking about how best to do this for a while. Earlier this year I eventually decided to try writing an article for an online news and research website that we have here in Australia called The Conversation. Only academics can write for this website, but it is designed for public readership and has a wide readership among the general public. Once my piece was published I was amazed by how many people read it in a short space of time and how many commented. It seemed clear to me that the best way to engage in the public arena was to publish online.

So then I decided to start my own blog (This Sociological Life), which went live in May this year. I have greatly enjoyed writing blog posts on my own research and other topics I have found interesting. Following setting up the blog I looked into ways to let people know about it and signed up to Twitter as a means of publicising it. I found Twitter to be not only an excellent way of publicising my blog posts as I published them but also of connecting with other people sharing my research interests globally and of sharing bits and pieces I had found on the web with them. Australia is a long way away from where most of the research in my fields is happening and researchers within this country are also separated geographically from each other, scattered around a very large continent. Twitter is a great way to connect quickly and easily, and in real time, across these vast distances.

I was then quite intrigued with the other different social and other digital platforms available and how they can be used for academic purposes, and investigated various tools, including Pinterest, Delicious, Scoop.it, Pearltrees, Quora, infographics tools, SlideShare, Storify, Mendeley, Paper.li and Facebook. I even made a (very simple) sociology app using an online wizard I discovered. And as I was investigating all these digital platforms I wrote a series of blog posts outlining to other academics what these tools have to offer. I have collected these posts together in a short e-publication, Digital Sociology: An Introduction, which I published on my university’s open repository for anyone to access.

**What do digital tools have to offer sociologists?**

My experiences of using the digital tools I have mentioned above have taught me that they are an excellent way to find, collate and curate information available on the web, to share it with others, to make connections and let others know about your own research.

I use quite a lot of the material I find on the web in my own research. For example, I have created a number of Pinterest boards on the specific topics I am researching at the moment. I have begun not only to use the images I have gathered on Pinterest in my research but to embed the links to these boards in journal articles and books I am writing, so that readers can click through and quickly view the material I am discussing. This material is also invaluable when I present the research in conference papers, as I can easily find images for PowerPoint presentations (or even call up the boards themselves if there is an internet connection available).

I also find a sense of creative achievement in using digital media. Such activities as writing a blog post, illustrating it and publishing it, or creating a Pinterest board or a Storify is a satisfying process not just because of content but also because of the way it looks. Many of these tools are very easy to learn to use and create a good-looking product.
It is also very satisfying to be able to monitor how many people have viewed/read your creations and to receive comments on them.

I make sure that I use as many tools as I can to disseminate what I have written/made across various social networks. A blog post, for example, can be publicised via Twitter, LinkedIn, Academia.edu, Paper.li, Scoop.it, Delicious, Facebook, and Pinterest, just to name a few possibilities.

**You've written recently about 'digital sociology'. What do you mean by this?**

In my view there are four major aspects to digital sociology:

1. Professional digital media use: using the kinds of tools discussed above for academic purposes.
2. Sociological analyses of digital media use: researching the ways in which people's use of digital media configures these sense of selves, their embodiment and their social relationships.
3. Digital data analysis: using pre-existing digital data for social research, either quantitative or qualitative.
4. Critical digital sociology: undertaking reflexive and critical analysis of digital media informed by social and cultural theory.

The second of these dimensions of digital sociology has been undertaken for quite some time – since personal computers were invented and brought into popular use. The other three have yet to be taken up to any great extent in sociology. I believe the fourth dimension, critical digital sociology, is an area in which sociologists can really take the lead, given the theoretical and methodological tradition in sociology of social and cultural critique.

**Is there a risk that digital activity can serve as a distraction from more traditional activity? It's easy to imagine many people accepting your argument that there are valuable opportunities here but nonetheless wondering where and how they will find the time to engage online.**

There's no doubt that engaging in digital media use can take away time from more traditional scholarly pursuits. But the point is, such engagement enriches these pursuits. There is a wealth of material out there available on the web; there is a huge audience who are eager to engage with and share the ideas of sociologists and other academics; there are other academics you can find via social media networks and connect with who you may never had known about; and these media offer great potential to get your research out there and encourage a greater number of people to read it and know about it. It is a matter of investigating the various tools, finding out which ones work for your own purposes, and developing a way of incorporating them into your daily work routine that does not swallow up too much time. You can use them as little or as much as you like: you have full control over this!

-------------------

**Deborah Lupton is an independent writer and researcher in sociology and cultural studies, located in Sydney, and an Honorary Associate, Department of Sociology and Social Policy and the Biopolitics of Science Network at the University of Sydney. Prior to this she was Professor of Sociology and Cultural Studies at Charles Sturt University, Australia. You can follow her on Twitter [1]@DALupton and at [2]This Sociological Life.**
To add to Deborah’s optimism about a growing Digital Sociology probing through the new tools, digitization of inter scholarly communication, faster and wider collection and distribution of knowledge through Web 2.0. I think that simple things are more likely to happen in Internet Sociology or Sociology 2.0 initially than extension of complex theories and methods or a new wave of social thought except exploring and explaining cyber world or virtual social network. Just to mention I wrote a paper in 2007 analyzing social media - "Hate Communities in Cyber Space", 8th Global Conference: Perspectives on Evil and Human Wickedness, March 2007, Salzburg, Austria (published in Constructing Good and Evil,Edited by Laura Torres Zuñiga and Isabel Mª Andrés Cuevas, eBook).

The Best of Christopher Hitchens (2012-10-02 15:00)

Free Agent Nation OR what precarity looks like for the winners (2012-10-03 08:00)

Daniel Pink, author of Free Agent Nation, makes being a 'free agent' sound pretty great. But then as a former political insider at the heart of the Democratic machine in the 90s and more latterly a business guru and best selling author, it seems likely that his experiences of being a free agent have been, well, pretty great.

But my point is not to attack the concept. After a number of years as a self-styled 'freelance sociologist', albeit not an enormously well paid one, I have long seen the attraction of the model of work Pink so appealingly describes. However it’s in that self same capacity qua sociologist that I can’t help but recognise the duality of this ‘freedom’ and how emblematic it is of the ambivalent nature of life in late capitalism. As Zygmunt Bauman has argued in his work on globalization, mobility is the condition of those at the very top and the very bottom. The global elite slip free of national constraints, circulating the globe in cosmopolitan splendor as they lead their strange dance with similarly mobile global capital. Meanwhile those at the bottom are equally mobile, as the struggle for shelter and sustenance inculcates the frantic mobility of the migrant.

Likewise the free agent nation might be great for some, as they escape the deadening bonds of sedentary bureaucracy and fashion a protean occupational self beyond the constraints which bind others. But for most others, it’s a life of insecurity and risk, an increasingly vicious cycle of unemployment, underemployment and fixed term contracts. Perhaps Pink’s book would benefit from a new subtitle? Free Agent Nation: what precarity looks like for the winners.

The Daily Mail Song (2012-10-03 12:00)

Professor Eric Hobsbawm (RIP) is interviewed on 'Responsible capitalism' earlier this year (2012-10-04 08:00)
My new, non-automated life (2012-10-04 13:31)

One of the most fascinating effects of moving to a new place is that for a few days and weeks nothing is obvious and everything requires attention. The same happens when migrating into a new language, but right now I’m thinking of my interaction with physical surroundings – something [1]Goffman would think about, if he hadn’t been so preoccupied with micro-interactions with humans. I have to admit that I am a bit of a [2]Latourian, after all.

I grappled with this sensation a bit [3]here, but today I want to be a legislator (or a car mechanic) instead of a poet. Here is a blunt list of the minutiae of my new, non-automatised life, quoted from my [4]internal conversation – think of these as citations from an ongoing interview with myself which I record in my memory in lieu of a voice-recorder. In fact, you don’t need to read the list.

- How far is work? How far is home? How on earth do I cycle in the middle of the road? Ah, that’s a bike lane and everybody does it. OK then...
- When are national holidays? What happens when there is one? (one happened to be on the very next day, 3 October and I was dying to find out).
- What kind of stuff can you buy in a pharmacy? What does it mean when someone tells you that “private healthcare in Germany is very cheap”? (I did ask. It turned out that a “simple consultation costs no more than 70 Euro”. I was so shocked I almost choked on my tea).
- What time do shops close in the evening?
- How do I ask the shop assistant, well, anything?
- Are bags free in the supermarket?
- How cold does it get in the evenings?
- What does the S-Bahn ticket say - I mean, I understand the words, but somehow the meaning doesn’t quite make sense. Can I really take any type of transport within 2 hours? Let me read the instructions again...
- Which way is the exit from the metro? Yes, I see the arrow. But it is ambiguous. Everything is ambiguous. I feel stupid and slow.
- How many bikers are likely to overtake me on the bike lane at 8 pm on a weekday? How fast and how impatiently are they likely to be? Will they honk or will they just whizz past?
• How much pressure do I need to apply on the bike lock in order to lock or unlock it?
• The key in the front gate doesn’t turn. A moment of panic as I turn it again and again in the dark, my hands full
  of shopping bags and a bike.
• I’m in. How long do I have before the light in the staircase goes off?
• Ah, the light has now really gone off and I’m already up the stairs. How many steps are there between floor 1
  and 2? How high is each steps? Where is the banister?
• Where are the light switches located?
• Is this thing my fingers have just found on the wall in the dark the light switch or the neighbour’s doorbell?
• Which of the two keylocks should I unlock first, the top or the bottom one? Which way to turn the key? And
  which of the two round keys belongs to which lock?
• How fast will the water evaporate from the pot with boiling potatoes on this cooker?
• In which drawer are the tea spoons?
• When I get up at night, do I turn left or right to get to the kitchen?

Actually, I hope that you didn’t read that list. Just looking at its length should be enough to appreciate how much of our
normal everyday life is routinised and automatised. We tend to think of ‘automati(sati)on’ as something pertaining
to mechanical apparatuses used for efficiency, but in fact we all use multiple simpler automatisation techniques all
the time. Part of the problems encountered e.g. by people with Alzheimer’s disease or stroke survivors is that they begin to forget how to do things usually seen in our culture as simple. Understanding what happens when we face a radically new environment can also help us understand, for example, autism. Lots of interesting neurobiological research has been done on the automating functions of mirror neurons (e.g. [6]Fan et al 2010). E.g. this article [7]article by Williams, 2008 makes interesting links with autism which the author defines as an ‘impaired development of embodied aspects of cognition’. I guess it is similar with dyspraxia (e.g. this [8]Dowell et al’s 2009 article about dyspraxia in autism). Moving to a new place provides a useful fringe experience and reminds us that interacting not only with people, but also with the environment around us involves complex social - and neurological - labour. If you look at each of those boring sentences above, you will see that in all of them I zero in on one particular, usually man-made, element of my reality that under normal circumstances remains invisible, hidden, and unacknowledged (Cresswell & Hawn recently wrote a [9]cool article about the epistemology of lived experience using Goffman and [10]Bakhtin and applying it to online gaming!). In a way, I prefer all these invisible elements to be visible. They are mostly ugly, irritating, and they slow me down, but if I know they are there, they cannot take me by surprise. This heightened attention is a way of managing a new, scary world. But even fully automatised worlds which we have inhabited for a long time hide the possibility of surprise.

Who Do You Really Want to Be? Dr Mayim Bialik’s commencement speech (2012-10-05 00:00)

Being editor is great. You get to impose things you love on the readers! Just joking. But, in all honesty, whether you are a Big Bang Theory fan or not, this is a lovely, useful, and inspiring commencement speech. [1]Dr Mayim Bialik (PhD in neuroscience, but perhaps more famous as [2]Blossom from the 1990s [3]sitcom of the same name, and Amy Farah Fowler from [4]The Big Bang Theory) talks about ego, character, autonomy, self-actualisation, about not being the greatest of the great. She is not afraid of that thorny question: who do you really want to be? I think this is a good speech to read in the beginning of an academic year, too.

Call for Micro Podcasts (2012-10-06 08:00)

Over the last couple of years we’ve hosted a lot of [1]podcasts on Sociological Imagination. However thus far all of them have been produced by us. We’d like to host some by you as well! Specifically micro podcasts on any sociological topic.

For instance this 1 min podcast we recorded with Les Back at the British Sociological Association conference earlier this year:

It was recorded with [3]Audioboo which is a free smart phone app that records podcasts of 3 minutes and under. It is entirely free and incredibly easy to use. It requires no technical knowledge whatsoever and allows you to publish 1380
your podcast online with a couple of clicks.

If you go through with this and post a micro podcast on your Audiboo account, we can quickly post it up on SI. All you need to do is [4]e-mail or [5]tweet us with the address of the podcast.

Why not give it a go...?

The simplest (and most effective?) campaign ad ever (2012-10-08 08:00)

Given the [2]postmodernist panache which has characterised Barack Obama's ascent to the summit of US politics (not to mention the [3]terrifying amounts of money which have gone into this most recent contest already) there seems something curious, anachronistic even, about the uncomplicated nature of this recent attack ad by Obama's campaign. Who would have thought that the verbatim words of your opponent, coupled with the cheaply and cheerfully emotive cinematography of the TV movie, could exercise such power?

A sign that contemporary politics is not as postmodern as we might have thought? Or rather that Mitt Romney, in spite of looking like the lazy casting choice for Republican president in a high budget but poorly directed HBO style show, remains simply inept at playing the baudrillardian games which constitute the working life of the high level politician in a [4]post-democratic era?

Top Ten Tips for PhDs starting to teach (2012-10-09 08:00)

If you’re new to it, standing in front of your first seminar class can be a terrifying prospect. As a new PhD student last year, I was thrown in at the deep end with two seminar groups a week on a topic tangentially related to my PhD, and I don’t mind admitting it took me a while to find my feet. It’s easy to recognise one’s (many) mistakes with hindsight, so here is the benefit of, oh, a whole year’s experience: my Top Tips for those finding themselves in the same situation this September.

1. **Preparation.** It’s all about balance – have an overall plan, but allow for interesting deviations. Always have a couple of “last five minute” activities up your sleeve in case your session runs out of steam (one of the simplest is to ask, “if we were going to investigate this empirically, how could we do it?”). However, the converse... don’t spend so long on preparing a one-hour session that you neglect your PhD (note to self, must take own advice).

2. **Learn your students’ names.** If you’re not automatically sent it, ask your department office for your university’s version of the “mugshot sheet” – a printout of your group’s student ID photos with their names and email addresses underneath. You can use the register to get to know your students. You should have one (because we’re all keeping tabs on our overseas student attendance, now, aren’t we?) but even if you’re only required to pass it round, doing an informal version of the traditional roll call will help put names to faces. It helps to do a quick layout of who’s sitting where that you can refer to if you want to call on individual students for contributions (which I generally find works better than asking a question of the whole class, who then look at the floor...).

3. **Watch others teach.** Even if you’re not enrolled in a PGCHE or some kind of teacher training programme, observation of others’ seminars is a great way of picking up tips (good and bad!). As a new PG, it’s probable that you’re not long out of being on the receiving end, so use that experience – who inspired you? How did they do it? What was it about their classes you enjoyed? This is one case where plagiarism should be positively encouraged.

4. **Get feedback.** Generally, the formal feedback mechanisms will only kick in at the end of the term/year, when it’s too late to change anything. Try a post-it note “last-five-minutes” exercise – on red, yellow and green, ask for anonymous suggestions for “I don’t understand/enjoy...”, “Why don’t we try...” and “I enjoy/find useful...” relating to the course. You might get a few blunt comments, but with any luck they’ll be outweighed by positive suggestions, and maybe even a compliment or two that will make your flippin’ week.

5. **Relate your material to the outside world.** As a seminar leader, your job is most likely not to actually deliver content, but to situate it in a real-life context, discuss its applications, debate its worth. Use news stories and current events, give examples of actual uses, find people doing jobs actually using the topics on your syllabus.

6. **Keep copies of essay feedback.** It helps you keep track of what you’ve said to who (particularly if a student subsequently asks you about it); and you can see whether your advice was acted on for subsequent work. If the same mistakes reappear, you’ll have to come up with something else.

7. **Be positive with feedback.** The old adage of “criticise the action, not the person” applies. Don’t shy away from pointing out substandard work, but do offer suggestions for how it could have been improved, particularly if a mark is just below a class boundary – what would have put it over?
8. **Don't beat yourself up** if it isn't perfect at the start. It's easy to feel a certain amount of guilt if you don't have a great seminar – after all, you are responsible for delivering the session, your students are paying for the privilege, etc; and it's easy to have unrealistically high expectations – images of enthusiastic, inspiring debates can seem a long way from your first teaching experiences. Learn from what didn’t work, change it, move on; and don’t be afraid to ask for advice. Your university will have a teaching support unit – find it, and get as much training as you can.

9. **Communicate your enthusiasm.** You are (presumably) teaching a subject you’re interested in enough to dedicate three years of your life to, so explain/demonstrate just what it is that you find so fascinating. If I had a pound for every time I used the phrase “...and I think this is REALLY COOL because...” in my classes, well, I wouldn’t need to be teaching.

10. **Take your own board pens.** Nobody tells you this.

[7]Exploring the Emergence of Underground Musical Worlds

Exploring the emergence of underground musical worlds, a talk by Nick Crossley | Thinking culture (2012-10-12 07:56:21) [...]

The Accidental Sociologist is feeling rather unsociological.... (2012-10-10 13:00)

In these first few weeks of 'transitioning' the main thing I've noticed is the lack of anything spectacularly new. SPSS looks just like Excel, I did most of the qualitative methods course in my PGCE and social theory is basically what I learned in literary theory but without the addition of people like Roland Barthes and Donna Haraway, whom I wouldn't be without. I'm feeling surprisingly territorial of my position as an English Literature academic and have managed to forget that the disciplines have the potential to be so different; where once I could assume shared knowledge I can't anymore. Instead of making me feel more like a sociologist, studying sociology (formally in any case) is thus far making me feel more like a literary critic. I keep wondering when I can reasonably berate classmates for such things as lacking a working knowledge of canonical literature or not recognizing quotes from Shakespeare. Truth be told I had a rather large wobble last week and had to be brought down from the cliff ledge by a combination
of extensive talking with academic friends and, er, wine. It doesn’t help that what I’m currently studying is not – how to phrase this? – the most intuitive of topics to a literature geek. Statistical inference (which currently makes up 90 % of my sleep time and 100 % of my awake time) is a discipline I’m unlikely to return to in a hurry and certainly not one that is coming naturally; the questions I asked during the last week’s class made the poor lecturer look like she wanted to run weeping from the room. Thankfully I’m not alone in this and it’s amazing how buoyed one can feel knowing that others are also struggling.

Having moaned thus, I have to admit that there are some distinct advantages to coming from an arts background. Though the study of English Literature may appear to be primarily concerned with examination of fictional characters and situations, it’s really far more about considering the human condition and how we relate to our environment, making the leap to thinking in terms of social theory and its construction relatively straightforward. Moreover, being concerned with language as a matter of course makes it easier to be a critical thinker – I’m finding so far that everything I learned in my literature degrees, both content and skills wise, is incredibly transferable in terms of both skills and knowledge.

The more I study the textual aspects of sociology, the more I question the boundaries that distinguish disciplines. Considering that my methodological approach is distinctly qualitative rather than quantitative, I’m now beginning to wonder what it is that marks out a qualitative theoretical (as opposed to field work loving) sociologist from an arts or humanities academic? We’re both concerned with people, with words, with thick description, with textual sources. Does it really matter if the characters we write about from source material were never alive to begin with?

Submit your questions....

One of the primary aims of this column (in addition to providing me with a public space to talk about myself...) is to create a sort of workshop style environment in which anyone doing postgraduate work in sociology – or indeed academia in general – can find the answers to any and all of those niggling questions that have been playing on their mind. These can be questions about substantive topics, theory, field work, methodology, constructing funding applications, finding CFPs, writing abstracts, conference papers and articles, getting published, networking, job applications, teaching and anything else that is relevant to postgraduate study of sociology. As part of this we’ll be fielding questions to leading academics as well as PhD students in the know.

We'll regularly feature a workshop oriented column with a selection of pertinent and popular questions with a variety of responses. If you have a burning question that you want put to our panel of experts you can contact me via The Sociological Imagination or Twitter. In order to reach as wide an audience as possible we’ll be using a Twitter hashtag, #phdsoc. Stick this tag on to your tweets and we’ll pick them up and add them to our pile. Indeed this is probably the best way of getting in touch. We’re hoping for a post bag bigger than Santa’s! Please also share this hashtag widely so that sociologists far and wide can begin using it.

Top Ten Ideas for starting points for Social Science seminars (2012-10-11 08:00)

It’s pretty much impossible to start a debate with “Topic X. Discuss.” An interesting, controversial or downright unusual source is a great way of getting things going – introduce it at the beginning, show it on screen or pass copies
round, get everyone in the class to note down anything about it that strikes them, and away you go: who has written down the same thing? Who agrees/disagrees? Why? Who might have a different point of view? A good source should provoke a response – either positive or negative – and serve as a starting point for marshalling opinions. Here are my Top Ten ideas for discussion-starters to get you thinking:

1. **Crime maps.** These are amazingly detailed and available online from the [1]police website. Put in a postcode and you'll get the crime stats for the area on the right – click on "Crime and outcomes in this area" for detailed maps and a breakdown by type of crime. Look at the stats for your local area and ask why certain types of crime occur in different areas? Where are the “hotspots”? Why? Look at the types of crime listed – what occurs where? What constitutes “anti-social behaviour”? According to whom? Why has it become a policy priority? Compare different parts of your town, different towns, urban/rural, university locale vs rest of city, what happens where students live? Look at the historical data – what is going up/down? Where does this data come from? How reliable is it as a source? **Good for: Criminology, Environment, Social Policy.**

2. **Census records and the national archives.** The census records for every 10 years beginning in 1841 are [2]online. There’s a 100-year embargo so the most recent available is 1911. Although most commonly used for tracing family histories, there’s a wealth of social information contained in them, particularly after the late 1800s ones when more detail was recorded. You need to register (and pay!) to view the original copies but you can get samples for free – just do an image search for “example census page” and there’ll be material you can use. What is recorded on each page? Why was this data captured? Discuss privacy and personal data. Look at the family structure at each address – what do you notice? How does it compare with the modern family? Look at a few from different censuses – what is different? Look at the employment column – what does it tell you? How is this linked to the area lived in? Are there regions today which are associated with a particular type of work? Why? Link this with the “where born” column – who moved where? Why? Does this still happen? Look at the last column – for example, the 1901 census asks if the person is “(1) deaf-and-dumb, (2) blind, (3) lunatic, or (4) imbecile, feeble-minded.” Huge amounts of mileage there for a discussion on attitudes to illness and mental health, why was this recorded, what health information is taken in modern censuses? Why? **Good for: Health/Medical Sociology, Work, Families, Education, Migration.**

3. **News stories.** There are vast amounts online – start with the[3] BBC and newspaper sites, look at local newspapers, local radio, student publications, it’s easy to link to a video clip to start a seminar. Compare coverage of a news story in different media, whose angle is it? Are they for or against? Why? Is the news source impartial or does it have an underlying ideology informing its news coverage? Who is producing/writing the story? How reliable are news sources as factual data? Will the story influence the behaviour of those viewing it? How/why? Don't restrict yourself to UK news sources - everything is online, so see how a foreign newspaper has covered a British story, compare and contrast – especially if you’re teaching a comparative policy course. **Good for: All social science branches, Media.**

4. **Government departments.** All departments produce vast numbers of publications, reports, papers, press releases, etc, etc. You can use most of it for something! Assess both the content and the presentation: evaluate who the perceived audience is for the material, who wrote it, for what purpose? How is the material being presented and why? Is it successful? Look at any statistics – are they reliable? How do you know? Again, what is being portrayed and why? There’s too much to cover in much detail here (maybe a future blog post!) but a few examples of bits I've used are: the [4]Government Art Collection (How much should be spent on public art? What is its value? How does it contribute to British culture?); weekly[5] A&E statistics(Who sets the targets? Are they meaningful? How are they used/abused?); Dept for Education[6] advice on drugs (whose responsibility is it to teach young people about illegal drugs? Is the advice valid? Useful? Appropriate? How would/should it translate into the classroom? How involved should schools be in the home lives of their pupils?). You get the idea. **Good for: All social science branches.**

5. **University publicity material.** Gather prospectuses, brochures, flyers, website screenshots. It’s instantly relatable
but harder to critically assess from an objective viewpoint. How is the University’s publicity department trying to portray itself? What pictures are used? Did the class use such material in deciding to apply? Was it effective? Does the material convey a sense of place? Community? How? What language is used? What is its effect? How would you design publicity material to convey the campus culture? Good for: Environment, Culture, Identity, Visual methods.

6. Mass observation material, searchable [7]here. Again, vast amounts of material are available here so pick one or two items and use them to start a discussion. Try a section of personal diary from the 1930s, one of the “panel” day observations or questionnaire responses. An interesting subsection is the [8]Worktown Collection, a special study of Blackpool and Bolton. Beware the website, once you get into it there's a real risk you won't be seen for days... Use for a historical perspective on contemporary topics around daily life. Find a modern cohort study and compare the methods and data generated. Good for: Work and employment, Culture, Politics.

7. Non-news magazines. This will cost you a few pounds and may involve slight embarrassment if you are doing the buying ([9]Nuts magazine, anyone?), but works really well in seminars. Buy a selection of magazines, compare and contrast. For example, to look at sources of health advice – [10]Men's Health, [11]Women's Health, the aforementioned Nuts, [12]Sagamagazine, a fashion magazine, a teen magazine, a sports magazine. Evaluate differences in content and presentation between Men's and Women's Health, look at health and wellbeing content of different magazines – who is the audience? Who is the author? Why is this material being presented? Does it work? Good for: Health/Medical, Media, Gender.

8. Wikipedia (bear with me), [13]here. Not so much the content of the site, but the way in which it is constructed. Look at a relevant topic and evaluate it in terms of content and layout. Use the Wikipedia principle to construct an informative handout on a different topic – where does one person start in writing it? How is it edited? Who agrees? Who has control over online publishing? Who is responsible for fact-checking? Does it work? What about other user-editable sites (eg [14]Wikileaks)? What are the implications for incorrect information entering the public domain? Good for: Most topics, Media, Education.

Hannah Perrin is an ESRC DTC Scholar and PhD student in Social Policy at the University of Kent with interests in health professions, clinical education and training, occupational socialisation and work transitions. She twitterson about her research [20]@HCPerrin and blogs at [21]Academish.
Resource ideas for teaching (and maybe research) | Thinking culture (2012-10-12 15:52:07)

[...] Sociological imagination also has a really helpful list of ten useful resources for teaching seminars. These are materials that might be used to provoke a bit of conversation. Although quite a few are also often used as research resources. There are links here, for example, to the British Library Sounds Archive and the classic Mass Observation archive - which I once used to get some really nice stuff about people’s experience of noise the the 1940s. Share this:TwitterFacebookLike this:LikeBe the first to like this. This entry was posted in data and dataplay, Uncategorized and tagged Resources for teaching, seminar ideas, Sociology. A quick thought about Jiscmail (2012-10-12 08:00)

Do you administer a JISCMail? I administer two: [2]asexuality-discuss and [3]socialmedia-discuss. Though I’m bad at administering them and, partly for this reason, nothing much happens on them. This is a shame because my initial motivation still stands: I thought there was inadequate dialogue taking place on both topics and I wanted to try and help bring such dialogue about, connecting with others who were interested in these topics in the process. I assume this motivation is true of many others who setup Jiscmail lists. But I grew up with [4]vbulletin and mailing lists have never really done it for me.

I assume this also applies to others. So a proposal: if you want to consolidate a research network around a specific topic, don’t setup a mailing list. Instead create a wordpress blog. Create an account for anyone who asks for one and lay down no editorial restrictions whatsoever. Ask those who take up an account to do the same. Let a thousand flowers bloom. Don’t see the blog as a collective product but seem it as an open publishing platform, a clearing house, which serves the same purpose as a mailing list might have done but does so in a much more effective way. Thoughts?

William Buckley and Noam Chomsky (2012-10-12 14:00)

What does it mean to be a public intellectual in a digital age? (2012-10-13 08:00)

[1]"What does it mean to be a public intellectual in a digital age?" on Bundlr
Using NVivo: a one day crash course for qualitative researchers, Fri 9th Nov (2012-10-14 08:00)

9:30am to 5:30pm, Friday 9th November at the [1]Manchester Digital Laboratory

Suitable for complete beginners or those who need a refresher, this intensive one day course will cover all the core functionality of NVivo:

- An overview of the software
- Managing and importing your data
- Coding strategies and techniques
- Analysing visual and multimedia data
- Using memos effectively
- Using annotations and see also links
- Relationships and modelling
- Querying your data
- Managing the complexity of your project

£50 for PhD Students, £100 for all others

Press below to go to the booking form:

[2] An Introduction to NVivo Eventbrite

All participants will receive an electronic resource pack which covers the material from the course and provides guidance on continuing to develop proficiency with the software. To take part you will need a laptop with NVivo installed. A 30 day free trial of NVivo 10 is available from the [3]QSR website.

To keep costs down lunch is not included. But the venue is in the heart of Manchester’s famous Northern Quarter and is surrounded by excellent cafes and bars. There will also be LOTS of tea and coffee.

If you are a wheelchair user and are interested in this training event, please contact me and I’ll try to arrange a session which can accommodate you.

Mark Carrigan has taught NVivo extensively at the University of Warwick and acted as a NVivo trainer and consultant for the EU FP7 funded MYPLACE project. For more information see his [4]website. Please feel free to get in touch via
LinkedIn co-founder Reid Hoffman discusses the ideas in his new book, "The Start-up Of You". (2012-10-14 14:00)

Experience with MOOCs – Week One (2012-10-15 08:00)

There’s been a fair amount of interest in the rise of MOOCs – Massive Open Online Courses – in the HE ether recently, debating whether such online courses – where thousands of students can register, and participate via video lectures
and online assignments – add something valuable to the higher education sphere. As part of my PGCHE I’m looking at innovative delivery modes for higher education courses, so thought the best way to find out about the MOOC phenomenon was to sign up, and document the experience, hoping to compare both the content and format with a traditional course taken at my own institution.

MOOC number one is Networked Life from the University of Pennsylvania, via the Coursera platform. I’ve chosen this one (along with Social Network Analysis from the University of Michigan) as my PhD will involve some analysis of support network diagrams and thought it might be useful, as well as seeing how effective the online format is. I can see the appeal – I can sit here at home in front of the computer, coffee in hand, a heartfelt rendition of Unchained Melody wafting over from next door’s builders... here we go.

The first thing I have to do is agree to an “Honor Code” stating that I won’t plagiarise in any form, either by claiming others’ work or disseminating course materials as my own. Feeling like an American highschooler pledging allegiance, I click OK and voila, the course page. It’s rather snazzy but no different really to any other VLE – we use Moodle at Kent – so I have the Announcements, Quizzes, Video Lectures, Discussion Forums, Reading Lists, etc that I was expecting, and it’s easy to navigate. The course only opened yesterday and the forums are already buzzing with activity – people are checking in from Colombia, Trinidad, Iran, Toronto, Moscow, Melbourne, Sao Paolo, Seoul, Mauritius, Dubai... and offline study groups are being formed based on geography and native language, as well as international Skype meets. I introduce myself as Hannah from Canterbury, Kent, get a friendly welcome from those who think I’m in Ohio (hello, Kent State, USA) or New Zealand (hello, University of Canterbury, Christchurch, NZ), and an even friendlier one once it’s established I’m British (hello, University of Kent, Canterbury, UK). This is a truly global thing.

An interesting discovery is that the MOOC runs alongside the same "physical" course at UPenn – although the lectures are already recorded, additional material will be posted at we go along, and I wonder how much contact there will be between the two. I’m slightly afraid of the quiz topics (Contagion in Social Networks? The Erdos Renyi Model?) so am hoping all will become clear. Wish me luck...

Hannah Perrin is an ESRC DTC Scholar and PhD student in Social Policy at the University of Kent with interests in health professions, clinical education and training, occupational socialisation and work transitions. She twitterst on about her research [2]@HCPerrin and blogs at [3]Academish.

1. https://www.coursera.org/
The short, professionally made film Rufus Stone is the key output of the three-year ‘Gay and Pleasant Land?’ research project led by Bournemouth University academic, Dr Kip Jones. The stories that form the foundation of the script for Rufus Stone are entirely based upon research undertaken by Jones and his team from the University’s School of Health and Social Care with the assistance of a citizens’ Advisory Committee.

Rufus Stone, was directed by Josh Appignanesi (The Infidel) and produced by Parkville Pictures, London, and won two awards at the prestigious Rhode Island International Film Festival in August, 2012. It is currently making the conference and film festival rounds and negotiation for distribution is taking place.

Jones and Hearing’s conversation below about making Rufus Stone will be expanded upon in a chapter in a forthcoming book edited by Marilyn Lichtman, Qualitative Research in the Social Sciences, to be published by Sage in 2013.

[4]Kip Jones is Reader in Qualitative Research and Performative Social Science at Bournemouth University in the UK. He has spent more than ten years developing the use of tools from the arts and humanities to research and/or
disseminate social science knowledge, or a Performative Social Science.

Trevor Hearing leads television and film production studies at Bournemouth's Media School, and has years of experience working in the television industry as a documentary filmmaker. Kip and Trevor have worked on many joint projects, including documenting the filming of Rufus Stone and producing a trailer for it.

"You ask for what one should be keyed up?" (2012-10-17 08:00)

"You ask for what one should be keyed up? My god, for long weekends in the country, and snow and the feel of an idea and New York streets early in the morning and late at night and the camera eye always working whether you want or not and yes by god how the earth feels when it’s been ploughed deep and the new chartreuse wall in the study and wine before dinner and if you can afford it Irish whiskey afterwards and sawdust in your pants cuff and sometimes at evening the dusky pink sky to the northwest, and the books to read never touched and all that stuff the Greeks wrote about and have you ever read Macaulay’s speeches to hear the English language? And to revise your mode of talk and what you talk about and yes by god the world of music which we just now discover and there’s still hot jazz and getting a car out of the mud when nobody else can. That’s what the hell to get keyed up about"

Call for Contributions: what does the Sociological Imagination mean today? (2012-10-21 08:00)

It has been over 50 years since C. Wright Mills wrote the Sociological Imagination. In that time the world has changed beyond recognition: the Cold War ended, the Keynesian consensus broke down, a globalizing neoliberalism rose to the ascendancy and the internet began to transform human communication and culture. In recent years, with 9/11 and then the financial crisis, it seems that history has returned with a vengeance. Is Wright Mills’ notion of the ‘Sociological Imagination’ still pertinent today? How can Sociology help shed light on the rapidly transforming world around us and the consequences of these transformations for the people who inhabit it? What does the ‘Sociological Imagination’ mean today?

The [1]Sociological Imagination website is seeking short articles which engage with these themes, or particular aspects of them. Submissions should be 500 – 1500 words and [2]e-mailed as a Word document. There is no deadline for submissions.

Call for Micro Podcasts (2012-10-21 14:00)

Over the last couple of years we’ve hosted a lot of [1]podcasts on Sociological Imagination. However thus far all of them have been produced by us. We’d like to host some by you as well! Specifically micro podcasts on any sociological topic.
For instance this 1 min podcast we recorded with Les Back at the British Sociological Association conference earlier this year:

It was recorded with [3]Audioboo which is a free smart phone app that records podcasts of 3 minutes and under. It is entirely free and incredibly easy to use. It requires no technical knowledge whatsoever and allows you to publish your podcast online with a couple of clicks.

If you go through with this and post a micro podcast on your Audiboo account, we can quickly post it up on SI. All you need to do is [4]e-mail or [5]tweet us with the address of the podcast.

Why not give it a go...?

4. mailto:mark@markcarrigan.net
This rather striking self-portrait is part of an even more striking project. Artist Brian Lewis Saunders, who is rather keen on self-portraits more generally, undertook an experiment in artistic perception: he took a different drug every day and drew himself under the influence. Check out the rest of them via [2]Cultso (HT) and be sure to have a look at the artist’s [3]website.

International Number Ones (2012-10-23 08:00)

Click on the image below to explore this visualisation of international number ones (as the people behind it point out: every country is the best at something!) from the wonderful website [1]Information is Beautiful. [2]
Top Ten Tips: Preparing to Publish (2012-10-24 08:00)

There’s a ton of advice out there for PhD students and ECRs on getting published, from choosing a journal to improving your academic writing. Here are my top tips for useful things to do BEFORE you start writing; so if you’ve got half an idea that you think could turn into something publishable, here goes:

1. **Pick your journal.** Decide where you want to balance between highly prestigious, wide-ranging journals, and smaller ones that focus on a particular sub-field. Try looking at the e-journal collections or using the articles that you’ve been reading that by definition are in the right area – where are they published? Use impact factors if they’re relevant to your field.

2. **Read your target journal.** Common sense, perhaps, but it’s a good idea to look at a WHOLE issue of your journal to get a feel for its tone. Does it have a quant/qual focus? Is it mostly theoretical or empirical? Is there a special issue coming up on something relevant? Sign up for email notifications that will let you know about these.

3. **Decide on the type of article...** Look at the type of work that is published – for example, [1]Work, Employment and Society publishes full articles, Research Notes, Debates and Controversies, On The Front Line (a section for research participants to have their say) and Book Reviews. [2]Behavioral Sciences and Law differentiates between Research Reports and Research Articles. [3]Music Analysis has a Critical Forum as well as publishing original research. Which style best fits your idea? Or, which would you feel better able to write?
4. **...And read some of those articles.** Look at the content and structure of published pieces: are there any common features that it would be a good idea to include? Do they go Intro-Methods-Results-Discussion? Is there usually a historical perspective? Are there diagrams, illustrations, links to external content? Do they usually end with a firm conclusion or ideas for further work? A bit of time spent studying here will give you enormously valuable information you can really use.

5. **Consider co-authors.** If you've got a brilliant idea that would benefit from an additional angle, consider asking a colleague with particular expertise for their input. Establish roles and the division of work early on and decide on the order your names will appear on the paper before you start.

6. **Follow the Author Guidelines for the journal.** Writing 101. Each journal's guide is available online and contains various info on how to construct your article; from referencing style to word limits, formatting diagrams and what to include on a cover sheet. Not following the instructions is a really easy way to get your article rejected without even making it to the review stage, so take note and keep checking.

7. **Write your article!** Pitch it to the journal you are writing for, taking into account all the info you've gathered so far. Put it away at least overnight, sleep on it, re-edit; lather, rinse, repeat.

8. **Make the abstract brilliant.** Make sure it does genuinely summarise, rather than introduce, your article. Get the key points in loud and clear – remember that the editors and reviewers may not be experts in the specific topic you are writing about, and see many, many submissions, so make sure it’s right there at the start.

9. **Include a short note to the Editor when you submit.** Editors have jobs too, so don’t waffle on! A brief note including why you are submitting your article to that particular journal is useful, but don’t rewrite your abstract (or the whole paper, or your CV...).

10. **Aim high.** Despite lower acceptance rates, an advantage of submitting to some of the higher-ranked journals is that you’re quite likely to get some useful feedback, even if your article is rejected. Use it, learn from it, revise your article and get ready for submission to the next journal – have a big cup of coffee, and restart from point 2.

Foucault, Biopolitics and Critique (2012-10-25 08:00)

*Biopolitical Experience* offers an original and comprehensive interpretation of Michel Foucault’s analysis of biopolitics - situating biopolitics in the context of embodied histories of subjectivity, affective investments and structures of experience. Going beyond lamentation at the horrors of biopolitical domination, the book develops a positive-critique of biopolitical experience: offering explanations as to the enormous appeal of biopolitical discourse; and cultivating an affirmative, ethical and productive response to the technologies of biopolitical racism and securitization. Such a response is not about life escaping power or a retreat from life, but rather involves critical work on the conditions of production of population life (becoming collective). In addition to a detailed account of Foucault’s writings on biopolitics, biology and experience the book offers a critique of some key contemporary interpretations of Foucault and develops the positive-critique of biopolitical experience by exploring the place of biopolitics, racism and contingency in feminist politics.

Often when speaking of post-war developments in pragmatism, many people tend to focus on the philosophy of the latter Wittgenstein or Rorty. However, such an exclusive focus tends to eclipse other notable contributions. In Cornel West’s genealogy of pragmatism, C. Wright Mills plays a prominent role in mid-century pragmatic developments. Mills shares this space with other notable American thinkers, Sidney Hook, W. E. B. Du Bois, Reinhold Neibuhr, and Lionel Trilling. Mills particular contribution was to apply pragmatism to sociology; to apply vision to science to use Rorty’s terms.

Mills prominence should not be surprising given his solid grounding in pragmatism: His doctoral dissertation addressed the pragmatism of the Metaphysical Club against the rise of the social sciences, and the institutionalization of critique. Mills is therefore a useful thinker to demonstrate and contrast the differences between conventional sociological methods and pragmatic methods.
Central to Mills' sociology is his pragmatist inspired methodology. For Mills' this takes the form of a philosophy which sets forth the right sociological problems. For our purposes, we can call this Mills dictum. He presents this in The Sociological Imagination. In the book, issues of sociological theory do not amount to Grand Theory (the term Mills used to mock Parsons's work) or produce abstracted empiricism (a comment on Bell's work) but rather are attentive to "historical social structures" as they come to be of "direct relevance to urgent public issues and insistent human troubles."

To achieve relevance, Mills drew upon various general sociological ideas to guide and orientate the analysis at hand. This is how selected ideas such as Weber's analysis of bureaucracy and Mannheim's description of social consciousness sit side by side. They are not reconciled in a model of social change, but rather as resources in a methodological toolkit. Neither is considered correct per se, or even regarded as such. Instead, their incorporation is based upon their ability to drive an analysis that assists in understanding the human condition. In the same sense, the combination of pragmatic and analytic elements in this thesis is not held onto by because they are true, correct, or theoretically consistent, but rather for their methodological offering.

In Mills' case the analysis took the form of combining social structure, historical change, and biography. Or to borrow the title of his collected papers, power, politics and people. This sociological imagination allows for meaning and applicability wider than scholarship, such that matters of policy and political practice can be widely debated for a true democracy. This is a point of convergence with deliberate democrats and public reason liberals. We find this sentiment neatly expressed in Mills' aphorisms to have a politics of exposure as opposed to a science of politics. In this sense the method is humanistic in character.

As it is presented here, Mills' understanding of theory is similar to that proposed by Anthony Giddens in New Rules for Sociological Method and Capitalism and Modern Social Theory. Giddens' approach is to consider the classic sociological tradition as "tied together as an endeavor to construct a critical analysis of the legacy of the social theory" aiming to understand "social activity and intersubjectivity." As Giddens writes of method, "it is not a guide to 'how to do practical research,' and does not offer any specific research proposals. It is primarily an exercise in clarification of logical issues." Had Mills lived longer, there is no doubt he would have endorsed these quietist remarks. Key to Giddens is that "social theory must incorporate a treatment of action, and must grasp the significance of language, the practical medium whereby this is made possible." Both of these concerns are evident in Mills' early essays, some of which are collected in Power, Politics, and People. For example, in the essay 'Language, Logic and Culture', language is "a system of social control" and when combined with vocabulary acts as "sets of collective action" that produce norms and values. These are certainly nods to early pragmatists Dewey and Mead.

These points are crucial to the pragmatic tradition, and to any pragmatic analysis. To take language as an example; it is both a way of knowing, and a practice. A tenet then is that the transformation of linguistic expression can alter linguistic practice vice versa. The introduction of new expressions can alter practices; new ways of knowing can alter existing ways of acting. Changes in epistemology can change action. Rorty makes this observation at the beginning of Contingency, Irony, and Solidarity. He notes how during the French Revolution vocabularies "could be replaced almost overnight." The point to which Rorty is driving at, is that new questions of concern require new vocabularies, and that old vocabularies linked to old questions being no longer of assistance, need to be discarded.

Pragmatists recognize the fluid nature of language and language practice. For this reason, pragmatists resist, on principle, the unification and codification that is required for the realization of the explanatory projects of conventional sociological method. The same principles animate C. Wright Mills questions of concern. For this one
needs to safeguard the very possibilities that Mills' social imagination offers themselves. For us, this means avoiding the institutionalization and domestication of critique.

### Using social media for impact and public engagement – a case study of @projectmyplace (2012-11-02 08:00)

In this podcast Mark Carrigan talks to Martin Price of the [1]MYPLACE project (it was originally recorded for the [2]Digital Change GPP). MYPLACE brings together 16 universities across 14 European countries, as well 14 other 1412
public institutions. It’s a massive and fascinating project, looking at young people's political participation across Europe and how it’s shaped by the continent’s legacy of totalitarianism and populism. It’s also a great example of how social media (in this case the blog linked above and the @projectmyplace twitter feed) can be placed at the heart of even the largest research project and be used creatively to meet the project’s strategic aims, without getting in the way of more ‘traditional’ elements of the work involved in research.

Bertrand Russell on YouTube (2012-11-05 08:00)

Perhaps somewhat naively, it had never occurred to me how much archive footage was available of early 20th century philosophers. If my late modern prejudices had not blinded me to this fact, I would have looked up some of my favourite philosophers on Youtube a long time ago. But they did and now I’ve transcended them so here are some wonderful [1]Bertrand Russell videos and apologies in advance if this sudden discovery makes the Sociological Imagination incongruently philosophical for the near future.

Why I am not a Christian:

On Smoking:

Ears, tongues, and teeth (or Phones, languages, and dentists) (2012-11-05 13:05)

Today I made my first (short) phone call entirely in German. It wasn’t easy, so I’m proud!
The first thing is, I really dislike talking on the phone, regardless of language and conversation partner (though talking in a language I use rarely is worse, talking to strangers and officials is worse than talking to family, and talking to friends is somewhere in between). Stage fright management techniques usually help (funnily enough, I hardly have any stage fright on actual stages). Depending on mood and the urgency and importance of the phone call, I manage to hold most necessary phone conversations, and only occasionally do I end up putting phone calls off indefinitely.

The other thing I don't like is going to the dentist. It is by no means a phobia, but the logical result of one particular terrible experience - or, rather, a series of particularly terrible experiences with the same naughty tooth. In other words, provided that I trust the dentist, I would prefer going to see her or him to talking on the phone to anyone. But this time I'd rather hold five phone conversations than have to have that one naughty tooth treated. That bloody piece of bone has been the root of all evil. Three or four rounds of fillings in the last 15 years. Two root canal treatments with complications in the last five years. An unidentified inflammation at its (nonexisting) root, which went on for a couple of years but did not show on X-rays. More recently, three attempts to patch it up with partial temporary fillings. Needless to say, this has resulted in having trouble eating anything hard, such as steaks, raw vegetables, and nuts, for the foreseeable past. The bastard has been begging for a crown for a while (I'm not sure there's enough tooth left even for a crown, so a bridge might be on the way). Two days ago, while enjoying a warm dinner on a dark and cold Saturday evening, I cheerily and absent-mindedly bit into what probably was this tooth's last carrot. The dilapidated structure cracked and almost fell out, but not quite. Perhaps if it had, I'd have been more efficient in finding a doctor.

Now, why am I boring you with gory details of teeth and irrelevant confessions of petty social phobias? Because moments like this remind you that you are a recent migrant, by highlighting the deficit of several things non-migrants take for granted: trust; possible courses of action in emergency; local knowledge that extends not only to usual courses of action, but also to alternatives. They point at an interesting feature of being a migrant: [1]Intersectionality. The theory of intersectionality, initially developed in gender studies, seems very useful for understanding any type of inequality, in this case inequalities based on migrant experience. Needing semi-urgent dental help in a new city, by itself, isn't such a drama - especially when you are a very privileged migrant: one that has a paid job, speaks a little of the host language, has access to a phone, and even knows several locals who can share potentially useful (or at least comforting) first-hand knowledge, such as recommendations of a good doctor or dentist. Equally, having a mild [2]phone-phobia when living in a familiar milieu is inconvenient, but manageable. And, not speaking German in itself is not usually a problem (even when you live in Berlin!). My migrant status reminder thus comes not in the form of a bang on the head, the click of handcuffs, or the sound of a closing door. It is far more delicate and tacit, like thin skin peeled off exposing your metaphorical body to the world and depriving it from its usual defences (by the way, the skin metaphor has psychoanalytical roots and has been employed very interestingly to experiences unemployment by sociologist [3]Valerie Walkerdine). But nevertheless it does come, in the form of two or more intersecting issues that suddenly reinforce each other and require urgent, active management. The result is that things are far more difficult than they should be, when seen from outside. The resulting experience is an unexpectedly high expense of emotional energy and a feeling that some of your "skin" has been "peeled off". Hopefully, the resulting "scars" harden it for future experiences.

Luckily, the phone operator spoke clearly, repeated and rephrased stuff when I couldn't understand, the call was over in less than a minute, and I now have an appointment in less than 48 hours.

3. http://bod.sagepub.com/content/16/1/91.refs
Wanted: Ph.D. student to put Harriet Martineau back in the sociological canon (2012-11-06 08:00)

Harriet Martineau (1802-1876) was one of the most remarkable women of letters – perhaps ever. Her body of work ranged across the social and biological sciences and even theology. [1]Wikipedia gives a good introduction to the breadth of her writing. However, if Martineau is remembered at all today, it is as the English translator of Auguste Comte’s work. But Martineau was a sociological pioneer in her own right, a friend of John Stuart Mill and the Utilitarians, as well as a correspondent with all the major intellectuals of the mid-19th century, on both sides of the Atlantic, and including Charles Darwin. By all accounts she was a formidable personality (a Germaine Greer-like figure perhaps) who stood out in her day for being able to earn a living from her writing without ever having to get married.

The person who appears to be the leading living scholar of her work is [2]Deborah Logan, an American specialist in Victorian literature. This leaves plenty of scope for a sociological interpretation of Martineau’s oeuvre. As it happens, many of Martineau’s papers are housed at the University of Birmingham. Based on a twitter exchange between Jo VanEvery (@JoVanEvery), Mark Carrigan (@mark_carrigan), and myself, it dawned on me that Warwick (only 20 miles from Birmingham) would be a great place for someone to do a Ph.D. on Martineau’s significance in her own time and her continuing legacy, both in sociology and for feminism more generally.

I would welcome a student interested in undertaking this project. I think such a Ph.D. could be easily turned into a timely book. But keep in mind that you will need funding! I am happy to work with students interested in applying for funds but I have none at my disposal. (When approaching me (s.w.fuller@warwick.ac.uk), please already have a funding source in mind that you have good reason to believe would support this project. This means doing some homework about funders!)

Finally, a few years ago, I staged a play in which the main female role was that of Harriet Martineau. [3]You can have look here.

Human, All Too Human (2012-11-09 08:00)

This astonishing 1999 BBC documentary series follows the lives of three prominent European philosophers: Friedrich Nietzsche, Martin Heidegger, and Jean-Paul Sartre. The theme of this documentary revolves heavily around the school of philosophical thought known as existentialism, although the term had not been coined at the time of Nietzsche’s writing, and Heidegger declaimed the label. The documentary is named after the 1878 book written by Nietzsche, titled Human, All Too Human: A Book for Free Spirits.

This is the book from which the series takes its name:

It has been over 50 years since C. Wright Mills wrote the Sociological Imagination. In that time the world has changed beyond recognition: the Cold War ended, the Keynesian consensus broke down, a globalizing neoliberalism rose to the ascendancy and the internet began to transform human communication and culture. In recent years, with 9/11 and then the financial crisis, it seems that history has returned with a vengeance. Is Wright Mills’ notion of the ‘Sociological Imagination’ still pertinent today? How can Sociology help shed light on the rapidly transforming world around us and the consequences of these transformations for the people who inhabit it? What does the ‘Sociological Imagination’ mean today?

The [1]Sociological Imagination website is seeking short articles which engage with these themes, or particular aspects of them. Submissions should be 500 – 1500 words and [2]e-mailed as a Word document. There is no deadline for submissions.

Advice on introducing Twitter to academics (2012-11-13 08:00)

Twitter has a definite image problem. It first penetrated the public consciousness in a way which has left it defined by celebrities and, particularly for academics, this is unattractive. If you want to persuade academics to use it, it’s important to illustrate that the academic twittersphere (I hate the term but have yet to come across a better one) has some quite specific characteristics.

Perhaps by demonstrating some of the varied kinds of high-quality interaction you get on there e.g. #phdchat discussions, the feeds of high profile academics who are engaged users, the possibility for crowd-sourcing.

It’s difficult to convey the point of Twitter. Partly this is a result of the inadequacy of ‘micro-blogging’ as a concept: it doesn’t get across what such a service is, how it can be used or what value these uses have. If you want to persuade academics to use it, your account has to be framed in practical terms. However this is difficult because much of the terminology, interface and minutiae of Twitter are inherently confusing and probably always will be.

Therefore it’s important to convey that you really do have to try it properly (i.e. fill out your profile, add a picture, find relevant people to follow, have some conversations, explore a hashtag and do some retweeting) before you’re in a position to make an informed decision. They may subsequently decide it’s not for them but it’s important to get across that everyone finds it quite bewildering from the outside or when they first sign up. Hence the prevalence of the “I’m not sure what the point of Twitter is” opening tweet.

The steep learning curve isn’t a very attractive proposition to academics.

Hence as well as being framed by examples of high-quality intellectual interaction, sessions should be framed by an account of the different uses to which you can put Twitter and how these fit into, as well as enhance, existing aspects of academic practice e.g. connecting at conferences, promoting your work. People just aren’t going to be bothered to persist with a slightly bewildering service unless they’re confident that (a) it leads somewhere (b) that ‘somewhere’ is a place they’re going to benefit from being, given who they are and what they do.

There’s a difficult balance to strike between the technical aspects of doing workshops about Twitter and the more conceptual aspects relating to how people conceive of and engage with Twitter. People will have technical questions
and they should feel free, if at all possible, to ask these as and when during training workshops. Technical questions left unanswered will hinder, perhaps fatally, people’s ability to relate Twitter to them. But the main focus of such a workshop should be on the conceptual questions, as the aim should be to allow potential academic Twitter users to be able to construe the service, as well as the uses to which it can be put, in terms of their existing practices, projects and commitments.

Therefore the core technical training should take place before hand: either in the form of a computer session where everyone signs up, a step-by-step guide distributed before hand to get people up and running or a demonstration at the start on an OHP with a dummy twitter account which can ‘lose its identity’ after each session. This can be supplemented by further resources which are sent after the session (potentially via Twitter? incentivising subsequent use vs alienating those who don’t immediately get round to it) which take the step-by-step training to a higher level. This would allow technical questions to come up and be asked in a free-flowing way which would benefit the ‘thinking through’ process which is a necessary component of a session. But it would also hopefully minimise them so that they don’t interrupt the flow of the session or dominate it.

Unless people quickly get tied into some sort of network on Twitter they’re unlikely to persist with it.

In part this entails the necessity of getting people to choose followers during a session, as well as demonstrating the various means through which this can be done. But an equally important part of it is getting people in the session to follow and interact with each other. Therefore they’re tied into a network by the time they leave the session and, even if only a smaller number actively engage, their engagements are going to have consequences throughout this initial network (through their RTs and conversations etc) in a way which is going to maximise the chance that disinterested/apathetic participants see interesting stuff in their timeline and feel moved to explore further. Furthermore follow ups from the facilitators could usefully stimulate this but it must be carefully and conservatively done, otherwise it risks coming across as contrived and/or intrusive.

Not everyone is going to respond to Twitter in the same way and, if you’re an overly enthusiastic social media geek, it’s easy to forget this. This is ethically problematic, in so far as it can lead you to fail to recognise that some forms of engagement with Twitter (i.e. keeping it as narrowly professional in the capital ‘p’ sense of the term) are grounded in people’s lives and personalities in ways that must not be implied are the ‘wrong’ ways of using Twitter. You’re also likely to, at best, fail to connect with workshop participants and, at worst, alienate them if you fail to explicitly recognise the human diversity which leads to the diversity of ways in which one can engage with Twitter.

Therefore “there’s no right or wrong way, it’s a case of trying it and figuring out how you want to use it” should be a running motif through trainings sessions, there should be allotted time for group discussion of core issues (e.g. professional vs private online identity) with the facilitators taking a back-seat to gently steer discussion and answer technical questions.
as Tiziana Terranova calls it, that is required by social media. The advantage of my blog is that I can post things when it suits me, it’s more easily archived and maintained, and it can be more sporadic. The thing with Twitter is that it seems to be more of a continual commitment and that content is more ephemeral. So, I’ve avoided Twitter so far but I can see that it might actually be helpful for the visibility of my work. I can see that when a post on here gets tweeted by a reader it often gets a higher level of attention. This suggests that there is some advantage in using it. I’m going to continue to resist for the time being at least. My caution was probably a result of some of the early research I did on social media as it was beginning to take off in 2006-2007. [...]

SI Profile: Margaret Archer (2012-11-15 08:00)

[1]"SI Profile: Margaret Archer" on Bundlr

Melvyn Bragg and his guests discuss the Continental-Analytic split in Western philosophy. The Analytic school favours a logical, scientific approach, in contrast to the Continental emphasis on the importance of time and place. But what are the origins of this split and is it possible that contemporary philosophers can bridge the gap between the two? Melvyn Bragg is joined by Stephen Mulhall of New College, University of Oxford, Beatrice Han-Pile of the University of Essex and Hans Johann-Glock of the University of Zurich.

Call for Micro Podcasts (2012-11-17 08:00)

Over the last couple of years we’ve hosted a lot of [1]podcasts on Sociological Imagination. However thus far all of them have been produced by us. We’d like to host some by you as well! Specifically micro podcasts on any sociological topic.

For instance this 1 min podcast we recorded with Les Back at the British Sociological Association conference earlier this year:

It was recorded with [3]Audioboo which is a free smart phone app that records podcasts of 3 minutes and under. It is entirely free and incredibly easy to use. It requires no technical knowledge whatsoever and allows you to publish your podcast online with a couple of clicks.

If you go through with this and post a micro podcast on your Audiboo account, we can quickly post it up on SI. All you need to do is [4]e-mail or [5]tweet us with the address of the podcast.

Why not give it a go...

The evolution of mobile phones (2012-11-19 08:00)

Having coffee and waiting for a call. Once again, boredom proves the mother of great (or merely relatively entertaining) ideas. I am thinking about mobile phones. Fascinating things, aren't they? I first saw a mobile phone (mobiphone) in the mid-1990s, when it was an expensive piece of equipment owned chiefly by businesspeople. In the popular consciousness in Bulgaria, the mobiphone became firmly associated with the so-called 'mutri' (thugs, mafiosi). The first mini-mobile I saw belonged to a Dutch ship-agent in the summer of 1998. I got my first own mobile phone in the spring of 2000, shortly before graduating from high school and although it didn't quite change my life in an instant, it crept in and is not about to creep out any time soon. But it seems unimaginable today. Even those 3 (now 2, as one recently gave in) of my friends and acquaintances that do not possess a mobile phone in fact do this because they have other means of communication (all three are full- or part-time academics and avid internet-users).

But, as a sociologist, I should now spare you reminiscences about life before the advent of the mobile phone and get beyond personal anecdotes. So, let's trace the 'evolution' of mobile phones through a chronological selection of some of the most popular mobile phones in the period between 1983 and 1999 - [1]here. The [2]Mobilephonehistory.co.uk website also has some interesting info about the history of mobiles. The Guardian chips in with an [3]article, the title of which could be construed as not-so-hidden advertising. And here is a 2003 [4]article by Lacohée, Wakeford and Pearson on the social history of the mobile phone, unfortunately already a little outdated. Perfect example of how quickly changes in technology can affect our everyday lives, the structure of the economy, socialising patterns, life chances, modes of sharing information, private/public spheres, employment opportunities, and much else. Do you know any other resources about the social history or social significance of mobile phone technology?

Is America the New ‘Old Country’? (2012-11-19 18:24)

The great journalist Walter Lippmann famously defined the twentieth century as the ‘American Century’. In 2012 the twentieth century is history: We’ve been there, done that. Now, it seems, America is the Old Country. The idea of countries being ‘old’ or ‘new’ has been popularised in recent times by George W Bush’s Defence Secretary, Donald Rumsfeld, who distinguished Old and New Europe (with the UK mercifully excluded), based on whether their promotion of Western values took an inward or outward turn – as judged by their willingness to support the US-led invasion of Iraq. However, I mean ‘old country’ in the nostalgic sense that immigrants to the US used to refer to Europe as the ‘old country’.

Although a New Yorker by birth, I have now spent two-thirds of my professional career in the UK. I return to the US 4-5 times per year, typically on business. For me the US seems culturally stuck in a late Cold War time warp – that is, forever 1970-1990. I should not be hearing the music of my youth whenever I turn on a random radio station – or three or four. The buildings are either 1930s art deco (remnants of New Deal public works projects) or 1970s anonymous skyscrapers. The city centres of the old industrial cities are Disneyfied, often to resemble some generic mid-20th century image that a child (such as myself) might have had of the place. Sometimes I even think that the prices have been frozen at the levels of my childhood. And perhaps most strikingly, the people still talk as if America...
is the greatest place in the world without a hint of doubt or irony.

There is something quite touching about all this, and I wish I could say that America’s endless capacity for self-affirmation genuinely inspired its citizens to do better. But as demonstrated by the intensity of the uphill battle that Barack Obama faced in his re-election campaign, self-affirmation is too often a mask for collective denial and a refusal to engage in the painful act of national self-redefinition. Here Americans most resemble its late 19th/early 20th century European immigrants who would rhapsodise about some mythical ‘old country’ to the disadvantage of their adopted homeland. Obama’s greatest long-term contribution to the American psyche may be to have started, often by personal example, the difficult conversation of what it means to be American, now that the world-historic spirit passes from its shores – and living in the past is not an option.

Michael Sandel: The lost art of democratic debate (2012-11-20 08:00)

An early review of the Sociological Imagination (2012-11-21 08:00)

"Imagine a burly cowpuncher on the long, slow ride from the Panhandle of Texas to Columbia University, carrying in his saddle-bag some books which he reads with absorption while his horse trots along. Imagine that among the books are some novels of Kafka, Trotsky’s History of the Russian Revolution, and essays of Max Weber. Imagine the style and imagery that would result from the interaction of the cowboy-student and his studies. Imagine also that en route he passes through Madison, Wisconsin, that seat of a decaying populism and that, on arriving at his destination in New York, he encounters Madison Avenue, that street full of reeking phantasies of the manipulation of the human will and of what is painful to America’s well-wishers and enjoyable to its detractors. Imagine the first Madison disclosing to the learned cowpuncher his subsequent political mode, the second an object of his hatred...The end result of such an imaginary grand tour would be a work like The Sociological Imagination"

This less than charitable early review of the Sociological Imagination was written by [1]Edward Shils. It offers an interesting insight into the status Mills enjoys within the sociological cannon, as his now iconic status was paralleled during his life by a dissidence which had not yet been elevated into esteemed iconoclasm. But it would be too easy to read the career trajectory of Mills as a fable about the intellectual virtue of resistance within a professionalising sociology. While Mills may be blogged about (something he would have [2]enjoyed partaking in himself perhaps) in
admiring tones decades later by those who can’t help but contrast his enduring reputation to that of Shils and co, there are surely many others who have simply been forgotten.

matthew bond (2013-01-08 17:16:54)
Lots of normative and positive problems with C Wright Mills’s work. For starters: 1. Just another pessimistic elitist like Pareto. 2. Hard to falsify his claims. 3. Lack of empirical investigation. ps thanks for quoting Shils shred. I usually dig ES’s prose but that passage stinks.

**Why disability history should be on the school curriculum** (2012-11-22 08:00)
A good article in the Guardian answering this question: [1]here.

Parenting in modern Britain: series of podcasts by the University of Warwick (2012-11-23 08:00)

In September 2012, the University of Warwick held a conference on the 'Understanding Parenting: Historical and Contemporary Perspectives'. It was supported by The Wellcome Trust and brought together researchers, policy-makers and practitioners to discuss the debates surrounding childlessness, childbearing and childrearing. The conference was convened by Dr Angela Davis and Dr Laura King at the University of Warwick.

Check out the conference podcasts.

Are Teenagers more 'Obedient' These Days? (2012-11-23 19:06)

Recently Mark Easton, a BBC editor, observed that the “teenage rebels are not what they were.” By reviewing some of the recent analyses, he shows how much the new generation of teenagers are different from the past ones in the cases of using the banned drugs, drinking alcohol or smoking.

Then he asked “today, though, where are the rebellious sub-cultures?” And correctly adds that “no-one is suggesting that young people do not misbehave, but teenagers no longer seem to define themselves by wild disobedience.”

Easton’s hypothesis is also interesting. He believes that “these days, perhaps, adolescent identity is defined more by the use of social media rather than the use of illicit drugs.” Now it means that youth gangs are now going virtual. Then they show their disobedience on the social networks like Facebook which is almost out of the control of the past generation.

“The archetypal teen is evolving.” There is no doubt on it. And also internet and the digital gap between the generations are also constituted a new sphere of action for the teenagers to be together and create their own new—however virtual—world very easily. Then they have their own kingdom and there is no need to challenge the other—more real—kingdoms. From this perspective, yes, they became more obedient and probably submissive.

It is thought-provoking to think about other more sociological and historical causes for this phenomenon. I want to invite you to take a look at the problem from another, wide, historical, perspective. It seems to me that the teenagers did not become obedient. Conversely I believe that whole of the society is now more disobedient.
Just take a look at the way we dress and compare it with the extremely formal ways of dressing-up (like as a university student) 60 years ago. The male students of the time used to wear ties and coats and even there were some courses for the female fresher about the way they should behave in the university like how to sit down or drink and etc. One will apparently observe that in compare with them we are absolutely 'hippies.'

The radical leftist movements of 60s to 80s and the postmodern ideas of the 70s onwards had some profound effects on the everyday life of the Western (including British) low-culture. This impact is crucially on the way modern men are looking at the world. 50 years ago this world was horribly divided between some solid ideologies like Marxism, Fascism and Liberalism. The world was full of ‘certainties’ and ‘absolute truths.’ There were quite a lot of real targets to fight against in addition to many intense hopes to create the ideal society. But the deep effect of the post-modern turn was the gradual liquefaction of those solids. As Marx once said 'all the solids melts into air.'

If we look at the evolution of the modern world in the last decades of the twentieth century we can discern the stormy tendency toward the liquefaction of the ‘solids’ in any kind; first of all religious ones during the Enlightenment, then the human made ideologies like Fascism and Marxism, and finally the core ideal of the liberalism, the idea of progress and the sanctity of science itself, largely, challenged.

The point is that in an age which Zygmunt Bauman called the age of liquid modernity, teenagers can find no real target to be opposed to, not a 'valid' criteria to resist against, not a single grain of truth to show its falsity. They are not so 'obedient.' All of the society is more rebellious. At the middle of such a permanent revolutions no one needs to be 'wild disobedient.'

To put it more accurately, the term 'disobedient', which presupposes the presence of a non-challenged power to which one can be totally obedient, has recycled. Here we have more suitable term; representation. What today teenagers are really searching for is to represent their individual identity and interests on the virtual basis. The fundamental selection is not between obedience/disobedience but between well-representation/misrepresentation/not-represented.

Morteza Hashemi Madani is a PhD student in the sociology department of the University of Warwick. His fields of research are philosophy of social sciences and science studies. Also in the past ten years he has been a blogger and journalist.

These generalisations are very ethnocentric. Please reread what you’ve written and think about whether any of it applies to Saudi Arabia or Egypt, where religion is still very "solid" and there has never been a youth rebellion against social norms. There’s more to the world than the US and Europe. The failure to notice this is a serious flaw in a great deal of sociology. Moreover, even in the US, religion is still very solid for most people. When you say "we" or "teenagers", think about who you’re really talking about. You’re writing on the Internet, and the Internet is global.

Well sir! I am a middle-eastern researcher who has been there in the past 25 years. Before you accuse me of having ‘white mask on the black skin’ – I’m actually a kind of brown :) – I should add that you have a point there. I wrote this as a response to an article which was published on BBC and it was mainly about European/Western teenagers. Not a kind of universally valid theory for whole of human beings right now. To explain in detail what is happening in the middle-East in the age called ‘liquid modernity’ was not my concern here. Might write about it later but you might be right that I needed to add one adjective like ‘Western teenagers’ not to make it ‘naively universally valid claim.’

"The radical leftist movements of 60s to 80s and the postmodern ideas of the 70s onwards had some profound effects on the everyday life of the Western (including British) low-culture."

I'll leave it to the author to decide whether to reveal their personal characteristics but the allegations of ‘ethnocentrism’ (I know him in real life) made me LOL. In the genuine laugh out load sense of ‘lol’.

All the more so given the patronising self-righteous tone in which your comment is written.

It doesn’t matter who you are. I’m not making an ad hominem argument. I’m just pointing out that the phenomena you’re describing are real for only a small part of the world’s population. The phrase "Western (including British)" occurs halfway through the post, after you’ve already referred to "the new generation of teenagers", "the whole of society", and "the way we dress". Anyway, your claims aren’t even valid for Britain, only for the most secularised portion of the British population. There are plenty of people in Britain whose religious beliefs haven’t been "liquefied" at all, and whose way of life is utterly untouched by radical leftist movements, and there are even more in the US. The notion that "the West" (a meaningless Eurocentric term) has become thoroughly secularised and postmodern is a discredited fallacy.

I find your contention that people can be divided up into those for whom religion/belief is 'liquid' and those for whom it is 'solid' utterly bewildering. I’m not a fan of Bauman’s liquid modernity stuff but, discounting that, this seems like a gross misreading.

But this has nothing to do with me so I’m going to back off and leave you and Morteza to talk...

And if I sound annoyed, it’s because this sort of sloppy cultural myopia is distressingly common in English-language sociology,
in which "we" often seems to mean "me and my liberal friends in academia", as if conservative Christians, Muslims, Jews, and other "non-liquid" populations didn't exist or didn't matter, or could be safely ignored on the grounds that they exist only in the so-called "non-Western world", when in reality they're your neighbours in London.

(1): as if they "could be safely ignored on the grounds that they exist only in the so-called "non-Western world" (2): "Please reread what you've written and think about whether any of it applies to Saudi Arabia or Egypt, where religion is still very "solid" and there has never been a youth rebellion against social norms." Surely the assumption you're critiquing in (1) is precisely the one implied by what you said in (2)?

Sociological Imagination (2012-11-24 11:56:43)
This is why I think the 'liquid' concept is pretty useless in terms of practical social theory. It either leads to the obliteration of empirical detail (which is the perfectly valid point of your critique) or the meaningfulness of the conceptual distinction melts (!) away when you recognise that 'solid' and 'liquid' life exists side by side to varying degrees. It's a crap dichotomy which reifies a complex process, pretending to offer explanatory purchase on it while doing little more than getting in the way of actually understanding social & cultural change. I love much of Bauman's work but, though he is much more likable, his stuff on liquid modernity is no better than Giddens and Beck and, in some ways, much worse.

Rule of thumb: if someone tries to explain social change in terms of transitional dualisms (modernity -> postmodernity, traditional -> post-traditional, solid -> liquid etc) they're almost certainly not explaining anything. They're assuming a trajectory of social change and fitting whatever empirical data they engage with into a preconceived framework. If you explain change over time in terms of a transition between dualisms you inevitably assume the very process which you're citing empirical data in an attempt to substantiate.

Here's an example of what I'm referring to, from Bauman's "Liquid Modernity", p. 28: "As Lessing pointed out a long time ago, at the threshold of the modern era we have been emancipated from belief in the act of creation, revelation and eternal condemnation." I mentioned Egypt and Saudi Arabia as a heuristic. I don't think anyone who lived in the Arab world could write something like Bauman's sentence above. The incongruity would just be too flagrant. However, that doesn't excuse him for writing it in the UK, either. And the fact that that book is so widely admired and cited says something about the sorry state of sociology.

Benjamin Geer (2012-11-24 12:52:30)
And you're right that I misused Bauman's terms "solid" and "liquid". Actually, since he seems to think that only atheists can be modern, one would have to conclude that most of humanity has not experienced any modernity at all – an absurd conclusion.

Teenages in most part of the world are disobedient, in spite of religion or regional culture. Media is important to close and adjacent behaviors and ideas of youth together.

Sociological Imagination (2012-11-24 18:02:37)
Hurray we've found a mutually agreeable conclusion! Entirely agree with your last two comments :)

Morteza (2012-11-25 02:52:04)
It seems to me that the Islamic revolution of 1979 in Iran was a challenge to the naive conception of the history as a one-way street toward the secularisation. To define 'liquidity' only from the sociological (empirical) point of view is so misleading. If you do so obviously you can find some empirical counter-facts which show the existence of 'solidity.' The point is that I believe we need an epistemological reading of the term 'liquidity'; Religion as a meta-discourse is challenged in the modern world. I
know that even in the West we have Muslim extremists. Also I know that inside Christianity there are some serious tendencies toward the revival of religious discourse. But the point is that this religion is not a meta-discourse and exactly because of this needs 'a revival movement.' As Milbank clearly stated his goal at the beginning of *Theology and Social Theory*: "What follows is intended to overcome the pathos of modern theology, and to restore in post-modern terms, the possibility of theology as a meta-discourse." The process of liquefaction is not the process of 'getting rid of religion' (from the sociological point of view which Comte and Marx used to see) but its disappearance as a meta-narrative. Religious truth is there; valid, alive and solid. But it does not remain unchallenged. It is not a meta-narrative any more. Religious political movements like Islamic revolution in Iran among Shia’s or Fundamentalist movements inside Sunny Islam or even inside academia in the West and East (like Milbank’s radical orthodoxy) clearly define their goals; the revival of religion as a meta-discourse. So what I said in this essay was not based on the positivistic naive idea of the progress of history toward the demolition of religion. Conversely I do believe in the necessity of the revival of religion as a meta-narrative. But when I say that ‘this is my political project’, at the same time I have presupposed that it is not in that position right now. Religious truth is just one truth among other nationalist, chauvinist, socialist etc. ideas even inside Saudi Arabia. PS. Still I don’t want to open the Pandora’s Box of “religion and middle-east in the age of liquidity” and, evidently, restricted my essay to the West. Just one point for here: I believe that fundamentalism is the other side of the coin of secularisation by distortion of the traditional religion from inside. Fundamentalism as one way of re-emergence of religion in the modern time is more secular (and because of this violent) than one might think.

**What does a career in social research entail? (2012-11-24 08:00)**

So what do social researchers do? RSUK has launched a [1]website about careers in science, exploring different possibilities of life as a researcher and the different career paths which UK researchers take. The website features researchers from all seven Research Councils and cover a broad range of disciplines. New case studies will be added to the site regularly. Click here to [2]meet some real-life social science researchers!

![Sociology](Photo: Idle Ethnographer TM)
"Ultimately, if I’m honest, I do it because it’s fun" (2012-11-25 08:00)

In this short podcast recorded at a [1]Digital Change GPP discussion event earlier this year, [2]Eleonora Belfiore discusses her experience of using social media as an academic.

[sc _embed _player fileurl="http://markcarrigan.files.wordpress.com/2012/07/ebgpp.mp3"]

The Accidental Sociologist is having a bit of an identity crisis.... (2012-11-26 08:00)

There’s a moment in Heart of Darkness when, Kurtz, at the instance of his death, cries ‘The horror! The horror!’ The terror, madness and awful spectre of what has been and what is yet to come lie before him and he cannot help but exclaim and lament his fate.

This is a fair and true reflection of how I currently feel about sociology. And literature. And my PhD proposal. What is becoming increasingly apparent is that being interdisciplinary in a compartmentalized funding system is A Very Difficult Thing.

Problem one is my all-encompassing identity crisis. So I’m interested in sociological stuff, but my particular areas are poles apart: sexualities versus critical theory, Frankfurt style. Added to this my determination to get the sociology of literature in there, plus my chronic funding application state which is pushing me to write a literary criticism oriented AHRC bid in addition to my ESRC bid, plus thinking of a suitable MRes dissertation topic, all ends up in me writing at least four different proposals – and for one of them there are multiple variations on a theme. It’s too much. Someone needs to stage an intervention, possibly involving a bucket of cold water and a Monty Python-esque fish moment.

Problem two is that I still can’t work out where I fit. My first AHRC draft was deemed too sociological; my ESRC ideas have been suggested as literary (it was the same proposal): who knows anymore where ideas fit? Methodologically I’m certainly of the literary persuasion. But it seems that library visits, hard thinking and then writing stuff is not a recognised research method in the social sciences. Conceptually, I’m sociological. In terms of goals I’m not concerned with saying new things about literary texts, but I do want to make a contribution to how we understand ourselves, the formation of our society and the ways in which we ‘do’ culture. Throughout my methods courses I’ve yet to come across a method that I’ve thought would be more appropriate to analyzing texts that what we do in literary criticism. Sociologists have discourse analysis (and critical discourse analysis, you’re a bit of a knob) which is a lot like lit crit but
with different words and there’s some attempt to science it up. I like it but for me it feels like reinventing the wheel.

So I’ve been spending the last month or so writing like a bastard and then scrapping most of it as I come a little closer each day to understanding what I want to do and how. It’s a slow, painful and horribly reflexive process of undressing hidden desires and admitting what I actually am concerned with rather than what I think will look good on a CV or status-driven ideas of appearing to do something very hard. And all this writing brings me neatly to something which has been plaguing me throughout November.

No, not awful moustaches - #acwrimo – which if you are unfamiliar stands for Academic Writing Month. The point is to make a concerted effort throughout the month of November to write as much as you can on your current academic writing project. Then you tell everyone about it on Twitter, thus creating a feeling of positivity and productivity. Or so goes the theory. Personally I find it ghastly, to the extent that I wonder if Kurtz himself had taken part and that this was one of the horrors he regretted in his final moments. I’m all for creating supportive atmosphere which allows the flourishing of new ideas, the exploration of our interests and which buoys our flagging self-esteem – and we need this in both our online and ‘real’ lives. To be sure, one of the biggest lies about academia is that you do it alone – that it’s a career for people who like spending their time outside the company of others. Certainly you have to be able to work alone for long stretches – no one is going to write your work for you – but you absolutely cannot do it alone. The support of others is vital. So, in a way, I do understand the impetus behind the collective writing movement, the spurring on and the frequent exclamations of content produced and word counts shooting ever higher. But I’m more and more uncomfortable with the version of academia we’re selling ourselves through movements like this: that writing comes easily; it happens fast; that your body of work is sound despite being produced quickly; that you’ve had three internationally significant REF-able ideas and it’s still only breakfast, and so on and so forth. It seems to happen more so on social media than in offline life, and is particularly apparent on Twitter. It seems we’re all desperate to give an impression of ourselves as coping easily, unflappable, happy, well-adjusted, creative powerhouses of intellectual thought. Who wouldn’t?

Well, I’m going to come out and say it straight: I’m not. Not only do I occasionally find writing hard, but I find the thought process that goes into deciding what exactly to write even harder. I also sometimes have really brilliant ideas and when I do start writing, it’s awesome and original and it makes me feel invincible. And then there are the days when I feel like Oscar Wilde and all I do is put in a comma – and then take it out again. There are brilliant days when I write thousands of words and they all end up staying but these are pretty much balanced by the days when I write utter bollocks. The #acwrimo challenge is certainly a worthy one and I’m not questioning its validity and presence in online working but what I will question is some of the motives of the way that people share their #acwrimo challenge work. There are a decent number on my Twitter feed who are honest and open about how much they’ve done and report the writing blocks as well as the successes. I think this makes for an inclusive community. However there is a significantly higher proportion (mostly of retweeted comments, to be fair) that focus solely on how well they are doing to the extent that it becomes boastful. No matter how productive I am personally, I always find this alienating. Whilst I love hearing good news stories from most people, I realize that I enjoy hearing their fortune because I can see how hard they’ve worked for it. Others seem merely to want to let the world know that they’re successful and succeeding. To me, that doesn’t count as community.

Sometimes talking endlessly about what you find difficult is the wrong thing to do – in being so negative and despondent, you only succeed in fulfilling your pessimistic prophecy. But often it can be inspiring and freeing to admit that you’re stuck or that you love what you’re writing but it’s going a bit slowly, or that you’ve trapped yourself in a thought-spiral too tight to unwind but you’re sure there’s something good beneath the debris. If there’s one thing I’ve learned thus far it’s that admitting my failures is the necessary first step to putting them right.
"Life gets under your skin": reading about welfare and the lifecourse in plain English (2012-11-27 08:00)

As part of the Economic and Social Research Council Festival of Social Science that took place earlier this month (3-10 November 2012), researchers from the [1]International Centre for Lifecourse Studies in Society and Health (ICLS) funded by the [2]Economic and Social Research Council (ESRC) releasing a plain English guide to their research demonstrating how ‘Life gets under your skin’. The booklet explains how social policy related to family life, education, employment and welfare can have beneficial effects for the health of individuals. It also shows how multi disciplinary, longitudinal research can deliver findings valuable to the individual, society and the economy.

India's XXI century untouchables (2012-11-28 08:00)

I recently talked to Pradeep Shinde, an anthropologist who studies the performance of work by sanitary workers in a Mumbai slum. He argues that the caste system in India is still very much present, and that alongside the changes caste-related beliefs are still embedded in Indian society and that there is also a resurgence of such beliefs not only in India, but also among Indian emigrants around the world. He recommended a fascinating film about the contemporary situation of Dalits in India:

The Public Understanding of Science is a Political Issue: an interview with Alex Smith (2012-11-29 08:00)

In this interview Mark Carrigan talks to Alex Smith (right) about his recent fieldwork in Kansas City, part of the larger Making Science Public project, exploring the role that debates about the status of science are having in the unfolding of the Republican primaries. We touch on broader issues about the role of science in society but also about the status of the understanding of science as a public issue. Alex argues that this must be understood in political rather than cultural terms. The public understanding of science is not simply a matter of PR for academics.

Interested in Digital Sociology? (2012-11-30 08:00)

One of SI’s editors is working with Emma Head from Keele University to propose a Digital Sociology study group for the British Sociological Association. We’ve now collected enough signatures for the application to go ahead but we thought some readers might be interested in this anyway. Get in touch by [1]e-mail or [2]Twitter if you’d like to be kept informed about the group’s progress.

BSA Digital Sociology Study Group, co-convened by Mark Carrigan (LSE) and Emma Head (Keele University)

In spite of the increasing prominence of the Digital Humanities within the academic landscape, the form and practice which might come to be implied by the moniker ‘Digital Sociology’ remains strikingly inarticulate. While recent developments in computational social science and online research methods are certainly to be welcomed, it is
our contention that the nascent 'digital turn' being witnessed in the academy has broader significance for the future of sociology than such specialisms can account for. Lupton (2012) identifies four major areas to the nascent field of digital sociology: professional use of digital tools by sociologists, sociological analyses of digital media use, sociological analysis of digital data and critical analysis of digital media and their attendant circuits of capital and power. Our proposed group would seek to represent each of these areas, drawing out the commonalities between them while taking care not to obliterate the distinctions between them.

The proposal is made against the background of what Savage and Burrows (2007) identify as the coming crisis of empirical sociology, particularly the profound challenge which the proliferation of 'big data' poses for the traditional analytical repertoires of professional sociology. While recognising that important initiatives have been undertaken at a national level towards these ends (e.g. Digital Methods as Mainstream Methodology) we nonetheless contend that there are limitations to the approach adopted and that, with regards to the long term vitality of professional sociology, there is a need for a distinctly sociological exploration of these challenges. We imagine that this would involve building digital research capacity, in a manner which would draw on and complement these existing projects, while also moving beyond them to address the broader questions contemporary circumstances pose for the future of sociology. We share Back’s (2012: 18) belief that, in spite of the profound challenges faced by sociology in an age of austerity, it is nonetheless the case that “there is more opportunity to reimagine sociological craft now than at any other point in the discipline’s history”. We propose the Digital Sociology study group as an open-ended forum which seeks to explore the nature and implications of these challenges but also to collectively elaborative creative solutions to them.

Aims:

To identify and disseminate best practice in the use of digital tools by sociologists.

To develop and promote specifically sociological modes of inquiry into digital media use.

To develop and promote specifically sociological responses to ‘big data’, in terms of both secondary analysis and the broader methodological questions posed by this transformation in the information systems of late capitalist society.

To develop and promote specifically sociological analyses of the broader personal, cultural and structural changes of the ‘digital turn’ in social life.

To provide an open forum for exploration of what the digital turn entails for sociological practice, professional identity and the future of the discipline.

Events and network:

The inaugural event of this study group is tentatively planned to take place in London (at the BSA meeting rooms) in the first half of 2012. This will involve invited speakers and time for discussion and networking to create wider ownerships of the developing aims of the group.

An event is also planned for March 2014, at Keele University, which would focus on postgraduate researchers.

The group would have its own developing online presence and the form that this takes will be discussed at our first event (and subject to BSA approval, where necessary).

Being Human in the Information Age - Professor Steve Fuller (2012-12-01 08:00)

The hypothesis of the University of Warwick’s Being Human Research Network notes that, “Human life is increasingly driven and mediated by technology and technological change with profound implications for human identity and behaviour.” Indeed, the way in which we express ‘what it means to be human’ occurs in close relationship to the technology of our age. As actors in this phenomenon we find ourselves constantly redefining who we are through the way in which we both use and understand the metaphors associated with latest technological advancements.
Steve Fuller on being human in an information age | Thinking culture (2012-12-02 07:11:21)

[...] Sociological Imagination has a short video of Steve Fuller talking about being human in an Information Age. I think this is probably linked to his recent book Humanity 2.0: What it means to be human past, present and future. There’s an interview with Steve about the ideas in his book in The Guardian. [...]

Noam Chomsky: How Climate Change Became a 'Liberal Hoax' (2012-12-03 08:00)

Who are the English Defence League? (2012-12-04 08:00)

Two recent articles about the EDL might also be of interest to readers:

- Hilary Pilkington from the MYPLACE project used a recent article to explore the experience of going on an EDL demonstration from an insider's perspective.
- The Extremis project conducted a detailed survey examining public attitudes towards the EDL.
The reasons for female religiosity (2012-12-05 08:00)

Listen to a [5]podcast with one of the authors, Dr Marta Trzebiatowska.

1. http://www.youtube.com/embed/u0fwLIg1evg
2. http://blogs.lse.ac.uk/politicsandpolicy/2012/10/17/when-is-a-kettle-not-a-kettle-when-it-is-on-slow-boil

Benjamin Geer (2012-12-06 05:49:38)
Strangely, the authors don’t seem to have considered the hypothesis that religious practice legitimizes domination, and that women tend to need this legitimation more than men because they are generally more dominated.

Milena Kremakova (2012-12-12 14:19:09)
Benjamin, I'm not sure I understand your argument... could you explain what you mean when you say that women tend need legitimation more than men? That it is more of a problem for women?

Benjamin Geer (2013-09-25 19:14:49)
Since you've tweeted this post again, I'll answer your question, which I never got around to answering. I was thinking of Bourdieu's idea that social relations of domination depend partly on the complicity of the dominated. Through "symbolic violence", domination and exploitation are "misrecognised" (by both the dominant and the dominated) as the fulfillment of legitimate principles. He also argued that one of the main social functions of religion is to facilitate this misrecognition. It
follows that the more dominated you are, the more misrecognition you need in order to accept your position. Since women tend to be more dominated than men, you would expect them to need more religion in order to accept their situation, other things being equal.

Surviving a PhD - 10 Top Tips (2012-12-06 08:00)

Tip 1 – Academics need you: Most are keen to speak to any potential student who has a good research idea as a good record of successful PhD supervisions is essential to build a successful academic career. Don’t be afraid to approach a potential supervisor directly. There were not any suitable advertised studentships in the are which I live (and I did not want to move as I have a young family here), so I decided I needed to make my own opportunity. I developed a rudimentary research proposal and emailed every academic I could identify in my local region whose research interests seemed to fit. In the end I worked up a proposal with Newcastle University which we submitted for an ESRC 1+3 studentship in the open competition (I was awarded the scholarship but did not take it up, instead I opted to study via a different route – more on that in a subsequent post – but I thought the advice may be useful).
**Tip 2** – Its YOUR PhD - Take ownership: Whether the research idea is your own, or you have been appointed to research a topic as an advertised position, YOU are the one working day and night and living the research. Whilst your supervisors will have opinions or perhaps an agenda which will shape the direction of your research, It is YOU alone who will have to defend it in the viva. I have spoken to many PhD researchers who felt that their research was not their own and they were merely doing the bidding of their supervisor. The result can be mixed – some drop out as the lack of control leads to a lack of interest or focus, some work day and night to please their supervisory team and burn out, many are successfully awarded their PhDs but feel that they are a sham as their work was not entirely their own.

**Tip 3** – Write up as you are going: I am always amazed when I speak to PhD students who are in the third year and entering their "writing up stage" and tell me that they havent written more than a few thousand words. They feel daunted and overwhelmed by the huge task of meeting that 40-80,000 plus word count (depending on the discipline). “But you must have the literature review almost completed at least?” I say – but many just have pages and pages of notes. I had written complete drafts of my Introduction, Background, Literature Review, Methodology and Scoping Study by the Midpoint of my PhD – 18 months since I began. Sure, I would have to update and re-draft these sections – some of them extensively, but the knowledge that I had written about 40,000 words of what became a 90,000 document was of great comfort to me. I could also then pass these sections off to my supervisors for review whilst I embarked on my data analysis.

**Tip 4** – Love to Hate your Thesis: You will at some point hate your thesis, trust me...This is OK, its normal – most people seem to go through it at some point – usually about two-thirds of the way through. This is completely normal and to be expected. Don’t panic, take a break – yes a break. PhD students need a holiday too, even if its just a break from the research to do something different. When you return your brain will have sorted out some of the problems you are struggling with on its own.

**Tip 5** – Finished is better than perfect: I am a perfectionist by nature – but I have had to learn over the last few years the finished is better than perfect. Perfection, like beauty, is in the eye of the beholder. If you are lucky enough to reach the mythical land of perfection (which only exists in your own head), it is still highly likely that readers, and more importantly, examiners will find fault. This is what examiners are paid to do. The same advice applies to writing papers too. This leads into Tip 6 below...

**Tip 6** – The written Thesis is just part of the PhD: The majority of PhDs have some form of wording on the fist page which states something like the document is “submitted in partial fulfilment of the requirements of the University for the degree of Doctor of Philosophy”. Spot the keyword? “partial”. Before and during the viva the examiners will be considering many criteria in addition to the thesis such as the administration of the PhD, your training record, publications and impact activities to name a few. The point is, the Thesis does not have to be – nor is expected to be – perfect. The examiners will always have an opinion on how you have presented the results or the approach you took. You will not know what this opinion is until you put the work in front of them – so don’t try to...
second guess but ensure that you can defend why you took a certain approach as opposed to another. You made the decision (see Tip 2) based on the evidence in front of you at the time and you are the expert in this subject. So defend.

**Tip 7** – Enjoy the Viva!: No, really. This is your chance to communicate your research, your passion, to at least two leading academics – sounds scary, but they will be genuinely interested in what you have done. Most examiners want to pass a student – despite the horror stories that are popular amongst PhD students. The truth is in the majority of cases they will have already made a decision about whether to pass you or not. You can read about my viva experience and top viva survival tips [2]here.

**Tip 8** – Have a plan for life post PhD: By this I dont mean start looking for a job etc…although of course this is important – more how are you going to fill the void? And it is a void. You will have been immersed in a particular subject and culture for at least 3 years, probably more. Once you have completed any changes demanded post viva and submitted the final completed thesis – the silence is deafening...

**Tip 9** – It is worth it: Completing the PhD, for me at least, was an anti-climax. There were no trumpets or angels, no being carried through the university on the shoulders of my peers, no huge pay-rise or immediate offers of employment, not even any champagne (although there was, strangely, many flavours of Schnapps..). However 6 months on from the viva and corrections it feels worth it. Its a validation of your research skills and prowess., you feel a little more authoritative when speaking to peers or students (although inside you know that you are not any smarter that before), and you have survived – almost mentally intact....

**Tip 10**- Ignore tips 1-9: In the words of [3]Richard Butterworth,

**The only way to find out how to do a PhD is to do one. Therefore all advice is useless...**

The Tweets and the Streets: an interview with Paolo Gerbaudo (2012-12-07 08:00)

In this interview Mark Carrigan talks to Paolo Gerbaudo about his new book Tweets and the Streets. In a fascinating study based on ethnographic fieldwork during the Egyptian revolution, the author deftly charts a course which avoids the extremes that polarise the debate and addresses the crucial question of how the 'tweets' and the 'streets' intersect in the unfolding of contemporary social movements. If you find the interview interesting you might enjoy checking out the author’s blog here.

Getting Started: Social Media for Academics (2012-12-08 08:00)

<a href="http://bundlr.com/b/getting-started-social-media-for-academics" target="_blank">"Getting Started: Social Media for Academics" on Bundlr</a>
The hypothesis of the University of Warwick's Being Human Research Network notes that, "Human life is increasingly driven and mediated by technology and technological change with profound implications for human identity and behaviour." Indeed, the way in which we express 'what it means to be human' occurs in close relationship to the technology of our age. As actors in this phenomenon we find ourselves constantly redefining who we are through the way in which we both use and understand the metaphors associated with latest technological advancements.

Jews and Tattoos, or What happens when religion clashes with everyday life? (2012-12-10 08:00)

I recently learnt that among the rules that Orthodox Jews observe is [1]not tattooing their skin. This made sense initially and I thought that the reason was the forceful branding of people in concentration camps. However, the prohibition is in fact much older and based on this verse from the [2]Torah:
"You shall not make gashes in your flesh for the dead, or incise any marks on yourselves: I am the Lord" (Leviticus 19:28).

[3] Avital Norman Nathman, one of the bloggers in the Jewish website [4] Kveller, discusses the question of tattoos in a post entitled [5] Concentration Camp Tattoos for a Younger Generation? While tattooing may seem to some a minor concern in comparison with a religious belief, to others it is not: otherwise there would be far fewer people with tattoos around! Regardless of whether we are talking about tattooing, food-choices, marriage, gay rights, or any other small or huge issues on which religious have something to say, the discussion in the post is enlightening of the thought process that goes on when such a clash happens.

As a secular person who grew up in a secular post-socialist state, I have no first-hand knowledge of how exactly people combine observance of the tenets of their religion with the demands of their everyday life. Sadly, this is not something that is often discussed between religions and non-religious friends, or even between friends each of whom belongs to different religions. And as a sociologist who has never studied sociology of religion, I find myself baffled by these questions every time I notice one of my friends confused or frustrated by the clash between their belief and something in their daily surroundings. What judgements do people do, and what takes precedence when they are faced with so many small everyday issues, such as having trouble choosing a suitable meal, having to ignore strange looks because of ‘conservative’ headgear or clothing in one situation and then being scorned for not being sufficiently conservative in another, or being unable to join in a particular social event or gathering. In Margaret Archer’s terms, how do people cope in practice, when important concerns clash in their lives?

So I decided to do a little research, and here is what I found.

Here’s a few other articles:

Baeke G, Wils JP, Broeckaert B. ‘We are (not) the master of our body’: elderly Jewish women’s attitudes towards euthanasia and assisted suicide. Ethn Health. 2011 Jun;16(3):259-78.

[16] (1995) Rationality in science, religion, and everyday life: a critical evaluation of four models of rationality by Mikael Stenmark, University of Notre Dame Press,

2. Torah
On twitter a few months back I ventured a list of ‘top ten’ living sociologists. What I meant of course was my favourites, meaning those who had most impressed or influenced me during my intellectual travels. Without revisiting that list I am in this blog offering for consideration a toptwelve that, I guess, bears a close resemblance to my original selections. Ranking them is a step too far so there come ‘in no particular order’. Attached to each is a publication I have personally relished. I hope it goes without saying that I welcome dissent, however irrational or bombastic.

Louis Wacquant is not here as a proxy for his mentor and colleague Pierre Bourdieu. It is not coincidental, however, that he shares the latter’s virtues, at least in my estimation. Chief amongst them is his straddling of what are too often well-patrolled borders between the theoretical and the substantive. Wacquant is a reflexive practitioner. His studies, often of outsiders, from boxers to abandoned Afro-Americans subsisting within a largely subterranean network of informal markets on the outskirts of Chicago, (a) bear testimony to a pragmatic blending of methods beyond the new post-quantitative/qualitative orthodoxy of ‘mixed methods’; (b) at every juncture speak of a genuine dialectic of theory and research; and (c) present a bold case for macro-, meso- or micro-social change. And the publication of choice? It’s *Urban Outcasts: A Comparative Sociology of Urban Marginality* (Polity, 2008).

John Goldthorpe may be a surprise inclusion, at least for those familiar with my own efforts. After all, he is best known as an empirically scrupulous neo-Weberian researcher of social mobility in the UK, and am I not a professed neo-Marxist guilty of formulating a vulgar-sounding ‘greedy bastards hypothesis’ in relation to health inequalities? What would he think? But he is surely our premier post-war English sociologist? His contribution extends well beyond his series of studies and reflections on social mobility to encompass theoretical interventions ranging from a critique of ethnomethodology (with which I agreed) to the support of rational choice theory (with...
which I disagreed). The thoughtfulness, subtlety and clarity of his writing are exemplary. My favourite interjection: *On Sociology* (2nd ed, Stanford, 2007). **Eric Ohlin Wright**'s appearance may be less surprising. He is probably best known for his - I think telling - neo-Marxist theories and studies of the continuing salience of social class in what I prefer to call 'high' rather than 'late' modernity (hindsight will adjudicate on the terminology). But he has added another string to his bow: he has proffered and interjected 'alternative futures'. A number of sociologists have lamented the reluctance of our 'community' to enter this domain of non-utopian envisioning of possibilities, what Giddens has called adventures in 'utopian realism'. Has the need to do so ever been so plain? My own, and my family's (http//:Cost _ofLiving.com), sense of the case for an action sociologysits well with this emphasis. The chosen work is: *Envisioning Real Utopias* (Verso, 2010). **Emmanuel Wallerstein** is the progenitor and principal advocate of the neo-Marxist 'world systems theory'. I came to his largely historical work because an old friend and colleague from Emory University, Terry Boswell, who died prematurely from, but in no way a victim of, motor neurone disease, was an enthusiastic convert (he tried to persuade Emory to recruit EW but to no avail). Wallerstein's theory might seem dated post-1989/91, but he anticipated Marxism beyond the nation-state and points to the future. His work is a reminder that agency and culture alike are structured but not structurally determined, a favourite mantra of mine. Given his productivity and the reach of his historical sociology a choice of text is difficult, but I plump for: *The Modern World System Vol.3. The Second Era of Great Expansion of the Capitalist World-Economy, 1730s-1840s* (Academic Press, 1989). **Richard Sennett**, cosmopolitan sociologist and occasional visitor to LSE, is one of those craftsmen he has himself written so persuasively about. He ploughs his own furrow, opting for topics that have somehow eluded others. Once he has treated them, they remain treated, inspiring colleagues to pick up and work on his themes and insights. He has moved from discourses on the hidden injuries of class to exploring singular concepts like respect and togetherness. He is currently exploring notions of politics and civil society and the creation of public spaces in the twenty-first century. The book I am choosing here has influenced my own thinking, referring as it does to our need to be pro-active and decisive in an era of almost unprecedented uncertainty: *The Culture of the New Capitalism* (Yale, 2008). **Zygmunt Bauman**, prolific Polish émigré who came to rest at Leeds, is less known for his early work than for his profuse comments on our 'postmodern' present. For a while I felt he conflated a sociology of the postmodern, which was required post-1970s, with a postmodern sociology, which would have sounded the discipline's death knell; but he righted himself. If his recent sequence of books around the notion of 'liquid modernity' has perhaps been too slick and speedy, they nevertheless remain replete with insights (and telling concepts). It is to one of his earlier prize-winning volumes that I turn for an exemplar however: *Modernity and the Holocaust* (Cornell, 1989) is a theoretically elegant, sophisticated and harrowing study of the holocaust as a twentieth-century culmination of Weber's societal rationalization. **Margaret Archer** is less widely known than others on my list, her main contributions being to the sociology of education and the critical realist theorization of the present. She owes much to Roy Bhaskar but shows a striking independence of mind. Like Goldthorpe she straddles the domains of theory and empirical research. It is her later series of books and articles – on the relations between structure and agency and on types of reflexivity – that I have found particularly illuminating. She lends substance to Bhaskar’s ‘transformational theory of social action’ via her account of ‘internal conversations’. It is something of a toss up, but largely because I have made most use of it I mention here her penultimate book: *Making our Way Through the World: Human Reflexivity and Social Mobility* (Cambridge University Press, 2007). **Michael Mann** is another historical sociologist committed to the ‘big picture’. Born British, he has since found a home at UCLA. He provides a frame for the understanding of the slow unfolding of types of social formation and settlement. He will remembered, no doubt, for his multi-volume tracing of human sociability; but in between this sequence he has published theoretically fine-tuned books on the post-9/11 American ‘war on terror’, fascism and ethnic cleansing. My selection is: *The Sources of Social Power. Volume 2. The Rise of Classes and Nation States, 1760-1914* (Cambridge, 1993). Bob Jessop probably owes his inclusion on my list to
his continuing commitment to get to the bottom of the modern state. Beginning with Marx, he has systematically and methodically drawn on the inspiration of Gramsci and Poulantzas to fashion an all-inclusive strategic-relational theory of contemporary capitalist and non-capitalist states. In a conceptually strong series of books, interspersed with many articles, the evolution of his thought has been exposed. Very few stones have been left unturned. He also gave an excellent half-day workshop for our UCL Sociology Network earlier this year. Unsurprisingly I am citing here his latest offering: *State Power: A Strategic-Relational Approach* (Polity, 2007). Goran Therborn would I suspect be on many colleagues’ short-list. He is yet another with a remarkable facility for finding and theorizing history’s patterns. His accounts of European modernity and of the Western family impress with their reach as well as their depth of learning: they are anchored in the minutiae of ordinary people’s day-to-day circumstances and decision-making. My choice of book is his *The World: A Beginner’s Guide* (Polity, 2011), a title that seems to have inspired rather than daunted him. It is worth recalling, however, that there is continuity through his output, the early radicalism of his seminal excursus on ideology surviving into his later more magisterial efforts. Jurgen Habermas is quintessentially Germanic in his capacity for synthesis. His output is extraordinary, much of it as philosophical as it is sociological. His ‘theory of communicative action’ was condensed into two mammoth volumes and probably represents the culmination of his sociological work. But there was much more before and has been much more after. Of late he has been preoccupied with discourse ethics, constitutional law and Europe’s post-nationalist future. It has taken him a long way from his Frankfurt School and neo-Marxist roots; too far in my view. Admiring of his opus on communicative action as I am, it is to his early work I have retreated for a favourite contribution. It could have been his *Habilitation* thesis on the public sphere; but I have opted instead for the peculiarly prescient and topical *Legitimation Crisis* (Heinemann, 1975). It retains its bite after the global financial crisis of 2008-9.

Dahn Shaulis (2012-12-17 23:04:05)
How about Robert Bullard, the father of Environmental Sociology and founder of the Environmental Justice Resource Center? His books are valuable tools for activists and lawyers.

**Why do I care about my research and activism?** (2012-12-12 08:00)
I am a third-year PhD student currently attached to the University of Durham and am publicly known as an activist for women's issues in Hong Kong. I would like to briefly share my research, activism and thoughts on these.

While working on my MA dissertation, I interviewed victims of trafficking for sexual exploitation. The material available on the issue of trafficking is horrible enough; however, as you may all know, it is one thing to read about this extreme violation of human dignity and another thing to hear about it straight from the victims, face-to-face. Would I just finish writing up my dissertation, send the NGO a summary sheet and then forget about those women and their experiences? How would that help anyone? I felt I had to begin the PhD I am currently working on, which is on trafficking of women in Hong Kong, so that I could gain a better understanding of the issue. Without understanding the nature of a problem and its root, it is difficult if not impossible to fight the problem.

Although there are many factors related to trafficking in women, such as ethnicity and poverty, I am approaching the issue with the lens of gender inequality and cultural acceptance of violence against women, which I believe lie at the heart of the issue. This links to my activism.

I am the initiator and lead organiser of SlutWalk Hong Kong; the global SlutWalk movement aims to raise awareness on the issues of sexual violence and victim blaming and must not be misunderstood as being carnivalesque or a "Slut Pride" movement. In addition to organising the marches and associated events, I regularly spend time updating the SlutWalk Hong Kong Facebook page and the blog. In addition, I am interviewed by news sources, such as South China Morning Post and China Daily, on issues of gender and sexual violence. I also work with other NGOs, both attending their protests or discussion forums and organising events with them, without remuneration of course. I am also involved in NoMoreSlaves Flashmob, which organises flashmobs to raise awareness on human trafficking around the world.

Why do I care about my research and activism? This is because I can neither live with willful ignorance nor inaction in the face of such injustice. I spend my time exploring trafficking and violence against women in order to do my little
part in helping to make the world a more just, more egalitarian place. I believe that anyone with the resources and ability to contribute to society should do so; I believe that universities should help make the world a better place instead of being what critics refer to as "paper mills"; and I believe that with knowledge comes the responsibility to do something positive with it.

As all activists and others working to change society know, this work is rarely paid and never ends, but I am committed to doing my small part. By the way, I am also an administrator of Occupy Hong Kong’s Facebook page.

Lorri (2013-10-06 20:51:59)
You are doing such important work. Thank you and congratulations. Ethics in Australian universities are so stringent. I do not know of others in your field here. However, my daughter studies in the academic field of gender studies, so this link may be helpful to you. I emailed her the link. Warm regards Lorri bev

New collaborative labour history project (2012-12-13 08:00)

[1]LabourStart, an internation news and campaigning website for trade unionists, has launched a new collaborative project and is asking labour history enthusiasts to help! They want to produce a ‘Today in Labour History’ calendar that can be added as a widget to the websites of campaigning groups, individuals, union branches and so on. Here is their announcement, reposted from the [2]History Workshop:

We would like the calendar to be as international in its scope as possible. There are some very good sites with ‘today in labour history’ pages but they tend to be focused on events in the English-speaking world. We are particularly keen to include struggles from the global south, and transnational movements. We also want the events to reflect the whole labour movement, top to bottom. We want to include and celebrate local strikes and lesser-known individuals alongside momentous general strikes and famous activists.

We are asking people to send us any dates they would like to be included in such an online calendar. We only need a date, a brief description of an event, and a link to more information. We hope this will develop into an exciting project involving activists and labour historians from around the world.
The death toll of postsocialist mass privatisation (2012-12-14 08:00)

In 2007-2009, I did over 50 interviews with Bulgarian maritime workers. I wanted to study the[1] post-socialist transformations of institutions and practices of maritime labour - and how those changes affected the working lives of seafarers and other maritime workers. Two different respondents told me the same tragic story. One knew it first hand, from his workplace, and the other - through the maritime grapevine, but both told the story without undue exaggeration, only sadness and respect, and in strikingly similar ways.
A middle-aged lady who worked in the on-shore administration had suddenly passed away. The previous day, a rumour had passed through the office that their branch in that city would be closed down, and all of the on-shore administrative staff - hundreds of people - would be sacked outright. One of the colleagues had suddenly felt dizzy and ill, and gone home. The next day she did not come to work. She had died of a heart attack.

Now, in-depth interviews people tell many personal and less personal things, some of which they would not have shared publicly. As a sociologist, although I fully trusted both of my respondents, I could not not have verified this information outside their interviews. The direct link between stress and death is extremely hard to prove objectively, if at all possible, and I was not even a journalist, so I was in no a position to investigate. Or so I told myself. Perhaps I should have. The ethics of a field study are never clear cut.

Sadly, this was not the only story linking stress and illness or possible death, but this was the most striking one. It was told by two different people, from two different generations, both of whom I had good reason to trust. But I have also heard of other instances of people falling ill in expectation of, or soon after, being laid off, around the restructuring of the local maritime labour market and especially [2]the former national fleet's privatisation. I have also witnessed the effect of stress and fear of job insecurity among those seafarers and shore workers to whom I was close when I did my fieldwork (some in my own family, others friends and colleagues of my seafaring family members). Throughout the months and years, I have personally seen aggravated heart disease, incidents of hypertension, insomnia, breakdowns, not to mention family tension, middle-aged men's hair going white in the course of weeks, or other diseases getting out of hand because the person works too much and has no time to visit the doctor, or is too worried about overspending or not taking on more financial debt, in case he or she soon gets laid off.

Today, I came across a study by [3]David Stuckler, [4]Lawrence King and Prof [5]Martin McKee, published in [6]the Lancet, which reminded me of this story. The study - which is already old, published in February 2009, but no less relevant - claims that as many as 1,000,000 working-age men died due to the economic shock of mass privatisation policies followed by post-communist countries in the 1990s.

One of the authors, David Stuckler from Oxford's Department of Sociology, commented: 'Our study helps explain the striking differences in mortality in the post-communist world. Countries which pursued rapid privatisation, or 'shock therapy', had much greater rises in deaths than countries which followed a more gradual path.'

Read a summary [7]here and the study report, if your institution or you have a subscription, [8]here).

The authors’ response to methodological criticism (free access) is also well worth reading.

Another of the authors, Lawrence (Larry) King, gave a public lecture at the [10]UCLA on the subject - you can hear the podcast [11]here.

For months on end, seafarers and shore-workers had been expecting the national cargo fleet to be privatised. It had already been the subject of rumours for over a decade, and many young and well-qualified workers had already 'deserted the sinking ship', but tens of thousands had stayed - out of loyalty, or because they had nowhere else to work. But now new rumours had appeared that the privatisation would really take place soon. Rumours were running wild, because absolutely no officially confirmed information was available. Workers were afraid they could lose their jobs any time - and the older ones among those men and women were justifiably scared for the livelihoods of their families, because they would be unable to find other jobs. And no, we cannot attribute workers' fear solely to middle-age risk aversion, or advise them to be more enterprising and laid back. The structure of the post-socialist labour markets - by far not only in maritime transport - seriously discriminates against older workers, and especially women (it also discriminates against the youngest workers, but this is a separate, painful, topic). There simply are not enough jobs for people, even though they may be well-qualified. And, to quote prof Stuckler again,
'Not only did rapid privatisation lead to mass unemployment but also wiped out the social safety nets, which were critical for helping people survive during this turbulent period.'

[12]
Fashion online (2012-12-15 08:00)

It is interesting to see how the fashion industry has been employing new computer visualisation techniques to approach realistic, three-dimensional human body shapes. This influences the way we shop, as well as the dynamic of the market for clothes: for example, while 20% of the clothes from traditional shops go to waste, of all clothes bought online about 1/3 end up being returned! This short BBC documentary ([1]video here) explores some of the newest technology used by retailers to facilitate online shopping for clothes.

Sociologists also have fun (2012-12-16 08:00)

A glimpse into the sociology student culture in Germany... Here is how sociology students at the Humboldt University in Berlin advertised their first semester party a few days ago:

[1]
Marx and Weber were also once young!

In this interview I talk to Alex Smith (right) about the New Ethnographies book series he edits. I was interested in this series because of its deliberate intention to embrace and ferment the extension and productive growth of this most traditional of qualitative approaches. As Alex describes in the forward to the series which is quoted from below:

This includes the growing number of books that seek to apprehend the ‘new’ ethnographic objects of a seemingly brave new world, some recent examples of which have included auditing, democracy and elections, documents, financial markets, human rights, assisted reproductive technologies and political activism. Analysing such objects has often demanded new skills and techniques from the ethnographer. As a result, this series will give voice to those using ethnographic methods across disciplines to innovate, such as through the application of multi-sited fieldwork and the extended comparative case study method. Such innovations have often challenged more traditional ethnographic approaches. New Ethnographies therefore seeks to provide a platform for emerging scholars and their more established counterparts engaging with ethnographic methods in new and imaginative ways.
Sociology of procrastination (2012-12-18 08:00)

I want to write about the sociology of procrastination... perhaps tomorrow.

Joke aside, here are a few useful resources for those procrastinators among our readers who would like to acquire some robust theoretical and empirical knowledge about this fascinating phenomenon. Social psychology tends to see procrastination as 'self-handicapping', e.g.:

It is also typically linked with neuroticism and personality traits:

Bulge Uzun Özer’s short paper [1]A Cross Sectional Study on Procrastination: Who Procrastinate More? (from which we took many useful references for this post) provides some interesting recent descriptive statistics on academic procrastination. It presents the results from a quantitative study of 447 students (247 female, 200 male) enrolled in public high schools and universities in Turkey’s capital Ankara.

This website devoted to time management strategies offers a brief but good [3]anti-procrastination guide and answers some questions about procrastination. It also gives some interesting statistics (not all referenced, alas).

This 2004 [4]paper by Anthony J. Onwuegbuzie from the Department of Educational Measurement and Research, College of Education, University of South Florida provides some fascinating data on one particular type of procrastination: the one caused by statistics anxiety! (click on link to get the PDF)

Four years ago, Nathan Yau, who at the time was a UCLA PhD candidate in statistics with a focus in data visualization, started a [5]self-experiment to stop procrastinating. He tried various techniques about which you can read [6]here...sadly, he never published any more reports. The experiment was either successful - Nathan got on with his PhD research - or not...

But my favourite of all these sources is a very short [7]essay called ‘Structured procrastination’ by writer John Perry. As often happens, without being a sociologist, Perry analyses the problem in a compelling, logical, and readable way, while also providing a humorous but viable solution. Perry's approach (sometimes) works for me. Try it - today!

Ashli (2012-12-18 10:04:19)
I just read this in the midst of avoiding the 8000 words I’m attempting to write by Christmas eve. Meta procrastination!

The Woollen T-shirt Strikes Back (2012-12-20 08:00)

(reposted from [1] 300daysinberlin.wordpress.com where the [2] Idle Ethnographer posts not entirely sociological impressions about being a foreigner, once again)

I have owned this goddamnugly woollen T-shirt since I can remember myself, and that was a pretty long time ago: some time in the early and mid-1980s.

1468
It was enormous, sickly-yellowish, and stung like a wasp. I hated wasps ever since I had sat on one on the beach. I hated the vengeful T-shirt almost as much as I hated the martyr who had perished under my two-year old bum. Luckily, while I was still small and disenfranchised in the area of appearance and personal style, the offender was too large to be forced upon me. When I grew up a bit and gained the right of free vote on sartorial matters, I did try to put it on a few times, out of desperation. Every couple of winters, one morning my seaside town would wake up covered in 2-3 cm of snow. One felt obliged to go out and make a snowman, or else waste the chance of the five-year-plan. Of course, I didn’t have the requisite clothing, because such extreme cold wasn’t common and snow gear just wasn’t worth the investment. And so my eyes would eventually turn to the sore sight of this pseudo-beige monstrosity. But each time I tried it on, it was a bit smaller than the previous time, and stung so much and looked so despicably ugly that even I, who normally didn’t give a toss about fashion, couldn’t stand it, so I immediately gave up on the idea.

And so, the poor T-shirt, like an old unloved aunt, aged gracefully without ever being unfolded, and shrunk without ever needing to be washed. The fact was that I was the one growing, but it looked like it was the one shrinking.

Eventually, in a decade or so, it became just the size of me. The tag said 88/170. I was 164cm tall and almost stick-thin, so it should have been about right, if only it weren’t so ridiculously tight. At the time, tight T-shirts were out of vogue, but teenage me didn’t know that (I didn’t know what ‘vogue’ was, either). I believed that they couldn’t possibly have ever been, or ever be, in fashion. The only conceivable fashion was the one I had grown up with. Think leggings in all colours of the rainbow, or black ones if you wanted to look chic; a huge oversized XXXL T-shirt, also in
all colours of the rainbow, and hairbands. And in winter, well, anything warm - but please, nothing that stings, or that you’re too embarrassed to show, if you have to take off your cardigan in a hot room. That’s right, aerobics guru Жоржета Димитрова did wear a tight costume, but it sure didn’t sting her back. Also, what sort of colour is this - beige? dirty white? Trying-to-be-yellow? Ew.

So, for my early teenage, early post-1989 mind, my poor unworn woollen T-shirt had come to symbolise the most dingy and heart-wrenching aspects of "соц" ["socialist"] production: plain-coloured, weirdly shaped, and overly practical - so practical that you never really needed it.

Forsaken in the very far corner of my not very large wardrobe, it gathered dust, year after year, watching fashions fleet past. Somehow, even in my black gothic metal phase, it eschewed all lets-throw-old-stuff-out raids. My mum always said, well, it’s a shame to throw it away, it’s practically new, you have no other non-black clothes, and you might go skiing some day. Did I mention we lived by the sea? Seaside Bulgarians don’t go skiing. We can’t afford it. And even we they could, we would freeze to death on the train, get a lung infection, wimp out, and never even reach the mountains. Better stick to the soggy and windy Black Sea coast winters and drink tea with fake rum somewhere cosy. Keep the woollen T-shirts hidden somewhere safe, where they can’t sting you in the back when you’re not looking.

This way, the unwearable and untouchable T-shirt had also acquired an unthrowawayable status. It had become like a useless broken sector in your hard-drive, which you can’t use, but can’t defragment, either, so you leave it be, because it doesn’t take up that much space, but is just a bloody nuisance sometimes when you come across it.

When I really grew up, at the wise old age of 19, I moved to another, much colder, city where I spent half a decade. Somehow the dreaded piece of clothing never made it to my student suitcase which was instead always full of home-made food.

Then I changed country. I went to another soggy and windy place where 2-3 cm of snow suffice for all social life to freeze. No one needs anti-sexy woollen T-shirts in England. It never gets that cold, and even if it did, the English are far too fashion-conscious - or so I reasoned once when I dug out the forgotten object from the heaps of T-shirts back at home. And besides, when it really gets to freezing temperatures, students can usually find some legitimate excuse to stay at home, in their (non-woollen) pyjamas, and in bed, drinking tea and pretending to read a book or write a paper.

Today there is an occasion to celebrate my inelegant repugnant соц T-shirt. It is the first day of my life on which I genuinely appreciate this well-preserved, no-nonsense clothing item. I find it perfect in size, shape, colour, and above all, warmth. Having grown up into a bit of a stingy scrooge, I’m also pleased I don’t need to go and spend money on a new one. But even the fashion-conscious, shopping-inclined section of my brain (still negligible, but far bigger than it was in my teenage years) is pacified. It gives me some measure of bizarre pride to think that my like-new T-shirt is older than most of the so-called “vintage” things sold in Berlin’s Vintage Clothing shops. I was about to cut off the tag, but it says Ютрика in fancy red Cyrillic letters that now evoke the obligatory nostalgia in 31 year old me, so I let it stay and sting my neck. My shivering back even somewhat enjoys the stinginess of this slightly weathered, almost-new, garment. In fact, worn over another shirt it hardly stings at all. Under a huge (also once hated, now loved) woollen hand-knit-by-grandma pullover it keeps me warm, while the world outside is covered in increasing amounts of German snow. And, as I keep telling everyone, Berlin degrees are colder than English or Bulgarian ones. They’re real hard-working degrees of cold, not some luke-warm welfare scroungers. So -5°C in Berlin feels actually more like -15°C elsewhere. So, dear wronged T-shirt, welcome back to my bosom. Who knew! Well, obviously, my mum did.

The US sociology job market in 2012 (2012-12-21 08:00)

As the year draws to a close, let’s have a look at the sociology job market across in the USA in 2012. Neal at Scatterplot have made a crude but very helpful visualisation of the decreasing number of jobs available for sociologists this year on the basis of 329 ads posted in the ASA Job Bank. We repost the results: click on the image to read Neal’s analysis!

Scatterplot’s analysis of the UK sociology job market in 2012. Pretty grim! Click on the photo to check out the blog which has a wealth of interesting sociological stuff.

[4]Scatterplot are:

- [6]Tina Fetner, McMaster
- [8]Shamus Khan, Columbia
The social scientists behind Obama’s victory (2012-12-22 08:00)

This year’s USA presidential elections were very exciting and contested, but perhaps less obviously ground breaking than the previous ones. However, important structural shifts have happened in the way in which the campaign is conceived, organised, and carried out. In a nutshell, the campaign has never been so scientific. As one of the scientists in the team, psychologist Dr Craig Fox, said,

“Before then I felt like we had to sell ourselves; this time there was a real hunger for our ideas.”

[7] 1472
Deconstructing a... take-away menu (2012-12-23 08:00)

We don’t normally post fake news such as ones from the Onion, but this one is an exception. It is not fake. It is true. An exploratory mini-survey among current and recent PhD students in sociology and related disciplines has shown that "Jon Rosenblatt"'s case is not at all unique. We've all been there, done that. Sociological imagination gone wild! While trainee dentists look at your teeth as you speak, medical students try on tens of deadly diseases every day to find that they fit the symptoms, perfectly, and engineering students survey the design and durability of each and
every human-made artefact, we sociologise and deconstruct.

"Jon Rosenblatt, 27, a Harvard University English graduate student specializing in modern and postmodern critical theory, deconstructed the take-out menu of a local Mexican restaurant "out of sheer force of habit" Monday.

..."I can’t help it," Rosenblatt said. "Even when I close my eyes at night, I feel myself deconstructing things in my dreams—random stuff like that two-hour *Dukes Of Hazzard* reunion special or the Andy Warhol postage stamp or commercials for that new squeezable gel deodorant. I'd say I'm going crazy, but that presupposes an artificial barrier between societally preexisting concepts of 'sanity' and 'insanity' which themselves represent another false dichotomy maintained for the preservation of certain entrenched elements of the status quo and... Oh, God. I'm doing it again."

______________

Daddy Leave in Norway (2012-12-27 08:00)

This is the Idle Ethnographer’s share of social advertising for today. In Norway, 90% of men take their 3 months leave, while in the UK only 40% of men take the 2 week daddy leave to which they are entitled - the figures in Norway are
actually pretty impressive, given the short time the scheme has been running. As always, we need to bear in mind that pushing policies to introduce more daddy leave is not some empty argument. It is not about getting some rigidly defined equality at all costs. As things stand, and in the way most of us have been socialised, it is still considered normal in many communities that a larger share of women will be generally more interested in, and capable of, and ready for, taking care of kids. If that is the situation now, this does not mean that it is set in stone. Things are changing and this is fabulous. At least in my ideal world, all people are people, not overly determined by their gender or physical or mental ability. Of course, those things are important, but society can do its share to smooth out the differences to give more capability to everyone make everybody's life better. Until everyone is equally interested in parental leave and the decision is taken by parents and guardians of all genders, on an equal footing, I reckon we can do with some affirmative action.

**Sandy Hook and Call of Duty: the toxic relationship between “violent” games and the media**
(2012-12-28 08:00)

Following the tragic events of Friday in Newtown, Connecticut, a friend and I had been trying to guess how long it would take the media to blame allegedly “violent” video games for the latest spree killing. We didn’t need to wait very long. By Friday evening, Facebook users were poring over the profile of Ryan Lanza, at the time believed to be the perpetrator and whose Facebook profile [2] appeared on the Huffington Post website. He happened to enjoy the game [3]Mass Effect, a role-playing game set in space, battling aliens intent on destroying the universe. A (brief) outcry followed claiming that the game ought to be banned on the Facebook page for the game, as well as in groups set up on Facebook in memory of the event. This subsided once the 24 hour news media declared they had named the wrong brother, with Huffington Post since apologising for mis-identifying Ryan. Since then, the news channels and tabloids have started blaming video games due to Adam Lanza’s nerdy, reclusive image. Yesterday, the Sun’s [4]headline claimed he had played the likes of army shooter Call of Duty, based on the testimony of a plumber who had visited the family house and saw military posters in the basement, however he does not say if he actually saw Lanza playing the game in question. The Daily Express also [5]blamed Dynasty Warriors, an action game based in ancient China, which involves sword fighting, not shooting. Also yesterday, the American gun lobby is [6] calling for discussions around the first amendment including a consideration of violent Hollywood films and games that “teach young kids how to shoot heads”, as part of the NRA’s attempts to move conversations away from gun control. As the Guardian has [7] pointed out though today, there is no evidence that Adam Lanza actually played any of these games. Nevertheless, in the aftermath of spree shootings, it is generally only a matter of time before video games are blamed - from the [8] Columbine boys who played Doom, to [9] Anders Breivik playing Call of Duty and World of Warcraft. So, is there any truth to this knee jerk hysteria?

The research into the effects of violent video games remains patchy, with much of the research being conducted in laboratories. Bushman and Anderson (2009) claimed playing a game for 20 minutes would affect helping behaviour for example. After spending time playing the fighting game Mortal Kombat or the sport game PGA Tour Golf,
respondents were asked to sit in a room to respond to a survey. While they were filling these out, a recording of a fight was played outside the room, and lab assistants timed how long it took the individual to respond to the noise, then go and help. The disparity between those who had played the violent or non-violent game was only a couple of seconds, but the authors claimed this was evidence that playing a violent game had a negative effect on helping behaviour. In another study, Anderson et al. (2007) gave high school age teens from Iowa a survey of their media consumption, and their social attitudes. This included details such as GPA, number of hours per week of television watched and games played, then how often they perceived certain types of behaviour to be common, such as fights between married couples. In this way, they try to prove a link between media consumption, especially gaming habits, and their normative beliefs around violence towards others and anti-social behaviour. Crucially, they did not ask the teenagers about their home life, such as witnessing domestic violence, abuse, or even gun ownership. In the absence of such data, the authors claimed that playing video games could lead to distorted views around violence.

However, none of these studies has proved that playing video games will definitively make you harm others. Newman et al.’s (2005) study of spree shootings in America concluded that in most of the cases they examined, the perpetrators did not play video games. The majority did however show symptoms of mental health problems, ranging from the onset of schizophrenia, to depression. Crawford (2012) has pointed to the way in which studies, such as those cited above, fail to adequately define violence in video games, which is rather subjective. Indeed, Anderson et al. (2007) has no definition of violence whatsoever. Crawford (2012) also argues that removing the study of video gaming from its domestic setting into laboratories will never give the same results, and that such studies often have inconsistent methodologies and sampling problems, for example focusing only on short-term reactions, not long-term effects. Moreover, Thornham (2011) suggests that these studies conceptualise gamers as passive receivers of messages from games, as opposed to active participants. Rather than sitting watching the action unfurl, the gamer plays an active role in what happens, generally directing the course of action themselves. In regard to children and video games however, Bijvank et al.’s (2009) study found that showing children video game boxes with "mature" content ratings for violence or action actually made them want to play the games more, than if they lacked them. Thus, the greater the media outcry around a game, the likelier a child will want to play it!

At a time like this, the media is looking for an easy scapegoat. Of course, I would never advocate giving a child an inappropriate game to play, and parents and guardians need to ensure that children are not exposed to anything untoward before they are old enough. Nevertheless, the overwhelming majority of people playing video games are not violent - otherwise, there would be far more cases like this. It may be in some instances that violent people are drawn to video games they perceive to be violent, which would suggest correlation, not causation. Yet, folk wisdom kicks in, and claims are made suggesting there must be some effect from playing games - even if there is no evidence. No-one at this stage can even say if Adam Lanza actually played video games. Newspapers have suggested that Adam was a loner, possibly suffering with Asperger’s syndrome, who seems to have become a recluse in recent years, according to the Guardian article cited above. Thornham (2011) identifies the stereotype of the lone male gamer as a construct framing gaming as perverse, anti-social and escapist. The media discourse around gaming, and especially in light of these events, certainly enables an imaginative leap that links social rejects with anti-social gaming. Surely though, now is the time to focus on actual guns rather than game guns.

Ethics and Social Theory: The Work of Andrew Sayer (2012-12-30 08:00)

University of Wales, Newport (City Campus)
22 February 2013  |  09:45-16:45

Ethics and Social Theory: The Work of Andrew Sayer

Andrew Sayer’s work in critical social science has ranged across political economy, social theory and ethics – combining insights from each, and shedding light across them in rare and valuable ways. His most recent books The Moral Significance of Class (Cambridge, 2005) and Why Things Matter to People: Social Science, Values and Ethical Life (Cambridge, 2011) have developed a distinctive position, critical of both modernist and postmodernist orthodoxies, and of the tendency among social scientists to neglect or deny the importance of normativity in social relations. As an alternative, Sayer offers a qualified ethical naturalism, combined with a realist social theory. It is a position which draws fruitfully on diverse theoretical resources – Adam Smith, Pierre Bourdieu, the ‘capabilities’ approach — while staking out distinctive ground of its own.
This seminar will explore this recent work from a series of critical angles, and include a response from Andrew Sayer himself. It will be of interest to sociologists, social theorists and those with an interest in how moral philosophy relates both to wider questions of social understanding and critique, and to everyday lived experience.

Speakers:

Dave Elder-Vass (Loughborough) ‘The moral economy of digital gifts’

Carol Smart (Manchester) ‘Talking about what matters: the view from empirical research’

Gideon Calder (Newport) ‘Lay normativity, critique and the institutions of ethics’

Ted Benton (Essex) ‘Norms, naturalism and social explanation’

Gregor McLennan (Bristol) Summation

Andrew Sayer (Lancaster) Response

Fee (registration and food) | £30

Places are limited. Formal booking will open in mid-January, but places may be reserved before then.

Looking for a new year’s resolution? @PaulbernalUK offers a suggestion some readers may find unthinkable (2012-12-31 08:00)

If you’re looking for a New Year’s Resolution – have you considered leaving Facebook? There are many reasons to do so, and getting more compelling all the time – all it takes is a little resolution.

1) Privacy

Everyone should be aware that privacy is an issue with Facebook. So many people put so much ‘private’ information onto Facebook that the possibility that your private information, photos, stories etc might get known to a wider public should be obvious. We shouldn’t be shocked when bad things happen – and yet even Randi Zuckerberg, sister of Facebook’s founder Mark Zuckerberg, still [1] seemed surprised and upset when a ‘private’ family photograph she posted somehow made its way onto Twitter. It wasn’t hacked, scraped, leaked or anything nasty – it’s just that Facebook is designed that way. The private becomes public all too easily – ‘sharing’ means you lose control. If Randi had just emailed the pic to her family, or put it on a genuinely private site, none of this would have happened.

2) Real Names Policy

Facebook’s policy is that people should only ever use their real names – and this can have very bad consequences. There are many people for whom using real names is dangerous, from whistle-blowers to political
dissidents, from victims of domestic abuse to people just wanting to harmlessly let off steam. And it’s not just in the extremes that it matters: forcing a real names policy can matter to almost anyone. It helps anchor your ‘online’ life to your ‘offline’ life – meaning that anyone wishing to take advantage of you, to manipulate you, to take information out of context etc, and link what they find out about you online to your offline existence. Real names policies are potentially deeply pernicious – and not only does Facebook have one, but it is ratcheting up its efforts to enforce it. Snitchgate, [2] about which I blogged in September, was just one example, where they experimented with getting people to ‘snitch’ on their friends for not using their real names. For Facebook, a real names policy has value – it makes their data on you more valuable when they want to sell it to others – but for people, it is both limiting and risky.

3) Monetization

Facebook is a business, and in business to do just one thing: make money. What that means is that they want to make money from their assets – your data. The recent [3]furore over Instagram’s altered terms of service was just one example – and in many ways it was typical. Instagram has access to a huge collection of photographs – and since Facebook acquired Instagram for $1 billion earlier in 2012, it has been looking for ways to make money out of those photographs. The internet community’s reaction to that change was dramatic – and Instagram quickly changed tack (or at least appeared to) but make no mistake, the issue will recur. Facebook will look to make money – since the far-from-stellar IPO, the pressure to make money has been growing. Facebook has to satisfy its shareholders first of all, its advertisers next, and its ‘users’ last of all. The users don’t provide money directly, after all – so Facebook has to make money from their data. That drive to make money means that what happens to you when your data is used is of very little consequence....

4) Profiling – and self-profiling

One of the best ways to describe Facebook is as a ‘self-profiling service’. Everything you put up on Facebook, every ‘like’ button you press, every silly game you play, every person you ‘friend’ (and every person that ‘friends’ you) helps build up that profile. The profiles are used primarily for advertising – but also to build up their database of profiles. Profiling is something that is risky in two diametrically opposite ways: if profiling is accurate, it impinges on your privacy, whilst if it is inaccurate it can mean that bad decisions are made for you or about you. What’s more, profiling data is particularly vulnerable – allowing far more accurate and dangerous forms of identity fraud and similar scams.

5) Facial recognition

Facebook loves facial recognition – and it’s not just a coincidence of names. Facial recognition allows them to make more and more links, which helps them to profile better, and also to anchor information in the ‘real’ world, just like their ‘real names policies. Their practices with facial recognition – including ‘automatically’ tagging photographs – may have been rebuffed in Europe on the grounds of data protection, but just as with the Instagram issue (see (3) above), make no mistake, it’s coming back. The risks will still be there – they’re inherent in the concept – but they’ll find a way to get what at least purports to be consent from users in order to satisfy the letter of the law. Anyone who has put a photo of themselves on Facebook should be concerned.

6) You never know who’s watching

Most Facebook users imagine that the people who look at their pages are their ‘friends’, or perhaps their ‘potential friends’, and don’t consider who else might look at what they post – and there are vast numbers of other groups who will look. Those who are slightly less naive might understand that their employers might look, or their potential employers – but what about insurance companies, looking to see if people are engaging in risky activities, or credit agencies wanting to make more ‘accurate’ assessments? Or the authorities, looking for people doing ‘bad’ things – or people who ‘might’ do bad things? Show some interest in anything political... again, the risks are
both ways: accurate watchers finding out things you don’t want them to find out, inaccurate watchers making bad decisions based on incorrect assumptions.

7) Facebook is forever

Many users of Facebook start off ‘young’ – perhaps in age, but perhaps in naiveté. They put material up that they think is funny, or cool, and don’t think how it might look in the future. This doesn’t just mean the odd drunken photo being seen by a potential employer – it means pretty much everything you put on Facebook. There was a big story in September 2012 when people thought their old ‘private messages’ were being posted onto their timelines, and they were hugely upset. It wasn’t true: what was actually happening was that some of their old public posts, posts from a few years ago, were reappearing – and people had forgotten the kind of things that they used to post. What you want to be public one year, you might well wish to forget in a few year’s time: with Facebook, that’s close to impossible! These days you can delete your account – but even if you do, that may not be enough. Services like profileengine.com keep old Facebook profiles even when they’ve been deleted.

8) Monopoly

Facebook is proud that it has now got more than 1 billion users – which makes it pretty close to the only game in town. Monopolies are very, very rarely a good thing – and if Facebook becomes (or perhaps has already become) the default, that puts a huge amount of extra power in their hands. Effectively, they can do whatever they want, and we’ll still have to be there. That can’t be good – and shouldn’t be good, particularly is you really CAN leave, and really DON’T need to be on Facebook. There are alternatives.

9) Concentration

...and those alternatives offer a solution to another risk involved in Facebook. Facebook wants to be all things to all people – and that means all your data, all your links, all aspects of your life concentrated in one place. That means much more accurate profiling, but also much greater vulnerability. If Facebook knows everything about you, they have much more power over you – and their profiles become much more powerful, so if compromised, sold, hacked, given to the authorities, to some other ‘enemy’ of yours, they have much more potential for damage. What would be much better – though somewhat harder work – would be to use different services for different features. Use one provider for email, use twitter for mass communication, set up your own blog on a different provider, put your photos on your own website, play games on yet another and so forth. Much less risk – and much more freedom to get better services. Also, much less dependency...

10) Dependency – and bad habits...

The last reason I’m going to mention here is dependency. Many people seem to be becoming deeply dependent on Facebook. They use it for everything – and seem totally lost if it goes down. They can’t contact their real friends and relations – they haven’t even kept a record of their email addresses. That means they end up spending far too much time on Facebook – and get into lots of bad habits, habits that Facebook encourage. Too much sharing (which to Facebook sounds like blasphemy), too many pictures posted online, too much information given out (e.g. geo-location data) without a real thought to the consequences. If you leave Facebook, and instead set up particular systems for particular functions, you’re far less likely to become dependent – and you’re far less lost if one or other of those services goes down for some reason or other.

And if that’s not enough...

...there are many other reasons. One that matters to people like me is that the only way that Facebook will ever change in any meaningful way, the only way it will start to take users’ privacy and other rights seriously, is if it
starts to lose users. If enough people start leaving, it will have to do something differently, and start to take us more seriously rather than just treat us as cattle to be herded and milked....

So why not do it? Make it your New Year's Resolution: leave Facebook!

Here is a [6]link to instructions as to how to delete your Facebook account. If you have the strength, go for the real 'deletion' rather than the 'deactivation' method. If you just deactivate, you're leaving your data there for Facebook and their partners to exploit.....

4.1 January

Happy New Year! (Mieow!) (2013-01-01 08:00)

Always fascinating to look back into history and find out that all new things are well forgotten old ones. We don’t get tired by celebrating New Year (OK, we do, but we forget about the tiredness after a year and celebrate it again). Such appears also to be the case with (modern European) humans’ fascination with cuteness and ridicule, in the shape of cats. The Internet today is replete with photos of cats, but this is nothing new, as these [1]photos from the 1870s testify:

[2]
A happy new year! (Click on image to visit a fascinating photo gallery)

Happy New Year 2013 to all of our readers! Thanks for stopping by to read and comment. We hope to continue being fun and useful to you in this new year!

We thought we should start the year by mentioning an important, if not strictly sociological, subject: the importance of academic integrity.

Integrity in methods, research process, ethics, and the presentation of findings has always been important for all types of research. This is even more so in today’s increasingly pressurised environment which many academics recognise as determined by funding opportunities and the trend towards ever-increasing efficiency, shaped by shorter-term research projects, channelled by 'buzzwords'. Those who do research face fierce academic job market competition and are compelled to either 'publish or perish' (and win grant-applications or perish).

And here are two views on integrity, to start off the new year’s reading list:

The first one is a 1974 lecture by theoretical physicist (and amazingly inspiring person) [1]Richard Feynman (1918-1988)

The transcript is available [3]here. It is mainly about integrity in experimental science, but is nevertheless relevant to any research. The recording is, unfortunately, read by someone else; do should check out Feynman's other lectures on YouTube - he was a great lecturer.

How do I teach policy analysis? (2013-01-08 08:00)

One thing I write with reasonable regularity on student essay feedback is “don’t just describe, analyse”. This applies most often to work addressing a particular sociological theory, set of literature, or policy area. With this in mind, I put together the following model for policy analysis and have been using it in undergraduate seminar groups for a couple of weeks. Responses were pretty good; students commented that they are generally not taught such practical techniques in their methods course and it’s useful to be able to apply these things with some guidance – in the first week I introduced the model and each class used it to look at a particular piece of policy (in this case, a specific NHS document on breastfeeding); and the following week we broadened it out to look at a broader range of documents (on men’s health); then last week a more independent session on alcohol in pregnancy, including some visual materials as well as text.

The model is essentially a series of questions to ask of any piece of policy (or whatever you’re looking at), building into an outline for analysing a single item or set of items. Some I’ve classified as essential, some as the extra bits to encourage more critical thinking, although the differences are negotiable! I’d be interested to hear from anyone who spots any additional aspects I’ve missed...

1. **INTRODUCTION**: What is the overall aim of the document? What is it for, and who is the intended audience? (General public, specific demographic groups, policy-makers, practitioners, service users, commercial enterprises, third sector organisations, researchers?)

   Booster questions: Why is this issue/topic perceived as a problem? Should it be?

2. **CONTEXT**: What has been the historical development of the issue? What is the current situation - cultural and political context, news events and reports, recent research?

   Booster questions: Why has this document been published now? What is it about the current political, social or economic climate that has made it necessary or possible?

3. **CONTENT**: What is actually being said and by whom? What evidence is being used to back up arguments and is it used well? Are statistics used appropriately? Can it be trusted as a source?

   Booster questions: What is the author’s motive/angle? Is there an underlying ideology or political agenda being pushed? How else could these aims be achieved?
4. **PRESENTATION**: What kind of language is used and how easy is it to read/understand? Are there significant words or phrases that are used or repeated? What is the layout of the document, its style, how does it use illustrations or diagrams?

Booster questions: How does the presentation of the content fit with the intended audience? How might it have been different if written by or for a different group?

5. **IMPLICATIONS**: What are the potential outcomes or consequences arising from this document? What has been the response of the public, the media, organisations or groups identified at step 1? What is your own response to it?

Booster questions: So what? How much of an impact has the document had and was it as intended? Why (not)? Link it with other publications on the topic – what are the common themes and significant differences? Who has a different view?

6. **CONCLUSION**: What actions are required as a result of this document? Is there a specific call to action included or implied? What is the overall message?

Booster questions: Link the document being studied back out into wider themes: what does it contribute to debates on identity, gender, deviance...?

Please feel free to re-use the model (with appropriate acknowledgement) – I’ve got a set of class handouts formatted for seminar use that I’d be happy to share if you get in touch, and please let me know how you get on.

Hannah Perrin is an ESRC DTC Scholar and PhD student in Social Policy at the University of Kent with interests in health professions, clinical education and training, occupational socialisation and work transitions. She tweets about her research [1]@HCPerrin and blogs at [2]Academish.

**Why do people believe what they believe?** (2013-01-09 08:00)

I’ve always been fascinated by the question of why people hold the political beliefs they do. In part this is because of how badly most people handle this question. From across the political spectrum, there is a pervasive tendency to explain away the beliefs of others: idiocy, ignorance, naivety, self-interest etc. In a recent Twitter conversation, someone invoked psychoanalysis to explain why neoliberals are committed to their project. Why are we so bad at dealing with the beliefs of others? To a certain extent it’s because we don’t approach them in a vacuum, we too have our beliefs and these stand in relations of contradiction or compatibility to those of others. It’s also perhaps, as Chantal Mouffe might suggest, a reflection of political incivility within the unhealthy
democracies of late capitalism: seeing the other as an enemy to be defeated, rather than an adversary to debate with.

However I think a much more important factor is the sheer complexity of the question. Why do people believe what they believe? Our beliefs are caused and yet somehow transcend those causes. Our political worldview is marked by our natal context and yet escapes it. If we treat the question too abstractly we risk subsuming the messy complexity of the political worldview of thinking, feeling and fearing embodied agents into the conceptual abstraction entailed when we talk about things like ‘socialism’, ‘liberalism’, ‘libertarianism’ etc. This can seem justified by the fact there are people who consciously embrace the systematicity of these positions but this blinds us to (a) their normative commitments are always more complex than their stated beliefs make apparent (b) such people are, in this strict sense of having made an agential commitment to a position, surely a minority. An alternative approach is to treat the question in an empiricist manner, risking that we collapse a subject’s political worldview into the chain of events which led them to their present position and beliefs.

To get beyond these two approaches, I think what Ruth Levitas talks about as an archaeological approach to understanding political thinking is extremely useful. My understanding of this is based on a talk I saw her give two years ago (see below) so what follows is more a summary of the line of thought this sparked off in myself, rather than an accurate summary of her thinking on the issue.

The archaeology of political thought involves making explicit the idea of a good society that is embedded in particular political positions. These may be, to varying extents, inchoate. Alternatively there may be a contradiction between what an individual expressly endorses as a good society and that which is implied by their substantive politics. But there is nonetheless a deep structure to political position taking. When we make normative claims about social and political arrangements, our statements carry further normative entailments which frequently outstrip our discursive awareness of them. This is why dialogue and debate help us elaborate our worldview i.e. arguing about politics helps expand our awareness of the unacknowledged entailments which stems from our acknowledged commitments, as
well as offering us the opportunity to review and revise them.

If we consider this in biographical terms then the picture becomes, superficially at least, rather complex. The coherency of a political world view is something which is real (a logical structure holds between normative propositions) but unavoidably partial at the level of the actual (the cognitive tracing through and drawing out of these connections by a subject) and the empirical (the observable political commitments made by a subject). However we can make this complexity manageable if we focus on the actual: what brings about this ‘tracing out’ of the further commitments entailed by our existing beliefs?

I think it’s inevitably sparked by the necessity of making sense of our experience. We read new things, we encounter new people, we discuss new ideas and we see things happen in the world. In doing so we are confronted with novelty which stands in a contradictory or complimentary relationship to our existing commitments. In doing so, assuming we don’t engage in what are arguably extremely common avoidance strategics to evade the moment, we are compelled to trace out entailments of our commitments.

To put it more directly, I’m saying that deliberation is central to this everyday experience of being a normative being. There is a rationalistic moment to this deliberation given that it is driven by things we experience as contradicting or complementing our existing beliefs. But it is not in any meaningful sense a rationalistic process. What can be reconstructed in rationalistic terms represents the possible contours of normative commitment but what leads us to make choices is the fact that things matter to us. To bring this back to the original question: adequately making sense of the political beliefs of our opponents involves recognising:

1. They are also beings to whom these things matter
2. Their current beliefs are part of a biographical unfolding driven by a perpetual struggle to make sense of what they encounter
3. Their backgrounds have shaped their beliefs, in so far as it has patterned the novelty they’ve confronted and the cultural resources available to them in making sense of this novelty
4. Their unfolding set of normative commitments have also been shaped ‘internally’ by the sort of deep structure, most easily identifiable in what we term ideology but by no means exhausted by this.
5. While this deep structure exercises causal power via logical relations of contradiction and complementarity, normativity itself is a causal force. Ideas of the good life and the good society (encoded in mental images and cultural products) can ‘pull’ us towards them. We can be driven to systematise our thinking because of our desire to get ‘closer’ to the notion of the good life and/or good society embedded within it.

For an actual case study of this approach, this [2]post discusses common attitudes towards asexual people.

Interested in Digital Sociology? (2013-01-16 08:00)

The British Sociological Association’s new Digital Sociology group aims:

- To identify and disseminate best practice in the use of digital tools by sociologists.
- To develop and promote specifically sociological modes of inquiry into digital media use.
- To develop and promote specifically sociological responses to ‘big data’, in terms of both secondary analysis and the broader methodological questions posed by this transformation in the information systems of late capitalist society.
- To develop and promote specifically sociological analyses of the broader personal, cultural and structural changes of the ‘digital turn’ in social life.
- To provide an open forum for exploration of what the digital turn entails for sociological practice, professional identity and the future of the discipline.

Please [1]get in touch if you’d like to be put on the announcement list. We’ll hopefully be announcing our first event in the near future, with much more activity to follow.

Please add me to you announcements!!!
Social Theory Postgrad Seminars @SocioWarwick (2013-01-17 08:00)

The Social Theory Centre Postgraduate Seminars will take place in the odd weeks of the second term of 2012-2013 in the Department of Sociology at the University of Warwick. This series is particularly designed for postgraduate students interested in all aspects of social theory; whether based in Sociology or other social science of humanities disciplines - All are welcome.

Some representative themes are as follows:

Ideology | Secularisation | Modernity | Theology and Social Theory | Social Epistemology | Political Philosophy | The Role of Intellectuals

If you would like to present your current research in this seminar series, please send a short abstract of your paper to Daniel Fairbrother <[1]d.j.fairbrother@warwick.ac.uk> or Morteza Hashemi Madani <[2]s.m.hashemi-madani@warwick.ac.uk>.

DEADLINE for sending the abstracts: 21 January 2013

1. \mailto{d.j.fairbrother@warwick.ac.uk}
2. \mailto{s.m.hashemi-madani@warwick.ac.uk}

What is Digital Sociology? (2013-01-18 08:00)

1. Though it is a hugely exciting trend, the growth of digital research methods risks becoming a narrow specialism. It is crucial that we don’t fall into the [1]digital dualist trap of assuming that ‘online’ and ‘offline’ constitute distinct realities, as doing so profoundly misrepresents both the ‘real’ and the ‘virtual’. Rather than see digital research methods as a specialism, we can more usefully construe them as expanding the research repertoires of sociologists to adequately equip us for researching a social world where digital technology is ubiquitous.

2. The growth of computational methods are particularly exciting, however they pose a particular risk that we become preoccupied with technique. New technical opportunities naturally invite questions of what we do with them and why. The exploration of such techniques must be anchored in a renewed and reflective dialogue about the nature and ends of sociological practice. Preoccupation with computational techniques risks fuelling a much broader transition from mode 1 to mode 2 knowledge production within the academy and threatens the sustainability of sociology as a discipline.

3. In doing so, we grant digital sociology a much needed existence over and above digital methods. Digital sociology can be construed, in the broadest terms, as an exploration of the opportunities which digital tools afford for rethinking sociological craft. Creating and refining new tools for research constitutes one element of this. So too does the empirical study of the broader digital turn which has led to the possibility of such tools existing, as well as transformed the nature of the social world which they are subsequently used to study. But digital sociology can, at least potentially, mean something which both encompasses these elements and moves far beyond them.

4. One obvious possibility to this end is to consider the implications of digital tools for the communication of sociological knowledge, as well as the aforementioned focus on its production. Assuming that ‘impact’ is here to stay,
it becomes necessary to ameliorate some of its more deleterious effects by engaging with this transformed institutional climate in a specifically sociological way. Refusing to explore the possibilities which digital tools afford for communicating sociological knowledge (in a way which generates an 'impact') carries the risk that the specifically sociological dimensions of such knowledge, as well as the autonomy with which such communication is carried out, are eroded to an ever great extent.

5. The communication of sociological knowledge has been systematically undervalued, as opposed to its production. The communicative possibilities which digital tools afford will not be used to their full potential unless the communication of sociological knowledge is seen as carrying equal importance as a scholarly activity – applying as much to teaching as it does to ‘impact’ and ‘public engagement’ using digital tools.

6. If communication of sociological knowledge comes to be valued in a widespread way, it holds out the possibility of rethinking the public role of the sociologist. There is a greater public appetite than ever before for social scientific knowledge – witness the continual presence of social science books (usually written by journalists) in best seller lists or the millions who watch TED videos (etc) or follow iTunes U courses. However construing public engagement entirely in such terms misses the point – it turns public engagement into a specialism defined by the superstar academics it can produce at this level. Yet the availability of free, easy, instantaneous publishing and communication tools enables such activity to be a potentially everyday occurrence for sociologists. ‘Narrowcasting’ about a specific research area to what can potentially be an extremely small group of interested individuals is no less important than broadcasting to an audience of millions and it should be seen as such. The key claim is that (a) communicating sociological knowledge carries equal scholarly weight to its production (b) this communication should not be construed in instrumental terms.

7. As John Holmwood has put it, "Sociology is a discipline that has to be ‘achieved’, or continually re-invented, in new circumstances." – Digital Sociology in the broadest sense addresses the question of what such reinvention could or should mean in new circumstances where the content of this ‘newness’ is defined largely by the digital.

Making the familiar strange (2013-01-19 08:00)

In this video, Dalton Conley discusses the C.W.Mills' idea that a successful sociologist makes the familiar strange.

Digital sociology and sociological craft

2. [mailto:mark@markcarrigan.net](mailto:mark@markcarrigan.net)
Have you even been couchsurfing? Met new friends whilst travelling? Used a travel-share website? Sleeping on a friend’s - or acquaintance’s - floor while visiting a new place? If you’ve done it, chances are, a sociologist somewhere has studied it (and if not, you should go ahead and study it and tell us about it!). Sociologist Paula Bialski who did a fascinating ethnographic study of CouchSurfing (the biggest [1]hospitality exchange network) calls this intimate tourism or emotional tourism. In this edition of [2]Thinking Aloud on BBC Radio 4 from 12 November 2012, Paula Bialski talks about the sociology of intimate tourism.

Paula is a Polish-Canadian sociologist who received her PhD from [4]Lancaster University where she worked under the supervision of Prof. John Urry and Dr. Monika Buscher. She has researched mobility, tourism, and friendship and social networking, and the implications of the internet on offline interaction, friendship, trust, and social capital. Her new project [5]Low Budget Urbanity, studies low-cost transport issues through Couchsurfing and ridesharing systems. Paula is also part of the awesome band "Paula & Karol" (www.paulaikarol.pl) band!

Do check out Paula’s sociology blog where she writes field notes and thoughts about the sociology of intimate tourism (and lots of other interesting things). She also published her research in the book [6]Becoming Intimate Mobile.

Academic blogging – both/and rather than either/or (2013-01-27 08:00)

How do you feel about academic blogging? If you are reading this then, chances are, you feel reasonably well inclined towards it. However if you are an academic blogger then you will undoubtedly be aware that many people are not so well inclined. This raises an obvious question: why? There are many different answers which could be given to this question. Most of which are grounded entirely in anecdotal evidence. This is an issue that is crying out for empirical research. But given its continued absence, I want to focus on one issue which I believe, on an entirely anecdotal basis, to be pertinent – does academic blogging dangerously blur the boundary between research and journalism?

It’s an important question and one which advocates of academic blogging can sometimes dismiss too quickly. Underlying it is an entirely understandable fear of the relatively ephemeral nature of blog posts. The speed with which blog posts come and go, as well as the cultural connotations attached to the term ‘blogging’ itself (not all of which, it must be admitted, are unjustified) may lead many, when confronted with the advocation of academic blogging, to see ‘blogging’ as corrupting ‘academic’.

However I think this misconstrues exactly what academic blogging is. Or at least what it could be. Rather than turning academics into journalists, it actually holds out the possibility of protecting against this. By opening up a distinctive space between academic research and journalism, a thriving academic blogosphere mediates between them. It provides a space for translation, in that blog posts within it will tend, to varying degrees, to communicate in a way that is less specialised than the more familiar modes of academic communication which underwrite both their content and their authority. It also aids discoverability, in that navigating the academic blogosphere as a non-specialist will tend to be intrinsically easier than negotiating the world of staff pages, journals and paywalls.

The crucial point is that academic blogging does not take place in a vacuum. It is grounded in existing research and expertise. The flexibility it affords allows this relationship to be a dynamic one – blogging can be underwritten by research conducted, in progress or is merely planned. It also provides a degree of space and freedom to extend beyond the realms of research. It is widely acknowledged that social media offers new possibilities for public intellectualism but what is much less understood is the transformed nature this can take. Rather than the broadcasting which defined the public intellectuals of the 20th century, social media facilitates ‘narrowcasting’ – relatively narrow audiences can be reached, with little or no funding needed, facilitating a broader and much more democratic relationship between academics and various publics. Academic blogging holds out the possibility of extending the role of the academic, rather than threatening its diminution. I share many of the fundamental concerns which I hear expressed about impact and public engagement – particularly the entirely justified fear that this agenda, as well as the broader changes within higher education within which it is unavoidably implicated, threaten the autonomy of academic work. I think there’s a risk that the production of academic knowledge (in the broadest sense of the term) becomes subjugated to the contingencies of the political cycle, particularly as its mediated by funding bodies and other intermediaries. Part of the difficulty stems, I think, from the unavoidably top down way in which ‘impact’ and ‘public engagement’ are introduced and enacted. But I’ve always felt conflicted about this issue because, at least when they are construed in ‘bottom up’ terms, I’ve both enjoyed them personally and increasingly seen such activities as important. Using social media has helped give my research a media profile which otherwise would have
been impossible, particularly at this stage of my career. It’s made me easy to discover for journalists and it’s helped me forge a rich array of connections with the broader community who have been the subject of my research. I’ve also found that, increasingly, journalists have read my blog posts or listened to my podcasts before they contact me and it hugely aids the subsequent dialogue. The use of social media can help get academic knowledge into a public forum in a form which is broadly comprehensible but not simplified. In doing so, it helps ameliorate some of the more problematic issues that can emerge from the culture clash of academic knowledge and journalistic constraints. Far from subjugating research to journalism, actively participating in this making public of academic knowledge will actually fortify academia against the intrusions of media imperative i.e. the academic blogosphere mediates between academia and the media. What is recounted above is simply my own personal experience but it’s one which, I’m sure, others have had. Furthermore, it seems likely that as academic blogging becomes more widespread, so too will this experience. Likewise as, for a variety of reasons, organizations invest in multi-author blogging projects which facilitate broader engagement (allowing those who only want to write an occasional blog post to get traction for their writing online) and add value to the content through curation and editing. Imagine if blog posts recounting the aims, arguments and findings of research papers become as ubiquitous as abstracts? What would the effects be? Among many others, it would likely make academic knowledge navigable to a great majority of people who are otherwise excluded from it. Rather than reducing scholarship to blogging, the former is extended through the latter, giving it a public visibility which it currently lacks and making it available in a way in which it currently isn’t.

Laura Sangha (2013-09-20 11:11:44)  
Thanks for an interesting post - I like the idea of the blogsphere as mediating between academia and more public spheres, and it will be interesting to see how the potential of the medium develops. I have often thought about my blogging as a bit like those conversations you have over coffee at conferences - you wouldn't publish anything based solely on them, but they are useful, informative, interesting, usually not too specialist, sometimes frivolous.

Sociology of ... outer space? (2013-01-28 08:00)  
I started this post as a one-sentence note about a future field called "sociology of space". The idea came while I was reading [1]this BBC article on some of the problems encountered the crew of a spaceship going to Mars. The article touches on important sociological issues - sleep, social interaction in a small [2]total institution, sex - but in a new context. This made me think whether the case of (currently very small) communities and societies of people travelling in outer space actually merit a whole new subfield. Perhaps not yet, but eventually yes, I though. I imagined the not-so-distant future of sociology and its inevitable expansion into new - literally - territories. Okay, not quite literally, because in latin, terra means earth, and I was thinking of extra-terrestrial sociology. This would be a sociology beyond globalisation.

Now, a sub-field related to both sociology and social geography, called "[3]sociology of space", already exists, so we would need another term. So I set out to do a rudimentary literature review to see if anyone at all had
published anything about a sociological approach to outer space.

But lo and behold, a hasty online search for literature revealed that some work in this direction already exists - albeit still on the outskirts of sociology. Note to self: the first example you find in an internet or physical library search is not always the most important.

My first find was the Journal of Astropolitics and the name of Jim Pass who in 2006 published an article on "Astrosociology as the missing perspective." Two years earlier, Pass had defined "astrosociology", or "sociology of outer space" as a new field dealing with 'the scientific study of astrosocial phenomena, or social and cultural patterns related to outer space. A debate ensued about whether to add a new Astrophysics section to the Americal Sociological Association (ASA). In his 2006 article The Astropolitics of Space Colonies; Or the Social Construction of Societies in Space, Pass claims to be making 'the first formal astrosociological effort' to discuss future societies in outer space. Further attempts to legitimise this subfield include a special issue of the same journal in 2011 (See introduction by Hearsey and Pass) in the same journal and a 2011 paper by Pass, Hearsey and Caroti. Pass has presented his thoughts in several conferences and published linked from his website, astrosociology.org. Whilst it is undoubtedly wrong to judge a book by its covers (or a website by its graphics), other subtle signs such as the constant reminder of the author's credentials, text titles such as "Inaugural essay", the overabundance of the "all rights reserved" phrase do raise the reader's suspicion as to whether importance is placed on the content, or indeed on securing a potential trademark.

An anthology called "The Astrosociological imagination" has been published by Stephanie Lynne Thorburn. (I'm not so keen on the use of classical sociology references in the titles such as "Invitation to astrosociology" and "Astrosociological imagination", but I wouldn't mind, if there were more behind the titles).

Pass' work has been criticised mainly informally in the blogosphere both for his approach, and for the name he uses for the new subfield. One short comment paper by James Ormrod deserves special mention, because it offers a more plausible framing of the problem. While Ormrod embraces the idea that space needs to be studied sociologically, he criticises Pass for taking an overly simplistic approach to this topic, as well as of blowing the idea out of proportion. He makes an argument for a 'critical sociology of the universe', rather than simply defining a new subfield by its physical location. Ormrod gives as a reference a book he wrote with Dickens called A sociology of outer space. (Routledge). If it really was forthcoming in 2005, it either hasn’t come forth yet, or Google hasn’t indexed it yet in 2013.

Young sociologists who don’t have a field of your own, are you taking notes? Sociology of outer space is currently a small, empty, quiet and rather messy space. This might change. In fact, it has to change, because outer space - imagined and real - has an important role in social life. But perhaps we need to write some pretty good stuff about it, before stitching a pithy name on what is currently a non-existing discipline.

2. totalinstitutiongoftman
Dr. Satyapriya Rout (2013-02-02 12:14:42)
An interesting piece. But too limited and narrow at the time being.

Milena Kremakova (2013-02-03 10:44:17)
Thanks for reading! Yes, it began as an idea on the spur of the moment and then I realised that there already exists some work on the question of sociology of outer space. Fascinating and totally out of my field, so the post turned out lacking depth. Is your work connected to this area? We would love to post a contribution.

Jim Pass (2013-06-21 03:03:28)
Current sociological subfields can indeed cover what we consider astrosociological issues, but they tend to do so as individuals not attached to a specific community with an interest in space and society, and we have moved on to a multidisciplinary orientation. Finally, astrosociology is just a field, which I founded to create a coherent literature and body of knowledge. Space has always been influential in cultures since the creation of ancient societies. For those who want more good theory and research institute this area, we invite you to contribute. Our nonprofit organization is dedicated to building this field that covers space issues from a social-scientific perspective; an area traditionally scoffed at by sociologists, as I have learned from personal experience. The exceptions to the rule remain inadequate, which we endeavor to remedy, including inspiring students to help us develop the field.

Sol Gamsu (2013-10-01 08:26:08)
Neil Brennan’s ideas about extended urbanization also involve the extension of urban influence into outer space. I think his talk might be up on the rc21 conference website.

**Immigration in the UK (2013-01-29 08:00)**

[1]
The survey shown in the above picture shows that a large percentage of the British population is worried about immigrants coming into the country. But is it really that much of a problem? Read about the multicultural success of Slough [2] here and about Lithuanians who live in the UK [3] here. And, of course, watch the documentary about Peterborough and its immigrants called The Poles Are Coming, about which we already wrote some time ago:

What gender equality? Family and careers in high-skill jobs (2013-01-30 08:00)

Let's take the example of historians. How equal are their career paths of women and men historians, our fellow social scientists (humanities scholars)? According to Alexis Coe, writer and journalist based in San Francisco, [1] being married helps professors, but only if they are male. The author - herself a former graduate student in history - summarises the findings of a new study of historians’ working lives published in December 2012:
Female historians who were either married or had been married at the time of the 2010 survey took an average of 7.8 years to move from associate to full professor. Women who had never married were promoted in an average of 6.7 years. Almost two times as many of the female full professors listed their status as divorced or separated, which suggests their professional obligations were somehow less compatible with marriage than their male colleagues. They were also more likely than their male colleagues to have never wed at all.

Conversely, male historians who were or had been married advanced in 5.9 years. The unmarried man took 6.4 years, a bit longer.

Female professors were more likely to have a spouse or partner with a doctoral degree, 54.7 percent to men’s 30.9 percent. Their partners were also more likely to work in academe, 49.6 percent to 36.3 percent.

American History Association members can read about the survey [3]here.

As Kay S. Hymowitz sums up in her article, [4]The plight of the Alpha Female,

"Children completely change the landscape for women."

But we need to also ask the unasked question: not only why so few women want to sacrifice family for their careers - but why do so many men?

Facebook Graph Search: @PaulBernalUK explains what this is all about... (2013-01-31 08:00)

The first thing to ask whenever Facebook (or indeed any other business) releases a new product or service is what’s in it for them. In the case of Facebook’s new ‘Graph Search’, as in most things Facebook, the answer’s pretty direct: it’s about the data. Graph Search, though it may seem to be just a cool new way of finding stuff, could also turn out to be a very clever way of Facebook gobbling up even more data than before – as well as trying to squeeze even more value from the data that’s already out there.
It comes at a time when Facebook might be facing a new situation – they may be reaching saturation point in terms of user numbers, at least in their prime markets. Figures seem to be suggesting that they are losing users – apparently [1]down 600,000 in the UK and [2]1.4 million in the US - and though those figures need to be taken with a decent pinch of salt, they do at least suggest that the era of unrelenting user number growth for Facebook may be over. What that means for Facebook, particularly after their less than stellar IPO, is that the pressure's on to make more money from existing users. They need money, and for that money they need data! They’re like the plant in Little Shop of Horrors, continually shouting out ‘Feed me!’. They need to be fed, so they can grow, and the more they grow, the more they need to be fed.

Firstly, its important to understand what Graph Search does. As [4]the BBC's Rory Cellan-Jones puts it, Graph Search is a "new way of mining the information your friends, and their friends". Essentially, as it's been described, it takes the data about you, and about your 'friends', and uses it as a source from which to search – giving you back stuff that your 'trusted' friends either use, or 'like', or something along those lines. Where it can get stuff off Facebook, it gives you that – and if it can't find relevant stuff, it goes to Bing, and does a web search instead. You can search for whatever you want – the examples given by Zuckerberg were things like "people who like fencing and live in Palo Alto" or "films my friends like" or "restaurants recommended in New York" – but the possibilities are endless, and Cellan-Jones highlighted the possibilities of using it as a sort of 'dating search': companies like eHarmony etc will be quaking in their boots.

Still, how is this about data? Well, if Graph Search takes off, it will have a number of implications:

1. When people search, they reveal stuff about themselves – they effectively add more stuff to their profile. That’s one of the reasons Google do so well – having information about what people are interested in is key. Each search term entered on Graph Search is more data for Facebook – and a potentially more accurate profile of the user.

2. Graph search will work better for people if their own profile is better – that is, the more data you put up about yourself, the more ‘personalised’ your Graph search will be. Facebook will be sure to let people know that, to persuade them to enter more and more data.

3. There have already been hints made that you might want to put more data up to ‘help’ your friends when they use Graph search. Of course the people it really helps are Facebook – they want more of your data – but the altruism, the sociability, will doubtless be stressed. Be a good friend – put more data up! Tell people what you like!

4. Businesses will start to realise that if people are using Graph search, they need to be on Facebook – and they need to get people to 'like' them even more than before. The 'like' button is already a big deal – this will make it more so. Businesses will be pushing you to 'like' them even more than before.... which means yet more data to Facebook, and more 'permission' given for that data to be used. Do you know what you're consenting to when you press 'like'?  

5. The more businesses are on Facebook, the more individuals have to be Facebook to manage those business pages – it's another 'lock in'. I know many people who say 'I'd love to leave Facebook, but I have to be there to manage my business's page'. That will only increase...
For Facebook, it's a 'win-win' scenario. They get more data – and potentially better data, as people might focus on refining their profiles in order to get 'better' Graph Search results. They get more uses – and hence more money – from their existing data. They get others – individuals and businesses – to do both their selling and their data gathering for them. They lock people into their business model even more.

There's another interesting issue for me. Google are under pressure for not making their searches 'neutral' enough – for possibly prioritising businesses that they make money from, or downgrading rivals or so forth. They deny that this is happening, and claim their search algorithm is 'neutral'. Facebook Graph Search by design prioritises businesses and others on Facebook – it doesn't even pretend to be neutral. Should it? And if it can exist in this form, why shouldn't Google be allowed to be less than neutral? Of course there are vast differences between the services, but I have a feeling this may open up an already squirming can of worms even further.

I should note that this is only a first set of thoughts on Facebook Graph Search – and I haven't even talked about privacy yet! What actually happens to it may be very different from Mark Zuckerberg's dream. It could be a distinctly damp squib – much of the reporting has suggested people are underwhelmed by it. I hope so, because the one thing, more than any other, that I don't want to see on the internet is one service dominating. The net needs to be open, it needs to be varied, it needs to be flexible and it needs to be dynamic. If we all do the same thing, or all use the same service all the time, that is far less likely to continue.

What is 'academic blogging'? (2013-02-01 08:00)

This question has been on my mind a lot this week. Largely because it occurred to me that I have yet to encounter a non-trivial answer to it. Sure, it's easy to say academic blogging is blogging by academics. But what does this really tell us? Martin Weller has an interesting discussion along these lines in his book the Digital Scholar:

'Scholarship' is itself a rather old-fashioned term. Whenever I ask someone to think of scholarship they usually imagine a lone individual, surrounded by books (preferably dusty ones), frantically scribbling
notes in a library. This is somewhat removed from the highly connected scholar, creating multimedia outputs and sharing these with a global network of peers. Scholarship is, though, a sufficiently broad term to encompass many different functions and so has the flexibility to accommodate new forms of practice. It is not only focused on teaching, or research, but also on a wide range of activities. In fact, a rather tautological definition of scholarship is that it is what scholars do. And a ‘scholar’ can be defined as a learned person or a specialist in a given branch of knowledge.

Traditionally we have tended to think of scholars as being academics, usually employed by universities. This is the main focus of this book; it is the changes to university and higher education practice that will form the main discussion and research. However, digital scholarship broadens this focus somewhat, since in a digital, networked, open world people become less defined by the institution to which they belong and more by the network and online identity they establish. Thus a well-respected digital scholar may well be someone who has no institutional affiliation. The democratisation of the online space opens up scholarship to a wider group, just as it opens up subjects that people can study beyond the curriculum defined by universities.

A simple definition of digital scholarship should probably be resisted, and below it is suggested that it is best interpreted as a shorthand term. As Wittgenstein argued with the definition of ‘game’ such tight definitions can end up excluding elements that should definitely be included or including ones that seem incongruous. A digital scholar need not be a recognised academic, and equally does not include anyone who posts something online. For now, a definition of someone who employs digital, networked and open approaches to demonstrate specialism in a field is probably sufficient to progress.

Similar ambiguities obtain with the term ‘academic blogging’. I guess my fear is that that, unless this is more widely recognised, certain possibilities about what it could be taken to entail might be foreclosed i.e. ‘academic blogging’ comes to be defined as only one of the many specific activities that are currently subsumed under this rather vague term. I think there's a real need for empirical research into how academics are using blogging platforms – looking at their intentions behind the activity, the practical results of it and developing taxonomies to better capture how these tools are actually being used (as well as the relative frequency of these uses and their distribution across disciplines) rather than taking the categories already in circulation as being heuristically useful for understanding this emerging field of activity. My fear is that the term ‘blogging’, as well as having all sorts of negative cultural connotations, actually obscures more than it reveals when used as an interpretive category.

Conditionally Accepted | Please Blog Responsibly (2014-02-06 15:02:14) 

Do you find social media taking up too much of your time? (2013-02-02 08:00)

Do you find social media taking up too much of your time? If so then [1]IFTTT could be incredibly useful for you. It allows different social media channels to be connected up using statements of the form IF [x] THEN [y] - where X is
an event occurring on one channel and Y is an action on another channel. When I found out about this, I was instantly fascinated but it can be quite tricky to work out how to *actually* use it. That said, I've been using it for months now and I was surprised to realise recently that I actually have 10 IFTTT statements running. These do things which previously were either impossible or only possible by hand. It's an incredible time saving tool and I feel I've barely scratched the surface of it.

Here are the ones I'm currently using:

- Every new post on the LSE Politics Blog (via the RSS feed) gets saved as a new document on my Google Drive.
- Articles I favourite on Pocket (Read It Later) get saved in Google Drive as a PDF
- New posts on Sociological Imagination get their details entered on a spreadsheet archive in Google Drive
- New posts on the Public University website get placed in my Twitter buffer for Sociological Imagination
- New entries on markcarrigan.net go into my Twitter buffer for Sociological Imagination
- New entries on markcarrigan.net go to the Sociological Imagination facebook wall.
- New posts on Sociological Imagination go to the Sociological Imagination facebook wall
- New posts on Sociological Imagination go to the Twitter buffer for Sociological Imagination.
- My favourited items on Google Reader go into the Sociological Imagination twitter buffer.

Idle Ethnographer (2013-02-07 12:42:38)

But isn't the whole point of channels that they are separate so you can decide what sort of post go into which of them? I'm not sure I see the point in linking them through "if X, then Y".

Sociological Imagination (2013-02-10 15:50:33)

Saves massive quantities of time!
“Oh! There are other people just like me? I’m not so weird after all”: the transformation of identity in the digital age (2013-02-04 08:00)

The internet was integral to the formation of the [1]asexual community. While the details are slightly messier than such an account suggests, the sociologically important aspects of its history can be summarised as follows:

1. Individuals who don’t experience sexual attraction are made to feel ‘broken’, ‘damaged’ or ‘fucked up’ by a culture which places great stress on sexual activity as a marker of personal fulfilment. While they recognise that they are different in relation to a given reference group (often peers at school) the nature of this difference is assumed to be pathological – they deviate from norms they observe and assume that this deviation means that something is wrong with them.

2. If they try and explain these differences to others then what were previous observations of norms endorsed become encounters with norms enforced. Rather than just observing that others orientate themselves towards
sexual activity in certain ways (both attitudinal and behavioural) they encounter the expressions of these norms. Commonly individuals who try and explain a lack of sexual attraction will be told by others that they are ‘late bloomers’, ‘haven’t met the right person yet’, have a problem with their hormones or their minds (etc). What was an interior self-directed assumption of pathology becomes one encountered from others as well.

3. However when the internet came along, it became possible for people with this experience to talk. Initially this wasn’t a case of ‘I am X’ and I want to find others like myself because there was no sense of what X was. However the sheer communicative possibilities afforded by the internet, to express oneself and encounter the self-expressions of others enabled a convergence of experience [note for those who know asexual history: I’m simplifying massively here for theoretical purposes] as people recognised aspects of their own experiences in the accounts of others.

4. These dialogues give rise to the emergence of the sense of an X. People generate labels to describe what they share, as well as labels to express their differences. The dialogue the internet affords [2]affirms commonality but also elaborates differences. Not only does a community form but it becomes internally differentiated.

5. The growth of the online community makes it easier for people to come to define themselves in this way. Whereas many older asexuals spent years or decades searching for some workable understanding of why they were different, many younger individuals simply type ‘do not experience sexual attraction’ into a search engine and find themselves at a n asexual discussion forum. This online growth fuels ‘offline’ media attention – it comes to the attention of journalists eager to document the novel and surprising, which in turn helps the community grow as further individuals encounter the label and find it online, fuelling the trend which was deemed to be newsworthy in the first place.

Now consider a very different group: people who experience Autonomous Sensory Meridian Response:

ASMR stands for Autonomous Sensory Meridian Response and is a physical sensation which can often be felt as a tingling feeling which begins around the scalp and can often travel all around the body particularly down the back and into the persons arms and legs.

Most people describe it as a tingling in the head.

What can trigger ASMR?

ASMR can be brought on through acts known as triggers. These can be visual or through sounds.

Watching another person complete tasks can induce ASMR with activities such as:

- Nail tapping
- Scratching
- Drawing
- Coloring in pictures.
- Whispering
- Hand movements
- Brushes
Haircuts
Massage
Handling items

When triggered ASMR can be very relaxing for the person and can help them feel a lot calmer and in some cases can be so relaxing that some people may fall asleep.

There are some striking similarities observable here. Internet culture was [3]integral to its recognition. The phenomenon has received [4]media [5]attention and the group who recognise themselves as having the experience has grown as a result. Both directly ("oh, so that's what that is!") when encountering such coverage and indirectly through friends and acquaintances who later recount what they have read. In essence it constitutes a label which has only come into social circulation via the internet. The label doesn't create the experience but nonetheless it renders it both easier to recognise (i.e. to acknowledge something it is necessary for it to have a label to constitute it as a thing) and articulate, either in internal conversation with oneself or with external others. Once it becomes an object of internal deliberation, people form plans and projects on the basis of it. Until ASMR was identified as a 'thing' it wasn't going to occur to anyone to make any of the thousands of videos on youtube relating to it.

Some people who felt weird about it suddenly feel relieved that they have a label with which they can now identify, rather than the experience being a site of anxiety and confusion. Those who didn't feel weird but didn't understand the experience simply find some interest in recognising that it is a 'thing'. The parallels can be overstated - crucially, it doesn't seem particularly likely to me (though I'm not 100 % sure) that anyone experienced massive distress about their ASMR experiences. Sure, it perhaps made them feel a bit weird if, for contingent biographical reasons, they were prone to dwelling on it. But it's unlikely to have given rise to the feelings of social erasure and marginalisation which many asexual people experience. Nonetheless there are some converging elements and I think they are very interesting. Crucially they apply much more broadly. This post is hopefully the first step in branching out (meant non pejoratively) from this aspect of my asexuality research - how is the internet reshaping the biographical dynamics of normativity? Or in other words, how is the internet changing how our sense of who we are and how we differ from those around us unfolds over the life course?

**The riddle of modern day hermits (2013-02-05 08:00)**

Every now and then, people who have rejected society get caught under its radar and their solitary lives make it into newspapers. Three recent stories in the papers talked about such contemporary recluses living simple (or, rather, very difficult) lives away from humanity and close to nature. The unimaginable lives of modern-day hermits hold
many people’s minds in a grip of fascination. Millions of websites with examples and tips come up if you search for “living a simple life” or similar on the Internet. Here are just a few articles that caught my attention recently:

- A Russian family of six who lived a solitary life in the forests of Siberia for over 4 decades, unaware even of World War II, were discovered by geologists in 1978 (read a wonderful article [1]here
- [2]Emma Orbach, an Oxford graduate who has now lived for 13 years in a mud hut in Wales.
- An experiment in reclusive living for a year done by Peter Owen Jones (those of you based in the UK can view a documentary about Peter [3]here)
- Mary Cathryn S., a catholic hermit (article [4]here)

[5]

In an interesting paper from [7]1977, two sociologists, Elgin and Mitchell, study what they call 'voluntary simplicity'. Interestingly, they draw a distinction between voluntary simplicity which normally happens in urban areas and does not involve reclusive living, and 'back to nature' movements. Bearing in mind this distinction, we can nevertheless see strong links between the two phenomena - with the back-to-nature movement being a the more extreme and rare expression of the more or less the same core values. Elgin and Mitchell describe the reasons for choosing a voluntarily simple lifestyle in the USA and the living patterns common for it, as well as the social and business implications. They pinpoint an important feature that is the sense of 'urgency and social responsibility' (p. 3) common to the choice of a simple life which, when the paper was written, struck them as a novel phenomenon which had not existed a decade previously. The underpinning values that they identify appear very similar to those today: material simplicity, human scale living (small is beautiful), self-determination, ecological awareness, and personal growth. It is also interesting to compare their somewhat optimistic predictions for the year 2000 with the benefit of hindsight. The popularity of simple living seems to have grown indeed, but on a much smaller and less society-encompassing scale as the authors predict.

A Manifesto for Growth (2013-02-06 08:00)
shocked, shocked (2013-02-06 19:46:56)
I’m shocked, shocked, there are these simple solutions to our problems that are so obvious. I think a smidgen of sociological imagination - and analysis - would indicate why such reductionism is frankly laughable

Objective Mind: new online platform for post-soviet studies (2013-02-07 08:00)

Just a brief post to introduce you to a new and growing online platform dedicated to post-Soviet states. It is called (somewhat peculiarly) [1]Objective Mind and offers analytical articles as well as background information on ex-Soviet countries, including [2]Country Profiles and [3]Portraits that anyone can use for research, in addition to articles. Their very friendly [4]voluntary editorial team is looking for [5]authors. Certainly worth bookmarking if you are interested in post-Soviet (and post-socialist) social, economic and political affairs. Here is, for example, a recent overview article about [6]recent affairs in Georgia by Roy Yu.

"The PhD is in need of revision": a Canadian perspective (2013-02-08 08:00)

The PhD is in need of revision, writes Rosanna Tamburri of the Canadian online newspaper [1]University Affairs.

After completing five years of study towards his PhD in English at Queen’s University, Ian Johnston dropped out. To those who have similarly slogged through a doctoral program without success, his
reasons will sound all too familiar: his funding had run out; he hadn’t yet begun to write his dissertation; the isolation had become oppressive; and the prospects for landing a tenure-track faculty job in English studies – were he to forge ahead and finish – were dim.

So he left Queen’s in 2009 and enrolled in a master’s program in educational counselling at the University of Ottawa, which he completed in 2012. Now 32, Mr. Johnston is working as a freelance writer while he looks for work in the counselling field. He laments those lost years.

Why did men stop wearing high heels? (2013-02-09 08:00)

Finally a good article explaining the craze of high heels with the help of some well-researched historical evidence. After years of being baffled why on earth (rather, above earth) half of the (rich) world’s population is expected (and often cherishes the opportunity) to wear such sinister monstrosities on a daily basis, I’m now somewhat less confused. Mind you, I have done ballet and still didn’t understand what the point in high heels was. I have even suffered from the realisation that this inability to understand something that everybody else takes for granted makes me a bad ethnographer and a lousy female client who frequently shops in the boys’ section of shoe shops despite the shocked faces of the shop assistants - but now the mystery link between status and lack of comfort has finally been revealed.

Read the article by William Kremer [1]here and listen to the podcast [2]here, available also outside the UK. Beware: unless you are a sociologist/historian specialising in both gender issues and fashion, you might have your preconceptions overthrown.

"My summer at an Indian call center" by Andrew Marantz (2013-02-16 08:00)

For our readers interested in the globalisation of labour and workers' experiences, today's reading is about call centres. Two documentary films, the 2005 film [1]Nalini by Day, Nancy by Night and the 2006 film [2]Bombay Calling also tackle this recent global employment outsourcing phenomenon, and there is a long list of sociological analyses. Although Andrew Marantz's account of his [3]experience working in an Indian call center in 2011 is a journalistic piece, it is full of thick ethnographic description and offers insider insights into the subjective experiences of the hopes and disappointments of call centre employment.

The current moment seems to be one of 'crisis' or at least of dramatic change for the authority of academic expertise. Policy debates over climate change, embryology and the like have often seen scientific knowledge politicised, problematised and reduced in public imagination to just another partial 'perspective'. These issues are particularly acute where scientific expertise runs up against that of, or associated with, markets. Whilst authority that is grounded in the experience of practicing natural and social science seems to flounder, authority that is associated with market forces seems only to gain in stature – despite recent disasters wrought under the watch of just such expertise. This creates and compounds a series of dilemmas for critical academic practice that are bound up with changing conceptions of what constitutes public life. The arrival of a post-secular moment in which religion has re-entered the public sphere further unsettles debates about expertise, science and religion. This summer school provides a space for postgraduate students, postdoctoral fellows and other early career academics to come together to respond to this 'crisis' and to think through new avenues for intellectual life, practice and collaboration – reaching across boundaries of science, religion, critique, participation, pragmatism, vitalist ethics, and explanation. Together, we will work through the challenges of the present moment and ask whether there is a conceptual language or theoretical framework for addressing such challenges beyond disciplinary divides. The summer school offers a mix of expert lectures and participant-led discussion groups as well as workshops organised by members of the Authority Research Network. For more information about the summer school, please visit our website: [1]http://buff.ly/Uzqihe

Keynote academics:

Bob Antonio (University of Kansas), John Holmwood (University of Nottingham), Amy Levine (Changwon National University), Celia Lury (University of Warwick), Andrew McGettigan (Independent), Thomas Osborne (University of Bristol), Stephen Turner (Florida University), Sarah Whatmore (University of Oxford)

Application process:

1. Please complete an application form (attached) and return to [2]alexander.smith@warwick.ac.uk by 5pm, March 15th 2013

2. We will consider all applications, and inform successful applicants, by April 15th 2013

3. All successful applicants will be required to register for the summer school by May 15th 2013

Registration fee: £200 to include accommodation and food for the duration of the summer school. Applicants are required to cover their own travel costs.

Bursaries: We have some money available for fee waivers and travel bursaries. If you would like to be considered for either or both of these, please indicate this on the application form. Our resources are limited, and we will prioritise those applicants without sources of institutional support.

Organisers:

Alex Smith, Claire Blencowe and Gurminder K. Bhambra, Department of Sociology, University of Warwick
Women academic authors between 1665 and 2010 (2013-02-18 08:00)

Gender in academia: how much have things changed? (2013-02-19 08:00)

This 1992 article discusses the [1]barriers faced by female scientists and engineers. How much have things changed in the past 21 years? Not enough.

"Can non-Europeans think?" (2013-02-20 08:00)

In [1]this excellent short article consisting almost entirely of rhetorical questions, Hamid Dabashi (Professor of Iranian Studies and Comparative Literature at Columbia University in New York) debunks the "ethnographic gaze" of Eurocentrism.

The Bulgarian Winter: Between the Devil and the Deep Blue Sea (2013-02-20 11:29)

On Wednesday, 20th February 2013, the Bulgarian government headed by Boyko Borissov has deposited its resignation. What happened? What comes next? Read anthropologist Mariya Ivancheva’s analysis below. (The article is reprinted with author’s permission from [1]Criticatc, a Romanian left-wing comment and analysis web portal. See the original article [2]here.) [3]

Over the last week, Bulgarians in most big cities have been out in the streets, protesting against the increased electricity and heating bills. While the increase has happened gradually throughout 2012, the bills that were delivered to the post-boxes of the population in January 2013 were often times bigger than they would normally get. The wave
of contention in response to the rise of electricity prices spread throughout the country, resulting in blockades of roads, barricades, increasing popular rage and police violence. An old man cut his veins in a village in North Bulgaria in a feat of desperation over his bill. One of the organizers of the protests in Varna was stabbed with a knife. The boss of the police force in traditionally rebellious city of Pernik was beaten up by angry protesters. In Sofia over ten people were arrested, and further twenty five beaten by the police. A team of journalists were shot upon with private weapon from a building in the center of Sofia. Police cars and barrels of rubbish were turned upside down after the protests on Sunday and Monday night. Bills, flags, and cars were burnt, and windows broken before offices of the few power distributing companies and their local representatives. The protesters were mostly rank-and-file Bulgarians fed up with the political system of the last 23 years that has lead to their full impoverishment and total alienation from the political process. Middle-aged men and women, young couples with children and students all went out on the streets to protest the deadlock which successive governments had installed on them. The protests were also joined and partly hijacked by a number of right-extreme groups. Mobilized around the neo-Nazi march this Saturday, commemorating interwar General Hristo Lukov, the Hitlerite leader of the Bulgarian Legions, who and introduced anti-Semitic laws, they were ready to provoke and loot. Their reactions jeopardized the energy of the protests which peaked on Sunday, and resurfaced on Tuesday. Tuesday night saw bloody clashes with the police in Sofia on the even of the commemoration of Vassil Levski, the only uncontested hero and political martyr of the Bulgarian national liberation. When Boyko Borissov said he would resign on Wensday morning, it was this blood on his hands, he said he could not tolerate. Yet, most people see his resignation as a way to desert the sinking ship of the Bulgarian state amidst the crisis previous cabinets started and he deepened. The last protests did not come out of the blue. Over the last two months numerous protests have taken place throughout the country. In November the threat to the poet and all-time-dissident Nikolay "Bossiya" (Barefoot) Kolev sparked the so-called "Tomato revolution": a night of discontent not just against the unjust court trial of Bossiya, but against the government in general. In December and January two protests against privatization moves took place. The privatization of the freight train transport – the profiting part of the railway company split "under EU regulations" – has also been underway despite the protests in Sofia. A much wider social and media response was generated around the months' long blockade of the Sopot Machine plant. The demand of the workers to get their six months' salaries back led to its rapid privatization and the materialization of a mysterious sum of money with which the government paid back the salaries of the state-employed workers. In December and January the Green movement that protested in the summer was back to the streets. While in June their victory against the Forestry act was seen as a success, less than half a year later the government was overseeing the continuing construction. The contradictory Law of Education also sparked moderate protests. While the competition between teachers and the state subsidy to private schools have been the most contradictory clauses, middle-class parents mobilized against the compulsory post-4 kindergarten provision. Since December students at the Sofia University have also come out to protest against the increase of student fees. All these protests have come as a symptom of the increasing discontent of Bulgarians with the political and economic system. And while not all demands went against privatization and for protection, this was the overall frame: a frame that has proved difficult to articulate after decades of a systematic liberal pro-market brain-wash. The latest wave of contention that led to the resignation of the cabinet made no exception, but by early this week, the demands had started to change. The initial demand for the decrease of energy bills gradually changed with the slogan “Let’s burn the monopolies”. This motto expressed the explanations of the government as to why the increase of prices had happened were various. The reasons given ranged from the tax on green energy, the slightly longer period of charging, the delay of the process of reporting and increased consumption due to the Christmas holidays, and the low voltage of the electricity for domestic consumption. These were all valid reasons, and it was not transparency that was missing in the price formation. The solution offered, however, by liberal intellectuals, the media, and also initially by the people in the streets, was – surprise, surprise – the end of monopolies and further privatization and liberalization of the energy market. Yet the whole process is a showcase of how privatized entities function out of state control. The power distributive companies were privatized in 2005 and then sold out to three foreign companies under very favorable conditions of secure 16 % annual profit or return for them. This made the state – and thus the taxpayers – literally indebted to these private companies, which have on top of that held prices high with a cartel agreement. Yet, it was not the monopoly in general that was a problem: an issue which was eclipsed by the amnesia of 23 years of transition to market economy. It was the monopoly in the hands of uncontrolled and uncontrollable private companies within a free market economy.
with no state regulation or protection that made the population vulnerable to price hikes. Yet, the crisis of political representation seemed stronger and soon took a lead among the protesters. The concrete plea of concessions on the electricity bills were soon followed by an overall demand for the resignation of the government, which in some places took the form of claims against particular local mayors and representatives of the state. By Monday the demands changed more dramatically to a new Constitutional Assembly, majority vote with no parties but individual candidates, and the revision of all privatization deals and concessions for the last 20 years. Thus, while general discontent with the capitalist system only surfaced timidly in some of the protesters’ demands, the crisis has become political.

DE ACELASI AUTOR

[4] The assault on Ahmed Dogan: a heroic sal...

Caught in the vortex of increasing popular discontent, the Bulgarian center-right government of Citizens for the European Future of Bulgaria (GERB) has mostly responded with quick-fix solutions to quell people's anger. It has privatized state-owned enterprises but kept collective contracts. It has made concessions on contradictory bills to only then change other laws in favor of big business. It has exhausted the treasury to pay sums of money to shut down further protest. The only thing it has not changed has been the general direction of its austerity and privatization reforms. At the same time, Prime Minister Borissov's response to most protests has thus far been that of genuine irritation and contempt. While he scorned the participants in previous protests this winter, he has tirelessly underlined the great contributions of his government in the construction of highways. After the small concessions he granted to certain protesting groups, he has restored his overall image of a reconciling father of the nation. This time, however, the paternalistic tone was not allowed by the people in the streets. After Borissov's failed attempts to calm them down in appearances on TV late last week, the protests and blockades continued at full speed. They culminated in tens of thousands people coming out in the streets in the country on Sunday. The nervous and contradictory reactions of Borissov and his team betrayed their total impasse. In a typical populist gesture the Prime Minister publicly declared himself in support of the protesters and "generously" offered them rescheduled payment if they filed a complaint: a true gesture of liberal solidarity. This measure was not welcomed. People firmly demanded his resignation. As a next solution, Borissov pressed the Minister of Economics, Energetic, and Tourism Delyan Dobrev to carry out investigation of the power distributing companies and declassification of their contracts with the state. In less than a week, Borissov also fired two bosses of the Direction of the State Commission of Power and Water Regulation (DKVER): one for the increased bills, the other – freshly appointed – for her company's involvement in the online trade of banned cigarettes. The chaotic and desperate actions of Borissov and his people on Monday are a symptom of the deeper political and economic crisis which his and previous governments have brought to the country. They were also a sign of conflicts within the party in power. The President – usually a blind follower of the PM – used the chaos for some political self-promotion, declaring his support for people. GERB issued "directives for reaction" to the media, but then quickly withdrew them, saying that the email was in fact aimed to reach its parliamentary group members only. At the same time, the clamor around the energy bills eclipsed another protest – or a threat of one – that actually put the decisive spike in the gun of the government. This winter Bulgarian grain producers held a number of protests. After a promise of the Prime Minister to pay their subsidy by the end of February, they had frozen the protests. Yet, the promise of the government did not seem to materialize and a next warning was issued late last week. The promise of Borissov to pay the subsidy from the pocket of the state, until the European Commission pays it back to the grain producers, was met with unexpected resistance by the Finance Minister Simion Dyankov. Dyankov, a young yuppie that left his position as the Chief Economist of the Finance and Private Sector Vice-Presidency of the World Bank to join the government, said it was impossible to pay before April. His refusal outraged Borissov and he asked him to resign on Monday. Ironically, back in 2010 Borissov had said that the resignation of Dyankov would mean the end of his government: yet another promise of the Prime Minister that came to naught. Before he left his position, however, Dyankov was asked to issue a new emission of country's bonds for 800 mln lv (409 mln euros) last Wensday. Under the unexpected shock for the national economy and surprise to the international market the country's bond yields have started to rise and the value of Bulgarian debt to go down: a threat which the media and people on the streets have equally neglected. Under the pressure of the protests about the electricity bills, on Tuesday the Prime Minister
gave a press conference. He did not resign. Instead, in a program of seven points, he promised changes which the
DKVER had to vote. A cancellation of the 13% increase of electricity voted in August 2012 fell down, and a further 8
% decrease of the price was voted. Where the money would come from to secure these measures, the PM did not
make clear. While the PM has refused the idea of nationalization, he declared himself in favor of the concentration
of control of in the hands of National Electricity Company (NEC). An uncontrollable state-within-the-state, NEC was
seen by the people as one of the main reasons for the lack of transparency in the price formation of electricity, but no
 provision was made. The declassification of the contracts with the power distributing companies was paralleled with
a promise that they would be penalized and CEZ would lose its license. GERB has also promised 50% of its quota in
DKVER to become public, and it has asked the other parties to follow track. Two ladies, allegedly part of the protest
organizers – Daniela Pelovska and Diana Kaneva – who were called to Borissov’s premises yesterday, joined the PM
at the press-conference rostrum on Tuesday. They enthusiastically endorsed the government’s quick reaction, and
said they did not demand its resignation. They said that before the demands start being fulfilled no further protests
would follow, and that if there was anyone to blame it was not the current PM, but the whole political system of the
last 23 years. They said they did not support the ultras’ violence asked ordinary protesters to withdraw from par-
ticipation. While the first reactions in the social networks were those of frustration, both journalists and protesters
soon joined in their outrage against the badly staged political theater. The investigative site Bivol forwarded infor-
mation about Pelovska. Beyond her participation in the privatization process and involvement with the party of the
former Tsar Simeon II, it was disclosed that both her son and her daughter are high-ranking officials within the local
authorities in Sofia, where Borissov’s party GERB holds power. Two of the other protest organizers Yanko Petrov and
Yanaki Ganchev spoke before the privately owned independent Channel 3 saying that the two ladies had betrayed
all Bulgarians. They said for the continuing of the protests until people saw the fall of the government. Protest
organizers from all around Bulgaria have called people to continue their offensive. While big protests have taken
place on Tuesday evening already, the real big national protest was scheduled for Sunday, 24th of February. Given
the relatively close parliamentary election in July, the deposited resignation of the government now and its loss later
this spring was already no news. Borissov’s political game was no longer convincing for the majority. His resignation
was a last attempt to save his face, but most people see his resignation as a sign of weakness. With or without an
interim government, the lack of an alternative political actor makes the electoral perspectives rather bleak. Borissov
has thus far absorbed popular discontent within both the all-time powerful Bulgarian Socialist Party its all-time ally
the Movement for Rights and Liberties and their similarly neoliberal right-wing contenders. The new party of former
European Commissioner Miglena Kuneva – a splinter of the Tsar’s party and some further members of the former
democrats – is yet another embodiment of power-hungry marginals of the political transition. The new coalitions in
the conservative right political parties as Democrats for a Strong Bulgaria seem barren, especially since it was Ivan
Kostov’s government that started the whole process of privatization in the energy and further sectors. A few parties in
the extreme right, such as Ataka and VMRO, have tried to ride the wave of the protests. And while their thugs discred-
ited the protests, their leaders have kept firm ground, calling for nationalization of the power distributive companies,
and the resignation of the government. Yet if the current political system with GERB and all other discredited parties
figure as the devil in the equation in the title, the alternative scenario is both impossible and appealing as the deep
blue sea. What is certain is that the camel’s back has been broken in Bulgaria. Bulgarians have joined larger processes
that shook the region – Romania last winter, Slovenia, Hungary, Macedonia and Kosovo this season. Slogans of los
Indignados in Spain and the Greek anti-austerity protest start featuring in the streets. What is really needed now
is that people organize and speak openly of what form of economic rule and political control we demand and how
to achieve them. We need mechanisms and forms of political, economic, and social participation: a struggle that is
parallel to the electoral one, and one that aims to overturn the system as it is. Solidarity and international diffusion
of protest strategies and forms of organizing are now needed more than ever. And while the anti-capitalist and anti-
privatization vocabulary and alternative economic solutions are still at a rudimentary stage of development, one thing
is clear: the Bulgarian winter is still on the go. [5]Mariya Ivancheva is a doctoral candidate in Sociology and Social
Anthropology at the [6]Central European University. Her research is on the past and present of socialism as reflected
in the history of student movements and the contemporary higher education reform in Venezuela. Mariya is a member
The armbands, officially known as [2]Motorola arm-mounted terminals, look like something between a Game Boy and Garmin GPS device. The terminals keep track of how quickly and competently employees unload and scan goods in the warehouse and gives them a grade. It also sets benchmarks for loading and unloading speed, which workers are expected to meet. The monitors can be turned off during workers’ lunch breaks, but anything else—bathroom trips, visits to a water fountain—reportedly lowers their productivity score. Tesco did not respond to requests for comment, so it’s hard to know if the arm bands have been a success.

What struck me was the muted presence of [3]gamification themes, both in the deployment of the technology and in the reporting of its use. The technology allows management to ‘grade’ workers and compile real time moment-to-moment data ([4]facilitating Taylorism 2.0?) in a manner which [5]produces ‘scores’:

The former employee said the device provided an order to collect from the warehouse and a set amount of time to complete it. If workers met that target, they were awarded a 100 per cent score, but that would rise to 200 per cent if they worked twice as quickly. The score would fall if they did not meet the target.
Micro-measurement of employee behaviour is obviously not new, however the use of mobile technology (that looks like a Game Boy) to produce ongoing scores for each individual is more novel. It produces the sustained, coherent and linear feedback which is integral to game dynamics. It doesn’t stretch one’s imagination to conceive of Tesco giving out FourSquare-esque badges for sustained levels of achievement by individuals in the depot or publishing league tables in order to ‘motivate’ workers in the depot to achieve ‘better scores’. When/if it takes such a form, gamification looks and sounds little like the radical technology described by its advocates, which draws together a trendily eclectic selection of behavioural knowledges into a easily saleable intellectual ‘movement’ which is increasingly in vogue within management schools.

However is there really such a disconnect? Drawing on the work of people like Nikolas Rose, it could easily be argued that technologies of motivation and affect (the ‘psi disciplines’) are intrinsically political. Or that, at the very least, they cannot be detached from their political implications. While I would resist any poststructuralist turn which, in my view, risks collapsing intellectual inquiry into cultural politics, I’d nonetheless suggest that people who work in these areas have a responsibility to consider the implications which their work might hold. I find gamification fascinating in a number of ways. Nonetheless my engagement with it (which to be fair amounts to watching some videos, reading a single book and doing a Coursera course) has also left me with the sense of it as deeply troubling. Largely because there seems to be little or no engagement with the question of the consequences that might be held by this work when it is thrown ‘out there’ into the world, free to be deployed in a world riven with inequalities of power and status, facing a long-term crisis of economic growth and an increasing tendency towards structural (near or total) redundancy for large swathes of the labour market. Within such a context, the failure of gamification people to engage with the politics of gamification is deeply troubling.

There is a name for those under- and precariously employed, but actively working, academics in today's society: the para-academic.

Para-academics mimic academic practices so they are liberated from the confines of the university. Our work, and our lives, reflect how the idea of a university as a place for knowledge production, discussion and learning, has become distorted by neo-liberal market forces. We create alternative, genuinely open access, learning-thinking-making-acting spaces on the internet, in publications, in exhibitions, discussion groups or other mediums that seem appropriate to the situation. We don’t sit back and worry about our career developments paths. We write for the love of it, we think because we have to, we do it because we care.

We take the prefix para- to illustrate how we work alongside, beside, next to, and rub up against, the all too proper location of the Academy, making the work of higher education a little more irregular, a little more perverse, a little more improper. Our work takes up the potential of the multiple and contradictory resonances of para- as decisive location for change, within the university as much as beyond it.

Specialists in all manner of things, from the humanities to the social and biological sciences, the para-academic works alongside the traditional university, sometimes by necessity, sometimes by choice, usually a mixture of both. Frustrated by the lack of opportunities to research, create learning experiences or make a basic living within the
university on our own terms, para-academics don't seek out alternative careers in the face of an evaporated future, we just continue to do what we've always done: write, research, learn, think, and facilitate that process for others.

We do this without prior legitimisation from any one institution. Para-academics do not need to churn out endless outputs because of the pressures of a heavily assessed research environment. We work towards making ideas because learning, sharing, thinking and creating matter beyond easily quantifiable products. And we know that this is possible, that we are possible, without the constraints of an increasingly hierarchical academy.

As the para-academic community grows there is a real need to build supportive networks, share knowledge, ideas and strategies that can allow these types of interventions to become sustainable and flourish. There is a very real need to create spaces of solace, action and creativity.

The Para-Academic Handbook: A Toolkit for making-learning-creating-acting, edited by Alex Wardrop and Deborah Withers, calls for articles (between 1,000-6,000 words), cartoons, photographs, illustrations, inspirations and other forms of text/graphic communication exploring para-academic practice, and its place within active intellectual cultures of the early 21st century.

It will be published by HammerOn Press in 2014.

Introducing a special feature: the 'Sociologists of Crisis' series (2013-02-24 19:30)
Sociology and crisis often appear linked together, trapped in each other’s embrace sometimes as ‘intimate bedfellows’ and sometimes as an ‘odd couple’ too. What binds the one to the other is the very nature of their unusual relationship which, like most tempestuous love affairs, finds itself in moments of settlement and rupture depending on the tide, the mood, or the very circumstances that prompt or discourage their encounter. Such a broad opening paragraph admittedly sits and inevitably awaits scornful criticism that will demand references to substantiate claims made and justifications that would need to spell out what entitles any author to dare attempt such generalising pronouncements. My answer, consistent with every lover’s confession, is simple; it is my attuned interest in both sociology and crises that gives me the confidence to talk about them freely, if not carelessly, even by violating established standards of academic practice. What I hope to introduce with this introduction to the series however, is not a purely academic endeavour nor is it a theoretical treatise. Like most of my previous posts at the Sociological Imagination blog, they are -at best- civic responses to social events (the English riots, the Eurozone crisis) or academic arguments (the limits and possibilities of sociology), intending to raise questions that draw on sociology’s vocabulary of intellectual curiosity and provocation.

A few cautionary remarks are due however before this article series is properly introduced; the first is that despite my publicly exposed love-letter to sociology, and my faith in its potential usefulness in explaining crises, what prompts me to discuss the discipline itself with so much ease is my own research specialisation in a ‘sociology of sociology’ itself in the space of my (soon-to-be-completed) doctoral thesis at the University of Sussex, where I am also fortunate enough (if not entirely blessed!) to teach sociology to first year undergraduate students; sociology’s very first and foremost (re)public.

The second and perhaps most important point of caution, concerns the way in which the words sociology and crisis are linked together in this article, assuming their troubled relationship to be already known to and accepted by the reader; it might be wise to remind ourselves that sociology’s trajectory through time finds it in various moments of crisis in itself, with itself and of itself, like those documented by Raymond Boudon’s 1971 classic, The Crisis in Sociology. This article series however, does not interrogate sociology’s existential unease but rather sociologists’ uneasy conscience in the face of socio-political questions that have an immediate bearing on their research, with crisis being just one of them. What I hope to introduce in the Sociologists of Crisis series then, is the way in which sociologists’ work might provide insightful and imaginative ways with which to orient both our contemplative thought and our routine, everyday social action towards a better understanding of and confrontation with the current global crisis.

The idea behind such an initiative is the belief that, despite the insularity and overspecialisation of contemporary scholarship, there remain ideas and research incentives that might prove rather useful, practical companions in our turbulent discussions of the current socio-political realm, often offering unfamiliar twists in thinking and fresh opportunities for critically examining our social world against the cult of punditocracy or the doxosophic lens of the media and the blogosphere too. The objective of this project is to offer sobering accounts of the crisis by moving beyond and away from the hype of media discourse, political demagoguery, ideology and irrational, irresponsible
popular responses that often come in the form of forlorn gloom dramatised by hand wringing, chest beating and fatalistic lamentations that are polarised around disputes between warring camps; affording rival answers to a shared predicament.

This begs a number of questions that would need qualifying, one of them being; "which crisis exactly are we referring to?", and the answer lies not (just) in the global financial meltdown of our time, but in the specific context of one of the main casualties of it; Greece, to which a [3]two-part article was devoted last August in the space of this blog. The reasons behind choosing Greece as our destination for a guided tour of economic crises lie (a) in the fact that it provides a rather fertile ground for examining a lot of the arguments made about crises in general, and (b) in its casting as an accidental protagonist in the broader theatre of global capitalism’s ebb and flow.

The method or rather the chosen path for our navigation into such topographies of debt is to host a series of conversations with current sociologists whose research and thinking can offer perspectives that elude facile, popular representations of our crisis-ridden times and replace them with commentary that draws neither on expertise on the Greece, nor on intellectualist self-indulgence divining what the world looks like, but on the basis of powerful insights gleaned from the professional practice of their sociologies. The central question behind this modest project, best seen as a work-in-progress much like politics itself, is ‘can the way in which we speak about and listen to something change our understanding of it and more importantly its very own course?’ The argument offered here gently nods in affirmation of that statement proposing that by demystifying the language we use to refer to and comment on the crisis and its attendant issues, central or peripheral, ultimately has a bearing on how we might act towards it, experience it and/or live with, against or beyond it.

When language is used as the prime software for organising politics in the mind and as a framing device for our positioning as opinion-makers, opinion-dwellers and opinion-sharers, its misuse for the invention of villains, or the celebration of false-Gods can have harmful effects on our participation in our polity and the very shape it might take from this moment on. This re-adjustment of language to its critical functions is consistent with the title of the series which does not just allude to ‘sociologists of crisis’ as citizens of a world in crisis, but to sociologists of and with critical judgement, thus using the word ‘crisis’, derived from the Greek root krinein, for its capacity to judge rather than explain away the tribulations of the ‘sick man of Europe’ beset by austerity, rising unemployment, political corruption, Kafkaesque bureaucracy and escalating violence. Against such ‘giant evils’ of society, as William Beveridge of the [4]Beveridge Report fame, would have it, and in favour of Paul Gilroy’s (2012: 395) bold assertion that such ‘rhetorical habits must be broken and our political system adjusted accordingly so that it can acknowledge the perils of a predicament in which the integrity of our ebbing democracy may itself be at stake’, this series will be of interest to those who wish to resist the impulse to think and act unreflectingly and thus un-sociologically, influenced by elusive and illusory linguistic tropes and socio-political attitudes that are misleadingly coded as respectable political argumentation. The first article of this series will elaborate further on the theme of language, political culture and the sound of politics, and will be ‘live’ online towards the end of the month, like every article in this series.

Alex Trotiuc, CEO of MRP-EURASIA (2015-12-22 11:02:17)

Dear Mark! I like your publication and your clear reasoning about crisis in sociology. I drew special attention my research staff MRP-EURASIA to incoming mass migration to Europe from Asia and North Africa in the last 1-2 years. These masses of people (hundreds of millions) fall into the above-mentioned social group “homeless people requiring social assistance and accommodation”. They very quickly get the status of "refugee" and get the civil rights a citizen of EU - eventually they “accumulate” and assimilate in Germany, France, Austria, the United Kingdom (countries most accessible for migrants and most heavily standard of living in Europe). They greatly change the socio-political attitudes and preferences of opinion-makers, opinion-dwellers and opinion-sharers in European countries. What do you think and what ideas do you have? Thanks in advance for your reply. No to the Euro! @ProjectMYPLACE report from Latvia (2013-02-26 08:00)

MYPLACE researcher Liga Rudzite from the Latvian team reports on the recent protests against new legislation to move towards the replacement of the Latvian Lat with the Euro. For more information on the MYPLACE project, visit the project’s website [1]HERE or the project’s blog [2]HERE. You can also follow MYPLACE on [3]twitter.

On 31st of January the Parliament of Latvia – Saeima – voted on the Law on Euro that will regulate the process of introduction of Euro replacing the current currency of the country – Lat. On the morning of the vote the Members of Saeima were met by a protest action organized in front of the Parliament building by an NGO “Antiglobalsists” gathering around 70 people expressing their discontent with the vote they were about to cast.
At the end of 2012 the Prime minister of Latvia Valdis Dombrovskis suggested that Latvia is now ready to introduce Euro and this should happen from the 1st of January 2014. This caused public debates on whether Latvia is ready for that and whether the population of Latvia would support the decision.

Several NGO’s gathered together at the beginning of this year to start a campaign against Euro in Latvia — "Euro – No!". The main activities of the campaign so far included initiating discussions in news portals, voicing opinions wherever possible, sending out information and inviting people to join the cause via chain e-mails and letters, and on social networks. An open letter was also written to the Prime minister and the Parliament asking them to postpone the introduction of Euro and to organize a referendum on the question.

Even though joining the Eurozone was part of the Agreement on joining European Union, thus also a part of the referendum for joining the EU, campaigners say that this question should be voted on in a separate referendum, as not all countries of EU have joined the Eurozone and only 48% of the population voted for joining the EU anyway.

Campaigners have also started an initiative on an online participation platform manabalss.lv (my voice) to make Government return to the question of Euro and postpone the change of currency. So far this initiative has collected just over 7000 signatures out of 10000 necessary for the motion to go to Government. Public polls show that about 57% of the population are against the introduction of Euro in 2014.

In order to keep Lat as the national currency activists of "Euro – No!" campaign have established an NGO "Latvia for Lat!" planning to gather and involve all people and organizations that are against introduction of Euro and to organize a referendum on the question. The protest action was the first visible public activity of the NGO and it was followed by a conference "Why we do not need Euro? Why should we keep Lat?" and a press conference on the activities of the NGO and the campaign.

Invitations to join the protest action were spread through social networks and the official message from the official organizers "Antiglobalists" said that "On this day the members of Parliament are planning to destroy the national currency Lat, and similar to the 1940 to adopt currency that we will have no control over. This time it will be Euro instead of Rubles."

As mentioned before about 70 people took part in the protest action. The action slogans called for saying no to Euro and getting rid of slaves of Brussels, as well as stated that "We will have only those rights that we will be able to fight and win for!" and "The more we will protest, the better we will live!"

Even though the Parliament managed to pass the law with a slight majority of votes (52 in favor, 40 against), "Euro – No!" campaigners seem to be organizing a protest movement that should be taken seriously by the Government.

And here is a YouTube video from the protest:
Request for help from New Social Media, New Social Science (2013-02-26 19:19)

How do you make decisions about ethical questions when designing online research? Where are the gray or sticky areas? What resources have helped—what do you need? The New Social Media, New Social Science project would like your input so we can assess what resources are needed. Please share your insights, frustrations and questions in this short questionnaire: [1]https://www.surveymonkey.com/s/e-ethics. For more, see: [2]http://nsmnss.blogspot.com/2013/02/thinking-ethically.html.

The word ‘blogging’ often has negative connotations. Yet blogging can be understood both as an output and as a platform. Many negative views about blogging are connected to a certain idea of what it is: a single author, using it as a forum to express their views to a world which, in my cases, isn’t particularly interested. However this is only one kind of output which the platform can be used to publish. Increasingly, popular and successful blogs are taking on a new form: the multi-author blog. As the LSE’s Chris Gilson and Patrick Dunleavy have [1] argued,

The truth is that the single-author blog model has already gone out of fashion, and is in rapid decline. A blog is only as good as its readership and without consistently strong posts, and an easy way of finding them, there will be no readership. In the modern world of web 2.0, RSS feeds, Facebook and Twitter, it simply is not very effective to have a single author, single issue, rarely updated blog; all the effort made in writing and posting will be typically wasted.

Even creating a combined blog portal for a whole university is no guarantee of success. For instance, the Warwick University blog portal lists over 7,000 blogs which in combination have over 140,000 entries. But there are no indications of which are the popular or timely blogs, nor even a separation of staff and student work.

These considerations help explain why the vast majority of popular political blogs are now multi-author blogs (MABs); that is, themed and coherent blogs run by a proper editorial team and calling on the services of multiple authors to ensure that the blog remains topical, can cumulate a great deal of content and can ensure a good ‘churn’ of high quality posts. We believe that MABs are a very important development, and they can be an assured way for an academic institution to become more effective in the context of the web.

Such websites function more like online magazines and take full advantage of the power of modern blogging platforms: free, instantaneous, collaborative publishing of a kind which has never previously been possible. While the uptake of such tools within academia is still relatively new, there are already countless examples of ongoing successes, such as the [2]LSE Impact Blog, the [3]LSE Politics & Policy Blog and the [4] Sociological Imagination. As Gilson and Dunleavy argue later in the article above:

We believe that there is a huge untapped market for well-informed, continuously updated and varied academic blogging. Academics are already writing content and universities already function as huge dynamic knowledge inventories that insiders know about, but the wider public cannot access. The difficult creative job is therefore already done. Multi-author blogs are a fantastic, easy, and moreover, cheap way for academics and universities to get their research out to what is essentially an unlimited audience. From this process, we can all benefit.

Perhaps the most exciting aspect of such tool is that they require little technical knowledge to utilise. If you are capable of using Microsoft Excel or Microsoft Word, you’re capable of using these tools. Furthermore, the extremely sophisticated collaborative functions built into them enable projects to be maintained without the need for regularly scheduled meetings or large amounts of communication. They enable an entirely new form of academic communication: a kind of ‘middle-range publishing’ that falls between books/journals & conferences/seminars.

Call for papers: E.P.Thompson and the history of capitalism (2013-03-03 08:00)

Reposted from: [1]the Weatherhead Initiative on Global History (WIGH)

THE GLOBAL E.P. THOMPSON: REFLECTIONS ON THE MAKING OF THE ENGLISH WORKING CLASS AFTER FIFTY YEARS

**Date:** October, 3rd – 5th, 2013

**Deadline:** Paper Proposals are due May 15th, 2013
Fifty years ago E. P. Thompson published The Making of the English Working Class, one of the most influential social history works ever. Its approach to the history of common people, its arguments and its methods came to influence several generations of historians and others all over the world. To trace Thompson's influences, and with it the larger story of the varied approaches to social history that have come out of them, the Program on the History of Capitalism and the Weatherhead Initiative on Global History at Harvard University seek to initiate a global conversation among researchers across the humanities and social sciences to reflect critically on Thompson's impact on the writing of history and his enduring significance for future research.

At a time of global economic crises, as scholarship returns to themes of class, inequality and political economy with renewed interest, urgency, and moral purpose, the fiftieth anniversary of the Making of the English Working Class offers a welcome opportunity to both critically reflect on Thompson's scholarship and consider the ways in which his ideas, methods and commitments can still inspire intellectual frameworks and research programs that speak to present global problems.

The conference, to be held at Harvard University from 3rd-5th of October, 2013 invites critical engagement with Thompson's legacy. The Making has been at the center of many controversies in the writing of social, political, cultural, and labor history over the past decades, and we welcome papers that trace these debates. We are also interested in papers tracing Thompson's influence in various fields of history, and in various parts of the world. Moreover, we are seeking contributors who address issues such as

- Translating E. P. Thompson: English Idioms and Traditions in Global Context
- Class Formation: An Important Category of Analysis in History?
- Moral Economies and Political Economy: Culture, Economy and Politics
- Spatially Situating Social Processes: Communities, Regions, Nations, World-Systems

We are committed to making this a global conversation. With translations of the Making into many languages, including Chinese, Japanese, Turkish, Portuguese, Spanish, French and German, Thompson's work has had a global audience. Middle Eastern, Asian, African and Latin American scholars are especially encouraged to apply. All proposals, papers, and presentations must be in English.

Finally, we encourage graduate students to submit paper proposals. We hope to provoke an inter-generational dialogue, involving established scholars who have long drawn inspiration from Thompson's work as well as aspiring practitioners starting their academic careers.

Please submit paper abstracts of no more than 500 words, along with a CV, to Jessica Barnard at the email address: jbarnard@wcfia.harvard.edu with the subject line “E. P. Thompson 2013”

Paper Proposals are due May 15th, 2013
We will notify applicants in June, 2013. If accepted, we will ask you for a draft paper by September 1st. We will cover all (economy class) travel costs, accommodation and meals.

Organizers
Rudi Batzell, PhD Candidate, History, Harvard University
Sven Beckert, Laird Bell Professor of American History, Harvard University
Andrew Gordon, Folger Fund Professor of History, Harvard University
Gabriel Winant, PhD Candidate, History, Yale University

“Why do you find blogging useful as a researcher?” (2013-03-04 08:00)

I asked this question on Twitter in preparation for a blogging for researchers workshop I was running at the University of Warwick. I’ve included some of the answers I received below. I’ve also collated a collection of resources [1]here. Part of the reason I asked this question was because I wanted to avoid inadvertently prioritising my own particular style of research blogging and increase my awareness of how other researchers use blogging. However I found it striking how similar the experience of others is to my own here, namely the role a blog can play as an [2]’ideas garden’ helping to articulate and develop your thinking in a much more immediate way than other public forums allow.

Edward Harkins (2013-03-04 09:51:21)
Intriguing & timely question. There's a strongly increasing interest in the use of online and academic research. I'm more of a practitioner researcher, but empathise with the question. I find (other people's) blogs useful because they are a terrain in which a mixed and varied range of backgrounds and abilities can be encountered. You can get the ... ahem ... 'usual suspects' (some of whom I'm sure have a green tinge to their fonts) ; but I have come across some strikingly novel and thought-provocative outcomes emerging from this cross-over of backgrounds and abilities.

Why is blogging useful? | Thinking culture (2013-03-06 08:07:53)
[...] sociologicalimagination.org has some thoughts on why academic blogging is useful. There are some tweets here about the topic [...]

Jenni Burt (2013-03-14 08:33:35)
We've only just started our research group blog, and it's been an interesting (and steep) learning curve. Certainly, it seems there are great benefits but also some pitfalls - and links to resources such as you have provided are a great use. I even got inspired and wrote a little summary of our blog journey to date... http://www.cchsr.iph.cam.ac.uk/515

“Why do you find Twitter useful as an academic?” (2013-03-06 08:00)

This was the question I asked earlier this morning on Twitter. I was preparing a workshop on twitter for academics and was a little nervous about my content. The basic point of the workshop was to convince participants about the value of using twitter as an academic. The quality and quantity of responses was in itself one of the best arguments I could make for the value of Twitter. The very fact of being able to crowd source broad questions in this way is one of the most striking advantages which stem from engaging regularly with Twitter as an academic.

- Quick answers to questions on things like .. where do I find this tool or that tool .. (@rjhogue)
- We discuss concepts (@Annlytical)
- There are people who are practicing what I’m researching academically and give me a reality check (@Annlytical)
- Twitter is brilliant for keeping up with things, networking, finding new ideas, people’s blogs and publications (@BenGuilbaud)
• meeting new people (in all disciplines), academic support, public engagement, increased visibility, filtered news (@Martin_Eve)

• What Martin said. I think you already saw this but it’s the Prezi I made for grad students [1]http://bit.ly/uK05VM (@qui_oui)

• Also, I’ve found Twitter useful for augmenting F2F academic conferences, extending the conversations (@JessieNYC)

• Twitter is incredibly useful 2 me as an academic 4 many reasons, perhaps chiefly curating the ideal academic dept (@JessieNYC)

• Twitter’s unique advantage is that very quickly allows me to spread word of my work to non-academic audiences (@elebelfiore)

• Keeps me up-to-the-minute with news in my field ie; policy issues, and connects me to conferences/other academics (@DonnaBramwell)

• connects me to other delegates at conferences, allows me to interact with students in lectures, keeps me up-to-date (@timpaa)

• We trade references for research (@annlytical)

• great source of information & resources wouldn't have found otherwise (@nicklebygirl)

• Twitter makes it possible for me to engage with global community even though I now live in Australia & am #altac (@katrinafee)

• a PhD can be very isolated so I think twitter is a great way to meet people who can help and give advice (@CET47)

• you can get very interesting literature advices or other sources you have not noticed yet (@Journey210)

• Academic uses of twitter – links to blog posts, shared sense of community, shameless self-promotion…! (@KatieMcGettigan)

• to invite community members to events and lectures on campus (@MegFrauts)

• twitter is the best way to keep up to date with my subject, find useful resources and connect with others (@LGSMU)

• Twitter makes it possible to follow conferences globally and get in touch with other academics for quick Q &A sessions (@Greg0rE)

• joining twitter has helped remove the isolation of study through engagement with [2]#phdchat - synch & asyn-chronous (@JaneDavis13)

• twitter allows me to familiarize w current trends & edu tools for my students (tumblr & prezi are examples) (@DisModern)

• it allows me to keep up to date with advancements in my field. I can also dicuss these things with the experts with ease (@CallumCohen)

• keeps you in touch w development in your field n wider (@lace675468)
Important topic! I made a very quick content analysis about those Twitter answers just for fun, here you are: SOME advantages for academics: SUPPORT & NETWORKING (with academics, conference delegates, other disciplines, students, experts, practice workers) • academic support • a PhD can be very isolated so I think twitter is a great way to meet people who can help and give advice • helps remove the isolation of study through engagement with #phdchat - synch & asynchronous • shared sense of community • connect with others • networking • meeting new people (in all disciplines) • getting in touch with other academics for quick Q &A sessions • connects me to other delegates at conferences • useful for augmenting F2F academic conferences, extending the conversations • allows me to interact with students in lectures • makes it possible for me to engage with global community even though I now live in Australia & am #altac • There are people who are practicing what I’m researching academically and give me a reality check • We discuss concepts • I can also discuss these things with the experts with ease • Quick answers to questions on things like.. where do I find this tool or that tool .. INFORMATION & RESOURCES Keeping up to date • filtered news • it allows me to keep up to date with advancements in my field. • keeps you in touch w development in your field n wider • the best way to keep up to date with my subject • brilliant for keeping up with things • allows me to familiarize w current trends & edu tools for my students (tumblr & prezi are examples) • Keeps me up-to-the-minute with news in my field ie; policy issues, and connects me to conferences/other academics • keeps me uptodate Finding useful resources • finding blogs and publications • links to blog posts • find useful resources • We trade references for research • great source of information & resources wouldn’t have found otherwise • you can get very interesting literature advices or other sources you have not noticed yet • curating the ideal academic dept • makes it possible to follow conferences globally Finding new ideas • finding new ideas VISIBILITY • public engagement • increased visibility • very quickly allows me to spread word of my work to non-academic audiences • shameless self-promotion • to invite community members to events and lectures on campus I’d like to add one more useful thing: possibility to influence problems of society.

**Sociology and the Global Economic Crisis (2013-03-10 08:00)**

**Sociology and the Global Economic Crisis**

Special Issue Call for Papers  
Deadline for submissions: 31 August 2013

*Editorial Team:*  
Ana C. Dinerstein (*University of Bath*), Gregory Schwartz (*University of Bath*) and Graham Taylor (*University of the West of England*)

We hear it, see it, and read about it everywhere; yet, to what extent are we able to translate the quotidian reality of the global economic crisis into adequate forms of knowledge? Has the crisis highlighted important limits in our sociological imagination linked either to the subdivision of our discipline or, more fundamentally, questioned the contemporary relevance of sociology as a social science?

This Special Issue of Sociology, to be published in October 2014, invites contributions that will:

- Explore how sociology can contribute to a better understanding of (the lived experience of) the global economic crisis; and/or
- Reflect on how social processes and movements confronting the crisis can inspire a new sociological imagination.

And aims to bring together contributions that:

- Bridge disciplines
- Unsettle conventions
- Cosmopolitanise epistemologies
- Renew sociology

The Editors welcome contributions on relevant topics in any field of social science engaging with sociological research, from early career and established academics, and from those outside academia.

Queries: To discuss initial ideas or seek editorial advice, please contact the Special Issue Editors by email on sociology.specialissue.2014@gmail.com

Full Call for Papers can be viewed [here](http://www.britsoc.co.uk/media/48566/Global_Economic_Crisis_SOC_SI_2014_CFP.pdf)
How will sociology cope with digital data? An interview with David Beer (2013-03-11 08:00)

[1]Why should sociologists care about the 'digital'?

Continuous publishing has changed my experience of developing ideas (2013-03-13 08:00)

A few months ago [1]Pat Lockley and I wrote [2]an article for the LSE Impact Blog about **continuous publishing**. This was actually a phrase introduced by the site's editor for the title but it perfectly captured what we were trying to get at. Given that I have been semi-consciously trying to do this since then, I thought it would be a good time to try and get some thoughts down about exactly what I take it to mean and how it can work. This is what we wrote at the time:

> Perhaps it's time to move from [3]'the Cathedral to the Bazaar'. These metaphors from the open-source software movement refer to contrasting models of software development. In academic terms we might see them as referring to distinct orientations towards publishing: one which works towards the intermittent, largely private, production of one-off works (papers and monographs → cathedrals) and the other which proceeds in an iterative and dialogical fashion, with a range of shorter-term outputs (blog posts, tweets, online articles, podcasts,[4]storified conversations etc) standing in a dynamic and productive relationship with larger-scale traditional publishing projects: the 'cathedrals' can be something we build through dialogues, within communities of practice, structured around reciprocal engagement with publications on social media platforms.

I have been trying to do this for a range of things I've been working on since then: my PhD, my asexuality research, a twitter action research project I’m doing with [5]Salma Patel and the (slightly fuzzy) idea for a monograph.
about digital academia I plan to start next year. In essence I've been trying to take a range of things I would be doing anyway and instead do them out in the open:

1. **Brainstorming sessions** e.g. [6]11 random thoughts on asexuality studies
2. **Cataloguing and reviewing literature** e.g. [7]meta-ethnography, [8]the myth of academic autonomy
3. **Developing my ideas in a way which sits between brainstorming and formal writing** e.g. [9]some thoughts on getting academics to use Twitter, a useful metaphor for [10]teaching academics about twitter, the cultural [11]significance of asexuality, a quick post on [12]attachment theory and my PhD
4. **Reflection on work I've been engaging with** e.g. some thoughts on [13]socialization and personhood
5. **Developing presentations** e.g. interrogating sex and gender categories: an [14]asexual case study, my TEDx [15]idea
6. **Posting homeless bits of academic work which have been cut from papers but I don’t want to forget about** e.g. the idea of [16]‘emotional’ purchase,
7. **Doing chunks of formal writing** e.g. the [17]discursive gap
8. **Planning forthcoming writing projects** e.g. [18]late capitalism and sexual culture

There are also two other uses which fall outside the category of stuff I would be doing anyway. Since thinking about the idea of continuous publishing I've been more conscious of the motivation for some of the podcasts I do e.g. [19]this one with Nick Crossley. If I'm engaging heavily with a book as part of my research and it's logistically feasible to do a podcast, there’s absolutely nothing to be lost by e-mailing the person to ask if I can do a podcast. Pretty much everyone I've ever approached has said yes, although it has sometimes taken a long time to schedule. The fact that I'm posting them on a fairly well developed website as well as my own probably helps but I suspect:

- Some people would have agreed anyway
- If more people start producing academic podcasts then they’ll rapidly get accepted as a form of publication in their own right
- If this happens then it will create a natural opening for Multi-Author Blogs to start actively soliciting podcast contributions

If you’re engaging with someone’s book anyway it makes you the most natural interviewer in the world. Preparing for the interview doesn’t really constitute any additional work because the questions stem from your own engagement, albeit filtered through some sense of the podcast as a listenable end product.

As well as podcasts, there is **crowd sourcing**, which I’m increasingly realising is an enormous benefit of engaging heavily with the academic twittersphere. For instance see the results of [20]this request for help prior to a Twitter workshop I was doing. I was later able to incorporate this into the workshop, as well as the overarching project, in a number of deeply valuable ways. Compiling such crowd sourcing efforts by hand is very quick and I’m fairly certain there must be an automated way of doing it. The ensuing compilations then constitute a useful resource in their own right.

1564
I increasingly can't imagine working in any other way. The fact that these provisional outputs are published makes me more attentive to them then if I was just scribbling them down on paper (my handwriting is basically illegible when I get overly-enthusiastic and I have files full of notes I can barely read from before I started working like this) or doing mind maps on my iPad (more useful but if I come back to them months later, my grasp on the conceptual structure of the map has diminished). The fact that people do read them is rather pleasant and changes the experiences of developing ideas in a subtle way which I can't quite get into words. My productivity has actually increased (a little bit in terms of formal outputs, very much in terms of continuing to develop projects) at a time when I'm massively over-committed and my attention is split between 20 things at once.

Furthermore, it's just fun to regularly throw stuff out there to see what people make of it.

Kath McNiff (2013-05-10 10:57:35)

I love the idea that shorter term outputs can be in a "productive relationship" with larger works - and even inspire and inform them. By publishing blogs, tweets and other posts we're forced to formulate a coherent idea and polish it for public consumption. And feedback from readers can really help to move an idea forward - while no feedback can leave you wondering if the idea has legs at all - and whether you could have presented things in a more engaging way. Not true of your post of course! Thanks for the insights!

Milena Kremakova (2013-05-13 12:03:47)

Excellent points! I also find that online writing can help you write down fresh ideas instead of delaying (and never writing them).
Searching for an (empirical) middle ground between the social self and the liberal self

Back when I planned to do a PhD in political philosophy, I was extremely interested in Michael Sandel's critique of John Rawls. Particularly his attack on what he claimed was Rawl's notion of an 'unencumbered self':

Now the unencumbered self describes first of all the way we stand toward the things we have, or want, or seek. It means there is always a distinction between the values I have and the person I am. To identify any characteristics as my aims, ambitions, or desires, and so on, is always to imply some subject 'me' standing behind them, and the shape of this 'me' must be given prior to any of the aims or attributes I bear.

I had a vague idea that my thesis could be a historical study of the rise and fall of this view of the self. It almost certainly wouldn't have held my interest for 3 years but it's been an ongoing thread at the back of my mind. It's been on my mind recently because a few conversations have left me struck by the sense in which many sociologists seem to see Margaret Archer's work on internal conversation as postulating precisely such a self. In her work on the subject, our inner speech is seen to be the mechanism through which we exercise our capacity for reflexivity: "the mental ability, shared by all normal people, to consider themselves in relation to their social contexts and vice versa". Our decision making operates through such internal conversations, constituting a 'back and forth' between objective and subject (our situation & our concerns) rather than something which can be construed in 'flat' terms.

Epistemic contraints operate at both levels – the individual's knowledge of their selves and their circumstances is profoundly fallible, both in terms of the capacity to be mistaken and also sheer limits to possible knowledge. Likewise the internal conversation always takes place under their own descriptions i.e. our framing of a situation in the terms we use to describe it shapes what we know and how we can act, in a manner which is partly explicable by looking at the path-dependent cultural history of the individual concerned.

Now this all sounds abstract. But my interest in it comes from what I'd argue is it power to gain explanatory purchase on how actual individuals actually make the decisions which shape their lives (and I'm obviously not suggesting they voluntaristically 'shape their lives' – in fact the whole point is that a notion of 'shaping a life' which doesn't take account of structural contraints and enablements would be meaningless!). The empirical question of degrees of fallibility are bracketed in order to make the higher level discussion possible. Because the answers to these questions are empirically quite complex. But their are, nonetheless, reliable answers. It seems profoundly hubristic to deny this, symptomatic of a disciplinary imperialism driven by insecurity rather than triumphalism. But I digress. As [2]Thaler and Sunstein point out,

Hundreds of studies confirm that human forecasts are flawed and biased. Human decision making is not so great either. Again to take just one example, consider what is called the 'status quo bias,' a fancy name for inertia. For a host of reasons, which we shall explore, people have a strong tendency to go along with the status quo or default option.

However it would be a mistake to move to the opposite extreme, inverting homo economicus by affirming a view of human decision making as irredeemably erroneous. Instead we need to recognise the empirical nature of the question at two levels: the underlying cognitive capacities that are deployed in decision making and the contextual variability in how these capacities are actualised within concrete action situations.
How well people choose is an empirical question, one whose answer is likely to vary across domains. It seems reasonable to say that people make good choices in contexts in which they have experience, good information, and prompt feedback – say, choosing among ice cream flavors. People know whether they like chocolate, vanilla, coffee, licorice, or something else. They do less well in contexts in which they are inexperienced and poorly informed, and in which feedback is slow or infrequent.

The latter level strikes me as one which sociology is uniquely well suited to addressing. Not least of all because it can encompass structural questions within its purview, in a manner which I imagine social psychology would tend to struggle with: how structures shape the concrete action situations individuals confront and how ensuing actions contribute, both aggregatively and emergently, towards the transformation or reproduction of those structures. However doing this adequately necessitates getting over hangups about the findings of behavioural science and cognition + agency more broadly.

Classifying Sex Conference, July 2013, Cambridge (2013-03-16 08:00)

Thursday, 4 July 2013 to Friday, 5 July 2013
Location: CRASSH, Alison Richard Building, 7 West Road, Cambridge CB3 9DT

Summary

This conference brings together social scientists, gender scholars, sexologists, psychiatrists, historians of science, as well as mental health practitioners and sexual rights activists to critically explore the sexual classifications produced by the 5th edition of the Diagnostic and Statistical Manual of mental Disorders (DSM), published in May 2013. The DSM is a standard reference for the classification of mental disorders, and its first major revision since 1994 is consequently an important event. The conference will explore which categories of normal and abnormal, healthy and pathological sexualities the new manual produces, and critically scrutinise their consequences for diagnostic practices, as well as their wider social and political implications.

Speakers:

Eric Fassin (École Normale Supérieure, Paris)
Lisa Downing (Birmingham, Humanities);
Jeffrey Weeks (South Bank, Weeks Centre for Social and Policy Research)
Cynthia Graham (Southampton, Psychology);
Katherine Angel (Warwick, History of Science);
Monica Greco (Goldsmiths, Sociology);
Ken Zucker (Toronto, Psychiatry; Chair of the Sexual and Gender Identity Disorders workgroup); Zowie Davy (Lincoln, Health and Social Care);
Cynthia Kraus (Lausanne, Gender Studies).
Patricia Crittenden (Miami, Family Relations Institute)
Patrick Singy (Chicago Society of Fellows)
Simon Goldhill (Cambridge, Classics).
Alain Giami (INSERM, Paris)

Digital Sociologist #3: David Beer (2013-03-17 08:00)

How did Thinking Culture come about?

Has the way you've used the blog changed over time?

How does your blog connect with the rest of your work?

Do you ever have trouble finding time to blog?

So is curation a central part of you use social media?

Does blogging provide a space for things which you couldn't fit elsewhere?

CfP: Normality in an uncertain world (2013-03-18 08:00)

Normality in an uncertain world

6th ENQUIRE Postgraduate Conference, 10th and 11th September 2013

1570
Call for Abstracts

This conference aims to bring together post-graduates and researchers, with an interest in normality, to explore the development, current application and possible future of such research.

We are pleased to confirm our keynote speakers:

- Derek McGhee, Professor of Sociology, University of Southampton
- Angharad Becket, Associate Professor of Political Sociology, University of Leeds
- Julia O'Connell Davidson, Professor of Sociology, University of Nottingham

In a world of uncertainty, never has ‘the normal’ been so important. All societies operate normative patterns of behaviour that are enforced by sanctions. Such patterns are now interwoven and valorised at global, national, communal and personal levels so that ‘the normal’ has become a powerful entity. Ideas of biopower and self-governance are structured around the control of bodies and the creation of ‘normal’ ways of being. It can now be argued that tyrannies of perfection structure contemporary social life.

While social research has often focused on explaining deviance and the abnormal, such explanations are dependent upon a perception of ‘the normal’ for their existence. ‘The normal’, therefore, becomes important across disciplines, resonating with researchers as a central concept in addressing the pressing sociological issues of our time.

The idea of a ‘normal’ raises pertinent questions for future research. Who defines normality? What are the implications for deviance? Why do researchers construct and deconstruct the abnormal? Does normality serve as a mechanism of control? What function does normality play in different cultures/societies? Is normality inevitable?

Such questions apply across the discipline and call into question the normality of research itself. Indeed, are there such things as normal and abnormal methodologies? How important is the statistical norm? What structures the conception of ‘valid’ or ‘useful’ research?

In order to create a conference that pushes the boundaries and stimulates further and continued debate, we welcome broad interpretations of the conference title.

Please submit abstracts of no more than 300 words by Friday 3rd May 2013 to [mailto:enquire@nottingham.ac.uk](mailto:enquire@nottingham.ac.uk)
Philosophy by podcast? (2013-03-19 08:00)

In this podcast Nigel Warburton and David Edmonds, the duo behind the popular philosophy bites series, talk about podcasting and its broader significance in contemporary society.

We found this fascinating, on a narcissistic level because of the idea that the unglamorous job of digital editing has platonic dimensions, though more importantly because of its spirited argument that academic communication via social media can 'join up' the intellectually counter-productive and existentially unsatisfying silos which characterise the contemporary academy and avoid the pragmatic domain of 'X studies' which constitutes the immediately obvious alternative.

Reflections on taking the intellectual carving knife to your PhD thesis (2013-03-20 08:00)

I remember very distinctly the moment when I first took a figurative carving knife to my PhD thesis. I was in a careers workshop at a conference and a senior academic had just explained how the oh-so-rational metric of the REF placed the same value on monographs and journal articles. From the start of my PhD I'd always been drawn to the prospect of publishing it as a monograph, drawing together years of work and sending it out into the world in a pretty package with a shiny cover. I liked the idea of turning my thesis into something which would be read by people other than my parents, supervisors and examiners. Perhaps even something that people responded to? Yet I also wanted a job and, at the same time as I was growing attached to the idea of the monograph, I was also rapidly internalizing that horrible motif which plagues the psyches of aspiring academics everywhere: publish or perish. As much as I liked the idea of a monograph, I liked the idea of getting a job more. So upon learning the value of a monograph relative to a paper, I picked up the intellectual knife and started to ponder how many choice cuts I could get from my thesis.

After an afternoon of hacking away at my planned thesis, it turned out I could spin off a lot of papers. Sure there would be repetition and overlap but that's inevitable, right? In the months since then, this sense of inevitability has troubled me. I realized how quickly and deeply I'd come to accept the 'rules of the game', making plans that were entirely contrary to what I believed and cared about because I couldn't see any choice other than submitting to the logic that defines the contemporary academy if I wanted a career within it. Which left me with the obvious question: did I want a career within it? The perverse eagerness with which I instrumentally carved up my long treasured post-PhD monograph became symptomatic of everything I disliked about the modern university. The fact that just three years of a PhD, framed in terms of 'playing the game' in order to win autonomy within it, had left me able to be so thoughtlessly instrumental truly worried me. If this was what academia would do to me then I didn't want to be an academic.
Since then I’ve relented somewhat, partly due to realizing that there was no need to see it as a matter of being entirely in or entirely out of the university. But mostly through talking to friends, some in similar situations and others with no connection to higher education, about these questions and why they troubled me. If we want academic careers after we finish our PhDs then, inevitably, we have to make some sacrifices. If we want to be employable then we, at least to some extent, have to make choices that fit the imperatives of institutions within which we seek employment. But if we’re doing this because we care about it then we need to constantly ask ‘why?’ at every stage. We need to be clear that we’re doing what we do because we CHOOSE to rather than because we’ve internalized a set of perverse imperatives which actively erode the values that motivate us. We have to continue to look for alternatives to passively reproducing the demands of neoliberal academia. Otherwise I fear we’re going to look in the mirror twenty years from now and wonder what the point of it all was.

Think Tanks In America (2013-03-21 08:00)

Given the ubiquity of think tanks within contemporary politics, it is easy to forget that their current influence is a relatively recent phenomenon. Yet without an understanding of their history, it is difficult to understand either their role within public life or its broader significance. *Think Tanks In America* is a sophisticated and impressive work of historical sociology which charts their emergence over half a century, offering a distinctive and compelling explanation of how such organizations came to exist and to enjoy the influence which they now do.

One of the most impressive aspects of the book is the theoretical sophistication of what is first and foremost an empirical study. This is particularly apparent in the first chapter, within which [1]Thomas Medvetz sets out to ‘rethink the think tank’. He takes issue with a prevailing tendency within the think tanks literature to treat its object of study (i.e. the ‘think tank’ itself) as unproblematic. Instead he asks, drawing on Bourdeusian theory, how the category itself emerged. Or in other words: how did the notion of a ‘think tank’ become meaningful and commonplace? He contrasts this to the prevailing ‘substantialist’ approach which treats the think tank as a particular sort of entity or thing.

This might seems counter intuitive to those unfamiliar with the theoretical approach adopted by the author but its value stems from the fact that “there are no substantive properties shared by all members of the think tank category as the term is currently used in political discourse”. Given the heterogeneity encountered when investigating ‘think tanks’, there is an inevitable tendency for social scientists who understand their investigation in substantialist terms to get lost in the production of taxonomies. Not only is this analytically unproductive but, crucially, it also often acts to foreclose inquiry into the “social relations (of hierarchy, struggle partnership, and so on) that surround and make possible the think tank”. To put this in slightly plainer terms: the approach Medvetz adopts looks at the broader context within which think tanks have come to exist over time, rather than simply focusing on the question of what a think tank is and how variation amongst them should be categorised.

The book doesn't disappoint in this respect, offering an empirically detailed but also conceptually rich account of the history of think tanks. Medvetz argues that this hinges on the emergence of a ‘space of think tanks’: a distinct subspace of knowledge production which has arisen over time at the point of intersection between the academic, political, economic and media fields. The process he documents involve a differentiation between the think tanks and their surrounding fields but also within the space of think tanks itself. For as those organisations differentiated themselves from universities, lobby groups and media outlets, they also increasingly orientated themselves towards each other, coming to constitute “a semi distinct social universe with its own logic, history, and interior structures, not to mention its own agents”. His argument to this end is rich and detailed but the point
is fundamentally a simple one. What we now call a ‘think tank’ came into being through the efforts of such organisations to practically define how they were different from universities, lobbying organisations and media outlets.

However what is perhaps the most compelling aspect of his account comes at the end of the book. It is also the point at which the personal concerns underlying the author’s research interests become most apparent. Drawing together the diverse strands of the book, he argue that the success think tanks have enjoyed has also helped undermine the relevance of autonomously produced social scientific knowledge. The public figures of the think tanks, with their capacity to deftly negotiate the twin worlds of media and lobbying, have blurred the boundaries between intellectuals and non-intellectuals in America and relegated many within the academy to the margins of public debate. This influx of new competitors has left social scientists in a situation where, increasingly, money and political power direct ideas, rather than ideas directing themselves.

In essence Medvetez is arguing that autonomous social scientists have been squeezed out of the intellectual ‘market place’. Which raises the obvious question: how should they respond? His nuanced and careful book wisely avoids the temptation of attempting an answer but it does go some way to elucidating the often unappreciated complexity of the question. This book is an important contribution to the academic literature on both think tanks and intellectuals. But it is also one which will be of profound interest to a broader readership concerned with the role of ideas in political life.

This was originally published on the [2]LSE Review of Books

23 April 2013 ‘Enacting public engagement: collaboration and critique within/beyond the university’ (2013-03-22 08:00)

The aims of this forum are to explore what is required to enact engagement in different contexts, and to reflect on what is at stake in these processes. Bringing together researchers, activists and practitioners with an interest in publics and public institutions, the forum will provide a space for conversations about:

- Theoretical, technological and other infrastructures being developed to support the emergence and enactment of publics;
- Projects that problematize, reimagine and rework social and power relations;
- Forms of collaborative knowledge production that bring together diverse actors within/beyond the university.

Programme

11.00-12.15: Re-enacting the public university

Professor Rebecca Boden (University of Roehampton): ‘Rethinking an “open university”’, embedding the academy in
a social economy'

Dr Joel Lazarus (People's Political Economy and University College, Oxford): An analysis of the recent flourishing of critical education initiatives in the UK: critical education at the heart of social transformation

12.15-13.00 Lunch

13.00-14.15: Co-production and co-authorship in research

Dr Morag McDermont (University of Bristol): Productive Margins? Problematics of academics and community organisations co-producing research

Professor Les Back (Goldsmiths, University of London): title tbc

14.15-14.30 Tea and coffee

14.30-14.45: Digital articulations

Dr Aristeia Fotopoulou & Dr Kate O’Riordan (University of Sussex): Sustaining networked knowledge: expertise, feminist media production, art and activism

Dr Nick Mahony & Dr Hilde Stephansen (Open University): Making participation public: building agendas and sites for collective action

15.45-16.00: Collective reflections on the day

Subjectivity and Subculture: One Day Symposium (2013-03-24 08:00)

Subjectivity and Subculture

One Day Symposium

Monday 10th June 2013: 9:00am-6:30pm

Institute of Advanced Study, Milburn House, University of Warwick

We are delighted to announce that [1] Dr Rupa Huq, Senior Lecturer in Sociology at Kingston University, and [2] Dr Shane Blackman, Professor in Media, Art and Design at Canterbury Christ Church University, will give keynote papers at the symposium.

Call for proposals

Theories of subculture – emerging primarily from within the Chicago School in the early Twentieth Century, and from the Centre for Contemporary Cultural Studies (CCCS) in the 1970s and 1980s – have tended to characterise subculture as the collective cultural and social practices of disenfranchised young working class males. However, in recent years scholars have challenged this definition, arguing that subcultures are inhabited by a diverse population, and that these spaces may not be as cohesive as earlier theorisations suggest.

Scholars have addressed this issue by pursuing research into ‘marginal subcultures’. This work sheds light on how people are able to organise their cultural practices around specific modes of subjectivity, but there is, to date, limited engagement with how people negotiate a variety of subject positions within the same subcultural environments.

This one day symposium focuses on how subjectivities are managed by subcultural participants and by those who research such spaces. It seeks to facilitate a dialogue about the intersectional and reflexive considerations of subcultural research, placing particular emphasis on the implementation of innovative methodological strategies. The symposium will address the following questions:
1) Are marginal subjectivities *always* disempowered within established subcultural environments?

2) To what extent should contemporary subcultural researchers challenge the definition of subculture as a form of ‘marginal’, or ‘disenfranchised’, collective cultural participation?

3) What are the primary epistemological concerns within the field of subcultural studies at the present time?

4) How can we as researchers develop innovative methodological approaches to the study of subjectivity and subculture?

5) What does the future of subcultural studies look like?

Proposals for **15 minute** papers that reflect upon one, or a number, of these questions are invited. Specific topics may include, but are not limited to:

- The negotiation of gender/racial/ethnic/sexual identities within subculture.
- Feminism in subculture.
- Insider/outsider subjectivities in subcultural context.
- Disability and subcultural participation.
- Age and subculture.
- Femininity, masculinity and subculture.
- Queer identity within subculture.
- Subjectivity in the context of trans-local subcultural spaces.
- Innovative methodological approaches to the study of subculture.
- The researcher’s own reflexive considerations in relation to the subcultures they study.
- The visual representation of subculture.
- Subculture and the Internet.

Please email 250 word proposals to Dr Michelle Kempson, at [M.Kempson@warwick.ac.uk](mailto:M.Kempson@warwick.ac.uk), before 15th April 2013.

New Report on Internet Ethics by AoIR (2013-03-25 08:00)

The [1]Association of Internet Researchers (AoIR) is an organisation whose aim is to ensure that "research on and about the Internet is conducted in an ethical and professional manner".

AoIR recently published their second major report intended to assist researchers in making ethical decisions in their research:

[3]2012: Ethical decision-making and Internet research 2.0: Recommendations from the aoir ethics working committee (Author: Annette Markham and Elizabeth Buchanan, with contributions from the AOIR Ethics Working committee).

It updates their previous report from [4]2002: Ethical decision-making and Internet research: Recommendations from the aoir ethics working committee (Author: Charles Ess and the AOIR Ethics Working Committee).

Subjects vs subjectification – getting beyond an unhelpful dichotomy (without irritating the Foucauldians too much) (2013-03-26 08:00)

One important objection to the notion of ‘internal conversation’ rests on a broader trend within contemporary social theory that is concerned with the possibility that theoretical claims about agency lead proponents to make claims about agents which are empirically inadequate. So too that these ensuing claims might find themselves implicated, knowingly or otherwise, in broader political contestations within wider society (though the suspicion persists that those most vocal about the purportedly intrinsically political nature of social science and social theory systematically, indeed hubristically, overestimate the influence of social scientists and theorists outside the academy). On such a view, affirmation of a choosing, reflective and deliberative self is unavoidably embroiled within a broader project of
neoliberal governmentality. Nonetheless, it seems profoundly mistaken to therefore expunge conceptual talk about subjects from the admissible range of contemporary social theory. Recognising this as a mistake is entirely compatible with the methodological move Miller and Rose make in their genealogical investigations into ‘technologies of the self’: “what understandings of the people to be acted upon – whether explicit or implicit – underpinned these endeavours, and how did they shape or reshape the ways in which these individuals understood and acted on themselves?”.

While it might be objected from a realist standpoint that such an investigation presupposes a theory of the subject, it is important that we nonetheless understand the ambiguous role such an account occupies within a broader inquiry of this form. As the author’s themselves observe, “that question could only be answered on the basis of some explicit or implicit assumptions about human mental processes. Yet for us, the historical forms taken by those presuppositions were exactly what we were studying”. It is perfectly possible to accept the validity of such an injunction, construing it as an exercise in bracketing to facilitate a specific form of inquiry, while rejecting the more radical implication that all claims about the underlying properties and powers of human subjects are, in actuality, claims about the cultural resources and reflexive technologies which are distributed within a given social context at any given time. Such an absolute injunction would involve a failure to distinguish between what Bhaskar terms the transitive and intransitive objects of scientific inquiry: the “changing cognitive objects that are produced within science as a function of scientific practice” and “the unchanging real objects that exist outside the scientific process” respectively.

Bracketing the real properties and powers of human subjects may be a useful move for investigation into the empirical variety of reflexive technologies over time, insofar as that it minimises the role that our prior (transitive) commitments play in the empirical investigation. In doing so it facilitates a largely descriptive, though nonetheless valuable, mode of investigation which traces out the socio-cultural factors involved in empirically observable changes in how human beings “recode variations in moods, emotions, desires, and thoughts”. In doing so it can lead to empirically rich accounts of how, for instance, the rise of a “psychological language of self-description: the language of anxiety, depression, trauma, extroversion, and introversion” was connected, inter alia, to the use of psychological tests of intelligence and personality from vocational guidance to military promotion and the rise of “psy technologies for marketing commodities” or the “proliferation of psychotherapies”. Within the framework of this thesis, the objects of such investigation are understood as cultural resources (ideational objects) and reflexive technologies (the socio-cultural application of these objects). It is necessary to understand the properties and powers of such cultural objects in order to explain socio-cultural variation in modes of “seeing, judging, and acting upon human normality and abnormality” and how we “our desires, moods, and discontents” are mapped onto differing images of the human.

Through investigation into such objects, whether or not it takes a genealogical form, it becomes possible to empirically flesh out the sense in which, as Archer puts it, “our reliance upon the public domain for thinking can be upheld, without this determining what we do with it – that is the contents of our mental activities”. The difficulty with Rose’s work, as well as the broader corpus of sociological thinking of which it is an outstanding exemplar, lies in its inability to make sense of how such cultural objects (which it has mapped in a highly detailed and sophisticated manner) are mediated at the level of an individual subject. Such subjects are perpetually implied within Rose’s work, with continual references to reflexivity in Archer’s sense (i.e. the relationship of a self to a self) implicit in the substantive claims made about shifting constellations of technologies of selfhood, yet remain curiously absent. Unfortunately this absence precludes the possibility of gaining concrete explanatory purchase on how particular cultural objects are mediated by particular subjects – Rose’s account is laudable in its detail at the level of the former yet conspicuous in its generality at the level of the latter.

Rose actually does offer something analogous to a theory of the subject, though unsurprisingly it is framed in terms which deny this. He writes that his engagement with the question of subjectivity is offered “not in terms of the effects of ‘culture’ upon ‘the person’, or in terms of a ‘theory of the subject’, but by seeking to characterize the mode of action, as it were, of the diverse psy technologies of subjectification that I have discussed”. As well as the tacit
admission that the lack of engagement with subjectivity was the glaring omission in his otherwise accomplished body of work, his explicit framing of the ensuing account in terms of the mode of operation of 'psych technologies' is telling, in that it leaves the subject as little more than an explanatory lever, invoked merely to flesh out the absent subjective moment of his broader account. What explains this continual hostility to abstract models of the subject?

Archer addresses the same question in an exploration of a body of work which is undergirded by a similar cultural politics. As she observes of Richard Rorty's anti-humanism, his injunction against substantial conceptions of the human has a normative component to it. Given Rorty's desire to nonetheless make normative claims pertaining to human beings, it is inevitable that the human resurfaces and, with it, so too does the problem of structure and agency. So too with Rose and his Deleuzian account of the subject, as well as its concomitant insistence that "the 'question of agency' as it has come to be termed, poses a false problem". On the one hand, it is denied that the human is "an actor essentially possessed of agency" and on the other that they are a "passive product or puppet of cultural forces". The reintroduction of agency into Rose's ontology leads him to make a move surprisingly reminiscent of structurationist theory, transcending the dichotomy of structure and agency through central conflation. His attempt to avoid an affirmation of agency leads instead to a particular understand of the bridge between structure and agency, such that former is understood to continually shape the latter through an ongoing process of 'enfolding', only to be reproduced and sometimes transformed by the latter, as a consequence of the radical contingency and therefore underdetermination which characterises the process.

However the point here is not to critique Rose but to elucidate the difficulties inherent in the treatment of subjectivity within contemporary social theory. I have suggested that there is a methodological objection to abstract treatments of subjectivity, which can be relativised to a particular mode of inquiry and dismissed when claimed to apply more broadly. There is also a normative objection, a broad discomfort with are assumed to be unavoidably normative implications of talk about 'humans' and 'subjects', as well as the belief that academic thought and talk about such matters entrenches the hegemony of the 'liberal self'. But there is also a concern about the empirical difficulties which are seen to be contained within theoretical accounts of human properties and powers. Such difficulties become more pronounced when the issue is framed within a particular substantive area of investigation. For instance Heaphy adroitly identifies the implications which the widespread uptake of Giddens et al within sexuality studies has had on the empirical portrayal of the lives of LGBT individuals within contemporary Britain.

Heaphy takes issues with a pervasive tendency to hold up LGBT lives as exemplars of reflexivity in the first sense, identifying a range of strands in the sexualities literature of which this is true. He argues that, as a whole, these represent a "powerful story" about LGBT lives as "reflexively achieved forms of existence that are the exemplars of the life politics of self-fashioning". Furthermore he suggests that the appeal of such accounts stems from the affirmation of LGBT agency implied by them, in contrast to the previously dominant Foucauldian vision of sexualities which tended to stress disciplinary subjection. Arguments about LGBT reflexivity, as perhaps did Foucault's account in an earlier political era, have an intuitive plausibility because of the wider social circumstances in which they are articulated. As Heaphy observes, "it seems clear, after all, that lesbian and gay sexualities have more 'empowered' and visible in the culture than ever before, and recent legislation in Britain and elsewhere (such as the Civil partnership and other Acts) seems to promote and defend the legitimacy of same-sex relationships".

However Heaphy raises a number of problems with such accounts. He suggests that these prevailing narratives of LGBT reflexivity have been characterised by a "blurring of arguments about theoretical possibilities and empirical actualities" i.e. a theoretical affirmation of agency leads proponents to make claims about agents which are empirically inaccurate. In doing so the realities of difference are occluded, such that "exclusive and well-resourced lesbian and gay experience is valorized while other experiences are made invisible". This, he argues, is a consequence of insufficient attention to power, particularly in an indifference to the "relationship between power and sociological narration". He goes on to argue that in order to take the "differences that are shaped through the intersections of
class, race and ethnicity, generation, geographical location and like” seriously we must acknowledge “that there is no one lesbian and gay experience or forms of existence, and that lesbian and gay living should be studied in their diversity of forms”. In doing so, we might come to ask “how significant resources (economic, social, cultural and corporeal) are in shaping different possibilities for lesbian and gay living, and how their embodiment gives rise to different possibilities for identification, relating and life political practice”. Heaphy argues that a move towards reflexive sociology within sexuality studies, as part of a Bourdieusian turn which moves the study of LGBT lives away from Giddens and Beck, would help rectify this worrying tendency to homogenise the lived experience of LGBT individuals and treat their lives as if difference didn’t matter.

While applauding Heaphy’s broader aims and accepting elements of his critique, this direction of travel is nonetheless revealing of profound conceptual confusions relating to what reflexivity is and how it operates. The broader shift he identifies from Foucauldian conceptions of sexuality (excessively structural) to voluntaristic accounts influenced by Giddens (excessively agential) reveal an inability within sexuality studies, as well as social theory more broadly, to come to terms with the problem of structure and agency. One approach elucidates the role of structure while obliterating agency. The other elucidates the role of agency while obliterating structure. The two approaches each contain an element of truth but, in their inability to proceed beyond their own theoretical terms of reference, neither is able to do justice to the ambivalence of human experience.

Both freedom and constrain co-exist in our daily experience. We choose and yet we are denied choice. We shape our circumstances and yet our circumstances shape us. We make our way through the world and yet the maps we use and the paths we choose from forever elude our full understanding, let alone our control. We are subjects and we are subjected. In fairness to Giddens, attempting to reconcile this duality is at the heart of his theoretical project. Yet the empirical inadequacies which so often result from attempts to adopt his approach as an explanatory framework are indicative of the conceptual error at its heart. Unless we conceptualise reflexivity in a properly mediatory manner, as being the human power which allows the pursuit of courses of actions by (fallibly) taking stock of objective circumstances and our subjective concerns, the problems Heaphy correctly identifies will inevitably ensue. But if we do understand reflexivity in such a way, these problems do not occur. The issue here is not reflexivity as such. The issue is conceiving of reflexivity in a way which detaches it from the constraints and enablements an individual is contingently subject to at any given moment. If we conceive reflexivity in a manner which is fundamentally relational, such that our degree of freedom or constraint is an empirical matter emergent from our circumstances at a particular moment in time and the biographical pathway which led us to such circumstances, then these contrasting images of human life (LGBT or otherwise) as either overly-free or overly-constrained simply do not emerge.

"Why do you find Twitter useful as an academic?" (part 2) (2013-03-26 10:46)

The original version of [1]this post got an interesting comment yesterday. We hope the author won’t mind us reposting the comment as a new post. It was a quick content analysis of the answers in the original post.

So... why do you find Twitter useful as an academic?

SUPPORT & NETWORKING
• academic support
• a PhD can be very isolated so I think twitter is a great way to meet people who can help and give advice
• helps remove the isolation of study through engagement with #phdchat – synch & asynchronous

1582
• shared sense of community
• connect with others
• networking
• meeting new people (in all disciplines)
• getting in touch with other academics for quick Q &A sessions
• connects me to other delegates at conferences
• useful for augmenting F2F academic conferences, extending the conversations
• allows me to interact with students in lectures
• makes it possible for me to engage with global community even though I now live in Australia & am #altac
• There are people who are practicing what I’m researching academically and give me a reality check
• We discuss concepts
• I can also discuss these things with the experts with ease
• Quick answers to questions on things like.. where do I find this tool or that tool ..

INFORMATION & RESOURCES

Keeping up to date
• filtered news
• it allows me to keep up to date with advancements in my field.
• keeps you in touch w development in your field n wider
• the best way to keep up to date with my subject
• brilliant for keeping up with things
• allows me to familiarize w current trends & edu tools for my students (tumblr & prezi are examples)
• Keeps me up-to-the-minute with news in my field ie; policy issues, and connects me to conferences/other academics
• keeps me uptodate

Finding useful resources
• finding blogs and publications
• links to blog posts
• find useful resources
• We trade references for research
• great source of information & resources wouldn’t have found otherwise
• you can get very interesting literature advices or other sources you have not noticed yet
• curating the ideal academic dept
• makes it possible to follow conferences globally

Finding new ideas
• finding new ideas

VISIBILITY
• public engagement
• increased visibility
• very quickly allows me to spread word of my work to non-academic audiences
• shameless self-promotion
• to invite community members to events and lectures on campus

"I tried hard to be proud of my service, but all I could feel was shame" (2013-03-27 08:00)

A powerful speech by Mike Prysner, a US army veteran turned anti-war activist, given at the Winter Soldier symposium. This event involved anti-war veterans from around the US coming together to give testimony about their experiences on the grounds in Iraq and Afghanistan, with scholars, journalists and other activists offering responses and context to the veteran's testimony.

Here's a video which summarises and advertises the event:

There are many more videos from the event here. There's something extraordinarily powerful about this collation of testimony, with the opportunity to give an account of their experience to others clearly going hand-in-hand with a need to give an account of their experiences to themselves which they can live with.

The discourse of 'defence' inevitably, perhaps unavoidably (willfully?), abstracts away from the messy fleshy painful and tragic reality of war and its human consequences. Would policy making work differently if this were not the case? If, perhaps, those who make decisions to send others to war are forced to confront the consequences of their action? This has been on my mind a lot since reading this letter from a US army veteran to Bush and Cheney:
I write this letter on the 10th anniversary of the [7]Iraq War on behalf of my fellow Iraq War veterans. I write this letter on behalf of the 4,488 soldiers and Marines who died in Iraq. I write this letter on behalf of the hundreds of thousands of veterans who have been wounded and on behalf of those whose wounds, physical and psychological, have destroyed their lives. I am one of those gravely wounded. I was paralyzed in an insurgent ambush in 2004 in Sadr City. My life is coming to an end. I am living under hospice care.

I write this letter on behalf of husbands and wives who have lost spouses, on behalf of children who have lost a parent, on behalf of the fathers and mothers who have lost sons and daughters and on behalf of those who care for the many thousands of my fellow veterans who have brain injuries. I write this letter on behalf of those veterans whose trauma and self-revulsion for what they have witnessed, endured and done in Iraq have led to suicide and on behalf of the active-duty soldiers and Marines who commit, on average, a suicide a day. I write this letter on behalf of the some 1 million Iraqi dead and on behalf of the countless Iraqi wounded. I write this letter on behalf of us all—the human detritus your war has left behind, those who will spend their lives in unending pain and grief.

You may evade justice but in our eyes you are each guilty of egregious war crimes, of plunder and, finally, of murder, including the murder of thousands of young Americans—my fellow veterans—whose future you stole.

I write this letter, my last letter, to you, Mr. Bush and Mr. Cheney. I write not because I think you grasp the terrible human and moral consequences of your lies, manipulation and thirst for wealth and power. I write this letter because, before my own death, I want to make it clear that I, and hundreds of thousands of my fellow veterans, along with millions of my fellow citizens, along with hundreds of millions more in Iraq and the Middle East, know fully who you are and what you have done. You may evade justice but in our eyes you are each guilty of egregious war crimes, of plunder and, finally, of murder, including the murder of thousands of young Americans—my fellow veterans—whose future you stole.

Your positions of authority, your millions of dollars of personal wealth, your public relations consultants, your privilege and your power cannot mask the hollowness of your character. You sent us to fight and die in Iraq after you, Mr. Cheney, dodged the draft in Vietnam, and you, Mr. Bush, went AWOL from your National Guard unit. Your cowardice and selfishness were established decades ago. You were not willing to risk yourselves for our nation but you sent hundreds of thousands of young men and women to be sacrificed in a senseless war with no more thought than it takes to put out the garbage.

I joined the Army two days after the 9/11 attacks. I joined the Army because our country had been attacked. I wanted to strike back at those who had killed some 3,000 of my fellow citizens. I did not join the Army to go to Iraq, a country that had no part in the September 2001 attacks and did not pose a threat to its neighbors, much less to the United States. I did not join the Army to “liberate” Iraqis or to shut down mythical weapons-of-mass-destruction facilities or to implant what you cynically called “democracy” in Baghdad and the Middle East. I did not join the Army to rebuild Iraq, which at the time you told us could be paid for by Iraq’s oil revenues. Instead, this war has cost the United States over $3 trillion. I especially did not join the Army to carry out preemptive war. Preemptive war is illegal under international law. And as a soldier in Iraq I was, I now know, abetting your idiocy and your crimes.

The Iraq War is the largest strategic blunder in U.S. history. It obliterated the balance of power in the Middle East. It installed a corrupt and brutal pro-Iranian government in Baghdad, one cemented in power through the use of torture, death squads and terror. And it has left Iran as the dominant force in the region. On every level—moral, strategic, military and economic—Iraq was a failure. And it was you,
Mr. Bush and Mr. Cheney, who started this war. It is you who should pay the consequences.

I would not be writing this letter if I had been wounded fighting in Afghanistan against those forces that carried out the attacks of 9/11. Had I been wounded there I would still be miserable because of my physical deterioration and imminent death, but I would at least have the comfort of knowing that my injuries were a consequence of my own decision to defend the country I love. I would not have to lie in my bed, my body filled with painkillers, my life ebbing away, and deal with the fact that hundreds of thousands of human beings, including children, including myself, were sacrificed by you for little more than the greed of oil companies, for your alliance with the oil sheiks in Saudi Arabia, and your insane visions of empire.

I have, like many other disabled veterans, suffered from the inadequate and often inept care provided by the Veterans Administration. I have, like many other disabled veterans, come to realize that our mental and physical wounds are of no interest to you, perhaps of no interest to any politician. We were used. We were betrayed. And we have been abandoned. You, Mr. Bush, make much pretense of being a Christian. But isn’t lying a sin? Isn’t murder a sin? Aren’t theft and selfish ambition sins? I am not a Christian. But I believe in the Christian ideal. I believe that what you do to the least of your brothers you finally do to yourself, to your own soul.

My day of reckoning is upon me. Yours will come. I hope you will be put on trial. But mostly I hope, for your sakes, that you find the moral courage to face what you have done to me and to many, many others who deserved to live. I hope that before your time on earth ends, as mine is now ending, you will find the strength of character to stand before the American public and the world, and in particular the Iraqi people, and beg for forgiveness.

Tomas Young.

Reading this on the bus, left me with tears.

The "Communist Monopoly" Game (2013-03-28 08:00)

If you like board games, you’ll love the [1]Waiting Game. Well, not sure that you’ll actually enjoy it (though you might!), but you’ll certainly learn something. As someone who grew up in a still socialist Bulgaria, I do remember the queues which are the pinnacle of this board game developed by a Polish research institute to inform young
people about what life was like under state socialism before 1989. The game, called "Kolejka" (Polish for "queue") is a modified version of Monopoly, in which players queues at shops to "obtain" scarce goods. (On deficit of goods, read [2]this wikipedia article). They also have to put up with queue-jumpers and food shortages... unless they have a "colleague in the government" card! The game comes with a book of socialist jokes and a booklet with historical information and archival photos of...well, queues.

As Spiegel reports,

"'Kolejka' will have an initial production run of 3,000 and will be available to buy in stores at the very reasonable price of €10 ( $13). And in case the lines at the shop are too long, it can also be purchased online."

"Kolejka" - the new board game about shopping under state socialism. Funnily enough, "kolejka" means "female colleague" in Bulgarian. Translation across Slavic languages is a true minefield! PHOTO SOURCE: Spiegel.de

Is this the perfect present for your retired Polish aunt who used to be part of [4]Solidarity? I think not. But certainly a fun present for people who don’t know much about everyday life before 1989. And if you play it with that aunt, she might actually tell you more about life under state socialism, which wasn’t all about queues. There were good things, too.

The Definitive Guide to Academic Social Media (2013-03-29 08:00)

[1]“The Definitive Guide to Academic Social Media” on Bundlr

Ethnographic Methods: ethics, practice and theory (2013-03-30 08:00)

Ethnographic Methods: ethics, practice and theory

12.00-17.00, Thursday, 23 May 2013

The University of Warwick

At its best, ethnography – often glossed as ‘participant observation’ – has provided sociology and other social researchers with a valuable tool for apprehending a world in flux. Across the humanities and social sciences (e.g. cultural studies, social anthropology, sociology), however, ethnography remains a ubiquitous research method that can often raise as many questions – ethical, methodological, political and practical – as it seeks to answer. This workshop will consider recent efforts to reassert ethnography as theory (rather than just description) in order to explore these questions. In doing so, it will survey recent scholarly debates about collaborative ethnography, multi-sited ethnography and the literature on so-called ‘new’ ethnographic objects. Participants in the seminar are required to read Laura Nader’s ‘Ethnography as Theory’ (2011, HAU: Journal of Ethnographic Theory 1 (1): 211-219) as well as Matei Candea’s ‘Arbitrary locations: in defense of the bounded field-site (2007, Journal of the Royal Anthropological Institute 13 (1): 167-184).

The deadline for applications is 5pm on Wednesday, 15 May 2013.

Further information about this half-day workshop, which is being led by Dr Alexander Smith (Department of Sociology, University of Warwick) in collaboration with Dr Michaela Benson (Department of Sociology, University of York), can be found [1]here.

Please get in touch with Dr Smith if you have questions: alexander.smith@warwick.ac.uk.

Here’s a podcast we did with Alex that might give some background:
What does the future hold for ethnography?

The Future of Sociology (2013-03-31 08:00)

[1] "The Future of Sociology" on Bundlr

4.4 April

Wimbledon 2013, The Philosophers Battle (2013-04-01 08:00)

Will you be at #BritSoc13? (2013-04-01 19:06)

We'll be there for some of it, with impulsively purchased SI branded pens to give out. Meanwhile, check out this video of last year’s BSA conference:

CfP: Social Media in Social Research (2013-04-02 08:00)

The Social Research Association is holding the third Social Media in Social Research Conference on Monday June 24 in central London.
Following the success of the first two events, we would like to receive papers and presentations on this subject which will be showcased at this year’s event. These can be from the academic research, practice policy and client communities and cover aspects of social research in social media, including case studies, lessons from practice, ethical and methodological issues, and integrating social media as part of a broader research methodology on a project.

Submissions should be made to the SRA office, admin@the-sra.org.uk, by end April 2013. Authors of selected papers will be invited to present at the conference. In the spirit of new media, we are being loose in our interpretation of the term ‘paper’. In written form we expect the length of the paper to be somewhere between 1,500 and 4,000 words. In presentation form, we expect the content to be sufficient for a 20-30 minute presentation, followed by questions.

Sociological Imagination (2013-04-15 19:00:33)
Is that a question or a request? If former please explain what the question is, if latter then use google!

The Idle Ethnographer picks up a spade (2013-04-03 08:00)

The Idle Ethnographer is back in the field. I am doing some follow-up, and some new, interviews with maritime people in Bulgaria. Most of the previous ones were done 4-5 years ago, just before the effects of the 2008-9 financial crisis could be felt on the market for maritime labour. I don’t have anything up to date online - here’s a timely reminder to do some! - but you can look up a summary [1]here, on my old Warwick e-portfolio page, if you’re interested. Or email me - I’d be thrilled to find fellow maritime sociologists.

Since then, the situation in maritime employment has changed quite a lot, so there are many things to talk about: the former state fleet was privatised in 2008; the "maritime bubble" burst, shipping prices fell by half; the demand for seafaring labour is now much less than before 2008 - combined with the effect of being a EU member state, the result is that Bulgarian seafarers find it much harder to get a job. (what is wrong with the EU? oddly enough, it is the good social and employment protection of EU-citizens which drives global firms away towards less well protected labour markets such as that of the Philippines or China).

As I said - lots of large-scale, uncontrollable global changes. It is also interesting to see what has happened to the young seafarers who were just starting out back in 2008; and to the old ones who were close to retirement. Unfortunately, this is a very short visit - just 11 days, and it’s not enough to set up proper fieldwork, even using the "snow-ball" method. Not to mention that I’m also staying with my family and "negotiating" (I hate that word!) different roles as a daughter and researcher doesn’t come easy.

In case you wonder, for my previous study I did 52 interviews, of which 40 in-depth, and this took me altogether 10 months of fieldwork. I also collected loads of other written data, anything I could lay my hands on. This time, I’ve been here for a week and have only just managed 2 proper interviews and planned 3 more. I won’t have time for more, unless I’m very lucky and interviewees "find me". When I was teaching sociological research methods, students always wanted to know how many interviews they should do. I never know what to say.

1591
interviews isn’t much at all, even when they last 3-4 hours each. They do, however, give an initial glimpse, if one finds respondents with sufficiently different viewpoints and talks to them, to make sure their viewpoint has come across in good detail and nothing is misrepresented. In fact, even just one very rich interview gives you endless threads, directions and insights into the structure of the problem you’re studying, the prevalent vocabulary, the typical viewpoints... - provided you are already versed in its precise social context - that it could sometimes be a sound beginning for research. The same goes for two, three, five interviews. And there is no upper bound. The thing is, even my four dozens interviews with seafarers surely missed some important types of experiences, career trajectory types, opinions and logics - and some of the interviews were more view-changing than others. I didn’t stop because I ran out of interesting people or stories. I stopped because at one point I got overwhelmed with more data than I can physically and mentally process - and I thought it was important to make the best use of what I had, rather than waste it (and also I simply ran out of time).

This is not mass scale, representative research - yet, if read and thought about attentively, it is much more than just pub conversations with random seafarers. As one interviewee described it after a long evening in the pub - "So, you’re trying to "make sense of" ("осмислиш") what goes on on the labour market by talking to many seafarers to see different viewpoints and formulate my own". He nailed it. That’s exactly what qualitative sociologists are doing, I replied with relief, as we were walking under the midnight breeze, trying not to trip over the broken pavement in the dark streets of the living estate in my seaside town (my two interviewees were kind enough to walk me home). I was glad not to be misunderstood about how exactly I get my "data" and what i do with them, especially in the light of the ongoing crisis of Bulgarian empirical sociology sparked by leaked and hotly disputed polling results last week... (see this news article [3]here about the pollster war).

It’s still too early to be making any public substantive conclusions. Suffice to say, [4]Richard Sennett would probably find very similar things, if he could speak Bulgarian. Instead, here are some random field truisms. You may laugh and think that there’s something fishy about my methodology, but I assure you that there is a grain of truth in all of these statements.

- Careful with gatekeepers: they keep the gates in both directions.

1592
- My empirical work would be much worse, or not possible at all, if I were a teetotal sociologist.

- There is no painless way of recruiting respondents: I am bound to inconvenience them. The only thing I can do is make it interesting for them, as well.

- Nothing is what it looks like. What seems like work isn't, and what seems like leisure, isn't. A six-hour visit to the pub totally was work (parents who call 11 times in the meantime have trouble with this concept). Typing away at the computer for 10 hours a day inevitably involves far more procrastination than work.

- I wonder whether it should instead be termed "fieldplay" or "fieldexploration". "Fieldwork" makes me imagine a spade.

- The success of all anthropological fieldwork hangs on unexpected chances and impertinent phone calls (you're hearing this from someone with a mild phone-phobia...). One such phone call landed me a lecture at a university in Plovdiv, which will take place tomorrow... and which I now have to go and prepare!

- I'm reminded that it really does help to show that I know all the basic maritime terminology. The conversation is never levelled, but at least I don't need to be explained words such as bulker, winch, draught-survey or ship chandler, or why something terrible must have happened it a captain's mate spots his captain measuring the ballast.

- By all means try, but never try too hard, to pay for your beer - instead, offer to buy a beer next time. And never, ever, refuse home-made crumpets.

The joys of grad student shaming (2013-04-04 08:00)

We recently discovered [1]English Grad Student Shaming and we think it’s wonderful. It’s also striking how many of the themes on the blog seem to be relevant beyond the disciplinary confines of English Lit.

So, an obvious question, does anyone want to submit any specifically sociological photos to us along the same lines...?

Deborah is an advocate of using social and other digital media for professional purposes. She blogs at '[2]This Sociological Life', tweets @DALupton, has a number of [3]Pinterest boards and [4]Storify presentations dealing with her current research interests and administers three Facebook pages: [5]Sociology of Health, Illness and Medicine, [6]Digital Sociology and [7]Sociology of Parenting. She contributes pieces to *The Conversation* and *Crikey* online discussion sites and is an invited member of the *Crikey* Health and Medical Panel.

Apocalypse captivates the human imagination. Once synonymous with 'end of the world' scenarios and confined largely to the religious, the term is part of vernacular language in the West and is used to describe a myriad of events from the fiscal difficulties of the Eurozone to nuclear war, from environmental disaster to the dangers of digital technology.

The advancement of science and technology has assisted in expediting anxiety with regard to apocalyptic catastrophe because such 'progress' has produced unforeseen hazards and risks. Critical theories of risk have been developed that harness and organise responses to scientific developments in an attempt to provide solutions to possible catastrophe. It is suggested that in order to prevent global catastrophe, modern society must be reflexive. Moreover, the advent of such hazards has served as a recruiting sergeant for fundamentalist religious groups who have clear and explicit eschatologies. Rather than viewing possible risks and hazards as by-products of late modernity—'signs of the times', they are re-interpreted as 'signs of the end times'. Consequently, one strand that runs through the above is the political implications of apocalyptic ideology and theories of risk. Whether this is the focus some Christian dispensationalist groups put on the role of the state of Israel in the Middle East, or the so-called catastrophic acceleration of global-warming, decisions based on interpretations of these inevitably have political ramifications.

The purpose of this inter-disciplinary conference is to investigate and evaluate some of the variety of apocalyptic discourse that exists in contemporary popular western culture along with critical theories of risk. Papers are invited that explore both the secular and religio-political dimensions of apocalyptic language in contemporary society and include, but not restricted to, the following themes:

- Secular interpretations of apocalypse;
- Religio-political apocalyptic discourse;
- Critical theories that seek solutions to contemporary notions of risk;
- Correlations between critical theories of risk and apocalyptic ideology;
- The growth of fundamentalisms as a reaction to risk culture(s).
Proposals for short papers are invited on any aspects or themes related to the above. Papers will be 20 minutes in length with an additional 10 minutes discussion. Applications to submit a paper should include:

- Proposer’s name and affiliation;
- Title of the paper;
- 250-word abstract;
- Details of any audio-visual equipment you will need to deliver your paper.

Short paper proposals should be submitted to Riskraptureconf@chester.ac.uk by no later than 4pm on Monday 22nd April 2013.
Conference costs: £50 (£25 unwaged and students) inclusive of lunch and refreshments.
Conference registration will open in due course.

For all professional and/or novice visual researchers out there: the Sociological Imagination is pleased to announce its new column dedicated to “Visual Research”. To celebrate its beginning, we are launching a continuous call for reader submissions.

The call is open to all our readers. One piece of visual research work will be featured each Friday. The SI reserves the right to use the submissions on the website at any time after they have been sent to us, after explicitly notifying their authors by email. If you’ve sent us an image and change your mind for any reason, just [1]e-mail us and we promise not to post it. Scroll down for submission guidelines.

[2]
Guidelines for submissions:

How to submit: Please e-mail us with 'SI Visual Sociology' in the subject line.

How many: Authors may submit up to three separate pieces of work (we shall consider more numerous applications on a case by case basis – i.e., if we really like them!).

What information: Every submission must be accompanied by the following information:

- title of the work;
- full name/s, or artistic pseudonym/s, of its author/s;
- contact e-mail address and/or other contact details.

What counts as “a piece of visual research”? What ratio must there be between image/s and text? We side with Becker (1995)* in abandoning methodological purism, and leave to your discretion the decision what and why classifies as visual sociology/anthropology (as opposed to documentary, photojournalism, art, or any other visual-based genre). The editorial team also reserves the sole right to decide whether to publish any submission. Submissions may range from image/s with text to text with image/s, as long as images and analysis or story are integral to one another.

Type of image: Any images/photographs are acceptable: black-and-white or colour; new shots or old scanned shots from your archives – as long as you have the rights to distribute them; and there are no restrictions regarding any artistic or photo-processing technologies used in the production of the images.

Format and size:

- JPEG format
• 1:1.5 ratio and any resolution suitable for publishing online (the images the SI normally posts are scaled down to 440×294 pixels, or near)

Legal issues: Any persons present in the photographs MUST be notified, be aware, and not oppose the publication of the images. If in doubt, consult this guide on photographers’ rights:

http://www.sirimo.co.uk/2009/05/14/uk-photographers-rights-v2

Copyright: The submissions will be distributed under the following conditions

Creative Commons Licence Attribution 3 (allowing for non-commercial distribution of shared works):

"This work is licensed under a Creative Commons Attribution-NonCommercial-NoDerivs 3.0 Unported License."

The task of Sociology in an age of austerity? Reflecting on #BritSoc13 (2013-04-07 08:00)

The task of Sociology in an age of austerity is to occupy public debate and make inequality matter [1] #BritSoc13

This is a tweeted paraphrase of how BSA president John Holmwood described the task of sociology in his presidential address at the British Sociological Association conference. Do you agree? If so, what does this mean in practice? What should sociologists do? In practical terms how can we ‘occupy public debate’ and ‘make inequality matter’? If
you don’t agree then what do you think the task of sociology should be in our present circumstances? Let us know via the comments box, twitter, facebook or e-mail and we’ll compile your answers and publish them.

Every minute of every day: an experiment in real time research and digitally inscribed ethnography
(2013-04-07 20:40)

Every minute of every day is a collaborative experiment in real-time ethnography between Goldsmiths College and Richard House Children’s Hospice (Newham) [1]http://richardhouse.org.uk/about and St Joseph’s Hospice (Hackney)[2]http://www.stjh.org.uk/About-stjosephshospice. The aim of our project is to capture something of the local areas and communities that are served by the hospices by using an array of methods – photos, sound recordings, film - and of course by talking and listening to people. We hope that our research will help the hospices to find out more about their local communities and vice versa. We also hope to learn more about engaged social research.

You can follow the project [3]here. It’s a wonderful example of how digital tools expand the research repertoires of sociological projects, with text, photography and audio (all presumably from mobile phones) combining into an emergent research document which is more than the sum of its parts. Though, as Les Back notes in one of the entries, this does require a different mode of engagement on the part of the reader:

We are meeting at 11am. A group of postgraduate researchers from Goldsmiths will spend another day collecting and sending fragments of Newham’s life back to the blog. One thing that we’ve learned from our experiment in blog ethnography is that it reverses the usual order of a fieldnote book. You read the latest entry rather than the first one. This changes the usual order of notes. This means the blog only really makes sense if either you have been reading it in real time, or if you read it backwards. Les
Visualising #BritSoc13 - some geeky post conference procrastination (2013-04-08 08:00)

Can academics manage without Twitter? (2013-04-09 08:00)

Following [1]David Hill’s post about joining Twitter, I’ve been thinking again about joining Twitter. A few months I [2]posted about Twitter. In that post I spoke about my concerns of constant connection and the work it seemed to require, amongst other things. I’m not so concerned now, but for some reason I’m still resisting joining Twitter. The question this has led me to is about the necessity of joining Twitter. Is it possible to be an academic without being on Twitter? Can an academic manage without Twitter?

In trying to answer this question I’ve been searching around and looking at the content of academic Twitter profiles (including journals, departments and societies as well as individuals). I’ve also been chatting with colleagues. What I’m finding is that Twitter seems to have rapidly become the place to find out about what is going on in the academic world. It would seem that there is something about Twitter, more than any other social media, that seems to suit academics. The result seems to be that academic life is being remediate a on a large scale. Not only is information about opportunities (including job, publishing and speaking opportunities) passing around freely, but Twitter seems to be making aspects of academic practice more visible. We can see what is going on where, who has achieved what, where people are moving to, and so on. I’m wondering if this is going to increasingly mean that you need a good reason to avoid Twitter. I’m increasingly getting the sense that I’m likely to miss stuff, or that I’m likely to fall out of the loop. Plus, of course, there is the visibility that comes with an established Twitter profile. Maybe resistance is futile. Maybe this is the new space for academic life to thrive. I’ll probably join in soon. But this remediation of academic life, and the underlying [3]politics of data circulation, are going to need some attention soon. The ease with which Twitter has been absorbed into academic practice is interesting in itself. It will probably be worth thinking through the ways in which it is restructuring academic practice and communication – and how it amplifies certain voices amongst the noise of Tweets. I’m hoping to build some of these questions into an article I’m about to start.

#Britsoc13 and Sociology’s problem of shortsightedness (2013-04-10 08:00)

Two years ago in April it was a beautifully warm and sunny Spring. I was wearing sunglasses and sandals as I lazed in the sun on the grass in the LSE campus at my first attendance to the British Sociological conference. Back then I was on the verge of a crucial decision, 6 months or so into my Sociology PhD (the first time round) I was questioning my commitment to the discipline. I attended the conference, paying the extortionate fee out of my own pocket (around £210 for concessionary fees plus BSA membership joining fee of £50, non-members you are looking at £500 for the whole three days), but above all seeking inspiration from my fellow peers. I was expecting to mingle with like-minded thinkers, engage with forward-thinking and exciting alternatives. What I went away with was an overwhelming sense of ‘Sociology’s crisis’ a discourse which echoed throughout the conference. Two years ago it was the peak of student protest activity, Occupy and UKUncut were taking to the streets, and yet that sense of activism and exchange of ideas felt very distant from the stale powerpoint presentations and formal wine receptions of the conference. This week that same feeling of what can only be described as disappointment arose once again.
It was shortly after the conference of 2011 that I applied to study yoga [1]here and booked a one way ticket to India. Two years down the line and back nestled into academia, I am wiser and less naive on my return. Still though I registered for Britsoc13 with enthusiasm even if with a pinch of apprehension.

Housed within the Grand Connaught Rooms, what was underwhelming was the similarity of ideas, grumbles and criticism of two years ago. Now well immersed into the age of austerity, there was much talk of how Sociology’s challenge is ‘different’ now and we need to adapt new tools and ways of thinking. Yet these calls for change were largely muffled by the amount of formulaic presentations that rehearsed a conservative almost stereotypical form of Sociology I hadn’t been acquainted with since A-level. There was luckily some genuinely great speakers and talks to be found such as the Open stream which took place in the Derby suite and had an interesting array of psycho-social research and presentations. Namely one panel discussion which focused on the marginalisation of psychoanalysis in Sociology for me set the scene for the whole conference. George Cavalletto remarked rather poignantly how researchers get frustrated by Sociology’s inability to account for inner life and then turn to literature and cultural studies to find answers and adequate expression for their ideas. The marginalisation of psychoanalysis as a credible discipline in the social sciences and the further degradation of the psyche and the emotions as valid areas of study has led to Sociology becoming a discipline where emotions are only things that come from the outside-in thus reinforcing tired binaries between mind and body. Sociology becomes a matter of inequalities that can be seen or proved but not felt, its remit including only the newsworthy topics of race, gender and class, but articulated in a very truncated sense.

The discussion following Polly Toynbee’s plenary also threw up some interesting questions. The plenary was in some ways a how-to guide to getting your research in the mainstream media but the q &a saw some audience members stand up to talk about their work as ‘activist scholar’s’ as they described themselves. A sociologist’s task is to not just relay information but actively educate their communities in which they work and research they argued. Further another response reminded us that a sociologist’s task is to be provocative and go against the norm. Sociologist’s are so busy toeing the line and filling in REF applications they forget about the importance of big ideas. Toynbee was calling for the need for big thinkers along with the researchers that produce the ‘facts’ as she called them. (The simplistic view of the journalist where objectivity exists as a possibility…). Yet as she also acknowledged ‘big thinkers’ are dismissed if they lack the appropriate forms of validation. The sociologist’s hands are so tied that all that becomes possible are small-scale projects. Yet the problem lies not in the small scale of the research but the small scale of ideas and thinking. Big ideas can be attached to the small-scale, the embedded, and the everyday, but what is lacking is the ability and or motivation to undertake this bridging. This was evident in the Happiness session where happiness was banded about like an unproblematic object. Research was presented that relayed people’s understanding of happiness as the truth of happiness rather than viewing them as a particular narrative of happiness that borrowed from the dominant understandings of happiness that imply certain ways to live a life and be a good citizen. Sara Ahmed’s work on happiness was demolished in the hands of Mark Cieslik who seemingly read a different book, and seemed to think that Ahmed was wanting to do away with happiness, where she was arguing for a form of happiness that did not ignore unhappiness as a possibility. Instead happiness was seen as a thing that existed outside of history, an innate feeling, and neglected to see how the form of happiness that was being advocated was remarkably similar with neo-liberal ways of living and being.

When emotions are a focus of Sociology they become hollowed out and instrumental, lacking theorisation from more sensory modes of study, such as psychoanalysis for example that could illuminate the way in which a person experiences happiness from their environment through affect and attuning to certain things. These ideas are all
active in disciplines such as cultural studies. It is no surprise that for my own research I have been reaching for Sara Ahmed, Judith Butler and Lauren Berlant to provide an adequate reading of subjectivity and loss. And Nikolas Rose and Michel Foucault for a sociology where the body and psyche are actually present and acknowledged. Les Back led a great session on the use of the senses and sensory methodology in Sociology. Again the best sessions of the Britsoc13 were the ones that basically said ‘You know what we are not really supposed to be here but we are going to try and challenge you for 90 minutes.’ My year at Goldsmiths acquainted me with Les Back’s great speaking style and passion for the rekindling of a form of forgotten sociology. It was quite striking to hear from someone of Back’s stature and prominence the difficulty in deciding to overcome any embarrassment in expressing his argument for the importance of the sensory in sociological research. It shared parallels with a similarly great session focused on reflexivity presented by Jon Dean and more broadly sociology’s role in key events such as the UK riots in a presentation by Martyn Hammersley. As Jon Dean spoke in his presentation about the problem of including personal reflections in academic work and the dilemma of what is too much ([2]a problem I know well) a response from the audience after asked ‘What kind of discipline do we have if we cannot include such data in our work?’ It was a powerful statement. What kind of discipline do we have? Thinking of Les Back’s hesitation to focus on the sensory perhaps out of fear of being discredited – I too started to think what discipline is this? And indeed do I want to be part of it? Les Back then spoke about an exhibition he visited as an example for the forms of presentation that should be on display at the BSA conference. Installations that engage the senses. Also in the session Alex Rhys-Taylor used sound recordings and gave a monologue of the sights and sounds of Ridley Road market that felt very close to the ‘scenic compositions’ Lynn Froggett spoke of back in the psycho-social sessions.

It is true some research lends itself better to interactive and creative presentations than others. The point is not to do away with statistics, graphs and powerpoint. But it is to suggest a form of Sociology that allows these sensory methods and modes of thinking as a valuable possibility. Embarrassment or shame are brought about when people fail to be recognised; when others refuse to listen. These few snapshots of marginal ideas at Britsoc13 felt like glimmers of hope in amongst the polite small talk, bad vegetarian lunch options and overpriced entrance fee. Yet these thinkers will continue to only throw their ideas against a brick wall if the sociology discipline fails to listen.

I owe much to sociology, and will always be somewhat grounded, if only through educational socialisation, in a sociological view of the world. I always loved Sociology because it gave me the freedom that other disciplines didn’t. But now I feel constrained and frustrated by Sociology’s limits, where the potential radical thought always has to be explained on conservative terms. Particularly as a novice researcher, barely broken in to my PhD, it can seem a dreary and frightening prospect. Luckily I have spent enough time outside academia as well as in to realise the game everyone plays is one you can opt in or out of. I might be old-fashioned in that I came into Sociology wanting to change things and not keep them the same because I saw problems that were being ignored and overlooked. This applies to the inner workings of the discipline too. Conferences that take place in opulent buildings filled with overwhelming numbers of white middle class male faces leave a bad taste in my mouth. John Holmwood in his plenary spoke of readjustment rather than constructing ideals of the future. Indeed a fixed ideal of the future is limiting, but perhaps a fixed desire to maintain the status quo is even more so. As Sociology continues to concern itself with engaging the public and ‘every day life’ we are getting further and further away from the object we are so hurriedly scrabbling toward.

It seems like Sociology needs to ask itself what it thinks makes a life worth living. I am not saying we should cohere on this vision but at least lets have better avenues for dialogue and not bristle so alarmingly at new approaches that delve into the arts and humanities for inspiration. Because in essence is this not the goal of sociological endeavour:
to ask what makes a life worth living. A life with less inequality, less discrimination based on gender or colour of one’s skin or age or sexuality, a life that is not prescribed but active, aware and critically engaged. A life of learning, a life made meaningful through felt emotions, affect, attuning to the environment and sensory imaginations. To start thinking this way and asking these questions requires big thinking and being alive to experiences and encounters. Our lives as sociologists are not separate to our work but integral to it. Perhaps then hope lies in those who have yet to become institutionalized into the formal dance of sociology’s discipline requirements. In those still young enough or those outside academia that are able to think big and unabashedly. Hope might also lie in those of us PhD students who risk to take the challenge to make their PhD a piece of radical sociology, where radical is simply a challenge to normative obligations, that doesn’t seek career progression as the endpoint, that seeks to contribute to a life worth living. I’m prepared for the challenge, the question is, are you?

- Caroline Pearce

David (2013-10-04 09:09:21)
Many years ago, I looked at sociology, did a few ‘O’ level lessons & looked at some literature at different levels. Just couldn’t stand the subject for many of the reasons stated in your excellent column describing problems in the subject. I particularly liked your use of ‘articulated in a very truncated sense,’ ‘similarity of ideas,’ ‘formulaic presentations’. These were apt observations. There are many others I could add from my own experience of life. In my brief acquaintance with sociology I observed all the things covered in your column, and still observe them today whenever I come across sociology literature. (You obviously experience this too, hence your article). I also occasionally hear sociologists repeating all this dreadful stuff. As you say, formulaic, and so, so samey, similar, and totally unoriginal, & so relentlessly narrow in its approach to real life. I’m glad I left the subject, couldn’t have gone on with that. Regards, David Wright

1606
To suggest that language may appear as a problem for a country that is teetering on the edge of financial, moral and political collapse, could be easily mistaken for virtually inviting a debt-ridden population to a dinner of ‘cake’ with Marie Antoinette (to whom the callous and ignorant remark of ‘let them eat cake’ is commonly attributed), or to the pained and patronizing tone of a deconstructionist academic (neither of which I admit to being) who cries over dislocations of grammatical categories in an inspired barrage of linguistic fecundity.

My concern with language in this article however is hardly aesthetic, in any culinary or abstractedly theoretical sense; rather, it is purely political and seeks to interpret the way in which politics is spoken about and spoken to, not as a set of ordinary linguistic devices used to express views in conversation, but as political triggers that denote and fire up schisms, chasms and spasms which are felt not just at the level of private or public discussions but also as a key players in the political sensorium, either in the form of media spectacle, parliamentary politics or as angered, disobedient responses from the commentariat; comprised of the noisiest authorities, tweetellectuals and the ‘lay’ public all engaged in crafting aperçus on all manners of subjects relating to The Crisis.
Popular themes that recur in this veritable mélange of warring wor(l)ds, images and sounds include the high-pitch fear-mongering over a failing economy, reverberating promises of a politically ineffectual and morally bankrupt government for a better tomorrow through more cuts and heavier taxation, blaring sirens from predatory lenders demanding that we fasten ourselves onto the vindictive straitjacket of more austerity, lurid images of poverty combined with tales of personal disaster and dereliction brought forward by economic decrepitude, nauseating repertoires of routine xenophobic violence by far-right groups, snapshots of police brutality, howls of indignation by righteous revolutionaries incandescent with rage, torrential leaking of confidential documents that reveal scandals, piercing commentaries by the 'intelletueul du jour', nauseating ruminations on fiscal themes by celebrity economists, aggressive IMF, ECB and World Bank pep talks on 'work-shy', 'tax-evading Greeks', malodorous connections of the political elite with mafia-run fiefdoms, creeping unholy alliances between the Church and far-right groups, twanging urban militias each fighting for their 'cause', low-bandwidth radios resisting kleptocracy and fighting the spectre of neoliberalism online, ticking electoral pendulums predicting the rise of the extremes in voting preferences, loud radio and TV phone-ins reproducing madness, prejudice and confusion, time-worn political parties reeking of the cheap incense of bygone glories, Neo-nazi sympathisers shouting racial abuse, teenage anarchists blowing up shopping malls and robbing banks to hear their cries and endure cops' lashes behind bars, odoriferous ideologues retreating into their bug-infested tribal enclaves, heckling international media offering uncharitable jokes and condescending anecdotes, Quixotic dreamers bedazzled by their rosy self-delusions, immigrants and ethnic minorities hopelessly marooned to the margins, demagogues of the left burning effigies of the ruling class with demonic frenzy, defending moribund institutions that ooze decay and capitalise on hard-wired, historical traumas, agitators du moment in air-conditioned and sonically monitored studio flats typing throbbing manifestos for change, verbal assaults becoming the norm in televised panels, interviews, Skype conferences and Google+ hangouts, moping melancholy clouding passengers' minds, enveloping fogs of burnt wood sweeping across the city as petrol becomes more expensive each day; what this cornucopia of sights, sounds, scents and other such forms of sensual perception serves to show is not a simulacrum of Dickensian bleakness but the ordinary, everyday repertoires of existential synaesthesia of a country in crisis.

What this confusing list of cheerlessness does not admit however is that the way in which the public experience of the crisis is mediated and rendered intelligible is through language; language is the favoured medium of exchange and reflection upon those events of a day spent in crisis. These being not mere linguistic tropes but real orchestrations of the current soundscape of politics in crisis-bound Greece, it is worth considering the role of language in producing and reproducing these. Part of the problem in the political culture of Greece is to be found in transforming our relationship with language so that we start occupying what Les Back (2007) calls ‘a listening post’ in society and everyday life. Using language as listeners is only part of the problem but it is a basic one, no matter how naïve and fanciful it may seem at first sight. R. Murray Schafer (1994) who coined the term ‘soundscape’ offers a few comments in his book, The Soundscape that might serve as very good advice on how to develop a vocabulary of engagement through listening and speaking; discussing, not debating. Given that ‘man echoes his soundscape in speech’ (p.40) and that ‘noise pollution’, like the socio-political fracas that I have described above, results ‘when man does not listen carefully’; ‘noises’ become ‘the sounds we have learned to ignore’ (p.4) and ‘linguistic accuracy’ ceases to be ‘merely a matter of lexicography’, especially as ‘we perceive only what we can name’ (p.34), but rather graduates to the function of ‘an instrument of the will’ (p.11). What this cut-up of Schafer’s original quotes serves to illustrate is that society is accomplished through language and sounds via interaction; ideas are made in language and of language using it both as a resource and a medium that broadcasts distress and communicates anxiety about public issues at large. This a fairly obvious point especially to those familiar with the conversational sociology of Harold Garfinkel and Harvey Sacks, but one that can help us understand language also as an acoustic phenomenon that dominates the socio-political space where interactions are made and unmade daily. The importance of this is to attune ourselves to the reality of sounding out politics as membership in a discourse community that shares linguistic codes, themselves married to cultural traits that resonate the way we hear, speak and do politics.
This of course is hardly new(s); Schafer (1994: 215) reminds us how 'in his model Republic, Plato quite explicitly limits the size of the ideal community to 5,040, the number that can conveniently be addressed by a single orator', while Shakespeare's memorable stanza from King Lear (Act 4, Scene 6) invites us to disown our 'eyes to see how the world works' and are advised to 'look with [y]our ears' instead. Such colourful allusions to broadening our sense of politics but also preparing our senses for politics too, is achieved through thinking not just with and/or in our minds but with the body too. This interpretation of the body as good to think with, trusting its sensory organs as much as we trust our intellectual apparatus is given proper theoretical weight in various sociologies of the body and embodiment, an example of which is to be found in David Oswell's (2009) theoretical investment in the idea of politics as an experiment in and of language, transmitted by sounds the body situates and amplifies for us in the public realm. Oswell (2009: 12, 2) notes how we articulate our political demands through the powers of organised speech, insisting that 'democracy is figured out through the modalities of speaking and listening within different parliaments or assemblies of mouths and ears' and goes on to describe parliaments as 'concrete assemblies of heard and spoken political expression' mediated by and through language, his supposition being that 'political expression and political articulation need to be understood in the context of the realpolitik of sound and sense'. Was this 'realpolitik of sound and sense', after all not just what Plato's philosophical nemesis, Aristotle had in mind when he made the distinction between voice (φωνή) and speech (λόγος) to distinguish the noise of animals (represented by 'voice') from human speech as the articulation of reason by men within an organised political unit, namely the polis? (Aristotle, Politics).

II

However, theoretical, abstract and jumbled all this may sound, I believe that this very 'realpolitik of sound and sense' has deep roots in how we collectively manage and understand our polity through words and sounds; themselves acting as admittedly shifty but at the same time fairly indicative barometers of social attitudes, patterns, habits and trends that not only outline the contours of the current crisis, but also register historic tensions that bear the imprint of prolonged misunderstandings and misrepresentations in need of restoration and repair. What seems to be needed urgently, among many other things of course, is a communicational overhaul of sorts framed not just as 'a struggle with language', as Wittgenstein (1977: 11e) would have it, but a struggle in language too; and one which involves treating each other as 'cultural colleagues', to use Garfinkel's (1967: 11) unforgettable phrase, in an effort to foster a strong communitas where associational public life can flourish if we act towards it by learning to listen well in the spirit of skilful co-operation; understood as a craft and as a vocation in order to make better social, cultural and political sense out of situations that dissuade us from doing so, crises being just an example and a good starting point for doing so.

This idea of mutual understanding and togetherness, achieved by investment to the rituals, pleasures and politics of co-operation, to quote the subtitle of Richard Sennett's (2012) most recent book, belongs as much to him and Garfinkel (1967) as it does to us. This spirit of linguistic, cultural and political effort towards consensus (not compromise!), seems to be entirely lacking in Greece and this is not a modern politico-sensory impairment but rather one with a long historical trajectory since the country's emergence as a modern nation at the tail end of the 19th century. Greece has traditionally been hostage to the 'language games' and the 'polititricks' of populism and irresponsible demagoguery, both operating as cultural trends and political practices that are reproduced in fragrant speechism and clownish gesturing that still remain all too prevalent in the country's political oratoria, often resembling figures that could easily be lifted from the verses of Alexandrian poet C.P.Cavafy who in 1928 crafted a subtly ironic libel for a fictional yet oh-so-real 'Prince from Western Libya' or H.A.Vaughan's sonnet, 'For certain demagogues' (see
Brathwaite, 1984: 31), penned in Barbados in the 1940s but hearing the same alarm bells that that rang so loudly in Patrick Leigh Fermor’s ears ten years later when he described Jamaica’s labour party leader Alexander Bustamante as an ‘ex-rabble-raising demagogue, whose every word and gesture have an engaging histrionic phoneyness’ (see Gunst, 1995: 73).

Greece’s tripartite coalition government as well as its opposition bear a striking resemblance to such rhetorical flourishes of populism described by Cavafy, Vaughan and Leigh Fermor but such posing does little more than bring ‘a new elation’ to mere ‘fickle dust’, to borrow a clipped verse from Vaughan’s sonnet, and seem to require (as previously suggested) a radical breakdown of such ‘rhetorical habits’ as Paul Gilroy (2012) describes them. These ‘rhetorical habits’ however, are more than mere archetypal acts dramatised in predictably recurring plots, but point to enduring political conflicts, ideological biases and (worse of all) cultural loopholes that are used to evade responsibility and critical, rational argument thus reinforcing fanaticism rather than open dialogue; often taking the form of political witch-hunting which uses language as a political tool, not to articulate politics but to summon worshippers, exorcise witches, call people to prayer and attract consumers of voting preferences around suffocatingly close-knit party formations which self-righteously claim to have the monopoly of sense and entitlement to the truth.

III

The question however remains; what is to be done? On a quasi-aesthetic/cultural level, Schafer (1994: 153) would go as far as to suggest that what we need is to develop a ‘sonological competence’ as a way of navigating ourselves out of this distressingly echoic labyrinth of miscommunication and socio-political disjuncture and my contention is that his proposition is immensely useful, if interpreted as an argument against the sensory deprivation of the body politic (especially) when it is hit by crises such as the one experienced in Greece, as I type and as you read. Can we then suggest that by becoming ‘sonologically competent’, we also educate ourselves politically into acquiring a new kind of literacy which leaves no social interaction or political interrogation ‘suspended in hyphens, testifying to the disconnectedness of our thoughts’? The phrase belongs to Nancy Scheper-Hughes and Margaret M. Lock (1987: 10), whose work gives a nod of approval to developing a ‘precise vocabulary with which to deal with [the] mind-body-society’ triptych and this passionate plea of theirs for a more mindful understanding of ‘the body’ is in reality no different from the rallying cry of this article being no other than an invitation to listen intently to how politics is orchestrated in language and sound and that crises can be perceived and felt as audible warfare involving an intense artillery exchange that can mutilate or heal depending on the camp we plead allegiance to.

What I have tried to demonstrate is that we can use sociology in times of crisis in an effort to make sense of how things sound; appreciating that language is simultaneously a political and performative act. Trusting the noises language makes matters immensely in trying to tell a story of who we are and what we do or as Csordas (1994: 11) notes in reference to Paul Ricoeur’s (1991) musings on the tension between ‘language’ and experience, ‘text and action’; ‘language is a modality of being of being-in-the-world-', such that language not only represents or refers but “discloses” our being-in-the-world’. Language is hardly ‘immediately available’ and much less a frivolous enterprise; like Sidewalk’s author, Mitchell Duneier (1999: 339) we have to ‘strive [...] to get things right’ as ‘[t]he meanings of a culture are embodied, in part, in its language, which cannot be grasped by an outsider without attention to the choice and order of the words and sentences’.

Against this soundscape of communicational and associational deprivation as registered in the squeaking frequencies of ‘language games’ and ‘politricks’ and as is democratically represented in Greece by virtually all parties involved - from the political mainstream and the dominant media to the opposition, the marginal outsiders, the blogosphere and the ‘public’ itself, - sociology and sociologists may have the capacity to reverse the script and flip the disc on
which our political needle seems stuck by allowing the opportunity to ‘defamiliarise the familiar’, destroy our myths and encourage us to re-interpret our life in crisis in ways that can remind us of what it means to be human. In addition to that, sociology can suggest strategies for escaping our current political insulation and point instead to a re-vitalisation of a civic ethic which makes itself heard in the public sphere, not as an instrument of shopworn and devalued rhetorical gambits but conducting instead a symphony of accommodation between civic consciousness and economic performance, in ways that allow for associational solutions to political predicaments while attempting to envision what might happen if we jump headlong into resolving the tension between democratic government and capitalist economy. Thus, making room for the emergence of a new public sphere that might transform the current fragmentary political landscape into the ‘real utopia’ of associational democracy as envisioned by Erik Olin Wright, Joshua Cohen and Joel Rogers in their multi-volume ‘real utopias project’.

Whether the sociological imagination is powerful enough to do that of course is a different matter and one that is continually open to debate. What remains unquestionable for the remainder of the ‘Sociologists of crisis’ series however, is my intention to demonstrate [3]John Brewer’s conviction that ‘sociologists don't debate quibbles. We are tackling the financial crisis head-on’. In that spirit, each post will from now on host conversations with current sociologists whose research and thinking contributes vitally to challenging, upsetting and disrupting irresponsible sloganeering with imaginative responses on issues that are continually if not nauseatingly discussed in the public realm about ‘The Crisis’. These conversations/interviews mark their debut next month with Prof. Gerard Delanty’s thoughts on the idea of Europe.

Ring the alarm! The sound of crisis: from 'language games' to... 'politricks' | Sociologist of Crisis (2015-05-07 16:05:08) […] published at The Sociological Imagination on April 11, […]

While My Guitar Gently Types (2013-04-12 08:00)

Tired of typing emails, crouched over a keyboard? David Neevel's new invention will resonate with you. It is an electric guitar which can type! This isn't sociology, but it sure is imagination, of the highest rank. We at SI hope to see these guitars in the shops. We wonder whether it would be called a keyboard, if it's not, well, a keyboard. Maybe a fretboard or tunetyper? Neevel works in advertising so he'll probably find a cool name for it.

#britsoc13 : We do teach y’know (2013-04-15 08:00)

In one of Chomsky’s later books, I think it’s *Failed States* but I may have got that wrong, he includes a two page conclusion in which he starts ‘Some people accuse me of never providing solutions or recommendations…’ and proceeds to set the record straight. With a couple of measly bullet points covering about a page. I had a similar reaction when I read a great volume recently, Will Atkinson, Steve Roberts, and Mike Savages’ [*Class Inequality in Austerity Britain*](http://www.youtube.com/embed/vhRFTi3kLUw?feature=player_embedded). It’s a great book – timely, prescient, angry and level-headed, that does a really substantial job of addressing how inequality makes it worse for all of us. Go buy a copy – I’ll wait.

Done? Good. The only problem I had with the book is the editors tackling of ‘the recommendations problem’. The final chapter included some reflection on how sociology could be done better, an argument for an activist and public sociology. Great thing to get behind, but I felt something that I and my colleagues at SHU and throughout the country do was forgotten, something we do all the time. Teach. Since September I have spent at least three hours a day in the company of young people aged 18-21, people who have chosen to study sociology and political science (yeah I know, but they’re not bad people). Why does teaching sociology not seem to count as public sociology, or as a way of encouraging activism?
It may seem small and parochial, but we should never forget that we have at our doorstep people longing to know about the world, longing to learn about their position in that world, waiting for people with a variety of experiences and ideas to talk to them. They’re great, and we are very lucky to be able to do what we do. One of the easiest ways to get our message out, [2] to impart the facts of the welfare changes for example, is to teach it, and to reinforce the messages so that students’ friends hear it, and their families hear it. This will not have the same impact as a great media campaign that cuts swaths across middle Britain, but we seem pretty sure we are not getting one of those. To ignore the fact that we teach at our largest conference seems a pretty appalling oversight. A quick scan through the programme (searching for the word ‘teaching’ which may not be the best method to employ) shows only two or three papers which focus on the usefulness of teaching sociology. The vast and overwhelming majority of papers were focused on new and important research – great, but that’s not all we do.

I know there is now a [3] BSA Teaching group (formerly the ATSS), which seemed to have a great first conference, and has another coming up in July 2013, but the idea that we keep teaching separate is something the BSA should reconsider. If sociology is meant to be democratic and equal, then having a conference dominated by richer Redbrick and Ancient universities, with much of the work of post-1992 institutions sidelined, is not a great idea. I met one or two sociology teachers, those focused on A-levels, but very few. The professional themes and fears which dominated BSA2013 – REF, publishing, massive funding bids – are not things all university sociologists worry about. Before we worry about trying to educate the public, we have to make sure we are doing all we can to educate our students to the best of our ability. If BSA-led sociology places research over teaching, then we are missing out on our greatest opportunity to enact change in individuals. Let’s stop ignoring teaching.

#britsoc13: BSA 2013 Review: Highlights, Lowlights, and Issues (2013-04-16 08:00)

From Weds 3 – Fri 6 last week the [1] British Sociological Association Conference 2013 took place in the Grand Connaught Rooms in central London. It was my second BSA conference after last year in Leeds, and my first post-PhD, post-getting-a-Lectureship conference full-stop. I have, for the sake of brevity, limited myself to 3 highlights, 3 lowlights, and a random selection of other thoughts.

I originally thought this would be one post, but given that the first one is over 800 words long, I’ll break them up into easily digestible chunks.

Highlight 1: A Renewal of Confidence in Sociology

A colleague of mine and I have discussed a theory: that sociology is not a science, that there is no such thing as social science, there is merely social critique. At the root of critique is an awareness of the self, so the first
question we have to ask sociology undergraduates is ‘why are you such a terrible person?’ It felt to me that this was a conference of sociologists who are well aware of their flaws – both personally (our inability to get our message out, introversion, methodological dullness, or consistent failure to focus on things that vitally matter) and professionally (accepting our limitations, not challenging received practices, talking to ourselves), but the very act of being aware of these issues is an important start. The BSA2013 was three days of (largely) recognising the bad, and reaffirming the good.

One of the first sessions I attended was John Holmwood and Ben Fine addressing how sociology and economics can combine. Personally I believe economics has shown itself to be a thoroughly discredited discipline over the last few years (shock!). Sociology is a discipline which critiques the status quo, which points out the structural and agential issues which are either causing harm or preventing improvement. Holmwood and Fine stressed how economics didn’t rock the boat, and used the same tools and methods, those invested with legitimacy, to keep things the same. It dominated discussion through its resources, and had easy access to power, which both corrupted academia (watch [2]this clip from Inside Job to see what they mean), and gave credence to things which were not credible.

One of the reasons sociology doesn’t get listened to, is that is says things that people don’t want to hear. Politicians only want data which makes their opponents look bad, or supports their policies, as do the media, as Polly Toynbee addressed on Friday (although the Telegraph did publish [3]this). Think tanks want academics to change their findings in order to support their policy agenda, as Will Atkinson addressed in his paper on Wednesday. But whereas in 2012 I felt the BSA was afraid to rock the boat, annoyed that people weren’t listening, this year we were still annoyed, but rather than sulking in the corner, arms crossed, there was real anger, and a longing for action and activism. Obviously with the conference coming in the week of the most dramatic and traumatic benefit changes, surrounded by lies, rumour, and spurious evidence, the anger was real, as was the desire to do something about it. If the elite are to complain of a ‘broken society’, it is up to us to kick back and show who broke it (h/t Tim Strangleman).

But the nagging sensation remains: are we going to do anything and what are we going to do? These questions are ones we are stuck on: I will come back to it in a future post.

I called this blog empathyscience, as this is the term I teach to all first years as they decide to embark on three-year sociology course. It will not make you a large amount of money (‘You are not the next Mark Zuckerberg’ as Shamus Kahn shows [4]here), nor is it particularly vocational, setting you up nicely for a particular career. But it is the subject which best helps explain other people. It is the subject which enables you to understand what other people are going through, and that you are not an island. If we accept worries about individualisation in society, then perhaps it’s best to think of each student who takes it on as a small act of rebellion. As John Holmwood said in his Presidential address:

> Sociology must in the service of democracy...the task of sociology in an age of austerity is to occupy public debate and make equality matter.

He’s right. And this may sound like soppy nonsense, but you have to have an emotional pull to a subject in order to go through the grind of submitting, resubmitting, and failing at article publication, and the mountain of marking that waits at the end of each term, and the completely nonsensical administrative changes that are constantly thrust our way. It’s nice to occasionally here something that makes you think ‘Oh yeah, it’s good that I do this’.

But ask me again in a year.

In retrospect it was never very likely I'd finish my PhD during a daily commute (2013-04-17 08:00)

(via AyeshaKazmi from the Occupy Boston protest)

Some thoughts prepared for the Sociologists Outside of Academia panel discussion at #BritSoc13

I felt slightly nervous about this panel prior to it because of the change that I’d undergone inbetween originally being invited and the actual BSA conference itself. I’d previously been hugely enthusiastic about the idea of 'Sociologists Outside of Academia' but now I’m more cautious, albeit not hostile to it at all. Around 6 months ago, having pondered the idea for ages, I went to work full time in a social media role (at the LSE so I didn't get particularly far 'outside' of academia but the move into a non-research role was subjectively very meaningful).

I'm in the 5th year of an unfunded part-time PhD, I've freelanced and worked lots of part time contracts in a
A wide variety of roles over the course of my thesis. For much of this time, the workload outside my PhD has added up to something much more than the 36 hours a week I was contracted to work at the LSE. So I didn't think working full time while continuing to do research would be any more difficult than this. But it REALLY was and I'm still trying to understand why that is - in the freelancer / part-time researcher lifestyle I've had for the past four years, I've enjoyed having an awful lot of space to think and develop projects on my own terms.

I'd seen the prospect of being a 'Sociologist Inside Academia', with the social structures it unavoidably involves subjugation to, as threatening that space. But in the last six months that space largely vanished, retreating to little more than my morning commute on the train and some time at the weekends. Which leaves me confused about a notion which I had previously been so enthusiastic about. It's left me thinking about what is it to be a 'sociologist outside of academia'? Is it to continue to identify as such? To continue to engage with sociological literature? To continue to engage with other sociologists? To continue to do research?

It was the last one that was key for me. My enthusiasm for the concept of abandoning a traditional PhD route, supporting myself through other means so that I could do the research I wanted to do freed from audit culture and the instrumentalism it fuels, was predicated on being able to continue to do research. Though I do realise when saying this that the kind of research I do (social theory & theoretically motivated small scale qualitative research) makes this possible in a way it might not be for others.

At present I feel like an idea that came very naturally to me, to have one foot in and one foot outside of the academy, probably isn't possible in the way that I hoped it would be. But I'm not certain by any means. Not least of all because there's a lack of any serious discussion of alternative academic career paths in UK sociology, something which is much less true in the US - perhaps because some of the pernicious trends in the academy which lead people out of necessity or choice to pursue alternative academic career paths are much more developed there.

But I think these broader trends aren't going to go away and there's a need to seriously address them in practical terms. The ranks of the 'para academics' (those precariously employed but still actively working within academia) and the 'alternative academics' (those with graduate level training seeking alternative career paths outside the grouping we call 'academics') are only going to grow. At a time when Sociology is under great threat in the UK, it seems blindingly obvious to me that taking practical steps to incorporate people with sociological training and/or doing sociological work outside the academy is integral to preserving the discipline.

So things like making conferences more financially accessible, running lectures and engagement events which are accessible to those outside the academy (in all senses of the term 'accessible') and using social media to start to move sociological debates more into the open, as well as creating resources and multimedia publications which make sociological knowledge more accessible to those outside the academy. I think there's been a pervasive failure to value the communication of sociological knowledge (at least outside of a classroom context) which really doesn’t help in this respect.

There's also a need to offer much more multi-faceted career advice and skills training for PhD students. This is something the BSA's PG forum, which I helped organise for a couple of years, has tried to do. But it's still sadly absent at a more localised level and I think this contributes to a lack of understanding of the transferable skills gained during a PhD (particularly the value that being able to digest, understand and communicate academic research has for other roles both in and outside the university) and little sense of the options available.
Hard being a long distance PhD, but wait, this chap is within the LSE. Library, access to canteen, facilities shared with staff and students...

my point was that I had no time or energy to work on my PhD while I was there, not that I couldn’t find my way to a library near work...

In defence of being alone (2013-04-18 08:00)

3. [http://www.youtube.com/watch?v=2_dz173YZhA&list=UUbL4jfzgj8LNZD4etgA_IEA&index=1](http://www.youtube.com/watch?v=2_dz173YZhA&list=UUbL4jfzgj8LNZD4etgA_IEA&index=1)

Couldn’t agree more. Except you have a camera person to accompany you. I dont.
Cross country; years and years running,  
Huuuuuge amounts of training,  
Puzzled; getting nowhere... slower and slower,  
Not occurring that I had undiagnosed asthma.  
Germany, in the street collapsed,  
Running killed off!  
Painful; bit of a shame; quite upset,  
Brittle asthma; late onset,  
Looked at sadly; doctors telling people,  
"Well you haven’t had it before and now you have"  
Slightly unusual asthma; aspirin intolerable.

Town planner; on site to office confinement,  
5 mile runs at lunchtime - couldn’t even get to my car from the office,  
Without resting; seating on walls; breathing crisis,
For others, contractors; committee meetings frightening,
Seeing me wheezing unable to speak; more alarming,
Amusing; not thinking it might be permanent; simple denying,
Subtle; early signs of depression,
Eased out of job; retired early, redundant,
Slow realisation! No more denial; difficulty untangling,
Side effects of acute asthma from unwanted depression,
Trying to exercise; slow walking, asthma inhibiting.

Doctor suggesting alternatives; experimentation,
Steroid injections,
Overnight, asthma vanishing,
Suddenly I was exercising,
Wonderful feeling!
I'm cured! More denying...
You can’t forever have steroid injections,
Allowed me to build fitness; combating slow insidious lack of muscle toning,
Asthma had been bringing,
Able to be moving; depression vanishing.

Stopped injections,
Asthma stopped me exercising; returned depression,
Took up cycling, cycling more easy than walking,
Discovering freewheeling,
Short bursts; freewheel a bit and get around again,
Getting the pleasure of exercising,
then...
Same time; depression seemed to worsen,
My doctor thought, "You're interested in psychology, see a psychologist"...
Inept psychologist, "I'm a lot more sane!"
Stopped.

Pacing myself, working,
Joinery; given book token...
Bright yellow - Idiots guide to hypnosis, picking,
Incredibly calming; scripts, just reading,
My interest in hypnosis introducing, growing,
Asthma and hypnosis training,
Funny synchronicity things,
3 years later; completed the training,
Reasonably good qualification in hypnotising,
Also... asthma periodic not constant becoming,
TRANSFORMATIONAL for me.

I’ve become a lot more active physically,
Now; exercise inducing,
Exercise regime starting slowly,
Increasing brisk hill walking,
Asthmatic response to exercise reducing slightly,
No long distance running unfortunately,
I do miss it. It’s a pity.
I rarely say I may have asthma,
Not really noticeable any longer,
GP was a naughty experimenter!
Rather than sticking to the books ever.

I don’t really have asthma attacks any longer,
Fantastic! Blocked nose still, seems to be getting better,
Anoxia; wife helps me,
Unaware; creeps up gradually,
Bloating; unusualness peacefulness,
Bit fatter,”Do you have asthma?”
“Oh actually, maybe”, I consider,
“If you die of asthma I’ll dig you up and kill you!” She kindly tells me,
Infection; floors me for two days or three,
Take advantage; pamper myself, books reading,
Enjoy the relaxation; also a positive experience in a funny way.

An unusual form of asthma,
I’ve no memory of having problems,
As a child I know I was free of asthma.

Dr Helen Owton is a Lecturer in Psychology at the University of Northampton

Transforms data into poetry and visual representation. Well done, Helen!

Where Do Neoliberals Go After the Market?
Calculation, computation and crisis

A one-day conference organised by Centre for Interdisciplinary Methodologies, University of Warwick
13th June 2013
10am-6.30pm
Room S0.21
Neoliberalism is commonly identified as a belief in the self-regulating powers of markets, especially financial markets. Markets, from this perspective, are powerful information-processors, which are uniquely capable of governing complex societies while preserving liberty. In recent decades, financial institutions have added further computational power, which, among other things, has led to the automation of trading and the calculation and simulation of market scenarios to manage risk. The financial crisis has been perceived by some as the outcome of this collision between markets and increasingly 'performative' economics.

But where does this leave neoliberalism and its technical ideal of freedom? Does it simply require more markets or greater computational power to prevent future crises? Or are we witnessing the emergence of a different neoliberalism, based on different technologies and ideologies of liberty, in appeals to 'Big Data' and 'openness'? Might software and 'open data' usurp the primacy of the price system in the neoliberal imagination, as tools of governance in complex modern societies? To what extent are the political desires of the digital elite – from Hackers to Silicon Valley – amenable to the neoliberal project?

This one-day conference will address these questions from a range of disciplinary perspectives, including software studies, history of economics, political theory, media theory, international political economy and economic sociology.

Speakers Include

- [2]Prof Philip Mirowski, University of Notre Dame
- [3]Prof Shirin Rai, University of Warwick
- [4]Dr Richard Barbrook, University of Westminster
- [5]Dr Orit Halpern, New School
- [6]Dr David Berry, Swansea University
- [7]Dr Johan Soderberg, Université Paris-Est/Écoles des Ponts

Conference themes

- Neoliberal responses to financial crisis
- The invention and reinvention of 'competition'
- The philosophy and techniques of 'openness'
• The persistence and reinvention of the market
• The intersections between neoliberalism and cybernetics
• The significance of data and 'Big Data' to the evolution of neoliberalism
• The role of specific devices in visions of freedom
• The political lineages of 'hackers'

**Attendance**

The conference is free to attend, but registration is essential. To register please click here.

Room S0.21 is in the Social Sciences block. A campus map is available here. All details on how to get to Warwick University are available here.

Please send any enquiries regarding the conference to Will Davies at William.j.davies@warwick.ac.uk

---

**New column! “Visual Sociology” call for reader submissions (2013-04-21 08:00)**

For all professional and/or novice visual researchers out there: the Sociological Imagination is pleased to announce its new column dedicated to "Visual Research". To celebrate its beginning, we are launching a continuous call for reader submissions.

The call is open to all our readers. **One piece of visual research work will be featured each Friday.** The SI reserves the right to use the submissions on the website at any time after they have been sent to us, after explicitly notifying their authors by email. If you’ve sent us an image and change your mind for any reason, just e-mail us and we promise not to post it. Scroll down for submission guidelines.
Guidelines for submissions:

How to submit: Please e-mail us with ‘SI Visual Sociology’ in the subject line.

How many: Authors may submit up to three separate pieces of work (we shall consider more numerous applications on a case by case basis – i.e., if we really like them!).

What information: Every submission must be accompanied by the following information:

- title of the work;
- full name/s, or artistic pseudonym/s, of its author/s;
- contact e-mail address and/or other contact details.

What counts as “a piece of visual research”? What ratio must there be between image/s and text? We side with Becker (1995) in abandoning methodological purism, and leave to your discretion the decision what and why classifies as visual sociology/anthropology (as opposed to documentary, photojournalism, art, or any other visual-based genre). The editorial team also reserves the sole right to decide whether to publish any submission. Submissions may range from image/s with text to text with image/s, as long as images and analysis or story are integral to one another.

Type of image: Any images/photographs are acceptable: black-and-white or colour; new shots or old scanned shots from your archives – as long as you have the rights to distribute them; and there are no restrictions regarding any artistic or photo-processing technologies used in the production of the images.

Format and size:
If we want to understand digital dualism properly, we need to abandon the concept of 'digital dualism' (2013-04-22 08:00)

In a [1]recent post Nicholas Carr, author of [2]The Shallows, offered a really interesting critique of what has become an increasingly influential idea within the sociological blogosphere: digital dualism. He begins with what is probably the clearest summary of digital dualism I have yet to encounter:
The distinction between online and offline is an outdated holdover from twenty years ago, when "going online," through America Online or Prodigy or Compuserve, was like "going shopping." It was an event with clear demarcations, in time and space, and it usually comprised a limited and fairly routinized set of activities. As Net access has expanded, to the point that, for many people, it is coterminous with existence itself, the line between online and offline has become so blurred that the terms have become useless or, worse, misleading.

The underlying point is one which I find glaringly obvious, as I've explained [3]elsewhere:

Until the recent proliferation of mobile devices, it was necessary to sit down at a computer and stare at a screen to use the internet. This helps create a sense of the internet as a 'virtual' space which is in some way disembodied. As someone who has had unpleasant back and neck problems from my posture when using a computer in the past, it's always been obvious to me that using the internet is not at all disembodied. Though the obviousness of this has become utterly glaring, to the extent that I can't quite take those who disagree seriously, since I started using an iPad and iPhone. Similarly the cyberpunk romanticisation of the 'virtual' plays a cultural role in propping up this ontological assumption.

However 'digital dualism' is a critical term, it conceptualises an ontological fallacy. The whole point of the concept is that digital dualists are mistaken. If the concept is useful, which I still think it is, it is because it helps elucidate how and why 'digital dualists' are mistaken. Crucially I'd suggest that digital dualism is not always an assumption people are aware that they are making - in a similar way to the [4]sexual assumption, it is architectonic, it is conceptually presupposed by certain views people are aware that they hold and it rail roads their thinking in certain directions. But this doesn't mean that people reflectively think there are two separate 'worlds' which are entirely independent of each other.

I think the concept can be more useful understood as our deliberations being conceptually structured, they are concepts in social circulation which have a certain practical plausibility for some (i.e. if you primarily or entirely use the internet by sitting down at a desk, turning on a computer and logging on then the distinction between 'online' and 'offline' just makes sense) and so culture and practice reinforce each other. They are tools we think with, both in terms of our internal conversations and also how we externalise such inner conversations to external others. As a pretty strong claim, I'd suggest that 'online' and 'offline' are the sorts of terms we only ever re-ally use when we’re talking to others about something which we’ve previously been introspecting about by ourselves.

The problem with 'digital dualism', as a catchy but flawed critical concept rather than as the attitude it designates, rests on its inadequacy as a term to make sense of this empirical complexity. It surely designates something real and interesting. But it does so at such a degree of abstraction that, when applied to empirical subject matter, it’s apparent sophisticated belies a strikingly limited interpretive repertoire. Carr makes this point usefully.

There is something tiresome about the self-righteousness of those who see, and promote, their devotion to the offline as a sign of their superiority. It’s like those who can’t wait to tell you that they don’t own a TV. But that’s a quirk that has more to do with individual personality than with some general and delusional dualist mentality. Jurgenson’s real mistake is to assume, grumpily, that pretty much everyone who draws a distinction in life between online experience and offline experience is in the grip of a superiority complex or is striking some other kind of pose. That provides him with an easy way to avoid discussing a far more probable and far more interesting interpretation of contemporary behavior and attitudes: that people really do feel a difference and even a conflict between their online experience and their offline experience.
experience. They're not just engaged in posing or fetishization or valorization or some kind of contrived identity game. They're not faking it. They're expressing something important about themselves and their lives—something real. Jurgenson doesn’t want to admit that possibility. To him, people are just worshiping a phantom: “The notion of the offline as real and authentic is a recent invention, corresponding with the rise of the online.”

The difficulty here can, I’d argue, be understood in terms of Margaret Archer’s concept of ‘central conflation’. This is an idea she uses to make sense of what she takes to be mistaken orientates towards the structure and agency debate in sociology. This is the Wikipedia entry I wrote about this, which I’ll quote because this post is taking a lot longer to write than I initially planned:

Archer argues that much social theory suffers from the generic defect of conflation where, due to a reluctance or inability to theorize emergent relationships between social phenomena, causal autonomy is denied to one side of the relation. This can take the form of autonomy being denied to agency with causal efficacy only granted to structure (downwards conflation). Alternatively it can take the form of autonomy being denied to structure with causal efficacy only granted to agency (upwards conflation). Finally it may take the form of central conflation where structure and agency are seen as being co-constitutive i.e. structure is reproduced through agency which is simultaneously constrained and enabled by structure. The most prominent example of central conflation is the [5]structuration theory of [6]Anthony Giddens. While not objecting to this approach on philosophical grounds, Archer does object to it on analytical grounds: by conflating structure and agency into unspecified movements of co-constitution, central conflationary approaches preclude the possibility of sociological exploration of the relative influence of each aspect.

In contradistinction Archer offers the approach of analytical dualism,[7][1] While recognizing the interdependence of structure and agency (i.e. without people there would be no structures) she argues that they operate on different timescales. At any particular moment, antecedently existing structures constrain and enable agents, whose interactions produce intended and unintended consequences, which leads to structural elaboration and the reproduction or transformation of the initial structure. The resulting structure then provides a similar context of action for future agents. Likewise the initial antecedently existing structure was itself the outcome of structural elaboration resulting from the action of prior agents. So while structure and agency are interdependent, Archer argues that it is possible to unpick them analytically. By isolating structural and/or cultural factors which provide a context of action for agents, it is possible to investigate how those factors shape the subsequent interactions of agents and how those interactions in turn reproduce or transform the initial context. Archer calls this a [8]morphogenetic sequence. Social processes are constituted through an endless array of such sequences but, as a consequence of their temporal ordering, it is possible to disengage any such sequence in order to investigate its internal causal dynamics. Through doing so, argues Archer, it’s possible to give empirical accounts of how structural and agential phenomena interlink over time rather than merely stating their theoretical interdependence.

My point is that the critique of ‘digital dualism’ can too easily conflate the ‘online’ and the ‘offline’. In doing so, we’re left with a situation where, yes, we’ve acknowledged their interpentration but because we’ve ‘transcended’ the dichotomy, we lose the ability to unpack the interplay between its two sides. The argument that "no, you’re wrong, these aren’t separate things at all!" is useful in so far as that it allows us to identify an interface between two things that were erroneously deemed to be distinct. Likewise, it can help us understand the mistakes which ensued from imputing a discreteness which was mistaken. But it becomes a problem when the argument which allows
us to identify and critique comes to preclude our capacity to explain. It becomes a problem when our eagerness to explain “you’re so wrong, look how interpenetrative they are” obscures the variation and sequencing of that interpenetration. The ‘online’ and the ‘offline’ are not distinct. But the modalities of their interpenetration are empirically variable in a profound, interesting and important manner. We need a conceptual toolkit which allows us to both identify and unpack that empirical variability. I don’t think that the idea of ‘augmented reality’ (the ‘correct’ counterpart to digital dualism) can provide these tools.

Janet Salmons (2013-04-23 00:20:31)
Regarding digital dualism, you state, "The distinction between online and offline is an outdated holdover from twenty years ago." And while my lifestyle is one at the blurred edge where on- and off- overlap, recent experiences have reminded me that in fact "digital dualism" is a relevant concept in the real world. There are times when the "online" just doesn't work, where immediate physical presence, even if wordless, speaks in important ways. My mother, almost 93, has been ill. Not that long ago we had a pleasant, almost daily exchange of email. Now, in a rehabilitation center in another state faraway, digital communication is not an option. I have to actually board a plane and be there. Similarly, I recently had an unforgettable exchange, an eye to eye communication with my uncle, almost 96, a week before he died. It was a look that transcended language, which sadly he had lost the ability to use. We need the to avoid losing "the ability to unpack the interplay between its two sides" of our lives, and at the same time to value all the ways we are able to touch, learn from and communicate with one another. As an online researcher and educator, the kinds of experiences mentioned in this comment have prompted me to stay aware and attentive to a full range of communication potential.

Faulty practice in [insert name of science] (2013-04-23 08:00)

A fellow Ukrainian sociologist drew my attention to a recent article written by a Polish ornitologist. Tomasz Wesołowski works at the Laboratory of Forest Biology, Wrocław University and has nothing to do with sociology. However, he tackles an issue that threatens to undermine the integrity of other contemporary academic fields: the structures and rules used to measure the quality of academic research:

"... The authors intending to publish many papers in the most prestigious journals tend to frame titles using very broad terms to overestimate their importance and overgeneralise the results. Exploratory, observational, studies are undervalued (treated as a sort of inferior science, not deserving publication in high-profile journals). Field studies are done and published by people without basic field skills/taxonomic knowledge (an especially acute problem in poorly known tropical regions). Moreover, field procedures are inadequately described (others cannot evaluate the quality of work and replicate the study if necessary). Field data can be underreported (biological data in the results section are replaced by outcomes of statistical analyses). Proper credit to earlier work is missing. Many authors tend to ignore earlier sources and refer only to the most recently published papers. I think it is possible to relieve the discussed problems. In order to do so, we have to "dethrone" publications, cease to treat
them as if they were the purpose of scientific work and the sole measures of scientific output. To improve the situation, we also have to require that journal editors (1) modify the list of requirements distributed in Guidelines for the authors to include aspects crucial for proper documentation; (2) extend the list of questions which referees have to address, to include the above aspects as well, and (3) consistently reject all submissions not fulfilling these minima. Additionally, the journals would have to stop promoting unsubstantial quality criteria, e.g. “impact factors”.

Call for Participation

SUMMER CLINIC ON SOCIOLOGICAL AGENCY
LONDON SOUTH BANK UNIVERSITY

In 2012-2013 we participated in an interdisciplinary reading group on the concept of agency at the University of Manchester. Out of this we felt the need to conduct a fuller survey of core positions on agency in sociological theory and beyond. We hope that this will be of interest both to those who are developing their understanding of this concept, and to those seeking further reflection.

We will begin this process by looking at some key contemporary sociological theories in a five week London ‘Summer Clinic’ which will run as an intense peer-facilitated reading group. The clinic is intended to cover a lot of ground in a fairly short period. After an introductory week on some essential themes, each week will consist of two sessions devoted to a specific theorist (for a detailed overview, see below). Although this is an intensive schedule you can either drop in to a single week or participate more fully. We welcome PhD candidates, early career researchers, as well as advanced theorists.

We intend the ‘clinic’ to be part of a larger project to look at agency from a wide range of perspectives. After the Summer we will organise a monthly reading group (at LSBU) to further our understanding of how this concept is operating more widely. We might look at phenomenological, pragmatist, post-structuralist, feminist, social movement theoretical, race critical and post-colonial approaches - or other perspectives suggested by participants.

In case of sufficient interest, we hope to organise a symposium in Spring 2014 in order to explore emerging perspectives and the latest developments in the field.

Lastly, we have set up a mailing list for this project. Please send us an e-mail ([agencytheorylondon@gmail.com](mailto:agencytheorylondon@gmail.com)) if you would like to subscribe and be kept updated.

We would like to invite you to participate in the summer clinic. Feel free to attend the whole clinic or any specific week of interest. Below you will find the details of the clinic:

**Period:** 8 July - 9 August 2013  
**Time:** 2-5pm, Tuesdays & Thursdays  
**Location:** Room TBC, Keyworth Building, London South Bank University  
**Address:** Keyworth Street, London, SE1 6NG [station: Elephant and Castle]

Organisers: Julien Morton (London South Bank University); Dieuwertje Dyi Huijg (University of Manchester)  
Contact details: [agencytheorylondon@gmail.com](mailto:agencytheorylondon@gmail.com)

Please get in touch if you are interested or have queries so we can provide you with more details.

**SCHEDULE SUMMER CLINIC ON SOCIOLOGICAL AGENCY**

**Week 1:** 9 & 11 July 2013
**Week 2:** 16 & 18 July 2013
**Week 3:** 23 & 25 July 2013
**Week 4:** 30 July & 1 Aug 2013
**Week 5:** 6 & 8 Aug 2013

**WEEK 1: INTRODUCTION TO SOCIOLOGICAL QUESTIONS OF STRUCTURE AND AGENCY**

1634
WEEK 1, DAY 1
9 July 2013: 2-5pm
Ch.1: "Introduction"
Ch.2: "Action reported missing in action theory"
Ch.3: "Action and social action"

WEEK 1, DAY 2
11 July 2013: 2-5pm
Callinicos, Alex. (2004, 2nd Ed), Making history: agency, structure, and change in social theory, Leiden: Brill
Ch.2: "Structure and Action", only §2.1, §2.2, §2.5
Ch.3: "Reasons and Interests", only §3.4, §3.5
Ch.4: "Ideology and Power", only §4.1 (§4.2, §4.3)

WEEK 2: PIERRE BOURDIEU

WEEK 2, DAY 1
16 July 2013: 2-5pm

WEEK 2, DAY 2
18 July 2013: 2-5pm
Bohman, James (1997), "Reflectivity, agency and constraint: The paradoxes of Bourdieu's sociology of knowledge". Social Epistemology, 11, 2, pp.171-186

WEEK 3: ANTHONY GIDDENS

WEEK 3, DAY 1
23 July 2013: 2-5pm
Ch.1: "Elements of the Theory of Structuration"
Ch.4: "Structure, System and Social Reproduction"
Ch.6: "Structuration Theory, Empirical Research and Social Critique"

WEEK 3, DAY 2
25 July 2013: 2-5pm
WEEK 4: MARGARET ARCHER & CRITICAL REALISM

WEEK 4, DAY 1
30 July 2013: 2-5pm
Ch.4: "The primacy of practice"
Ch.6: "Humanity and reality: emotions as commentaries on human concerns"
Ch.8: "Agents: active and passive"
Ch.9: "Actors and commitment"

WEEK 4, DAY 2
1 Aug 2013: 2-5pm
Archer, Margaret. (2003), Structure, Agency and the Internal Conversation, Cambridge: Cambridge University Press
Introduction: "Introduction: how does structure influence agency?"
Ch.3: "Reclaiming the internal conversation"
Ch.4: "The process of mediation between structure and agency"

WEEK 5: BRUNO LATOUR & ACTOR NETWORK THEORY

WEEK 5, DAY 1
6 Aug 2103: 2-5pm
"Introduction"
§1.1: "Introduction to Part 1"
§1.2: "First Source of Uncertainty: No Group, Only Group Formation"
§1.3: "First Source of Uncertainty: Action is Overtaken"
§1.4: "First Source of Uncertainty: Objects too Have Agency"
"Conclusion: From Society to Collective"

WEEK 5, DAY 2
8 Aug 2013: 2-5pm
"After ANT" by John Law
"On Recalling ANT" by Bruno Latour
"From Blindness to blindness" by Kevin Hetherington
"Ontological politics" by Annemarie Mol
"Actor-network theory - the market test" by Michael Callon

2. mailto:agencytheorylondon@gmail.com
Critical realism, interdisciplinarity and well-being (2013-04-24 08:00)

In the [1]Social Theory & Health 2012 Annual Lecture Roy Bhaskar, founder of [2]Critical Realism, gave a lecture on 'Critical realism, interdisciplinarity and well-being'. Use the link below to access the podcast of the lecture:

While some of the ideas fail to convince (e.g. surely understanding scientific fields is irreducible to empathy?) it’s worth a listen, not least of all as a philosophical corrective to what is often an extremely polarised debate about interdisciplinary working. Bhaskar has a philosophically rich meta-theory of what interdisciplinary working entails coupled with a practical commitment to applying this meta-theory to helping people work across disciplines. It’s an interesting combination, with his frame of reference for this discussion simultaneously encompassing the deeply abstract and the immediately mundane aspects of interdisciplinarity.

A rather lovely infographic via [1]Stavvers:

Description:

This is an infographic featuring text and descriptions

TITLE: INTERSECTIONALITY: A FUN GUIDE

1. A drawing of a triangle with a smiley face. The triangle is two shades of blue striped. A speech bubble comes from his mouth saying “Hi”. It is captioned “This is Bob”.

2. Caption: “Bob is a stripey blue triangle AND SHOULD BE PROUD.” Bob has a speech bubble saying “YAY ME”.

1638
3. Caption: “SOME PEOPLE DO NOT LIKE BOB. BOB FACES OPPRESSION FOR BEING A TRIANGLE AND FOR HAVING STRIPES” Image of Bob with a sad face, positioned between stick figures holding a sign saying “Down with stripes” and another set of stick figures holding a sign saying “Down with triangles”.

4. Caption: “LUCKILY THERE ARE LIBERATION GROUPS! BUT THEY AREN’T INTERSECTIONAL. SO THEY LOOK LIKE THIS” An arrow points to two rooms, separated by a barbed wire fence. A room with a sign saying “welcome triangles” with triangles inside of many different solid colours. A room with a sign saying “welcome stripes” featuring many different shapes with stripes.

5. Caption: “BOB CAN’T WORK OUT WHERE TO GO”. Bob has a sad face. His thought bubble says “Am I more of a stripe, or a triangle?”

6. Caption: “THEY DON’T TALK TO EACH OTHER. IN FACT THEY COMPETE”. A solid yellow triangle with a cross face is next to a pink striped circle with a cross face. The solid yellow triangle says “I’m more oppressed”. The pink striped circle says “No! I am! I deserve more!”

7. Caption: “BOB WISHES TRIANGLES AND STRIPES COULD WORK TOGETHER”. An arrow points to a red striped circle with an open mouth, and a solid blue triangle with an open mouth. The red striped circle says “Oppression of one affects us all”. The solid blue triangle says “No liberation without equal representation”.

8. Text, in red: “INTERSECTIONALITY IS THE BELIEF THAT OPPRESSIONS ARE INTERLINKED AND CANNOT BE SOLVED ALONE”.

9. Text, in black: “OPPRESSIONS ARE NOT ISOLATED! INTERSECTIONALITY NOW”.

The legacy of deindustrialisation has shaped the meaning of the urban landscape for young people in the West Midlands (2013-04-25 08:00)

This post by Anton Popov and Martin Price is based on the first full report of the [1]MYPLACE project, whose work we have regularly featured on Sociological Imagination. For more information on the MYPLACE project, visit the project’s website [2]HERE or the project’s blog [3]HERE. You can also follow MYPLACE on [4]twitter.

One aspect of the broader [5]MYPLACE project has been to explore the construction and trasmission of collective memory within European societies. In the UK we have addressed [6]these issues through research mainly in Coventry (although some fieldwork was conducted also in Nuneaton) in collaboration with the [7]Herbert Art Gallery and Museum. The aim of our research is to access young people’s memories of a particular period of British history within the context of the contemporary social, cultural and political processes that characterise present day Britain. The period identified for this aspect of the research is the 1970s-80s: a period in British history of radical transformations in the social, political and economic life of the country and one associated in the public mind with Margaret Thatcher. Against the background of economic recession, the Conservative government attempted a restructuring of industry that led to the closure of many factories, plants and collieries. Its individual-centred ideology, neo-liberal in its core, underpinned a raft of policies that aimed to roll back the state and envisaged ‘individuals’ rather than ‘society’ as the target of policy.
Given the selection of Coventry and Nuneaton as the fieldwork locations for the UK, the Herbert is an important access point to both the historical memories of the period in question and to young people who have engaged with these historical narratives through their involvement in the museum’s activities. The fieldwork for this part of the MYPLACE research was carried out from October 2011 until November 2012, and included observations at museum exhibits, as well as focus groups with young people, and expert interviews with museum staff.

In our approach to young people's memories of the 1970s and 1980s – a period that is identified as a ‘difficult’ or ‘problematic’ period of recent British history – we adopted an understanding of social memory as a dynamic process; as a socially constructed phenomenon, which is an aspect of the present and, therefore, different from history, which is preoccupied with the past.

Both Coventry and Nuneaton underwent substantial economic and socio-demographic changes as a result of de-industrialisation and re-structuring of local economies during the 1970s-80s. Historians of Coventry’s car industry describe the city at this time as ‘a microcosm of de-industrialisation’ when between 1975 and 1982 the fifteen largest firms in the city shed a total of around 55000 jobs. Over the decade up to 1981 Coventry’s population fell while unemployment rose.

The focus on the late 1970s to early 1980s has particular resonance at the current time of economic recession and thus offers great promise for the understanding of generational transmission of historical memory. However, current historical narratives related to this period tend to be structured around few key events – the miners’ strike of 1984, race riots (Bristol, Brixton, Toxteth and Moss Side) in 1981-82, and the Falklands War of 1982, – while other aspects of political activism (such as CND and the Green movement) as well as the growth in popularity of radical right parties like the National Front are less prominent in the public narratives through which this period is represented and historical memories are constructed.
Working-class lives in de-industrialised society are commonly portrayed as being characterised by fragmentation of community relationships, poverty, violence, growing crime and substance abuse, and poor health. At the same time, the industrial past of British cities is often remembered nostalgically, not only by older generations of working class people but by society in general. Nostalgia can tell us more about the present than the past. As people experience living through the socio-economic transformations of post-industrial society they continue to express their present concerns through socio-cultural idioms rooted in the past.

Although the historical narratives of de-industrialisation and ‘urban decline’ are represented in the Herbert they are rather marginal to the main focus of the museum on other aspects of Coventry’s social history. The very approach to history dominant in the museum, focusing on communities and the lives of ‘ordinary people’, is arguably rooted in a left-wing opposition to Thatcherism’s assault on ‘society’.

Young people’s interpretation and internalisations of historical narratives through which the 1970s-80s are represented in the Herbert museum demonstrates that, as for many in the UK, for them that period continues to exert a lasting legacy which might be defined as providing ‘living memories of urban decline’. Memories of de-industrialisation in industrial centres such as Coventry continue to be lived by an increasingly marginalised working-class population. These memories are ‘living memories’ for many in Coventry partly because the closure of the manufacturing industries which provided the majority of work places in Coventry and the surrounding area had started in the late 1970s and continued throughout the 1990s up until the present day, when the future of the last car-manufacturing plant remaining in the city is uncertain. These living memories of de-industrialisation have translated into a feeling of the ‘depressing present’ expressed by many of our participants.

The living memories of deindustrialisation are expressed by young people in their interviews through the discourse of ‘urban decline’ when they focus on the social deprivation epitomised by the ‘council estates’. In their
interviews they reproduce the stereotypical and stigmatising view of estate residents as ‘underprivileged’ and lacking ‘respect’ for the ‘community’. At the same time, the ‘community’ is talked about in nostalgic terms of social solidarity and ‘respect’ and ‘security’. In their reflections on the ‘difficult past’ young people express their frustration and dissatisfaction with the present when they talk about lack of future prospects in the de-industrialised towns and cities of West Midlands. Ironically, they sometimes tend to idealise that period, even if they acknowledge that it was ‘difficult’. For example they ascribe more meaning and effectiveness to protest movements from the past than to contemporary online activism or violent clashes that took place during recent student protests and riots in August 2011. These nostalgic memories are a result of memory-work and they represent young people’s concerns with a contemporary society that they describe as unfair, unequal, and restrictive. Our analysis demonstrates how misremembering and forgetting on the part of younger and older generations contributes to the ‘community nostalgia’ narratives.

The living memories of de-industrialisation and urban decline have to be examined, however, in relation to other dominant historical and social discourses. Thus the Coventry Blitz (during WWII) has been mentioned as the ready-made response to the question about events in the local history which might be defined as ‘difficult’ or ‘problematic’. Memories of the Blitz play an important constitutive role for Coventry people as a ‘mnemonic community’ providing them with common ground for the forging of a well-established historical narrative. The discourse of multicultural Britain shaped during the years of the New Labour government has impacted on how young people see urban culture. It also has to be taken into consideration when we analyse how memories of racial tensions in the past (the race riots of the 1980s, for example) and the multicultural environment of contemporary British cities are interpreted by young people.

Last but not least, our research demonstrates the important role which popular culture and family play in what and how young people remember or forget about the period in question. Young people often mention classic British films as a source of information about particular events associated with the 1970s-80s (e.g. the miners’ strike) or music styles from that time (for example, punk, 2-Tone, heavy metal); although they are not always aware of the social context within which they occurred. The older generation of family members are also often mentioned not only as the source of memory narratives but also as influential figures in terms of socialisation in cultural practices (e.g. particular musical preferences) or political culture and social attitudes (socialism, mistrust towards the police, anti-racist or xenophobic ideas). In contrast, our research to date has not identified any significant role for school and college curricula in developing young people’s perceptions of the period of the 1970s and 1980s.

[The research leading to these findings has received funding from the European Union Seventh Framework Programme ([FP7/2007-2013] [FP7/2007-2011]) under Grant Agreement number FP7-266831).]

This post is based on the project’s first report, which can be read in full [8]here. It was originally published on the [9]LSE Politics Blog.

Interested in Asexuality Studies? Everything you need to get started contained within (2013-04-26 08:00)

This is the outline for the special theme issue of Psychology & Sexuality which I edited with Kristina Gupta and Todd Morrison. It was published in March 2013. The editorial and the 'virtual discussion' are open access (i.e. freely available without a university library subscription to the journal) until the end of May 2013.

[1]The Editorial for the Theme Issue, including a review of existing literature on asexuality and an attempt to formulate a cohesive agenda for Asexuality Studies

There is little evidence about the prevalence of absence of sexual attraction, or the characteristics of people reporting this, often labelled asexuals. We examine this using data from two probability surveys of the British general population, conducted in 1990–1991 and 2000–2001. Interviewers administered face-to-face and self-completion questionnaires to people aged 16–44 years (\(N = 13,765\) in 1990–1991; \(N = 12,110\) in 2000–2001). The proportion that had never experienced sexual attraction was 0.4 % (95 % CI: 0.3–0.5 %) in 2000–2001, with no significant variation by gender or age, versus 0.9 % (95 % CI: 0.7–1.1 %) in 1990–1991; \(p < 0.0001\). Among these 79 respondents in 2000–2001, 28 (40.3 % men; 33.9 % women) had had sex, 19 (33.5 % men; 20.9 % women) had child(ren), and 17 (30.1 % men; 19.2 % women) were married. Three-quarters of asexual men and two-thirds of asexual women considered their frequency of sex ‘about right’, while 24.7 % and 19.4 %, respectively, ‘always enjoyed having sex’. As well as providing evidence on the distribution of asexuality in Britain, our data suggest that it cannot be assumed that those reporting no sexual attraction are sexually inexperienced or without intimate relationships. We recognise the possibility of social desirability bias given our reliance on self-reported data, but suggest that its effect is not easily predicted regarding absence of sexual attraction.

[3]Mental health and interpersonal functioning in self-identified asexual men and women

Human asexuality is defined as a lack of sexual attraction to anyone or anything, and preliminary evidence suggests that it may best be defined as a sexual orientation. As asexual individuals may face the same social stigma experienced by gay, lesbian and bisexual persons, it follows that asexual individuals may experience higher rates of psychiatric disturbance that have been observed among these non-heterosexual individuals. This study explored mental health correlates and interpersonal functioning and compared asexual, non-heterosexual and heterosexual individuals on these aspects of mental health. Analyses were limited to Caucasian participants only. There were significant differences among groups on several measures, including depression, anxiety, psychoticism, suicidality and interpersonal problems, and this study provided evidence that asexuality may be associated with higher prevalence of mental health and interpersonal problems. Clinical implications are indicated, in that asexual individuals should be adequately assessed for mental health difficulties and provided with appropriate interventions that are sensitive to their asexual identity.

[4]HSDD and asexuality: a question of instruments

The relation between the American Psychiatric Association's (APA) Diagnostic and Statistical Manuals (DSMs) and asexuality is likely to constitute a prolific direction in research, especially because of the diagnostic category ‘hypoactive sexual desire disorder’ (HSDD). This article investigates the concept of sexual desire as outlined by psychiatry and explores the ways in which asexuality disrupts that knowledge. By extension, I consider the model of sexuality that the DSM vehiculates. The manuals themselves provide no measures, no scales, and no defined norms, yet, simultaneously, assume a normative sexuality against which all others can be measured and classified. This
article discusses the conceptualisation of ‘sexual dysfunctions’ in the DSM, of which HSDD is a part, and questions how it operates in clinical research into asexuality. I also pay attention to the clause of ‘personal distress’ in HSDD, since it appears to be one of the main differences between HSDD and asexuality. HSDD, asexuality, and the role played by the DSM poses questions such as what discourses, forms of knowledge, and institutions, have shaped, silenced, and eventually erased, asexuality.

This article draws attention to the constitutive mechanisms of asexual identity. It identifies a shift in expert discourse: a move away from pathology towards recognition of asexual identity. While this discursive shift, propelled by recent research in psychology and sexology, could pave the way for the inclusion of asexuals in public culture, it also reaffirms dominant terms and formations pertaining to sexuality and intimacy. The article argues that the discursive formation of a new asexual identity takes place through a process of objectification and subjectification/subjection at the interface between expert disciplines and activism. The recognition of identity is constitutive of subjects that are particularly suitable for self-regulation within the parameters of (neo)liberal citizenship. Yet, at the same time, the discursive shift also makes room for critical intervention akin to queer critique of naturalised gender and sexuality norms. The recognition of asexual identity could serve to destabilise the sexual regime (of truth) that privileges sexual relationships against other affiliations and grants sexual-biological relationships a status as primary in the formation of family and kinship relations. The article concludes that asexual identity encourages us to imagine other pathways of affiliation and other concepts of personhood, beyond the tenets of liberal humanism – gesturing instead towards new configurations of the human and new meanings of sexual citizenship.

Contributors to this thematic issue were requested to answer six questions related to asexuality as a phenomenon and also the research therein. All responses received were collated into a ‘virtual discussion’ with the hope of spawning new ideas and also identifying any gaps in the current research and general knowledge regarding asexuality.

[8] Review of Sex, lies and pharmaceuticals: how drug companies plan to profit from Female Sexual Dysfunction

[9] Review of Understanding Asexuality

And here are some of my favourite papers that have been written elsewhere on asexuality:

[10] Coming to an Asexual Identity: Negotiating Identity, Negotiating Desire

Sexuality is generally considered an important aspect of self-hood. Therefore, individuals who do not experience sexual attraction, and embrace an asexual identity are in a unique position to inform the social construction of sexuality. This study explores the experiences of asexual individuals utilizing open ended Internet survey data from 102 self-identified asexual people. In this paper I describe several distinct aspects of asexual identities: the meanings of sexual, and therefore, asexual behaviors, essentialist characterizations of asexuality, and lastly, interest in romance as a distinct dimension of sexuality. These findings have implications not only for asexual identities, but also for the connections of asexuality with other marginalized sexualities.

While same-sex marriage debates have captured public attention, it is but one component of a broader discussion regarding the role of marriage in a changing society. To inform this discussion, I draw on qualitative, Internet survey data from 102 self-identified asexual individuals. I find that asexual relationships are complicated and nuanced in ways that have implications for a GLBTQ political agenda, including same-sex marriage recognition. In addition, findings indicate that assumptions of sex and sexuality in relationships are problematic and that present language for describing relationships is limiting. Findings suggest a social justice agenda for marginalized sexualities should be broader in scope than same-sex marriage.

[12] There’s more to life than sex? Difference and commonality within the asexual community
Asexuality is becoming ever more widely known and yet it has received relatively little attention from within sociology. Research in the area poses particular challenges because of the relatively recent emergence of the asexual community, as well as the expanding array of terms and concepts through which asexuals articulate their differences and affirm their commonalities. This article presents the initial findings of a mixed-methods research project, which involved semi-structured interviews, online questionnaires and a thematic analysis of online materials produced by members of the asexual community. The aim was to understand self-identified asexuals in their own terms so as to gain understanding of the lived experience of asexuals, as well as offering a subjectively adequate grounding for future research in the area.

[13] Crisis and safety: The asexual in sexusociety
This article provides a discussion of the implications that asexuality, as an identity category emerging in the West, carries for sexuality. Asexuality provides an exciting forum for revisiting questions of sexual normativity and examining those sex acts which are cemented to appear ‘natural’ through repetition, in the discursive system of sexusociety. Drawing especially on feminist and postmodern theories, I situate asexuality as both a product of and reaction against our sexusocial, disoriented postmodern here and now. This article also addresses the question of whether or not, and on what terms, asexuality may be considered a resistance against sexusociety.

[14] Asexuality in disability narratives
This essay explores normative regulations of disabled people’s sexuality and its relationship with asexuality through narratives of disabled individuals. While asexuality has been persistently criticized as a damaging myth imposed on disabled people, individuals with disabilities who do not identify as sexual highlight the inseparable intersection between normality and sexuality. Disabled and asexual identity and its narratives reveal that asexuality is an embodiment neither to be eliminated, nor to be cured, and is a way of living that may or may not change. Claims for the sexual rights of desexualized minority groups mistakenly target asexuality and endorse a universal and persistent presence of sexual desire. The structurally and socially enforced asexuality and desexualization are distinguished from an asexual embodiment and perspective disidentifying oneself from sexuality.

Valuing the BBC: A half day seminar at City University London, May 9th (2013-04-28 08:00)

City University London presents a half day seminar exploring the public value of the BBC. The seminar offers a range of perspectives on the BBC’s role in public life, discussing the BBC Trust, science reporting, research with the BBC and public service broadcasting in an international perspective.

City University London has been at the cutting edge of developing research on cultural value and this seminar is part of that work. The first part of the seminar is based on an AHRC funded project that has looked at how the BBC Trust uses the idea of public value and its public value test. The BBC Trust has used public value as a system of articulating the importance of the institution to British and global public life as well as a method for assessing the value of proposals within the BBC itself. Dr Dave O’Brien, from City’s Centre for Cultural Policy and Management, will present the findings of fieldwork with the BBC Trust that has investigated how public value plays out in practice. His presentation will be in response to opening comments by Diane Coyle, vice chair of the BBC Trust.

The second part of the seminar will be a panel consisting of three presentations from academics from City University London. Prof Toby Miller, from the Centre for Cultural Policy and Management, will discuss the BBC’s public service broadcasting role using a range of international examples drawn from his work. Connie St Louis, Director of City’s Science Journalism MA, will explore the BBC Trust’s Review of impartiality and accuracy of the BBC’s coverage of science. Finally, Dr Sam Friedman, from City’s Department of Sociology, will reflect on the BBC’s Great British Class Survey and the relationship between academic research and the BBC.

The seminar will be of interest to the public, academia and journalists. All are welcome.

timetable:
9.30-10am arrivals and coffee

10am-10.20am Diane Coyle

10.20am-10.50am Dave O'Brien

10.50am-11.20 Q & A for Diane and Dave

11.20-1pm Panel session with Toby, Connie and Sam, including Q &A

To book a place contact Dave O'Brien [1]dave.obrien.1@city.ac.uk

The Rorty Discussion with Donald Davidson (2013-04-28 11:05)

In these videos two of the most influential American philosophers of the 20th century, Richard Rorty and Donald Davidson, discuss a range of pressing philosophical issues. One particularly interesting thing about this dialogue is how clearly it shows the degree to which Rorty, often decried rather unfairly as a postmodernist, was embedded within the tradition of analytic philosophy which he ultimately rejected.

Happiness and young people's aspirations: freedom or constraint? (2013-04-29 08:00)

It's strange (and slightly disturbing) to think that I've been researching young people's educational and employment choices and aspirations for over a decade now - from my doctorate, that looked at gender and the choice to study maths, to this current project. One thing I've noticed is how young people increasingly cite happiness as a rationale for their choices. This happiness is seen by those citing it, both to offer freedom and to guarantee the future. But in this post I want to question this by showing how happiness carries its own constraints.

I'll start with some data from around 2006, collected as part of the EU-funded PREMA project. This project, like my doctorate, explored gender and post-16 mathematics. It interviewed young people who had opted into maths and those who had opted out. These typical extracts from two White young women show how they take enjoyment as a guarantee of future success:
It’s important to do well in art and art history: ‘because I enjoy it, that’s why it’s important to me. ... Like I said I am not one to take something just because I’m good at it. ... You know it’s a difficult exam [art history] but because I’m really interested in it I’m sure I’ll do much better than I would otherwise ... I think it’s more important to do what you enjoy, that’s all.’

I’m kind of stumped at the minute I don’t, um, I don’t think I want to go to university because, I don’t really think that’s the thing for me. I think I want to take a gap year, and then and then, a job in something ... so I don’t really think that I’m taking those three subjects to get a career in that I just picked things that I enjoy ... and hopefully, that would be good for everything.

On one level young people choosing what gives them pleasure is something to celebrate – it’s certainly feels better than young people talking about being compelled to follow this or that path. And yet, I hope to show that enjoyment, pleasure and happiness aren’t as innocent as they first appear.

First, as Nikolas Rose has documented, in his book [2] Governing the Soul, we are compelled to make choices in pursuance ‘of meaning, responsibility, a sense of personal achievement, a maximized ‘quality of life’, and hence of work’ (p.104). In other words we have no choice but to choose:

We are obliged to make our lives meaningful by selecting our personal lifestyle from those offered to us in advertising, soap operas, and films, to make sense of our existence by exercising our freedom to choose in a market in which one simultaneously purchases products and services, and assembles, manages and markets oneself.

Ironically having to find fulfilment through our work usually means that we end up working longer hours and protesting less, which Karl Marx might have viewed as a clever ruse of capitalism to make us complicit in our own exploitation.

Second, talk about happiness and enjoyment was usually tied to talk about parents. Here’s one of the PREMA girls again:

[My parents] just tell me to do what I want to do. They want me to be happy I mean they didn’t, of course my dad wanted me to stay, my dad wanted and my mum wanted me to stay at school, and but they said ‘if you didn’t want to do that that’s your choice we’re, we’re going to support you whatever you want obviously. If you don’t want to do that then don’t do it, if you’re not going to be happy doing that then don’t do it because you’re not going to be happy, you’re not going to want to work as hard’. They just want me to do what I’m going to enjoy the most.

This happiness-and-parents-talk recurred among the focus groups with 16 year-olds that [3] Dawn Leslie, Rob Toplis and I carried out last Spring for an evaluation funded by [4] the Institute of Physics (IOP). Here again we can see a general sense of parents as caring and willing to ‘support me in whatever I do’. Here’s one girl and one boy (both Indian):

I think my parents have always just kind of said they will support me in whatever it is I do. My dad always makes jokes like I’m his retirement plan ... so my interest in what I kind of want to do has just been all me.
When we ... came here to get our reports like with the form tutor and [parents] would like talk about what we want to do in the future ... and see if it’s the right option for you.

Thus these young people’s selfhood and happiness were central to their educational and career choices.

[Sara Ahmed’s (2009)] work on conditional happiness is relevant here. As she writes, the parental desire for their child to do whatever makes them happy appears to ‘offer a certain kind of freedom, as if to say: ‘I don’t want you to be this, or to do that; I just want you to be or to do ‘whatever’ makes you happy.’ You could say that the ‘whatever’ seems to release us from the obligation of the ‘what’. The desire just for the child’s happiness seems to offer the freedom of a certain indifference to the content of a decision’ (p.8). However, happiness is ‘not what might happen, but what will happen if you live your life in the right way. That happiness can signal a ‘right way’ suggests that happiness is already given to certain objects’ (p.2). Ahmed focuses on marriage and children as such ‘happy objects’, but I think that we could apply this to careers – with university, and medicine and other professional careers figuring as ‘happy objects’ for many parents.

If the parents’ happiness is contingent on the child’s, since the parents ‘are already in place ... their happiness comes first’ (p.6): the child has an obligation to follow their parents’ ‘happy objects’. As one young man in the IOP research put it, ‘you know your parents are going to be happy with you getting the grades, that’s the motivation to see your parents happy’. The existence of happy-career-objects was most explicitly acknowledged by one young woman who chose the pseudonym Nora:

[At the Parents Careers Evening] you got to like know as well like what your parents, like want you, it’s just like, you know certain stations, my mum got like ‘okay, yeah let’s go there’. And there was some that my mum like didn’t actually really want me to go to coz, there’s this Asian thing [laughter] ... [So what did you find out there?] Like it depends on the things like. If they know it is a good job and everything they would be like happy to support you and everything. But like, you know like some things they are just like, ‘yeah that’s a good thing but try something else’.

Here Nora shows her awareness of what she calls ‘an Asian thing’ – that there are some careers that her parents would not be happy about.

The constraints of happiness, while they may push people towards different happy objects, act across gender, class, ethnicity. Happiness is not as happy-go-lucky as it may first appear. I’m looking forward to seeing how happiness figures both in the narratives of our case study celebrities and in the thinking around the futures of young people in our study when we carry out the individual interviews in the summer.

2. [http://www.amazon.co.uk/Governing-Soul-Shaping-Private-Self/dp/1853434442](http://www.amazon.co.uk/Governing-Soul-Shaping-Private-Self/dp/1853434442)
What are you doing tonight? I'm going out to commit some sociology... (2013-04-30 08:00)

In the wake of a [1]foiled terrorist attack in Canada, recent comments have offered a [2]fascinating insight into mindset of Canadian Prime Minister Stephen Harper:

Now is not the time to "commit sociology," Prime Minister Stephen Harper said Thursday in the wake of a foiled terrorist plot to attack a Via Rail passenger train that has some now musing about the causes of radicalization.

"In terms of radicalization, this is obviously something we follow. Our security agencies work with each other and with others around the globe to track people who are threats to Canada and to watch threats that may evolve. I think though, this is not a time to commit sociology," he said.

"Global terrorist attacks, people who have agendas of violence that are deep and abiding, are a threat to all the values that our society stands for and I don't think we want to convey any view to the Canadian public other than our utter condemnation of this kind of violence, contemplation of this violence and our utter determination through our laws and through our activities to do everything we can to prevent and counter it."

What I love about this is the manner in which the clumsy mode of expression ('committing sociology') works to foreground what is a much more pervasive attitude among the political class: explanation is construed as tantamount to justification. This is something I've talked with Les Back about in two podcasts about the UK riots ([3]first and [4]second) where, analogously to 'committing sociology', there was much public proclamation of this disorder being 'criminality pure and simple'. In each case, our political leaders display an orientation which is not simply a scepticism about 'committing sociology' but a desire to proclaim the indefensibility of sociological reasoning and performatively purge it from the public discussion.

But what is it they are seeking to purge? It is not per se academic sociology. I would suggest the hostility is directed towards a mode of sociological reasoning which is under attack within sociology: one that is causal, humanistic and explanatory. The mode of sociological reasoning which Harper feels compelled to preemptively dismiss is one which would avoids the merely descriptive (where would be the subversive challenge in that?) but rather seeks to offer causal explanations of how social action does not emerge ex nihilo, with the most 'extreme' acts constituting situated responses to social circumstances with a far broader reach than that of the actors themselves. The prohibition being enacted by Harper and others is on explanation rather than simply understanding: the
challenge is posed by a mode of reasoning that doesn’t merely aim to understand the other from their own point of view but instead explains how that point of view came into being within a shared social context, identifying the social facts *irreducible* to individuals which nonetheless have led particular individuals to violent action. There is a space of questions which is being shut down here but, crucially, it is also being shut down in a range of ways within sociology itself.

I think Harper’s request here is even simpler still and that’s ‘not to humanise the terrorists’: presumably to allow for a tough judicial response.

4.5 May

**Reflecting on the Riots (2013-05-01 08:00)**

In the first episode of the LSE British Politicast, we take a closer look at the Riots of 2011. This podcast looks back on the riots, presenting sociological and criminological perspectives on why they happened and what, if anything, can be learned from them. **Tim Newburn**, Professor of Criminology and Social Policy at the LSE, talks about his award winning research project [2]Reading the Riots, which aimed to examine in detail at who was involved, the extent and nature of their participation, and their accounts of what prompted or motivated their actions. **Les Back**, Professor of Sociology at Goldsmith’s College walks us through Catford, London, which along with the surrounding area of Lewisham, caught the attention of the national media when its multiple shops were raided and destroyed in the riots. He notes how today’s disaffected youth experience an “intense sense of the present”.

You can listen to the podcast [3]here.

The idea for this followed from the [4]UK Riots project I’ve been working on here on Sociological Imagination for the last year or so.

Paul Krugman and Joseph Stiglitz discuss the Economy and Inequality (2013-05-01 22:22)

The dawn of Cafe Society (2013-05-02 08:00)

I have for over 40 years written in cafes. In the early 1970s I scribbled in longhand, always having a notebook and biro about me somewhere. More recently, of course, I have carried a lightweight laptop around, several books chapters or papers on the go simultaneously. Still, however, I often link the writing of a particular piece with a particular location. As I can consume less coffee – I had a cup in front of me almost permanently through to my late 50s, regarding it as an occupational given – I have substituted the odd bar for a café, especially if working late. So this webpage will be about cafes and the odd bar or two.

What better place to begin than Trondheim. For several years I have been a visiting speaker at the Norwegian health sociology workshop, usually in mid- or late April. My host, Aksel Tjora, now Professor of Sociology in Trondheim, is as enamoured of cafes as I am, hence our current project to co-edit a book on Café Society. And naturally we had to discuss and commence this volume in Trondheim’s cafes (and bars). The photo here shows the two of us sitting out in the Trondheim sunshine getting the project underway.

In the course of my own research for the book I went beyond a time-bound fascination with Sartre and de Beauvoir and their acolytes working in Les Deux Maggots in Paris, or with writers, artists and would-be revolutionar-
ties talking and conspiring in Vienna’s famous and still-luxurious coffee houses (both of which I have sampled in my time). Instead, I turned to London’s earliest coffee drinkers. So these few lines give a context to the city in which my coffee consumption has been greatest by far.

Coffee was entirely unknown before the middle of the 15th century, when it was absorbed initially into the drinking habits of people in the Red Sea basin, infiltrating the Ottoman Empire in the 16th century. It was in the course of the 16th century that it came to Britain. The first English coffeehouse opened in Oxford in 1650. In 1652 an Armenian, or maybe Greek, immigrant from Smyrna, Pasqua Rosee, financed by his merchant employer Daniel Edwards, set up an establishment in St Michael’s Alley at Cornhill. The habit of coffee drinking and the emergence of the coffeehouse have fascinated Western historians ever since, not least because of their association with a civil society beyond monarchical reach. The period from the end of the 17th century through the ‘long’ 18th century saw the coffeehouse come to play a significant political role as a forum of debate and dissent independent of Parliament (see my blog on ‘Habermas, civil society and the public sphere’). By the start of the 19th century, concluding a longstanding rivalry, tea had been usurped by coffee. Coffee had even displaced ale as the national drink. Early in the 19th century, however, the coffeehouse underwent a protracted period of class-based retrenchment, from which it only re-emerged – as coffee prices fell – with the sponsorship of Arab, Turk, Greek, Sicilian and other émigrés in the course of the second half of the 19th century. London’s Soho, a magnet for émigrés, proved a key location. Although there were perhaps as many as 1,400 coffeehouses in the London area by the end of the 19th century, they had not regained their earlier political salience; the bourgeois coffeehouses had largely given way to the more lowly coffee room. The 20th century may have set off inauspiciously for the coffeehouse but following the success of milk bars from the 1930s, the coffee bar, seen initially as something of a ‘low-life’ resource, proved extremely popular in the 1950s. In 1945 Gaggia adapted the espresso machine to create a high pressure extraction that produced a thick level of crema; and by 1946 the cappuccino – christened for its resemblance to the colour of the robes worn by the capuchin monks – had been delivered: the unique selling point of the classic café had arrived. Coffee bars were rife in London’s Soho by the mid-1950s, the first, a classic Formica café called The Mocha at 29 Frith Street, being opened by Gina Lollabrigida in 1953. Rippling rapidly out of Soho, these cafes became magnets for political activists, jazz players, nouveau existentialists (although delivering ‘The Outsiders’ rather than ‘Ethics of Ambiguity’ or ‘Being and Nothingness’) and beatnik babyboomers, anticipating and feeding the cultural explosion of the 1960s. The 1970s witnessed a rise in unemployment as oil prices quadrupled and Britain’s manufacturing base halved, signalling a recession that left only a handful of diehard café groups untroubled: the Lyons’ Wimpy Bars (established in 1954) and the Golden Eggs (set up by Reggie Kray and others in the early 1960s). This proved a significant juncture, a transition from Fordist, industrial welfare-statist capitalism to post-Fordist, post-industrial, post-welfare-statist capitalism. By the onset of the Thatcherite 1980s cafes were struggling again, further challenged by a revitalised publ culture, burger conglomerates and a mushrooming of sandwich bars. Meanwhile things were stirring in the USA and a ‘speciality coffee industry’ was beginning to flex its corporate muscle. In the new consumerist landscape American cafes encouraged people to ‘hang out’, to idle away the afternoon, and to do so without paying very much. Surely only the Americans could market a ‘13-shot venti soy hazlenut vanilla cinnamon white mocha with extra white mocha and caramel’? Starbucks was founded in 1971, and its time had now come. But the story of Starbucks is for another occasion. This was originally posted on [2]Graham Scambler’s blog. You can follow his ongoing Cafe Society project [3]here.

"Painting primates" by Justin Goodman and Joseph Klett

Welcome to the first article in our visual sociology column! It introduces a less widely known area of sociology: the study of animals and society. Do check out the website of the [1]American Sociological Association’s Section on Animals and Society (and their [2]Facebook page) to learn more about this fascinating subfield of sociology.

The photograph, titled ‘Melody’ and taken in 2013, is part of Painting Primates: A collaboration between human and chimpanzee artists, a project by Justin Goodman and Joseph Klett. In the image, you can see the human artist working on the canvas which has already been painted on by his chimpanzee collaborator.

In this photograph, human artist Nathaniel Gold, author of the [3]Chimpanzee Manifesto, paints a portrait of a young chimpanzee named [4]Melody, a resident of Florida's Save the Chimps sanctuary. The piece is being painted on a canvas started by Cheetah, another resident of the sanctuary who was rescued from a laboratory and now chooses to paint as a form of behavioural enrichment.

The photo is part of research by Goodman and Klett documenting the [5]collaborative art project between Gold, [6]Cheetah and other chimpanzees that is being featured in the forthcoming art show, [7]"Equality & Individuality: Collaborative Art Between Primates." This article, [8]Painting with Chimps, introduces Gold’s work in more detail.

Justin Goodman ([10]justin.goodman@marymount.edu) is a lecturer in the Department of Sociology at Marymount University and a member of the leadership council of the American Sociological Association's Section on Animals and Society. Joseph Klett ([11]joseph.klett@yale.edu) is a PhD candidate in the Department of Sociology at Yale University.

Interested in Digital Sociology? (2013-05-04 08:00)

The British Sociological Association’s new Digital Sociology group aims:

- To identify and disseminate best practice in the use of digital tools by sociologists.
- To develop and promote specifically sociological modes of inquiry into digital media use.
- To develop and promote specifically sociological responses to ‘big data’, in terms of both secondary analysis and the broader methodological questions posed by this transformation in the information systems of late capitalist society.
- To develop and promote specifically sociological analyses of the broader personal, cultural and structural changes of the ‘digital turn’ in social life.
- To provide an open forum for exploration of what the digital turn entails for sociological practice, professional identity and the future of the discipline.

1. http://digitalsociology.org.uk/
Normativity is a concept with a contentious history. While most would accept its centrality to everyday human experience, the question of what exactly it is and how it is to be explained has rarely, if ever, commanded widespread agreement. In this review essay I will consider two important recent contributions to this debate, summarising and evaluating each in turn before attempting to draw out the important issues these books raise for work on normativity.

In Explaining the Normative, Stephen Turner seeks to unpick the messy intellectual history of normativity and, through doing so, offer an account of exactly where the debate about the notion has gone wrong and how it might be put right. He suggests that the pervasiveness of the issue within the contemporary philosophical landscape is a consequence of normativity’s historical position at the interface between philosophy and the social sciences. With the emergence of social science and the continual growth of its explanatory ambitions, many philosophers have sought to stake out a particular area of human life unamenable to causal explanation. Normativity represents ‘a more or less self-conscious attempt to take back ground lost to social-science explanation’ (Turner 2010: 5).

The first chapter of the book attempts to draw out the common features which philosophical accounts of normativity tend to share. While recognising the diversity which characterises normative arguments, he nonetheless claims the existence both of a strong family resemblance and an array of generic problems which afflict theories of normativity. Perhaps the most pertinent of these is what Turner calls the ‘does it matter problem’. The normativist must say that norms are ineliminable from explanation. Yet while ‘ordinarily the explanation of action involves beliefs’, the validity of those beliefs (i.e. the usual subject matter of the normativist) ‘is not explanatory in itself’ (Turner 2010: 13).

The second chapter of the book interrogates the explanatory conflict between philosophical and sociological accounts of normativity. Much of this discussion hinges on what explanatory role normativity can play and how this issue has generally been framed from within the two disciplinary perspectives. Normativists argue that normative facts cannot be explained in non-normative ways. One can point to the sociological fact of adherence to a norm but this in itself cannot constitute genuine normativity. Yet this sociological fact is nearly empirically equivalent and usually seems explanatorily adequate to account for why people do the things they do. So social scientists have tended to ask what role there actually is for normativity.

The third chapter takes a slightly different direction, exploring the normativity of law as a case study. Turner traces development in the thinking of the great 20th century legal theorist Hans Kelsen who spent a lifetime trying to establish the normativity of law. While some of this discussion might be difficult to follow for those unfamiliar with the subject area, it functions effectively as a case study, illustrating the generalised and abstract points drawn in the first two chapters at a much more substantive level of intellectual debate. The fourth chapter uses the practice of anthropological explanation to explore the normativity of concepts. The discussion centres around the work of Peter Winch, taken as a writer who typifies the normativist tradition within social science, for whom ‘social or natural explanations of essentially conceptual or normative subjects are always inadequate to account for the phenomena properly described in their full conceptual significance’ (Turner 2010: 110). The fifth chapter explores the possibility of grounding normativity in an account of collective intentionality. As Turner writes, ‘collective intentionality does appear to provide something objective, at least for a community or collectivity: a standard that is factual in some sense and at the same time normative’ (Turner 2010: 121). However he argues that such accounts fail because they presuppose ideas about collectivity which are themselves ungrounded. The sixth chapter draws together many of the ideas articulated earlier in the book and represents the fulfilment of Turner’s titular promise to explain the normative. The crux of his argument is this: why invoke a special domain of fact outside the stream of ordinary explanation when the things we would locate within it can be explained naturalistically? Intriguingly Turner draws on cognitive science and neuroscience to posit empathy as a naturalistic explanation for apparently normative phenomena. He argues that ‘the ‘norms’ that govern meaning, the meanings of terms applied to the world, may be readily understood in nonnormative terms: as empathic projections that are confirmed, sustained, corrected and
improved through interaction with others' (Turner 2010: 177-178). In doing so he cuts through the gordian knot at the heart of the debate about normativity: how to explain normative phenomena in a naturalistic way without explaining them away. Empathy has a 'natural process underlying it: both the capacity, actually employed, of emulating or following the thought of another and the feedback generated by actual social interaction'. As he points out, these are 'facts of social theory (and of neuroscience)' (Turner 2010: 205). While Turner makes a powerful case about the function of empathy, it would be a mistake to see this as the central feature of his book. What makes Explaining the Normative such an impressive book is the way that Turner's argument is grounded not just in a vast knowledge of historical debates but in the intellectual biographies of individual theorists who grappled with issues relating to normativity. For instance he traces the development of Kelsen's thought over his lifetime, showing how his engagement with the problems of normativity ultimately forced him to reject many of the characteristic normativist claims, leading him to see the notion of a ground for legal normativity as fundamentally fictitious. Similarly he shows how Winch's attempt to come to terms with the strange case of the Azande (who seemed to reason in ways which violated the norms of their own thought) led him to abandon the idea of internal relations: 'logical relations between concepts, or concepts and actions, which are intrinsically normative: they specify the standards of correctness and are conceptual rather than merely psychological and causal' (Turner 2010: 103). Instead Winch introduces the notion of 'intellectual habits', cognitive dispositions which we must understand in order to interpret other cultures. In doing so, he introduces a parallel natural order of dispositions and habits which is more than capable of doing the explanatory work necessary to explain the practice of the Azande. As with Kelsen, Winch's attempts to grapple with the normative ultimately led him away from normativism. Turner's approach to such cases makes the problem of normativity come alive, as the lived concern of real persons, rather than an abstract object of philosophical wrangling. The result is that his own positive account, relatively brief though it is, possesses much more force than it might if stated outright as a free-standing thesis. In the Causal Power of Social Structures, Dave Elder-Vass sets out to provide a comprehensive realist solution to the problem of structure and agency, encompassing a whole range of issues within a lively and multi-faceted discussion. While only one chapter of the book deals explicitly with normativity, it is considered in its entirety here because of how closely Elder-Vass's arguments hang together. The first three chapters of the book set out a realist account of emergence and causality. He advocates a relational theory of emergence which understands the causal powers of any given entity as a function of its internal relations over a range of ontological strata. As with other sections of the book, the conceptual clarity which Elder-Vass shows in his writing really illuminates a discussion which might otherwise have been technical and obscure. Furthermore while these chapters offer an admirable contribution to the philosophy of social science in their own right, they also stand as the theoretical architecture which Elder-Vass draws upon in articulating his social theory. Such logical consistency is evident throughout the book and it's one of the most impressive features of it. The fourth chapter offers an instructive overview of prevailing accounts of structure within social theory. Elder-Vass explores these accounts in terms of the questions of social ontology dealt with in the first few chapters before offering his own: 'to the extent that it refers to something genuinely causally effective, the concept of social structure refers to the causal powers of specific social groups' (Elder-Vass 2010: 86). As such, questions about structure are irrevocably linked with questions about agency for Elder-Vass. These are dealt with in the fifth chapter, where much of the discussion centres around an ambitious attempt to synthesise the work of Margaret Archer on reflexivity and Pierre Bourdieu on habitus into what Elder-Vass calls an 'emergentist theory of action'. Though neither theorist would likely accept the ensuing account, his reconciliation of deliberation and habitus is an intriguing proposition, which is thoughtfully grounded in human neurobiology. The sixth chapter is where Elder-Vass explores normativity through his notion of 'norm circles'. Elder-Vass argues that norm circles, a concept derived in part from Simmel's conception of social circles, have 'emergent causal powers to influence their members, by virtue of the ways in which those members interact in them' (Elder-Vass 2010: 122). These powers are founded on the commitment which members of the circle have to endorse and enforce practices which are congruent with the norm in question. Such a circle is centred around the collective intention which members have to support the norm and the individual behaviours which flow from this intention: 'They may support the norm by advocating the practice, by praising or rewarding those who enact it, by criticising or punishing those who fail to enact it, or even just by ostentatiously enacting it themselves. The consequence of such endorsement and enforcement is that the members of the circle know they face a systematic incentive to enact the practice.' (Elder-Vass 2010: 124). This is another example of the logical
consistency exhibited by the book’s arguments. As advocated in the meta-theory of social ontology elaborated in the first section of the book, Elder-Vass seeks to identify the causal power of specific social groups rather than subsuming such crucial ontological questions under a general account of normative social institutions. In this case he argues that specific norms circles, obtaining for particular norms, account for the normative causal influences which individuals experience in their daily lives. The relations between members of such a norm circle 'provide a generative mechanism that gives the norm circle an emergent property or causal power: the tendency to increase conformity by its members to the norm' (Turner and Elder Vass 2010: 124). Given the normative heterogeneity which is evident in contemporary society, every individual is embroiled in a whole array of intersecting norm circles such that they must 'sometimes negotiate a path that balances normative commitments that are in tension with each other' (Turner and Elder Vass 2010: 143). If followed through empirically, this insight about normative intersectionality transforms 'norm circles' from a seemingly quite formalistic concept into an extremely incisive one, able to gain considerable explanatory purchase upon our everyday experience of normativity. The seventh chapter extends this approach to social theorising in order to offer an account of organizations. As with other chapters, he proceeds through the identification of specific social groupings, the internal relations of which give rise to emergent powers at the level of the whole. One particularly intriguing aspect of this discussion is his use of Goffman's notion of 'interaction situations' as a way of founding his claims about social structure on an analysis of the experience of individual actors in concrete situations. The eighth chapter draws on the preceding work to articulate an analytical typology of social events, identifying both the ontological basis of each and the explanatory practice best suited to it. The conclusion aptly draws together the diverse strands of the book, restating them in a succinct and clear way which helps situate them within their wider intellectual context. In fact Elder-Vass exhibits this skill throughout, with a similar review of his arguments at the end of each chapter. This goes hand-in-hand with another defining feature of the book, noted earlier, which is the logical consistency evident throughout. It is an impressive feat to cover so much ground within a single text and yet still maintain such interdependence between arguments, as well as a striking unity of intellectual purpose. Explaining the Normative and the Causal Powers of Social Structure are two important contributions to research about normativity. Superficially they seem quite different, with the former’s focus on the history of philosophical thought and the latter’s concern with social ontology. However one important aspect they both share is the central role which the findings of neuroscience play in their conclusions. Turner looks to the discovery of ‘mirror neurons’, which activate both when we perform an action and when we see another perform the same action, as a way of explaining many of the phenomena which normativists have tended to claim as their own. This inbuilt capacity to understand the behaviour of others transforms empathy from ‘an intellectual process bound up with the error-prone folk language of intentionality’ into a ‘fact of science with a discoverable set of features located in specific neuronal processes’ (Turner 2010: 176). The conclusion Turner draws is that the ‘norms’ that govern meaning, the meanings of terms applied to the world, may be readily understood in nonnormative terms: as empathic projections that are confirmed, sustained, corrected and improved through interaction with others.’ (Turner 2010: 177-178). Similarly Elder-Vass invokes neuroplasticity, the manner in which the networks of neurons in our brain are conditioned and configured by experience, in order to explain the processes of emergence through which our capacity for action results from the biological without being reducible to it. Though these are different ideas, utilised by each theorist for a different purpose, a similar direction of thought can be seen in both accounts. As Elder-Vass puts it ‘we can explain the powers of human individuals without explaining them away’ (Elder-Vass 2010: 93). This is also Turner’s great insight, although he does not express it quite so succinctly. What Explaining the Normative does do however is foreground the way in which underlying human concerns and cross-disciplinary disputes have shaped the historical debate about normativity. On one side the normativists have sought to defend the distinctiveness of the human against the expansion of naturalistic explanation. On the other naturalists have tried to causally explain human experience, against the mystifications of transcendental philosophy, though have too often explained it away. Taken together these two books illustrate powerfully that the dichotomies underlying this debate have been too starkly drawn. It is possible to defend the distinctiveness of the human without invoking the mysteries of a transcendental domain undergirding the aspects of human experience which have been subsumed under the banner of normativity. In fact it is only through rejecting the terms of this dichotomy, with the causal on side and the normative on the other, that we might begin to fully understand what it is to be human.
A very interesting and incisive review. I am not sure, however, why it is so imperative to deny the transcendental in the explication of normativity. Why not concede it? One cannot disprove it, after all.

I don’t think that’s an entirely convincing argument for it.

I did not say it was. But by assuming from the start that the transcendental is to be avoided, the burden of proof is upon you.

Why? I’m actually much more sympathetic to the idea of the transcendental than I was when I wrote that, albeit defined rather idiosyncratically. But I just don’t see why the burden of proof is on the person seeking to avoid positing transcendental factors in their account. It’s like saying that a moral philosophy that doesn’t posit God has to devote time & energy to justifying why it doesn’t.

I am glad about your open-mindedness. The reason why the burden is on you is that ordinary intuition tends to support a non-naturalistic account of the ultimate source of normativity. And I do think that any credible naturalistic moral theory would have to justify itself in the way you dismiss.

I’m not being deliberately obtuse - I genuinely don’t understand why that is the case.

Say you wanted to write a pure Idealist or Subjectivist treatise. At some point you’d have to explain why most people believe, au contraire, in the reality of an independent, external world. I think that it is the same case for works on normativity.

The difference between writing as an idealist or subjectivist (and carrying the burden of proof re the external world) and then writing as a naturalist is as follows: everyone believes in the same external world, but supernatural beliefs vary. There are some good attempts at explaining this variation naturalistically (see Pascal Boyer, Dan Sperber etc.). I’m not convinced that ‘ordinary intuition tends to support a non-naturalistic account of the ultimate source of normativity.’ How do you know this? (Please don’t say introspection, for goodness sake...) One thing the review fails to point out is that the concept "normativity" in fact has a very short history, as well as a contentious one (see line 1 above). I don’t think you’ll find any references to ‘normativity’ before the 1920s, and its only with the growth of a particular kind of technical (and arguably vacuous) moral philosophy in English speaking universities from the 1950s onwards that anybody has tried to place any real weight on it at all. We do not need it, and we need actively to attack it whenever it is used (for example by Rawls) to justify abhorrent social arrangements which it is in many of our interests to attempt to dismantle.

Dan I thought I was going to be in agreement with you when I first read Alistair’s reply. Sadly not... "We do not need it, and we need actively to attack it whenever it is used (for example by Rawls) to justify abhorrent social arrangements which it is in many of our interests to attempt to dismantle." I’m sure you’re astute enough to recognise the self-reference problem inherent in saying that we need "actively to attack" normativity talk when it is used "to justify abhorrent social arrangements" - so I assume you have an extremely narrow definition of what normativity is or there’s some point that I’ve failed to grasp. Perhaps
part of the issue here is the conflation of philosophical and sociological accounts of normativity? I can perfectly understand scepticism towards the former (though I don’t share it, I think it’s quietism at its intellectual laziest) but I find scepticism towards the latter bewildering. Perhaps it’s better if we talk about ‘normativity’ in the philosophical sense and ‘evaluation’ in the sociological sense? Evaluative orientations cut throughout social life and I can take seriously a consistent scepticism which treats all evaluative claims expressively but a scepticism that repudiates any attempt to discuss foundations to evaluation and yet wishes to retain political commitment to overturning ‘abhorent’ circumstances seems obviously contradictory to me.

Sociological Imagination (2014-08-07 14:32:30)
Or to put it another way: there’s vast and longstanding traditions of empirical research into normativity (in the sociological sense) in both psychology and sociology. There probably are in other social scientific disciplines as well. I read what you’re saying as an argument that understands itself as attacking philosophical hubris but, from my point of view, it hubristically dismisses vast swathes of empirical social science on what are essentially a priori grounds.

Dan Fairbrother (2014-08-09 14:02:46)
When you say... “I think it’s quietism at its intellectual laziest” to be sceptical about philosophical normativity, I can’t help thinking it might have been more intellectually proactive to tell me why. Which research have I ignored? (I’m not sure I’ve done anything “a priori”.) I’m not sure what the contradiction you’re charging me with is supposed to be. Is it (a) having political views and being sceptical about philosophical uses of the concept “normativity”, (b) having political views and being sceptical about sociological uses of the concept (which I never said I was, but I might be), or (c) a combination of the first two? If it’s (a), then I think the answer is pretty straightforward (if it’s (b) or (c), I don’t understand the point). Why - ? - can’t I accept that the grounds of my political views are likely to be at least partly if not wholly determined by considerations much less like Rawls’ (i.e. what would I say behind the veil of ignorance) and more like these: what side I was born into, what opportunities I have in virtue of my social position, whether my family were killed by British, American, Israeli, Palestinian, or ISIS explosives, what I’ve got to lose or gain, who my friends are, how hungry I am, how educated I am etc. etc. If politics is about these things, the “normative” becomes a rhetorical arena, the continuations of Hobbesian/Machiavellian/Nietzschean (I/Weberian?) politics by other means. Being “right” is only a part of winning, and it is in the interests of those currently dominant to sustain the idea that there is any such thing as “right” at all. The general acceptance of a conservative view of its content helps keep people in their place.

Sociological Imagination (2014-08-11 15:16:14)
I’m talking about large swathes of research in moral psychology, the sociology of morality and the sociology of religion - I’m not saying you ‘ignore’ them, I’m saying that you render them methodologically untenable and this is tantamount to dismissal. I don’t think your political views are “determined” by anything but that’s a pedantic point. There’s a large gap between “the grounds” of your political views being “partly” and being “wholly” shaped by social and political circumstances. I have absolutely no problem with the former view, it’s the latter I find problematic. To insist on the latter shuts down a vast space of empirical and conceptual questions that I’m much more interested in opening up. I’m not denying the ‘rhetorical arena’, I’m only suggesting that we lose sight of an important dimension to its reproduction and/or transformation if we don’t take experience of values seriously.

Alistair Duff (2014-08-04 21:34:43)
Thank you very much for taking the trouble to join this debate that I seem to have initiated. Hmm. A few points. Your first point is a very good one. The situations are indeed structurally different in the way you identify. Nevertheless, I think my contention holds that a treatise on moral theory must engage with the widespread belief in normativity’s non-naturalness. My basis for this? Most people believe in God; any poll will tell you that. Relatedly, most people experience moral imperatives as somehow transcendent. Introspection is part of this, to be sure. Nothing wrong with that. Your final point I struggled to understand. Rawls is the greatest moral and political theorist since T. H. Green and J. S. Mill. Part of that greatness was precisely his restoration of normative philosophy. The content of his political philosophy–social democracy–was also, I think, largely correct, and was certainly not destructive of most people’s interests.
Dan Fairbrother (2014-08-06 21:13:47)
Rawls we can agree to disagree on... I don’t think it’s as simple as polls about theism or picking up on transcendental sounding language in moral-phenomenological reports. The relation between avowed beliefs and actual behaviour is complicated. (Strangely, how many people go to church and *don’t* believe in a god?) Theism varies and the variation can be explained (fairly convincingly, but it’s always going to be a work in progress). People’s use of a “transcendental” vocabulary can mean all sorts of things about their beliefs or feelings depending on the context - not least that they don’t know how to explain or justify them. The point is that some people (mainly anthropologists, it would seem) do “engage” the great variation in odd-sounding beliefs, practices, aesthetic preferences, etc., and do a fairly good job of explaining them naturalistically; this doesn’t mean that they need take a different approach when approaching that strange tribe, the normative philosophers. I’ll accept the burden of proof on these things if someone will lend me a unicorn to carry it. When you said above (I missed this the first time): "And I do think that any credible naturalistic moral theory would have to justify itself in the way you dismiss", you seem to be suggesting that any of us want to engage in something called 'moral theory'. But I don’t see why any of us should, so, putting unicorn’s aside for a minute, perhaps there’s no real question of the burden of "proof".

Sociological Imagination (2014-08-07 14:36:54)
I think there are strong prima facie grounds to assume that transcendental vocabulary implies transcendental commitments! There are many cases where this won’t be true but I don’t see the desirability of replacing a first person vocabulary with a third person one unless there’s some extenuating factor which suggests this is necessary to preserve the adequacy of the explanation.

Dan Fairbrother (2014-08-09 13:26:50)
When you say "I think there are strong prima facie grounds to assume that transcendental vocabulary implies transcendental commitments!", I take it that the exclamation mark is supposed to suggest that this is something obvious that I have missed. However, I didn’t talk about "transcendental vocabulary", but "transcendental sounding language", for precisely the reason that the empirical jury is always out as to whether and to what extent the behaviour, including linguistic behaviour, we are faced with is most usefully described as "transcendental". Philosophers are often very quick at this stage because they want to recruit intuitions to their cause, but sociologists and anthropologists should take professional pride in avoiding this. So-called "prima facie grounds" are useless here - there are only better and worse overall explanations. When you say... "There are many cases where this won’t be true but I don’t see the desirability of replacing a first person vocabulary with a third person one unless there’s some extenuating factor which suggests this is necessary to preserve the adequacy of the explanation" ...I’m afraid I have no idea what this sentence is supposed to mean.

Sociological Imagination (2014-08-11 15:05:15)
"When you say... "There are many cases where this won’t be true but I don’t see the desirability of replacing a first person vocabulary with a third person one unless there’s some extenuating factor which suggests this is necessary to preserve the adequacy of the explanation" ...I’m afraid I have no idea what this sentence is supposed to mean." I’m saying we should assume people mean what they say unless we have a reason not to. My objection to what you’re saying is both methodological and ethical. "I didn’t talk about "transcendental vocabulary", but "transcendental sounding language", for precisely the reason that the empirical jury is always out as to whether and to what extent the behaviour, including linguistic behaviour, we are faced with is most usefully described as “transcendental”." I suspect we’re talking at crossed purposes here. All I was originally trying to claim was a point about moral phenomenology and normative beliefs - in so far as people use “transcendental sounding language” to describe and explain their experience of such matters, we should resist the injunction to explain this away, which is what I take you to be doing in effect. Perhaps wrongly, it’s hard not to get the feeling we’re all talking at crossed purposes.

Dan Fairbrother (2014-08-11 20:52:13)
That’s the problem with you idealists, you’ll always think it’s a matter of mere misunderstanding! I think this debate needs to become either a serious philosophy of social science argument (where we’d start with Weber’s ‘Objectivity’ essay, naturally), a discussion of some particular cases (where we would *start* with someone like Runciman), or just stop. It’s been fun.
Sociological Imagination (2014-08-18 14:06:18)
Well I’m tempted to say that I think you can’t adequately explain the politics of the religious right in America without admitting the causal power of ideas (which in my terms is what this disagreement basically comes down) but I should probably reread my thesis instead given my viva is impending and I’ve basically forgotten what my PhD was about...

Alistair Duff (2014-08-10 18:17:54)
I would quite like to challenge you on Rawls a bit further, but will leave that aside if you wish. My points on normativity too simplistic? Easy to say that. Easy too to liken belief in God, or the transcendent more generally, as on a level with belief in unicorns, but a tad Dawkinseque. Shall I quote Otto, Weil or Tillich, say, instead? Moreover, you seem to me to be assuming precisely what I am trying to problematise, when you say that anthropologists can explain away naturalistically the idea of the normative. As for SocIm’s observation about legitimacy of first-person perspective: Like! If that is intuitionism, fine.

Dan Fairbrother (2014-08-10 20:47:41)
I didn’t say your points were "simplistic", Alistair, I said that it’s not as "simple" as taking polls or reading off what to you and many others seems to be transcendental sounding language. I certainly didn’t mean this in an ad hominem way. It’s not as "simple" as polls etc. because these polls - these data - themselves raise a complex range of options. Dawkins-esque? Only if Dawkins is Nietzsche-esque, or Hume-esque, or Lucretius-esque... Dawkins has been useful in some ways in terms of public debate, but I understand his gene-centred evolutionary theory is a bit hopeless (John Dupre is good on this in "Darwin's Legacy"...) But all of this misses the point. I'm not suggesting that I have a knockdown argument against the people I think are deluded (and I do think they are). The original dispute was about the burden of proof; the minimal conclusion I am arguing for is that there is no burden of proof. The project of naturalistic explanation does not commit to providing a moral (or indeed a political) theory. It clearly doesn’t need to accept anything as genuinely normative (in the "normativist" way) to succeed on its own terms. If someone then wishes to criticise a particular naturalistic explanation in detail, then if part of this criticism involves positing something non-natural (like a unicorn, or a god, or a somehow-universally-binding-moral-principle) then this person may carry the burden of proof to this limited extent: if they want to convince the naturalist. But I don’t see any *general* requirement that the naturalist and the non-naturalist should have anything constructive to say to each other at all.

Alistair Duff (2014-08-11 09:41:52)
Thank you for your clarifications in para 1; much appreciated. Two points: I think to put belief in unicorns on a level with belief in God (or the transcendent, numinous, etc, more generally) is unfair, and you must know this. Dawkins knows this too, but continues to belittle theism in that way. He has, I think, done a disservice to what Rawls would call reflective equilibrium by making fundamental discussion less civil. Nietzsche poisoned debate in his day in the same way, not sure about Lucretius, Hume was better-mannered. Thanks though for your point about his gene ideas. May pursue after retirement! On your second para. I think a comprehensive account of normativity is obliged to account for its full phenomenology, including the sense for most people, intuitionistically, of its transcendent quality. Can I perhaps recommend that you look at my book A Normative Theory of the Information Society, reviewed this week (p. 45) in Times Higher Education. I argue that the normative belongs to the right, but originates in the good. If you don't have time, no problem, but perhaps we should park the discussion and agree to differ?

Thank you for the reference to your book (I’m afraid I don’t have £30 at the moment, but it might crop up in the library...). Certainly, let’s stop - for this little debate to be worth continuing, we’d need to start talking about specific cases and specific explanations. I’m not sure civility is always a desirable quality in public debate (precisely because I don’t think there’s anything like ‘reflective equilibrium’ or ‘ideal speech’ to do a disservice [odd word that, in the history of rhetoric...] to). Civility (or the ‘shallow husk of politeness’ as I think Westermarck called it) is just one among many styles of rhetoric, the function of which varies historically. (Was Hume considered civil in his day? Not by all, for sure. As for Nietzsche: one man’s poison...) I don’t think it’s unfair (or indeed ‘easy’ as you put it above) to put belief in unicorns in the same category as belief in a god. It actually requires a fairly sophisticated analysis to see that they’re both violations of expectations associated with ordinary ontological categories (PERSON and ANIMAL). We should certainly try to explain the difference in their popularity: why does
the ‘god’ concept seem to have spread better than ‘unicorn’? There are various reasons why this could be, not least that a counter-intuitively powerful person, as opposed to a counter-physiologically endowed animal, is much more useful for imposing and sustaining particular kinds of social arrangement. People are interested in ideas that more obviously relate to themselves, and there’s a greater incentive for imaginative people to invent concepts that help them manipulate this. (I’m ripping-off Boyer a bit here.) This begins to “to account for [the] full phenomenology” of one particular “normative”, “transcendental” concept: what it’s like to have the concept and be involved in the forms of life associated with it is exactly what explains its cultural survival.

Alistair Duff (2014-08-11 16:57:01)
I think we must agree to differ on (a) the form of debate generally (I think you are badly mistaken to think that civility is not essential in public debate, and (b) the content of our specific debate (I remain of the view that to equate belief in God or the transcendent generally with the absurd belief in unicorns, is palpably unfair, as well as false). Maybe you could get your library to get my book, and we could revisit the problem of normativity at a later date. (I sent my author copies to Jurgen Habermas, Julian Assange, me mum, etc.)

I remain unclear about quite why you think it’s ‘unfair’ or ‘false’ to analyse similar psychological processes (with radically different social outcomes) in the same way. And the same goes for your insistence on ‘civility’. You’ve not argued for either of these thoughts (which is fine, in one way, but it doesn’t give me any reason to share them). But yes, let’s stop.

I find it difficult to know what to do with the fact that I first watched this video on an iPad mini and am now writing this post on a MacBook Air. The company also apparently makes the Kindle, Wii and Play Station 3. When I was younger and had more radical politics (sociology killed my anarchism) I was critical of consumer boycotts on the grounds that they were anti-corporate rather than anti-capitalist, drawing a boundary between ‘bad’ MNCs
and good everything else in such a way as to preclude critique of the economic relations underlying either side of the dichotomy and impede collective action to transform that nexus. Whereas now it seems obvious to me that corporations like Apple in particular are susceptible to public pressure, albeit in a profoundly shallow and uneven way. On the other hand, I really do like my iPad mini and MacBook Air (and iMac and iPhone, sigh...) a lot - so I'll respond to the moral inertia provoked by this video in the time honoured fashion of academics everywhere: I'll negotiate my own unease by intellectualising it, displacing the moment of action by instead pointing to how fascinatingly, though disturbingly, neo-feudal the world of Foxconn appears to be:

Foxconn's largest factory worldwide is in Longhua, Shenzhen, where hundreds of thousands of workers (varying counts include 230,000,[5][18] 300,000,[6][20] and 450,000,[7][21]) are employed at the Longhua Science & Technology Park, a walled campus[8][6] sometimes referred to as "Foxconn City"[9][22] or "iPod City".[10][23] Covering about 1.16 square miles (3 square km),[11][24] it includes 15 factories,[12][22] worker dormitories, a swimming pool,[13][25] a fire brigade,[14][6] its own television network (Foxconn TV),[15][6] and a city centre with a grocery store, bank, restaurants, bookstore, and hospital.[16][6] While some workers live in surrounding towns and villages, others live and work inside the complex;[17][26] a quarter of the employees live in the dormitories, and many of them work up to 12 hours a day for 6 days each week.[18][18] Another of Foxconn's factory "cities" is Zhengzhou Technology Park in Zhengzhou, Henan province, where it is reported 120,000 employees work.[21][27]

'Cultural Value and the Contradictions of Modern Conservatism' by Simon Ravenscroft - The culturalvalue Initiative (2013-06-02 00:39:41)

[...] of the time. If in the past religion and then science were examples of those powerful ideas, Michaels argues that, today, the dominant narrative is economic in nature: we live, today, in an economic monoculture, where all the important debates are taking place [...]
Alongside this programme time will be allocated for networking opportunities over lunch and during an optional evening social event. There will also be an opportunity for feeding back to representatives of the BSA about the ways in which the organisation could help and support the teaching of sociology in schools and colleges more fully.

Confirmed Speakers:

- **Prof John Holmwood** - Nottingham University
- **Roger Hopkins-Burke** - Author, An Introduction to Criminological Theory, principle lecturer, NTU
- **Dr Jason Pandaya-Wood** - Head of Sociology, NTU
- **Dr Emma Head** - School of Sociology and Criminology, Keele University
- **Dr Mark Carrigan** - Department of Sociology, Warwick University
- **Helen Jones** - Higher Education Academy
- **Dr Alex Channon** - School of Education, University of Greenwich
- **Dr Julie Scott Jones & Dr John Goldring** - Department of Sociology, Manchester Metropolitan University
- **Dr Christopher R. Matthews** - School of Social Sciences, NTU

**CALL FOR MICRO-LECTURES**

A number of time slots are to be filled by post-grad students and early career researchers eager to come and present their work. There is no limitation on the empirical, methodological or theoretical origins of this work, but presenters will be asked to briefly consider how their research might be incorporated into the teaching of sociology. Conference fees will be waived for those selected to speak.

Do you want to: Enhance your profile? Keep sociology teachers up-to date? Increase sociology's wider knowledge base?

Come and deliver a micro-lecture (about 15 minutes) on your research to a group of committed sociology teachers who are eager to discover what the new empirical insights are showing. [1]Find out more >>
COSTS

Delegate fees (lunch will be provided, along with tea & coffee throughout the day):

• BSA Member: £40

• BSA Teaching Group Member: £50

• Non-member: £60

BOOK NOW!

Recognising Diversity? Gender and Sexual Equalities In Principle and Practice (2013-05-07 08:00)

Recognising Diversity?: Gender and Sexual Equalities In Principle and Practice

20th & 21st June: Centre for Interdisciplinary Gender Studies, University of Leeds

Recognising Diversity?: Gender and Sexual Equalities In Principle and Practice marks the end of the research project 'Recognising Diversity?: Equalities In Principle and Practice', funded by the Economic and Social Research Council (ESRC) (PI. Dr. Sally Hines, Centre for Interdisciplinary Gender Studies (CIGS), University of Leeds). The project was designed to provide knowledge transfer of Sally Hines’ previous research which explored understandings, meanings and significance of the UK Gender Recognition Act (GRA). Set within the context of an increasing legal, policy and political focus on 'equality' and 'diversity,' and a raft of other legal and policy shifts around gender and sexuality, the GRA promised increased rights and recognition for trans people. Yet, the project found that whilst some trans people were afforded increased levels of citizenship, others were further marginalised. Fuelled by 'rights based' claims for inclusion founded on notions of 'sameness', findings from the project suggested that equality and diversity agendas fail to account for 'difference'. This 2 Day Conference explores these issues in relation to UK gender and sexualities equalities and diversities more broadly. In keeping with the aims of the knowledge transfer award, it seeks to bring academics working around equalities and diversities together with policy makers, activists, journalists, artists, and campaigning/support organisations to explore the significance of recent UK cultural, social, political, legal, and policy shifts which address gender and sexuality. The conference will centre the importance of dialogue both across academic disciplines and between academic and non-academic members and user group communities.

Invited speakers will speak to the following themes across the 2 days:

- Community Organising * Policy Change and Resistance
- Intimate Diversities * Intersecting Inequalities
- Cultural Politics * Queer(y)ing Theory and Activism
- Resisting Liberation Narratives * Policies and Practices of Care

Serge Nicholson and Laura Bridgeman will present a reading from There Is No Word For It: Trans MANgina Monologues (Hot Pencil Press) following the Conference Dinner on the first evening. Serge will also introduce his film Trans Guys Are..., which will be screened on day two of the conference. LGBT Youth Theatre Group Side By Side will perform on the second day of the conference. The conference will close with a screening of Jason Elvis Barker’s film Millennium Man and a talk/Q & A with Jason.

For full details of speakers and conference timetable see the Conference Programme at: [1]http://www.gender-studies.leeds.ac.uk/ Registration: Please follow the link below for online registration: [2]http://store.leeds.ac.uk/browse/product.asp?catid=78 & modid=1 &compid=1 The deadline for registration is Friday 7th June. Travel, Conference Venue, Conference Dinner, and Accommodation The conference will be held in The Carriage Works,
which is located at No. 3 Millennium Square in the centre of Leeds. The postcode is LS2 3AD. The venue is a few minutes’ walk from the train station and there are city center car parking facilities. There is a wide range of nearby accommodation to suit different budgets. The conference dinner will be held in the nearby University of Leeds Refectory and delegates will be guided to the dinner venue from the conference.

Conference Contacts: Sally Hines: Email: s.hines@leeds.ac.uk; Stefanie Boulila: Email: s.c.boulila@leeds.ac.uk

Conference Fees:
- 2 Day Waged: £150 (including conference dinner)
- 2 Day Unwaged/Student: £50 (including conference dinner)
- Thursday 1 Day Waged: £100 (including conference dinner)
- Thursday 1 Day Unwaged/Student: £30 (including conference dinner)
- Friday 1 Day Waged: £80
- Friday 1 Day Unwaged: £25

Using social media for student recruitment isn’t going to work if everything goes through the comms office (2013-05-08 08:00)

This interesting article in the Guardian Higher Ed reports on empirical data which supports something I’ve believed for quite some time: communications offices are, at least in some respects, ill suited to using social media for student recruitment. Their role as an official channel and concern to manage the corporate brand leaves them tending towards sanitised offerings which have little impact on the decision making of potential students:

[2]Our research, conducted with online student community [3]The Student Room, surveyed over 300 potential and current students about what information sources or channels influenced their choice of university. We found that although 65 % of students use social media channels several times a day, students rated universities’ social media presence as less influential and less trustworthy than more traditional sources such as prospectuses or open days.

Prospective students are keen to engage with their university through social media channels, with one fifth of students saying that universities don’t make enough use of social media in recruitment, which meant they currently didn’t expect or look for information there.

What’s more, many of the students we surveyed were clueless that their chosen university even had a Twitter or Facebook account – showing that there is a need for universities to ensure their social media presence is clearly signposted to attract the widest audience.

There is also a question to be asked about what kind of content is relevant for social media profiles. We found that fewer than one in five students were influenced by university Twitter accounts and only one in four were influenced by Facebook pages or blogs.

Comments we received from students included, “they do not talk about the things we need to know” and “I don’t find enough useful information that relates to me”. This suggests that many universities are using social media to try and engage with too many stakeholder groups at once, and consequently not being tailored enough about the updates they are sending out.

So how else can social media be used for student recruitment? Facilitating digital activity at the departmental level would mean that the structures which will overwhelmingly shape the day-to-day academic experiences of students are rendered open in a way that they previously have not been. Putting resources into encouraging undergraduates, postgraduates and staff to blog about their work and their shared working life within a department would paint a publicly accessible picture of what it will be like to be part of that department. Taking photos and recording audio from events, using a Twitter feed to curate the public life of the department and being open to online engagement with potential students would, I’m convinced, potentially have a much greater impact on the decision making of students than official messages which are centrally produced. The expansion of marketing/communications in higher education is happening at the same time as many ensuing professional outputs have a declining purchase on the decision making of the target demographic. This is a specific instance of a much broader point: doing communications well in contemporary higher education demands so much more than just hiring new comms staff.
and giving the comms department more resources.

Andy Coverdale (2013-05-08 18:09:15)
Some good points here Mark. I agree, many students are fairly smart in sussing out glossy promos and would welcome
authentic / localised perspectives. Though culturally, increasingly globally-aware recruitment plays it safe. Basically, it's easier
to extend social media use through well-rehearsed marketing / comms. practices than invest the time and effort in the type
of activities you describe (which might require challenging dept.-level cultures). And unfortunately, unless the "resources"
you suggest (somehow) legitimise these activities by integrating them into assigned tasks and role / curriculum requirements,
they'll often just be seen as extra workload.

Sociological Imagination (2013-05-09 20:12:09)
I sort of agree - however if, as seems likely, UK higher ed sees a progressive transfer of resources to communications and
marketing functions then, if only a small quantity of this were moved into departmental budgets the money would be available
for quite a bit of part time PhD work...

Andy Coverdale (2013-05-09 20:58:16)
Perhaps it just needs re-packaging as outreach / impact :)

One Man's Story (Visual Sociology #002) (2013-05-10 08:00)

"Taos Alone" (1982) Photo by Michael V. Miller, University of Texas at San Antonio.

Taos alone

by Michael V. Miller
The title of this work is "Taos alone".

Shot by Michael V. Miller with telephoto lens on Pentax 35 mm SLR at side of mission church in Taos Pueblo, northern New Mexico, June, 1982. He showed the image this semester in class, and asked students what they thought it suggested. Their common reaction was that the subject conveyed a strong sense of alienation and isolation. As one student noted in a post on the class wiki: "It depicts so many emotions, yet tells the viewer nothing about the man's story. Leaves us guessing." Thirty years later, Miller reports he still regrets not approaching the man to get "his story," and that the image speaks also to the alienation and isolation of the picture-taker at that time in his life.

Michael Miller is a sociologist at the University of Texas at San Antonio, where he enjoys learning and sharing about all things related to visual sociology. He advocates a systems approach to the instructional integration of multimedia, and his most recent work examines online video clip repositories as a growing instructional tool. Please feel free to contact him at michael.miller@utsa.edu.

Bulgarian elections and (banned) film "Baklava" (2013-05-11 01:15)

[1]Baklava is a recent Bulgarian film which was banned as soon as it was released a couple of years ago due to allegations of content unsuitable for the screen, including violence, indecency and child pornography. Allegations aside, the film presents a bleak, but compelling and in some ways strikingly realistic version of contemporary Bulgarian reality, and it is a pity that it has not been available to the public. The film is even more heavy on metaphor than it is on shocking scenes - it seems to fit under the "magic realism" tradition in Bulgarian literature and film. Good cinematography and music, too.

Bulgarian elections are taking place this Sunday, 12 May, after resignation of PM Boyko Borissov in February this year. The film is available online only today, 11 May, from 00:00 to 23.59 during what Bulgarian law stipulates as the "day for reflection" prior to the election day. While watching it, I thought that more people, Bulgarians as well as non-Bulgarians, should watch it - so I am sharing it here.

"The film tells the story of brothers Jorre and Kotze who travel around the country in search for a treasure hidden by their deceased grandmother. Jorre is 26, wears black and listens to drum and base. Kotze is 9, wears a silver chain on his neck, steals, fights and listens to chalga. Despite the differences between them, the brothers set off on a journey all over Bulgaria. On the way, they encounter Bulgarian reality: crazy, at times scary, and shrouded in the country's political mindlessness".

Watch, download, share, and don't be shocked - before someone takes it down. Don't show it to your children and conservative or easily shocked relatives.
P.S. **Baklava** was filmed in the Idle Ethnographer’s home town.

Alex Trotiuc (2016-11-18 15:24:31)

Explanations of the Presidential election results in Bulgaria in 2016 [http://mrp-eurasia.com/download_files/Explanations_of_the_Presidential_election_results_in_Bulgaria_in_2016.docx](http://mrp-eurasia.com/download_files/Explanations_of_the_Presidential_election_results_in_Bulgaria_in_2016.docx) Today MRP-EURASIA (executive office in Bulgaria) invites to a public opinion poll (Omnibus) in Bulgaria following the results of the presidential elections November, 2016. Key questions that are waiting for a response (Omnibus participants can add their questions): 1. What are the key factors have played the main role in the results of candidates? 2. What rating are pre-election promises of each candidate (weighing of the electoral advantages)? 3. What are the Bulgarian voters primary estimations in relation to the quality, credibility and professionalism of the election campaign for the President of Bulgaria (will be estimate separately the opinions voters of main concurrents)? 4. What influence on the outcome of the presidential elections in Bulgaria could have Russia, the United States and the European Union (Romania separately)? 5. What are the key factors of influence on the outcome of the elections in Moldova can be migrated (used) for elections in East European and Balkan countries? 6. What kind of correlation are traced between Bulgaria and Moldova on the presidential election, where have won pro-Russian candidates? 7. What are the key promises of the candidates could consolidate the Bulgarian society towards overcoming socio-economic crisis, the crisis of confidence to the supreme power, the crisis in belief to the democratic values, credibility crisis to the "Western partners”? 8. How will the policy of Bulgaria towards the "Anti-Russian sanctions of the European Union and the United States”? 9. How to change Bulgaria's policy towards neighboring Greece, Turkey, Romania, Serbia (as well as Russia and Ukraine)? 12. How to change the policy of Bulgaria in relation to the projects NATO (including concerning missile defense system)? 13. What are the prospects of the new Bulgarian President party in the next parliamentary election? 14. How the new President of Bulgaria will affect to new Bulgarian Government?

**Research Methodology** "National Omnibus in Bulgaria by results the presidential elections in 2016": • Data collection method: F2F PAPI • The sample size 1500 • 4 main cities in the country (Sofia, Plovdiv, Burgas, Varna) • Age, gender, income level, education level, type of employment, etc. in accordance to the national representation. • Survey unit: household Omnibus Timing: • Applications, questions submitting: till 26 November • Adaptation of common questionnaire and tools: 26-30 November 2016 • Fieldwork: 01 December 2016 - 14 December 2016 • Delivery of report: to 16 December 2016 We accept your application for participation in Omnibus and all additional questions to email: Bulgaria _RFQ@mrp-eurasia.com In the Letter subject line please indicate "Application for participation in Omnibus Nr.01-1216" (or, respectively, "The question on the Omnibus Nr.01-1216") All the details of our standard omnibuses, please look on [http://mrp-eurasia.com/omnibuses_Bulgaria](http://mrp-eurasia.com/omnibuses_Bulgaria)

Although criminology has grown as a field of study in the last 2 decades, it remains rooted in sociology. The study of the analysis of crime, criminal behaviour, and societal responses to law breaking cannot be understood without understanding who has power and how various mechanisms of authority are exercised and contested. As part of our collective societal need to understand, explore, confront, and control criminal behavior, visual approaches have been developed based on two major orientations.

The first is focused on the power of images and is rooted in qualitative assumptions about localized meaning and contextualized understanding. In criminology, this has focused on the examination and interrogation of images of crime, harm, and punishment focused on the power of graphic manifestation. By demystifying and contesting the practices that underpin or that make use of those images, the interrogation of visual representations of social control is one part of this broader program. Another is based on the rise of big data and the infatuation with quantitative approaches in sociology. These approaches seek to provide generalizable conclusions that can be broadly applied. Data visualization offers a way to convey complex information and organizing numbers and analytics in more pleasing and accessible ways. Data visualization may allow a means to provoke new kinds of scholarly interactions and create more and better opportunities for collaboration.

While these broad categories are a useful way to understand the role of the visual in criminology, they are not exhaustive. Visual tools and techniques can be used in a variety of ways to teach concepts in the classroom, collect data for participants, outline a researcher’s analysis strategies, and present findings. The visual map below outlines the ways in which visual tools can be applied to the study of crime and social control, and serves a starting point for a larger and longer term project designed to define key propositions and test their viability. While each of the aspects below can be explored in far more detail, this visual map may serve as a useful overview.

E-mail us your visual sociology submissions and ideas on [5]S.I.Imagery@gmail.com. Full instructions can be found [6]here, or just email us, if you have any more questions.

Getting a Ph.D. will turn you into an emotional trainwreck, not a professor (2013-05-14 08:00)

Leanne Davis (2013-05-14 15:10:52)
All I can say is, “thank you”.

New Round of Postgraduate Research Scholarships in the School of Social Policy, Sociology and Social Research (SSPSSR) University of Kent.

SSPSSR has a world-wide reputation for excellence and is one of the leading and largest research centres for social science in the UK. In the last Research Assessment Exercise, we were ranked joint third with 70 % of our research being evaluated as either ‘World Leading’ or of ‘International excellence in terms of originality, significance and rigor.’
The School offers an unrivalled context in which to study for a PhD in the social sciences. We are a member of the South East Doctoral Training Centre (SEDTC) which awards scholarships funded by the Economic and Social Research Council (ESRC), and the School has been awarded European Union Erasmus Mundus funding for a Doctorate in Cultural and Global Criminology (DCGC).

As a result of our success in the 2013 ESRC SEDTC Scholarship competition we are in a position to award additional PGR scholarships to commence in September 2013. These cover tuition fees at the postgraduate standard home/EU rate together with an annual maintenance stipend of £13,590 per annum.

We have a thriving postgraduate community of over 200 students and offer a large and diverse range of professional seminars, School seminar programmes, workshops, methods and advanced methods training, transferrable skills, study groups, and writing/career workshops (home and abroad) for our students. Present postgraduate students are conducting research into a wide range of issues including comparative social welfare; the third sector; violence; cultural criminology; new media and technology; work and employment; environmental movements; the sociology of the body; penal policy; intoxication and drug policy; social and cultural theory; suffering; youth transitions; the sociology of private space; sex, gender and sexuality; ethnicity and identity; evangelical church membership; and a wide range of other topics.

Further information about this New Round of Scholarship can be found here [1] http://www.kent.ac.uk/sspssr/postgraduate/feesandfunds.html or email directly the Postgraduate Office [2] sspssr-pg-admin@kent.ac.uk

Deadline for receipt of applications is Thursday, the 27th of June 2013. Interviews for shortlisted applicants will take place on Wednesday the 10th of July 2013

Being realist about social movements (2013-05-15 08:00)

This is the first in a series of blog posts on realism and social movements. The purpose of it is to refine the explanatory purchase of realist thought within social movement studies and consider what it means ‘to be realist’ about social movements. This first post is dedicated to fleshing out realist thought and making my own argument(s) a little more accessible to social movement theorists. I hope that these blog posts go someway in encouraging discussion on realist thought within social movement studies.

Realism is an ontological position that implies that the social world has objects which exist and interact independent of our interactions with them. ‘The truth is out there’, so to speak, and as social movement researchers, we can begin to identify the objects of reality that make up the social world. As I realist, I search for the processes that exist beyond the world of ‘appearances’. I attempt to penetrate beyond the immediate experiences of social actors to look for an understanding of reality. This does not make human agency and social experiences epiphenomenal but, rather, a guide towards those objects that cause such experiences to emerge, develop and relate to other things around them.

Being realist about social movements, then, implies that there is a set of processes that exist beyond the immediate experiences of social movement activists and that these processes can be identified and understood. Indeed, the ontological claims of realism set a precondition for knowledge as social science. It is argued that the development of a systematic theory of ‘real objects’ and their ‘powers’ is a precondition to understanding their effects. Realist ontological reasoning is prior to epistemological inquiry if the social movement researcher wishes to answer key sociological questions like how do social movements emerge or what effects do they have.

It is within this line of thought that I explore the processes beyond how social movements mobilise and effect change in the social world. Now, a clear and concise definition of social movements is hard to find and it is recognised that term itself is subject to the fuzzy logic of everyday life. A watertight definition is problematic when different epistemological standpoints have competing knowledge claims. One persons social movement is another persons cult, so to speak, as the line between what defines either becomes epistemologically relative.

In response, I start with an ontological understanding of social movements as a form of social structure. This position is based on the realist social ontology of Dave Elder-Vass (2010), which suggests that groups of people have the ‘power’ to socially condition the behaviours of others. Social groups (or what he calls ‘norm circles’) can effect how people behave by creating the conditions for their conformity towards the groups beliefs and practices. This is known as a normative disposition and it is an environment that sanctions behaviour that transgresses the boundaries of what is considered typical or appropriate.

I map such circles, theoretically and empirically, within social movement studies, and argue that such normative environments may be hegemonic in nature. Specific groups of people have a socio-structural form of power that subordinates others into particular ways of acting based on a predetermined understanding of moral authority. Translated, groups of hegemonic actors subordinate others into particular ways of acting based on a superior belief system. These may be understood as movements from above. I argue that the experiences of such hegemonic groups are a catalyst for activism as a form of collective social action. Indeed, it is in making a problem of the subordinating experiences of hegemonic groups that resistant collectivities coalesce and challenge hegemonic discourse. These may be understood as movements from below.

It is within this oscillation of forces between groups of people that social transformation occurs, as movements from below provoke social change by transforming the normative practices of movements from above. Resistance is conceptualised as groupings of people who register their critique of ideology at the structures of domination and control. Movements from below publically redress the inconsistencies of the normative projects of hegemonic groups, that is, they register the blind-spots within, and open hegemonic discourse to reflexivity and critical appraisal.
Methodologically, this explanatory framework requires a careful elucidation of the histories within which social actors problematise their experiences and organise collective social action. It also means grasping at the histories of hegemonic social groups and the normative environments that emerge from them over time. To understand what is meant by this, it is important to recognise the intersectionality of social groups. No social group exists in isolation but, rather, insects with others in terms of proximity and imagination (cf. Anderson’s ‘imagined communities’). As such, it is in mapping these intersections that it becomes possible to grasp at how activists transform the normative environments that others base their practices on. Theoretically, if activists register a critique of a dominant normative practice as inconsistent with what specific groups of people are endorsing, then the ‘imagined community’ or ‘moral majority’ might be brought into crises. At the least, activists would open up a legitimate space for the critical appraisal of such a practice.

In the next blog post, I hope to further explore these claims as I expand on the relevance of historical research for this project. This will not be about simply finding empirical examples to support theoretical exegeses, though to be realist about social movements requires histories on which to elucidate the ratiocination between hegemonic and resistant groups. Rather, it is about finding another movement of thought that is complimentary to this realist position whilst maintaining the centrality of human and social experience. This position has a number of ethical implications that I will explore in future posts.

Bibliography

Dr Thomas Brock is a postdoctoral research associate at Durham University. His research interests lie in realist social theory, histories of radical thought and movements of political action. This was originally posted on the blog for the BSA Realism and Social Research group.

Can Human Action Be Explained? (2013-05-16 08:00)

If you find Charles Taylor interesting, there's another lecture and a link to introductory resources available [2]here. If you don't find Charles Taylor interesting then apologies in advance for the profusion of philosophers and theorists who will be featuring on this site while the editor finishes writing up his PhD theory chapters and is looking for productive ways to procrastinate.

juliette (2013-05-16 09:31:27)

oh gosh, not Charles Taylor the war criminal then!
There's a couple of interviews we've done on these themes with Les Back [2]here and [3]here. If you find the lecture interesting then you really should check out the [4]edited collection it draws on.

I shoot, therefore I exist

by Claudia Vallvé, Barcelona

This is my street. I see them every day, any hour of the day. By dozens. Standing there. Taking their photos. They come, they shoot, they go. Average of stay: 3 to 5 minutes. 30 minutes if they go to the gift shop on the left. When their trip is finished, they’ll go back to their homes, with their cameras full of images: buildings, streets, self-portraits. Taking their photographs makes them feel that they own this city. My city.

Paradoxically, the day I took this photo, a big demonstration was held in Barcelona. Just 100 meters from this place thousands of people were asking for better conditions at work, better access to housing, better education and social care systems... But this is not included in touristic guides. Just a nuisance, like the poor man with his kids and their balloons, slaloming among the multitude of tourists.

Tourism. The maximum form of modern consumerism. Coming, shooting and leaving. This is it.
Claudia Vallvé ([2]claudiavallve@xarxaconsultors.com) is a sociologist based in Barcelona. She is founding partner of Xarxa Consultors ([3]www.xarxaconsultors.com), a network of freelance professionals working in social research and consultancy. Claudia develops social investigations in different areas - mainly related to social welfare, employment, education and gender issues. In her blog, Cuestión de Método, she reflects on methodological issues ([4]http://claudiavallve.com/, in Spanish and Catalan). Claudia has kindly agreed to share some of her experience as researcher on SI soon!

E-mail us your visual sociology submissions and ideas on [5]S.I.Imagery@gmail.com. Full instructions can be found [6]here, or just email us, if you have any more questions.

BSA Teaching Group Conference on June 15th (2013-05-17 12:00)

BSA TEACHING GROUP CONFERENCE
Saturday 15th June 2013
Nottingham Trent University
Sponsored by the Higher Education Academy

The BSA’s Teaching Group is pleased to announce a regional conference hosted by the School of Social Sciences at Nottingham Trent University. This event is aimed specifically at sociology teachers and will bring together a variety of guest speakers in an interesting and informative programme.

THEMES COVERED AT THE CONFERENCE WILL INCLUDE; DIGITAL METHODS, STUDENT TRANSITIONS FROM A LEVEL TO UNIVERSITY, SOCIAL THEORY, GENDER STUDIES, TEACHING SOCIOLOGY WITH BOXING IMAGERY, CRIMINOLOGY AND A SERIES OF MICRO-LECTURES FROM THE NEXT GENERATION OF RESEARCHERS.

Alongside this programme time will be allocated for networking opportunities over lunch and during an optional evening social event. There will also be an opportunity for feeding back to representatives of the BSA about the ways in which the organisation could help and support the teaching of sociology in schools and colleges more fully.

Confirmed speakers:
Lunch will be provided, along with tea & coffee throughout the day.

Delegate fees:

BSA Member £40

BSA Teaching Group Member £50

Non-member £60

For further information and registration, please go to: [1]http://portal.britsoc.co.uk/public/event/eventBooking.aspx?id=EVT10272

Email: [2]bsatg@britsoc.co.uk or Tel: (0191) 383 0839

For academic enquiries please contact: Dr Christopher R. Matthews, Nottingham Trent University

Email: [3]christopher.matthews@ntu.ac.uk

2. mailto:bsatg@britsoc.co.uk
3. mailto:christopher.matthews@ntu.ac.uk

Lost in London (2013-05-18 08:00)

“Lost in London” is a film by Michael Smith and Wojciech Duczmal, who’ve collaborated on many documentaries for the BBC over the years. It develops further their idea of the lyrical essay-film, or documentary-poem.

Inspired by Baudelaire’s idea of the flâneur, the stroller whose epiphany is the shifting urban spectacle, the film is about one individual’s personal response to the unique spirit that charges the city he inhabits - in this case, Michael’s response to the inner East End, where he has lived for many years.

It’s a film about the deep, complex, bitter-sweet romance between an individual and his city. Like many long-term love affairs, it’s a dysfunctional one, but nevertheless, this film is a love story between a person and a place.
Acts of terror: a short film about photography, freedom and the police (2013-05-19 08:00)

While filming a routine stop and search of her boyfriend on the London Underground, Gemma suddenly found herself detained, handcuffed and threatened with arrest.

Act of Terror tells the story of her fight to bring the police to justice and prevent this happening to anyone else, ever again.

Official Website:

It is easy to forget about the 2005 Terrorism Act and its damaging effect on civil liberties and human rights. Act Of Terror puts the spotlight back on this murky law, and demands that we keep vigilant in the face of ever increasing state power.

An animated journey through the labyrinthine world of English Justice, the sinister caveats of Terrorism legislation, and the shocking cronyism of the police complaints system, Act Of Terror is about strength in the face of powerlessness and finding the courage to fight back.

Tuesday 16th July 2013
BSA Meeting Room, Suite 2, 2 Station Court
Imperial Wharf, Fulham, London SW6 2PY

This inaugural event for the BSA's Digital Sociology Group brings together a diverse range of speakers who, in a variety of ways, work within the nascent field of digital sociology. Rather than proceed from a substantive account of what digital sociology is or could be, this event seeks to address the question 'what is digital sociology?' through an open and informal exploration of a broad range of exciting work being undertaken by sociologists in the UK which could, in the broadest sense of the term, be characterised as 'digital'. In casting a spotlight on these projects in such a way the event aims to initiate an ongoing dialogue about the continuities and discontinuities between these emergent strands of digital activity, as well as the broader methodological and disciplinary questions which they pose.

Speakers:
Kim Allen, Manchester Metropolitan University
Les Back, Goldsmiths, University of London
Ben Baumberg, University of Kent
Laura Harvey, Brunel University
Noortje Marres, Goldsmiths, University of London
Heather Mendick, Brunel University
Mark Murphy, University of Glasgow
Evelyn Ruppert, Goldsmiths, University of London
Helene Snee, University of Manchester

Delegate rates:
BSA Concessionary Member (student/unwaged/retired) £10
BSA Member £15
Non-member (student/unwaged/retired) £20
Non-member £25

For administrative assistance contact: BSA Events Teamevents@britsoc.org.uk
Telephone: +44 (0) 191 383 0839
Academic enquiries: Dr Emma Head e.l.head@keele.ac.uk

The frustrations of philosophers: Richard Rorty, sociological explanation and intellectual biography
(2013-05-21 08:00)

I'm finally in the process of reading [1]this intellectual biography of Richard Rorty by Neil Gross. I've intended to for a few years now, given my long term fascination with Rorty, however it was only recently that I had it pointed out to me that I'd find the substantive analytical themes of the book interesting (given my research on culture, reflexivity and biography). Below you can meet Rorty the man:

I originally read Rorty as part of an MA in Philosophy and Social Theory at the University of Warwick. I'd completed a BA in philosophy at UCL which was almost entirely analytical and what intellectual satisfaction I derived from it was largely a matter of engaging with the challenge of articulating my profound dissatisfaction with, well, everything really. I'd gone to Warwick to do an MA in continental philosophy but, after a few weeks, I'd encountered social theory and sociology for the first time and realised that my difficulty was with philosophy itself rather than a particular approach to philosophical practice. However this was a gradual process of my understanding changing,
with an underlying direction of travel manifesting itself through lots of situational disputes in particular substantive areas of inquiry e.g. I got fixated on Rawls for a year because my understanding of this meta-theoretical frustration was most comprehensive in terms of his work. But then I read Richard Rorty and suddenly it all fell into place: defined in my memory by a debate with the two professors leading a social theory seminar where one (now my supervisor) asked me “why are you studying philosophy then?” and I realised that I had no idea... fast forward 5 years later and I’m on the verge of completing a PhD in Sociology and am extraordinarily pleased that I made the move, in the process avoiding my planned PhD about changing ideas of the individual in liberal thought which, to put it mildly, would have been unlikely to hold my interest.

What really interests me in retrospect about this is the apparent homology between Rorty’s intellectual trajectory (analytical philosophy to continentally infused pragmatism to cultural theorist – though Gross usefully warns against overdrawing the stages of this movement) and the one I underwent which was sparked by his work, as well as how much, if any, of this effect can be attributed causally to the homology itself? Did the order in which I engaged with Rorty’s writing (Contingency, Irony and Solidarity* then Philosophy and the Mirror of Nature before working through the philosophical papers) play a role in the effect they were able to have on me? Did the contextually bound intellectual frustrations he was working through in these writings offer, in virtue of their specific context, the particular configuration of ideational resources which I needed to work through my own intellectual frustrations in my own specific intellectual context at the time?

One of the truly admirable things about Gross’s book is the manner in which he resists the simplified trajectory of Rorty’s work which I’ve just sketched, showing how the seeds of his ultimate move away from philosophy were present at the outset of his career. His concern for contextualism and the history of ideas were always there, as was his concern for edification and disinterest in the narrowly technical, but his later project needed many things: he needed Davidson, Sellers, Goodman et al to escape from analytic philosophy in a way that was consistent with it, he needed Kuhn to operationalise his contextualism and, crucially, he needed his career and his life itself (as well as the broader social and culture context within which they were situated) to be configured in such a way as to make this ‘escape’ compatible with the exigencies of living in the manner to which he had become accustomed.

Gross usefully summarises his sociological approach to the study of Rorty:

Without abandoning the standard of fidelity to the archival materials, we can construct a more theoretically informed explanation for Rorty’s moves if we see him, not as a being spinning out ideas on the basis of a transhistorically rational consideration of their objective merits or as someone pushed this way and that by his personality or character but as a social actor embedded over time in a variety of institutional settings, each imposing specific constraints on his opportunities and choices and influencing him with respect to the formation of his self-understanding, his evaluation of the unworthiness of various lines of thought, and ultimately his intellectual output. (pg 330)

The book doesn’t exactly ‘solve’ the problem I’m grappling with in my own work. But it does make it somewhat clearer. In an (as yet unpublished) paper on asexuality I’ve argued that synchronic relations between the account an individual is trying to give of themselves (to themselves in internal conversation and/or to external others) and the cultural resources which are situationally available to be drawn upon in this self-articulation works diachronically to shape their socio-cultural exploration. If someone doesn’t experience sexual attraction but finds that the cultural resources they have available to them only permit them to articulate that facet of themselves in terms of pathology (e.g. “I’m fucked up”, “I’m broken”, “there must be something wrong with my hormones” rather than “there are people who are asexual and I’m one of them and that’s fine”) then it will, if they feel this self-pathologisation is unsatisfying or unsustainable, lead them to search for cultural resources which would enable them to give a better account of themselves.
I'm pretty confident of the empirical basis of this argument in terms of asexuality but I'm struggling to apply it elsewhere beyond quite general terms. Central to what I'm trying to say is the idea of the discursive gap (credit [3]Ruth Pearce) as an integral category for understanding interiority in a sociological way. On this view self-articulation (again either inwardly or outwardly directed) relies on certain cognitive affordances, many of which are introjected resultants of past social or cultural interaction, as well as cultural affordances, which may in future contribute to the individual's stock of cognitive affordances. At any given time there is always a 'gap' between what we are trying to say and the affordances which are situationally available to us and this gap 'drives' the direction of our cultural agency over time.

One of my intentions here is to ‘fuzz up’ (as Rorty would have put it) the distinction between the discursive and the pre-discursive. I don’t think it’s possible to understand either adequately, unless we see the relations between them, as well the centrality that movements from the inchoate to the articulate play in shaping who we are and how we make our way through the world. Something which I think Charles Taylor captures very sensitively:

Thus consider someone who has been ashamed of his background. This is what we say (and also he says) retrospectively; at the time, this was not at all clear to him. He feels unease, lack of confidence, a vague sense of unworthiness. Then he is brought to reflect on this. He comes to feel that being ashamed for what you are, apologizing for your existence, is senseless. That on the contrary, there is something demeaning precisely about feeling such shame, something degrading, merely supine, craven. So he goes through a revolution like that expressed in the phrase ‘black is beautiful’. Now the shame disappears; or sinks to a merely residual unease like the craving for a cigarette after meals of the ex-smoker; and is judged as merely another such nagging emotional kink, not as a voice telling him something about his predicament. (Taylor 1985a: 69)

I now profoundly disagree with pretty much everything in this book. But along with Taylor’s Philosophical Arguments and Sources of the Self, as well as perhaps MacIntyre’s After Virtue, it’s the only book I can think of which effectively rewired my conceptual apparatus and left me ‘seeing’ the world in a different way afterwards.

*The fact I’m using ‘hydraulic’ terms like ‘drives’ is what I mean when I say I’m struggling with this.

Digital Humanities but No Digital Sociology (2013-05-22 08:00)

All these changes in scholarship have been taken up with a great deal more enthusiasm by some in the academy than others. Our colleagues in the humanities have embraced digital technologies much more readily than those of us in sociology or the social sciences more generally. A casual survey of the blogosphere reveals that those in the humanities (and law schools) are much more likely to maintain academic blogs than social scientists. In terms of scholarship, humanities scholars have been, for more than ten years, innovating ways to combine traditional scholarship with digital technologies. To name just a two examples, scholars in English have established a searchable
online database of the papers of Emily Dickinson and historians have developed a site that offers a 3D digital model showing the urban development of ancient Rome in A.D. 320. There are significant institutions being built in the digital humanities including the annual Digital Humanities Conference, which began in 1989, and the National Endowment for the Humanities’ Office of Digital Humanities.

Sociology lags far behind in the adoption of digital tools for scholarly work. As Paul DiMaggio and colleagues noted in 2001, “sociologists have been slow to take up the study of the Internet” (“The Social Implications of the Internet,” Annual Review of Sociology, 2001, p.1). While there are notable exceptions, such as Andrew Beveridge’s digitizing of Census maps ([1]www.socialexplorer.com), when looking at the field as a whole these sorts of innovations are rare in sociology. In contrast to the decade-long conference in the digital humanities, there is no annual conference on “digital sociology.” Sociology graduate students Nathan Jurgensen and PJ Rey recently organized a conference on “Theorizing the Web,” that drew luminaries in sociology Saskia Sassen and George Ritzer, but this is the first sociology conference (that we are aware of) to focus exclusively on understanding the digital era from a sociological perspective. Analogously, there is no large institution, like the NEH seeking to fund digitally informed sociological research. The reasons for this sociological lag when it comes to the Internet are still not clear, but some point to the problems of getting digital publication projects recognized by tenure and promotion review committees.

“What kinds of creatures do we think we are?”: Human Sciences in the ‘Age of Biology’ (2013-05-23 08:00)
"Kant in Hand": a Cut-and-Paste Critique of Pure Reason, Project by Hanno Depner (2011)

Today’s visual sociology article is not just visual, but also spatial. It is a fascinating project for the visualisation and embodied learning of one of the classic philosophy works: Kant’s "Critique of Pure Reason".

Kant in Hand

by Hanno Depner, Rostock/Berlin
"Kant in Hand – make it, grasp it" is a book including building kit which can be transformed into a 3D infographic on Immanuel Kant's "Critique of Pure Reason", one of the most influential works in the history of philosophy. The introductory book/building kit by philosopher-designer Hanno Depner was published in German language (as "Kant für die Hand") by Knaus publishing house in 2011. This is how it works:

(1) Build the main parts of the "Critique of Pure Reason", using the cut-out sheets, and glue.

(2) Read the explanatory captions, starting with "Kant's Life and Work" up to the "Transcendental Doctrine of Method" to gain insight into Kant's vocabulary, arguments and composition of his "Critique".

(3) Put together all parts, forming ...

(4) ... the "Kant Cube".

(5) To start knowledge process, pull strap "Transcendental Doctrine of Elements" (which is the first part of the "Critique of Pure Reason"). The three Faculties of Knowledge (as described in the sections Aesthetic, Analytic and Dialectic) unfold. A black line marks the way of knowledge, starting from the "thing in itself", becoming perceptions and then propositions ...

(6) ... if put into the right drawers, or categories ...

(7) ... and finally conclusions, which are ordered in direction of the three "ideas" (Soul, World, God) and get undissolvably entangled: Metaphysics is not possible (if reason is used theoretically).

(8) If reason is used practically, metaphysics becomes possible – as outlined by the 4 final chapters – forming ...

(9) ... the base of all future philosophy.

In this video (in German), the author explains and shows the process:
Hanno Depner ([3]hannodepner@hotmail.com) studied Comparative Literature and Philosophy in Berlin and Norwich (UK). He worked as editor of the [4]International Literature Festival in Berlin and wrote for cultural institutions, as well as for print and online media. He was awarded first prize in the [5]Berlin Science Slam for the presentation of his book/building kit "Kant in Hand" in May 2011.

Hanno is a member of the advisory board of [6]DenkWelten Philosophy Museum. Currently he is doing research on the design of philosophy and knowledge as orientation at the Interdisciplinary Department of Rostock University (here is his [7]personal webpage). In April 2013 he organised a conference on "Visual Philosophie" which will be followed by a book containing all contributions.

CfP: Tensions of Rhetorics and Realities in Critical Diversities (2013-05-25 08:00)

Call for Papers

Tensions of Rhetorics and Realities in Critical Diversities

Edited by
Alexa Athelstan, Nichole Edwards, Mercedes Pöll & Sanaz Raji
(University of Leeds)

Website: [1]http://tensionsrhetoricsrealities.wordpress.com/call-for-papers
Email: [2]tensions.rhetorics.realities@gmail.com

We warmly invite your contributions to our edited collection entitled Tensions of Rhetorics and Realities. The book will be submitted to the Routledge series Advances in Critical Diversities (eds. Yvette Taylor and Sally Hines).

This collection orientates itself towards an understanding of diversity as an often misappropriated concept used to obscure and maintain existing inequalities rather than to further their deconstruction. Consequently, the collection intends to (re-)emphasize the importance of looking at diversities not from a one-dimensional level, but with consideration of the multiple positioned and intersecting viewpoints and contexts that shape the diversity of human existence – thereby allowing for a constructive and critical engagement with related issues.

Encouraging a strongly intersectional and interdisciplinary approach, Tensions of Rhetorics and Realities seeks to investigate and theorize the spaces of conflict, discrepancy, contradiction or difficulty that can arise when dealing with discourses and practices, policies and lived experiences, theories and methodologies, individuals or communities. Incompatibilities or infeasibilities within those domains can easily lead to tensions or idiosyncrasies. A particular focus on rhetorics and realities highlights the criticality of the ways in which diversity issues are being framed, understood and dealt with in various settings and by various actors. This collection will therefore approach diversities critically – as a site of real-life impacts and circumstances, as a concept and a strategy – while maintaining the awareness that diversity efforts remain subject to their proponents’ positionalities, ideologies, moral and value judgments, economic and political aims, and a variety of other contextual factors illustrating their situatedness. At the same time, the individuals and groups intended for or affected by diversity measures are subjects to their own contextual circumstances.

We welcome submissions from all academic disciplines investigating Tensions of Rhetorics and Realities in Critical Diversities. Within this framework, topics may include (but are not limited to):

- Social, political and economic measures of inclusion/exclusion
- Equality, inequality and the in-between
- Individual, collective, institutional or systematic agency
- Sites of power and power dynamics (e.g. the nation-state, the law, citizenship, social spheres, the media)
- Characteristics of ‘desirable’ or ‘undesirable’ states of society (e.g. multiculturalism)
- States of crisis and criticality
- Contemporary political trends and diversity (e.g. neoliberalism, benefit cuts)
- Social movements, activism and identity politics (e.g. LGBTQIA+ rights)
- Different ‘publics’ and lived experiences of division/communality
- Practices of representation and recognition (e.g. in the media, policy)
• Tokenism and political correctness
• Policing and censorship
• Identities as multi-layered, diverse categories for social engagement
• Intimacy practices, a-/sexuality and normativity
• Gendered lives, realities and expectations
• Racisms, anti-racisms and 'post'-racisms
• Colonialisms, 'post'-colonialisms and neo-colonialisms
• Feminisms, 'post'-feminisms and men's rights movements
• Issues of dis-/ability in the home, the public sphere or the workplace
• Questions of faith – religions and atheisms
• Class, non-/belonging and socio-economic mobility
• Privileged positionalities and subaltern knowledges
• In-/visibility and potential of queer, DIY, alternative or grassroots spaces and efforts
• Climate, ecology and the state of the 'natural' world
• Diversity policies and organisational practice
• Articulating Critical Diversities – the language of diversity issues
• Media discourses on diversity and difference
• Humour as a means of/against discrimination
• Critical Diversities in the academy
• Divides between theories and practices of diversity
• Methodologies for researching and assessing Critical Diversities

Please submit your 300 word abstract, a short biography and your contact details to tensions.rhetorics.realities@gmail.com by the deadline of 10th June 2013. We are looking forward to receiving your contributions! Please feel free to contact us with any enquiries or expressions of interest.

Kind regards,
Alexa, Nikki, Mercedes & Sanaz.

Moral behaviour in animals (2013-05-26 08:00)
[youtube http://www.youtube.com/watch?v=GcJxRqTs5nk]

In this talk the primatologist [1]Frans de Waal explains the transition underway from a tendency to construe animal behaviour (including the human animal) in terms of competition, aggression and domination to a new understanding of a pervasive capacity for cooperation and empathy. It’s a fantastic talk, not least of all because of the animal videos he shows as part of it, but I found it rather puzzling - not in the sense that I disagree with him but simply because it challenged a lot of theoretical conclusions I had come to about animal behaviour.

I have always thought of reciprocity as consisting in a distributional norm and thus, it seemed, one emergent from social structures. I had assumed that issues of reciprocity wouldn’t emerge until you had socialised production
processes (i.e. ongoing and organised collective activity, however simple this is) which generated a surplus. Furthermore I would have assumed that the ‘cognitive channel’ for empathy is something which presupposed language, in that it constituted a form of discursive awareness, though perhaps I’ve misunderstood the concept here.

I find his comments towards the end of the talk rather troubling, as they foretell (or rather his joke about Occupy and casual dismissiveness of philosophical objections to his findings does) the political implications of this naturalisation of fairness. Perhaps our distributional norms (which I’d continue to insist, as an empirical statement, are social and linguistically coded) have their affective roots in a bio-social apparatus which de Waal has demonstrated in his research but his seeming willingness to reduce the former to the latter is the problem here? Though this may be an unfair judgement to make on the basis of a TED talk because he does talk explicitly about ‘continuity’ with other primates (rather than, say, equivalence) though it wasn’t entirely clear to me based on the content of the talk that he concretely holds to this.

Invitation to contribute to the CelebYouth project website (2013-05-28 08:00)

‘The role of celebrity in young people’s classed and gendered aspirations’ is an ESRC funded research project which examines the relationship between celebrity culture, inequalities of class and gender and young people’s educational experiences, identities and transitions.

The project has an active website (http://www.celebyouth.org/) and twitter account (@CelebYouthUK) and the team regularly post blogs about the project and related issues – past posts have included an analysis of David Cameron’s ‘Aspiration Nation’ speech, a piece on Post-feminism and Olympic Role Models, and several on methodological dilemmas in youth research.

The research team are now welcoming guest contributions to the website from other people who are interested or working on topics related to the project. This could be work on celebrity and popular culture; young people’s aspirations and educational transitions; inequalities of class and gender; education policy; and/or the links between these.

We welcome guest contributions on these topics from anyone – from students, doctoral researchers, teachers, and academics – the only condition is that they are original and that what you write needs to fit with the broadly sociological, feminist and critical approach of the website.

If you would like to write for us please take a look at our website for more details http://www.celebyouth.org/write-for-celebyouth/ and get in touch with Heather Mendick (heathermendick@yahoo.co.uk) to discuss your ideas.

Many thanks in advance

LS Lowry and the Sociological Imagination (2013-05-30 08:00)

This isn’t the blog post I have intended to write for ages about LS Lowry’s profoundly sociological sensibility. But it is a precursor to it because [1]this article so succinctly describes exactly the point I’m trying to make about Lowry’s work:

What is amazing, and what confounds all efforts to cram Lowry into boxes marked “pessimism” or “nostalgia”, is that all these masses of people, delineated so simply and sparcely, are electric with individual life. No two are alike. They are no more realistic, conventionally speaking, than the caricatures in a strip cartoon, yet each of them is alive. Try this as an experiment: look at the figures in these paintings with concentration for some minutes, then turn to look at actual people walking in the street. Suddenly they all look like Lowry people, each instinct with desire, goal, daydream or preoccupation.

Lowry was fascinated by scale in a peculiarly sociological sense of the term, with even the teeming crowds that populate his most famous scenes exhibiting an undeniable individuality but one framed and formed by the relational and institutional contexts which he also took such care to represent. However while he is best known for his crowd scenes, the same attentiveness to individuality and context can be seen in his other work. It would be easy to
see discontinuities within these but, if we see them in terms of a range of scales through which the social can be apprehended, then a case can be made for Lowry’s sensibility as being distinctively sociological.

[2]"LS Lowry" on Bundlr

2. [http://bundlr.com/b/ls-lowry](http://bundlr.com/b/ls-lowry)
Fresh markets are an essential part of Mediterranean countries. Not only as a place for shopping groceries and fresh food. Fresh markets are also (or used to be) the social centre of our cities.

A market is a public space run by local authorities. Stands are owned by the local council who rents them, in a long-term basis, to the traders, who exploit the business. The law establishes that any city with more than 5,000 inhabitants must have a public market. The reason is a historical one: originally markets were created to ensure food supply in every city. However things have changed a lot from then, and now the situation is completely different. Supermarkets, big surfaces and commercial areas are a strong competition for local public markets. The economic crisis has made things still more complicated and the income of most of the traders has decreased considerably. However, many markets are still working with an "old fashioned" model. They are opened only in the morning, many stands don't accept credit cards, there is no home delivery, it's difficult to park around the market facilities, etc. As a consequence young people has stopped going to the market.

Public authorities are worried. In many places, markets entail a cost for the tight municipal accounts. But markets represent rooted values in our culture. They provide fresh food, many times from local producers and they also contribute to social and economic cohesion of our cities.

I've been working for the county government of Barcelona in order to find new solutions for public local markets. During the last year I've been conducting focus groups with all the stakeholders involved: public servants, politicians and traders, about the challenges and opportunities of public markets. In total, 79 persons have participated in the process. During the groups people were asked to give their opinions around three main questions: what do we do now that...
we should stop doing?, what do we do now that we have to do in a different way? and what do we are not doing that we should start doing?. At the end of the process we collected more than 350 proposals (of course, many of them were coincidental).

For me, the most relevant conclusion of the whole process is the difficulty of understanding that emerges when so many different actors are involved, and the importance of creating spaces that give the opportunity to speak and to generate dialog. This has probably been the first time that all these actors have been given a voice, in an equal basis. And the most astonishing thing for me has been the high degree of auto-criticism shown by most of the participants, and the creativity and innovation they have demonstrated in their proposals.

RFR Masterclass - Facet methodology - principles and practices workshop (2013-06-01 08:00)

Facet methodology - principles and practices workshop
Wednesday 12 June 2013
2pm - 4pm
'Facet methodology' – is an inventive orientation to researching the multidimensionality of everyday lives and relationships, which puts researcher creativity and imagination at the heart of methodological practice.

This masterclass will introduce the ethos of the approach and explore how it can be practiced and what its uses might be.

Masterclass participants will be invited to engage in practical ways with the approach, and to consider what it might offer for their own research projects and plans.

A health warning! - facet methodology is an orientation, requiring imagination and inventiveness. Please don't expect to be given a set of techniques or methodological rules that can be learned and applied!

**About facet methodology**

Facet methodology was developed collaboratively through the work of the Realities programme at the National Centre for Research Methods, at the Morgan Centre, University of Manchester.

We wanted an inventive approach that enlivened and animated our enquiries into everyday life and relationships, and that promised methodological rigour.

The approach was developed through our collaborative practice, in the doing of research and analysis, rather than as a piece of armchair theorising or methodologising.

We wanted a metaphor to articulate our research strategy, to ourselves and others, and we lighted upon the visual metaphor of a cut gemstone. Our approach envisions research fields as constructed through combinations and constellations of facets as we might see in a gemstone, where facets refract and intensify light, taking up the background, and creating flashes of depth and colour as well as patches of shadow.

We found this a useful metaphor to think with, and to interpret the kinds of practices we had been developing. In facet methodology, the gemstone is the overall research question or problematic, and facets are conceived as different methodological-substantive planes and surfaces, which are designed to be capable of casting and refracting light in a variety of ways that help to define the overall object of concern by creating flashes of insight.
Facets involve different lines of enquiry, and different ways of seeing. The approach aims to create a strategically illuminating set of facets in relation to specific research concerns and questions. The rigour of the approach comes ultimately from researcher skill, inventiveness, creativity, insight and imagination – in deciding how best to carve the facets so that they catch the light in the best possible way.

You can read about facet methodology at:

What’s the point of sociological theory? (2013-06-02 08:00)

By maintaining its specialized logic and orientation it is capable of providing a set of conceptual tools that can operate as a theoretical lingua franca, as a flexible vocabulary with no foundationalist pretensions, which can help sociologists establish bridges between their own and other disciplines, as well as between competing social science paradigms. This is to say that sociological theory should not aim at the establishment of some sort of monolithic paradigmatic unity, but at strengthening the present pluralism by removing the obstacles that are a hindrance to open-ended communication between the differentiated subdisciplines or paradigms.

Pg 9, Sociological Theory: What went Wrong?: Diagnosis and Remedies, By Nicos Mouzelis

Dawn Talbot (2013-07-02 17:15:32)
To challenge misconceptions and to give those who do not have a voice the opportunity to be heard, even a scream at times. To give them a way into academia that other specialism/schools of thought actually run from. To champion another and another perspective, recognizing that one truth is a misconception.

The way humans perceive the environment is the way humanity structures society.

The Sociological Craft Project (2013-06-03 08:00)

In the appendix to Sociological Imagination, entitled On Intellectual Craftsmanship, C. Wright Mills advocates keeping a file or journal within which to record your ideas. He argues that doing so:

encourages you to capture ‘fringe-thoughts’: various ideas which may be by-products of everyday life, snatches of conversation overheard on the street, or, for that matter, dreams. Once noted, these may lead to more systematic thinking, as well as lend intellectual relevance to more directed experience[...]

by keeping an adequate file and thus developing self-reflective habits, you learn how to keep your inner world awake. Whenever you feel strongly about events or ideas you must try not to let them pass from your mind, but instead to formulate them for your files and in so doing draw out their implications, show yourself either how foolish these feelings or ideas are, or how they might be articulated into productive shape.

Much of my initial fascination with this came from the extent to which it provided me with a theory of blogging. Or at the very least helped me articulate the way(s) in which blogging (which I've done for going on a decade now) was starting to intersect with my academic work (which only began in a meaningfully engaged way 5 years ago at the start of my part time PhD). In providing the conceptual resources to help me understand the emergent way in which I was using my blog to develop ideas, it also improved the way I was doing this by transforming it from a cluster of behaviours into a[1]deliberate and self-aware practice. But it occurred recently that thinking about how I was using the tools also inculcated a sensitivity to what I was using the tools for which I’d previously lacked.

This lack might have just been my own idiosyncratic circumstances to a certain extent - I've had a meandering path through higher education and, while there are many things I've gained from the slightly eclectic range of influences I've been exposed to, I also sometimes worry that there's a process of academic socialisation which other people have enjoyed which I've missed out on. Though this is probably something that most [2]accidental sociologists feel at some point. But I think that’s perhaps an example of particular conditions leaving certain groups more sensitive to a broader trend. In this case the lack of attention to sociological craft within postgraduate education. Les Back and Nick Gane recently wrote a [3]lovely paper exploring the notion of sociological craft and its relevance to the broader predicament facing sociology at the present juncture:

In the appendix of The Sociological Imagination, Mills develops this notion of the craft and its concern for questions of perspective and scale. In this part of the text, the craft refers to the imaginative labours
that are needed in order for the promise the discipline – its capacity to connect biography to history – to be fulfilled. The craft is a way of thinking that brings into view relations between the individual and the social that have previously gone unnoticed, and does so by exercising an imagination that ‘is often successfully invited by putting together hitherto isolated items, by finding unsuspected connexions’ (1959:221). The craft is about imaginative methodological and theoretical work that puts the promise of sociology to work, and in so doing enables us to think about things, including our own lives, differently.

But there is, however, a further quality to Mills’ idea of the craft: ‘literary craftsmanship’. For sociology to be to be effective, especially beyond the academy, it must have literary ambitions. Mills’ assessment of the quality of the sociological writings of his time is damning. He argues that there is a ‘serious crisis in literacy’ in which sociologists are ‘very much involved’ (1959:239).

However I’ve been thinking a lot recently about the more quotidian sense of craft and particularly how it relates to postgraduate education. In a way this ties in rather nicely with the above paper: if postgraduate teaching is how sociology reproduces itself as a discipline then any role that a renewed focus on craft can play in actualising the promise of sociology must have pedagogical implications in relation to postgraduates (if not undergraduates as well). The other line of thought that’s been preoccupying me recently is routine and creativity. I’m fascinated by websites which chart the mundane daily routines of famous writers, artists and intellectuals: see for example [4]here, [5]here and [6]here. My longstanding tendency towards obsessive introspection and self-analysis notwithstanding, this interest comes from some of the theoretical issues I’m interested in (particularly the relationship between habit and reflexivity) but it’s something which I’ve largely thought about in terms of how people organise and approach everyday life.

Increasingly though I’m seeing how useful a framework it is to think about craft – what does sociologists do in the deeply practical sense in which Mills discusses the question in the SI appendix? How do different sociologists approach similar tasks? How can an awareness of the different repertoires exhibited by sociologists factor into the development by PhD students and ECRs of their own distinctive style of sociological craft? Blogging gives a wonderful insight into the[7]backstage of sociological craft and, not least of all because of the name of the site, I’d love to explore this on [8]Sociological Imagination in some way. Thus far the best I can come up with is e-mail interviews though and that seems a bit crap really – any suggestions/thoughts/ideas are much appreciated.

Edit to add: I realised that I didn’t recognise the fact that some people are already producing the sort of material I’m talking about here, with [9]Patter being the most obvious example. I think the popularity of blogs like Patter and the Thesis Whisperer point to precisely the lack in postgraduate education which I point to above. I guess I’m suggesting two things in practice (a) somehow soliciting reflections on sociological craft so that a wide range of voices are represented (b) doing so with a specifically sociological focus – not for reasons of willful insularity but because, for reasons which might make a good follow up post, I think a disciplinary focus is integral to ensuring that discussions of professional craft don’t become somewhat less interesting proffering of generic career advice

Being realist about social movements: ontological stratification and emergence (2013-06-04 08:00)

Being realist about social movements means being clear on the theoretical foundations that one uses to examine the social world. This post will expand on two key aspects of realist social theory – ontological stratification and emergence – and argue that, together, these ideas foreground any realist explanation of how social movements form.

In the [1]previous post, I made the point that a realist is someone who believes that the social world has objects that exist and interact independent of our interactions with them. Based on the philosophy of Roy Bhaskar and his arguments in *A Realist Theory of Science*, this ontological position that has three key premises:

First, reality has a *transitive* and *intransitive* dimension. This can be summarised as follows,

'Science itself, or the scientific results, always consists of a set of theories of this independent [intransitive] reality. These theories - not reality - constitute the 'raw material' (Collier, 1994, p.51) that science uses in the practical work, and science continually tries to transform the theories into a deeper knowledge of reality. Theories thus are the transitive objects of science; they constitute the dimension that indirectly connects science with reality' (Danermark et al., 2002, p.22-23).

All this means is that reality consists of independent and enduring objects, structures and mechanisms (intransitive dimension) as well as human experiences, discourse and theories (transitive dimension). Theories, then, allow the realist movement researcher to better explain those structures of an independent reality, such as, the causal processes behind the formation of social movement activism.

Second, these powers are said to be transfactual, that is, they hold with necessity, operating independently of the theories that we use to probe them. If one believes that there are a set of principles that cause social movements to form, then, these principles are said to be universal. Such causes are always independent of whether we have or, indeed, can, appropriately discern them. Furthermore, such causes cannot be reduced to individual human agents or any particular form of social structure. All this means is that whatever we determine through empirical investigation cannot alone define reality. Thus, the emergence of social movement activism is subject to processes beyond the records of oral histories or the testimony of interviews.

One important implication of contemporary realism is that it explains the limitations of the empiricist trap. This is where sociologists define reality through their empirical research alone. What is also called an *epistemic fallacy*. The whole point of distinguishing between the transitive and intransitive dimensions of reality is to remind us that sense-experiences alone cannot be used to define what is real. In accepting that there is ontological depth to reality, realists reject any causal explanations that are based simply on patterns of events. Rather, following Bhaskar, realists recognise that social reality is an active and complex system, one which is open to human interference and disruption. This makes it an error to establish universal causal laws based only on tests within artificial environments (laboratory-based experiments that do not reproduce themselves within social life). As such, realists reject empiricism on the understanding that if social science is to be intelligible, then it requires an appreciation of the complexity afforded by open systems. Translated, if one seeks to find the principles of social movement formation, then one must depart with an ontological, rather than experiential, model of reality.
Foregrounding both of these principles is the ontological stratification of reality. In basic terms, stratification refers to the different 'levels' of reality within which objects, powers, mechanisms and their empirical effects exist. Realists distinguish the 'empirical' reality of social life from the 'real' objects whose causal powers effect social change through 'actual' mechanisms. This stratification is hierarchical and complex and beyond this simple beginning these hierarchical metaphors can be misleading. All three domains are important to social research but, here, it is better to simply suggest that reality is understood as comprising 'sets of nested structures' whose effects on actors are 'a plurality of interpenetrating constraints deriving from many recognisable "levels" looping back and around each other' (Dyke, 1988 cited in Carter and New, 2004, p.8).

Such stratification is at the forefront of any realist investigation into social movements. To understand the principles of social movement formation requires this ontological depth, as we move beyond the contextual or experiential basis of social movement activism. This does not make human and social experiences epiphenomenal, on the contrary, but it does locate experience at a 'level' of reality within which wider (un)observable 'happenings' exist. What becomes of experience is recognised within the construction of collectivities based on wider causal processes.

If one seeks to understand what causes the formation of social movements, then one must turn to a model of reality that places its emphasis on the structures for their emergence. Emergence is a central theme for contemporary realists and it is a principle that is defended based on a stratified account of reality. On this reading, realists defend a form of emergentism that can be captured with the maxim: the whole is greater than the sum of its parts. This refers to the relationship between people (as 'parts') and social structures (as 'whole') and the interactions between them. The purpose of such theorizing is to allow for an analytical toolset by which we understand the duality of agency and structure. As the argument goes, people interact to create social structures that are then irreducible to the individuals involved, that is, social structures are the emergent products of human interaction.

Such a thesis is paramount to understanding the formation of social movements, where agents interact to create social structures with emergent hegemonic and resistant properties. By this account, human and social experiences are no longer epiphenomenal when individual and collective biographies serve as witness to the creation or reproduction of socio-structural forms of power and resistance. What we have here, then, is an ontology of social groups whose principles begin to account for the emergence of social movements. Mobilisation, in this respect, is mapped onto the fundamental organisation of social groups, but with human and social experiences as the mediating factor between existing social conditions and the social consciousness necessary for change.

What soon becomes of methodological importance are those ('actual') mechanisms that mediate such fundamental processes. Being realist about social movements means tracing ('reroducing') those mechanisms by which political action is mobilized but, also, by which activists target their efforts for social change.

Empiricism aside, it is important that our transitive theories of social movement formation be empirically grounded, albeit within a fallibilist philosophy. In the next blog post, I hope to further expand on the relevance of historical research for this project. Where the methods of historical sociology serve to trace how social movements emerge but, also, how activists deploy 'repertoires of action' (Tilly, 1978) to, arguably, resist the mechanisms by which hegemonic groups are formed.

Bibliography

John Searle, Foucault and Bourdieu on continental obscurantism (2013-06-04 15:21)

» The Empty ‘Posturing’ of Žižek and Lacan? The Sociological Imagination (2013-07-16 08:01:06) [...] (via Open Culture) will perhaps divide opinion. It follows on quite nicely from John Searle's comments about Foucault, Bourdieu and continental obscurantism which I found recently. Before I express a view, let me offer a preamble: I own and have read a [...]
What is Digital Sociology? July 16th at the @BritSoci Meeting Rooms (2013-06-05 08:00)

Tuesday 16th July 2013
BSA Meeting Room, Suite 2, 2 Station Court
Imperial Wharf, Fulham, London SW6 2PY

This inaugural event for the BSA's Digital Sociology Group brings together a diverse range of speakers who, in a variety of ways, work within the nascent field of digital sociology. Rather than proceed from a substantive account of what digital sociology is or could be, this event seeks to address the question ‘what is digital sociology?’ through an open and informal exploration of a broad range of exciting work being undertaken by sociologists in the UK which could, in the broadest sense of the term, be characterised as 'digital'. In casting a spotlight on these projects in such a way the event aims to initiate an ongoing dialogue about the continuities and discontinuities between these emergent strands of digital activity, as well as the broader methodological and disciplinary questions which they pose.

**Speakers:**
Kim Allen, Manchester Metropolitan University
Les Back, Goldsmiths, University of London
Ben Baumberg, University of Kent
Laura Harvey, Brunel University
Noortje Marres, Goldsmiths, University of London
Heather Mendick, Brunel University
Mark Murphy, University of Glasgow
Evelyn Ruppert, Goldsmiths, University of London
Helene Snee, University of Manchester

**Delegate rates:**
BSA Concessionary Member (student/unwaged/retired) £10
BSA Member £15
Non-member (student/unwaged/retired) £20
Non-member £25

**Getting started with social media (2013-06-06 08:00)**

Social media is becoming increasingly integral to academic life & will only continue to be so – reasons include the increasing centrality of the digital in wider society, the impact agenda, precarious academic labour and the
individualization of professional identity, normalization... I think a minimal online presence is pretty much essential at this stage and with the partial exception of the google ranking conferred by a university domain I don't think there's much point in using institutionally embedded services – this isn't a criticism of them per se, it's just that the model is becoming less and less relevant.

But this doesn't have to be particularly onerous – it's just a case of ensuring visibility and retaining access to online networks through which increasing amounts of professionally relevant information flows i.e. use social media enough to allow relevant people to find you and for you to be able to find relevant people and information. This can be done pretty successfully with an academia.edu profile & occasionally updating a twitter feed.

Sign up to twitter, go to the LSE Impact Blog and find the academic twitter lists, follow everyone you think looks interesting. Follow any friends/colleagues you know on twitter – there's over 10 million users in UK now so there will be people you know. Then just share... say what you're working on and what you're interested in. Share ideas. Share papers and books you've found interesting. Share information about events. Get the app and use it on mobile devices. Using twitter really doesn't involve anything like the time commitment which you might expect at the outset.

Interdisciplinarity and the poverty of post structuralist intellectual strategies (2013-06-09 08:00)

Post-structuralism exchanges the undesirable situation of lack of communication between the social sciences for the equally undesirable one where the internal logic of each subdiscipline is completely ignored. To be specific, there is little satisfaction with the present status quo where the boundaries between economics, political science, sociology and anthropology have become solid blinkers preventing interdisciplinary studies of social phenomena. But such compartmentalization will not be transcended by the facile and mindless abolition of the existing division of labour between disciplines.

[Instead we need] a painstaking process of theoretical labour that aims at building bridges between the various specializations. Such a strategy does not abolish social science boundaries: it simply aims at transforming them from impregnable bulwarks to transmission belts facilitating interdisciplinary research ... what is badly needed today are more systematic efforts towards the creation of a theoretical discourse that would be able to translate the language of one discipline into that of another. Such an interdisciplinary language would not only facilitate communication among the social science disciplines, it would also make it possible to incorporate effectively into the social sciences insights achieved in philosophy, psychoanalysis or semiotics.

Post-structuralism, by completely side-stepping this difficult but necessary theoretical task, simply proposes the free and indiscriminate mixture of concepts and ideas derived from philosophy, literature, sociology, psychoanalysis, semiotics and elsewhere. This rejection of boundaries, in combination with the neglect of micro, meso and macro levels of analysis, of social hierarchies, and of the agency-structure distinction, quite predictably leads to a hotch-potch that is neither good philosophy nor good literature, nor yet good sociology, psychoanalysis or semiotics.

[This leads to] the present incredible situation where anything goes, and where complex macro phenomena are reductively explained in terms of signs, texts, the unconscious or what have you. As far as I am concerned, such crude exercises constitute a relapse to pre-Durkheimian attempts at explaining social phenomena in terms of instincts, race, climate or geography. The only difference is that today's postmodernists draw their reductive explanations from psychoanalysis and linguistics rather than from biology and geography.

Sociological Theory: What went Wrong?: Diagnosis and Remedies, By Nicos Mouzelis

I rather like the ‘conceptual pragmatism’ advocated by Mouzelis. As I understand his arguments, he is proposing that any adequate body of sociological theory (as opposed to social theory) must be capable of facilitating communication and translation between paradigms. Sociological theory which is geared towards ‘building bridges’ can sustain productive conversations across the boundaries of substantive intellectual differences precisely because it provides a rich and multifaceted language within and through which a whole range of divergent substantive claims about the social can be expressed.
If there are common points of reference then sociological theory can provide the sort of intellectual topology (i.e. mapping continuities and discontinuities between different approaches and theories in a relational way) which is a precondition for progressive debate about theoretical topics. But without such common points of reference - if conceptual idioms like structure/agency or macro/micro which recurrently emerge in practical settings are either ignored or rejected in favour of 'transcendence' - it becomes difficult for sociological theory to perform this function beyond those who are, in some sense, 'internal' to the approach.

I'm fascinated by theorists who can incorporate a diverse range of perspectives within the same over-arching framework. This is why I was drawn to Richard Rorty even though I think, in retrospect, his project was a regressive one. It's also more latterly why I'm drawn to realist social theory in spite of the (largely though not entirely unfair) perception it suffers under as being more concerned with scholastic critique than practical rapprochement. I'm not convinced theoretical debates can be adequately understood without an understanding of what (as some more or less stable issue which is relatively autonomous from the debate itself) is at stake in the respect positions being staked out. This minimal claim is perfectly compatible with a sociological approach to the history of ideas, as the 'what' does not need to be a timeless historical question, only something which has recurrently occurred with sufficient frequency to allow it to be treated in abstraction from the substantive disputes.

The Convention for Higher Education (2013-06-10 08:00)

Organised by the Centre for Applied Philosophy, Politics and Ethics (CAPPE), University of Brighton, and co-sponsored by the Campaign for Public Universities, the Council for the Defence of British Universities, and the UCU at the University of Brighton, this two-day conference on Higher Education investigated the current changes that British Higher Education (in England and Wales) is undergoing.

The Convention was designed to enable colleagues from the full range of university disciplines to address how to preserve a properly described 'higher education' from the effects of current proposals, and from the redefinition of universities and of higher learning. As a complement to the Council for the Defence of British Universities and the Campaign for Public Universities, it considered a draft of a Charter for Higher Education that the organisers hope will be debated and refined in most or all institutions of higher learning throughout the UK, and which could then form the core of values around which colleagues could cohere, whether as members of Councils and Academic Boards, Faculty or School Boards, as members of their Course Committees, or as union members.

The Convention was occasioned by the 25th anniversary of the Humanities Programme at the University of Brighton. Born in in adversity in 1988 – in the midst of an earlier assault on the Humanities – it has survived and thrived by resisting both governmental pressure and temporary fashions in education and pedagogy. It is an interdisciplinary, non-modular range of degree courses based on small-group teaching, and research-focused student development.

Here are some of our favourite videos from the event:
Is social media becoming mainstream within UK sociology? (2013-06-11 08:00)

I wrote a short article for the BSA Teaching Journal last week arguing that we are seeing the early stages of social media use becoming mainstream within UK sociology. I’m interested to know what others think of this argument so here is the evidence I cited:

- Almost 30 Sociology departments now have a twitter presence. Numerous departments have their own blogs.
- This year’s BSA conference saw 1497 tweets from 328 users on the #BritSoc13 hashtag – compared to a handful of people discussing the passing tumbleweeds on #BritSoc12 the year before.
Many of the BSA’s study groups have twitter feeds (off the top of my head I can think of at least 8) and a number of the study groups have their own blogs.

On a purely anecdotal level there seems to have been an influx of sociologists to twitter and the blogosphere in the last 9 months or so. Though I recognise how tenuous and prone to confirmation bias an anecdotal observation like this is.

These clearly aren’t mainstream activities yet. But in the very recent past social media seems to have quietly become much more integral to the activity of UK sociologists than it was previously. I thought Dave Beer captured this quite nicely when he asked [4]“Can academics manage without Twitter?” a couple of months ago (before almost immediately answering his own question by creating a twitter account):

What I’m finding is that Twitter seems to have rapidly become the place to find out about what is going on in the academic world. It would seem that there is something about Twitter, more than any other social media, that seems to suit academics. The result seems to be that academic life is being remediated on a large scale. Not only is information about opportunities (including job, publishing and speaking opportunities) passing around freely, but Twitter seems to be making aspects of academic practice more visible. We can see what is going on where, who has achieved what, where people are moving to, and so on. I’m wondering if this is going to increasingly mean that you need a good reason to avoid Twitter. I’m increasingly getting the sense that I’m likely to miss stuff, or that I’m likely to fall out of the loop. Plus, of course, there is the visibility that comes with an established Twitter profile. Maybe resistance is futile. Maybe this is the new space for academic life to thrive.

So, in full knowledge of the fact the only people likely to ever see this question are those who are using Twitter and reading blogs: is social media beginning to become a mainstream activity within UK sociology? What would it mean for it to become ‘mainstream’? What are the risks attached to such a process? What are the opportunities? I think Dave Beer’s post also highlights some of the important questions which need to be addressed if social media is becoming mainstream in this way:

But this remediation of academic life, and the underlying politics of data circulation, are going to need some attention soon. The ease with which Twitter has been absorbed into academic practice is interesting in itself. It will probably be worth thinking through the ways in which it is restructuring academic practice and communication – and how it amplifies certain voices amongst the noise of Tweets.

So even if academics can presently manage without Twitter, will this continue to be true in the future? If so do the implications of this trend vary across the career structure? For instance would it be easier for established professors to distance themselves from a mainstreamed academic twitter sphere than it would be for early career researchers or PhD students? If there are (soft) risks likely to be attached in future (missing out etc) to a lack of twitter presence then does this create a need for academic departments to work collectively to leverage the benefits of twitter for those within them? I’ve been thinking a lot recently about the way services like Rebel Mouse (which I use to automatically create [6]this page which I’m extremely fond of but is nonetheless rather pointless) could be used at the departmental level to draw together the social media presence of all those within the department in ways beneficial to both the individuals and the department themselves.

Originally this column was intended to chart my way through my first formal study of sociology. I’d tripped from one degree to another, with some arty, creative, musical projects in between and ended up in sociology. Apparently, accidentally. When I began my MRes I didn’t really know if I was a ‘proper’ sociologist, because I didn’t really know what sociology was. All I had ascertained was that the theoretical texts underpinning the discipline spoke strongly to me and that, as an intellectual space, it was the more likely discipline to let me do what I wanted. I’m almost completely through my Master’s now and about to embark on my PhD in sociology in the autumn, so do I now feel like a sociologist – and more importantly, do I feel accidental?

Honestly, I have no idea. The paucity of writing in this column is testament to the fact that, ultimately, I’ve managed to fit in with the discipline rather well. Frankly the original piece was a rather heartfelt cry for help – a plaintive grasping for a steadying rock amid the fluctuations of my academic path. Essentially it was therapy, and indeed proved therapeutic. That I haven’t really felt the need to write more often indicates to me that after an initial spell of “WTF?” I’ve managed to ground my research questions, knowledge and skills quite happily within sociology. More than this, when I now talk to people working in my old subject, English Literature, I approach their work with a combination of bafflement and amusement. I have almost no idea why they’re doing what they’re doing, nor how they’re going to make a case for impact out of it. Of course, excellent work is done in other subjects (but obviously the best and most relevant is done in sociology) but my complete alienation from something that used to be second nature seems further proof of my current comfortable place as a sociologist.

On the other hand, several recent incidents have brought into sharp relief the disjunction between me and sociology – or more specifically, what I might regard as dominant or hegemonic sociology. For me this is very much The Other Stuff, or What I Don’t Do, i.e. large scale empirical work where you have an actual chapter headed “Findings”. My chapter headings are all quotations from Alice in Wonderland. What I have are more musings than findings. Let’s take a moment to mark the difference there. I’m interested in power, legitimacy, values and knowledge. I appreciate the scientific method and applying this to theoretical reasoning. I fail to see why emotion and practice and affect (apparently) cannot be part of science. Fortunately I have the opportunity to investigate this question in my PhD, but it’s this specific gap that is always what makes me feel out of step with sociology. I write about writing but I don’t classify myself as a cultural sociologist.

At the 2013 BSA Annual Conference the organisers put my presentation in the ‘cultural sociology’ panel. If I had to define myself it would be within the remit of critical sociology or critical theory. I sort of resent the idea that anything even remotely drawing on art or artistry is put in the ‘cultural’ bracket, as if it can be demarcated and dealt with separately to scientific sociology. A recent email exchange with another sociologist, this time someone rather further ahead in their career than I, revealed further disjunctions in how art is dealt with in terms of sociological knowledge formation. We made a link based on mutual research interests concerning an unusual
topic within sociology (which is in a sense a very good thing), but equally there was a sense of shared relief in finding someone else who thinks this stuff is important. Now that may be a common feeling, but I'd argue that when your research almost **directly contradicts** the foundations of your discipline, it's a particular joy to find other folk who care.

Recently I have found myself abusing a phrase - I am guilty, in my representation of sociology to those outside the subject, of constantly describing the discipline as 'a broad church'. Ultimately, I still don't really know what sociology is but I'm slowly learning that it's more in the **doing than the definition**. Sociology is essentially a set of epistemological and methodological tools for interpreting society and people, but more than that it is a particular form of imagination. A **sociological imagination** is a tool as much as a certain theoretical viewpoint or methodology. So perhaps the reason I no longer feel so very accidental, so very much here by chance, is that the underpinning of sociology appears to be something quite amorphous and indeed, fortuitous: we might attempt to define a sociological imagination but fundamentally the imagination is slippery, indistinct, personal. The concept itself is suffused with artistry. Doing sociology should be similarly so.

---

You have summed up all that is destroying sociology as a serious discipline.

Expand on this....?

Neville Morley (2013-06-11 16:03:42)
Yes, is the main problem that you don’t count stuff, or do quote Alice in Wonderland?

Max Parkin (2013-06-11 16:15:37)
It has no core. Just lots of peripheries.

You’re awfully aphoristic for someone who derides French theorists so enthusiastically.

Max Parkin (2013-07-11 00:11:43)
Aphorisms ought to be a relief after all that eumerdification!

Milena Kremakova (2013-06-12 14:41:48)
Max Parkin: This "coreless" structure in itself is not necessarily the problem with sociology. The existence of multiple paradigms in the social sciences reflects the multiple possible ways of understanding what goes on in the world. It is not (at least) immediately possible to say which paradigm or style of analysis is superior - and the answer might differ depending on the research angle. Besides, there are competing paradigms in the "natural" sciences as well. That said, scientists (social and other) can (and do) argue about what is the best degree of precision for each purpose, and I agree that in sociology it really is harder to judge what is waffle and what is good work. However, this is because the world is complicated. I see sociology as a type of chaos theory with ∞ dimensions - that necessarily makes it and its methods fuzzy and imprecise.

Max Parkin (2013-07-11 00:12:57)
The short road to chaos, you mean?

durandusvonmeissen (2014-04-17 19:11:46)
Astute observation. I incline to think of this 'matrix' as a synthetic manifold of paradigms that go to constitute the
Existential Field for Perception, both objective and subjective elements and aspects of orientation, motivation, interest and planning (or mapping) strategies (cognitive frame or affective disposition, creative or responsive, reflective) enduring a momentum that can be characterized as dual-directional...having interiority and exteriority of experience, whether through Discovery, Invention or passive absorption of the cultural milieu in which we move about and have our being, so to speak. More on that in the "Prolegomena to the Models of Agency," being Value/s instinctively, fundamentally derived or reasonably contrived to serve ends both intrinsic and extrinsic to their realm/space/terrain...intuitive, sensate, cognitive, rational and ideal (projection of the Possible Real) having different orders of realization, different principles of instantiation as experience or differently organized set of value valences, synthetic and dynamically cooperative or competitive, as aspects of Perception that informs the EF, for all organic intelligence as for any Agency, rational purpose, aesthetic, or instinct.

Pity some of the French aren’t! They take far more words to say far less!

Max Parkin (2013-06-11 16:41:33)
I have 40 years of experience of the influence of French intellectuals on UK sociology. Yet to see anything that I thought advanced the discipline. Just because it’s hard to understand doesn’t make it valuable.

Milena Kremakova (2013-06-12 14:42:43)
Any particular examples of bad sociology? Do you have any examples of good sociology? What is your own field?

Sociological Imagination (2013-06-12 15:07:28)
and do you make a habit of walking up to PhD students and saying "YOU'RE what's wrong with sociology"? If you don't do it in person then why do you think it's ok to do it online?

Milena Kremakova (2013-06-12 14:42:43)
Any particular examples of bad sociology? Do you have any examples of good sociology? What is your own field?

Max Parkin (2013-07-11 00:15:02)
No, I just expect young sociologists to justify what they do and how and why, like I had to do. Bad sociology? The GBCS for starters.

Les Back (2013-06-13 07:10:37)
French intellectuals have contributed nothing to sociology? This is baffling having just given a talk in Copenhagen about Bourdieu's early work in Algeria and his sociological craft. Preserving the discipline in the way suggested in Max's comment will embalm it. This couldn't be more wrong at a time when computer scientists, artists, life writers and musicians are all falling over themselves to collaborate with sociologists. This is a great opportunity rather than a threat. There is no future for a timid or conservative sociology.

"There is no future for a timid or conservative sociology". Absolutely! Les Back. As a graduating sociology student, just completed an applied research project, I couldn't agree more. The organisation I worked with warmed to sociology as I have myself through a four year journey. At times I have almost hated it, but I really love it, now that it's beginning to make some sense to me. The amount of times I've used Bourdieu, and to be fair, Durkheim is very undervalued and unappreciated in an impersonal neo-liberal regime/ era where sympathy, empathy, tolerance and patience are at a premium. Well, maybe that has been the case in the past too and the 'founding fathers' saw similar in their days. I'm sure they did. I worked with a 'homeless' football club. Their strength was that they were patient and non-judgmental, They never wrote anyone off. Lots of complex, problematic people. Lots of 'write-offs'. From place to place, some in and out of prison, little if any structure or stability and so on. Amazing people too with stories worth hearing and knowledge to be made from them. Social bonds, trust, self-esteem, hope and (crucially) solidarity were missing from many homeless players lives before they started having a
game of 5-a-side in Liverpool Homeless Football Club. When I've raked through Bourdieu, Wacquant and also a lovely paper by Stepan Mestovic (1987) on the value Durkheim's and Mauss' ideas, for all the economism around, some basic humanity, reflexivity and imagination are vital ingredients of any good sociological imagination. As well as learning so much myself, about myself as well as the community I have worked with; sharing this journey and my thoughts with the key workers in a voluntary organisation has opened their eyes and minds too. The 'old', 'classic' sociological ideas and research in times of rapid change still resonate now. The over-cautious, conservative sociology is as bad as the coldness and blatant over-intellectualism of postmodernism. The reflexive approach is what we've been exposed to in Liverpool, i.e. using the resources we have available to us and the skills and concepts we've learned... All humans are capable of high levels of self-understanding and we use this to make social changes. Maybe not huge macro revolutions. Small changes can and have made a big difference to ordinary lives. Some people may be on the pitch but the game is far from over... Just thought I'd share my thoughts. Best wishes,

Max Parkin (2013-07-11 00:18:59)

Les, I have no idea what you mean, maybe because what you say has no meaning? I don't share your apparent idea of progress in the discipline. I don't care who is falling over themselves to collaborate with a discipline that has no core.

Accidental Sociologist (2013-06-13 09:04:03)

I've been thinking about Max's comments and this is what keeps coming to mind: "Your paintings are stuck, you are stuck! Stuck! Stuck! Stuck!" - Tracey Emin to Billy Childish Sociology, like art, can't be preserved in aspic and remain unchanged and unchanging. I have no time for deadness; I want my sociology to be full of life - to be exciting. So if my kind of sociology is destroying the discipline, I'd suggest that maybe ongoing destruction and revision is no bad thing.

Max Parkin (2013-07-11 00:51:07)

Sociology is not art. It has nothing to do with art, nor with literary crit, nor with French eumerdification. It isn’t about preserving anything in aspic. It’s about trying to make the discipline cumulative and not just continually revolutionary. Revolutions don’t emerge from eumerdification. If the core concerns of sociology are constantly changing, that’s a problem. For me, the core concern of sociology is the problem of order - not just for me but for every sociologist whose work I have admired from the classics to Lockwood. But who reads - who among the current young generation has even heard of Lockwood today? Only the best theoretical sociologist the UK has had in the last 50+ years, of course. Yet the youngsters don’t know his work (I know they don’t; I have asked wherever I go; so did Ray Pahl who was equally puzzled), but have Bourdieu quotes tumbling from their laptops and mouths. And even the many French sociologists I know don’t take Bourdieu that seriously! For empirical work, they find Goldthorpe more useful. You know, the Goldthorpe who is the best empirical macro-sociologist the UK has had in the last 50 years. It was G and L whose work attracted me to sociology and nothing since has persuaded me that their way isn’t the most promising for sociology. Why do UK sociologists prefer and keep turning to prophets from other countries? Naturally, I accept that there are other ways of doing sociology that are very insightful, too. But if one’s concerns are macro-sociological, as mine are, I fail to understand why the newer generations are so ignorant of what’s on their doorstep. Read Solidarity and Schism; read Lockwood in BJS 1996 - there’s a research agenda for today! Read Goldthorpe's On Sociology. Read Runciman's three volume magnum opus. Then explain to me why eumerdification is a better way forawrd. My ears are receiving.

Accidental Sociologist (2013-07-11 07:51:59)

Oh dear Max, if you think sociology has nothing to do with art maybe it’s you that needs to do some reading.....

No, no, no... That Ain’t No ‘Turkish Spring’! That is Chapullin (2013-06-11 15:30)

"What is it these people are protesting against?" foreign press members are continuously asking to the reporters. That is a very understandable enquiry as this movement is quite unique and complicated in many ways. But the answer to that question is very simple; people finally got enough of being told off on a daily basis by the authoritarian father figure, Mr Erdogan that is. One day it is academics, the next artists... yet the main group who kept being bullied by was the journalists as if there were any opponents left in the mass media.

It all started by a small group of young people acted as peaceful 'tree-huggers' in attempt to save a park situated at the centre of Istanbul from turning into 103rd shopping mall in the city. Whilst they were occupying the park singing, dancing and reading books in the frame of a pacifist sit-in resistance, on early Friday morning, 31st May, police raided the protest site in a brutal manner. The epic resistance of the crowd against the water cannons and pepper gas, especially by young women, snowballed into a nation-wide outrage. As the reaction accumulated at an amazing pace, despite the recent autocratic atmosphere in the country, the whole nation managed to get over the fear threshold, including myself. Last week today, when I wrote another article on the top-to-bottom administration in the Turkish cities, I had also told a friend that the whole country felt like living in a home with a constantly furious authoritarian father figure, thus dreaming of escaping the house one day. Then she told me to write a separate article around that issue and I replied her asking if she wanted to see me in trouble. Yet today here I ago, I feel encouraged to say it loud.

The strength of the movement lies in the diversity of the crowd. What brought so many diverse people in unity is their reclaim for their dignity and desire to be treated as adults. Erdogan has at times insulted not only his opponents but also even his supporters including the Ministers in his cabinet openly in front of the public. Moreover, some people close to him started to resonate this behaviour, for example son of a Member of Parliament in his early 20s, has recently put the police officers in line at a Police Station and bullied them to identify the one that got into quarrel with him in a previous occasion. Whilst this is a mere example, there has been hundreds of patronising and bullying treatment from people in power towards 'bottom'. As these examples kept accumulating, whole month of May has been full of much distress every other day, starting with the banning May Day celebrations in Taksim Square. Then the last day of the month, as CNN International has put it, 'something snapped inside Turkey'. That is neither ‘Occupy’ nor ‘Spring’ as it would be misreading the essence of the movement as either solely anti-capitalist or confronting the legitimacy of the current regime. Especially when considered nothing has come to the terms yet, the nature of the protests is constantly being reshaped in an organic way. Therefore it cannot be emphasised enough that, this is neither a war against Sharia or capitalism, this is about a public that wants to be taken into account.

It is totally clear to me why this whole protest is triggered by a debate about a park despite the fact that there are much more problematic issues in the country. And the reason is not that environmental concerns are the top priority for the majority. Neither are the neo-liberal policies that resulted in building more than 100 shopping malls in only Istanbul (and yet not one big public library). That is not to suggest that these are not actual concerns for some people, otherwise the whole action would have not been initiated in the first place. However the lack of participation in the policy making at local level has made the deficiency of general grassroots participation in politics more obvious. Whilst that is a common problem in almost all the cities in Turkey, in Istanbul things get more dramatic as the historical and cultural value of the city exceeds further than its national boundaries. Plus, it is the major economic and cultural hub of the country. Therefore both local and central administrations see it in a way that every inch of the land is too profitable to let the ordinary citizens decide its fate. When the level of the participatory decision making mechanisms in the city are limited to carrying out an electronic poll to select the colour of new public buses, naturally people's feeling of being left out and not heard kept gradually increasing.

That is of course not the first time the central government has taken a decision in a top to bottom fashion about city planning. In the mid-April, a historical building that included the oldest cinema theatre in Istanbul has also
been demolished defying a long period of grassroots resistance. Although there is a brand new and also a very
controversial shopping mall right next to it, there is going to be built another mall instead of 150 years old Cercle
D’Orient building. The form of resistance to keep this cinema was quite similar to the initial resistance at the Gezi
Park, however that has not developed into a protest at national level like this time. As the concept of ‘right to the
city’ is a strongly middle class concern in a society like Turkey, the majority were either oblivious about the issue
or conceived it as a luxurious concern given the many problems in the country. Therefore nobody, including the
activists themselves had foreseen the upcoming nation-wide protest.

As said, what happened this time was, things have finally reached to the boiling point throughout the whole month,
and many people has run out of their patience. Therefore following the severe police attack towards a peaceful sit-in
protest, people started to flood into Taksim Square to back up the protesters. And the fact that Prime Minister’s
reaction to that was once again telling off public by underlining that he would obviously not going to ask public
opinion about these issues, has not helped the situation to calm down. And as many have already written, despite
the mass media being mute, the word has managed to spread by means of mainly Twitter as the core group of
protestors come from an affluent middle class background that have fancy smart phones. And simultaneously, there
have initiated supporting demonstrations at the other big cities like Ankara and Izmir. It should be noted that though
there is no particular leadership in organising those, these demonstrations were mostly led by urban middle class.
However it would be totally unfair to ignore that it managed to diffuse to all the layers of the society very promptly.
For example as reported, one of the guys that has deceased during the protests in Antakya -a small city at the border
of Syria-, Abdullah Comert was a labour at a packaging factory.

Now that the cause has spread at a large extent and the government in a way accepted the excess police intervention
that consisted of way too much pepper gas, people started to ask ‘what is next?’ As there is no particular political
leadership of the movement, the follow up is yet to be designed. Also it should be kept in mind that the initial goal has
yet to be achieved as Erdogan keeps underlining in every speech he makes that the park will definitely be replaced
by the historical military barrack if not a shopping mall. Besides, he still keeps calling the protesters as vandals and
extremists rejecting to listen the content of the demands. Nothing has changed in his bullying authoritarian attitude,
which is the core reason why protesters and now even his supporters are raging. Furthermore, there is another
legislation draft at the Parliament waiting to be in rule soon, which allows foreign companies to search for petrol
in the forests of Turkey. Another law that has never been discussed by the public participation and likely to end in
giving a huge damage to natural resources for the sake of attracting foreign investment.

From what the Prime Minister and the members of his cabinet have been saying in the last week, there is little
hope that the government will change its autocratic attitude. However it also looks like protesters will keep resisting
until their demands are considered. Whilst having no ideological frame or a political agenda makes its sustainability
questionable that is also the reason why the participation is incredibly diverse hence a powerful one. As I write these
lines, the site of the protests’ initiation, Gezi Park has turned into a peaceful commune with a library, a gratis grocery
and a concert hall after 3-4 days of battle with the police. Protesters have taken the initiation and built what they
wanted. And due to the fact that affluent middle class is the critical mass of the protests; some companies have even
turned the whole thing into a marketing opportunity. The very quick spread of praise or condemnation of the shops
or media channels according to the level of their support to the protesters have been a commercial opportunity.
Therefore as never seen in Turkey (or perhaps in the world) before, even big corporations are now taking a side in a
social movement.

Consequently, at this very moment, protesters claim for a democratic climate in which they can discuss whether they
want to be more or less conservative or whether they want more shopping malls or not. Once that achieved, people
can go back to their own ideological enclaves and start to negotiate their own opposite standings in a peaceful
manner. Otherwise even the (almost extreme) right wing Nationalist Movement Party (MHP) members wouldn’t
go on the streets and chant as ‘in solidarity, against fascism!’ hand in hand with groups identifying themselves as communists.

[1]Chapullin is a neologism born out of this movement as the Prime Minister Erdogan in his speech referred to the protesters as ‘Capulcu’ that means bummers/looters so used as to describe the participants of the resistance.

Güneş Tavmen was born in Ankara and has worked in Istanbul. Now in London, she is studying for an MA Degree in Sociology at the City University, holding a Chevening Scholarship. She is interested in Information and Communication Technologies, urban life and grassroots participation.

"Stephen, you just don't get it" - a personal reflection on coming to use social media (2013-06-11 15:36)

I have been greatly influenced by a colleague who was once, moons ago, a student of mine and who has now well surpassed my achievements–Deborah Lupton [@DALupton]. She said to me, very nicely, when I said I liked the internet but could not see the point of Twitter, “Stephen, you just don’t get it”. Absolutely right. I didn’t but she rapidly opened my eyes. Now I do. Thank you again, Deborah.

So, like all late converts, I have since been proselyting my erstwhile colleagues—I used to be a sociology prof but now I run my own consultancy company, which includes things like facilitating some large planning sessions or conferences at Universities...

Well, I have to tell you, as a rough rule of thumb, over about 55 not only do my friends not get it, they don’t want to get it. This is embedded in a wider mind-set. They are locked into a sorts of 1970s model of the academic enterprise, with a focus on ‘refereed publications’ in ‘high status journals’. Etc. Pressed, they blame this on education bureaucrats for insisting on these things as ‘measures’ of academic impact/performance, a view that seems widely held but is rather disingenuous (well it is if you are over 60 like me). They choose to forget that when the bean counters came to the door and chose these methods for measurement, they did so because they were so well established in academia. In sociology, I recall, in the mid ’70s, being given a friendly lecture by my then Chair about how a paper in ASR or AJS was worth about 5 published in a list of more minor journals, how two such papers were worth a book, unless it was a very high status imprint like CUP, etc. Publish or perish thrived, selfish colleagues who shut their door, ignored students and typed furiously prospered and promotion/tenure committees loved them.

If you are fixated on this way of doing things, you have a really hard time taking a blog seriously, you don’t and won’t get social media generally (though you can manage email) and you are wont to pontificate on how the existing model is the only one that can deliver quality. Nonsense: history is littered with technologies for this...

Meanwhile, I hear quite literally, senior professors (one only last week who I won’t name cos he is a nice guy) insisting that he will retire rather than get on Twitter and (possibly inadvertently) exemplifying Kuhn’s argument that paradigm shift is based on the old generation dying out.

Back in the late ‘60s, when sit-ins were all the rage, there is a famous photo of a group of (baby boomer) students marching on the LSE waving a banner “Beware the pedagogic gerontocracy!!”. Sadly the baby boomers now
ARE the pedagogic gerontocracy.

**Stephen Mugford** can be found on Twitter [1]here

1. [https://twitter.com/StephenMugford](https://twitter.com/StephenMugford)

---

Xavi (2013-06-27 01:10:21)
"Sadly the baby boomers now ARE the pedagogic gerontocracy." Nope: it is called History. Berger and Luckmann got that right. Why "sadly"?

Xavi (2013-06-27 01:18:51)
Sorry, I meant: of course baby boomers are becoming the new order. That’s how it goes, not sadly how it goes.

Stephen Norrie (2017-08-05 11:25:55)
I’d like to hear a bit more about this: "They choose to forget that when the bean counters came to the door and chose these methods for measurement, they did so because they were so well established in academia. In sociology, I recall, in the mid ’70s, being given a friendly lecture by my then Chair about how a paper in ASR or AJS was worth about 5 published in a list of more minor journals, how two such papers were worth a book, unless it was a very high status imprint like CUP, etc. Publish or perish thrived, selfish colleagues who shut their door, ignored students and typed furiously prospered and promotion/tenure committees loved them." Perhaps S. I. could gather some oral history on topic?

Mark Carrigan (2017-08-06 22:03:49)
Try asking on Twitter and we’ll retweet?

**Visual cultural analytics (2013-06-12 08:00)**

![Image](1738)

Gillian Rose responds to an event on visual methods [2]on her blog. She focuses in particular on Lev Manovich’s work at the [3]Software Studies Initiative. I’ve been trying to follow their work for a while, in particular the creative
means they have been developing for analysing the visual images in social media content. In Gillian’s blog post she discusses and links to their [4]ImagePlot visualisation software. This software is designed to locate patterns in the images used in social media.

Of course, as things stand much of the analysis of social media content focuses upon text, given that visual images are so central in social media it seems that this is really an area that needs to develop. Software like ImagePlot is a good place to start. Maybe the visual analysis of social media content will expand over the coming years. It seems important to move away from a purely text based focus. The problem, as Andrew Abbott pointed out (see [5]here for a brief discussion), is finding patterns in such monumental data. It is here that software like ImagePlot might allow us to find these patterns. Gillian raises some potential limitations of this kind of software led analysis in her post.

Governments, the internet and freedom (2013-06-13 08:00)

Current events in Turkey have raised a lot of questions – questions that strike at the very roots of government legitimacy. One of those questions is about how governments deal with the internet. Turkish PM Erdogan has ‘blasted’ twitter and social media for ‘spreading lies during weekend protests’ (see for example [1]here).

It isn’t an uncommon response: when a government fears it’s losing control, it worries about the role played by social media in that loss of control. The extent to which Twitter and Facebook really contributed to the uprisings in the ‘Arab Spring’ is still a matter of debate – but the governments certainly thought they might, and sought to either suppress them or shut them down as part of their attempts to control the people. In the UK, in the aftermath of the rioting in London in 2011, Prime Minister David Cameron[2]suggested:

“Free flow of information can be used for good. But it can also be used for ill. So we are working with the police, the intelligence services and industry to look at whether it would be right to stop people communicating via these websites and services when we know they are plotting violence, disorder and criminality.”

Even at the time, Cameron seemed unaware that he was suggesting exactly the same thing for the UK as he
was deploring in places like Egypt and Libya – and even now, with suggestions that some within the government want to bring back the Snoopers’ Charter (see my blog posts [3]here and [4]here), and with regular calls to take control over various forms of ‘extreme speech’ – one man in the UK was arrested for a Facebook post of a burning poppy – it’s very clear that governments of many flavours consider the internet, and social media in particular, to be something to be feared.

And yet, when we watch what is happening in Turkey, many of us find ourselves naturally siding with those protesting. We need the right to protest – and the right to communicate, to organise, to assemble, to associate – and to do so with as much freedom as possible. That’s why those kinds of freedoms are built into most of the key human rights documents and declarations. The Universal Declaration of Human Rights, the European Convention on Human Rights and others have these as core values – and quite rightfully so.

When we see those rights restricted, controlled or threatened, we should know that this is wrong – and people in Turkey do. I was particularly struck by [5]one tweet, by tweeter Faruk Ateş (@KuraFire):

“A government that fears the free communication among its citizens is a government you can no longer trust to govern you. #Turkey”

He’s right. When governments seek to control our communication – whether by shutting down social media, or by monitoring all our communications (as the Snoopers’ Charter proposes), ultimately that means that they are governments that you can no longer trust to govern you. The Turkish government is looking increasingly like that kind of government – and so would ours in the UK if we tried to do the same.

Of course there are good ‘excuses’ for doing so – fighting terrorism, avoiding ‘disorder’, stopping radicalisation and so forth – but we should be aware that by doing so we are risking sacrificing a huge amount of what makes us ‘civilised’ in any real sense. We should not allow ourselves to be distracted or persuaded that there’s something else going on – that, for example, the Snoopers’ Charter is only about monitoring the communications of the ‘bad guys’ and will only be used to deal with terrorism. As David Cameron demonstrated back in 2011, it’s very, very easy for a government to slip into thinking that powers are needed to keep ‘control’ when things get difficult. Powers to monitor all will ultimately be used to monitor all, and for whatever purpose the government and other authorities deem appropriate at the time. It is a slope that is very slippery indeed....

We should all be watching what happens in Turkey very carefully – for many reasons. How the Turkish government ultimately deals with the protest will be very important – primarily for the Turkish people, but in many ways for all of us. I, for one, am hoping that freedom wins out, and that suppression and oppression are not the main victors. The same is true for all countries. We need to find solutions to our problems that don’t require that kind of suppression and oppression – solutions that support our human rights – and our humanity.

Attempting the Impossible (Visual Sociology #008) (2013-06-14 08:00)

Artwork: Alice Santoro (www.alicesantoro.com)

[1]
Attempting the impossible

by Alyce Santoro, "a delicate empiricist"

Shifts in society reflect shifts in the social imaginary: excerpt of the Manifesto for the Obvious International (the full text can be read [4]here):
“In philosophy, the collectively agreed upon definitions, symbols, styles, behaviors, ways of using language, and other factors that are held in common throughout a culture – assumptions about how things are "supposed to be" – are called the social imaginary. Whether it is "normal" to compete or cooperate, own property, go into debt, go to war, or go shopping is determined by a wide range of constantly shifting factors, including the influence of our political, legal, and educational systems; corporate advertising; the media; and various amalgams thereof. The social imaginary is like a program that runs surreptitiously in the background; until we become consciously aware of it, we don’t notice that our attitudes are being influenced by entities that may have a vested interest in them. When we fear our neighbors instead of loving them, industries that produce guns, fences, and alarms profit – we willingly give them our dollars in exchange for a strange kind of security indeed. The same happens when we buy into the illogical premise that it is "normal" to pursue endless economic growth based on finite resources that, if consumed, destroy planetary conditions that support life.”

Alyce Santoro is an internationally noted conceptual artist. A former scientist, she creates multimedia "philosophrops" to draw parallels between seemingly disparate fields and to spark dialog about holistic approaches to challenges facing the environment and society. More at [5]alycesantoro.com and [6]@alyceobvious.

---

[This week’s "visual sociology" post is on the cusp of philosophy, social activism, and art. Alyce Santoro plays with material objects, images and text to create artwork loaded with social and philosophical messages. Perhaps we ought to rename the column "Visual social science"? But even that wouldn't be precise enough. Since launching this column, SI has come across a wonderfully wide and varied application of visual approaches and methods than a narrow definition of "sociology" would accommodate - from empirical sociology to philosophy, anthropology, ethnography, education, politically charged art...]

Rethinking the craft of social research (2013-06-15 08:00)

"It is still the case that most social scientists view the research encounter as an interface between an observer and the observed, producing either quantitative or qualitative data. Equally, the dissemination of research findings are confined to conventional paper forms of publishing, and research excellence is measured and audited through such forms, be it in monographs or academic journals. It remains the case that in social science the inclusion of audio or visual material in the context of ethnographic social research has been little more than 'eye candy' or 'background listening' to the main event on the page. The relatively inexpensive nature of these easy-to-use media offers researchers a new opportunity to develop innovative approaches to how we conduct and present social research. There are more opportunities than at any other moment to rethink the craft of social research beyond the dominance of the word and figure and to reconsider our reliance on 'the interview' (often taking place across a table in particular place) as the prime technology for generating 'data'."

- Les Back in [1]Live sociology: social research and its futures

'Questions of wider dissemination and methodology itself have begun to convince social scientists to look beyond their own philosophical groundings to aesthetics for solutions (Jones, 2006). They have found that text is often only linear and, therefore, temporal; in science the meaning must be precise or risk disbelief. Narrated stories turned into written text (the vast majority of the outputs of the Social Science interview culture) now require a fresh approach. The constructed memories that are the building blocks of narrated accounts, like dreams, are simultaneous layers of past and present—the visual and the spatial—and these added dimensions, beyond the purely temporal, now demand attention'. - Jones, K. (2012). Connecting research with communities through performative social science. The Qualitative Report, 17(Rev. 18), 1-8. Retrieved from [http://www.nova.edu/ssss/QR/QR17/jones.pdf](http://www.nova.edu/ssss/QR/QR17/jones.pdf)

From the craft of songwriting to the craft of sociology (2013-06-16 08:00)

I wrote a couple of weeks ago about my interest in [1]sociological craft and increasing preoccupation with the idea of creating a forum (probably as part of this website) within which accomplished sociologists could reflect on the processes underlying their work. Hopefully in ways which would be helpful to PhDs/ECRs as well as addressing broader disciplinary questions about the purpose and nature of sociological work.

Part of the idea for this stemmed from a favourite website of mine, Songwriters on Process, which discusses the craft of songwriting in a reflective way with a diverse range of songwriters:

Songwriters on Process is dedicated to the creative process of songwriters. It’s the stories behind the songs, from beginning to end. The site features in-depth interviews with songwriters in which they dissect their process. What is their creative process when they literally sit down to write a song? What do they do when they get writer’s block? What quirks or superstitions do they have? How disciplined are they? Who are their literary inspirations? How do they get inspired? Do they compose on computer
Do you make daily writing a part of your routine?

No, that’s where I split the balance between being whimsical and being disciplined. I can’t do it every day. I like to write in bulk. I’ll write five or ten songs in a month, then take a month off. At the end of that month, I start to feel like I need something to come out. I feel like it’s going to happen, so I do things to inspire myself. I used to just pick up the guitar and that would be it. And if I picked up the guitar and nothing came and I couldn’t think of any words, I was out of luck. But now I’ve started to work with things like Garage Band, and I’m doing things like finding all these soul loops and cutting them out.

I learned how to play the piano and the organ and was like, “Wait a second, I can inspire myself through drum beats, or really anything.” I used to have random scattered papers with ideas all over the place. Now I also have these little mp3 files that are 30 seconds long and full of craziness. I can go back to them at anytime when I feel something happening, so I peel through them and flesh out the ones I like.

That’s probably also a good way to prevent writer’s block.

That’s why I started doing it. I had a really bad case of writer’s block a year ago. It was really hard because I never had nothing to write about. I decided that was never going to happen again, so anything I thought about, any idea, I’d write it down, take a picture of it. Mess with a little drum loop to make it interesting. Even if it was a little interesting and could never be used in any of my outlets, I would do it anyway.

Do you keep a notebook handy to write down things you see and hear?

Not really. That’s never been the case for me. I know a lot of people do that, but it’s hard for me to do. Sometimes I’ll be on the subway and listen to people talk. And I’m always like, “How is anybody getting anything out of this? This is nothing. It’s all about coffee and business meetings!” I read a biography of Tom Waits once, and he writes about anything. I mean, how do you sit there and listen to someone talk and write it down? What are you fleshing out? There’s nothing there! But apparently there is.

What is Digital Sociology? July 16th in London (2013-06-17 08:00)

Tuesday 16th July 2013
BSA Meeting Room, Suite 2, 2 Station Court
Imperial Wharf, Fulham, London SW6 2PY

This inaugural event for the BSA's Digital Sociology Group brings together a diverse range of speakers who, in a variety of ways, work within the nascent field of digital sociology. Rather than proceed from a substantive account of what digital sociology is or could be, this event seeks to address the question 'what is digital sociology?' through an open and informal exploration of a broad range of exciting work being undertaken by sociologists in the UK which could, in the broadest sense of the term, be characterised as 'digital'. In casting a spotlight on these projects in such a way the event aims to initiate an ongoing dialogue about the continuities and discontinuities between these emergent strands of digital activity, as well as the broader methodological and disciplinary questions which they pose.

Speakers:
Kim Allen, Manchester Metropolitan University
Les Back, Goldsmiths, University of London
Ben Baumberg, University of Kent
Laura Harvey, Brunel University
Noortje Marres, Goldsmiths, University of London
Heather Mendick, Brunel University
Mark Murphy, University of Glasgow
Evelyn Ruppert, Goldsmiths, University of London
Helene Snee, University of Manchester

Delegate rates:
BSA Concessionary Member (student/unwaged/retired) £10
BSA Member £15
Non-member (student/unwaged/retired) £20
Non-member £25

For administrative assistance contact: BSA Events Teamevents@britsoc.org.uk
Telephone: +44 (0) 191 383 0839
Academic enquiries: Dr Emma Head e.l.head@keele.ac.uk

I've been the reviews editor for the journal [1]Information, Communication & Society for a year or so. Things are going well with the journal. We get a very high number of article views and we are accessible through plenty of libraries throughout the world. I've found editing the review section to be really enjoyable, it's also helped me to stay on top of the vast literature that is being published in the area. I've also found the job to be really manageable and containable. I tend to spend chunks of time commissioning reviews, often when I don't feel I'm able to write that day, with the occasional moments used to read incoming reviews and to handle the management of the section. ICS is really well organised so editing the reviews can be quite efficient. I was very happy to take on the reviews section. ICS has always been one of my favourite journals, so I was keen to be involved. I can see that if you were taking a quite instrumental line then you might not be willing to take on a reviews editor role. I suspect that it doesn't help a great deal with the CV (this is my suspicion anyway, but views might vary). So it is one of those roles that you might take on for other reasons. Apart from the fact it is enjoyable and I like the journal, the reviews editor role brings other benefits. As well as helping to keep up with the literature, it also helps to build up a network and be part of an academic community. You get to know people when you invite them to write a book review, and then as you follow this through to publication. Most of all though, I think book reviews are important. They provide a space for dialogue and reflection, which are often things that get sidelined as a result of other pressures. When I took the role on I began to think that in some ways book reviews needed to be defended and nurtured. Particularly as spending the time to do them, which is an act with no describable or measurable pay off, is almost an act if resistance against the constraints and expectations of contemporary higher education. Book reviews provide a space to stop and respond to ideas.

Given the pressures people face it is probably a surprise that anyone agrees to right a book review. One of the advantages of the high price of academic books is that the promise of a free book is seen as a substantial pay-off. Even though this is the case it can still be tricky to successfully commission reviews. People often don’t have enough time, which is completely understandable. We all have to turn things down for this reason from time to time (I've had an idea for a post on saying no, I hope to post it on here soon). This makes it difficult to commission review from across academics at different stages of their careers. It is harder to find more established academics who are willing to write a book review. and beyond this, i suspect that the training of ambitious early career academics includes advice about avoiding book reviewing in favour of what are seen to be more productive/measurable activity (a shame as book reviewing can really help to build up background knowledge and facilitate more substantial writing). But one simple lessons learned very quickly was that people are more likely to agree to review a book if it is something they are keen to read. So I started to curate the section a little more. I did this by finding books that looked interesting or potentially influential. I then started actively contacting publishers to get hold of these books. I was quickly able
to build up a stock of these books, alongside the others that publishers were sending me anyway. I also found that publishers learned the type of thing I was after and started sending the type of stuff I wanted for the section. With this newly curated stock of books I had much more success. I is sometimes hard to match books to potential reviewers. The quality of websites varies substantially. But I found that the rate of people agreeing increased, and I was also able to attract more reviewers. Even established academics are keen to review important books in their field, especially if they are books they wanted to read anyway. I still get a good share if no's or no responses, but the hit rate of positive responses is quite high. I’m always keen to find reviewers. I have a bit of a backlog of books now, so some more commissions are on the to do list. One idea I had was to post a photo of the pile of books for review in here. I might do this in the future, for now I’ll stick with commissioning reviews. And I do occasionally get an email from dolls asking if they can write a review, but these are quite rare.

We have around 35 book reviews in the journal this year – I commissioned around half of these, my very capable predecessor left a good pool of reviews behind. And I’m now working on 2014. However, we now publish all reviews on our online first or 'latest articles' section. This means that the reviews are often published within a few weeks of submission. This allows the reviews to be timely. Indeed, I’ve just provided posts to seven recently published book reviews on this blog. These will all be in the print journal in 2014, but are already available online. This is working well at the moment, but we will no doubt review this, particularly in mind of open access debates. A number of journals are now publishing book reviews online and open access, often on blogs. This seems to be working well. As things stand we are keeping them in the journal. But we are about to enter a period of substantial change in academic publishing.

» Crafting a postgraduate module: Digital by-product data and the social sciences The Sociological Imagination (2013-10-15 08:00:47)
[...] reposted it with his permission as part of our Sociological Craft Project. Find out more here. If there’s an aspect of academic life you’d be willing to reflect upon for the project [...] 

CfP: The Sociological Craft Project (2013-06-17 14:40)

In this new feature the Sociological Imagination invites short (2500 word max) contributions reflecting on any aspect of sociological craft. We use the term ‘craft’ in the broad sense conveyed by Richard Sennett:

Craftsmanship names an enduring, basic human impulse, the desire to do a job well for its own sake. Craftsmanship cuts a far wider swath than skilled manual labour; it serves the computer programmer, the doctor, and the artist; parenting improves when it is practiced as a skilled craft, as does citizenship. In all these domains, craftsmanship focuses on objective standards, on the thing in itself. Social and economic conditions, however, often stand in the way of the craftsman’s discipline and commitment;
schools may fail to provide the tools to do good work, and workplaces may not truly value the aspiration for quality. And though craftsmanship can reward an individual with a sense of pride in work, this reward is not simple. The craftsman often faces conflicting objective standards of excellence; the desire to do something well for its own sake can be impaired by competitive pressures, by frustration, or by obsession.

We envision a number of forms such contributions might take:

- Reflections on particular academic roles (e.g.[1]review editor).
- Reflection on the process of writing for particular forms of publication (e.g. journals, monographs, logs)
- Reflections on the craft of research (the tools utilised, your relationship with them, the messiness of the process)
- Reflections on where you work, the devices you use, how the ambiance shapes your writing
- Reflections on undertaking research, managing time, negotiating conflicting demands.
- Reflections on routines and writing practices which are integral to your craft
- If you were brave enough to send us a picture of your workspace we’d love to include it!

However these are only examples. We’re keen not to get posts of the style “10 Tips for Writing Good Journal Articles”. We have nothing against these posts - we often feature them! But this project aims to generate a discussion of the craft of sociological work, the practices which sustain it and the emotional life and personal concern which are irrevocably bound up with it. We are particularly interested in contributions that explore the constraints that contemporary academic structures place upon the creative exercise of sociological craft and how we can, hopefully, work towards ameliorating these circumstances.

If you want to submit a contribution for the project then please e-mail it to mark@markcarrigan.net attached as word document (with any multimedia files attached separately) along with a short 2 line bio to accompany your post.

I am interested in writing a short piece for sociological craft on within and beyond the walls of the academy, looking at sociologists can curate using critical sociological traditions which are not directed by the impact agenda. The focus will be on exhibitions and live arts events.
Once again I came away from the BSA Conference with the message that sociology was in crisis but at the same time at a moment of great opportunity if only it could sort out precisely what it is and what it’s for. And once again I came away feeling cautiously optimistic. One source of this optimism was the presentation given by John Holmwood *Sociology’s ‘moments’: Democracy, expertise and the market*. A major contention of his paper, and one that has significant consequences for sociology, is that the dominance of neo-liberal public policy since the late 1970s has sought to replace ‘publics’ with ‘markets’.

In elaborating on the problems this presents to sociology, not least because the discipline and its institutional home in Universities are also being subject to a process of marketization and financialization, John contrasted the Parsonian project to create a professional sociology immune to ideological distortion with the American Pragmatists that developed the notion of the social self in the process of a critique of liberalism (1). It was Mead at the turn of the 19th century that saw the increasing tendency for government to merge with business and the industrial world. Dewey maintained that government did not so much represent the public interest as those of corporations and markets. Then, as now, this has significant consequences for our notions of democracy and the political role of the public sphere. But, according to Mead, this presents opportunities to the ‘public’ that emerge from forms of resistance and moments of critique.
A conception of a different world comes to us always as the result of some specific problem which involves readjustment of the world as it is, not to meet a detailed ideal of a perfect universe, but to obviate the present difficulty .... [1]The Working Hypothesis in Social Reform American Journal of Sociology, November 1899]

This has implications for the nature of sociology as a form of expertise and its role, according to John. It could be in the service of government and its partnership with the corporations and industry. Or it could serve the more public project of adjusting and coping with the effects and consequences, intended and unintended, of neoliberal corporatist policies. This implies a role for sociology in dialogue with ‘publics’ as they try to organise around the effects, to paraphrase C Wright Mills, that public issues have on private lives and communities. This may not sound radical or ‘activist’ enough for some but it is worth serious investigation and consideration. John makes the point that this is not an ‘emancipatory’ sociology. It is not a programme or project to bring into being ‘a detailed idea of a perfect universe’. However it does confront and critique the taken for granted assumptions of reality and the doxa that supports and reproduces it. It does expose the historicity and contingency of the taken for granted and demonstrates that other realities are imaginable. In serving the public rather than the dominant troika of government, industry and finance, sociology serves democracy in that it exposes and resists the multifarious processes and policies that combine to hollow out and neutralise democratic institutions. In a previous ‘radical moment’, in the 1960s and 70s, sociology could be seen as harnessed to a project of institutionalised reform and betterment operationalised by the welfare state and influenced by the new social movements focused on forms of equality and inclusive citizenship. But from that time on sociology has been squeezed between a neoliberal critique of the welfare state and citizenship rights and its denigration as a form of expertise in the service of a now derided and demonised programme of betterment and entitlement. John concluded with the question, what is it to practice sociology in a profoundly undemocratic system where reform has been de-institutionalised and sociology has lost its institutional locus and legitimacy? One suggestion is that it should revivify itself in response to a new radical moment and in doing so can revisit and be informed by some of the lessons and messages of the American pragmatists of the early 20th century. Sociology can inform a defence of wider social values in the face of a declining democracy. It can do this by providing publics with new and alternative accounts of the present and possible futures. In the face of TINA (there is no alternative) it can be asserted there always were and still are. To this end sociology (and therefore sociologists and their practice) must occupy (with all its post financial crash connotations) public debate in the service of democracy (not markets) and make inequality matter.

A great deal of John’s paper seemed to chime in well with the rather modest and arguably realistic (pragmatic) claims Zygmunt Bauman makes for sociology. Like John in his paper, Zygmunt offers a history of the development of sociology mapped onto key stages in the development of modernity and the state. In Zygmunt’s account this can be represented by his distinction between sociologists as legislators and, as this function is stripped away from them, as interpreters. He also offers a diagnosis of the current parlous state of democratic institutions based on a corporatist account of government and the separation of power from state politics as a result of economic aspects of globalisation. His conclusions for the contemporary role of sociological practice are similar too in that it should engage in dialogue with various publics in the service of wider social values, democracy and justice. I’m not claiming that John’s account and Zygmunt’s are reducible to one another. I’m sure there would be points of disagreement and differences in emphasis. I only draw attention to a similarity in their conclusions for the practice of sociology today. There are two points of interest that I’d like to pursue. The first one is the notion that sociology develops in confrontation with ‘radical moments’ that are precipitated by social developments external to its discourse and therefore
changes in the environment with which it has symbiotic and what might be called co-evolutionary relationships. The second is the notion that sociology should concern itself with and service democracy and wider social values such as those that are concerned with inequality and justice. I will return to the second point in another post but in the spirit of John’s return to the early American pragmatists I thought I would revisit an influential reflection on sociology at another radical moment in its history, the 1950s and 60s, by Alvin Gouldner. This will draw on two of his writings. The first is *Anti Minotaur: The Myth of a Value Free Sociology* (Social Problems, Volume 8, Number 3, Winter 1962, pp. 199 ff.) first given as a Presidential Address to the Society for the Study of Social Problems (SSSP) in 1961. The second is *The Sociologist as Partisan: Sociology and the Welfare State* (The American Sociologist Vol. 3, No. 2, May, 1968, pp. 103-116). This was a critical reaction to the Presidential Address given by Howard Becker to the SSSP 6 years later entitled *Whose Side Are We On* (Social Problems, Vol. 14, No. 3, Winter 1967, pp. 239-247) where Becker advocated we should conduct our sociological practice from the point of view of the ‘underdog’. Both these articles are conveniently collected together as chapters 1 and 2 of Gouldner’s book *For Sociology: Renewal and Critique in Sociology Today* Allen Lane 1973. (I first looked at these readings in 1977 when I was doing A level sociology at an evening class and frankly hardly understood a word of it)! This critique is quite damning and one wonders if Gouldner and Becker where friends! Gouldner’s critique of Becker’s attempt to side step the problem of values in sociology is instructive for thinking about the grounds upon which an engaged sociology should focus on social values concerned with inequality and justice as advocated by both John Holmwood and Zygmunt Bauman.

I’ll commence Gouldner’s discussion of the myth of a value free sociology with an extended quotation that mirrors very well some key concerns we, or some academics at least, still have today with respect to the role and practice of sociology.

The problem of a value-free sociology has its most poignant implications for the social scientist in his (sic) role as educator. If sociologists ought not to express their personal values in the academic setting, how then are students to be safeguarded against the unwitting influence of these values which shape the sociologist’s selection of problems, his preferences for certain hypotheses or conceptual schemes, and his neglect of others? For these are unavoidable and, in this sense, there is and can be no value-free sociology. The only choice is between an expression of ones’ values, as open and honest as it can be […] and a vain ritual of moral neutrality which, because it invites men (sic) to ignore the vulnerability of reason to bias, leaves it at the mercy of irrationality.

In Gouldner’s view a value free sociology is impossible due to the unavoidable necessity of making choices between subject matters, research hypotheses, concepts and explanatory frameworks. To mistakenly claim and offer value free knowledge, however sincerely, is to obscure the inevitability of this process, the values that inform it and its knowledge productions. If it is claimed that social values can only distort knowledge when in fact they are an indispensable condition of its production, then all knowledge is distorted. Distortion in the sense of partial, selective, contingent, is inevitable. But the term ‘distortion’ can be left out of this characterisation of knowledge as it implies the possibility of an undistorted knowledge that is impartial, complete(able), absolute and universal. This is the modernist utopian vision of knowledge that underpins the post-political world of techno-managerialism and expertise. For Gouldner, claims of value freedom translate into moral and value relativism. This leads to the claimed ‘value free’ sociology being at best politically irrelevant and at worse it surrenders authority, legitimacy and power to the dominant discourses of the status quo in which it becomes complicit. It is in danger of becoming the hand servant of and harnessed to the technologies of domination, legitimation and obfuscation. ‘Nudge theory’ springs to mind here along with behavioural economics and sociologically informed tools of post-political techno-management. A purported value free professional sociology can be used to help sell cigarettes as well as advise those who wish to reduce smoking. The domain of the value-free morally neutral sociology is that of the “spiritless technician who will be no less lacking in understanding than they are in passion, and who will be useful only because they can be used”. Gouldner warns us that however blunt and dull these sociologically informed tools are they are capable of building
a social technology “powerful enough to cripple us”. In his day prisoners of war and GIs were being systematically brain washed and compulsive consumerism was being driven by advertising and scientific marketing. As he observed, the social science technologies of the future will “hardly be less powerful than today’s”.

Within the institutionalised forms of sociology this can be experienced by its students and practitioners as isolating and alienating. In the words of Gouldner, “They feel impotent to contribute usefully to the solution of [society’s] deepening problems and, even when they can, they fear that the terms of such an involvement require them to submit to a commercial debasement or a narrow partisanship, rather than contributing to a truly public interest”. There are two strategies for psychological accommodation for the institutionalised sociologist. One is to embrace relativism, particularistic anthropology or the post-modern turn, solving the problem of value-freedom by promoting it to an intellectual principle. The other is to become a sociologist of sociology and engage in a learned and scholarly critique of its competing paradigms and methods. Both are ways of sheltering from the real world of political action and passion, uncertainty and messy pragmatism. "It evokes the soothing illusion, amongst some sociologists, that their exclusion from the larger society is a self-imposed duty rather than an externally imposed constraint". It disguises the fact that to refrain from social criticism reflects the personal interests and insecurities of some sociologists rather than “reflecting a higher professional good”.

So two tendencies that Gouldner identified in the 50s and 60s are for some sociologists to either ‘sell out’ or ‘opt out’ neither of which sound particularly edifying as a job descriptions for young sociologists today. Arguably the two tendencies are still alive and well but fortunately they do not represent the only options available or for that matter already manifest. In his day Gouldner was not saying that the ‘critical posture’ is dead in American sociology, only that it was ‘badly sagging’. He cited several authors that were bucking the trend many of whom would be largely unknown today but C Wright Mills, Dennis Wrong, Lewis Coser, Bernard Rosenberg and David Riesman may still stir the memory of some of us. Gouldner considered these to be intellectuals no less than sociologists, the larger tradition from which sociology evolved and which is itself founded on the assertion of the right to be critical of tradition. We have our own contemporary representatives of this contrary and troublesome breed.

For me, at least, a number of problems emerge from this. What is it to be critical? What is practically entailed in practising a sociology that engages in dialogues with various publics? On what basis do we choose the publics to engage with? What is the justification for adopting and focusing on values associated with inequality and justice? (2) Don’t financiers, bankers, the police, torturers and hedge fund managers constitute publics and operate in their own universe of values? If we claim we should side with the victims, given a sociologist’s systemic sensibilities, are we not all victims one way or another? And in a world of unavoidable and irreducible uncertainty in which
we have abandoned utopian visions and meta-narratives, political and scientific, isn’t pragmatic adaptation and problem solving doomed to be absorbed and neutralised, even exploited, by the status quo to enhance its legitimacy and wealth and further secure its domination? As Zygmunt Bauman, John Holloway and Slavoj Žižek all say, in no particular order, there are no guarantees this will all end happily. Perhaps the best we can do is live in the limbo of a hopeful resignation. Perhaps it is, after all, quite rational to tend our own gardens, retreat behind the barricades of relativism and incestuous methodological flagellation? Or make alliances with the centres of unassailable power to minimise our own victim-hood? I think there are positive, life enhancing and, yes, emancipatory answers to these questions. The next post will continue with Gouldner and examine his account of why we should side with the exploited and those that are subjected to an excess of suffering, given that to suffer to some extent is part of the human condition.

Notes:
(1) In another session devoted to an exploration of the relationship between economics and sociology it was pointed out that Parsons claimed that sociology is concerned with the residual problems left over by economics.
(2) It is not clear that a sociology that is informed by a concern with inequality and justice and that exposes the complex and contingent mechanisms that work ‘behind the curtain’, as Bauman and Kundera would have it, and therefore debunk the assertions of TINA cannot and will not be used to inform the policies and strategies, both explicit and hidden, of the dominant classes to preserve something like the status quo. This would mean that a body of critical knowledge would not be enough to produce a society that embodied the preferred social values of equality and justice. The knowledge would have to be translated into countervailing political and cultural processes and activities – a call for an engaged activist sociology perhaps using ‘action’ forms of research and engagement.

Of possible interest is the post I did last year reflecting on the BSA conference in 2012 [2]http://terrywassall.org/2012/04/14/reflections-on-britsoc12/

This post by Terry Wassall was originally posted on his [3]personal blog.

Before doing my degree in sociology I was in politics, where there was a similar tension between approaches. I was an unashamed pragmatist; what matters is improving lives now rather than hoping that everyone gets so hacked off that they call on you to lead the revolution. Some saw this as insufficiently ‘principled’, though dig down and it was more about sticking to policies than principles. Being willing to work with others to reach compromises in order to achieve common goals inevitably means dropping something you’d go for in an ideal world. If this is simply to achieve power or status, then it certainly is unprincipled, but not so if the objective is to improve how people can live their lives, and there is an awareness of what is being dropped and why. Such an approach cannot, should not, must not, be value free. As far as ‘the victims’ you mentioned are concerned, I’d say it’s about identifying the causes whereby people are disadvantaged, and tackling those. Identifying victims otherwise becomes an arcane game of deciding who qualifies and who does not, where the arbitrator becomes god and classification becomes more important than social action. I’m not sure it’s necessary, or beneficial, that one approach dominates the other. I’d say it’s better to have both, as long as people don’t fall out over it and start seeing each other as the enemy. But in the end, the debate being about self-awareness, it’s a very good one to have.
The Work of Richard Sennett: Public Life and Public Policy (2013-06-18 08:00)

This panel discussion was part of an LSE event two years ago celebrating the work of Richard Sennett and exploring its broader significance:

TheAwkwardSociologist (2013-06-19 08:44:49)
I wish I had known that my supervisor is not always right!!

Education is a two way process at all levels. Teacher and taught create knowledge through interactivity. PhD. is more so through which the supervisor not only guides but rejuvenates her knowledge, rethinks, finds many things new when in close educational contact with her research scholar. This dimension can not be overlooked that PhD. is a joint research - both suffer, both achieve and rejoice. Both publish also. PhD is exciting and as my supervisor used to say in 1975 it does transform the personality of the researcher. An important gain - a by product - is that the way of thinking is more systematic, organized and target oriented.

Annetta Mallon (2015-01-20 08:36:27)
That a supervisor who wants you to write the thesis they want you to write will cost you a year of recovery time. On the upside, I am now a well-informed and articulate advocate for HDR student rights, happy to support and mentor new candidates, and know that changing a supervisory panel is not the end of your academic world.
The World Population Clock (Visual Sociology #009) (2013-06-21 08:00)

Do you know exactly how many people there are in the world? At least almost exactly? A good estimate? You can look it up (and keep looking it up) on the [1]World Population Clock. This may be visualised demography rather than visual sociology, but it is interesting and it is an application of images in social science. So unless someone protests, it is staying in the visual sociology column.

On which side of history?

by the Idle Ethnographer

I took this photo through the glass doors of the US embassy in Berlin. The division between East and West Berlin isn’t that stark anymore; and now I wouldn’t be hasty to declare the western side colourful and the other one bleak. But for me this frame recreates the ideology of the longing for freedom which, we once thought, was greater in the west. It also reminds me of some of the tragedy of post socialist transition: ex-soc countries joined the tail end of a post-industrial capitalism which was already changing. A moving target, so to say. And we conflated the ideology of democracy with that of a free market. Perhaps now, with the [2]protests in Bulgaria which are currently under way (sadly neglected by western media although they are in part inspired by the ones in neighbouring Turkey) the year 1989 has finally been superseded by a newer watershed: 2013, the year of street revolutions [3]against governments of all political colours which do not work for the good of their country. As I am currently away from Bulgaria, I can’t add my two feet to the [4]protests (which you can find on Twitter and Facebook using the hashtags #BulgariaExists and #ДАНСwithme). I can only read news, blog, and hope.

---

The Idle Ethnographer (who isn’t at all idle, and is actually a sociologist) is Milena Kremakova. Milena writes the Sociological Imagination together with Mark Carrigan, writes a book on maritime working lives in Bulgaria after 1989, is about to start a huge and interesting new project on the early careers of mathematicians and computer scientists in the UK and Germany, and does many other fun things which means she also has trouble finding time to
sleep. You can get in touch with her by email.

Calculative Devices in the Digital Age: a call for papers (2013-06-23 08:00)

Call for Papers:

Calculative Devices in the Digital Age

Department of Geography
The Securing against Future Events project is organizing a two day conference on the forms and techniques of calculation that emerge with digital computation. How does the drive to make sense of, and productively use, large amounts of diverse data, inform the development of new calculative devices, logics and techniques? How do these devices, logics and techniques - from neural networks to decision trees, from Monte Carlo method to traversal algorithms, from text analytics to data visualisation - affect our capacity to decide and act? In a world of changing data landscapes, how do mundane elements of our physical and virtual existence become data to be analysed and rearranged in complex ensembles of people and things? In what ways are conventional notions of public and private, individual and population, certainty and probability, rule and exception transformed and what are the consequences of these transformations? How does the search for 'hidden' connections and patterns using association rules, correlation rules or link analysis, change our understanding of social relations and associative life? Do contemporary modes of calculation, based on constant incorporation of heterogeneous elements, produce new thresholds of calculability and computability, allowing for the improbable or the merely possible to be embraced and acted upon? As contemporary approaches to governing uncertain futures seek to anticipate the yet unknown event – in domains as diverse as marketing and insurance, emergency preparedness and counter-terrorism – how are calculation and decision engaged anew?

The workshop will be oriented to the following key themes:

- Data and calculation – algorithms and algorithmic logics
- Associative life – 'real' and digital identities and social relations
- Data, analytics and decision-making – applications, interfaces, protocols
- Calculating futures – uncertainty, prediction and potentiality

As the changing landscape of calculation is experienced across the arts, social and natural sciences, we are inviting papers from across disciplines and areas of specialism. Interventions from PhD students and junior scholars are particularly welcome.

The event is funded within Prof. Louise Amoore’s ESRC Global Uncertainties Fellowship ([1]www.securitysfutures.org) and is free to attend. Please submit contact details and a 250 word abstract to volha.piotukh@durham.ac.uk, with a copy to louise.amoore@durham.ac.uk, by August 1st 2013.

(Via [2]Dave Beer)

‘A vain Eutopia, seated in the brain’; Thus concludes The Moral of Bernard Mandeville's 1705 poem The Grumbling Hive, a six-penny pamphlet which owes its fame to the 1714 edition of Mandeville's most known oeuvre, The Fable of the Bees. Literary history aside, there are countless reasons for re-reading the poem in the light of the current global crisis; one is the very power of the verse itself, another is the suspicion that it is capable of setting forth, in John Maynard Keynes' (1964: 360) words, ‘the appalling plight of a prosperous community in which all the citizens suddenly take it into their heads to abandon luxurious living, and the State to cut down armaments, in the interests of Saving’. Richard Sennett (2012: 159) indeed toyed with the idea suggesting that ‘were he alive now, Bernard Mandeville could have written a new Fable of the Bees based entirely on Wall Street’.

Whatever the virtues and vices of Mandeville's controversial text however, it provides a good starting point for discussion on an ‘appalling plight’ such as the global crisis which erupted in the wake of the financial collapse of 2007-2008 and spread farther from the geography and the imagination of ‘Wall Street’, prompting Europeans to engage in much theoretical, intellectual and mediatised navel-gazing not just about financial, political, social and societal crises but also about the very idea of Europe itself. Laments, alarm bells and wake-up calls soon emerged in various forms, circulated through a multitude of media (old and new), offering divergent interpretations of a phenomenon that, fiscal policies aside, was suspected to signal not simply a crisis for Europe but a crisis of Europe too; a crisis that went beyond the management of a common currency but one that mobilised questions of historical and cultural identity about the Union itself.
This period of unsettlement is of course hardly new, and indeed it could be interpreted as a permanent feature or a even birthmark of Europe’s history and transformation from myth to a constellation of nation-states bound together by legislation, money and (more problematically perhaps), history and culture. Yet any notion of unity might be (still) premature, if not misleading, thus pointing to what the melancholic Portuguese poet Fernando Pessoa (2012 [1925]: 15) called ‘the European disassociation’ or ‘civilizational disassociation’; an atmosphere of bitter ennui that remind us of the disquiet of two other fellow-European littératures writing in the brink of World War Two, namely Stefan Zweig and W.H. Auden. ‘I belong nowhere, and everywhere I am a stranger, a guest at best. Europe, the homeland of my heart’s choice, is lost to me, since it has torn itself apart’ writes Zweig (1964 [1942]: xviii) while packing his bags for Brazil with a copy of Montaigne’s Essays as a useful travel companion and philosophical interlocutor on questions of ‘How do I survive?’ or ‘How do I remain fully human?’. W.H. Auden (2007 [1940]) in a manner as dark as Zweig’s, but without the consolations of the philosophy of Montaigne, was mourning for the loss of W.B. Yeats but one could also suspect him for distressing about a political turmoil and one of European import too:

‘In the nightmare of the dark
All the dogs of Europe bark,
And all the nations wait,
Each sequestered in its hate’

The verse is remarkable as it is depressing and it points to an acute sense of ‘disassociation’ with and a lack of ‘belonging’ in the Old Continent, thus uniting literary figures as distinctive and disparate as Pessoa, Zweig and Auden in their feeling of loss in Europe bringing to mind that ‘extravagant and wheeling stranger, of here and every where’ of Shakespeare’s Othello (Act I, Scene I).

These ‘extravagant strangers’ of Europe however are not alone in their saudade about their spiritual homeland and much of their message has morphed into political commentary during our current version of the European crisis witnessed in various ways; as (a) an unpleasant downfall of the economy which resulted in democratic dislocation and historical and cultural displacement, leading to questions about (b) the ability and power of EU nation states to remain sufficiently liberal and democratic, while casting doubt about (c) whether the EU is indeed institutionally and politically robust to cope with structural and systemic rather than symptomatic and arbitrary crises. Added to this is a (d) fictionalisation of Germany as a hegemonic superpower with little regard for its underperforming neighbours which then prompts bitter questions about (e) what kind of Europe we have had, we currently have and could have with many predicting a happy-end in an otherwise distressing political affair which can only end in divorce. This dramatic end to Europe’s rendezvous with its own future however does not end here, and Habermas’ (2009, 1975) image of a ‘faltering’ Europe which suffers from a serious ‘legitimation crisis’ is emulated in diagnoses that attribute much of Europe’s demise to its existential anomie; characterised, in surprisingly Durkheimian terms, by (a) weak levels of EU integration and (b) poor national regimes of regulation, exacerbated by (c) the German dominance of the EU and the destructive effect of (d) neo-liberal responses to a crisis that goes beyond casino capitalism tactics and Dow Jones arithmetic.

The conversation that follows was carried out with the belief that instead of talking about Europe merely as a problem, it might be possible to better understand it as an assembly of multiple and contradictory interpretations, personal, collective and institutional, all of which are engaged in a dialogue as well-thought and measured as the sociology of Europe that our guest in this part of the [2]‘Sociologists of crisis’ article series, [3]Prof. Gerard Delanty has been engaged in for a large part of his career. His 1995 Inventing Europe was one of the first attempts to a political and historical sociology of Europe and he is revisiting such concerns in his forthcoming book Formations of European modernity: a historical and political sociology of Europe, while our discussion took place soon after the publication of his article Europe in an age of austerity: Contradictions of capitalism and democracy for International
Critical Thought. Before joining in the discussion with Prof. Delanty however, it should be borne in mind, by means of a disclaimer, that what follows is simply one kind of discussion to be had on the theme of Europe with no pretensions to exhaustiveness or an assumed monopoly of knowledge and wisdom of a rather complex and complicated issue. Rather, it is a conversation that took place at a specific moment in time and place and with a more or less limited set of questions that sprang to my mind largely while talking.

As soon as the Eurozone crisis was pronounced a reality, the very idea of Europe came under attack and was to be understood as a problem. Why do you think that might be?

It has been largely regarded as a crisis because the whole project of European integration was based on the presuppositions of post-World War Two economic growth. Little thought was given to capitalism being in crisis but that's what happened since 2008. It can be argued that capitalism itself is going through a new phase and the emergence of such a new phase challenged assumptions of European integration; itself understood as an equilibrium between capitalism and democracy, or what is commonly referred to as ‘democratic capitalism’. It can therefore be said that European integration was conceived as a series of assumptions about market and political integration around a common currency and when these assumptions were challenged, the crisis emerged.

To what extent is the crisis of Europe a European identity crisis?

This crisis is an economic crisis beyond Europe; it is a crisis of capitalism which has severe consequences for Europe because it came about the same time that other problems became apparent. The economic crisis simply exacerbated problems such as the dilution of the possibility of a more cohesive Europe, as it’s obvious that something that is larger is going to be thinner. In other words the economic crisis became a problem of its own on the back of these other problems of cohesion within Europe.

If the global financial meltdown hadn’t become a reality, would such an identity crisis of and in Europe come about?

Yes. It was already there. The European Union’s enlargement diluted the European identity as something cohesive and different Europes emerged. In a sense the Eurozone crisis speeded up that process, a process which was already in progress.

Is the ‘idea of Europe’ then simply product of our imagination, a fictive space on which we deposit arbitrary meanings? If I understand it well, your book Inventing Europe seems to entertain such a possibility…

Inventing Europe was one of the first books to systematically explore the idea of Europe in history and it had a kind of critical function; to unpack and criticise the grand narrative of a continuous European identity. Instead, it emphasised rupture over continuity and the way in which European identity was constructed in relation to the non-European world. Where I differ now, in relation to that book, is in that you can no longer argue that something was constituted in relation to an outsider simply because there is no consistent outsider. Speaking of European identity, one needs a differentiated approach as Europe as a whole, Europeans and the political institution of the European Union do not translate to just one thing, not to mention the notion of identity itself is problematic. It is something like a black box, many things are attributed to it and they need to be unpacked. Europe is highly diverse so we need to be specific about which historical region of Europe we are referring to. In my latest book I speak of six historical regions of Europe [building on the western, central-eastern and south-eastern Europe division], each with different civilizational heritages, experiencing different roots to modernity. There is no common European identity that has existed in history continually, there have been different models. However, I do still agree with the observation that the relationship with the outside world is important but the outside need not be interpreted as simply hostile. A cosmopolitan hermeneutics is required to better understand this as an open question. Continuity emphasised the importance of the colonial context/legacy but one must not forget the pre-colonial past, when
Europe was weak and un-European. Greece is a good example, we now think of Greece as European but this has not always been the case. [The relationship of Greece with Europe and European identity has indeed been debated many times over in its history, not simply by its fellow EU members but by itself too].

Could it be then that nowadays ‘the Other’ is indeed ourselves? The differences and tensions within Europe that is...

Yes, one could say so as ‘the Other’ is no longer Asia, Islam or the non-EU world, but Europe’s own past especially if one is to consider the post-World War Two violence and trauma.

If that is the case, is it at all useful to identify with Europe or are we beyond it and only psychologically depend on it as a master narrative of sorts?

The notion of European identity is itself a constriction, and not in any way an object of identity for individuals. Rather, it is something that takes place within the context of other identities (e.g. national), something much more hybridized and trans-nationalised. Identities can therefore be seen not as external reference points but as more complicated than an external set of values that you buy into or not. For example Europeans are Europeanised but that doesn’t mean that there is such a thing as a European identity.

Can cosmopolitanism be seen as an antidote, or an alternative to the idea of Europe, in the form of postnational citizenship?

To a certain extent yes, but let us look more closely at the idea of cosmopolitanism itself. In my work, cosmopolitanism is understood as a theoretical and intellectual alternative to globalisation, a critique of globalisation and of nationalism too. It is that idea of tension between the polis (city) and the cosmos (the cosmic order of the Gods) and it also implies a world consciousness. Cosmopolitanism is also about taking into account the perspective of others’ view of the world, that reflexivity between self and other, which makes it different from the national view of things. In that sense cosmopolitanism can be seen as a space for dialogue, encounter and exchange as it is produced as a result of an encounter of one with another.

Would it then be better to define ourselves as nationals with a cosmopolitan outlook rather than as Europeans, given that the latter is not so concrete an identity?

Yes, I like this idea as cosmopolitanism is compatible with the nation as a political community armed with a cosmopolitan image. Nationally defined forms of political community can therefore be developed in a cosmopolitan direction.

How might we then propose cosmopolitanism as an alternative political institution, can it inspire people collectively and bring forth solidarities in a bottom up way? I am thinking about this presupposing that Europe was a notion that was imposed by elites rather than established by means of a democratic mandate...

Well, before or instead of doing that, we need to look at what trends are in evidence; the sociologist would indeed try to identify cosmopolitan trends in society and see where these can be enhanced rather than looking for some ideal model. Besides, cosmopolitanism is always incomplete, always partial as opposed to simply being present or absent.

Is there any way then that we can introduce cosmopolitan citizenship as a postnational political practice and alternative?

Well, I think Kant’s idea is still valid, seeing cosmopolitan law as based on the principle of hospitality and the
legal recognition of migrants.

But can we educate ourselves in such a perspective?

Yes, definitely. Martha Nussbaum’s (1996) famous essay on ‘the limits of patriotism’ makes that point. A lot of people in fact forget that it is largely a book about the national curriculum in the United States and an invitation to bring a cosmopolitan dimension to that. Cosmopolitanism is about the broadening of horizons so if it doesn’t take place in education it is not going to go very far; in fact education is the place where it all begins.

Does the idea of cosmopolitanism however not replace one imaginary category with another? I am thinking here of Weber’s definition of a nation as a ‘community of sentiment’ and Benedict Anderson’s ‘imagined communities’...

In contradiction with nationhood, I think cosmopolitanism implies a more positive, a broadening process, a process of enlargement...

Having made that distinction between cosmopolis and nation I am curious to ask you for your view as a sociologist of crisis about where the Greek case/situation might fit in with what we are now discussing...

I think that the Greek situation illustrates graphically the contradiction between capitalism and democracy signalling a movement into a new age of austerity. The situation in Greece is unique in that it problematises the capacity of the state and the political elites to manage the economy as such. The way politics is managed in Greece is not well-served by its political classes as they failed to get a hold on the economy.

Would it be valid to say that austerity is gradually becoming a new polity, a new culture of capitalist import?

I don’t think so but I appreciate why you might ask that, coming from Greece but I think that austerity is a discursive construction as a way of making sense of crises and we would need more evidence of a societal shift before we can conclude anything of the sort, especially as there are austerity-ridden countries such as Spain where (unlike Greece) the fundamental structures of society have not fundamentally shifted as a result of the recent crisis.

Thank you

Thank you too

A cup of coffee later, and having left Prof. Delanty’s office, I was rather pleased our conversation took place not just for what it included but for what it excluded too. Besides, the idea of Europe itself is just as selective, often holding on to a self-portrait that desires it untainted by a centuries-old cultural exchange, ethnic and linguistic plurality. This however is an image that is as paradoxical as Daniel Defoe’s playful late seventeenth-century poem about The True Born Englishman;

Fate jumbled them together, God knows how;

Whate’er they were, they’re true-born English now

More paradoxically even, it is useful to recall George Steiner’s (2004: 17-8) view of Europe as a map of cafés; ‘so long as there are coffee houses, the ‘idea of Europe’ will have content’, but such a definition can only work if that content is as broad as Steiner’s romantic view of the café as ‘a place for assignation and conspiracy, for intellectual debate and gossip, for the flâneur and the poet or metaphysician at his notebook. It is open to all, yet it is also a club, a freemasonry of political or artistic-literary recognition and programmatic presence’. The paradox in Steiner’s
affirmation therefore is that although our imagination of Europe can be sensed as a pilgrimage to ‘the café’, reality polices the boundaries of Europe in air-tight containers, also known as borders. In that map of cafés we call Europe, what and where is the space for the aroma of a café à la turque that so enchanted Orientalists like Théophile Gautier who praised that very method of grinding and drinking coffee in his 1853 voyage to Istanbul? Against the spirit of such a practice of Europe as a taxable customs rather than an open commons, a re-appropriation of the boundaries between natives and ‘extravagant strangers’ may become necessary as a process of translation from presuppositions to the intervening reality, itself an idea that is forged in the crucible of fusion and hybridity.

The soundtrack to this article is also a project of fusion and hybridity, brought forth by Courtney Pine and the Jazz Warriors who assembled in 2007 as ‘Afropeans’ to celebrate the bicentenary of the abolition of the slave trade. The [4]video shows the ‘Afropeans’ rehearsing before their Barbican performance in London, hinting perhaps at an idea of Europe as a rehearsal of and experiment with possibilities for self-definition as a playful provocation rather than clinging to the absent plot of its grand conceptions of itself.

A note on the discussants:

Gerard Delanty is Professor of sociology and social and political thought at the University of Sussex, UK. His most recent publications are Community (2nd edition, Routledge, 2010), The cosmopolitan imagination: The renewal of critical social theory (Cambridge University Press, 2009). He has edited (with Stephen P. Turner) The international handbook of contemporary social and political theory (Routledge, 2011) and Handbook of cosmopolitan studies (Routledge, 2012). Recent journal articles have appeared in the British Journal of Sociology (2011), The Irish Journal of Sociology (2010), and The Sociological Review (2012).

Lambros Fatsis is a final year DPhil student at the School of Law, Politics and Sociology at the University of Sussex. His doctoral thesis concentrates on discussions of public sociology, the role of the University and intellectuals, while other research interests include black music, urban culture and the history and sociology of the Jamaican soundsystem. He also performs as a reggae selector/radio presenter under the name Boulevard Soundsystem and is a contributor of Billboard magazine on reggae music.

[...] published at The Sociological Imagination on June 23, [...]

German Sociological Association: Yes to Evaluation, No to University Ranking (June 21, 2013) (2013-06-24 08:00)

On 21 June, the German Sociological Association has published a statement against the CHE (Centre for Higher Education Development) University Ranking which is a subject-level classification covering a range of academic disciplines that has been published annually since 1998. According to the GSA, the CHE ranking

"...has serious methodological and empirical deficiencies, [...] withholds vital information from prospective students, as its declared target audience, and [...] gives rise to wrong decisions on the part of science-policy decision-makers".

Read the statement of the
German Sociological Association and their recommendations

I like writing book chapters. If you look at my publications – well I don't mean you to do this literally – but IF you did, you'd see that I've written quite a lot of them. In the last month I've been sent two books which I've got chapters in, I'm expecting another collection as well as some chapter proofs any day – and I'm just starting on writing a chapter. So I really do think they’re OK.

The reason I like writing chapters is because they (generally) offer different opportunities for academic writing from the stock-in-trade journal article.

For a start, you can assume with a book chapter that you don’t have to convince readers that the topic you’re
writing about is important. The editors are going to do that in the foreword. They are also likely to do a pretty thorough survey of the field, and to cover its history. So you don’t have to do that kind of literature work in a chapter, unless it is one about the literature (see below). You just have to situate your own position and indicate the literatures that you draw on and to which you are talking/contributing.

And I reckon you can often be more creative as a writer in a chapter.

Not all book chapters are the same of course. There are different kinds of edited books which require different kinds of writing and different kinds of creatvity.

There are for example overtly pedagogical texts written for under- and post-graduate courses. The writing challenge here is quite different from a journal article – the reader is a learner, and the job of the chapter writer is to teach them about something. The writing must therefore be clear, engaging, the content well scaffolded; there may also be a need for examples, exercises and annotated bibliographies – perhaps even online links. It takes imagination and innovation in order to present instructional material so that it anticipates questions and answers them.

Then there are the chapters in international handbooks which set out to provide a state-of-the-art review of the field. The challenge here is not only to present a survey which identifies key debates, challenges and trends, but also to construct and argue for a future agenda – all the while not sending the reader to sleep with an excess of authors and titles and dates.

And there are topic based edited collections which aim to deliberately offer a variety of perspectives, to explore and to debate important questions. This is where the writer is most likely to be able to negotiate with the editor/s about a creative response. This is because topic-based edited collections often benefit from having variations as they keep readers moving through the text. So there is room for writerly manoeuvre. I have for example contributed chapters which are photo essays, multi-voiced accounts, auto-ethnographic words and images, heavily edited interview transcripts and variously structured narratives.

These kinds of chapters are the ones I most enjoy writing. It’s not that you can’t play with the journal structure, you can if you choose your journal carefully, and if you argue your case. But you generally don’t have to work so hard on this with the edited book. Provided the editor is up for some variation in the collection, you can think pretty creatively about how to present your material.

You can of course exercise the same kind of creativity in a whole book – but it is a much more challenging task. A book chapter is a good way in to alternative modes of academic writing. It’s a place where you can think and do much more about the WRITING aspect of academic writing. It’s a place to focus directly on the reader rather than primarily on the referees. It’s a place to practice and develop the craft of authoring.

So, that’s why I like writing book chapters....which I’m now about to get back to.

25 June is the international day of the seafarer. Did you know that almost 1.5 million people worldwide work on ships? Or that over 90 % of all goods we use have at one point been carried on board of a ship? And that if ships were to disappear, in just 24 hours life as we know it would grind to a halt? Take a minute to read something about the profession of seafarers today. Here are a few suggestions:

Some reflections on editing books and special issues while doing a PhD (2013-06-26 08:00)

I co-edited an edited book (see below) early in my PhD, with an existing project inviting me onboard as a fourth editor – largely, I assume, because my knowledge of the asexuality literature was useful to the project. It was a great experience in many ways. I gained an understanding of the publishing process and I realised how usefully such projects can broaden your grasp of the literature. So that was great. But on the other hand it also left a chapter which I was immensely proud of stuck in a book (which, as my first, I was also quite proud) with a price tag that might as well have gone hand-in-hand with a coversheet saying that it was intended for institutional libraries and everyone else should get lost.

Ok, so this is a problem, but surely they’re still worthwhile? So I thought as I set off on a second editing project. This time I put together a CfP for an Asexuality Studies anthology. Largely due to rookie mistakes and the intervention of some pretty major upheavals in my personal life during this time the project soon began to collapse into a bit of a mess. I also started to question my choice of publisher and, after consulting a number of people I trusted, settled on another. But the timescales involved at this stage were such that I had to go back and update all the existing contributors and gain permission to repackage the project. Given the real problem I was having with e-mail at the time (now resolved by becoming one of those irritating people who insists on getting to inbox zero everyday) this dragged on and on. While continually cursing the fact I hadn’t recruited a co-editor who was more organised than me (I’m great at time management but bewilderingly inadequate when it comes to the sustained feats of low level organisation necessitated by a process like editing a volume) I attempted to persevere, albeit punctuated by intermittent rounds of guilt ridden procrastination, before finally calling it a day a few months ago.
and sending profuse apologies to all concerned.

My third experience of editing has been brilliant. I led a team of guest editors for a special asexuality themed issue of psychology and sexuality ([1]some of which is still open access) which came out earlier in the year. Some things went wrong. The aforementioned personal difficulties (a year that was in theory one for wedding planning had become a year for untangling lives instead – it’s the sort of thing which makes it hard to prioritise academic editing…) got in the way a lot, as my general level of self-organisation got way too low to be able to sustain a project of this sort in a manageable way. Thankfully my co-editors were wonderful (though one did understandably get rather frustrated with me at points) and we eventually pulled it together. The end result is a genuinely groundbreaking text and, if you’re interested in sexuality studies, it’s an interesting one as well. Plus we have a proposed extension of it into a book under review at the moment. So in all this was a good experience. Though it’ll probably be a while before I get involved in editing again.

So here are some things I learnt which might be useful to PhDs/ECRs who are doing this stuff for the first time:

1. Don’t underestimate the amount of work involved. Or rather don’t underestimate the consistency of it. It’s not really that onerous in many ways but it does need little and often to succeed. If you are someone (like me) whose level of self-organisation veers between extremes then this is particularly important to address. As I found out to my cost, procrastinating for a month on an edited collection can make the mess you have to clean up afterwards radically more onerous as a result.

2. Don’t underestimate the potential benefits attached to it. Assuming this is a topic you’re interested in then you’re likely to massively increase your connections with others working on the topic, as well as getting a broader review of the field as a whole. I have a vague anxiety that 75 % of the world’s asexuality researchers think I’m a complete flake after my behaviour during the editing processes described above. But on the flip side I’m pretty sure I know 75 %+ of the people working in one of my fields.

3. Don’t try and do it on your own! Just don’t. I did it largely because, well, I thought it would look better to have been a sole editor. But it was a disaster. Whereas if I had, so to speak, had a Todd on that project (my very experienced co-editor from the other two projects) then I doubt it would have failed. If anything is a natural focus for collaboration in the contemporary academy, it is edited collections.

So I think editing collections can be a very worthwhile thing to do but it should be approached cautiously for those in the early stages of their careers. I can say with near certainty that I will never agree to edit anything again unless I have a co-editor who I have a prior working relationship with. But what about the broader landscape within which an individual might choose to offer time and energy to a project like this? I still think there’s value in them for many of the reasons Pat [2]describes in her article. After internalising the horrible attitude “book chapters are worthless” I’ve started to relent in recent months. I’m writing a chapter with Milena Kremakova for the Paracademics Handbook and I’m writing a chapter giving an overview of the asexuality studies literature for a psychology handbook later this year.

But the price issue still troubles me. Sure, I can post a pre-print on my academia.edu and on my blog. But that’s still an unsatisfying workaround. Edited books no longer have much credentialising function within the audit culture and their communicative function is hampered by the unit costs resulting from the commercial organisations to whom we are choosing to outsource the publishing. So more than any element of the contemporary landscape of scholarly publishing, it seems that the production of edited collections is a practice ripe for revolutionary change. I’ve written a little about this [3]here but it’s something I want to come back to in future.
3 tips for managing institutional, project and group twitter feeds in #HigherEd (2013-06-27 08:00)

In the last few years I've jointly or solely managed a whole range of twitter feeds -- including @sociowarwick, @bsathtory, @bsapgform, @bsadigitalso, @lsepoliticsblog, @bsarealism, @digital_change, @soc_imagimation, @asexstudies, @dis_of_dissent, @warwicksoscci and probably some others that I've forgotten about. Along the way I've learnt a lot about what works and what doesn't. Given that we seem to be in the very early stages of some sort of corporate twitter presence being expected for research groups or academic departments (etc) I thought I'd offer some tips about how to manage these kinds of twitter feeds in a way which will generate an audience, won't cause any controversy and won't take up too much of your time.

1. Tools like [1]Buffer app are essential to manage multiple twitter feeds effectively without it taking over the rest of your life. They stagger your tweets according to a predefined scheduled over a certain number of days. This can be 2 or 3 tweets only on week days. Or it can be 25+ tweets every day. It's up to you. It's worth playing around with it at first. Try out different schedules, taking into account both the content & time available to you. But once you get to grips with it, it means Twitter scheduling can be a weekly activity rather than a continual demand on your time. For instance I would schedule the @LSEPoliticsBlog feed (30 tweets a day at one point, 20k+ followers) two or three times a week. It took two hours max.

2. However this talk of 'content' which I slip into these days with distressing ease poses an obvious question: what 'content' do you have? This is where you need to think through what the point of the twitter presence is. Is it to disseminate project news? Is it to raise awareness of the project? Is it to network with likely outside constituencies? For research projects this question can be a bit tricky. Which is why combining this presence with a blog can be a strategic masterstroke at this stage. If you can get members of your project to write articles about the issues you're engaging with and their past work (etc) then this can be a valuable way of generating content for the Twitter feed. For research projects this is admittedly rather complex – listen to this [2]interview with the manager of the enormous FP7 funded MYPLACE project if you're looking for some inspiration. For academic departments, it's a lot easier, though this depends on how organised you can be. When I was employed to manage the Sociology@Warwick online presence (prior to joining the LSE's Public Policy Group to manage the LSE Politics Blog) I curated a collection of open access papers, books and media appearances of all the staff within the department. I then used buffer app to periodically tweet links to these, as well tweeting departmental news/events and retweeting tweets by staff members where appropriate. Now that more sociologists are using Twitter on a regular basis, it becomes possible to imagine a department twitter feed as aggregating the more appropriate aspects of individual users within the department. This could even take the form of a rebel mouse page like [3]this one which I use to automatically curate my online activity.

3. One of the most important features of Buffer is the analytics it offers i.e. it tells you how many people click on links and how many people retweet or favourite the tweet itself. Once you have been managing a Twitter feed for some time, it can become possible to see trends emerging in the kinds of content you’re putting out through it. This allows the management of the feed to become properly reflexive – are people interested in the work of a certain academic within your department? Then tweet more of it. Does video and audio get a good reaction?
Then ensure that all appearances by department members on youtube and vimeo (sometimes the individuals themselves are not aware these videos are out there!) feature in your regular cycle of content. Furthermore, it’s ok to push out the same links more than once. But be selective about how you do it, watch the analytics and try to put a different spin on it as you do.

Wendy Olsen (2014-05-10 04:14:03)
Hi thanks...I worry when it starts becoming computerised and automated as that will turn off readers... & also if a productivity and reward issue caused you to use an automated approach, then maybe the productivity net effect is nil. It makes me think about open access publishing and working papers. these could be more widely read. I would not read Twitter if it was all automated advertising.

Sociological Imagination (2014-05-12 20:52:38)
Hi Wendy, I see what you mean but it demonstrably doesn’t turn readers off. It’s the same content, it’s just scheduled so that it goes out regularly rather than when someone has the time to go online and post it. It depends on what you tweet I guess.

CfP: Gender violence and virtual worlds: brave new world(s) of regulation? (2013-06-29 08:00)

Virtual Worlds and Online Games now play a large part in society and social past times; they are popular and mass culture. Women actively participate in various online environments and Virtual Worlds, forming a significant part of these communities.

However, Virtual Worlds provide a different space for people to inhabit. Cyberspace has traditionally been regarded as a lawless environment – as much for its jurisdictional difficulties and absence of regulation, as for its lack of physical nature. In recent years one could observe a sudden emergence and major growth of cybercrime, with particular rise in cyber stalking and cyber-harassment. What is particularly intriguing is that many of these crimes take a gender-based form, such as gender-based violence, sexual harassment or cyber-pornography, which primarily victimize women (or rather female
avatars and characters).

Despite their prevalence cybercrimes, and gender-based cybercrimes in particular, remain unregulated. Where regulation occurs, it is largely in the form of Acceptable behaviour and Codes of Conduct. The difficulty then arises then with enforcement. Furthermore, various attempts at discussing the issue of misogyny in online environments and cybercrimes against women meet a strong, opposing and somewhat alarming response, such as one directed against Anita Sarkeesian, a feminist games critic, blogger and the author of the Tropes v Women.

These recent developments and paint a rather alarming picture of the gender inequality in virtual worlds and prompt a question about the need for regulation of such behaviour in online environments and in virtual worlds.

The Ignite© (UN)CONFERENCE is designed to create an opportunity to discuss these pressing, contemporary issues in an informal, multidisciplinary environment. Our event will take a form of Ignite sessions which are designed to stimulate discussion and exchange of new ideas in a short period of time ([1]http://igniteshow.com/). Presentations should be no longer than 10 minutes. After the Ignite sessions, separate sessions will be run to further explore these issues.

We are hoping to attract a range of participants from various backgrounds, who are interested in participating in this event and contributing to the discussion. You do not need to be a game player to join!

Please submit proposals of no more than 200 words including a brief biography and 3 keywords to Kim Barker (Birmingham Law School) and Olga Juraz (Open University) at: virtualgender@gmail.com by 10 July 2013 and join the debate on twitter @VirtualGender.

CfP: The Sociological Craft Project (2013-06-30 08:00)

In this new feature the Sociological Imagination invites short (2500 word max) contributions reflecting on any aspect of sociological craft. We use the term 'craft' in the broad sense conveyed by Richard Sennett:

Craftsmanship names an enduring, basic human impulse, the desire to do a job well for its own sake. Craftsmanship cuts a far wider swath than skilled manual labour; it serves the computer programmer, the doctor, and the artist; parenting improves when it is practiced as a skilled craft, as does citizenship. In all these domains, craftsmanship focuses on objective standards, on the thing in itself. Social and economic conditions, however, often stand in the way of the craftsman's discipline and commitment; schools may fail to provide the tools to do good work, and workplaces may not truly value the aspiration for quality. And though craftsmanship can reward an individual with a sense of pride in work, this reward is not simple. The craftsman often faces conflicting objective standards of excellence; the desire to do something well for its own sake can be impaired by competitive pressures, by frustration, or by obsession.
We envision a number of forms such contributions might take:

- Reflections on particular academic roles (e.g., review editor).
- Reflection on the process of writing for particular forms of publication (e.g., journals, monographs, logs)
- Reflections on the craft of research (the tools utilised, your relationship with them, the messiness of the process)
- Reflections on where you work, the devices you use, how the ambiance shapes your writing
- Reflections on undertaking research, managing time, negotiating conflicting demands.
- Reflections on routines and writing practices which are integral to your craft
- If you were brave enough to send us a picture of your workspace we’d love to include it!

However these are only examples. We’re keen not to get posts of the style “10 Tips for Writing Good Journal Articles”. We have nothing against these posts – we often feature them! But this project aims to generate a discussion of the craft of sociological work, the practices which sustain it and the emotional life and personal concern which are irrevocably bound up with it. We are particularly interested in contributions that explore the constraints that contemporary academic structures place upon the creative exercise of sociological craft and how we can, hopefully, work towards ameliorating these circumstances.

If you want to submit a contribution for the project then please e-mail it attached as word document (with any multimedia files attached separately) along with a short 2 line bio to accompany your post.

Simone (2013-08-09 20:51:23)
Hi, I’d be keen to open the CfP up to Arts and Humanities researchers at large - an impossible request to expect fulfilment of! I’m midway through writing my thesis on the subject of ‘work’ as it features as the central motif in recent British novels (well, after 1979). Part of my research is concerned with looking at the role of the writer as a craftsman, and at style as their main tool. So I am interested in the way work - and craft - is represented in the novel form and in how the writers of such go about that process. I have no idea how I might contribute to your proposal what with being an English literature researcher, but I’m open to suggestions. With best wishes, Simone Hutchinson

Sociological Imagination (2013-08-10 10:10:02)
sure, if you e-mail we can have a chat about it :-)

Sorry for my delay in replying, and also for my question: where is the email address listed? (!) Regards

Oh sorry, there’s a hyperlink for ‘please e-mail’ but it’s not enormously clear - pls send to mark AT markcarrigan.net - look forward to hearing from you.

Reflections on collaborative research with sixth form sociology students within a university setting
(2013-07-01 08:00)

As part of their study into crime and deviance, staff and students in the Social Science Department of North Leamington School designed and undertook a collaborative crime mapping research project at Warwick University.

The initial impulse for the research came from a comment from a student in the study group who casually referred to an area in our town as “Heroin Heights”. This area was also referred to as “The Bronx” by local postal workers. The intimation was that this area had higher rates of criminals residing within it. The discussion that followed led on to the idea that this was a form of reputationally labelling which could be tested through empirical research by combining census data and court records.

As a PhD researcher working in the school, J. Saunders, booked the Teaching Grid (innovative learning space) in Warwick University Library for large scale plotting of the data to take place on a number of screens in real time. This enabled the testing of our hypotheses using google maps and correlations of a number of different sources. We used the following procedures and resources.

Creating a collaborative map of offender residence by electoral ward boundaries From our initial simple reputation ally label we then broadened research to test the various hypothesis e.g which areas have high or low levels of offenders and correlations with a "zone of transition" or unemployment rate, deprivation and others.

Stage One - Making the map

We set up a google account as an administrator and then invited others to join and collaborate in map. As making the map is a little awkward collaboration can save time.

Maps of town electoral wards can be found here ([1]ONS at ward level)

We created superimposed the ward boundaries on the [2]shared google map.

It was useful to first make a hardcopy map (available from a local newsagent or petrol station) as a prototype to refer to when creating the computer version. This “old school” method did save time and avoided frustrating zooming in and out on the computer. When editing the map we saved often, to avoid loss of work in case of drop outs. Eventually we had a map of the town divided into wards and ready for the data input from the court records.

Stage two - Collected and highlighted known offender residential data

At the local library we collected and photocopied recent reports from magistrates courts detailing those convicted of offences and their addresses (by street). These are available in local newspapers and a suitable period of time e.g. 6 months was collected. On these photocopies we used a highlighter marking convictions of those who lived in the town. This saved time when inputting the data. A detailed discussion about the ethics of the research developed at this stage.

Stage three - Inputting data onto the map

We found this relatively straightforward but somewhat tedious. For each offender residence (by street) we dragged and dropped a placemarker on to the map. To find difficult addresses use a tab or second computer. An example of the map is below.
Stage four - investigating correlations

This was far more theoretically challenging. At this stage, debate took place based upon sociological theories of crime and deviance e.g. social disorganisation, zones of transition and reputational labelling.

Some of this data was recent and some older dating back to the 2001 census. The 2011 census data provides an excellent opportunity for an update and is available now. The issue of rates was discussed as there are different populations between wards. A simple spreadsheet enabled us to compare these and work out which wards had higher and lower rates of offenders within them.

General reflections on how the project worked pedagogically

Overall, in discussions with the students, the project was seen as a success, not least of all because doing original research on a local area was highly relevant and interesting. The use of collaborative methods rather than individual or smaller group work was also novel. Part of the rationale was to give students the experience of visiting the university itself and actually do some sociological research in that environment. This generated enthusiasm at the time and for further study beyond the sixth form.

As teachers we piloted the approach first before going to Warwick. Contingency plans could be put in place for the technical issues that arose (e.g. for freezes/drop outs). Internet speeds in the UK may be part of the problem as some countries have upload speeds four times faster. Technically if the system was seamless if would have enhanced the experience.

The visit to the university by students clearly focused their minds on future aspirations. All are now studying at universities. Seeing the central map on the large screen develop in real time made the teamwork element really tangible and enjoyable. Overall the theoretical discussions felt a little crowded out by the data input and technical aspects of the research. On the other hand the students by doing, rather than merely reading about research found out about the hard graft involved in any empirical study and this was valuable. The more theoretical discussions took place later in the week. Many unexpected issues arose on the fly that stimulated debate. The use of crime mapping in this way did highlight future potential and limitations.

We are now developing a follow on study of religious belief in the community which will incorporate more qualitative research and embed video and audio podcasts within the maps. This update has been influenced by the "Reading the riots" research done at LSE. The students learned about the process of research itself and the results showed that zone theories and reputational labels may have a grain of truth but the reality is more complex and capable of many different interpretations.

Race Critical Public Scholarship – pursuing justice in austere times, UEL, 17th July, 10.30-5.30 (2013-07-01 10:35)

The climate of so-called austerity is hardening inequalities, including institutional racism, and has facilitated a resurgence of overtly racist political parties and a troubling renewal of popular racism across Europe and beyond. In recent decades, there has been an implication that engaged scholarship in the field of race equality should address the state – perhaps by providing better evidence for policy or critiquing existing interventions. Yet in the present context of cutbacks and competition for the most basic of services, there seems little opportunity to engage officialdom in this way.

This workshop considers what scholars may be able to contribute to the wider struggle against racial injustice in such times. Contributors include Nira Yuval-Davis, Steve Garner, Max Farrar, Michael Keith, Bridget Byrne, Nasar Meer, Ronit Lentin, Les Back and John Solomos.

Oppression Bias and the Struggles of a Black Sociologist (2013-07-01 11:04)

Social science as it has developed in the western world has it as its goal to develop, catalog, understand, and organize human behavior. Sociology, Political Science, Psychology, Philosophy, Anthropology, Communications, and all the
other social sciences seek to make sense of the social world human beings have created for themselves over the past million years of our existence. For myself, I chose to study Sociology, the study of human interactions. Much like many of the other social sciences, it has its roots (in the western world, other societies have their own forms of all these fields hundreds or thousands of year before Europe) in the Enlightenment and the Industrial Revolution. Because the period that Sociology came into being along with other social sciences its focus was on Europe and interactions between European people, to the detriment of other societies and groups of people.

Europe's barbanistic and imperialistic interactions with the rest of the world over the intervening 200 years influenced the social sciences in a way that is classist, sexist, and racist in both their theories as well as the professional practice of these fields. Examples of racism for instance infecting these fields is the “culture of poverty”, eugenics, functionalism (or at least some applications of said approach), the entire field of Anthropology, and [1]Democratic Peace Theory.

Although in recent years, the influence of the Civil Rights/Black Power, Women’s Rights, [2]LGBT*, Anti-Colonial, and [3]Anti-Capitalist movements have influenced a new generation of social scientists who have not been as influenced by these oppressive circumstances, problems still remain. I can only speak for myself as an African in Sociology, but there are still great and many barriers to having the oppressed voices heard in the social sciences. especially for those of us who are practitioners of those social sciences like myself. One of the most important and basic of these barriers is what I would like to call the “Assumption of Oppression Bias”.

I don't know if I have seen this concept in other writings or pieces but I think its something that anyone from an oppressed background will immediately recognize. The basic dynamic of Oppressed Bias is more or less the same as all other forms of bias, that because of one's connection to a particular idea, people/persons, or institution said person can not or will not make an objective scientific analysis of X issue. Oppression Bias is then the idea that because one is part of X oppressed group they can not or will not make an objective analysis of the conditions of that oppression, the oppressed themselves, or the oppressors involved. This is a very serious issue that I believe in many circles has and is stifling the voices of those of us who come from oppressed backgrounds.

Speaking for myself, I got involved in Sociology not for the simple purpose of learning and studying human behavior. I got involved in the field to study human behavior for the purpose of using it (or someone else using it) to dismantle oppressive systems in our world and help build better systems of human interaction. Sociology especially has been split largely between those who feel our field’s only legitimate purpose is to catalog and organize information about human behavior while others, such as myself, argue that Sociology is only relevant in relation to its usefulness to fighting oppression, furthering human society, and building better institutions (regardless of political persuasion). For those of us from oppressed communities (of a racial, class, gender, or sexual nature), we have two imperatives for getting involved if we’re on the “interventionist” side of the divide. The first is because since most Sociology through its history has been done by people of privileged backgrounds, we feel that we can better understand the social circumstances related to our backgrounds than someone who has no real life interaction with them. The other reason is explicitly to contribute to information base that can further the liberation struggle of those who share our oppressed social position. Unfortunately for those two reasons people of privilege often ignore our world assuming the oppression bias.

The Oppression Bias language can be seen in many ways. One is the discouragement by Sociologists in the classroom for people to speak from anecdotes. We all know that anecdotes don’t constitute scientific information by itself but when you’re the only one in the classroom who remotely has any engagement with a certain social phenomena you would assume that people would give some deference to you on that point. Unfortunately often comments referring to life in the projects, coming out of the closet, or being from a rural town is met with silence and/or little engagement with the point or worse the student/scientist is reminded that their anecdote isn’t a scientific snapshot.

1784
Both of these responses discourages oppressed individuals from speaking from their lifetime of experience with X issue that I believe is relevant even if it didn’t come out of a research journal.

Another form of this bias that also happens in classrooms often is when an oppressed person thinks of a writer who is not a social scientist who said or wrote something that they feel is relevant to the discussion. An especially common example of this is when a working class or poor student/scientist brings up Marx's theory of revolution and change. We can argue all we want about whether its right or not but its interesting to always see the weird looks one gets when they reference him and one would assume that the looks reflect thoughts that resemble "commie..." It also happens when racial minorities mention revolutionaries of their people in conversation. There’s an assumption that often goes through the person who’s about to speak head that these people will dismiss this writer’s point because they aren’t a "scientist" like they are.

Assumptions of Oppression Bias of the above mentioned forms and others (“they have an “agenda”” accusation is another one) stifle voices of students, social scientists, and laypersons alike and contributes to a weird Catch-22 that all oppressed people in the social sciences have to face, or will face. You come into the field wanting to study "your people" because the current crop of people and studies have failed to do so in a decent way (or at all) and indeed there is almost a responsibility to do so because no one else will. The problem is that because you do that, you are assumed to have an agenda and much of your writing is proving the worth of either the topic of discussion itself or super reinforcing your logic to make sure NO ONE can question your work. This is a very uncomfortable position to be in and for many of us, it wears us down...a lot.

For Sociology and other social sciences to move forward towards a more fair and equitable picture of the social world, we will have to confront professional/psychological forms of suppression such as the Oppression Bias Assumption. If we don’t our fields will continue into the far future to be too heavily weighted in favor of the interest, logic, and perspective of the privileged to the disadvantage of the oppressed. That is a field I’d rather not be a part of.

Have you seen real oppression bias in your work? Have you seen the undue assumption of this bias used against you or anyone you know? What do you think we can do to fight back against this?

William Richardson is a 2nd year MA student in Sociology at the University at Buffalo (Department of Sociology. He is currently writing his Master’s thesis on how communities racially essencialize space and its contributes to continued residential segregation. Outside that he has interests in race/racism, intersectional stratification systems, and the integration of language into systems of domination.

“[1]Last Seminar by Stan Cohen must surely merit consideration as the strangest paper ever to appear in a Sociology journal. It tells the story of a gradual invasion of the university campus by those who are neither expected nor
welcome: research participants. Encountering strangely familiar figures in their everyday working lives, befuddled sociologists suddenly begin to recognise that those who have been the objects of past research have gradually returned to confront the researchers who sought to repress them upon completion of the research:

Then Bridges, who I thought had been deliberately avoiding me, walked up to the desk at the end of a class in which he had participated with his usual intense stare.

‘You don't know anything about it, do you? It's all a game to you.' I asked him what he meant.

‘Prison’, he said, ‘You think because you've spoken to a few cons you understand it all. Well, you don't, you just don’t.’

He was slowly shaking his head. The tone was polite, but condescending. I'd heard that tone before.

The ensuing confrontation is neither welcome nor pleasant. Those whose existence had been reduced to representational objects begin to subject the researchers to emotional torment, with their mere presence throwing the campus into disarray:

Those of us who had done any empirical research were being infiltrated by our subjects. (‘Infiltrated’, is that the right word? I'm still not sure how to describe what was being done to us. Penetrated? Visited? Invaded?) I could not explain how this had happened but they were certainly here, taking revenge against us for writing about them.

The story ends with Cohen's narrator desperately bundling up his most treasured books before fleeing the burning campus as gun fire echoes in the distance. It's a very strange story. But it asks an important question: what would involuntary confrontation with participants in past research look like? What would it feel like? How would a prior knowledge of such future rencountering (re)shape our practice? Certainly these are not new questions. But it would be difficult to find a text which considers them quite as dramatically as Cohen's.

This is something I've thought a lot about in the context of researching the asexual community. I first encountered the notion of asexuality through two new friends who identified as asexual. As I got curious about asexuality – partly because I didn’t ‘get it’ and partly because of its conspicuous absence within the sexualities literature I'd encountered at that point – I started to search online. I very quickly found asexual discussion forums, blogs and youtube videos. I found a website that an asexual PhD student (who eventually switched topics to research the history of asexual identity) had setup in order to help encourage and facilitate what was, at that point, a fairly insubstantial amount of academic research on asexuality. In short: an awful lot was happening online.

It soon became obvious that the internet had been integral to the emergence of an asexual identity and the formation of something which, for lack of a better term, we might call an asexual ‘community’. However the internet was also crucial to the formation of an extremely loose but nonetheless identifiable asexual research community – e-mail, mailing lists, blogs, discussion forums allowed geographically dispersed individuals with common interests to communicate. This has eventually led to some face-to-face meetings: a seminar at the University of Warwick, a conference panel at the Sexualisation of Culture conference, the formation of an interest group of the National Women’s Studies Association and numerous conference sessions which have emerged from this.
There’s a risk of overstating the point but there is, nonetheless, a clear homology here and it’s a really interesting one. In a way it represents a reshaping of the field of research – the same trends are identifiable in the formation of groups of researchers as can be seen in groups of the researched. It might be the case that asexuality represents an outlier but, even if this is so, it’s helpful because it foregrounds a change which might be difficult to identify elsewhere if it is manifesting itself more gradually. The institutional and territorial gap between researchers and the groups they research – the concern of Cohen’s story – is being radically narrowed by the internet in general and social media in particular. There are some striking examples of this within asexuality studies, such as the formalisation of the Asexuality Visibility and Education Network’s gatekeeping function and the Open Letter to Researchers written by the Asexuality Awareness Week committee, but I find it difficult to see how this could become anything other than a broader trend. Some elements of Cohen’s parable could seem anachronistic given the sensitivity and awareness which many social researchers, particularly insider researchers, exhibit in relation to this ‘gap’. My intention is simply to frame this recognised issue in terms of the many ways in which the technological innovations which are driving this process can be drawn upon to negotiate it proactively. By this I mean things like:

- Single author or multi-author blogging
- Tweeting about research
- Setting up a tumblr blog about research
- Podcasting (interviews, talks)
- Facebook pages
- Videocasting (interviews, talks, documentaries)
- Live streaming events
- Engaging with community blogs

These are possibilities which often come up in terms of ‘impact’ and ‘public engagement’. But I think these are often sterile concepts, redolent of top-down imperatives and an audit culture – it also risks subsuming the specific publics of the researched who have a stake in the content of that research under the general ‘public’ with whom we are ‘engaging’.

These are powerful tools which, increasingly, require little to no technical expertise to master. Martin Weller talks about these technologies as being ‘fast, cheap and out of control’:

Fast – technology that is easy to learn and quick to set up. The academic does not need to attend a training course to use it or submit a request to their central IT services to set it up. This means they can experiment quickly.

Cheap – tools that are usually free or at least have a freemium model so the individual can fund any extension themselves. This means that it is not necessary to gain authorisation to use them from a budget holder. It also means the user doesn’t need to be concerned about the size of audience or return on investment, which is liberating.
Out of control – these technologies are outside of formal institutional control structures, so they have a more personal element and are more flexible. They are also democratised tools, so the control of them is as much in the hands of students as it is that of the educator

In adopting fast, cheap and out of control tools we make the research process newly open and, in doing so, help ameliorate the methodological and ethical difficulties which can result from too wide a gap between researchers and the groups they are researching. Using these tools proactively helps ensure that changes in the broader field of research which are, by definition, unpredictable can be negotiated more actively than would otherwise be the case. Incorporating them into ongoing practice can also, somewhat paradoxically, lead to much greater impact than could ever be achieved by deliberately seeking ‘impact’ as a compartmentalised activity. The digital footprint which open research leaves manifests itself in a discoverability by activists, journalists, practitioners and policy makers which would be difficult, if not impossible, to cultivate through other means. But this discoverability is also a challenge – ethically and methodologically – one which I think Stan Cohen would have found very interesting.

Art, research and sociology’s promiscuity (2013-07-03 08:00)

I’ve just come back from two days talking, thinking and occasionally getting frustrated by the question of the relationship between art and social research. This is something I’ve been curious about for ages. Here are some reasons why:

• I think the communicative repertoire exhibited by most sociologists is profoundly limited and I think of performance, in the broadest sense of the term, as something which deserves serious consideration to this end.

• Dialogues with artists about their practice (as well as about art more abstractly) can be incredibly helpful in recognising non-linear creativity and incorporating this recognition into ongoing practice.

• An engagement between art and sociology can help drive innovation in methods, particularly in relation to the sensory and the possibilities which ubiquitous digital devices afford for mobile social research.

These dialogues might involve an exploration and renegotiation of the boundary between sociology and art. However I find the possibility that some might deliberately or otherwise collapse the boundary rather worrying. Social research ≠ art. Artefacts of art practice ≠ data. Exploratory liminality ≠ research questions. Conflating these things precludes the creative exploration of the differences and commonalities between them. It does a disservice to both sociology and art. My concern is that what Andrew Abbott describes as sociology’s difficulty with excluding things – its lack of any intellectually effective means of expelling topics which have come to occupy sociological attention – might,
in time, lead to a slide from considering the relationship between art and sociology to an enthusiastic attempt to conflate the two.

Kip Jones (2013-07-03 09:20:09)

I am curious to know if research methods in sociology can become the modes of research for artistic practice?

Do iPods block out internal conversation? (2013-07-04 08:00)

This is a claim my supervisor has made from time to time. It's one I've tended to be rather sceptical of but it came to mind earlier when I was walking home, with no music as a result of having forgotten to pickup headphones when I left the house. To say that listening to music on headphones ‘blocks out internal conversation’ is not to suggest that we cease thought or feeling when listening to music. In fact the process of walking and listening to music (one of my favourite things in the world on a sunny day) is usually emotionally and perceptually rich – take this for example, a song which for some reason is tied up in my mind with walking around on hot summers days but also tangled up with memories of various gigs in different cities and a couple of quite distinct periods of my life:
But what happens to my internal monologue when I’m walking along on a summer’s day listening to this song? It struck me earlier that I entirely see my supervisor’s point. My experience is of feelings and thoughts drifting in certain directions as a result of the music and the meaning (or lack thereof) past experience has embedded into it for me. But what inner monologue remains, if any, seems staccato and disjointed. Whereas earlier today when I found myself very aware of not having music for a 40 min walk (habitually I just would have music with me without thinking about it) I had a long drawn out inner dialogue about various things that have been on my mind recently. It’s this sort of dialogue through which we come to exercise agency (in that we decide on courses of action after deliberating internally about our circumstances and our concerns) and, if iPods do ‘blot this out’, it points to unacknowledged implications held by the ubiquity of this technology.

Adam Byrne (2013-07-23 12:42:13)
The non stop wearing of headphones in public is destructive to people’s thought processes, detrimental to positive social interaction and downright dangerous at times (think of people being sneaked up on unawares or joggers being mugged). Thousands of years ago music was precious and rare, only basic instruments existed and when someone sang or played it was a special social occasion with communal meaning. Now cheap and trite music is everywhere and means nothing. That’s why I decided to give it up a few years ago and the silence is golden! All the best, Adam.
Lorin Yochim (2014-02-02 16:33:02)
I rarely listen to music through those earphones. More likely to be found are podcasts like Thinking Allowed or the Philosopher Zone. Those seem to do wonders to create all kinds of new internal conversations. External conversations - not so much. :)
In the midst of a walk through the steers of a typically sedated Madrid at Siesta time, I turned a corner and stumbled upon a hive of life and energy, the likes of which I hadn't encountered before. This was my first encounter with the reality of Occupy. Whilst this image was taken back in 2011, bringing it into publication could be no more timely. In her recent paper in the Current Sociology monograph that specifically examines the new wave of global mobilisation, Lauren Langman (2013) highlights the tensions between a Lockean individualism associated with affluence and the egalitarian views associated with Occupy. As she states: 'At times of crises, people withdraw commitments to the existing social order - creating spaces for alternative views, values and understandings' (p.512). This image of a hotel, a place where affluence can buy you your own piece of home within a city and its occupation demonstrates the way that this tension is playing out within the streets of cities around the world.

New Frontiers for (Digital) Sociology? (2013-07-06 08:00)

In [1]2009 Savage and Burrows challenged sociology to modernise its methodological repertoires or face obsolescence. Digital Sociology is gathering momentum and developing into a promising riposte to this challenge.

Since Digital Sociology is a new area of exploration, interested sociologists are setting about defining its content and scope. This blog post is intended to make a small contribution to this discussion by proposing Digital Sociology should be concerned with emerging semantic web technologies.

Web 1.0 was made possible by Sir Tim Berners-Lee’s creation of the http protocol which enabled us to retrieve a copy of a document by accessing its address on a network. Web 2.0 was made by us; the content providers.

To realise the semantic web or Web 3.0 he and his colleagues envision everything (documents, data, inanimate objects, even us) having an address on a network and artificial intelligence having the ability to understand and ‘learn’ relationships between these addressed entities. So Web 3.0 will be created by machines as we become data sources on the network (incidentally, this is one of the reasons ANT offers useful tools in this field).

Understandably, owing to scale of its ambition, the semantic web is yet to be realised. However many of the technologies that make the semantic web at least technically feasible have powerful implications for the way we and the computers we programme, collect, store, use, and share data.

These include [2]linked data and [3]ontologies. Those of you familiar with relational databases will know about pieces of data, well...having relations. For example if you and your partner are registered on the DVLA’s database, even if you live at different addresses, it will be easy for the database to establish you have a relationship with your partner because your records share your car’s registration number.

The aim of linked data, via data structuring models such as [4]RDF, is to connect and consolidate records that exist in different databases; even data in different formats (if linked data was fully realised the Web would become one huge distributed database). The query language [5]SPARQL enables us to query across databases by mining linked data. For example, if the DVLA and your university stored its data as linked data it will at least be technically possible, via related records like your car’s registration, to find out which department you work in. You may park your car at the university which stores your car registration along with your employment records. Theoretically a search engine could pull all the details about your car and employment in one data grab. Now imagine all the possible connections that could be made using all the digital data stored about you on all the databases out there.
Ontologies introduce another layer of functionality to this scenario. They are not ontologies as we understand them in sociology; in computer science it’s a framework for organising data in a way that gives it meaning. Ontologies allow computers to ‘learn’ the semantics of relationships between data. For the more technically minded [6] here’s how the BBC are using an ontology to characterise news stories.

All that can be known in the previous example is that you and your partner share a registration number; computers can’t know or think that means you both drive that car. However, an ontology introduces other variables to the data relations. It could define you as a driver, and your partner as a driver, and then state you both own only one car. The computer would then ‘know’ you both drive the same car. As more variables are added the computer builds a richer picture until it’s able to imply relationships between data. Given, you and your partner are living at separate addresses and the car is sports car, add to that your age and a recent trip to Ibiza the computer could conclude you are having a mid-life crisis!

Obviously this only works on open data, correctly formatted data and a strict legal framework protects us from such sharing. However the use of this technology has important implications for the way data can be exploited.

Take for example Tesco club card data collected by [7] DunnHumby. If a Tesco customer buys the Sun, razors, a ready meal for one, a Katie Price fitness video, some baby clothes, cigarettes, and multi-pack lager when England games are on the reasoning software can, as it gains knowledge, produce a sophisticated profile of this customer; his social class, relationship status, lifestyle etc. Again, DunnHumby follows strict guidelines for anonymising this data but more semantic capabilities we add the more we are able, via machine processing, to reverse engineer aspects of identity. There’s no doubt that we should be worried about the personal data we give away to Facebook et al. for free but this technology could effectively mean the end of anonymous data. The better semantic A.I. technology becomes, the better it becomes at de-anonymising data.

Returning to Savage and Burrows’ challenge, these technologies offer sociology new methodological tools; more ‘intelligent’ data collection and processing but also a new, fertile territory for digital sociologists to analyse and critique.

P.S. This is only a fairly frivolous primer, for a more technical academic guide to these technologies please see;

Huw Davies is a 2nd year, interdisciplinary, PhD student at the University of Southampton attempting to synthesize the best of sociology and computer science under the banner of Web Science. More info on his Twitter profile @huwcdavies

Virtual Worlds and Online Games now play a large part in society and social pastimes; they are popular and mass culture. Women actively participate in various online environments and Virtual Worlds, forming a significant part of these communities.

However, Virtual Worlds provide a different space for people to inhabit. Cyberspace has traditionally been regarded as a lawless environment – as much for its jurisdictional difficulties and absence of regulation, as for its lack of physical nature. In recent years one could observe a sudden emergence and major growth of cybercrime, with particular rise in cyber stalking and cyber-harassment. What is particularly intriguing is that many of these crimes take a gender-based form, such as gender-based violence, sexual harassment or cyber-pornography, which primarily victimize women (or rather female avatars and characters).

Despite their prevalence cybercrimes, and gender-based cybercrimes in particular, remain unregulated. Where regulation occurs, it is largely in the form of Acceptable behaviour and Codes of Conduct. The difficulty then arises then with enforcement. Furthermore, various attempts at discussing the issue of misogyny in online environments and cybercrimes against women meet a strong, opposing and somewhat alarming response, such as one directed against Anita Saarkesian, a feminist games critic, blogger and the author of the Tropes v Women.

These recent developments and paint a rather alarming picture of the gender inequality in virtual worlds and prompt a question about the need for regulation of such behaviour in online environments and in virtual worlds.

The Ignite© (UN)CONFERENCE is designed to create an opportunity to discuss these pressing, contemporary issues in an informal, multidisciplinary environment. Our event will take a form of Ignite sessions which are designed to stimulate discussion and exchange of new ideas in a short period of time ([1]http://igniteshow.com/). Presentations should be no longer than 10 minutes. After the Ignite sessions, separate sessions will be run to further explore these issues.

We are hoping to attract a range of participants from various backgrounds, who are interested in participating in this event and contributing to the discussion. You do not need to be a game player to join!

Please submit proposals of no more than 200 words including a brief biography and 3 keywords to Kim Barker (Birmingham Law School) and Olga Jurasz (Open University) at: virtualgender@gmail.com by 10 July 2013 and join
Rethinking the vision of sociology one might want to argue for (2013-07-09 08:00)

it may be time to re-think how to situate our ourselves and our commitments in relation to, not only what one is against, but also what vision of sociology one might want to argue for. It is not a matter, to my mind, of answering disciplined instrumentalism with hyperpolitical posturing that dwells in the delusion that we transform the world simply by making pronouncements about it. It might be that the value of what we do is found in the commitment to thinking, education and understanding. In fact I think this is what the sociologists in this exhibit are talking about. Guided by ambition and a confidence that may have something to say about our current condition, this involves shaping the discipline, developing collaborations, and yes, raising income and resources to fund projects we believe in. A commitment to dialogue is central here to – not least with our students – if we are to seek and find new audiences and publics for sociological ideas. We have no choice but to play the game and establish standing that can be quantitatively recognised. However, this is a dead game without retaining a commitment to communicate to a wider range of publics comprised not only of professional sociologists but also our students – inside and outside universities - and people searching for alternative ways to think the issues of the day.

Caught Between Zombies and Chavs? The aesthetics of the crowd in an age of austerity (2013-07-10 08:00)

I love book shops. There are few things in life that give me greater pleasure then entering a book shop to choose a book at random. While I occasionally buy some utter crap through the enthusiastically scattergun approach I take to book buying, it’s much more common for me to stumble across books that I come to love. Or at least ones that intrigue me enough to lead to a purchase but then sit, unread, around my house for a year or two before I finally get round to them. There’s a much smaller, in a weird way rather exclusive, category of books that provokes neither response though. These are ones I have recurrently picked up in a shop, flicked through and yet have failed to provoke a degree of interest which would lead me to buy them... nonetheless they are sufficiently interesting that I find myself picking them up again a month or two later though still not buying them. The book of World War Z falls very much into this category and, rather inevitably given I must have picked it up close to 10 times over a number of years without buying it, it’s lodged into my psyche in a way that sits rather incongruously with the fact I was never interested enough to read it. So I was rather intrigued to see the film but nonetheless a bit ambivalent about it:
There are obvious things to dislike about this film. The narrative is disjointed in parts, with occasional gaping holes in the story telling matched by smatterings of dialogue so wooden that it’s a wonder the actors were able to deliver it with straight faces. But nonetheless it was gripping and the spectacle was, well, spectacular. This revolved around two aspects: zombie crowds and the breakdown of social order. The apotheosis of this was reached in the siege of Jerusalem by the zombie armies (!?) before the film got a bit tedious in the second half - Israel was the only state which took the initial reports of zombies seriously, with past history compelling military leaders to respond to even the most far fetched potential threat (there’s a far from subtle moral about the risk modelling of natural security states here). But please do ignore my cynicism because it turns out those walls were useful after all... for a while at least. But eventually the zombie armies, spurred on by the sounds of peaceful interethnic cultural collaboration - literally, it was harmonious singing in the immigration zone of Jerusalem that provoked the attack - soon overwhelmed even these defences and the state of Israel was consumed by the zombie plague. Was anyone else astonished that this bit of the film got made?

Leaving aside the sheer socio-political weirdness of this bit of the film, it also left me thinking about the aesthetics of the crowd which characterised the film as a whole. The film portrays, in its own terms, the beginning of a world war - an established global order, represented throughout by the United Nations, suddenly finds itself under siege by an internal threat and, I’m sad to say, all looks lost, at least until some heroic figures are able to leverage scientific knowledge and military resources into temporary survival and the onset of total war. Who are the enemy? The sheer mass of the human population, those who formerly contributed to the reproduction of the social order each and every day but are now gripped by an inexplicable destructive urge, constituting an existential threat to the established order through their sheer numbers and violent reaction to the remaining organs of power. How terrifying a spectacle, to see a crowd so blood thirsty, plagued by such malevolent demons that too much contact with soldiers can leave the security forces equally consumed by the nihilism of the mob! Who are the heroes? Special forces, the World Health Organization, the United Nations, the IDF and the US Military. The thought that kept returning to me through the film was the extent to which it portrayed the mirror image of what China Mieville describes as [1]‘floating utopias’ - in a kinder and gentler age of pre-austerity neoliberalism, the libertarian imaginary found its expression in fantasies of liberation from the state in [2]floating paradises of consumption and free enterprise. In an age of austerity, this utopian impulse finds it counter-image in nightmares of being eaten alive by a feral crowd, with dark hopes of malthusian salvation necessitating a militarization of social life and total war against the mass of humanity. Only through embracing death and destruction (by literally internalising it in the form of the viruses which render one oblivious to the teeming destructive hoards) can the forces of social order stand a chance against the nihilistic fever which has gripped the mass of humanity and eviscerated the capitalist world system.

The portrayal of the zombies isn't a million miles away from that of the [3]murderous chavs in Eden Lake:

But in that case the murderous crowd amounted to a few insecure, though deadly, teenage boys. The social pathology did not yet extend (in 2008) to the population at large. While a fashionable London couple found themself murdered by the locals when visiting the future site of an exclusive gated development in the West Midlands, the film nonetheless conveyed a vision of a controlled future in which these marginal predators would be kept at bay by increased social order - in other words, the gates were going to be put up around Eden Lake. So, if we want to avoid north London couples being massacred by West Midlands chavs, we'd better embrace this process. But World War Z portrays a time where even the world's biggest gate cannot keep out the murderous masses. So what hope for our collective futures? Well it seems we can either retreat into militarised communes, hiding from the world while the remaining forces of political order slaughter the mass of the earth's population, or we can begin to look more closely at the constitution of the feral crowd and begin to wonder if 'zombies' and 'chavs' are ideological fictions that serve...
a nefarious political purpose.

Adam Byrne (2013-07-23 12:33:59)
What’s your opinion on The Walking Dead (AMC TV series) interpretation of the zombie apocalypse, if I may ask?

Adam Byrne (2013-07-23 12:50:52)
I didn’t like World War Z for some of the reasons you mentioned - it was like an overblown car chase and there simply wasn’t enough time to tell the story properly but I do agree that the visuals were impressive.

An interview with David Jay: Why Asexuality Matters For The Future of Sexual Culture (2013-07-11 08:00)
In this podcast I talk to [1]David Jay about the future of the asexuality community, the implications of its increasing visibility and its relevance for sexual culture more broadly.

Baking an idea in the unconscious mind (2013-07-12 08:00)
My own belief is that a conscious thought can be planted into the unconscious if a sufficient amount of vigour and intensity is put into it. Most of the unconscious consists of what were once highly emotional conscious thoughts, which have now become buried. It is possible to do this process of burying deliberately, and in this way, the unconscious can be led to do a lot of useful work. I have found, for example, that if I have to write upon some rather difficult topic the best plan is to think about it with very great intensity – the greatest intensity of which I am capable – for a few hours or days, and at the end of that time give orders, so to speak, that the work is to proceed underground. After some months I return consciously to the topic and find that the work has been done. Before I had discovered his technique, I used to to spend the intervening months worrying because I was making no progress: I arrived at the
solution none the sooner for this worry, and the intervening months were wasted, whereas now I can devote them to other pursuits.

Bertrand Russell, The Conquest of Happiness, Pg 49-50

This is a book I first read seven years ago and occasionally come back to. While it's full of scattered insights, I'd struggle to think of any advice I've encountered anywhere that has been more straightforwardly useful than this suggestion. It's something I began to try and practice consciously pretty much immediately and, in the past few years, it's become such a habitual part of how I work that I'd pretty much forgotten I ever did anything else. It's a natural antidote for those who, as C Wright Mills might have put it, can find themselves getting obsessed with the "feel of an idea" - my own take on Russell's advice is to try and sit with an idea, see where associations lead you spontaneously, think through its implications and try to contextualise it in terms of ideas that are already more settled in your mind. Then to let it go, distracting yourself with something else and avoiding it for as long as possible until some practical exigencies demand reengagement. Often they don't and this is where the method is particularly great.

It came back to mind recently because of a discussion in which I suddenly found that a fragmented set of thoughts which preoccupied me a couple of years ago (how cultural items can be used to mediate human relationships e.g. CDs, Mp3s, Books, Films, Youtube Clips) suddenly emerged back into my psyche as a fully formed theory (linking transformation of the cultural industries to theories of individualisation) which was relevant to the discussion. As far as I can remember, I'd expanded no deliberate thought or intellectual energy on addressing these ideas in the preceding couple of years – they'd simply been sitting in the back of my mind, baking until they were ready. The 'baking' metaphor is perhaps another example of this. Someone used the term at a conference I was at recently (in fact I'm not 100% sure I didn't mishear them) and it briefly lodged in my attention without me really knowing why. Until I came to write this blog post and suddenly it became obvious why I had latched onto the metaphor of 'baking an idea'.

The Great University Gamble (2013-07-13 08:00)

Understandably, headlines focused on this dramatic rise in price and its apparent expense for graduates, while obscuring the greater burden placed on the publicly backed student loan scheme, which requires an increase in upfront government borrowing. In the medium term, Public Sector Net Debt is projected to grow by an additional £20 billion as a result. Aided by accounting conventions, BIS is able to show a reduction in departmental expenditure, but, perversely, the standard narrative about deficit reduction and borrowing does not apply here. Instead, the move to a generalised fee and loan regime is part of a more profound transformation of higher education and the public sector in general. The agenda is to create a lightly regulated market of a diverse range of private companies with direct public funding to institutions diluted to homeopathic levels. An experiment is being conducted on English universities; one that is not controlled and that in the absence of any compelling evidence for change threatens an internationally admired and efficient system.

BSA Realism Study Group Seminar: Contemporary Issues in Realist Thought (2013-07-14 08:00)

BSA Realism Study Group Seminar: Contemporary Issues in Realist Thought  
Friday 6 September 2013  
BSA Meeting Room, London.

As the new convenors of the BSA realism study group we are pleased to announce a seminar to debate contemporary issues in realist thought. We intend to facilitate discussion with a range of speakers to consider what can we learn about the application of realism across different disciplines.

We would like to initiate a broad discussion within the following areas:
- Realist dialogues across perspectives and disciplines.  
- Using realism in substantive inquiry.  
- What difference does a realist perspective make?

We intend that our discussions will inform a broad scoping exercise of current issues of realist thought which may help to inform future events that we will hold, developing an agenda for future sessions.

To book, please visit:  

For further information please see the attached flyer, further details on speakers and abstracts to follow shortly.

For more information on the BSA realist study group please visit:  

Hope to see you there  
Tom Brock, Mark Carrigan and Michelle Farr

The Empty ‘Posturing’ of Žižek and Lacan? (2013-07-16 08:00)

http://www.youtube.com/watch?feature=player_embedded&v=GWRqPbwYS0

This interview ([1]via Open Culture) will perhaps divide opinion. It follows on quite nicely from John Searle's[2]comments about Foucault, Bourdieu and continental obscurantism which I found recently. Before I express a view, let me offer a preamble: I own and have read a lot of Žižek books, though the ratio between my owning and my reading of the book is quite telling. I also think that, contra his critics, he can actually write pretty well, though seemingly only in his shorter books i.e. he often doesn’t write well. But I'm also aware that I like Žižek in pretty much the same way I sometimes like going out to get extremely drunk. I like the way that reading a Žižek book involves (to me at least) being engulfed by a torrent of verbosity, with the rapid fire and often barely coherent patchwork quilt of names and ideas being interrupted by those occasional moments of startling lucidity which, in the unpredictable zig-zag between incoherence and insight, work to lend the experience a sense of profundity entirely out of proportion to the actual weight of the propositions being put forward in the text (not a million miles away from the way in which drunken intellectual debates can sometimes feel incredibly profound because they occasionally lead to the unexpected elaboration of preexisting positions in spite of what is, if you’re honest, the generally low quality of the discussion). So I find it hard not to agree with Chomsky here:

1. http://www.youtube.com/embed/Fu1C-oBdsMM
What you’re referring to is what’s called “theory.” And when I said I’m not interested in theory, what I meant is, I’m not interested in posturing—using fancy terms like polysyllables and pretending you have a theory when you have no theory whatsoever. So there’s no theory in any of this stuff, not in the sense of theory that anyone is familiar with in the sciences or any other serious field. Try to find in all of the work you mentioned some principles from which you can deduce conclusions, empirically testable propositions where it all goes beyond the level of something you can explain in five minutes to a twelve-year-old. See if you can find that when the fancy words are decoded. I can’t. So I’m not interested in that kind of posturing.

Or at least I agree with him up to a point. I don’t know enough about Chomskyan linguistics to substantiate the claim but I’m unsure as to what extent the positivist rhetoric is invoked here for effect and to what extent these are reflective methodological principles. Ironically, what knowledge of Chomskyan linguistics I do have comes largely, I think, from the eclectic (mis)appropriation of interdisciplinary concepts which characterises the work of cultural theorists (fair term?) like Žižek whom I occasionally feel compelled to read. But I do identify with the impulse to differentiate methodologically coherent theorisation, understood as part of a broader endeavour of collective knowledge production, from the kind of Theory represented by Žižek.

---

Why are conspiracy theories popular? (2013-07-17 08:00)

This [article](http://www.openculture.com/2013/06/noam_chomsky_slams_zizek_and_lacan_empty_posturing.html) on the LSE politics blog was a thought-provoking discussion of conspiracy theories and the increasing weight of social scientific evidence concerning their emergence and dissemination. This is a topic that’s fascinated me for years and one which, until I started to realise that reading these sites on a daily basis would drive me mad, I was seriously considering as an idea for post-doctoral research. I couldn’t agree more with the article’s dismissal of psychopathological explanations of conspiracy theories – in effect a kind of reductive psychologism:

To begin, let’s take the often used psychopathological explanation, that those believing in conspiracy theories are crazy. Despite [Alex Jones’](http://sociologicalimagination.org/archives/13237) recent efforts to convince BBC viewers otherwise, mental illness is neither an antecedent, nor the product of conspiracy theorising. Most people believe in at least one conspiracy theory; many people believe in several. It would be difficult to label them all crazy. Some attribute conspiracy theorising to more benign afflictions such as paranoia, feelings of powerlessness, and alienation. These explanations don’t get us very far either: first, the causal direction is not clear. People may believe powerful actors are out to get them because they are paranoid, but conversely, people may feel paranoid because they believe powerful actors are out to get them. Second, given the [numbers](http://www.openculture.com/2013/06/noam_chomsky_slams_zizek_and_lacan_empty_posturing.html) of people that believe in conspiracy theories, we could not label all or most of society as paranoid.

However what I find less compelling is the article’s dismissal of the argument that conspiracy theories represent a form of cognitive simplification, allowing individuals to make sense of complicated events in simple terms:

1802
Conspiracy theories are often seen as the result of cognitive quirks, that in a complex world, people seek to account for complicated events and messy circumstances with simple theories. However, this often cited explanation does not stand up to scrutiny. While each person can decide for him or herself how complicated an explanation is, conspiracy theories are generally far more complicated than the official stories they often attempt to refute. Which is more complicated, the suggestion that 19 terrorists boarded planes and crashed them on 9/11/2001, or that Bush, Cheney, the FBI, the CIA, Israel, all major news outlets, the NYPD, the 9/11 Commission, and Popular Mechanics magazine are all secretly conspiring together to hide airplanes, plant explosions, destroy evidence, and deceive the public? Put simply, conspiracy theories are usually never more parsimonious than the official explanations they rival.

Part of the problem here is the seemingly linear understanding of ‘complexity’ invoked. This may very well be a consequence of writing for the web, in which case I withdraw my objection, though I suspect it isn’t. My difficulty with the counter-argument is in its conflation of narrative complexity and moral complexity. The stories conspiracy theorists tell are certainly complicated – though it’s important to recognise that this is likely as much a result of the constant argumentative elaboration required when most of the people you make it too, rightly, see it as ridiculous and offer objections – but, I’d argue, this narrative complexity obscures an underlying moral simplicity. Conspiracy theories work to sustain a sense of moral order which is profoundly simplified: good America has been thrown off track by bad neo-Conservatives who have conspired to manipulate the public for their own ends. The reduction in cognitive load which stems from affirming such a sense of moral order is a consequence of the questions it forecloses – those concerning government policy, geopolitics, differences and similarities between successive governments, one’s own complicity (wilful or otherwise) in the ensuing difference these governments have made in the world.

These are reflexive questions – ones concerning our place in relation to the world and what we should do given we are in such a place. Conspiracy theories do not so much foreclose reflexivity – [5] ‘truthers’ do vigorous and committed activism which any adequately sociological treatment of conspiracy theories has to recognise – but rather constrain the projects which might be reflexively enacted as consequence of such deliberation. It leads individuals to ask some questions, predisposing certain answers & ensuing projects, but not others and it is the nature of the questions it leads one to ask which constitute the ‘simplification’. But this is not something unique to conspiracy theories. It is a characteristic of all lay theories about socio-political processes and, assuming we wish to avoid a lazy liberal relativism that is chronically suspicious of political conviction, then it is precisely this continuity with other forms of political belief (rather than the divergences so theatrically embodied by Alex Jones on the Daily Politics) that we must examine.

http://www.youtube.com/watch?feature=player _embedded &v=TPT4dKyxUUQ

Joe Uscinski (2013-08-11 03:53:50)
I like this. Let me push you on two points. 1. Is it really that people turn to conspiracy theories to find simplifying moral narratives? Or, more plausibly, don’t people already know who the villains are before they come to the conspiratorial belief? All Americans experienced 9/11 to one degree or another, but it is mostly Democrats (who already despised Bush) that think...
Bush had something to do with it. 2. Do you think that trutherism itself leads people to ask certain questions and not others? Or, is it that people have a variety of relevant attitudes in play that drive which questions they ask, and which answers they buy?

Sociological Imagination (2013-08-26 12:00:57)
I don’t really know! Just some speculative thoughts provoked by the article - re: 2, i think the former definitely - there’s a path-dependence to our deliberation and, in a way i’ve still managed to articulate properly yet, i’d argue that ideology works by shaping the direction of deliberation “over time” rather than exercising an influence at any one time.

Intellectual Craftsmanship As Refusal (2013-07-17 17:13)

Today, we laborers in the groves of academia are pitted against one another in a quest for increased productivity. Academic departments and units compete against one another for increasingly scarce goods, such as the right to hire faculty; individual scholars in the same department compete against one another for small pay increases, euphemistically termed “merit pay.” In my own university, Rutgers, the public flagship university of New Jersey, “austerity” is the new normal, justifying stagnant salaries and higher tuitions. As state funding provides a smaller and smaller percentage of annual operating budgets, university administrators try to introduce entrepreneurial initiatives into academic departments to generate revenue—with varying degrees of success.

Competition in academia, like competition elsewhere, can at times spur one on to produce great things. (Just think of the fierce mid-1960s rivalry between The Beatles and the Rolling Stones!) Too often, though, competition for scarce resources leads individuals—and I’m speaking of academics here—on a quest to distinguish ourselves from our peers merely to stand apart from the crowd. Today, market values and “fast capitalism” increasingly permeate academia, leading to ever higher expectations of output (read: publication), and higher productivity for productivity’s sake—accumulating more and more lines for one’s cv instead of contributing work that really makes a difference to oneself, and to others.

When we mistake quantity for quality, we create a situation in which alienation flourishes.”We lack the time to craft the elegant phrase as we churn out paper after paper,” observes British sociologist Michael Billig, writing recently in the Guardian. Publishing may stave off one kind of perishing, and at the same time lead to a more imperceptible but no less insidious kind of wasting: the production of routine work that fails to inspire oneself—or to inspire others.

Perhaps it’s time to dust off C. Wright Mill’s notion of “intellectual craftsmanship, discussed in the appendix to his 1959 book, The Sociological Imagination. We tend to think of a craftsman as a carpenter in his/her shop, surrounded by apprentices, but the craftsman can also be found in the laboratory, in the concert hall—in the classroom, and in the study. Craftsmen—and women—combine technical skill with imagination and pride in their work.[1][i] They are dedicated to good work for its own sake—to practical activity, but their labor is not simply a means “to another end”—such as career advancement. The craftsman, writes Richard Sennett, is "engaged" in the fullest way possible with his or her work. He or she does not split work from the rest of life.

Mills spoke about the benefits that accrue to those who approach writing as a craft rather than simply as a means to an end. The main reason, he said, "I am not 'alienated' is because I write." Writing can make us feel more connected to others, and allow us to make a contribution to the society in which we live, he believed. Mills saw writing as a skill that one can develop, as well as an art form, and a form of self-expression. A mixture of technique and inspiration, good writing requires an acquaintance with the methodologies of research needed for the task. There is, he believed, an unexpected quality about writing too—a "playfulness of mind, as well a truly fierce drive to
make sense of the world, which the technician as such usually lacks."

In Mills’ view of intellectual craftsmanship, writing is a form of self-expression that is as much about the process as the product. He described his relationship to his book White Collar. “I am trying to make it damn good all over,” he wrote. "Simple and clean cut in style, but with a lot of implications and subtleties woven into it. It is my little work of art: it will have to stand for the operations I will never do, not being a surgeon, and for the houses I never built, not being an architect. So you see it has to be a thing of craftsmanship and art as well as science.”

In other words, writing is not something that simply happens at the end of the research process. Writing is also an aesthetic practice that entails play – what Mills calls “sociological poetry.”[2][iii] Hegemonic notions of the social sciences suggest creativity is something that we study, and is not a element of our practice. But thinking of what we do as a craft may be a first step in resisting tendencies within the academy (and beyond) to instrumentalize intellectual activity, defining success in quantifiable, ever narrower ways.

[3][i] Richard Sennett, The Craftsman

This was originally published on Arlene Stein’s [6]blog. It is reproduced here with permission. You can follow Arlene on Twitter [7]here. If you found this great post thought-provoking then perhaps you’d be interested in writing a response for our [8]Sociological Craft Project?
"But isn’t that what the psychologists do?: the dangers of disciplinary boundary work (2013-07-18 08:00)

To respond to this particular crisis of measure, economics and psychology are being forcibly re-married. Behavioural and experimental economics have their earliest origins in game theory in the 1940s, which allowed economists and psychologists to compare normative rational choice-making—that is, according to neo-classical economics—with empirical choice-making, as observed under laboratory conditions. The gap between economists’ prescriptions for how people should behave and what they actually do became subject to testing. Discovering patterns in such 'anomalies' became the preoccupation of behavioural economists, following Kahneman and Tversky's landmark 1979 article on 'prospect theory', which later won them a Nobel Prize.

Thanks to the new empirical techniques and data sets, economists could start to spot anomalies—cases where human happiness does not rise and fall as neo-classical economics would predict. At the centre of happiness economics sits the psychological concept of 'adaptation', the extent to which individuals do or do not become psychologically attuned to changes in their circumstances. Where they do adapt to changed circumstances—for example, of increased monetary income or national wealth—their happiness ceases to correspond to changed objective conditions, at least after the transition has passed. Where they do not adapt to changed circumstances—as with unemployment—their happiness remains directly proportionate to their objective conditions, regardless of how long they have lived with them.

Happiness economics took off during the 1990s, drawing on data provided by a number of national household surveys, which had included questions on 'subjective wellbeing' from 1984 onwards. With it has come the rise of homo psycho-economicus, a form of economic subjectivity in which choice-making is occasionally misguided, emotional or subject to social and moral influences. If homo economicus was unhappy, that was merely because he had insufficient money or consumer choice. But homo psycho-economicus suffers from psychological afflictions as well. He makes mistakes because he follows others too instinctively; he consumes things which damage his health, relationships and environment; he sometimes becomes unhappy—or even happy—out of all proportion to his material circumstances.

- Will Davies, [1]The Political Economy of Unhappiness

This is an interesting parallel to an issue I’ve been considering a lot recently. The contingently drawn historical boundaries between psychology and sociology have tended to leave the individual precariously placed within both disciplines. Oscillations between recurrently under-socialised and over-socialised views of the individual have as much to do with this underlying division of labour as an historical artefact of disciplinary based inquiry as they do with the whole sequence of antinomies which emerge from the forms of knowledge production that take place within such institutional constraints. I’d argue that the difficulty, as far as sociology goes, lies in the extent to which the independent variability of the individual vis-a-vis social reproduction or transformation doesn’t fit neatly into either domain of inquiry. This is something I’m increasingly seeing in terms of social and intellectual history rather than simply being a matter of social theory. So it was fascinating to see the argument Will Davies makes here. It conveys a sense of disciplinary boundary work, with renegotiation taking place more through local substantive skirmishes than detached reflections upon disciplinary boundaries and scope.
MOOCs and For Profit Universities: A Closer Look (2013-07-19 08:00)

The Classic Debate Between Noam Chomsky and William F. Buckley (2013-07-20 00:26)

The 2014 ISRF Essay Competition – Theory of Social Behaviour (2013-07-20 08:00)

The [1]Independent Social Research Foundation (ISRF) and the [2]Journal for the Theory of Social Behaviour (JTSB) intend to award a prize of 7,000 CHF for the best essay on the topic ‘The research investigator as instrument across the human sciences’. This is a topic, not a title. Accordingly, authors are free to choose an essay title within this field. The essay will be judged on its originality and independence of thought, its scholarly quality, its potential to challenge received ideas, and the success with which it matches the criteria of the ISRF and the JTSB. The successful essay will be intellectually radical, orthogonal to existing debates, and articulate a strong internal critique across the fields of social science research. Its challenge to received ideas will have the potential to provoke a re-thinking of the topic.

The ISRF is interested in original research ideas that take new approaches and suggest new solutions, to real world social problems. The full statement of the ISRF’s criteria and goals may be viewed [3]here.

The JTSB aims to advance understandings of social behaviour, that is, people acting in relation to, or being constituted through, the social world of other people, institutions, and material and symbolic culture. More detail about the Journal and recent debates can be found on the [4]Journal’s website.

There’s going to be a riot down in Trumpton tonight: on public scholarship and private commitment (2013-07-21 08:00)

In 1983 at the close of the miners strike two big, bad things vied for my fourteen year old attention: music and politics, and my attention was caught even more when they were entwined in the music of the Clash, Conflict, The Jam, and Billy Bragg. Later when I came to Brecht, Weill and Eisler and later still Tippett and Cardew, alongside the King Blues and Michelle Shocked I knew that this stuff was for me. I didn’t formally study politics. I was interested in the ideas and the theory so I studied sociology and philosophy and my practice was in the Anti-Fascist Action street battles on Remembrance Sunday against the National Front, the Anti-Nazi League demo’s against the fascist bookshop in Sarf London, and in leafleting to disinterested posties and rail workers at 5 in the winter morning. Music
was the soundtrack to all of this – the elegies of Walton and Vaughan Williams just as much as the noiseniks of Einsturzende Neubaten and, later, Mogwai and The Hold Steady.

This went hand in hand with a typical student journey from the eighties into a PHD in the nineties to a joint career in anti-racist community work and in universities where I was at times a researcher and a senior lecturer in sociology. I moved away from thinking about music in terms of its ideas but as a vinyl junkie and aficionado of twentieth century avant-garde music, classical, punk and electronica, remained a fan. Perhaps sadly I never lost the politics – the leafleting continued, the meetings interminably continued, things got worse, and then worse again. I never lost the faith that music and left politics could change the world. I still haven’t – as Victor Serge said in far worse times than ours:

'For my part, I have undergone a little over ten years of various forms of captivity, agitated in seven countries, and written twenty books. I own nothing. On several occasions a Press with a vast circulation has hurled filth at me because I spoke the truth. Behind us lies a victorious revolution gone astray, several abortive attempts at revolution, and massacres in so great a number as to inspire a certain dizziness. And to think that it is not over yet. Let me be done with this digression; those were the only roads possible for us. I have more confidence in mankind and the future than ever before' (Memoirs of a Revolutionary 1963).

It strikes me, and always has done, that the postmodernist onslaught against science, truth and reason in the social sciences eliminates anything of worth in the discipline. Sociology and the sociological imagination were born of
multiple ferments and revolutions – ideological, political and economic. The smoke of Manchester brickworks curled around the flags of the French revolution. In different (and profoundly different political) ways Weber, Durkheim and Marx, born of this blood and strife, sought new social orders, optimistic and future-thinking. If they were Jeremiah’s they never lost the flip side, the vinyl side B. That whatever the horrors and collisions and grating noise of tracks one to six, tracks seven to twelve pointed somewhere else, more ethereal, more beautiful. And the last track was always an elegiac slowie, the close-dancing smooch track. There was something full of grace and truth and grandeur about classical social science that captured me in the same way as Ziggy Stardust did.

Ethnography, committed sociological activism, art and music, ‘high and low’ culture, all stayed with me even when I became academically depressed about the sterility of much of sociology in social terms – that people considered themselves as ‘progressive’ within the university but did very little out there in the world about it. Careerists frustrated me in the sense that their own egos and aspirations went hand in hand with a lack of rigorous study of the classics, a loss of close readings of original texts, the decline of scholarship and committed ethnographies. Those frustrations stay with me but I am also amazingly hopeful about the kinds of critical and thoughtful ideas that emanate from students in classrooms that are already having an impact in their lives and communities even when as Serge says it often feels like ‘midnight in the century’. More than that I still love the excitement of sociological ideas in the same way, that as a sociologist of music now and as someone still attached to the punk and new wave ideals of the early eighties, I still love Half Man Half Biscuit. One day I will conduct a full choral version of the Trumpton Riots while the barricades are thrown up across the streets. In my dreams. But it’s those dreams that classical social science made possible.

Martyn Hudson is a sociologist based in the School of Arts and Cultures at Newcastle University researching music in rural communities. He has a PHD from Brunel University (1997) and has published widely in cultural history and politics. He combines this with political activism as a Third Camp socialist.

1. [http://www.youtube.com/embed/m3TV6vOt4Mc?feature=player_embedded](http://www.youtube.com/embed/m3TV6vOt4Mc?feature=player_embedded)

The miners’ strike hadn’t even started in ‘83, nevermind ‘drew to a close’ ;-)
youngsters don’t know his work (I know they don’t; I have asked wherever I go; so did Ray Pahl who was equally puzzled), but have Bourdieu quotes tumbling from their laptops and mouths. And even the many French sociologists I know don’t take Bourdieu that seriously! For empirical work, they find Goldthorpe more useful. You know, the Goldthorpe who is the best empirical macro-sociologist the UK has had in the last 50 years. It was G and L whose work attracted me to sociology and nothing since has persuaded me that their way isn’t the most promising for sociology. Why do UK sociologists prefer and keep turning to prophets from other countries? Naturally, I accept that there are other ways of doing sociology that are very insightful, too. But if one’s concerns are macro-sociological, as mine are, I fail to understand why the newer generations are so ignorant of what’s on their doorstep. Read Solidarity and Schism; read Lockwood in BJS 1996 – there’s a research agenda for today!

I think there are three important points here. Firstly, how is it that sociological work of the highest quality (and much else besides) can be eclipsed so quickly? Secondly, how has continental theory had the influence on British sociology that is has over the past few decades and what have its effects been? Thirdly, how have these two factors intersected to bring about the erosion of sociology as a cumulative enterprise? What else has been involved? The causality here is extremely complex and it’s Max’s crotchety simplification of it which has been winding me up. On this view, there was a sociological enterprise in rude health (oddly concurrent with Max’s entry into the discipline, almost as if there was an element of retrospective idealisation at work here...) until an invasion of fashionable French intellectualism, cheered on by modish young sociologists in generations following Max’s own, soon desecrated this intellectual arcadia and left a rudderless sociology being pushed and pulled by the tides of narrow minded fashion.

Clearly, I’m exaggerating for rhetorical effect but the point I want to make is about the kind of logic implied by Max’s arguments: everything was working, something external was involved in stopping it working therefore this external factor was the causal agent. Whereas I think there’s something much more complex going on here. For instance the emergence of an audit culture incentivised academic over-production (ever more books, journals and papers being ever less read) while squeezing out reading that isn’t instrumentally attached to the exigencies of present work. In this way, the speeding up of intellectual culture tends to be self-reinforcing and it’s a hugely negative trend. The more that is published, the faster debates move on and, given the underlying mechanisms driving the over-production, the limited time and space this allows for reading will tend to be subjugated to the demands of keeping on top of an ever-growing literature in order to contribute to the debate thus intensifying the process which is causing the underlying problem! This is part of what brings about the eternal sunshine of the spotless sociologist.

The same structure of incentives which drives this over-production also valorises novelty: in the contemporary academy, rewards go to those who can combine existing elements in new and exciting ways, capturing the intellectual attention of others and shaping the direction of future scholarship. However this process by its nature is something of an arms race, as the same incentives which drive X to propose Y also create the climate in which Z will soon come along and propose a radically new programme. I agree with Max both that sociology should be a cumulative discipline and that continental theory is implicated in the contemporary climate where it is anything but cumulative. Nonetheless I think his understanding of the causality is straightforwardly incorrect: these trends are structural not cultural. I suspect there are particular properties of continental theory which leave it ripe for appropriation by purveyors of sociological novelty seeking to make a name for themselves but I think this is a very different claim. Furthermore, it seems to me that part of the reason this can happen is because of the relative weakness of sociological theory as an enterprise. My suggestion is that Max’s attitude is the negative face of a common orientation towards sociological theory which, in its positive moment, seeks integration of a sort which ultimately produces the very fragmentation it abhors:

Sociology seems to produce a number of co-existing and mutually exclusive (semi) paradigms which continually split and re-form in different combinations. Those who are committed to the idea of the
necessity of a ‘theoretical core’ frequently argue that such a situation represents a moment of synthesis, a moment that requires the development of a unified frame of reference representing structure and agency as presuppositional categories (as argued, for example, by Parsons, Alexander Habermas, Giddens, Archer, Scott, etc.). The fact that an accepted synthesis never comes and that each new attempt gives rise to further critique suggests that ‘synthesis’ is one of the moves that gives rise to new splits and forms and is not, therefore, a resolution.

As someone who only discovered sociology after four years of getting pissed off by philosophy, it was its [3]promiscuity which drew me in and its relevance to the world around me which kept me there. As a statement about my own intellectual biography, the constant change in the ‘core concerns’ of sociology is precisely what made the discipline so gloriously fascinating for me. But I agree with Max that it poses problems. However I see these as practical problems to be addressed through constructive and cumulative work in sociological theory; building the infrastructure and tools to allow sociology to engage with new concerns while also working progressively to relate this novelty to those more established objects of sociological inquiry.

Benjamin Geer (2013-07-22 09:41:31)
Max's rejection of sociology “from other countries”, and his dismissal of anything foreign as a fad, are typical of the way academics use nationalism to justify their own ignorance of global social science.

Benjamin Geer (2013-07-22 09:45:23)
Imagine if British physicists dismissed Einstein's theory of relativity on the grounds that it was foreign, and urged their British colleagues to use "British" physics.

The Partisan Troika (2014-04-26 12:56:06)
Yet physics is a 'hard' science.

Benjamin Geer (2013-07-22 09:57:42)
Lumping together very different scholars (Foucault the post-modernist philosopher, Bourdieu the sociologist who opposed post-modernism) just because they were born in the same country is nonsense. And no, anything that has been mainstream field for 40 years is not a fad. A research programme that includes the most influential sociological monograph of the 20th century ("Distinction") is not a fad. It's normal for there to be a backlash against dominant paradigms. Usually the backlash is led by scholars who never bothered to learn the now-dominant paradigms when they were knew, and have for years been hoping that these innovations would just go away. Now that it’s clear that this isn't going to happen, many of them are panicking, and are fighting a desperate losing battle to turn back the clock and restore the value of their now-worthless cultural capital. The word “fad” is a favourite weapon of such individuals. One often finds their students (who have mistakenly invested in the same cultural capital) fighting alongside them. One only needs to know a little Bourdieu to understand such dynamics...
"Usually the backlash is led by scholars who never bothered to learn the now-dominant paradigms when they were knew, and have for years been hoping that these innovations would just go away." That's every bit as reductive an 'explanation' as the one Max offered that I'm arguing against.

Benjamin Geer

Reductive it may be, but sad to say, serious critiques of Bourdieu on theoretical or empirical grounds, from scholars who know his work well, are rare. Attacks from scholars with little or no knowledge of Bourdieu, and who portray widespread interest in Bourdieu as part of a reprehensible fad for "French" thought that includes Foucault, are common. See, for example, this post by archaeologist Michael E. Smith, and my comments: http://publishingarchaeology.blogspot.de/2011/12/problems-with-bourdieu-we-ca n-help-call.html The common denominator in these attacks is that they come from people who have little knowledge of what they're attacking, and who therefore have a professional interest in portraying it as not worth knowing. If they acknowledged it as worthy of study, they'd logically have to invest a considerable amount of time in studying it themselves. That would be an expensive investment; it's much cheaper to write dismissive blog posts in the vain hope that this will bring about a drastic change of course in mainstream sociology. I've heard similar diatribes from qualitative researchers against quantitative methods, and vice versa. I think it's very common for scholars to disparage any knowledge that's widely used in their own fields but that they themselves haven't mastered. This is basically a form of proselytism. If successful, it expands the potential market for the speaker's own work, at the expense of the work of those who use the rival paradigm. Of course, there are more refined variations on this theme. Scholars who have some knowledge of Bourdieu can often get away with making sophisticated-sounding but absurd claims about Bourdieuan sociology because their audiences know less about it than they do. Here's one example: http://www.annualreviews.org/doi/abs/10.1146/annurev.soc.27.1.125 The article makes statements such as "Homology, however, depends on a cultural homogenization" and "Bourdieu reduces all field relations to the power binary of dominant and dominated", which sound very strange to anyone who has actually read any of Bourdieu's books, and give me reason to have serious doubts about the peer-review process of the Annual Review of Sociology. This is unfortunate, because there are serious debates to be had about Bourdieu's theory, which has its weaknesses and gaps like any other. These debates are taking place in some quarters, but they are not served by the gross distortions or nationalist posturing that often passes for critique.

I think you're right! This is exactly what I want to understand (see both this post itself and the sunshine of spotless sociologist post linked in it) but I don't think what you're now saying is what your initial comment said. Which I assume was directed at Max's argument rather than mine. There's a really interesting structural process at work here and reducing it to a narrow cultural claim about competing cohorts (e.g. faddish young sociologists seeking novelty vs crotchety old sociologists who never bothered to learn what are now dominant approaches) really isn't helpful.

Hmm. Turning to your post above, I don't think there's any such thing as "British sociology", nor do I think there's any such thing as "continental theory" on which "the erosion of sociology as a cumulative enterprise" in Britain could be blamed. Ideas don't have nationalities and they don't stay within geographical containers. There's a global conversation going on, academics move all over the world (just as an example, I've worked in four countries in the past four years), they publish in countries other than the ones they live in (everyone wants to publish in the top journals regardless of where they're located), and the same debates and alternatives can be found pretty much everywhere. Nor do I agree that "the speeding up of intellectual culture" is a "hugely negative trend". On the contrary, academic cultural production is still incredibly slow. It can take years to get a journal article published, and many more years before a new idea gets noticed and begins to have an influence. I think academic publishing needs radical reforms to overcome this problem. Turning to the spotless sociologist post, you're surely right that there's a problem with the way social scientists are trained. However, it's not just that old debates are repeated without any awareness that they've happened before. It's that whole subfields are ignored by many of those who need them the most. For example, nationalism studies has produced several decades of debates, theories, and questions that anyone who is tempted to use words such as "nation", "patriotism", "ethnicity" or "identity" should be required to
know about, in order to avoid assumptions that were thoroughly discredited long ago. But this literature hardly seems to be taught, and when students who aren’t doing PhDs on nationalism have any contact with it, this contact usually seems to be limited to one book (Benedict Anderson’s “Imagined Communities”), which simply represents nationalism studies as it was in the 1980s, preserved in formalehyde. I do think that this has a lot to do with the power of an older generation of academics who are resistant to any ideas that they didn’t study when they were students. Not because they’re crotchety (this is not a matter of individual personality), but because this is an effective career strategy: invest in cultural capital early in your career, then just live off the interest until you retire. At the extreme, some people never read anything that was published in their field after they finished their PhDs. Their antiquated syllabi make it difficult for students to find out about more recent research. When they serve as PhD supervisors and peer reviewers, their lack of familiarity with the state of the art leads them to oppose young scholars’ attempts to build on it, since they are ill-equipped to evaluate such attempts. This stifles innovation, since young scholars have to water down their theoretical arguments in order to pass their PhDs or get their articles published. Thus I do think this is very much a struggle over the value of old vs. new cultural capital.

And I completely accept that you’re not making the simplistic case I accused you of in the last comment but I still think you are, essentially, reducing an extremely complex phenomenon to the behavioural dispositions of particular cohorts within academia.

Or to put it another way - if you’re right that this is an “effective career strategy” then what are the conditions of possibility for this?

I’m not trying to explain all the issues you and Max were talking about; I’m just trying to explain Max’s stance, because it’s so common. Its structural conditions of possibility involve several things I can think of off the top of my head, and probably much more besides: 1. Long-term academic employment is hard to obtain, but once you’re in, it’s not difficult to keep your job indefinitely without doing much more than publishing variations on the theme of your PhD topic. This is particularly the case in the US, where tenure effectively eliminates any incentive for senior academics to engage with new ideas, never mind produce new ideas of their own. 2. Academic employment and job security in the social sciences depend heavily on social capital. If you’re on good terms with a lot of people in your cohort, you can readily form mutual appreciation societies (what Bourdieu called cycles of consecration), in which A writes the preface of B’s book, B writes a positive review of C’s book, C invites A to contribute a chapter to an edited volume, and so on. Everyone involved gains prestige without having to face criticism of their work. The uses of social capital also take other, more complex forms; see the article "The academic caste system: Prestige hierarchies in PhD exchange networks" by Val Burris. 3. The high importance of social capital is a symptom of the fact that the social sciences have relatively low autonomy in Bourdieu’s sense, meaning that there’s barely any consensus about which knowledge you should be required to master in order to be a social scientist, or about the criteria that should be applied in evaluating research. In fields with higher autonomy (like mathematics), your prestige depends mostly or entirely on how good your work is, in terms of objective, accepted criteria, but in social science, it’s relatively easy to convert all sorts of other capitals (like social capital) into prestige. Thus you often find that everyone thinks X is a good scholar because other prestigious people think X is a good scholar, but nobody can say exactly what it is that X has done well. Since X’s prestige doesn’t depend on any actual results, it can’t be challenged on the basis of new results; hence X doesn’t have to engage in any substantive debates about new ideas. 4. Since it’s not clear what you should have to know, a viable strategy is to get away with knowing as little as possible. This strategy favours superficial conformism (which is perhaps more what you and Max were talking about): people adopt mantras without thinking much about what they mean, as a way of displaying their good taste, i.e. signaling that they’re the right sort of person, the sort one would want to work with. Everyone who uses this strategy is complicit in pretending that these mantras refer to theoretical concepts whose validity has been conclusively demonstrated. It’s in their interest not to discuss exactly what that presumed validity is based on, because if they did, it might become clear that some of these concepts rest on flimsy intellectual foundations. Such critiques would ultimately increase the autonomy of the field, which wouldn’t be in the interest of those who adopt the strategy of knowing as little as possible, because it would require them to know more. Anyone who rocks the boat will have a hard
time accumulating social capital, and hence will not benefit from the phenomena described in (1) above. 5. PhD students are in a structurally very weak position in relation to their supervisors and examiners, who wield absolute power over their future careers. They’re supposed to make an original contribution to their field, but in doing so they have the potential to undermine the work of these powerful gatekeepers. This is a clear conflict of interest, and leads many PhD students to self-censor.

ok to repost that comment as a post? it’s much more likely to get seen if so - some v insightful points that might spark further discussion.

Sure, just correct "the phenomena described in (1) above", which should be "(2) above".

great, will do

[...] really interesting comment by Benjamin Geer on yesterday’s Sociology of Intellectual Faddishness post merited reproduction in its own [...] 

Sam Burgum (2015-02-25 09:09:00)
Sociological Hipsterism = "what do you mean you’ve never read [insert fringe theorist]?! They are the pinnacle of sociology. As so happens, I am an expert on them and therefore an authority over you and everything you say or argue" Or the equally annoying... "I liked [insert fad] before they were cool..." Some theorists can perhaps be assumed to be popular enough that you don’t need to explain their theory, but for the majority, surely a critical outline of how you have interpreted them and found them useful/problematic is always necessary, rather than an appeal to expertise.

"We’re going to go out there and violate some rights" (2013-07-22 23:37)
In [1]this podcast from the LSE Impact Blog’s [2]Social Science in the Public Sphere event, Tim Newburn talks about his involvement in the [3]Reading the Riots project, which involved a collaboration with the Guardian to undertake research into the riots of August 2011 at a pace far beyond that which usually characterises academic social science. I’ve interviewed Tim about this in the past (podcasts [4]here and [5]here) and I find the project fascinating on a number of level. One thing that stood out to me in Tim’s talk, which I hadn't realised prior to my interview with him 6 months ago despite having been glued to the Guardian’s coverage, is the interesting fact that the project has not produced any traditional academic publications. While, to his credit, Tim recognises the consequence this model of publication might have for junior colleagues who need peer-reviewed publications to build research careers, it nonetheless raises an important question of how publishing of this form compares to traditional forms of scholarly communication in the literal sense of making public.

The short answer is that the project’s findings enjoyed a visibility, generated an 'impact' and sparked debate to a degree which would have been impossible for research published through traditional channels. The resources and skills which an organisation such as the Guardian is able to bring to bear on a project of this sort (and likewise the BBC with the Great British Class Survey in the second talk at the LSE event linked to above) give a purchase to public scholarship which ensures that it is genuinely ‘public’ in a way that is radically different from much of what is traditionally seen as falling into this category. Perhaps this fact explains some of the criticism that, in particular, the Great British Class Survey attracted?

Obviously a model such as Reading the Riots isn’t easily scalable but Tim raises the interesting point that organisations like the Guardian see projects of this form as part of exploring their future role within a changing media landscape. The long term changes taking place within academia in many ways parallel those which are playing themselves out within the news media and, as the Reading the Riots project illustrates, journalists and news organisation bring hugely valuable things to potential collaborations. It would be interesting to think about what such collaborations might look like beyond ‘headline’ studies such as Reading the Riots and the Great British Class Survey. Is there a middle ground between individual academics working with individual journalists and the sort of large scale collaborative projects which are discussed in the LSE’s event? It seems obvious to me that media collaboration of this sort are a hugely important part of the likely future direction of public scholarship but I’m far from clear in my own mind about what this would look like in practice.

Though whether it will count as a demonstrable impact for the REF is a question that is discussed in the second half of the podcast. What limited support I have for the concept of ‘impact’ rests on the extent to which, if at all, it recognises and incentivises public scholarship.

David Walker (2015-03-05 16:06:43)

Two observations. 1. are you eliding 'impact' and 'dissemination'. What's remarkable, in public policy terms, is how inconsequential the riots were (give or take Boris Johnson's waffling about water cannon for the Met). That makes attributing 'impact' to analysis of the events more difficult because their trace in legislation, policy and practice is faint. 2. The Guardian project in many ways belongs to 'old school journalism' of a kind that's increasingly fragile, as the economic basis of the press reshapes. Would a fully digital Gdn (or anyone else) commit time and resources to a project that would never have front-page (that word again) impact?

Sociological Imagination (2015-03-06 23:20:51)

Point completely taken with (1) - though your argument relates more to the difficulty of attributing impact rather than its existence, no? Not sure about (2) - could you expand?

This really interesting comment by Benjamin Geer on yesterday's [1]Sociology of Intellectual Faddishness post meritted reproduction in its own right:

1. Long-term academic employment is hard to obtain, but once you’re in, it’s not difficult to keep your job indefinitely without doing much more than publishing variations on the theme of your PhD topic. This is particularly the case in the US, where tenure effectively eliminates any incentive for senior academics to engage with new ideas, never mind produce new ideas of their own.

2. Academic employment and job security in the social sciences depend heavily on social capital. If you’re on good terms with a lot of people in your cohort, you can readily form mutual appreciation societies (what Bourdieu called cycles of consecration), in which A writes the preface of B’s book, B writes a positive review of C’s book, C invites A to contribute a chapter to an edited volume, and so on. Everyone involved gains prestige without having to face criticism of their work. The uses of social capital also take other, more complex forms; see the article “The academic caste system: Prestige hierarchies in PhD exchange networks” by Val Burris.

3. The high importance of social capital is a symptom of the fact that the social sciences have relatively low autonomy in Bourdieu’s sense, meaning that there's barely any consensus about which knowledge you should be required to master in order to be a social scientist, or about the criteria that should be applied in evaluating research. In fields with higher autonomy (like mathematics), your prestige depends mostly or entirely on how good your work is, in terms of objective, accepted criteria, but in social science, it’s relatively easy to convert all sorts of other capitals (like social capital) into prestige. Thus you often find that everyone thinks X is a good scholar because other prestigious people think X is a good scholar, but nobody can say exactly what it is that X has done well. Since X’s prestige doesn’t depend on any actual results, it can’t be challenged on the basis of new results; hence X doesn’t have to engage in any substantive debates about new ideas.
4. Since it’s not clear what you should have to know, a viable strategy is to get away with knowing as little as possible. This strategy favours superficial conformism (which is perhaps more what you and Max were talking about): people adopt mantras without thinking much about what they mean, as a way of displaying their good taste, i.e. signaling that they’re the right sort of person, the sort one would want to work with. Everyone who uses this strategy is complicit in pretending that these mantras refer to theoretical concepts whose validity has been conclusively demonstrated. Alienated and alienating writing (by alienated and alienating social scientists) (2013-07-24 08:00)

The problem for social scientists is that our jargon, like that of the natural scientists, is heavily biased towards nouns and noun phrases. Our big words are nearly always nouns, such as "re-ethnification", "mediatisation", "deindividuation" and all the other "isations" and "ifications" that dominate so much empirical and theoretical writing. [...] The preference for nouns is found across the social sciences, affecting the writings of both postmodernists and old-style empiricists. We can see it in the current fashion for using the definite article to transform adjectives into nouns, thereby creating a seemingly endless supply of new things to study: "the comic", "the homely", "the pastoral" and so on. What next? The grumpy, the drizzly, the pretentious? [...] by using big nouns, analysts can avoid describing people. If we assume that there is something called "nominalisation", then we need not specify what exactly people might be doing if they are said to "nominalise". In fact, statements, with active verbs and small ordinary words, generally contain much more information about actions than do the big nouns, which supposedly describe such acts. According to critical linguists, that is precisely why those in power like to use big nouns: they can transform the uncertain world of human acts into a world of necessary things 

This great [1]article by Michael Billig (HT [2]Dave Beer) makes an incisive point which echoes a powerful argument in Andrew Sayer’s [3]last book. Sayer argues that the pervasive disregard for ‘lay normativity’ [*] within social science (i.e. what matters to people and why) helps produce a vision of the social world which is alienated and alienating. Perhaps the pervasive tendency for social scientists to nominalise as part of their process of conceptualisation helps entrench this situation, as every occasion of linguistically distancing ourselves from concrete actors leaves us ever further from the ethical texture of everyday life. The result is an eviscerated view of the social world, with an apparent explanatory plausibility belying the loss of a significant part of the first person experience of being human. One of the things that most interests me is the possibility of sustaining the capacity for abstraction which brings about this state of affairs but doing so in a way which preserves lay normativity. Without the former, sociology becomes merely descriptive (in which case I’d much rather read essayists, journalists and novelists thanks) but without the latter its explanatory function is, at best, truncated.

Which to his eternal credit he acknowledges as a rather alienated way to express the idea.

CfP: Making Trans Count (2013-07-25 08:00)

Call for Submissions for Transgender Studies Quarterly 2.1: Making Transgender Count

As a relatively new social category, the very notion of a “transgender population” poses numerous intellectual, political, and technical challenges. Who gets to define what transgender is, or who is transgender? How are trans people counted—and by whom and for whom are they enumerated? Why is counting transgender members of a population seen as making that population’s government accountable to those individuals? What is at stake in “making transgender count”—and how might this process vary in different national, linguistic, or cultural contexts?

This issue of TSQ seeks to present a range of approaches to these challenges—everything from analyses that generate more effective and inclusive ways to measure and count gender identity and/or transgender persons, to critical perspectives on quantitative methodologies and the politics of what Ian Hacking has called “making up people.”

In many countries, large-scale national health surveys provide data that policy-makers rely on to monitor the health of the populations they oversee, and to make decisions about the allocation of resources to particular groups and regions—yet transgender people remain invisible in most of such data collection projects. The widespread deployment of gender as a binary category defined by the sex assigned at birth has made trans people invisible in government data collection. Without the routine and standardized collection of information about transgender populations, some advocates contend, transgender people will not “count” when government agencies make decisions about the health, safety and public welfare of the population. But even as more agencies become more open to surveying transgender populations, experts and professionals are not yet of one mind as to what constitutes “best practices” for sampling methods that will accurately capture respondents’ gender identity/expression, and the diversity of transgender communities. In still other quarters, debates rage about the ethics of counting trans people in the first place.

We invite proposals for scholarly essays that tackle transgender inclusion and/or gender identity/expression measurement and sampling methods in population studies, demography, epidemiology, and other social sciences. We also invite submissions that critically engage with the project of categorizing and counting “trans” populations.

Potential topics might include:

- best practices and strategies for transgender inclusion and sampling in quantitative research;
- critical reflections on past, current, and future data collection efforts;
- the potential effects of epidemiological research on health and other disparities in trans communities;
- who counts/gets counted and who does not: occlusions of disability, race, ethnicity, class, gender in quantitative research on trans communities;
- the tension between the contextually specific meaning of transgender identities and the generality and fixity that data collection requires of its constructs and social categories; *implications of linguistic, geographical, and cultural diversity in definitions of transgender and the limits of its applicability;
critical engagements with of the biopolitics of enumerating the population.

Please send full length article submissions by December 31, 2013 to [1]tsqjournal@gmail.com along with a brief bio including name, postal address, and any institutional affiliation. Illustrations, figures and tables should be included with the submission.

The guest editors for this issue are Jody Herman (Williams Institute, UCLA School of Law), Emilia Lombardi (Baldwin Wallace University), Sari L. Reisner (Harvard School of Public Health), Ben Singer (Vanderbilt University), and Hale Thompson (University of Illinois at Chicago). Any questions should be sent to the guest editors at [2]tsqjournal@gmail.com.

TSQ: Transgender Studies Quarterly is a new journal, edited by Paisley Currah and Susan Stryker to be published by Duke University Press. TSQ aims to be the journal of record for the interdisciplinary field of transgender studies and to promote the widest possible range of perspectives on transgender phenomena broadly defined. Every issue of TSQ will be a specially themed issue that also contains regularly recurring features such as reviews, interviews, and opinion pieces. To learn more about the journal and see calls for papers for future special issues, visit [3]http://lgbt.arizona.edu/tsq-main. For information about subscriptions, visit [4]http://www.dukeupress.edu/Catalog/ViewProduct.php?productid=45648.

The shifting language of research ‘participation’ (2013-07-26 08:00)

The relation of people like us–researchers in the social sciences–to the people we gathered data on and wrote about was beginning to worry us all. We had left behind the innocence of being happy when we used the tricks we had been taught, and continued to teach to our students, to “get access” and “gain rapport.” We rejoiced at our good fortune when people were willing to share their experiences and secrets with us, things they might have preferred the whole world not know about. We were proud of our ability to be “one of the boys” (or girls).

By the 1970s we all knew this relation was not so innocent as all that. What were the terms of this one-sided giving of information? Did we give anything back? Was the exchange as unequal as it seemed to be when we took a good look? Were we exploiting our superior educations and class positions to take advantage of innocent people? The answers weren’t obvious. Some people said that we gave, in return for data, our undivided attention and our caring acceptance of their lives, however unsavory those might seem to middle-class people who hadn’t achieved our level of “insider” understanding. Others thought that our research could lead us and others, perhaps people in positions of power who could undertake effective interventions, to an understanding that might improve the lives of the people who gave us our data, and so allow us to pay back their acceptance and even trust.

Becker’s chapter responds to Stan Cohen’s weird story of the Last Seminar in which research participants ‘invade’ the campus to take their revenge on the hubristic researchers. One of many things I found useful about Becker’s chapter is the way in which he historicises the issue Cohen explores, situating it in time and space in order to make sense of the narrative “exposing in a raw and undisguised form the tensions that might exist in these relations we talk about so easily from the comfort of the Senior Common Room”. He also offers a useful corrective to the incipient victimology that might ensue from universalising the relation depicted in Cohen’s story by recounting his own experiences of having research participants of ‘equal’ or ‘higher’ social status to himself.

What has really piqued my curiosity though is this sense of the 1970s as a time of shifting languages of research ethics and participation. From the perspective of someone who was trained in qualitative social research in the late 2000s Cohen’s story had a curiously anachronistic quality to it. Not so much that the moral of the story wasn’t comprehensible or agreeable (it was on both counts) but simply that it seemed like ethical common-sense. So what I’m interested in now is whether it’s possible to do a periodization of changes in the language of research ethics and participation.

Cuestión de Método (2013-07-30 20:07:32)

[...] la reflexion que hace Carringan sobre el texto de Howard Becker (podeis leer el post completo en: sociological imagination). Sin embargo, la cita me ha llamado especialmente la atención por cómo describe esa sensación de [...]
or orgy. At the university, an adviser had interested him in Amerindian languages. Certain esoteric rites still survived in certain tribes out West; one of his professors, an older man, suggested that he go live on a reservation, observe the rites, and discover the secret revealed by the medicine men to the initiates. When he came back, he would have his dissertation, and the university authorities would see that it was published. Murdock leaped at the suggestion. One of his ancestors had died in the frontier wars; that bygone conflict of his race was now a link. He must have foreseen the difficulties that lay ahead for him; he would have to convince the red men to accept him as one of their own. He set out upon the long adventure. He lived for more than two years on the prairie, sometimes sheltered by adobe walls and sometimes in the open. He rose before dawn, went to bed at sundown, and came to dream in a language that was not that of his fathers. He conditioned his palate to harsh flavors, he covered himself with strange clothing, he forgot his friends and the city, he came to think in a fashion that the logic of his mind rejected. During the first few months of his new education he secretly took notes; later, he tore the notes up — perhaps to avoid drawing suspicion upon himself, perhaps because he no longer needed them. After a period of time (determined upon in advance by certain practices, both spiritual and physical), the priest instructed Murdock to start remembering his dreams, and to recount them to him at daybreak each morning. The young man found that on nights of the full moon he dreamed of buffalo. He reported these recurrent dreams to his teacher; the teacher at last revealed to him the tribe's secret doctrine. One morning, without saying a word to anyone, Murdock left.

In the city, he was homesick for those first evenings on the prairie when, long ago, he had been homesick for the city. He made his way to his professor's office and told him that he knew the secret, but had resolved not to reveal it.

"Are you bound by your oath?" the professor asked.

"That's not the reason," Murdock replied. "I learned something out there that I can't express."

"The English language may not be able to communicate it," the professor suggested.

"That's not it, sir. Now that I possess the secret, I could tell it in a hundred different and even contradictory ways. I don't know how to tell you this, but the secret is beautiful, and science, our science, seems mere frivolity to me now."

After a pause he added: "And anyway, the secret is not as important as the paths that led me to it. Each person has to walk those paths himself."

The professor spoke coldly: "I will inform the committee of your decision. Are you planning to live among the Indians?"

"No," Murdock answered. "I may not even go back to the prairie. What the men of the prairie taught me is good anywhere and for any circumstances."

That was the essence of their conversation.

Fred married, divorced, and is now one of the librarians at Yale.

CfP: The Sociological Craft Project (2013-07-28 08:00)

In this new feature the Sociological Imagination invites short (2500 word max) contributions reflecting on any aspect of sociological craft. We use the term ‘craft’ in the broad sense conveyed by Richard Sennett:

Craftsmanship names an enduring, basic human impulse, the desire to do a job well for its own sake. Craftsmanship cuts a far wider swath than skilled manual labour; it serves the computer programmer, the doctor, and the artist; parenting improves when it is practiced as a skilled craft, as does citizenship.

In all these domains, craftsmanship focuses on objective standards, on the thing in itself. Social and economic conditions, however, often stand in the way of the craftsman’s discipline and commitment; schools may fail to provide the tools to do good work, and workplaces may not truly value the aspiration for quality. And though craftsmanship can reward an individual with a sense of pride in work, this reward is not simple. The craftsman often faces conflicting objective standards of excellence; the desire to do something well for its own sake can be impaired by competitive pressures, by frustration, or by obsession.

We envision a number of forms such contributions might take:

- Reflections on particular academic roles (e.g.,[1]review editor).
- Reflection on the process of writing for particular forms of publication (e.g. journals, monographs, logs)
- Reflections on the craft of research (the tools utilised, your relationship with them, the messiness of the process)
- Reflections on where you work, the devices you use, how the ambiance shapes your writing
- Reflections on undertaking research, managing time, negotiating conflicting demands.
• Reflections on routines and writing practices which are integral to your craft
• If you were brave enough to send us a picture of your workspace we’d love to include it!

However these are only examples. We’re keen not to get posts of the style “10 Tips for Writing Good Journal Articles”. We have nothing against these posts – we often feature them! But this project aims to generate a discussion of the craft of sociological work, the practices which sustain it and the emotional life and personal concern which are irrevocably bound up with it. We are particularly interested in contributions that explore the constraints that contemporary academic structures place upon the creative exercise of sociological craft and how we can, hopefully, work towards ameliorating these circumstances.

If you want to submit a contribution for the project then please e-mail it attached as word document (with any multimedia files attached separately) along with a short 2 line bio to accompany your post.

Žižek vs Chomsky: Is a pointless spat becoming a meaningful debate? (2013-07-28 09:44)

A quick round up of this spat which was entirely a creation of the internet - the opening salvos were entirely asynchronous, throwaway remarks in public talks that were plucked from obscurity by diligent web editors seeking to avoid their real work (unlike this post obviously). It began with Chomsky:

What you’re referring to is what’s called “theory.” And when I said I’m not interested in theory, what I meant is, I’m not interested in posturing—using fancy terms like polysyllables and pretending you have a theory when you have no theory whatsoever. So there’s no theory in any of this stuff, not in the sense of theory that anyone is familiar with in the sciences or any other serious field. Try to find in all of the work you mentioned some principles from which you can deduce conclusions, empirically testable propositions where it all goes beyond the level of something you can explain in five minutes to a twelve-year-old. See if you can find that when the fancy words are decoded. I can’t. So I’m not interested in that kind of posturing.

Then a related set of critical remarks began to circulate:
Then Žižek responded to Chomsky in a public talk at Birkbeck, transcription here provided by [3]EsJayBe - see their site for the full transcription and the audio itself:

What is that about, again, the academy and Chomsky and so on? Well with all deep respect that I do have for Chomsky, my first point is that Chomsky who always emphasises how one has to be empirical, accurate, not just some crazy Lacanian speculations and so on... well I don't think I know a guy who was so often empirically wrong in his descriptions in his whatever! Let’s look... I remember when he defended this demonisation of Khmer Rouge. And he wrote a couple of texts claiming: “no this is western propaganda. Khmer Rouge are not as horrible as that.” And when later he was compelled to admit that Khmer Rouge were not the nicest guys in the universe and so on, his defence was quite shocking for me. It was that “no, with the data that we had at that point, I was right. At that point we didn’t yet know enough, so... you know” but I totally reject this line of reasoning.

For example, concerning Stalinism. The point is not that you have to know, you have to photo evidence of gulag or whatever. My god you just have to listen to the public discourse of Stalinism, of Khmer Rouge, to get it that something terrifyingly pathological is going on there. For example, Khmer Rouge: even if we have no data about their prisons and so on, isn’t it in a perverse way almost fascinating to have a regime which in the first two years (’75 to ’77) behaved towards itself, treated itself, as illegal. You know the regime was nameless. It was called ‘alka’ [?] an organisation – not communist party of Cambodia – an organisation. Leaders were nameless. If you ask ‘who is my leader?’ your head was chopped off immediately and so on.

Ok, next point about Chomsky, you know the consequence of this attitude of his empirical and so on - and that’s my basic difference with him - and precisely Corey Robinson and some other people talking with him recently confirmed this to me. His idea is today that cynicism of those in power is so open that we dont need any critique of ideology, you read symptomatically between the lines,
everything is cynically openly admitted, we just have to bring out the facts of people. Like 'this company is profiting in Iraq' and so on and so on. Here I violently disagree.

Then Chomsky replies on [5]ZNet, clearly donning his figurative boxing gloves at this stage:

I’ve received a number of requests to comment on the post: “Slavoj Žižek Responds to Noam Chomsky: ‘I Don’t Know a Guy Who Was So Often Empirically Wrong’” (http://www.openculture.com/2013/07/slav-oj-zizek-responds-to-noam-chomsky.html).

I had read it, with some interest, hoping to learn something from it, and given the title, to find some errors that should be corrected – of course they exist in virtually anything that reaches print, even technical scholarly monographs, as one can see by reading reviews in the professional journals. And when I find them or am informed about them I correct them.

But not here. Žižek finds nothing, literally nothing, that is empirically wrong. That’s hardly a surprise. Anyone who claims to find empirical errors, and is minimally serious, will at the very least provide a few particles of evidence – some quotes, references, at least something. But there is nothing here – which, I’m afraid, doesn’t surprise me either. I’ve come across instances of Žižek’s concept of empirical fact and reasoned argument.

For example, in the Winter 2008 issue of the German cultural journal Lettre International, Žižek attributed to me a racist comment on Obama by Silvio Berlusconi. I ignored it. Anyone who strays from ideological orthodoxy is used to this kind of treatment. However, an editor of Harper’s magazine, Sam Stark, was interested and followed it up. In the January 2009 issue he reports the result of his investigation. Žižek said he was basing the attribution on something he had read in a Slovenian magazine. A marvelous source, if it even exists. And anyway, he continued, attributing to me a racist comment about Obama is not a criticism, because I should have made such remarks as “a fully admissible characterization in our political and ideological struggle.” I leave it others to decode. When asked about this by Slovene journalist/activist Igor Vidman, Žižek answered that he had discussed it with me over the phone and I had agreed with him:[6]http://www.vest.si/2009/01/31/zizkov-kulturni-boj/. Of course, sheer fantasy.

It’s not the only case. In fact, he provides us with a good example of his practice in these comments. According to him, I claim that “we don’t need any critique of ideology” – that is, we don’t need what I’ve devoted enormous efforts to for many years. His evidence? He heard that from some people who talked to me. Sheer fantasy again, but another indication of his concept of empirical fact and rational discussion.

Accordingly, I did not expect much.

Before Žižek [7]replies in a way which, for the most part, seems astonishingly reasonable and holds out the potential that this spat might be upgraded into a debate:

For me, on the contrary, the problem is here a very rational one: everything hinges on how we define “ideology.” If one defines and uses this term the way I do (and I am not alone here: my understanding echoes a long tradition of so-called Western Marxism), then one has to conclude that what Chomsky
is doing in his political writings is very important, I have great admiration and respect for it, but it is emphatically not critique of ideology. Let me indicate what I mean by this. [...]

My underlying thesis is here that no effective ideology simply lies: an ideology is never a simple mystification obfuscating the hidden reality of domination and exploitation; the atrocious reality obfuscated and mystified by an ideology has to register, to leave traces, in the explicit ideological text itself, in the guise of its inconsistencies, gaps, etc. The Stalinist show trials were, of course, a brutal travesty of justice concealing breath-taking brutality, but to see this, it is not necessary to know the reality behind them—the public face of the trials, the puppet-like monstrosity of public confessions, etc., made this abundantly clear. In a homologous way, one doesn’t have to know how Jews really were to guess that the Nazi accusations against them were a fake—a close look at these accusations makes it clear that we are dealing with paranoid fantasies. [...]

And he goes on and on in the same vein, repeating how he doesn’t see anything to what I’m saying, how he cannot discern in my texts any traces of rational examination of facts, how my work displays empty posturing not to be taken seriously, etc. A weird statement, measured by his professed standards of respect for empirical facts and rational argumentation: there are no citations (which, in this case, can be excused, since we are dealing with a radio interview), but also not even the vaguest mentions of any of my ideas. Did he decode any of my “fancy words” and indicate how what one gets is “something you can explain in five minutes to a twelve-year-old”? There are no political references in his first attack (and in this domain, as far as I can see, I much more often than not agree with him). I did a couple of short political books on 9/11 (Welcome to the Desert of the Real), on the war in Iraq (Iraq: the Borrowed Kettle), on the 2008 financial meltdown (First as Tragedy, then as Farce), which appear to me written in a quite accessible way and dealing with quite a lot of facts—do they also contain nothing but empty posturing? In short, is Chomsky in his thorough dismissal of my work not doing exactly what he is accusing me of: clinging to the empty posture of total rejection with no further ado?

I think one can convincingly show that the continental tradition in philosophy, although often difficult to decode, and sometimes—I am the first to admit this—defiled by fancy jargon, remains in its core a mode of thinking which has its own rationality, inclusive of respect for empirical data. And I furthermore think that, in order to grasp the difficult predicament we are in today, to get an adequate cognitive mapping of our situation, one should not shirk the resorts of the continental tradition in all its guises, from the Hegelian dialectics to the French "deconstruction." Chomsky obviously doesn't agree with me here. So what if—just another fancy idea of mine—what if Chomsky cannot find anything in my work that goes "beyond the level of something you can explain in five minutes to a twelve-year-old because" because, when he deals with continental thought, it is his mind which functions as the mind of a twelve-year-old, the mind which is unable to distinguish serious philosophical reflection from empty posturing and playing with empty words?

I wonder if the Verso editorial team have designs on making a book out of this yet. The only other winner is the academic blogosphere, with its newfound ability to mimic the internet more broadly and start fights through the force of brute connectivity.

» Paul Krugman, Niall Ferguson and the norms of public intellectualism in a digital age The Sociological Imagination (2013-10-21 08:00:22)

[...] academic blogosphere had been getting a bit boring ever since the Chomsky and Zizek spat came to an end. Fortunately, Niall Ferguson decided a couple of days ago that it was time to take [...]
and it’s certainly the most ambitious target I’ve aimed for in my many failed attempts to establish this sort of routine. I’ve been dividing the daily target between a few projects: my blog, an NVivo eBook I’m writing, my PhD and two papers. This range of options seems increasingly important, almost as a form of [2]structured procrastination, with at least one of them feeling suitable for some input each day, even if I find myself deliberately avoiding some of the others.

I’ve also noticed that my reading seems to be becoming more focused in the last week or so. This is something I often have a problem with: I’ve learnt over time to make structured choices about reading in order to feed into specific projects but, left to my own devices, I will tend to read in a scattergun fashion. My reading tends to be too wide (and consequentially rather shallow) and I’m too prone to picking up new books (and consequentially often struggle to finish books because I end up with 20+ on the go at once). There may be an element of confirmation bias in the observation but it does feel as if the structured writing habit is starting to inculcate a somewhat more structured approach to reading, without this being a conscious outcome I’m having to plan and aim for (as I had to do for my PhD reading for example).

I’m also becoming increasingly aware of how the physical act of writing does not, in itself, take much time. There’s a certain experience of immediacy and urgency in writing which has always been one of my most valued creative experiences: when an inchoate idea is at the forefront of your mind and the process of rendering and externalising it feels like one of the most natural (and important) things in the world. On such occasions, writing is fast. But these experiences have tended to be few and far between. Yet I’ve felt this a number of times in the last couple of weeks. It’s almost as if the discipline involved in setting the daily writing target ensures the space needed to be sensitive to the potential onset of these rounds of ultra-enthused writing and, with this, it becomes easier to recognise them and act on them. Is a rigid and disciplined approach to writing in general perhaps a precondition for free and creative experiences of writing on specific occasions? Obviously, it goes without saying that the results of a daily writing habit need editing. This is a given for my academic work and it’s something I’m feeling the need to do more frequently for my blogging. But thus far this daily challenge is proving to be a deeply rewarding experiment in academic life hacking and I’m really grateful to the Thesis Whisperer for writing the post which led me to try this.

Does Sociology still have a demand problem? (2013-07-30 08:00)

Mark Carrigan [1] asks, after an essay by Wolfgang Streeck, why there is so little sociology in public discourse? Streeck argues that there might be a demand problem, since although there are numerous sociologists plying their trade, we still seldom see sociology talked about (or acted upon) in public.

Mark specifically frames the question a bit differently:

“Why is sociology absent in public debates ... why do sociologists have so little confidence in their work that they talk about it only to each other, rather than to the world at large?”

I want to briefly give an anecdotal account why I think it might no longer be true that there is little demand for sociology. Also, I like to think that increasingly sociologists are taking up roles as public intellectuals.

Firstly, I am not a sociologist. Originally trained as a lawyer, and with an MA in Hypermedia (Say what?), I run a small social media agency in London called RAAK. Yet, I have been trying to learn bits and bobs of social science, and sociology in particular over time.

Why? Well, much of what has happened online in the last twenty years is of such nature that it begs proper explanation. From Wikipedia to AirNnB, from Twitter to SnapChat, humans are behaving in ways few predicted. If media is being democratised, we need to understand individuals, society and publics much better to understand media itself.

There are numerous questions to answer. Why do people share stuff? To what extent does identity matter online? How does information spread from person to person, and why and how does something go viral? What about privacy in this brave new world, and what of its flip-side, flourishing?

Much of the literature on the Internet and new media has sought to fill this gap. From the quasi-utopian writing of Jeff Jarvis, to the more nuanced work of Clay Shirky, I gobbled it up. A lot this work dabbles in social science light. Quite often one is left with more questions than answers.

It has been the far more substantial works of the likes of Manuel Castells that provided a better framework for much of my thinking. So slowly I drifted to reading and following more social science.

I am not alone in this endeavor. I have noticed over time how the discipline of social media (which encompasses a wide range of disciplines: research, marketing, product development, customer service) has veered to the social sciences looking for answers.

Brian Solis, a popular social media guru, has been popularizing the interest in sociology with blog posts like [2]Social media is about sociology and not technology. Much if his writing on the topic is simplistic and instrumental (not to mention muddled), see for example his piece in Techcrunch (arguably the world’s largest Technology news website) on how [3]Klout measures Social Capital and not Influence.

But the quest by him and much of the industry for answers in social science is very real. When Facebook first published the average number of friends on Facebook a couple of years back, it was remarkably similar to Dunbar’s number of 150, and people sat up and took notice. When sociologists explained the difference between relationships on Facebook and Twitter and their respective ability to transmit useful information based on research into the difference between strong and weak (Or bridging) ties, it rang true. When numerous sociological studies showed that people that used social media a lot were also more social offline, the public and industry felt vindicated.
And not all the whole lunge for sociology is purely instrumental without any consideration to what should be. For example – Yammer, a company (now bought by Microsoft) that provides social networking software for use inside companies and organisations, touts its platform as a way for companies to escape stifling hierarchies.

One of my own current fascinations is social network analysis. This is of course a sub discipline of sociology that has drawn heavily on both network theory and physics. Not only does it help me understand how information travels through social networks, but concepts like *preferential attachment* has helped us build better tools for surfacing the most interesting content on Twitter. How so? It has helped us grasp how networks form hierarchies that can be divorced of merit. Thus we realised simply building tools counting numbers of retweets or likes as signals often give you unsatisfactory indication as to the quality of content.

Through primarily Twitter, I have also noticed several sociologists putting their work in public of late. Here is a far from exhaustive list: Zeynep Tufekci's tweets and writing on social media and social movements; Nathan Jurgenson's Cyberology blog and Theorising the Web conference (which I attended); danah boyd, who has written extensively on youth sociality online; Gabriella Coleman, who has put herself out there as an expert on hacker culture.

I made a Twitter list of people talking about media, tech and society, and many of them are indeed sociologists. You can view it here.

Reading about writing (2013-07-31 08:00)

After writing an article and revising another (and doing admissions for my department), I’ve returned to writing the book I started in April. I’ve been trying to write in the morning and do teaching and admin in the afternoons. To help me along I’ve been reading some stuff about the processes and practices of writing. For some reason I always find it interesting and encouraging to read about other people’s writing practices (I think this must be the case for other people as well because the post I added recently about [1]making revisions to articles is already my most visited post). A place I often look for stuff about writing is Stuart Elden’s blog [2]Progressive Geographies. Stuart often includes posts on writing or links and comments on other peoples’ posts on writing – I’ve commented on one or two of these in the past, including a short post about the use of [3]presentation slides to guide writing. I’ve noticed that he has commented that his posts on writing often generate a high level of interest. For example, [4]here is a post he recently published about the number of words he writes in a day (the post also includes links to other articles and posts discussing this issue).
The consensus here and elsewhere seems to be to aim for consistency, with a target of about 500 words and a daily accumulative approach to writing. There have been one or two posts about this before on Progressive Geographies with Stuart indicating that he aims for about 500 polished words. Which I suspect means that he often writes more but then this averages out when you include days where the editing work is the focus. At the moment I've been trying to aim for about 1000 words a day, but this is unpolished as I'm leaving the editing until I have a complete draft of the book. Sometimes I manage more, although I'm sure that there is a lot of editorial work to do when I get to it. But this approach of doing some everyday, or every weekday for me, seems like a good way to work. Stuart makes some further comment here on managing the writing and scheduling it in to working patterns - I notice that there are also quite a few comments in response to this post. So far I've accumulated about 50,000 words on this book project by working like that. And it means that I know that about 20 days writing will mean I've got a complete draft. Although I've got a good deal of reading on my desk to do at the same time. I'll need to do this in order to progress the writing.

I noticed that some of the posts at this excellent site about writing, called writing on writing, mention a more sporadic approach to writing. William Outhwaite's piece makes some comment on this with reference to C Wright Mills famous notes on intellectual craftsmanship (which he notes endorsed the approach of writing everyday). The intermittency in writing is, of course, often caused by other work commitments. These types of commitments can intervene in writing, and I expect that once term starts I'll slow down a bit.

This writing on writing site includes lots of short posts from some prominent writers. There are some really nice pieces here, many of which are quite practically orientated with lots of tips. These include the ever entertaining Howard Becker, who has contributed a piece about the way that the context in which we write shapes the form of our outputs. Fans of Becker's amazing book Telling About Society won't be surprised by the open outlook to writing that he describes in this short piece. There is also a great post by Les Back. He talks about how writing should be a sensitive form of communication that can only thrive if we listen properly during the research process. He suggests that writing should be something that creates a sensory feel for the subject matter. This is something that he says can be lost by an over reliance on research equipment and apparatus. Amongst this resource of materials on writing there are various pieces about daily practices, approaches and the development of writing as a craft. I'm still working through them at the moment. I might post some more links if anything catches my eye.

Finally, I've also been flicking through the Scholarly Kitchen blog. Amongst other topics there are often posts there about writing and publishing. For example, here is a post about the role of publishers.

This post by Dave Beer was originally published on Thinking Culture.

Why sociology is necessary to understand online health behaviours (2013-08-01 08:00)

Despite being written in an era that pre-dated many of the digital technologies that have become important to society today, the implications of the sociological imagination (Mills, 1959), recognised in the simplest form here as the capacity to move from one social perspective to another, are still salient for understanding digital social phenomena. The World Wide Web has rapidly transformed the world in the 20+ years it has been in existence, though it is not just the technology that has altered how society operates, but the social context, actors and online social actions which have also shaped the technology and its use in return. Hence a sociological understanding can help us to shed light on these new and emerging online behaviours and interactions. Sociology is particularly relevant as it becomes increasingly clear that the Web is not just one entity but many – created at various points of exchange between humans and digital technologies. Norms and motives shift and adapt to the various virtual spaces, contexts and environments. Different behaviours and practices are enabled by the opportunities provided in this ‘brave new world’. In this brief article I will explore how these general characteristics of the Web manifest themselves in what is a fast growing and controversial application of this technology – namely the practice of purchasing medicine online.

Health behaviour and the Web

Health related information has been reported as one of the main reasons individuals access the Web (Eysenbach, 2001). In addition Fox (2007) referred to the 2006 Online Health Search, a US survey by the Pew Internet & American Life Project, which showed that “prescription or over-the-counter drugs” was the fifth most widely searched health topic on the Web (Fox, 2007). The most recent study conducted by the Pew Project in September 2012, found that 72% of Internet users they surveyed, say they looked online for health information within the past year. As well as providing knowledge, the Web is also a retail opportunity which allows the buying of medicinal products online. Even if obtaining medicine was not the original intention when visiting the Web, it provides the setting for advertising – including direct marketing such as pop ups. These may enable opportunist impulse buying whereby people do not realise that they are indulging in anything untoward. The issue is further complicated where the medicine is regulated and specified as prescription only. Although it is not illegal to purchase prescription only medicine rather than obtaining it from a health care professional; using a web supplier exposes the consumer to a plethora of criminal behaviour and health risks. The Web offers no guarantee on the quality and effectiveness of medicines supplied with no legal recourse available, especially if the product was obtained from an unregulated site. SPAM emails that bypass the healthcare system by advertising prescription only medicines further risks people’s health by encouraging self-diagnosis and self-medication. These also carry the risk of credit card fraud and PC viruses which could be associated with larger criminal associations and organisations.

Beck (1992) has purported that the increased propensity to conceptualise problems in terms of risk has been accompanied by shifts in both the role of the expert and the form and communication of their expert product. While the paternalism of the expert remains an important ‘definer’ (Beck 1992:29) of risks, significantly in terms of where they can be discovered and how they are best avoided, this role has supposedly undergone momentous changes. Beck alleges that expertise has both been ‘demonopolised’ (Beck, 1992:29) and ‘democratised’ (Beck, 1992:191).

In a society where risk is increasingly the justifiable basis for policy decisions, experts are relied on to both
identify the causes of risks and intervene in the generation of risks to prevent their reoccurrence. Topical risks such as speeding or the use of mobile phones whilst driving, the relative riskiness of legal versus illegal drugs, and the effects and control of smoking in public places, are increasingly conceptualised as societal risk issues by the authorities, but are also more importantly, issues which are of particular interest to the public who are perceived as both the victim at risk and the problematic cause of the risk in such instances. The Web plays in instrumental role in enabling behaviour that on the one hand empowers individuals, but on the other increases their vulnerability and exposure to risky and unauthorised practices. The Web is seemingly implementing a shift towards a more libertarian model of healthcare, with the empowered patient/consumer able to manage their health choices online.

A sociological understanding of The Web

The Web allows people to view Websites outside of the UK. It enables access to unregulated sites that have no form of governance and no authorisation to sell medicine. The likelihood is that no reference will be made to any risks the medicines may have, focusing purely on the supposed benefits instead. Personal interaction is reduced which may produce detachment and encourage disregard for the law/regulation. The consumer to some degree is removed from the proximity of the health risks and avoidance of ‘following the rules’ perhaps not carrying the same weight as when conducted in the ‘real-world’. The Web acts as a mask enabling the consumer to conceal and justify their actions. However, though the Web can provide anonymity to those who know how to exploit it, in practice many people will leave easily followable traces. These may not be self-evident to the individual though.

The advent of online pharmacies and health related information and purchasing online puts individuals in the position of a customer in the market place, able to make choices among the products marketed to them by commercial firms, rather than a patient subject to the authoritative guidance of professionals. The exercise of consumer choice and the need for the purchaser to take more responsibility to verify that the medicines available are what they claim to be is highly significant in relation to the Web. In some cases consumers are making decisions without consulting health professionals. There is conflict between the value of individuals being able to pursue their own interests and the values of efforts by the state to reduce harm, use public resources fairly and efficiently, and social solidarity.

Schneider and Sutton (1999) claim that the Web is a fertile ground for the commission of offences and behaviours difficult to detect or prosecute. The complex minefield of medicine regulation is difficult to enforce on the Web due to jurisdictional issues, and problems of concealment and anonymity. The purchasing of medicine online may be viewed as just another commodity which is digitally available. Though there is no risk of criminal sanction the consumer is still able to breach domestic regulation, suggesting that the law has yet to catch up with the Web. Any flouting of regulation may simply be part of the process in obtaining that which the Web makes so accessible. The extent to which the Web makes a difference to the structure and formation of the issue or whether it is purely replicating offline behaviour is unclear. Perhaps those who would not usually think about purchasing medicine and deviating away from obtaining it via authorised means are being subjected to the idea.

The issue of obtaining medicine using unorthodox means pre dates the Web. Previously people went abroad or conducted ‘shady’/‘underground’ deals, comparable with the obtaining of illegal drugs (Young, 1971). Such behaviour is socially unacceptable and punishable by law; however the Web omits the threat of sanction and allows denial. The risks of being caught are less though the law does not discriminate with its punishment for illegal activity. People can indulge in behaviour that they would not necessarily participate in offline, or in front of various audiences, creating a dichotomy of different behavioural presentations (Goffman, 1959) in the spaces of the Web. If a medicine that was available via prescription has been withdrawn it is no longer accessible in that country. However the Web has increased accessibility, its global reach means medicines are available in some jurisdictions and not in others; affording any person anywhere to procure them. What is legitimately available is constantly shifting and the Web does not always reflect this, allowing sales to be conducted outside authorised forms of supply.
The sociological imagination requires the ability to observe things socially and how they interact and influence each other. To fully appreciate the situation of online consumer health behaviours alternative points of view need consideration. Applying different perspectives of sociology to explore this phenomenon helps us to appreciate the wider context and acknowledge how the actions of people are far more important that the actions themselves. In providing a 'safe' opportunity to purchase medicine the Web appears to remove or bypass some of the threats and sanctions normally associated with illegal drug purchasing, though the reality is that the risks have not been reduced but are simply more clandestine. New sociological and methodological approaches must be considered in trying to understand these emerging digital behaviours.

Lisa Sugiura is a PhD student in Web Science/ Health Sciences at the University of Southampton

'The Public Value of the Social Sciences' by John Brewer (2013-08-02 08:00)

There has been much discussion about the ongoing marketisation of British academia. One of the best argued and important analyses is John Brewer’s recent book [1] The public value of the social sciences in which he critiques against the deeply flawed reductionism of the current ‘academic impact’ agenda and puts forward a much broader ‘value’ basis for the appraisal of the social sciences. The contribution of the social sciences (as well as that of the other sciences and humanities), Brewer argues, goes far deeper than their directly measurable utility, including teaching, research and public engagement. The social sciences offer us multiple ways of understanding ourselves and our societies and have a much more profound impact on society’s reproduction than the current impact assessments can measure. We fully agree with his argument which draws on the work of C. W. Mills and Michael Burawoy, for a publicly engaged and critical social science that addresses the big challenges of 21 Century societies.
John D. Brewer is Professor of Post Conflict Studies in the Institute for the Study of Conflict Transformation and Social Justice at Queen's University, Belfast.

BSA Realism Study Group Seminar: Contemporary Issues in Realist Thought- 6th Sept (2013-08-02 12:00)

BSA Realism Study Group Seminar: Contemporary Issues in Realist Thought
Friday 6 September 2013
BSA Meeting Room, London.

We are pleased to announce our speakers for the forthcoming seminar to debate contemporary issues in realist thought. Please see attached flyer for further details and abstracts.

Graham Scambler, University College London

‘Taking interdisciplinarity seriously: realism and explanations of health inequalities’

Sue Clegg, Leeds Metropolitan University
One Friday morning, on 3 August 2012, the Idle Ethnographer was piled into her parents’ car, still asleep, and driven to Turkey. It must be mentioned, to avoid confusion, that my home town is only 100 miles away from the Northern
Turkish border. It must also be mentioned that this post uncomfortably discusses national identity without being sufficiently reflexive or politically correct about it. It is merely a transcript of my travel scribbled on bits of paper in the car that day.

On the Bulgarian border, there are no notices in Turkish. On the Turkish border, there are no notices in Bulgarian or English. There is no visible toilet in the large concrete hall of the customs but there is a mosque room. Only one window serves car passengers and coach groups. We end up at the wrong window (the only one with a European sign) and by the time the officer says “Elena? Pasaport? Pecat giris? Polis pecat?” a coachload of Russian tourists are already queuing in front of the passport control. I notice at least 10 visible portraits of Ataturk and one metal facemask. I don’t know whether that is mandatory, or whether it shows genuine respect to this controversial historical figure. Or maybe defiance. I realise I know far, far too little about Turkish history, politics and culture. It somehow feels that I - and all my compatriots - ought to know more and fear less.

While waiting in the long queue, I get impatient and post a suggestion into the dusty suggestions and comments box: make two separate windows for coaches and cars, write signs in Bulgarian, English, French. Dad sniggers at my sudden civic participation spree and says that during the [1]Liberation (end of 19th Century) Bulgarian chieftains (“voevodes”) wrote letters in blood, and 50 years later Bulgarian attorneys already wrote in shit. I merely write in sweat. 9 am is already too hot. The new road into Turkey – to which we finally manage to get after 1h of waiting – is imposing in the perfection of its asphalt and its complete emptiness. Taking about Turkey is a good example of the impossibility of objective opinion. Being from BG, even after spending 6 years in the UK, I can’t testify about the exoticity of Turkey. Knowing that Europeans find turkey exotic no longer shocks me – but I can’t understand that sentiment. All my eyes tell me when I’m in Turkey are direct, irresistible comparisons to BG. I’m not the only one of my family who feels that. My father voices our inescapably nationalised point of view: “these fields used to be Bulgarian a hundred years ago. The sound of lunchtime prayer is disturbing. The ubiquity of white crescents on red flags feels unnerving”. Soon after that trip, I read an article in which a Bulgarian journalist said she always had an uncontrollable ghost of fear when she heard moslem prayer or saw a mosque. I wish I didn’t know what she meant.

The rest of this small family trip was spent avoiding the the 40°C heat and sauntering around the streets of Edirne (which in Bulgarian we call Odrin, thought we speak Russian in our family and we should, really, call it “Edirne” because that’s the name in Russian and contemporary Turkish), watching beautiful old mosques and parks, buying cheap shoes and souveniers in a cool closed bazaar, drinking delicious spring water, beer in the slightly less scorching shadows of parks, and eating huge peaches, beef tomatoes and cold watermelon. The fear I described in the previous paragraph is a strange sensation. It is there, and I wish it weren’t, but it is, even though all the people we meet or see are friendly and unthreatening. Yes, Turkish men stare at you (woman) a bit more than Bulgarian and much more than men in the UK do – yet their gazes are less intrusive than those of men in Tunis, about which my mother and I reminisce as we sit in the shade. In 1998 we visited the port of Sfax, Tunis and made the mistake of wearing white bermuda shorts while strolling around the local market with father and my then very young sister. My mother and I (then 17 years old) both got tomatoes thrown at us and our two pairs of white shorts had to be bleached to regain their white colour. The next days we both wore long summer skirts which attracted just as many gazes, but no more tomatoes. This visit to neighbouring Turkey was different, and yet it brought back the memory.

What is different for me: after spending 6 years in the UK, to my eye this north-western European Turkish city and my home Bulgaria seem much more alike than different. The differences between everyday practices, urban spaces, gestures, behaviours in the two countries are obvious, but seem slight and intricate. My family didn’t agree. People here are nice. My family did agree.

We end up talking in sign language with a few Bulgarian and Turkish words thrown in with a very friendly guy near the station. Later we will post him his portrait.

In [2]2011 the Idle Ethnographer wrote about Milan

gunes (2013-08-12 13:16:19)
I really didn’t get the point of that essay... Whilst you say Bulgaria and Turkey were administered under the same country almost a century ago, you are so shocked to see there are many similarities? Plus, are you generally holding a ‘fear’ towards foreign countries or is it special to Muslim ones? and ‘people here are nice’, can’t believe that sentence, seriously... in which parts of the world you think people are not nice? and in what way are you surprised that you had thought Edirne locals wouldn’t have been nice. Geez!

Milena Kremakova (2013-08-14 19:32:12)
Hi guhes, Thank you for reading. I’m grateful for your comment because it voices important problems, not just with the essay, but with the effects of history education on Bulgarian national identity. I was very uncomfortable writing and posting it, that’s why it waited in my folders for a whole year. It is very uncomfortable to admit that you were raised and educated so very "blind", racist, intolerant and irrational - but unfortunately this is exactly how it is and I'm trying to come to terms with it. To answer your questions: -yes, I, and many people I know, hold a general fear against one particular foreign and muslim country, i.e. Turkey. By extension, other muslim countries as well. I'm really not making this up, and I'm really not proud of it, either. -the "people are nice" phrase was deliberately simple and sarcastic, it was actually a quote from what someone from my family said during that trip. Listen to the unsaid stuff in that sentence: yes, it’s hard to believe people
in country X are just like you, if you’ve rarely had any contact with them, if you’ve spent (like my parents) all your life being immersed in tacit or open anti-X sentiments, everywhere you go, everything you read, anyone you speak to. When I went to school, in the 1980s and 1990s, we were taught about the “500 years of Turkish Yoke”. My head is filled with dates, events, and names belonging to a national liberation narrative. It was terribly, terribly biased. At some point the textbooks were rewritten to say “Ottoman presence” and then “Ottoman Rule” which is a more balanced term. The thing is, it’s not even just the fault of history classes: the whole national culture is built around the notion that the Liberation (1879) was the just culmination of a 5-century-long black and white struggle between an oppressed Bulgarian “people” and a horrible empire. (do you sense the bitter irony in what i’m saying?) The main dichotomy which is so present it’s invisible is “us” versus “them”: the nice and oppressed “us” are Bulgarian, Christian and the scary “they” are Turkish, Muslim. I don’t know what nationality you are - but you clearly aren’t Bulgarian. You saw and voiced tacit problems, taken for granted and very difficult to even see by me or other Bulgarians. You said “administered in the same country” - this is a good way of putting it - but you’d get into a row with many otherwise smart and/or educated people, in many places in my country, if you said this aloud in a conversation. This brief note (I hesitate to call it an essay) is a very tentative attempt to at least notice and admit these things, to myself. As a sociologist who does not directly deal with issues of “race”, ethnicity and nationalism, I know too little about these topics both theoretically, and in my own life. I decided to post this unedited in the end, hoping to get some reactions, because I had written it honestly - even though I do agree that it is very unsociological. If anything, it is autoethnographic. It is far more toned down than the stuff I’ve heard in interviews and the stuff I hear every day when I talk to friends and relatives “back home” in Bulgaria. This is how we are - most of us, in general. The reason why nationalism and neonazism are taking root in Eastern Europe, and in Bulgaria in particular, is that sentiments like the ones I wrote in the essay lay unreflected.

Rafael Medeiros (2013-08-27 18:11:51)
Hi Milena, I’m a Brazilian student living here in İstanbul- Turkey and i’m currently studying sociology at the University of İstanbul. I enjoyed reading your essay. I really understand a lot of that you have said in your replay to Gunes. I’ve been learning Ottoman history and as a result i know a lot about the happenings of the Liberation in Bulgaria. I’ve been to Edirne many times as i have close turkish friends that live there, also two years ago i have been to Burgas in Bulgaria. I could, such as you, see many similarities between Bulgaria and Turkey. First of all i could grasp the geographical similarities and as a second and closer grasp, i could see the similarities between the culture. I had made some Bulgarian friends over there and we talked quite a lot about Bulgaria and Turkey and just as you say while speaking i could grasp their "ghost fear". I also agree with you that this fear is probably the result of the politics that were applied after the Liberation times until today’s time. My Bulgarian friends were really surprised when i was telling them about the similarities of the food culture of Turkey and Bulgaria. I thought was surprised to them not knowing this before. I know the two countries are different in many ways but they share a long-history together and i believe that it creates bonds that a short-period of time can’t erase. I hope that one day Turkey and Bulgaria come to understand their cultural bonds and learn to understand their history in a more brotherly way. I still new to sociological thinking and also i still learning about Turkey’s history and also the history of the countries around. I don’t have the background yet to do strong statments about these countries, but i hope that with my simple english and my newly knowledge i could state my thoughts clearly to you. I really enjoyed to read something about our old Edirne : ) Thank you!

Open research and ‘self-promotion’ (2013-08-04 08:00)
I just read an interesting (though slightly depressing!) post from [1]Nick Hopwood giving useful advice to PhDs and ECRs. I’m not quibbling with his advice per se and I genuinely enjoy his blog but I took issue with this paragraph:

I had vague ideas that academics, with a few obvious exceptions, get on in their careers by doing good, solid research, teaching effectively, and making quiet contributions to institutional and disciplinary life. The quality of their ideas, discoveries, pedagogy and colleagueship would ensure that their recognition. If that was ever true (which it may not have been) it certainly isn’t now. You get, and get on in, an academic career by actively (perhaps aggressively at times) peddling your ideas, your effectiveness as a teacher,
and your value to the uni or your field. You have to push. This comes from having the vision and courage
to apply for grants when you'll probably get rejected, to aim for top journals, to try out new teaching
approaches, and to step up in working groups, push new ideas through committees, take on roles in your
disciplinary organisation. But it also comes from capitalising on those achievements when you make
them. An academic life is pretty much a constant sales pitch (see below). Here, I mean you’re selling your
work to others.

I completely see what he’s getting at. But I’d like to make a (potentially naive) argument against it. His case rests on
the suggestion that, in the contemporary academy, people won’t receive recognition through the intrinsic virtue of
their scholarship. There’s a certain plausibility about this claim. But does it hold for open scholarship? I suspect not
but I don’t wish to suggest that ‘openness’ somehow ameliorates all that is wrong with higher education. However I
do think that when the development of ideas becomes, via social media, 
[2]an open process then Nick’s argument largely ceases to be true. This could be construed cynically: perhaps social media is intrinsically self-promotive? Or
more positively: genuine openness in academic life would make it much more likely that people receive recognition
in virtue of “the quality of their ideas, discoveries, pedagogy and colleagueship”. Thoughts on this would be much
appreciated, as I’m not entirely sure whether I’m convinced by my own argument. I guess the intuition underlying it
is that ‘doing work in the open’ cannot be equated to self-promotion even if, in practice, the former leads to the latter.

The lessons of music culture for scholarly communication (2013-08-05 08:00)

Dave Beer makes some interesting points in [1]this short article which frames current debates about open access
in terms of trends within music culture, which have been driven by broadly similar structural processes and have
been playing themselves out for much longer. Some people argue that rendering academic publishing more ‘open’
could prove hugely problematic, as unrestricted access to the means of ‘making public’ could lead to an even more
confusing mass of literature than exists at present:

Kirby points out that the ‘footprint’ of academic publishing has grown ‘exponentially' since the 1960s. His point appears to be that even in the current system we are already faced with an unwieldy mass of journals and journal articles. This, as the statistics indicate, already represents an unfathomable amount
of published resource. Anecdotally we can probably reflect here on how hard it is to keep up with the
articles published in our own specialist areas let alone across entire disciplines and cognate disciplines. The point, it would seem, is that this situation could very well get even worse if we adopt an unlimited open model of publishing. The implicit observation is that academic publishers limit and classify the
output of academics and thus filter and order the content. Kirby’s suggestion is that with open access we
will be opening the floodgates whilst also losing some of these ordering mechanisms. As such we might
well end up, [2]Kirby (2012, p. 259) claims, with even more material and with ’no obvious means to make
any sense of it'.

There’s a certain plausibility to this argument though I think it, as well as Dave’s response, ignores the significance

1861
of network filtering (as happens through social media) and correspondingly overestimates the significance of bureauocratic filtering (as happens through publishing corporations). Journals are becoming less important to discovery and perhaps less important as cyphers of quality, at least in terms of the reading decisions individuals make (clearly this is untrue in terms of institutional use of prestige as a cypher for quality and associated decisions about the distribution of scarce resources). Nonetheless, it’s unrealistic to imagine that a socially networked academia could, as an unintended emergent effect of sustained online communication, “limit and classify the output of academics and thus filter and order the content”. Which is why the mechanisms being deployed within the music industry to filter content and aid discoverability are potentially so relevant:

Against this backdrop of cultural cacophony, music cultures have found ways to organise content so that it might find an audience. The broadcast model, despite the recent changes, remains relatively powerful in music. And so we still have large organisations shaping consumption at the top end of the market through TV shows like The X Factor. Amongst the chaos in music we also have systems that enable people to locate new music that they might like to listen to. Here predictive analytics are increasingly beginning to rule. Music fans are often told what music they are likely to want to listen to by machines. Software applications built in to iTunes, Last.fm and the like are predictive of tastes. These predictive systems provide a means for managing the chaos as the music automatically ‘finds’ its audience. This is an era in which, as Scott [3]Lash (2006) has put it, the data ‘find us’. The practices of tagging music with metadata and the accumulation of personal profiles combine to enable this form of ‘knowing capitalism’ ([4]Thrift, 2005) to operate. If this were to happen in academic research then one of the solutions to the intellectual din of open access might be apps that enable research articles to ‘find’ their desired audiences. This app might well predict what type of thing you might want to read and recommend it to you. An early version of this type of recommendation system, although based just on links with individual articles rather than one’s comprehensive browsing history, is provided by Elsevier’s ScienceDirect platform. It sounds nice and convenient, but as with music we are forced to question the underlying algorithmic infrastructures that will then be so powerful in shaping the formation of knowledge ([5]Beer, 2009; [6]Hayles, 2006). These algorithms will shape the knowledge we encounter and will in turn then impact upon our ideas.

I was quite taken recently with comments Chomsky [1] made about Lacan. I originally came to Lacan through Žižek, as the intriguing way in which Slavoj deftly weaved Lacanian ideas into discussions of film piqued my curiosity. So I bought Žižek’s book about Lacan. Five years on I cannot for the life of me remember anything about this book – or find it on my shelves – but it must have been reasonably interesting, as it then prompted me to go and buy the Œcrits. A few hours of engaging with this ungainly tome and my nascent enthusiasm for Lacan had been quashed. I continued to be vaguely interested in Lacan’s ideas but it’s unlikely, though not impossible, that I’ll ever bother to put the effort in to decipher Œcrits. Particularly now that I’ve read a short book I stumbled across on Friday. *My Teaching* collects three lectures given by Lacan to ‘non-specialist’ audiences. Having now encountered Lacan in plain-speaking mode, what allure he possessed in my mind has pretty much completely deserted him. Nonetheless, a few points stood out, not least of all this:

> It is primarily for that reason, I suppose, that, if we approach them from a different angle, we can agree to consider these Œcrits unreadable; people at least pretend to read them, or to have read them. Not, naturally, the people who supposedly do that for a living, or in other words the critics. Reading them would force them to prove their worth by writing something that might at least have something to do with what I am advancing, but at that point they become suspicious. As you may have noticed, this book has not had many reviews. Probably because it is very thick, difficult to read, obscure. It is not designed for everyday consumption at all. You might say to me that that remark might suggest I’m making excuses. It might mean that I’m saying I should have produced a book for everyday consumption, or even that I’m going to. Yes, it is possible. I might try to. But I am not used to that. And it is by no means certain that it would be a success. Perhaps it would be better if I did not try to force my talent. And I do not find it particularly desirable in itself, because what I teach will indeed eventually become common currency. There will be people who will get down to it, who will put it about. That is obviously not quite the same thing, and it will be a bit distorted. They’ll try to introduce it into the hubbub. They will do all they can to reposition it in relation to a certain number of those very solid convictions that suit everyone in this society, as in any society.

- Jacques Lacan, My Teaching, Pg 62

I found this a remarkably strange extract. Perhaps also an extremely revealing one. Lacan complains that critics do not read or review his writing. He emphatically suggests that this is a failing on their part, reflecting an unwillingness to engage with what he is actually saying. Yet he immediately acknowledges that the book is "difficult to read" and "obscure". There is a bizarre dichotomy underpinning this: books for "everyday consumption" vs books that are "very thick, difficult to read, obscure". In doing so he excludes the possibility that his ideas can be expressed *clearly* without *simplification* (with the latter presumably necessary to produce a book for "everyday consumption"). That this dichotomy seems axiomatic for him points to the esoteric nature of his work (or his ‘doctrine’ as he later refers to it) and perhaps helps explain the influence he sustained over his adherents. On such a view, the simplification necessary for "everyday consumption" should surely be anathema and yet he considers precisely this but worries that "it would not be a success" (jarring with the self-confident esotericism of a man who can implicitly see it as a point of pride that his book is "very thick, difficult to read, obscure"). Not to worry though, his work will be popularised throughout the land nonetheless (it will become "common currency" no less) though, unfortunately, it will inevitably get fucked up in the process. So probably best to stick to books that are "very thick, difficult to read, obscure".

I guess there are two points I’m trying to make it. One is the excluded middle in Lacan’s assumption about
the nature of writing i.e. that work is either esoteric and obscure or popularised and simplistic. This excludes the possibility of writing that is clear without being simplistic. This assumption is far from unique to Lacan and this frustrating esotericism pervades continental philosophy. Suggesting this does not entail the view that writing that is clear without being simplistic can therefore be understood by anyone. Clearly, it cannot and that’s rather the point - the notion that writing is either for ‘us’ and is obscure or for ‘them’ and thus simplified really annoys me. My other point is how insecure Lacan seems in this extract, with its heady mixture of frustration, grandeur and anxiety. It leaves me feeling that Chomsky and Wright Mills are both onto something in their suggestion that intellectual insecurity drives theoretical obscurantism. If one is self-confident about one’s ideas then surely the most natural thing to do would be to communicate them clearly...!?

The craft of giving (bad) presentations (2013-08-07 08:00)

This presentation by Nick Hopwood seems to have circulated quite widely this morning. It’s a satirical presentation attached to [1]this post, visually illustrating all the presentational mistakes he observes in the attached article. It makes a lot of useful points in a very effective way, though given Nick is presumably vaguely aiming this at PhDs and ECRs, it could perhaps have been framed a little more sympathetically given the anxieties which are often attached to presenting your work.

1864
What I thought was a more substantive omission was the lack of any reflection on presenting without powerpoint. I don't like slides. I never have. I struggle to synchronise myself with them, I'm bad at designing them and they completely preclude any extemporaneity on my part. I started to experiment with not using slides after reading a strange and thought-provoking plea for improvisation in academic life by Steve Fuller in [3]this book. However I've recently started to feel less confident about not using slides, as I've become aware of quite how dramatically the quality of my resulting presentation varies. If I'm in the right mood for it then it goes brilliantly and the notes I have with me are something I use to remind myself of a vague structure (points I want to make and in what order) rather than my 'content' as such. But if I'm not then I struggle to get into 'flow' (i.e. lose myself in the process) and sometimes end up coming awfully close to just reading the bullet point notes I have on my iPad, which is the worst of both worlds really.

I want to persist without using slides unless there is a specific reason for me to actually use them. When it goes well I really enjoy presenting in this way to an extent I simply don’t if I have powerpoint slides on the wall. But I’m going to try and think more creatively about how to use slides as visual aides to accompany a presentation rather than display my argument. I saw Les Back do this really effectively earlier in the week, using images on slides to set the scene while nonetheless sustaining a genuinely conversational style of precisely the sort I aspire to - public speaking as a peculiarly asymmetric form of dialogue rather than monologuing at the audience: a strange style of conversation where the people you are talking to are nice enough to give you 20 mins or more for you to make your point. It’s an extension of those really wonderful kinds of discussions & debates where each is genuinely listening to the other and giving them time to articulate themselves, rather than simply waiting for the other to finish speaking. However I’m a bit sceptical that I can learn to synchronise well enough to make this work for me and suspect that the process of matching background images to particular aspects of my talk will cause me to over-think it and preclude the kind of ‘flow’ without which I struggle to relax when public speaking. It can’t hurt to try though.

Incidentally Steve Fuller offered some great advice about speaking in the blog post linked to below. One thing I particularly liked was his suggestion that you need to “integrate your academic message with your normal mode of being”. I’m not sure how to actively cultivate this but when I think back on talks I’ve done which have gone really well, this seems like a really apt description of what the experience felt like at the time.

If the audience is to get any value-added from an academic talk, then the academic should speak not read the talk. Reading the talk, at best, is good karaoke. To me it always suggests that the academic hasn’t mastered his/her material sufficiently to navigate without training wheels. Ditto for powerpoint presentations, unless one really needs to point to something for added epistemic power. A good academic talk should be more like a jazz improvisation – i.e. the speaker provides some novel riffs on themes familiar from his/her texts that allow the audience to join in, sometimes contributing some novelty of their own.

We live in economically stretched times. Why invite famous drones, whose appreciation you could more cheaply acknowledge by buying their books or citing their articles? Anyone who is in charge of a speaker schedule – be it a seminar series or international conference – should always bear in mind that, in the first instance, it is the speaker – not you – who most obviously benefits from an invitation. It is not unreasonable to request something more adventurous than boilerplate from the speaker. You might even – God forbid! – ask them to address a topic somewhat outside their comfort zone. (Youtube is beginning to provide a resource to make informed judgements about who you should (not) invite.)

The increasing specialisation of academic life is way too often used to condone a multitude of sins
that hover around the concept of ‘competence’. I never ceased to be amazed how often academics are willing to speak to only a rather narrow sense of ‘what they have already prepared’, or how easily flummoxed they get when they’re told they have 20 instead of 30 (or 10 instead of 20) minutes to present. After all, we’re supposed to be in the business of conveying ideas not displaying powers of recitation.

Encore un article effectivement plaisant

Sociologists and anthropologists reflect on the craft of writing (2013-08-08 08:00)

This [1]wonderful project undertaken by the Department of Anthropology at Durham University has solicited short reflections on writing from an intriguing selection of authors from across the social sciences:

We have written to a number of scholars who have made a significant contribution to the social science literature and asked them to write a short piece (500 to 1,500 words) offering their personal reflections on the process of writing. In these pieces, scholars from a variety of social science disciplines share their thoughts, feelings, pearls of wisdom, anecdotes, theoretical musings and much else likely to give insight
and inspiration to those in the later stages of doctoral writing.

We have had a good response and been able to assemble a series of thought provoking pieces. We have a list of scholars lined up to provide their insights into writing but why not let us know who you would like to see produce a piece by emailing us.

This is very much the sort of idea I had in mind with the [2]Sociological Craft Project, though I guess I hope this will be simultaneously broader (in format and topic) but also narrower (restricted to sociology). Thus far I’ve only worked my way through a few of these short pieces and I’m writing this post in part as a place holder to remind me to come back this material. I’ve thought for some time that projects like this need to be encouraged and could be an important part of postgraduate training. Unfortunately, it is the sort of topic which can too frequently be left homeless within the traditional landscape of scholarly communication. It’s one of many reasons why I find an increasing turn towards academic blogging so exciting, as even those who don’t set out to focus on topics of ‘craft’ invariably shine a light on these ‘backstage’ aspects of academic practice which are usually obscured from view.

Noam Chomsky Calls Postmodern Critiques of Science Over-Inflated “Polysyllabic Truisms” (2013-08-10 08:00)

[youtube http://www.youtube.com/watch?v=OzrHwDOITt8?feature=player_embedded]

A couple of weeks ago Open Culture posted a great video featuring an [1]interview with Chomsky being rather scathing about Žižek and Lacan. Now they’ve posted another one where Chomsky discusses the political implications of post-structuralist thought in equally scathing fashion. I was amused by the abuse that was directed at the @soc_imagination account after tweeting the link to the last video ("reactionary", “anti-intellectual”, “scientistic”) and look forward to seeing what reaction this video provokes. His suggestion that disciplinary insecurity drives the impulse towards high theory reminded me of a similar claim made by C Wright Mills about grand theory in sociology:
Mills’ position here is an extension of his earlier attack on Parsons and Lazarsfeld, and is just as fierce in tone. He observes that ‘a turgid and polysyllabic prose does seem to prevail in the social sciences’ (Mills, 1959:239), and adds that this style of writing has nothing to do with the complexity of the subject matter. Mills explains the prevalence of this style, instead, in terms of a quest for status. He declares: ‘Desire for status is one reason why academic men slip so readily into unintelligibility. And that, in turn, is one reason why they do not have the status they desire’ (Mills, 1959:240). This thirst for status is said to be driven by an underlying desire for the sociologist to achieve recognition as a ‘scientist’; something, he argues, that led to sociology written in clear and accessible prose (including, presumably, his own work) to be dismissed by many as mere journalism.

‘Diagnostic overshadowing’: Why do people with mental illness get worse medical care? (2013-08-12 08:00)

A depressing but important [1]article by Juliann Garey appeared in the New York Times recently on the subject of "[2]diagnostic overshadowing". It discusses the findings from several new studies which reveal that people who have been diagnosed with mental illnesses consistently receive worse medical treatment than the rest of the patients. The problem is even worse with people, the more serious their mental illness is. As a result, many people with a serious mental illness don't avoid going to the doctor even when they need it. While the avoidance of institutionalised medical care is nothing new, as sociologists of health know well, this problem is particularly worrying because:

That is a problem, because if you are given one of these diagnoses you probably also suffer from
one or more chronic physical conditions: though no one quite knows why, migraines,[6] irritable bowel syndrome and [7] mitral valve prolapse often go hand in hand with bipolar disorder.

Less mysterious is the weight gain associated with most of the drugs used to treat bipolar disorder and schizophrenia, which can easily snowball into [8] diabetes, [9] high blood pressure, high [10] cholesterol and cardiovascular disease. The drugs can also sedate you into a state of zombiedom, which can make going to the gym — or even getting off your couch — virtually impossible."

[12] Juliann Garey’s other work is worth a look, too. She co-edits “Voices of Bipolar Disorder: The Healing Companion” and her novel "Too bright to hear, too loud to see" deals with issues of mental illness.

Soc 710: Social Theory Through Complaining (2013-08-14 08:00)

Response to comment on the post "Cite-seeing in Edirne" (2013-08-14 19:28)

This is my response to gunes’ comment on the post [1]"Cite-seeing in Edirne" - I'm publishing it as a separate post in the hope that it will provoke further discussion. It’s an important topic.
Hi gunes,

Thank you for reading. I’m grateful for your comment because it voices important problems, not just with the essay, but with the effects of history education on Bulgarian national identity. I was very uncomfortable writing and posting it, that’s why it waited in my folders for a whole year. It is very uncomfortable to admit that you were raised and educated so very “blind”, racist, intolerant and irrational - but unfortunately this is exactly how it is and I’m trying to come to terms with it. To answer your questions:

-yes, I, and many people I know, hold a general fear against one particular foreign and muslim country, i.e. Turkey. By extension, other muslim countries as well. I’m really not making this up, and I’m really not proud of it, either.

-the “people are nice” phrase was deliberately simple and sarcastic, it was actually a quote from what someone from my family said during that trip. Listen to the unsaid stuff in that sentence: yes, it’s hard to believe people in country X are just like you, if you’ve rarely had any contact with them, if you’ve spent (like my parents) all your life being immersed in tacit or open anti-X sentiments, everywhere you go, everything you read, anyone you speak to.

When I went to school, in the 1980s and 1990s, we were taught about the “500 years of Turkish Yoke”. My head is filled with dates, events, and names belonging to a national liberation narrative. It was terribly, terribly biased. At some point the textbooks were rewritten to say “Ottoman presence” and then “Ottoman Rule” which is a more balanced term. The thing is, it’s not even just the fault of history classes: the whole national culture is built around the notion that the Liberation (1879) was the just culmination of a 5-century-long black and white struggle between an oppressed Bulgarian “people” and a horrible empire. (do you sense the bitter irony in what i’m saying?)

The main dichotomy which is so present it’s invisible is “us” versus “them”: the nice and oppressed “us” are Bulgarian, Christian and the scary “they” are Turkish, Muslim.

I don’t know what nationality you are - but you clearly aren’t Bulgarian. You saw and voiced tacit problems, taken for granted and very difficult to even see by me or other Bulgarians. You said “administered in the same country” - this is a good way of putting it - but you’d get into a row with many otherwise smart and/or educated people, in many places in my country, if you said this aloud in a conversation. This brief note (I hesitate to call it an essay) is a very tentative attempt to at least notice and admit these things, to myself. As a sociologist who does not directly deal with issues of "race", ethnicity and nationalism, I know too little about these topics both theoretically, and in my own life. I decided to post this unedited in the end, hoping to get some reactions, because I had written it honestly - even though I do agree that it is very unsociological. If anything, it is autoethnographic. It is far more toned down than the stuff I’ve heard in interviews and the stuff I hear every day when I talk to friends and relatives “back home” in Bulgaria. This is how we are - most of us, in general. The reason why nationalism and neonazism are taking root in Eastern Europe, and in Bulgaria in particular, is that sentiments like the ones I wrote in the essay lay unreflected.

**Visualising the arteries of the city (2013-08-15 11:48)**

One thing I miss about living in a big city is the strange comfort I used to be able to take in the anonymity of the crowd. Though I couldn’t deal with it on a daily basis anymore, there’s still something I find oddly enjoyable about participating in the mass circulation of people which helps constitute the vitality of any city. This feeling came back to me vividly this week when I came across this map on Atlantic Cities which visually maps the NYC subway stems onto its geographical landscape:

[1]-http://www.youtube.com/embed/JAdl_XdFja8?feature=player_detailpage

Aerial photograph courtesy of [2]Dennis Dimick/Flickr. HT Atlantic Cities

There’s an interesting installation at the London transport museum which draws out this interconnectedness of the
city even further, as can be seen in this (low quality) video:

Connections combines striking 3D design, 55,000 model buildings, projection and transport data in what is the UK’s most fascinating and possibly its largest data display.

It shows the scale of London’s transport infrastructure and the interrelationships between travel above and below ground, by projecting travel data onto a 1:3500 scale relief model of London; the circular central area covers about 16 kilometres from Kensington to Greenwich Peninsular.

Visitors can walk behind the relief model to see the geographic relationship of the Underground to the roads above and look through periscopes at the views from London landmarks.

Proposal: Quantified Self Research Network (2013-08-16 08:00)

This post is a very tentative first step towards something which I hope others would share my enthusiasm for. I first encountered Quantified Self via Caspar Addyman who I worked with on [1]Your Brain on Drugs. I had to drop out of the project before we finished the [2]Boozerlyzer but it was great to see Caspar subsequently presenting this work at Quantified Self. This led me to read more about both Quantified Self and quantified self, distinguishing the two, as Whitney Erin Boesel convincingly argues we should:

As I so often remind people, there’s a lot more to self-tracking than just Quantified Self; these days, there’s a lot more to “quantified self” (lowercase) than just Quantified Self (title case), too[3][i]. One thing that seems to get lost in all this is that, while Quantified Self may be at the forefront of some new methods of self-tracking, it did not initiate the growing popular interest in self-tracking; rather, Quantified Self came to exist [4]because people were already self-tracking, and some of those people were interested in discussing their self-tracking experiences with others. While Quantified Self does undoubtedly help spread interest in self-tracking (just as increasing interest in self-tracking helps drive the growth of Quantified Self), I think the group’s more significant cultural impact has been to make the very concept of self-tracking more visible—and in so doing, to make tracking-in-general more visible. It is this last function, of making more visible a particularly disconcerting thing that usually fades into the background (e.g. being tracked by others), that I think is at the heart of some people’s deep discomfort when I say “Quantified Self” out loud.

Yet, in losing track of the distinctions between Quantified Self (title case) and “quantified self,” or between Quantified Self and self-tracking generally, we also lose track of what I increasingly believe is most noteworthy about Quantified Self: its reflexivity. “QSers” don’t just self-track; they also interrogate the experiences, methods, and meanings of their self-tracking practices, and of self-tracking practices generally. Over the last two years, I’ve watched reflexive engagement with self-tracking become an increasingly important part of Quantified Self culture (which is something I find very exciting). In fact, I argue that Quantified Self’s most central[5]object of concern has slowly shifted from the tools people use to track, to the data those tools and other self-tracking practices generate, to self-tracking practices as meaningful ends onto themselves, to developing ”[6]reflective capacities” not just through self-tracking practices, but in regard to self-tracking practices. Whether or not one sees Quantified Self as a harbinger of Data Doom, the group is also working to ask questions and to develop practices that could help to resist the very doom that the words “quantified self” sometimes seem to signify.

http://thesocietypages.org/cyborgology/2013/05/22/what-is-the-quantified-self-now/

Since then it’s come to occupy my thinking in a number of ways, as I’ve become increasingly preoccupied by my own self-tracking while also being frustrated and fascinated by the way it’s covered in the media. There are a few particular ways in which this interests me:

1. The thorough engagement with questions of [7]philosophical anthropology which still to be far less central than the subject matter would dictate

2. How particular answers to these questions work, implicitly or otherwise, to animate the framing of self-tracking and debates surrounding it (particularly in the media)

3. The emergence of Quantified Self as an undeniable movement of some sort
4. How the hyper-reflexivity identified by Whitney Erin Boesel should be understood sociologically (this is where my PhD leads directly into this research topic)

5. The political economy of self-tracking and the ethical, theoretical, legislative and political issues it raises

6. How to square the meta-theoretical circle between seeing this as a disciplinary technology and an emancipatory tool for self disciplining.

7. The continuities and discontinuities between digital self-tracking and older technologies of the self

I hasten to add that these are just my interests and I'm sure others would disagree with my framing and/or suggest further topics. In a really insightful article, which is worth reading in full, Deborah Lupton offers an overview of the rise of this self-tracking technology:

The advent of digital technologies able to assist in the collecting, measuring, computation and display of these data has been vitally important in promoting the cause of the self-tracking movement. While people have been able to monitor and measure aspects of their bodies and selves using non-digital technologies for centuries, mobile digital devices connected to the internet have facilitated the ever more detailed measurement and monitoring of the body and everyday life in real time and the analysis, presentation and sharing of these data.

These technologies include not only digital cameras, smartphones and tablet computers, but also wearable wristbands, headbands or patches with digital technologies embedded in their fabric able to measure bodily functions or movement and upload data wirelessly. Tiny sensors can also be incorporated into everyday items such as toothbrushes, pyjamas or watering cans to measure such activities. Blood pressure cuffs and body weight scales can be purchased that connect wirelessly to apps. Global positioning devices and accelerometers in mobile devices provide spatial location and quantify movement. Apps that regularly ask users to document their mood can monitor affective states. There seems hardly a limit to the ways in which one's daily activities can be monitored, measured and quantified. Some committed self-trackers even regularly send stool and blood samples for analysis and use commercially available genetic tests as part of their efforts to construct a detailed map of their bodily functions and wellbeing.

What I'm proposing is an informal and interdisciplinary research network to focus on Quantified Self, quantified self and broader issues of self-tracking (and gamification). An initial event could take the form of a papers session later this year, allowing those who are currently or are seeking to do work in this area to present to a room full of people with similar interests. If this idea is something you're interested in then please get in touch. I'm open to any and all suggestions about how to proceed.

Call for research participants: being single in Britain today (2013-08-17 08:00)

Forwarded call for participants. Please forward on to your networks and contact Eleanor (details below) for further information.

Call for research participants: Single spaces: Single-life in Contemporary Britain[1]www.singlespaces.co.uk

We are conducting a large-scale, British Academy-funded research project into single-life in contemporary Britain. The research will provide an overview of what it's like to be single in Britain today and the findings will add an important dimension to understanding the changing patterns of intimate life in contemporary society. The research has two stages:

1. The first stage is an online questionnaire: this is open to everyone who is single, lives in Britain, and is aged 18 or over. The questionnaire should take no more than 10 minutes to complete.
2. The second stage consists of individual interviews with a sample of single people: this is currently only open to single people who are 35 or over and who do not have children. At least half of these interviews will be conducted with people who identify as LGBTQIA (as minoritized sexualities are still frequently under-represented in social science research)

Please note, we don’t want to rigidly define what the label 'single' means, as being single means different things to different people, so we leave it up to you to define this term.

Please visit the website above for further information about the project, and for links to help you share the project via Twitter and Facebook.

Many thanks,
Eleanor

BSA Realism Study Group Seminar: Contemporary Issues in Realist Thought- 6th Sept (2013-08-18 08:00)

BSA Meeting Room, London.

We are pleased to announce our speakers for the forthcoming seminar to debate contemporary issues in realist thought. Please see attached flyer for further details and abstracts.

Graham Scambler, University College London

‘Taking interdisciplinarity seriously: realism and explanations of health inequalities’

Sue Clegg, Leeds Metropolitan University

‘Realism as a theoretical resource’

Mark Cresswell, Durham University

‘PEDAGOGY of the PRIVILEGED: Elite Universities and Dialectical Contradictions in the UK’

Dave Elder-Vass, University of Loughborough

‘Disassembling actor-network theory’

Bob Carter, University of Leicester

‘Realism and the Posthuman’

To book, please visit:

For more information on the BSA realist study group please visit:
[2]http://criticalrealism.org/Hope to see you there
Tom Brock, Mark Carrigan and Michelle Farr

Books, social media and ‘thinking-through-writing’ (2013-08-19 08:00)

For the last couple of weeks I’ve been rereading Margaret Archer’s The Reflexive Imperative and I’ve been blogging about the book[1] on a loosely chapter by chapter basis. I’ve now written eight of these instalments and have a couple more planned before I finish. I’ve gone back to the book for a number of reasons. I’m at the stage of writing about my data at present and, given that I both use Archer’s approach and conducted an extremely similar longitudinal qualitative study of undergraduate students, it seemed likely to be useful in my attempts to get a grip on my data. I also realised from a conversation with her that I hadn’t grasped one of the key points of the book on what was not exactly a thorough reading the first time round a couple of years ago. I’d seen the renewed focus on relationality as an exercise in ‘fleshing out’ the social and cultural circumstances confronted by reflexive individuals rather than, as is the case, it being an important development in understanding how the practice of reflexivity itself emerges. So given that my PhD purports to offer a realist (or ‘Archerian’ which was a label I’d never encountered until it was applied to me this week) framework for biographical research, using Archer’s morphogenetic approach to explain observable biographical patterns without falling into either the objectivist or subjectivist traps which plague biographical research, it was pretty important that I got my head around a major conceptual development in her work, even if I was then to find myself in disagreement with it.

I write all this by way of context because in my developing understanding of [2]’craft’ from a sociological perspective, it’s important that reflections upon a certain practice (e.g. ‘blogging about books’) aren’t abstracted from the who, how, when, why (etc) of the object being reflected upon. So if I’m going to reflect meaningfully on ‘blogging about books’ it matters how and why I did it. In this case two immediate reasons stand out as to why I blogged about this book: (1) I hoped it would be helpful for my PhD (2) I thought it was important, given my intellectual interests, to ensure I really understood this book. As I mentioned, I’d read it before and, as such, it’s difficult to disentangle the effects of ‘blogging about a book’ from ‘rereading a book two years later’. But I’m not sure how much that matters to the point I want to get across.

So what process has blogging about books replaced? To answer this question I only need to look towards the scrawled marginalia, perpetual underlines and promiscuous highlighting which are the legacy of my first reading of this book. They are for the most post completely and utterly incomprehensible to me. Furthermore the correlation between their span (there are very few unmarked pages left in my copy of the book) and the extent to which there were some fairly major points from the book which I didn’t grasp on first read invites obvious questions about how well this method of note taking works. I’ve been realising recently that I’m someone who thinks through writing. I rarely, if ever, know the ‘feel of an idea’ until I’ve tried to articulate it in my own words. Obviously I react to ideas that I’ve not written about but it can often be expressive (“ohhh shiny new concepts”) or entirely relational, predicated on my understanding of how the ideas I’m encountering sit in relation to other ideas with which I’m already properly familiar.
I think this is why I find blogging so helpful. It forces me to think-through-writing in a way which I just can’t replicate unless I know people will be reading what I write. If I write notes by hand they tend to be incomprehensible and pretty useless if and when I attempt to come back to them. If I write notes in a document on my computer that’s purely for my own use then my engagement tends to be flat. I persistently fail to go into it in enough depth to make the whole exercise worthwhile. It sometimes works if I have memos within NVivo or within a Scrivener project but I think in such cases the immediately practical context makes this form of writing a slightly different exercise. Jon Rainford wrote a nice post about blogging and writing a while ago,

In order to be able to write a coherent blog, I need to have read, understood, found a way to succinctly summarise and decided how the ideas in the work sit with my own. Writing this blog has helped me do that in a more concrete way and has helped me explore better not only the issues that I have been blogging about but my understanding of wider issues within Sociology. If you are reading this, you are probably someone who already knew this, certainly the part that writing was key to better understanding concepts and solidifying thinking. What a blog does more than this, is force me to consider if my arguments are strong enough to put out in public, for writing an idea on a pad and publishing it into the blogosphere are two quite disparate things.

This time I simply used index tabs to mark a paragraph which I might need to come back to for purposes of a blog post. The themes for the posts emerged pretty naturally and, now I’ve reread the book, I think it’s disaggregated in my own mind in terms of these subjectively meaningful themes. I paid particular attention to any concept in the book I felt unsure about: reading through, looking at past books and (re)articulating until I’d expressed it in my own language and felt confident that I understood it. I used quotes from the book when they seemed particularly relevant but did so in a way which left them contextualised within my own explanatory narrative. Now this is all indexed on my blog, easily searchable and ready for me to come back to whenever I need it for reference. I’m definitely going to do this again for other books but the amount of time involved means I’ll be very selective about which books I live-blog my way through in this way. But this in itself seems advantageous. The fact I’m confident this quite onerous approach will leave me understanding (pretty much) everything a book has to say raises an obvious question: which books do I care about enough to go to this much effort in pursuit of that outcome?

1. http://markcarrigan.net/tag/the-reflexive-imperative/

Simon Smith (2013-08-21 14:29:52)
>> I rarely, if ever, know the ‘feel of an idea’ until I’ve tried to articulate it in my own words. I’m sure this is quite a common feeling. It’s certainly one that I can relate to personally. But I’ve never felt the need to publish. My most valuable books and articles all have copious notes scrawled in the margins (or, more commonly these days, in the comments boxes on my iPad reader) and I often return to them. But actually I’m sometimes slightly shy of lending those books or forwarding those papers to colleagues for fear of how they might view my sometimes very personal (even cryptic) interpretations. And conversely, if I knew I’d be sharing them with a public, I fear it would constrain my writing at a stage in the thinking process when I need to let my writing be as unconstrained as possible. >> I’m confident this quite onerous approach will leave me understanding (pretty much) everything a book has to say. The way you’ve phrased this leads me to wonder whether the value of blogging

1882
comes in at a later stage in your thinking than you suspect. Perhaps it’s important that you blogged about the book on a second reading? Perhaps the first reading, and your now incomprehensible margin notes, had a different, more developmental significance similar to the process I’ve described above? Does blogging help you achieve a sort of consolidation or summing up of the lessons you need or want to take from a book, but which might be too closed, too polished, for the relationship we often have with a text on a first reading - particularly if it’s a text that really challenges or provokes us?

Sociological Imagination (2013-08-26 11:58:33)

it’s not that I’ve felt the ‘need to publish’ so much as that this mechanism (interaction between texts, my engagement with them and the specific characteristics of the blog as a communicative tool) has given a real affective ‘shoving power’ to my blogging. I was doing it anyway for extrinsic reasons but it’s become pretty integral to how I think, write and work as a result of this underlying complementarity. It met a need which I only retrospectively realised that I had. “I fear it would constrain my writing at a stage in the thinking process when I need to to let my writing be as unconstrained as possible.” I see what you’re getting at but I find the near opposite is true - it forces me to develop my thinking in a way which (whether it’s a function of laziness, busyness or subjectively being in a perpetual rush - perhaps all 3) I simply don’t do otherwise. “Does blogging help you achieve a sort of consolidation or summing up of the lessons you need or want to take from a book, but which might be too closed, too polished, for the relationship we often have with a text on a first reading – particularly if it’s a text that really challenges or provokes us?” Precisely - though I think you’re right about the specific nature of the second reading.

Why this blog? | Class Injustice (2013-10-10 23:55:12)

[...] To organize my thoughts. Mark Carrigan blogs here why he finds blogging so [...]
These are not new thoughts and feelings, of course. I came across [5]this excellent blogpost today by way of [6]a tweet from Pierre Bourdieu (yes, that Bourdieu). I'm pleased to discover that Jorge Luis Borges has created a myth for my time. Like all good myths, it mystifies. This is the kind of explaining I want to do: I want to gesture, not to spell out. I wonder if academia is the right place for this kind of work? But I will hold that thought for another time.

"Where the fuck do they get their shit from!?": Reality Television, Austerity Politics and Digital Public Sociology (2013-08-20 12:00)

[youtube=http://www.youtube.com/watch?v=hgTH56HK8hY &w=560 &h=315] It was with some trepidation that I found myself watching Nick and Margaret's We All Pay Your Benefits. This unspeakably contemptible show is presented as an "ambitious experiment" in which Nick Hewer and Margaret Mountford (who weirdly enough finished a PhD in [1]papyrology at UCL last year) "want to discover how much benefit is enough to live on and if work is worth it". As the BBC describes their show:

As the economy struggles and everyone feels the pinch, the country is more divided than ever about how much of our taxes should be spent on benefits for the unemployed. In an ambitious experiment, Nick Hewer and Margaret Mountford want to discover how much benefit is enough to live on and if work is worth it. Four claimants and four taxpayers come face-to-face to explore each other’s lives, examine their values and speak their minds. Will the tax payers feel that benefits are too high, or not enough? And will the claimants decide that hard work is good for them, or will the sacrifice be too much? Set in Ipswich - a town with typical figures for unemployment - this first episode sees the taxpayers spend time shopping, socialising and going through the claimants’ spending to see exactly how their hard-earned taxes are being spent. They must decide if they think the claimants are given enough benefits money or not enough and, with the battle lines drawn between 'scroungers' and 'strivers', this series brings the two sides together to discover if any of them can agree.

I think chunkymark nails it in the quote which I've used as a title for this post: [youtube=http://www.youtube.com/watch?v=dNi _irIZRh] It's pointless to waste energy on mapping all that is [2]conceptually and [3]empirically wrong with this show. It's also pointless to waste energy on condemning the hosts, no matter how much I wanted to [politely disagree with] Nick Hewer as he opined that "this whole debate is fuelled by emotion not fact". But it's nonetheless worth reflecting on how deeply sinister this show is. Tracy Jensen's work on austerity chic is useful for understanding the politics of this show. She describes how,
repeated distinctions are drawn between the out-of-control indebtedness of the past and the 'necessary' lean fitness of the future. These distinctions have been mediated through a range of metaphors, specifically around the 'solvent family', the hardworking family, and above all the responsible family which lives within its means and saves in order to spend, rather than borrows in order to spend.

http://www.mamsie.bbk.ac.uk/documents/Jensen_SiM_4(2)2012.pdf

The case for austerity rests upon sustaining the experienced plausibility of these metaphors. If these metaphors lose their intuitive power, if the rhetoric of “there’s no money left in the kitty” ceases to resonate with the mundane day-to-day experience of enough people to preserve a vague constituency reluctantly in support of what is, in essence, a class project of retrenchment then the politics of austerity will begin to fragment. These metaphors coalesce around an underlying equation of the finances of the household with those of the state: an almost palpably absurd conflation which only continues to have purchase on people’s minds because of the relative abstraction which unavoidably characterises any argument to the contrary and crucially because the political deployment of these asinine metaphors is continually buttressed by the distressing tendency within popular culture of which We All Pay Your Benefits is surely the most distressing example yet.

‘Personal responsibility’ is absolutely key to understanding how the financial crisis is being discursively circulated on multiple levels as an individual (not collective) failure. The individual family’s ‘failure’ to be responsible for itself is cast here as a sickness of dependency, for which the remedy is austerity. Just as the late Victorians considered ‘fecklessness’ to be a marker of undeserving pauperism – caused by individual moral failures – so too does contemporary underclass discourse equate poverty with personal irresponsibility.

http://www.mamsie.bbk.ac.uk/documents/Jensen_SiM_4(2)2012.pdf

TV shows of this sort work to sustain the mythology of 'Broken Britain' and, through doing so, sustain a political project which presupposes that enough people can be led to ignore the politics of unemployment: the global impacts of neoliberal policy, regional de-industrialisation, global migrations of capital, tax evasion and consolidation of wealth by a new class of super-elites, the wilful destruction of organised labour, and new topographies of work which normalise insecurity. 'Broken Britain' rhetoric ignores the intensified precarity of all labour – the rise of short-term contracts or contractless work, underemployment, low wages, the threat of outsourcing, diminishing returns on maternity pay and sickness pay, the failure to recognise caring responsibilities, 'flexploitation', the shift of education and training costs and risks to the individual and so on (Ross 2009; Weeks 2011; Standing 2011). By locating blame for unemployment in a 'generous' welfare state, these myths fail to recognise how important the welfare state has become in supplementing low paid and precarious work. For example, sixty-one per cent of British children who are officially ‘in poverty’ have at least one parent in work (Joseph Rowntree Foundation 2011), a statistic which seriously troubles the attribution of poverty to worklessness.

http://www.mamsie.bbk.ac.uk/documents/Jensen_SiM_4(2)2012.pdf

What is disturbing about the show is how knowingly it co-opts the veneer of social scientific intervention while using it to conceal something which is highly staged even by the standards of reality TV. Startlingly brief fragments of interview, as the camera wobbles in a circular motion around a stationary interviewee, near immediately cut into Nick and Margaret on the move - as we should all aspire to be - being driven by their taxi driver while dispensing
quasi-sociological insights into the inner motivations of their participants. The veneer of facticity which the show carefully cultivates works to cloak the comparatively clumsy staging of inter and intra-class antagonism which constitute the show's raison d'être. Its framing as an 'experiment' constituted through fact-finding interventions into the lives of individuals skivers, assessment by the benignly patrician and politically neutral hosts and confrontation with the ever so justifiably frustrated strivers, constructs the individuals subjected to this as case studies of failure in personal responsibility and the sicknesses of dependency culture. The class politics of the show are simultaneously so transparent that they could only be missed by the most reactionary idiot imaginable and yet weirdly invisible, subsumed into the tropes of reality television in a way which indefinitely defers the moment of explicitly political judgement towards which every second of the show is so palpably leading the viewer.

The mobilisation of 'common sense' domesticity to denigrate the skivers reminds me of a well spoken woman on Radio 4's Broadcasting House earlier this year who, without a hint of hostility in her voice, suggested that those on low incomes might be more able to balance their budgets if they learned to make mash and ate toast, as she did in her student days. The air of innocuousness with which people are willing to offer such judgements abstracts them from the context they share with those so judged, as if their own position within the social world is unrelated to any other. It collapses the frame of reference, as does reality TV as a whole, into one subject's apprehension of another's life - with all the unreliability that implies - thus denying its own status as a contentiously ideological cultural product. If the present government were to make a "structured reality TV programme" like The Only Way Is Essex, showing "real people in modified situations, saying unscripted lines but in a structured way" it would surely look very much like We All Pay Your Benefits.

It would free the government from the constraining need for consistency which characterises other forms of political communication, as the mockumentary style confrontations enable any and all characteristics of those playing the role of 'skivers' to be denigrated: Liam may be receiving support from his family (Tories like families, right?), he may be volunteering as a youth worker (I seem to remember something called the Big Society) but given that he is unemployed then any and all facets of his life can be deployed to construct him as an embodiment of what is implied to be a pervasive social trend. The way that reality television allows typicality to be established cinematographically rather than argumentatively (with the pesky factual dialogue that entails) makes this a deeply powerful form of political communication, easily marshalled for the project of building and sustaining a new common sense to underpin the politics of austerity (as Owen Jones has, for instance, convincingly argued about the way that characters from Shameless entered the contemporary political imaginary).

The appearance of John Hills, social policy professor at LSE, is indicative of how irrelevant to the show's purposes these 'experimental' trappings are. In a 1 min fragment from what was presumably a much longer interview, he explains the scale of the public's miscomprehension about the significance of unemployment benefits as part of the entire welfare bill. Both presenters recognise this, Margaret tells Nick that the problem are "pensioners, like you!" and then the show continues as if this never happened. For a moment the act is dropped, as Margaret and Nick have a private laugh about their own social positioning in relation to the show's topic, but then it is just as quickly resumed. In her discussion of contemporary rhetoric surrounding parenting, Jensen observes how policy has moved away from structural explanations of inequality, and towards behavioural explanations which focus on conduct and skills (Jensen 2010). The explanatory power that is attached to individual family’s 'good parenting' has intensified since the economic downturn, particularly through an extended discourse of 'tough love': the elusive, correct balance of discipline and warmth which is said to guarantee educational and social successes. Tough love names the crisis of social immobility as one of parental indulgence, failure to set boundaries, moral laxity and disciplinary incompetence.

Shows like We All Pay Your Benefits function as a sort of empirical case study sitting in a quasi-evidential relationship
to the political explanation of inequality. Occasionally, as Owen Jones has observed with Shameless, these characters are actually cited explicitly. But such absurd invocations are only possible against a background where these modes of representation have become so common place that their cultural articulations are recognisable elements of the political imaginary, even for those who disavow them. It’s perfectly possible to construct alternative modes of representation and establish them as similarly common place such as to disrupt the reproduction of the tiresome and pernicious tropes of austerity politics. For example this is how we could understand the political significance of Cathy Come Home in an earlier social context.

Perhaps public sociology has a role to play here? To "occupy public debate and make inequality matter" as John Holmwood put it earlier this year. I’m not suggesting that social policy researchers start producing mockumentaries but only that multimedia experimentation in the presentation of research, rethinking the craft of communicating sociological knowledge, is a more politically pressing issue for those whose research seeks to understand the social facts of austerity Britain. The way in which We All Pay Your Benefits affects, albeit superficially, the trappings of research is indicative of an opening for, as well as a threat to, sociology. If sociological knowledge fails to effect the change in the social world for which we may have hoped, it’s important that we don’t mistake a communication problem for a problem with the knowledge itself. It’s not simply a problem of academic books and journals, or the technical language contained within, though that doesn’t help. It’s also an issue of how the nature and purpose of communication are understood and how the potential interest of a public is characterised. Someone like Owen Jones uses sociological and social policy research to much greater political effect than the great majority of academics I can think of. Books about social science are frequently in international best seller lists, millions of people watch videos which convey academic ideas and yet sociologists are conspicuous by their absence from what little involvement academic social scientists (usually psychologists, economists and neuroscientists) have in this public activity.

However there’s a limit to the value of the ‘broadcasting’ model of public intellectualism, both in terms of the efficacy of communication and how widespread an activity it can ever be. This is not to denigrate it for a moment, I’m the biggest supporter you’re ever likely to meet - well presumably outside of those involved - of projects like the Great British Class Survey and Reading the Riots which could be taken as emblematic of what public sociology looks like when it reaches the national (and international) level of communicating sociological knowledge, not to mention innovating in its production. I also find it strange and frustrating that Malcolm Gladwell has sold more books about sociology than, I imagine, any sociologist has. Likewise that there’s no obvious sociological equivalent to someone like Steven Pinker. But what really excites me about our present circumstances is the possibility which digital tools present for forms of ‘narrowcasted’ public sociology, as part of a broader set of opportunities to rethink the craft of social research. As will be no surprise to anyone who ever talks to me about this stuff or reads anything I write about it, I think Les Back's arguments about our present opportunities for creatively rethinking our practice are extremely powerful:

While it is a cliché to say that digital technologies and new media impact profoundly on our everyday lives, little attention has been paid to opportunities that digital photography, mobile sound technologies, CD ROMs and online publishing opportunities might offer the social researcher and the practice of research itself. It is still the case that most social scientists view the research encounter as an interface between an observer and the observed, producing either quantitative or qualitative data. Equally, the dissemination of research findings are confined to conventional paper forms of publishing, and research excellence is measured and audited through such forms, be it in monographs or academic journals. It remains the case that in social science the inclusion of audio or visual material in the context of ethnographic social research has been little more than ‘eye candy’ or ‘background listening’ to the main event on the page. The relatively inexpensive nature of these easy-to-use media offers researchers a new opportunity to develop innovative approaches to how we conduct and present social research. There are more opportunities than at any other moment to rethink the craft of social research beyond
the dominance of the word and figure and to reconsider our reliance on ‘the interview’ (often taking place across a table in particular place) as the prime technology for generating ‘data’.

What’s important though is that we see these opportunities in a political context, in terms of the various threats currently facing sociology in particular and the public university as a whole, but also more proactively in terms of our own placement within that political context and our potential role in reproducing or transforming specific elements which can sought through concrete projects enacted either individually or collectively. Digital sociology presents us with new opportunities for what Bourdieu describes as a “scholarship with commitment” - new tools naturally invite discussion about the ends to which they may be applied and, in a communicative context which increasingly foregrounds the ‘backstage’ aspects of scholarly practice, we should strive to capitalise on this fortuitous conjunction of circumstances to think through these possibilities in a deliberately political and public way. Or in other words: if we share a contemptuousness about shows like We All Pay Your Benefits then we can think of collective projects, loosely related to the institutionalised notion of ‘public engagement’, which seek to deploy sociological knowledge in creative ways to ameliorate the ideologically driven diminishment of social solidarity towards which toxic popular culture like this leads. I have no idea what form such a project might take but what I’m suggesting is that the possibilities are literally far greater than they have ever been - we just have to realise the opportunities available to us and construct modes of collaboration which can lead to such commitment driven political interventions.

Incidentally I’ve realised that this discussion in Bourdieu’s Firing Back of ‘public scholarship’ and ‘private commitments’ was actually the spur for the first Call for Papers I did for SociologicalImagination.org and it’s taken me three years to catch up with why the idea occurred and articulate how I see digital engagement (communicating sociological knowledge through digital media) as something which is, potentially, deeply political. I’m not 100 % sure in retrospect if I didn’t misread this part of the book (I intend to reread soon) but I found it interesting to realise how I made this connection back but then seemed to lose it for a long time, until my recent involvement in setting up the digital sociology group.

Why do you care about your research? What is it that makes you want to spend your time exploring this area of the social world? What does it mean for you to gain understanding of these aspects of social life? Our answers to these questions often encompass the biographical, ethical and political. However these aspects of our involvements are often relegated to the background, as the factors seen as relevant to scholarship are too frequently construed in narrowly intellectualising ways.

The Social Imagination is intended as a space in which private commitments can be reconciled with public scholarship. Therefore we are soliciting contributions which explain how the two are linked and thus address the aforementioned questions. This could entail an explanation of your research, an intellectual biography, a political polemic or something else entirely.

Contributions should be between 500 and 1000 words.

1888

In October 2012, British Sociological Association journal Work, employment and society hosted a one-day conference reflecting on key debates and looking forward to what the future might hold for the discipline and the journal. We are happy to have video footage of the stimulating presentations.

Professor Kalleberg discusses the concept of job quality, indicates why it is important to study, and then illustrates the ways in which this concept has been studied in WES over the past 25 years or so. He also discusses the kinds of research that is needed on this topic in the future.

BSA Annual Conference 2013 Interview with Alice Mah from @SocioWarwick (2013-08-20 20:39)

amie Peck (University of British Columbia) - 'Explaining (with) Neoliberalism'. This was the closing plenary lecture at the 'Neoliberalism, Crisis and the World System' conference organised by Nicholas Gane and Claire Westall at the University of York, UK, July 3rd, 2013. For a full conference programme, see http://www.york.ac.uk/sociology/about... Funding for this event came from the British Academy and the Centre for Modern Studies at York.

1. file://www.youtube.com/embed/0NSskq9rbYU
The Genesis of Value by Hans Joas is a complex book which begins with a deceptively simple question: how do values and value commitments arise? It even states its answer at the outset ("values arise in experiences of self-formation and self-transcendence") before immediately recognising that the meaning of both question and answer are far from transparent and that the reasons for this opacity are far more interesting than the brute presentational fact of them having been offered in two sentences at the beginning of a book:

The concepts employed in both question and answer are not clearly defined – neither in philosophy and the social sciences, nor in the wider public debate about values; they are, in fact, extremely difficult to determine and are often essentially contested. It might be asked: what exactly is a value, for instance, and what is the relationship between values and value commitments? Is the concept of 'value' still an acceptable philosophical concept today at all – or is the public debate about values hopelessly old-fashioned, lagging behind more contemporary issues in philosophy? Can the concept of value remain a key concept in the social sciences once we have recognised the difficulties in operationalizing it for empirical research? Or would it be better simply to replace it with other concepts which better correspond to the methods of various branches of research, concepts such as 'attitude', 'practices' or 'culture'? What actually is the relationship between 'values' and 'norms', categories which are frequently used as if they were interchangeable? (Joas 2000: 1)

This instability of meaning renders ‘hermeneutic efforts’ unavoidable, which presumably goes some way to explaining the book’s strategy of intricately and elegantly weaving an argumentative thread through a whole sequence of modern theorists and philosophers: Nietzsche, James, Durkheim, Simmel, Scheler, Dewey, Taylor, Mead and Rorty. There’s an understated urgency to this exegetical endeavour, deriving from the observation made by Joas early in the book that “In all Western societies today, serious discussions are now taking place about the shift in, and loss of, values, the opportunities and dangers which such processes present, and the necessity of either reviving old values or searching for new ones” (Joas 2000: 2). In this sense, we can see that a philosophical inquiry into the nature of value pursued through textual means can nonetheless have sociological ramifications. Not least of all because “sociological diagnoses often have profound consequences for the intensive public discussions” as the “ parched soil of the public thirstily absorbs the analyses proffered by the social sciences on the subject of the change in and loss of values” (Joas 2000: 4). It’s in this context that Joas sees the ‘abstinence from value’ in the social sciences as deeply problematic, providing an opening for superficial treatments of value or the strategic mobilisation of the issue for political purposes. This politicisation of the value question itself intensifies the intellectual need for social scientific analyses,

Although, therefore, an increasing number of people take seriously and support a politics of values, the answer to the question as to how a stronger commitment to (old or new) values is actually supposed
to come about, indeed, how value commitment arises at all, is still wholly lacking in the public debate. Wide-ranging agreement has only been reached in a negative aspect: that values cannot be produced rationally or disseminated through indoctrination … Value commitments clearly do not arise from conscious intentions, and yet we experience the feeling of ‘I can do no other’ which accompanies a strong value commitment not as a restriction, but as the highest expression of our free will. Without wishing to provide a compendium of tried and tested advice for politicians or educators, this book can be understood itself as a contribution to the fundamental resolution of this question: from what experiences does this apparently paradoxical feeling of an ineligible, and yet voluntary, commitment to values result? (Joas 2000: 5).

However Joas recognises that there are a number of common objections which might be raised in response to such an inquiry. Firstly, some would argue that the question itself is ‘superfluous’ because human action and its value orientations exercise little or no influence on the course of historical change. This is perhaps the crucial objection for the account offered by Joas,

Sociologically, it seems clear to me that the discourse about values must become more intensive the less it is thought that political attitudes or social movements result quasi-automatically from material interests or resources. If we consider, say, ecological movements or waves of religious revival, we see that these certainly do not take place in a space wholly free of interests and independent of resources. But that does not mean, by any stretch of the imagination, that we may attribute a value-orientated character to them only in the sense that movements can develop, after passing through many stages of escalation, a fundamentally alternative value orientation. A radical shift in value orientation can, rather, be constitutive of them. Such a constitutive shift in value orientation certainly does not arise by mere coincidence, either. To explain its genesis, or at least its distribution, we can often cite social structural conditions which first prompted the search for a reinterpretation of the principles justifying a prevailing status hierarchy. But the question of the availability of alternative values, of the affinity of certain belief systems for social structural change and of the conditions for ‘ideological’ innovation, leads back to the irreducible character of the cultural, even in such materialistically influenced diagnoses. (Joas 2000: 6).

Another common objection raised against the discussion of value has parallel roots in liberal and postmodernist thought. In such cases, talk of value is suspected to represent an attempt to impose values on others. In the postmodern version this is construed in terms of the suppression of difference and in the liberal version it is regarded as breaching the priority of the right over the good. As Joas notes, “the liberals prefer the orientation of all to value-free procedures of peaceful co-operation and communication; and the postmodernists an ethos of respect for difference and all-inclusive tolerance” (Joas 2000: 7). Both objections collapse when pursued too doggedly because they inadvertently dramatise their own contradictions: “the liberals must ask themselves whether the value of the value-free procedures they favour must not at least be consensually shared and internalized as value; and the postmodernists cannot avoid portraying tolerance of and respect for the Other itself as utterly non-relativizable value-contents” (Joas 2000: 7).

The third objection Joas addresses is one which disputes the value of an inquiry into the nature of values because of the “complete uncertainty about values” which characterises our contemporary age. However such claims have an uncertain status when analysed, as Joas observes: “even the most dedicated advocate of the uncertainty thesis will not dispute that many people continue to feel absolutely secure in their particular values and react to their violation with intense outrage” (Joas 2000: 8). One way round this tricky empirical fact is to interpret this value-certainty as a “sign of ignorance or as the expression of an historically inadequate consciousness”. Another way to deal with this “discrepancy between widespread subjective-value-certainty and the modern uncertainty
about the foundation of values" is that adopted by the late Robert Bellah and his team in *Habits of the Heart*. One of the many interesting arguments in this astonishing (though flawed) book is their observation that interviewees were unable to justify the value commitments, of which they felt deeply certain, leading to "expressed helplessness, and anger at this very helplessness" (Joas 2000: 9). The disjuncture between subjective value-certainty and objective cultural uncertainty was thus seen to be experienced at the individual level when individuals were challenged to justify those values of which they were so certain. Bellah et al interpreted the "inability to justify value-security contained in this answer as indicative of the loss of a common language which makes such justification easier" (Joas 2000: 9). Their project was fundamentally ameliorative, with this underlying social and cultural pathology "not to be corrected by ensuring that everyone receives the news of uncertainty, but by revising the way we reflect on the foundations of our experience of value" (Joas 2000: 10).

This is true of *The Genesis of Value* itself, in its attempt to "clarify a question which, situated on an anthropological level, is mostly overlooked rather than answered, by empirical research" (Joas 2000: 12). Joas is concerned with "making available the appropriate theoretical tools to describe these experiences" of value orientation and, as such, to "draw us closer to that centre of human experience in which values originate in us" (Joas 2000: 10). The occlusion of these issues has its roots in modern intellectual history:

We can see quite clearly how important post-war schools of thought grew out of highly value-related impulses of the pre-war period, but then endeavoured to emancipate themselves from their value-related origins and to give the impression of their being a constantly advancing, professionalized solution to purely scientific problems .... For one hundred years, and thus since the birth of the academic discipline of sociology, a permanent gulf has divided those who, mainly influenced by economics, view human action as the pursuit of self-advantage or clear interests, or at the very least stable and largely context-independent preferences, and those who emphasise the irreducible character of the normative dimension of human action. The controversy between 'utilitarians' and 'normativists' runs through the entire theoretical development of this discipline, although that does not mean that there have been no attempts to synthesise the rival directions or to find a third way. It is my thesis that both sides on the front-line between utilitarianism and normativism – at least in their previous and present forms – have the greatest difficulties in analysing the genesis of values (and norms). (Joas 2000: 13)

It's in this sense that we can see the quiet ambition underlying the project undertaken by Joas. Not only is he concerned with addressing one of the central pathologies of modern life but he also seeks to reorientate social theory. In fact the two ambitions go hand-in-hand given that the demands of the former are seen to necessitate the latter. What I find so oddly beguiling about this book is the casualness with which these lofty goals subsist throughout such an elegantly crafted sequences of chapters analysing important philosophers and theorists who have contributed in some way to the project Joas now seems to implicitly see himself as concluding.

---

Milena Kremakova (2013-08-21 08:25:55)

Seems worth reading, thanks for the review! To take up what you said in the last paragraph, maybe Joas sees his book rather as beginning that reorientation project, and not concluding it? Obviously, it isn't possible to provide a neat answer to such a big question.
Since Foucault, I cannot see such a search for "genesis of values" as another attempt to de-historicize the present liberal humanist values (including the illusion of the control of the values themselves by the individual) rendering them as absolute and natural. It is certainly no accident that Foucault is not mentioned.

And that’s precisely why I don’t like Foucault.

Victor Onrust (2014-05-02 08:46:51)
"Don’t like" ???? Are we having a serious debate or are we on Facebook? NB could you install the Wordpress options to be informed of new reactions by mail?.

Sociological Imagination (2014-05-02 13:01:35)
Neither! No idea how to do that sorry.

Reseaching Affect and Psychosocial Studies (2013-08-22 08:00)

For those interested in psychosocial approaches to research, this video series I just stumbled across will be of interest. It's from a seminar series which was jointly organised by people from Cardiff University and City University a few years ago. It aimed to "bring recent interest in affect with older traditions, especially those developed in relation to psychoanalysis, thus bringing different traditions of work into dialogue with each other". I've included a quick snippet of Wendy Hollway below - you can find the full selection of videos [1]here.

[vimeo 12945183 w=400 h=300]

I personally find this incorporation of psychoanalytic concepts deeply problematic in terms of both their application outside of clinical settings and the far from clear meta-theoretical criteria upon which this quasi-psychoanalytical toolbox is constructed. But I also find it very interesting and, if I'm correct in my understanding of what motivates it, I'm largely persuade by the underlying direction of the travel i.e. the need to recover the individual as an explanatory variable within social research without construing the subject in a rationalistic and/or self-transparent fashion. I'm just sceptical about the method adopted, effectively amounting to the psychoanalytic reading of a socially situated subject - peering into the inner depths of concrete individuals. It doesn't solve the underlying problem of how individual and society (agency/structure, micro/macro, subjectivity/objectivity etc) are interconnected - instead it just 'drills down' into one side of the dichotomy.

Economists and the Politics of Austerity (2013-08-23 08:00)

This wonderful post by [1]Simon Wren-Lewis, who is far and away my favourite economics blogger, gets to the heart of austerity politics and its implications for economics as an academic discipline. The underlying question has long fascinated me: are economic ideas adopted by political actors as clothing for pre-existing policies or do these ideas actually shape political agendas in their own right? As Keynes purportedly remarked, "even the most practical man of affairs is usually in the thrall of the ideas of some long-dead economist". It's an instance of a broader theoretical question about the autonomy of culture: how and to what extent are ideas causally efficacious? But dealing with the question at that level of abstraction isn't enormously enlightening, which is why I find such a concrete instance of these issues (the role of economic ideas in formulating and justifying austerity politics) so interesting. Krugman offered an interesting perspective on this after the Reinhart and Rogoff scandal,

But what did go wrong? I've been seeing a lot of comments along the lines of “They're all just tools of Pete Peterson”; so I guess I should say that this is, in these cases, way too crude an interpretation.

Notice that I say “in these cases”. There are indeed plenty of economists who are essentially hired guns for interest groups, and they don't all work at right-wing think tanks. But the temptations that led to the current affair are, I'd argue, nowhere near that crude.

Start with R-R. The fact is that Carmen and Ken are fine economists. Carmen has been doing terrific empirical work on banking crises for a long time. Ken is arguably the world’s leading international macroeconomic theorist. In fact, the main reason I knew that the case for fiscal policy remained strong
even in the context of New Keynesian models was that I carefully read the canonical text by Obstfeld and Rogoff.

So what happened here? My interpretation is that after writing a very good book, R-R dashed off a careless paper on debt and growth that was so much what the VSPs wanted to hear that it made them instant celebrities in a way they hadn’t been before — and they didn’t know how to say stop the merry-go-round, we want to think about this a bit harder. The temptation involved was one of fame and becoming a part of the alleged real world, not some crude mercenary consideration.

I think his point is an important one: we need to recognise that think tanks provide a mechanism for the consolidation of ‘hired guns’ (as part of a broader process of restructuring in the ‘market place of ideas’) but that self-interest can serve to mobilise academic endeavour in ways which extend far beyond ‘crude mercenary considerations’. But as Wren-Lewis observes, pursuit of this individual self-interest may prove extraordinarily damaging for the discipline as a whole:

As I argued in a recent post, what we have here is a combination of two things. First a strong political force that wants deficit reduction to be the focus of policy because it sees this as a useful way of reducing the size of the state. Second, public perceptions that try and understand events in terms of what they know: their own borrowing and spending decisions. So the need for immediate austerity becomes the dominant policy almost everywhere. I get frustrated sometimes that some colleagues, naturally concerned about the details of academic debate, cannot see the bigger picture here. The bigger picture is the marginalisation of our discipline – used when it suits a particular political purpose, but ignored otherwise. If policymakers and the pundits just pick up economic ideas when its suits them, and when the analysis or facts do not suit them just make stuff up (examples from US and UK), economic analysis just becomes fodder for speech writers. That reduces the discipline to an academic game, and soon those same people will ask: why are we paying people just to play games?

So how do we get macroeconomics back into fiscal policy making? First, we need to sort between politicians and political parties that are quite happy with the current state of affairs, and those who are not. Those who are not need to fight fire with fire, replacing one bit of homespun thinking with another which gets us closer to how policy should be made. One way of doing that is to replace the ‘state as an overextended household’ idea with the ‘state as an innovative firm’.

I find his proposed solution quite compelling. Rather than nervously attempting to triangulate their way out of a corner that the Conservatives have backed them into, the forceful promulgation of an alternative metaphor (the state as “a firm that decides to undertake these investments by borrowing when borrowing is cheap”) could be an effective strategy for Labour. But what really interests me about this post is his diagnosis of the underlying political situation facing economics as an academic discipline. Tom Medvetz has offered a really astute analysis of the underlying structural changes that have transformed the interface between the academy and politics in the United States over the last half century:

While social scientists with little left to prove in the academy can afford to reinvest their academic capital in public debate – and often do – rank-and-file scholars have little incentive to follow this route [...]
growth of think tanks over the past forty years has played a pivotal role in undermining the relevance of autonomously produced social scientific knowledge in the United States by fortifying a system of social relations that relegates its producers to the margins of public debate. To the degree that think tanks arrogate for themselves a central role in the policy-making process, they effectively limit the range of options available to more autonomous intellectuals, or those less willing to tailor their work to the demands of moneyed sponsors and politicians [...] The rise of think tanks must therefore be set analytically against the backdrop of a series of processes that have contributed to the growing subordination of knowledge to political and economic demand – including the reassertion of control over the economy by holders of economic capital, the development of specialised forms of political expertise, the growth of the mass media as a conduit for the imposition of market forces into politics, the corporatization of the university, and the withdrawal of the state from the financing of public education. The question posed acutely by the rise of think tanks in America concerns the social value of social scientific knowledge itself: Put simply, should money and political power direct ideas, or should ideas direct themselves?

Tom Medvetz, Think Tanks In America 225-226

The diagnosis offered by Wren-Lewis concerns, from this perspective, the long term implications for academic economists of the tendency to, as Medvetz describes it, “engage in policy debate by imitating the style of intellectual production institutionalized in the space of think tanks”. While it’s not possible to prevent policymakers and pundits from ‘picking up’ economics ideas when it suits them, this deleterious trend rapidly intensifies with each aspirational economist who actively embraces this situational logic in the pursuit of self advancement (or ‘relevance’). Could the impact agenda be seen as an attempt to institutionalize this strategy within the academy, rather than merely leaving it to the power of incentive structures emanating from outside academic institutions? Even acquiescence to it helps perpetuate the process. The only solution would be for more economists to engage in public debate, including on Twitter and blogs, though as Medvetz points out, this is a strategy primarily open to those who have ‘little left to prove in the academy’.

Omni Reboot: A new website for philosophical science fiction (2013-08-23 12:00)

Two weeks ago, a New Jersey based venture launched a new web magazine in the heritage of Bob Guccione’s Omni. Besides publishing the Penthouse magazine, Guccione cared deeply about art and science, as Claire Evans, editor of [1]Omni Reboot [2]claims. Trying to catch the spirit of the apparently influential science-fiction magazine of the eighties and nineties, the reboot sees itself at [3]“the intersection of science, technology, art, culture, design, and metaphysics”. The perceptible future and technology enthusiastic overtone of the publication seems to be counter-balanced by the willingness to engage with the real and potential horrors of the past and future techno sphere. Stories about illustration [4]artwork for Frank Herbert’s Dune cycle, about the [5]works of the Strugatsky brothers and a [6]fiction piece by Bruce Sterling are among the first publications of the new magazine and signal a profound sense for quality philosophical science fiction.
Moritz Reiter ([8]reitermoritz AT icloud.com) lives in Berlin. In the little spare time he has besides that, he studies for a masters in history at the Humboldt-University of Berlin, with a special interest in the history of the net.

CfP: Beyond Binaries: Exploring the Psychosocial (2013-08-24 08:00)

The idea of the psychosocial (or psycho-social) can be traced back to Sigmund Freud's early writings, particularly 'The Future of an Illusion' and 'Civilization and its Discontents' address sociological notions of structures, classes, society, the masses as well as psychoanalytic concepts of the individual, the psyche, the Superego, drives, etc.

Many scholars after Freud have explored the dualism of individual and society, or the social and psychical and ways to think the two in conjunction as opposed to a binary. From the Frankfurt School's Freudian-Marxist perspective to Norbert Elias, to contemporary psychosocial studies in Britain and the US to name just a few, there is
an academic field that is about overcoming theoretical and epistemological boundaries between micro and macro, between the individual and the social. It is this tradition that marks the starting point for the conference.

What is the psychosocial? What theoretical and empirical scholarship is helpful in thinking about it? How can the idea of the psychosocial be developed further?

We invite MA or PhD students who would like to present their research, be it of an empirical or theoretical nature, that can be broadly situated within psychosocial studies or that addresses ideas in relation to individual psyche's and society. Papers should be 20 minutes in length and work in progress papers or the presentation of an idea or thought are very welcome.

The conference will be an informal opportunity to share research with others and to network and meet other researchers.

Please submit abstracts of max. 500 words along with a short bio to Jacob Johanssen (jacob@cyborgsubjects.org) and Siobhan Lennon-Patience (u9919166@uel.ac.uk) by November 4th, 2013.

The conference will be held on December 7th at the University of East London, UK and is organised by the Psychosocial Studies Postgraduate Group [1]http://www.facebook.com/PsychosocialPostgradGroup) and supported by UEL (www.uel.ac.uk).

‘The New Normal’ – Work and Performance Management in an Age of Recession by Phil Taylor (2013-08-24 12:00)
In October 2012, British Sociological Association journal Work, employment and society hosted a one-day conference reflecting on key debates and looking forward to what the future might hold for the discipline and the journal. We are happy to have video footage of the stimulating presentations.

WES was founded to address the world of work with a more encompassing understanding than the institutional focus central to academic industrial relations. This was reflected in the early issues of the journal, in which trade unions barely appeared. Over the years, they have received more attention, while the sociology of trade unionism (not only in the pages of WES) has become more sophisticated.

Yet ironically, actually existing unions have almost universally been in decline and on the defensive over the same period: hence Professor Hyman's reference to the owl of Minerva. Should sociologists be concerned? And what is to be done?

Richard Hyman
CfP: Quantified Self and Self-Tracking (2013-08-25 08:00)

In the last few years there has been a significant increase in public and academic interest in the use of devices or techniques for the accumulation, aggregation and analysis of personal data. Apps for mobile phones such as Track My Run and body tracking devices such as Jawbone, Fitbit and Nike’s Fuelband have perhaps garnered the widest attention with their ability to passively collect data on everyday activities which can then be analysed and shared with others. There is, however, more to quantified self than the mainstream media picture of obsessive “techies”. Many people engaged in “life logging” collate data on mood and experiences often without a direct quantitative element. While a relatively formalised arm of the quantified self movement has formed, through the Quantified Self group based in San Francisco, not everyone involved in quantified self activities is affiliated with Quantified Self. This formalised movement, as well as the broader cluster of practices and orientations which are coalescing within and beyond it, point to commercial and political connections which have yet to be fully explored.

The new Quantified Self research network will explore the broad implications of this loose set of practical and ethical approaches to understanding bodies, psyches and everyday practices. While we are interested in exploring the practices and techniques of assessment we think it is equally important to understand the often novel ways in which the diverse types of analysis enable new forms of reflecting on the embodied self and relations with others. We hope to encourage interdisciplinary dialogue around this multitude of emerging issues, in the belief that historical, philosophical, cultural, sociological, psychology, economic, technological and political approaches all have a role to play in understanding this fascinating trend.

The network aims to:

- Build network of scholars interested in qs
- Explore possibilities for further research and collaborations
- Share ideas about substantive issues
- Support access and development of postgraduate and early career researchers
- Develop sociological approaches to understanding qs
- Identify potential for disciplinary collaborations
- Develop relations with interested parties beyond the academy
- Potentially developing some sort of web resources (perhaps as part of the BSA Digital Sociology Groups’s website)
We've organised an initial seminar at the University of Leeds on **September 17th**. If you would like to do a short talk (20 mins max) about your research, intended research or simply to explain the intellectual basis for your interest in quantified self then please contact network organisers: Mark Carrigan ([1]mark@markcarrigan.net) and Christopher Till ([2]christophertill@hotmail.co.uk) with a short abstract and bio. Full details will be released soon for those who do not wish to present but would like to attend on the day. Furthermore, please get in touch if you would like to be kept informed about upcoming event or otherwise participate in the network.

BSA Realism Study Group Seminar: Contemporary Issues in Realist Thought- 6th Sept (2013-08-25 10:00)

BSA Meeting Room, London.

We are pleased to announce our speakers for the forthcoming seminar to debate contemporary issues in realist thought. Please see attached flyer for further details and abstracts.

**Graham Scambler**, University College London

‘Taking interdisciplinarity seriously: realism and explanations of health inequalities’

**Sue Clegg**, Leeds Metropolitan University

‘Realism as a theoretical resource’

**Mark Cresswell**, Durham University

‘PEDAGOGY of the PRIVILEGED: Elite Universities and Dialectical Contradictions in the UK’

**Dave Elder-Vass**, University of Loughborough

‘Disassembling actor-network theory’

**Bob Carter**, University of Leicester

‘Realism and the Posthuman’

To book, please visit:  
In many academic circles today anyone who tries to write in a widely intelligible way is liable to be condemned as a ‘mere literary man’ or, worse still, ‘a mere journalist.’ Perhaps you have already learned that these phrases, as commonly used, only indicate the spurious inference: superficial because readable. The academic man in America is trying to carry on a serious intellectual life in a context that often seems quite set against it. His prestige must make up for many of the dominant values he has
sacrificed by choosing an academic career. His claims for prestige readily become tied to his self-image as a 'scientist'. To be called a 'mere journalist' makes him feel undignified and shallow. It is this situation, I think, that is often at the bottom of the elaborate vocabulary and involved manner of speaking and writing. It is less difficult to learn this manner than not. It has become a convention – those who do not use it are subject to moral disapproval. It may be that it is the result of an academic closing of ranks on the part of the mediocre, who understandably wish to exclude those who win the attention of intelligent people, academic and otherwise.

C. Wright Mills, The Sociological Imagination, Pg 218

Felix (2013-08-26 12:44:28)
You should mention that this was published in 1959. I saw a link on Twitter and had never heard of the book or author.

Karamat (2013-10-05 12:20:15)
I have recently discovered The Sociological Imagination and the Appendix: On Intellectual Craftsmanship. All i can say it has made me see my whole world very differently

Sorry that should have Sociological. Third time lucky

Sorry that should have said Sociological. What is happening today?

What is Sociology for? (2013-08-26 19:13)

But, sometimes, asking what something is ‘for’ can, if understood as an expository tactic, a starting-point rather than a ruling, be a means of helping us to clear away the discursive debris that accumulates round any widely used category. The very asking of the question in this slightly over-insistent, finger-jabbing form may be enough to encourage reflection to cut through the incidental clutter and begin to wonder what kind of response could count as a useful answer. From then on, it is probably sensible not to try to press the question further in this narrow form, but to let rumination extend itself, brooding on the diversity that may shelter under a single term, pondering a series of characterizations or historical instances rather than seeking a single defining proposition.

- [1]What are Universities For? by Stefan Collini

Collini asks this questions of universities in general. But let’s think of sociology in particular: what is Sociology for?
In October 2012, British Sociological Association journal Work, employment and society hosted a one-day conference reflecting on key debates and looking forward to what the future might hold for the discipline and the journal. We are happy to have video footage of the stimulating presentations.

WES has published critical political economy by authors like Tony Cutler and Theo Nichols which has dissected the confusions of mainstream economics and managerialism. But we have yet to develop a constructive political economy which explains how we can manage the current conjuncture in the interests of labour and for the common good. This presentation takes up this task for the UK where the worsening regional problems of the ex-industrial districts are nested in a stalled UK economy. And there is a policy impasse because the British central state increasingly lacks the political will and technical capability to solve deep seated problems through macro economic management or structural reform or industrial policy.

Against this background, much depends on local and regional initiatives which challenge current limits on what is economically thinkable and politically doable. The primary focus should be on managing what’s left. This is the foundational economy (health, education and welfare, utility infrastructure, retail and food processing) which employs more than 40% of the workforce. The new imaginary would
involve breaking with policies that promote competition and perfect the market. Instead local and regional actors should press initiatives for coordination and networked provision within the regional economy with limits on value extraction.

Against 'Shaking Up' the Social Science (2013-08-27 08:00)

A recent blog post by [1]Nicholas A. Christakis on the New York Times site about the need for 'shaking up' the social sciences has provoked a great deal of debate online. The author argues that while the natural sciences have flourished in the last century, giving rise to "whole new fields of inquiry" resulting from "fresh discoveries and novel tools", the social sciences have stagnated:

They offer essentially the same set of academic departments and disciplines that they have for nearly 100 years: sociology, economics, anthropology, psychology and political science. This is not only boring but also counterproductive, constraining engagement with the scientific cutting edge and stifling the creation of new and useful knowledge. Such inertia reflects an unnecessary insecurity and conservatism, and helps explain why the social sciences don’t enjoy the same prestige as the natural sciences.

Christakis argues that social scientists “too often miss the chance to declare victory and move on to new frontiers” and instead plug away at the same old topics with diminishing returns. I’ve suggested[3]elsewhere that we can easily find [4]flaws in explanations of the [5]lack of cumulative progress (i.e. the “the creation of new and useful knowledge” and “moving on” to new topics when we’ve “figured this topic out”) in sociology which locate it in the cultural tendencies of sociologists. Nonetheless his case is certainly a provocative one:

So social scientists should devote a small palace guard to settled subjects and redeploy most of their forces to new fields like social neuroscience, behavioral economics, evolutionary psychology and social epigenetics, most of which, not coincidentally, lie at the intersection of the natural and social sciences. Behavioral economics, for example, has used psychology to radically reshape classical economics.

[...]

It is time to create new social science departments that reflect the breadth and complexity of the
problems we face as well as the novelty of 21st-century science. These would include departments of biosocial science, network science, neuroeconomics, behavioral genetics and computational social science. Eventually, these departments would themselves be dismantled or transmuted as science continues to advance.

Some recent examples offer a glimpse of the potential. At [6]Yale, the [7]Jackson Institute for Global Affairs applies diverse social sciences to the study of international issues and offers a new major. At [8]Harvard, the sub-discipline of physical anthropology, which increasingly relies on modern genetics, was hived off the anthropology department to make the department of human evolutionary biology. Still, such efforts are generally more like herds splitting up than like new species emerging. We have not yet changed the basic DNA of the social sciences. Failure to do so might even result in having the natural sciences co-opt topics rightly and beneficially in the purview of the social sciences.

New social science departments could also help to better train students by engaging in new types of pedagogy. For example, in the natural sciences, even college freshmen do laboratory experiments. Why is this rare in the social sciences? When students learn about social phenomena, why don’t they go to the lab to examine them — how markets reach equilibrium, how people cooperate, how social ties are formed? Newly invented tools make this feasible. It is now possible to use the Internet to enlist thousands of people to participate in randomized experiments. This seems radical only because our current social science departments weren’t organized to teach this way.

But is it plausible? From my perspective the (structural) incentivisation of innovation as an end in itself is one of the causes of a lack of cumulative progress rather than something which could act as its solution. An environment where ‘publish or perish’ reigns leads to an ideational arms race, with rewards going to those who can publish often while presenting novel ideas which shape the subsequent agenda. So we have to be very careful about matching this tendency with new (cultural) incentives disparaging work on the ‘settled subjects’ and shifting resources and acclaim to ‘new fields’: an intensification in the rate at which X studies and neuro-X proliferate wouldn’t, at least as an aggregate tendency, make the situation worse not better. The picture Christakis paints of a culture gap between the disciplinarity of the social sciences and the transdisciplinarity of the natural sciences is also rather overdrawn, as [9]Dirk vom Lehn argues on Org Theory:

I am surprised Christakis puts forward the argument that “the social sciences have stagnated” over the past years. He gives no empirical evidence for such a stagnation of the social scientific disciplines and I wonder what the basis for this argument is. If he was to attend the Annual Conference of the American Sociological Association (ASA) in New York in August he will see how sociology has changed over the past few decades, and he will be able to identify specific areas where sociologists have impacted developments in policy, technology, medicine, the sciences, the arts and elsewhere.

His argument ignores also the long-standing cooperation between social scientists, technology developers, computer scientists, medics and health services providers, policy makers, etc. etc. etc. For example, for several decades social scientists, computer scientists and engineers have collaborated at research labs of PARCs, Microsoft and elsewhere, jointly working to develop new products and services.

Furthermore, argues vom Lehn, these fields give the impression of moving onwards while producing the "new and useful knowledge" Christakis calls for while ignoring much of the research that has been done elsewhere.
Christakis refers to the development of new fields like neuroscience, behavioral economics and others that "lie at the intersection of natural and social sciences". Because "behavioral economics" is popular also with policy makers let us take this new field as an example: one of the key findings of this new field is the importance of "non-rational action" for people's decision making. I very much enjoy the creative research undertaken by scholars in this field, but it is quite surprising that it gets away with by-and-large disregarding 100 years of social scientific research. Critique of arguments that prioritize rational action over other types of action has been key to Max Weber's famous work in the early 1900s, Talcott Parsons' discussion of the utilitarian dilemma, Harold Garfinkel's breaching experiments and many other sociologists' research and teaching.

The fields which Christakis sees as exemplars of what a 'shaken up' social science would look like are, in part, consequences of the very trends he decries. The superficial plausibility of such arguments needs to be interrogated. The common-sense tone underlying them only remains coherent by straightforwardly ignoring what has largely been established within the social sciences and the impact which the earlier discussed valorisation of innovation has had on underlying tendencies towards faddishness which are already deeply pathological:

Articles like Christakis' imply that current social sciences have little impact on society, policy makers and knowledge development more generally, whilst research in the natural sciences, in their view, has more "impact". They, however, overlook and disregard social scientific research that has been forgotten because scholars and policy makers follow the latest fads and fashions, such as so-called Big Data research and the opportunities of brain-scans, rather than using and further developing the existing theoretical, methodological and empirical basis of the social sciences. Moreover, they pretend that the social sciences and the natural sciences basically could achieve the same impact, if only the social sciences would make appropriate use of scientific methods. Thereby, however, they ignore what social scientists have shown over and over again over the past 100 years or so, i.e. that the social is fundamentally different from nature; it always is already interpreted when the social scientist arrives. The 'social' requires interpretation of a different kind than nature as encountered and then interpreted by natural scientists. Furthermore, people often change their behavior in response to the research process and in response to social scientific findings. Nature remains nature. Apples keep falling down from trees.

As vom Lehn observes, these presumably well meaning interventions can end up playing into the hands of those seeking to reshape the university and defund the social sciences. Particularly within the UK context, it fits within a political agenda that seeks 'selectivity' and 'concentration' in higher education:

Two aspects of this drive for 'efficiency' are significant. The first is a concern to encourage 'concentration and selectivity'. This involves the argument that not all universities should conduct research across all areas (selectivity) and that research capacity should be concentrated in fewer universities (concentration). The second is that economic and social impacts of research should play a larger part in the determination of which projects should be funded (via the research councils) or should be rewarded with QR funding from the REF.

It doesn't take a great deal of imagination to see how the strategy suggested by Christakis for social science to establish a “small palace guard to settled subjects and redeploy most of their forces to new fields” coheres with the logic of concentration and selectivity. The overwhelming bulk of funding will be distributed towards the narrowly defined ‘priority areas’ with what funding, if any, remains for research outside these areas being provided from within wealthy institutions. Though institutions themselves will have an impetus to use ‘seed funding’ to help develop potential bids and hence there's the possibility of the ‘priority areas’ coming to be reproduced internally. This broader political project has designs on reshaping disciplinarity, as Holmwood argues:

In the language of science policy studies, it is clear that the impact agenda is designed to reinforce the reproduction of what Nowotny et al (2001) call mode 2 knowledge. This consists in interdisciplinary, applied problem-based knowledge, which they contrast with discipline-based knowledge. Whereas the former involves the external beneficiaries of research drawn into the research process as its co-producers, the latter is frequently described in terms of disciplinary hegemony and internal audiences.

In line with those who think that the impact agenda can be shaped toward the ends of public social science, Nowotny et al (2001) set out an attractive image of a new „public agora“, drawing upon socially distributed expertise. Yet the reality seems to be rather different, namely the rise of privately-negotiated user-researcher relationships and the replacement of disciplinary hierarchies by those of government strategic priorities operating though funding agencies (with individual universities increasingly mirroring those hierarchies with their own strategic priorities adapted to the priorities of funding bodies)

[...] There are beneficiaries of the shift to mode 2 knowledge. Indeed, Nowotny et al suggest that their identification of mode 2 knowledge has been used ‘politically’, writing that, "those with most to gain from such a thesis espoused it most warmly – politicians and civil servants struggling to create better mechanisms to link science with innovation; researchers in professional disciplines such as management, struggling to wriggle out from under the condescension of more established, and more 'academic', disciplines" (2003: 179).

[...]

According to Abbott, a problem-based academic system would be “hopelessly duplicative” (2001: 135). Disciplines are repositories of 'problem-portable' knowledge, and “the reality is that problem-based knowledge is insufficiently abstract to survive in competition with problem-portable knowledge" (2005: 135). In fact, this is something that is very familiar from the ESRC’s (2006) own engagement with perceived problems of research capacity in applied interdisciplinary areas (for example, in management studies) and its articulation of a distinction between ‘exporter’ and ‘importer’ subjects to distinguish between academic disciplines and interdisciplinary applied subject areas.

Though it may be done with the best of intentions, drawing these sorts of boundaries between ‘settled subjects’ and the ‘new frontiers’ is politically dangerous. It misconstrues the failure to cumulatively ‘move on to new topics’ when we’ve ‘figured this topic out’ and risks intensifying the very deficiencies it purports to ameliorate. It also implies a
view of "the creation of new and useful knowledge" which is homologous to that underlying the political project to instrumentalise and/or defund the social science ("if it’s not useful, why should we pay for it?") and, though many advocates of the former would reject the latter, they nonetheless risk finding themselves inadvertently acting as suppressive fire while the intellectual traditions they seek to equip for new challenges are instead dismantled around them.

Bill Cooke (2013-09-01 17:30:15)
Thanks for this, I agree with all you write. However, I think it very important to acknowledge that the piece to which you respond emanates from the USA, and reflects the particular socio-politics of that place. Even in challenging US anti-intellectualism, we are in danger of colluding in the view that the US is some kind of centre that should be taken notice of. This is of course, sustained by the fact that most of us can’t read Portuguese, Hindi, Mandarin, or any other language, so we are extremely limited in what we can and do understand of social science. Indeed, if we really wanted to disrupt social science, perhaps we should disrupt those institutions which privilege Anglophonist social science, and argue for a new social science which is not restricted by linguistic hegemony.

Sociological Imagination (2013-09-02 11:38:55)
I think that’s a really important point Bill - it’s something I’ve thought about a lot given that google analytics tells us that our website has an extremely large non-Anglo American audience. It’s less of an issue for Milena who I run the site with but it’s difficult for me not to fall into perpetuating something I don’t want to as a monolingual young British sociologist who maintains this site in my spare time.

» Shaking up the social sciences The Sociological Imagination (2014-10-17 08:01:18)
[...] Higher Education has run an interesting article by Amanda Goodall and Andrew Oswald. I wrote a response to the original article by Christakis that sparked this debate (in fairness he didn’t choose [...]
Jodi Dean (Hobart and William Smith Colleges) gives the opening plenary lecture at the 'Neoliberalism, Crisis and the World System' conference organised by Nicholas Gane and Claire Westall at the University of York, UK, July 2nd, 2013. For a full conference programme, see http://www.york.ac.uk/sociology/about... Funding for this event came from the British Academy and the Centre for Modern Studies at York.

The craft of co-writing (2013-08-28 08:57)

As with more things in life than I care to admit, the notion of co-writing has always been loosely tinged by association with images from Frasier. Witness the wonderful episode where Frasier and Niles attempt to write a book together:

[youtube=http://www.youtube.com/watch?v=URC0Q885miA &w=640 &h=400]

However I've done it twice in recent months (one a chapter now under review and one a paper near completion) and it's actually gone very well. There's an obvious sense in which it's simply easier to co-write a 6000-10000 word long piece of work than it is to write it on your own. But is this a good rationale in and of itself? I'm not sure that it is, leaving me rather suspicious of the fact that this is the defining impression left with me after having now done it twice.

What have your experiences of co-writing been like? Is it something you've done regularly? Is it something you'd like to do but feel reticent about? What do you think it needs to work well? Has it ever gone badly and, if so, why? We'd love to know what you think about this. If you'd like to submit a short guest post as part of our sociological craft project then please get in touch: mark AT markcarrigan.net
CfP: Hard Times – Austerity and Popular Culture (2013-08-28 14:15)

Although the British Prime Minister David Cameron popularised the renowned axiom ‘the age of austerity’ in a speech of 2009, political discourse has long given shape to popular rhetoric on the subject. The sentiments of ‘make do and mend’ and ‘boom and bust’ offers two such examples that have filtered into popular and national conscious. Indeed, there have been memorable occasions when political parties have sought to appropriate the vehicle of popular culture to articulate their agendas; who can forget Tony Blair’s use of the D:Ream dance anthem ‘Things Can Only Get Better’ as part of the Labour Party’s Manifesto in the 1996 General Election, for example?

However, political idiom is not the sole medium to express the effects of austerity, recession and the global economic crisis in contemporary society. From Jarvis Cocker’s glamorisation of the sexual tension between the ‘haves’ and have nots’ in Pulp’s ‘Common People’, to Morrissey’s cynical yet dulcet tones espousing what today’s Government might describe as the scourge of benefit culture in The Smith’s ‘Still Ill’, popular culture has sought continually to explore and engage with the social and cultural manifestations of recession and austerity. John Self, the protagonist of Martin Amis’s Money learned hard lessons about ‘maxed out’ credit cards in the Thatcherite Yuppie culture of the 1980s, but the summer of 2013 will see Kirstie Allsopp share her austerity-inspired know-how with prime-time audiences in the Channel 4 television series Fill Your House For Free.

Our edited book collection, Hard Times: Austerity and Popular Culture seeks to map the diverse ways in which austerity is—and has been—reflected in and by popular culture. We solicit submissions on any aspect of austerity in popular culture that can offer new and innovative insights into its representation and ideologies. In what ways have literature, film and television, and music (amongst other cultural modes) given expression to austerity? How are its effects conveyed? What commentaries does popular culture offer on, about or towards the age of austerity? How has the expression of austerity in popular culture changed over time, and what lessons about representations of austerity in popular culture from the past can be learnt in the present? Can popular culture have a significant influence in shifting our attitudes towards political discourses of austerity? In soliciting submissions from across the arts and humanities, the editors welcome submissions that could consider the following themes:

- Representing recession
- Credit and spending culture
• Boom and bust – individual and cultural
• The Gendering of austerity
• Thrift chic
• Self-sufficiency vs. spending cuts
• The austere family
• Race, disability, and/or class and austerity
• Benefits culture(s)
• Nostalgia and austerity
• Representing contemporary austerity through the past
• Unemployment and/or poverty
• Youth and austerity
• Revolution, revolt and protest against austere times

Please submit abstracts of 600 words and a short biographical note to both editors, Dr Helen Davies (Helen.Davies@tees.ac.uk) and Dr Claire O'Callaghan (cfo3@le.ac.uk) by 31st January 2014. If accepted, completed chapters of 6000 words will be expected by 1st September 2014. A proposal will be submitted to I.B. Tauris from whom we have received an expression of interest.

The Beginner’s Guide to Multi-Author Blogging [v1.0] (2013-08-29 08:00)

The term ‘blogging’ has a strange history. For some, it still conveys a rather unglamorous image, captured in Andrew Marr’s infamous remarks a few years ago that “a lot of bloggers seem to be socially inadequate, pimpled, single, slightly seedy, bald, cauliflower-nosed young men sitting in their mother’s basements and ranting”. Associated with this stereotype is the image of blogging as a lone pursuit. However increasingly this is not the case and the reasons for it are not complex. To attract an audience it’s necessary to update a blog on a regular basis and, as a sole author, it’s very difficult to do this. Those who manage it usually, in my experience, see the blog as an integral part of a wider set of activities which they would be doing anyway. So the blog is embedded within an existing cluster of practices rather than being yet another responsibility they have to keep track of. For instance in my own case, I primarily use my blog as a notebook to develop ideas, which is something I struggle to do without writing. But this isn’t for everyone and, unless blogging is something which you’re likely to commit to and/or embed within your existing activities then it’s going to extremely difficult, if not impossible, to maintain a sole authored blog with any degree of regularity, at least in the long term. This is why multi-author blogging, which can take many forms, is an increasingly popular practice, as Chris Gilson and Patrick Dunleavy from the LSE’s Public Policy Group ably summarise,

According to some good estimates, perhaps 80 per cent or more of the single-author blogs on the web are currently inactive, or are ‘desert blogs’ that very rarely updated. And this is because people start them with high hopes, in determinedly individualistic mode, but find that hard to sustain after a while. Coming up with fresh content, day after day or week after week, is hard work for any academic, especially in the current climate where there are so many other demands on people’s time. But if you don’t post regularly, in a rhythm that is clear to readers so they know when to come back, then it can be hard to keep things going.

We don’t think single-author blogs are a sustainable or genuinely useful model for most academics – although all praise to the still many exceptional academics who can manage to keep up the continuous effort involved. By joining together and forming multi-author blogs, academics can mutually reinforce each other’s contributions. We have 350 authors now on BPP, so if they blog with us twice a year we can post two posts a day without too much difficulty (as we do). And there are many synergies - for
example, readers who come for a blog on political developments may stay reading for comments on social policy, or constitutional reform. On a multi-author blog, you often benefit from the content that others provide, and they often benefit from yours.

Quite why more universities don’t take the LSE’s lead is utterly beyond me, given how obviously a relatively small investment in multi-author blogging serves to build capacity for impact and public engagement, thus allowing the vast majority of academics who don’t want to sustain a sole-authored blog to nonetheless engage effectively online. But leaving the chronic shortsightedness of communications policy in UK higher education to one side, it’s worth taking a look at the LSE sites if you’re not already familiar with them to see what they entail in practice: the LSE Impact Blog, LSE British Politics and Policy, LSE EUROPP and the LSE Review of Books. These could be seen as the upper end of the spectrum in terms of organisation and resources, given they have full time staff working on them, though I’d argue they constitute a gold standard for organisations within higher education seeking to engage in multi-author blogging. But it’s also possible to run a multi-author blog with little organisation and no funding. Milena Kremakova and I have been running the [3]Sociological Imagination for over three years now, with no funding and institutional support while we’ve each been doing a lot of other things. This is much easier to do then it looks with sufficient planning and part of my enthusiasm for this technology stems from my curiosity about the explosion of creativity which would likely ensue if everyone who might potentially be interested in doing something like this realised quite how emphatically it is within their grasp to do so. So what do you need to get started?

1. A team, network or group with a shared interest. This shared interest can be something diffuse and it can be something plural. But the project is unlikely to succeed without an underlying interest which can subsequently inform and shape what you do in practice. Is it a particular research topic or cluster of topics which interests you? Is it a particular approach to doing research? Is it a particular career stage and the issues related to it? If you have institutional backing then this a somewhat different issue but, assuming you don’t, these are the sorts of questions which will help guide you as you’re planning and setting up your blog.

2. A sense of the blog’s purpose and the kinds of content it will host. Will it be longer academic pieces? Or shorter posts written for a broader audience? Will you include multi-media and video? Will you collate resources relevant to your topic and use the blog to share them with a broader audience? There are a lot of options and setting out with one idea in mind in no way precludes later expansion. But it’s important to think about what your multi-author blog will actually look like and what sort of content it will host. What would it need for you to feel the blog is a success? This question might be difficult, if not impossible, to answer at the outset but it’s worth thinking about and discussing as a group.

3. How will work be distributed amongst your group? How rigorously will you proof read and edit each other’s work? Will specific individuals have particular roles or will you all post as and when? Will you co-ordinate your activity as a team and, if so, how will you do this? Is it possible that there might be disputes about content and, if so, how will you resolve these within your group? It’s important to make sure everything is on the same page at the outset but, again, there’s no reason why an understanding you reach at the outset needs to be anything other than provisional.

4. Will you accept guest posts? If so will you actively solicit these through an open call or by approaching people directly? If you publish guest posts will these be read and agreed upon by the team or is it enough for one member to have thought it was suitable for posting?

5. Try and build an ‘archive’ at the outset. Given that blogs require regular updates to succeed, it’s important both to have a (realistic) aim about how frequently you will post but also to have a backlog to sustain you at the outset.
when you’re finding your feet and in case of dry spells where people are too busy with other commitments to write regularly for the blog. Scheduling posts within WordPress can be useful for this as well, given it allows you to ensure the blog is updated up until a particular point in time. It also means that something which would otherwise have to be a daily(ish) activity can instead become a weekly or even a fortnightly one. When we’re both busy, Sociological Imagination is sometimes scheduled weeks in advance. It’s really surprising how much you can get done if you spend an entire afternoon working on a blog once every couple of weeks.

6. How will you promote your blog? For instance a twitter feed is pretty essential so that new posts are automatically tweeted. However tools like Buffer App can be used to automatically schedule tweets from your archive. This can take a bit of getting used to but once you get the hang of it, it’s easy to make this a regular activity and it’s nowhere near as time consuming as it might sound.

This is a very provisional first go at something I’ve intended to write for ages. I’m not sure if it’s v1.0 or v0.1 really. I’m going to come back to it in the future, probably quite a few times, to flesh out points 1 to 6 a lot, add more points and write a conclusion. In the meantime, any comments are much appreciated and I’m particularly interested in any questions or issues you think it would be useful for me to address in future iterations of it.

2. [http://blogs.lse.ac.uk/impactofsocialsciences/2012/02/24/five-minutes-patrick-dunleavy-chris-gilson/](http://blogs.lse.ac.uk/impactofsocialsciences/2012/02/24/five-minutes-patrick-dunleavy-chris-gilson/)

---

40 reasons why you should blog about your research (2013-08-29 23:43)

1. It helps you become more clear about your ideas.

2. It gives you practice at presenting your ideas for a non-specialist audience.

3. It increases your visibility within academia.

4. It increases your visibility outside academia and makes it much easier for journalists, campaigners and practitioners to find you.

5. It increases your visibility more than a static site and allows people who find you to get an overall sense of your academic interests.

6. It’s a great way of making connections & finding potential collaborators.

7. It can provide an archive of your thoughts, ideas and reactions which can later be incorporated into more formal work.

8. It makes it easier for people to find your published work and increases the likelihood they will read and cite it.

9. Its informality and immediate accessibility can help make writing part of your everyday life rather than being a source of stress and anxiety.

10. Its a great way to promote events and call for papers. Particularly if you blog regularly and your blog is connected to Twitter.
11. It helps ensure you can continue to develop strands of thought which, for now, don't have any practical implications but might at some point in the future.

12. It encourages you to reflexively interrogate and organise your work, drawing out emergent themes and placing isolated snippets of commentary into shared categories.

13. It allows you to procrastinate for a further 10 to 20 minutes before going back to NVivo in a useful(ish)way.

14. It helps you build a community around your ideas and interests – Kath McNiff

15. It allows you to start a conversation that other researchers can join using comments – Kath McNiff

16. It’s a tremendous way to access additional relevant information/sources through the connections you make - @drdjwalker

17. It can also be a great way to increase your sample size by crowd sourcing contributions and through public scrutiny help prepare you for the peer review process when the time comes to publish your work - @drdjwalker

18. It’s a great way to get international and cross-disciplinary input and reflections on your research - @jess1ecat

19. It’s a fabulous way to give back to the research community by providing links and resources for other researchers, give and you shall receive - @jess1ecat

20. Reciprocity through blogging and Twitter shares builds your profile but importantly forges lasting connections to fellow researchers - @jess1ecat

21. It allows you to publish ideas immediately without waiting two years while things go through peer review and more peer review and wait in a publishing queue - @CelebYouthUK

22. It’s fun - @CelebYouthUK

23. It’s a faster way to get your research findings out. Journal/book publishing and the peer-review/editing process can take FOREVER - @ajlusc

24. Because C Wright Mills would have probably been a blogger. If not, he would at the very least have been a fan - @ajlusc

25. It is an exercise in disciplined writing. Stuff that doesn’t get used in the bigger thesis project, published papers, and the like, can be glossed for a blog and thrown out for ‘collision’ with others’ ideas. That’s how better ideas get formulated - [1]Ibrar

26. It makes you a better writer - @drfigtree

27. It allows raw uncensored ideas to be creatively expressed before stymied by a prolonged peer review process - @DrBenKoh

28. It allows research findings to be put out there in a format that participants can access, and are actually likely to read - Matthew Hanchard

29. You have control of the publishing process - @DrHelenKara

30. It’s a way to publish information about all aspects of research which formal publishing methods won’t accept, whether because it’s too short, too partial, too controversial, or for some other reason - @DrHelenKara

31. Keeping your own blog can be a daunting prospect, but that’s not the only way: many bloggers are more than happy to accept a ‘guest’ blog on a subject which would be of interest to their readers - @DrHelenKara
32. It helps to be up-to-date with new findings in your discipline, and often with findings in other fields - @udadis-isuperior
33. It’s a means to be FOUND. People google those words and ta-da! - @everythingabili
34. It forces you to think of your ideas in simple language that can be easily articulated. It’s communication practice. - @everythingabili
35. You will have MORE IDEAS – GUARANTEED. The process of blogging almost always sparks off more ideas. How could it not? - @everythingabili
36. No need to study in isolation if you are a distance learning student, blogging is one way to network, share ideas and your studies with fellow students around the world - Lucy Bodenham
37. Over time, a blog has helped me to develop more jargon-free and even poetic writing. I have returned to academic publication with a better language with which to express myself - Kip Jones
38. Blogging helps keep your profile out there if you are experiencing a gap between publications - Jeff Craig
39. Help students know what their (prospective) adviser work on - @dimitridf
40. It is free global advertisement for your programme/university - @dimitridf

Any suggestions for more reasons? Put them in the comments box and I’ll add them to the list & note who they came from. If you’re on Twitter please include your twitter handle.

wordpress or tumblr :-)

Matthew Hanchard (2013-09-11 10:52:02)
One reason for using a blog, that is not covered is that it allows research findings to be put out there in a format that participants can access, and are actually likely to read. For example, I recently ran a short survey. The last question asked if respondents would like me to share the findings with them. Very few respondents are likely to trawl through a dense academic text, or want the raw data. Posting a short summary of the findings in a clear, concise format (lets say a WordPress post) is ideal for this.

The Politics of Circulation, Human Agency and Building Your Own Information Environment 
(2013-08-30 08:00)

In the spirit of [1]structured procrastination I thought I’d put some thoughts down which occurred when reading Dave Beer’s paper on the [2]Politics of Circulation earlier today (weirdly enough, also in the spirit of structured procrastination, it’s like I have some impending deadline that is leading me to find ever more creative displacement activities). In this interesting discussion piece he observes a general tendency across the humanities and social sciences towards a new focus on public scholarship:

> It is becoming increasingly apparent that various academic disciplines, right across the spectrum of the social sciences and humanities, are trying quite hard to develop a more public profile. These struggles take many forms, as do the drivers and pressures that instigate them. Some are based upon governmental imperatives for research ‘impact’ – which is actually shorthand for having measurable impact (Burrows, 2012). Others are a result of cultural changes and the general feeling that public engagement is worthwhile. Alongside these, there are also some broader transformations in the media landscape that mean that researchers are forced to ask: what is stopping me from having a public face?

This leads quite naturally to experimentation which the manifold possibilities afforded by social media for communication and engagement with those outside the academy. However the ensuing “integration of new media forms into research practices” has complex implications which the conceptual space opened up by the politics of circulation helps us begin to unpack. There has always been a politics of circulation for social research but digital communication entails a unprecedented increase in the visibility, complexity and rapidity which characterises this circulation:

> The outcomes and findings of social research have always circulated back into the social world in variegated and often untraceable forms (Savage, 2010). But the changing media through which research is being communicated opens this research up to a new range of possibilities for circulation and re-appropriation. If it gets any attention, it will be commented upon and rated (or 'liked') and, crucially, it will be re-appropriated through sharing, re-tweeting, re-blogging and as sections of the content (particularly visualizations) are cut-and-pasted into other posts for use by other ‘authors’.

Many of the anxieties which surround the use of social media by academics can be usefully understood in terms of the politics of circulation. The article ends with the suggestion that “the greater our understanding of the politics of circulation then, the greater our chances of turning them to our advantage”. I couldn’t agree with this more. I’ve been trying for ages to conceptualise my intuitive sense of social media as at least incipiently political for social science given the present institutional and political environment it confronts. So perhaps what I’ve been grasping for is simply the notion that increased digital literacy amounts to an expansion of academic agency given contemporary politics of circulation? I find the range of free (or nearly free) possibilities currently available quite astonishing. It’s not simply a matter of social media platforms allowing new forms of communication but increasingly it is possible to build your own information environment to exercise what can be a quite significant influence over how your work circulates.

The two tools I have in mind here are Buffer App and IFTTT. I’m running it out of time for writing this post so here’s the explanation of IFTTT I wrote a while back:

> Do you find social media taking up too much of your time? If so then [3]IFTTT could be incredibly useful for you. It allows different social media channels to be connected up using statements of the
form IF [x] THEN [Y] - where X is an event occurring on one channel and Y is an action on another channel. When I found out about this, I was instantly fascinated but it can be quite tricky to work out how to actually use it. That said, I've been using it for months now and I was surprised to realise recently that I actually have 10 IFTTT statements running. These do things which previously were either impossible or only possible by hand. It's an incredible time saving tool and I feel I've barely scratched the surface of it.

Here are the ones I'm currently using:

- Every new post on the LSE Politics Blog (via the RSS feed) gets saved as a new document on my Google Drive.
- Articles I favourite on Pocket (Read It Later) get saved in Google Drive as a PDF
- New posts on Sociological Imagination get their details entered on a spreadsheet archive in Google Drive
- New posts on the Public University website get placed in my Twitter buffer for Sociological Imagination
- New entries on markcarrigan.net go into my Twitter buffer for Sociological Imagination
- New entries on markcarrigan.net go to the Sociological Imagination facebook wall.
- New posts on Sociological Imagination go to the Sociological Imagination facebook wall
- New posts on Sociological Imagination go to the Twitter buffer for Sociological Imagination.
- My favourited items on Google Reader go into the Sociological Imagination twitter buffer.

With a very small amount of fiddling it makes it possible to make some quite complex things happen automatically. For instance every post I publish on this blog gets posted immediately on my own twitter account, on the sociological imagination facebook page and gets added to the Buffer for @soc_imagination to be posted at a later date – it also appears in a RSS feed which, when I sit down to ‘curate’ for the various Twitter feeds I run every few weeks, allows me to then add the post to the Buffers for these Twitter feeds with a single click. It might sound quite complex but the point I’m trying to get across is that it’s entirely automatic once you set it up. These tools make it possible to set up ‘pipes’ between ‘channels’ which ensure pathways of circulation, while also facilitating the easy collection and review of information about the further circulation which each ‘stage’ of this path gives rise to. I’ve been wondering for ages how to conceptualise what has, to me, seemed like an escalation of what online tools are offering and the politics of circulation certainly has promise in this respect. It’s also something I want to think more about in terms of agency in this novel information environment.

Youth Researcher Development Workshop (2013-08-30 10:13)

FINAL CALL FOR PRESENTERS (Please circulate widely)

British Sociological Association Youth Study Group

Researcher Development Workshop for Research Students and Early Career Researchers

BSA Seminar Room, Imperial Wharf, London, Thursday 7th November 2013

The BSA Youth Study Group invites research students and early career researchers working on or with an interest any aspect of youth research to attend a research development workshop.

Building on similar previous events, the purpose of the day is to provide a platform for researchers to present their work in a supportive, constructive and intellectually stimulating environment. Researchers with work at any stage of the research process are welcome to present their ideas, findings or concerns of navigating the field.

Whether planning to present at the BSA annual conference (or any conference or seminar for that matter!), refining ideas and questions through the literature review, or preparing to seek out avenues to disseminate your work in journals in the field, the day will provide a safe space for participants to receive feedback and help them develop their research in a range of different ways.

The process will be supported by advice and guidance offered by established scholars in the fields of Sociology of Youth and Youth Studies.

The day will also provide a useful networking opportunity to meet other people researching in similar fields. With this in mind, delegates not wishing to present but who would like to take part in an observational capacity or share and discuss their ideas more informally are very much encouraged to attend.

Places are limited, but every effort will be made to include as many presenters as we can.

If you are interested in presenting your work at this event, please email a very brief outline of your research (maximum 150 words) and an indication of your stage of research and the primary issues you would like to develop (presentation skills/content, refining questions, dissemination etc) to [1]s.d.roberts-26@kent.ac.uk before September 5th, 2013. This will enable us to cluster or stream the presentations effectively.

Similarly, if you wish to attend without presenting or have any other questions about attending the event please feel free to email.

Fee: BSA Member £15 / Non Member £25

Hope to see many of you in November.

Dr Steve Roberts, University of Kent

BSA Youth Study Group Co-convenor

Scheduling my academic life (2013-08-30 18:22)

I really enjoyed Raul Pacheco-Vega’s recent post on how he schedules his work life ‘to the very minute’ so I thought I’d offer my own reflections. I’m intellectually fascinated by how people organise their everyday lives for both personal and academic reasons. I used to have massive difficulties with procrastination and focus. I still do really but in a different way. It’s hard to convey how much I identified with Raul’s description of his experience: “I learned early in my life that I had a really broad range of interests, and that if I didn’t rein in my own impulses, I would be scattered and disorientated before long”. He seems to have learned this a lot earlier than I did though.

I rely on two pieces of software: Goal Streaks on my iPad and OmniFocus on my iPad, iPhone, desktop and laptop. The former keeps track of things that are important to me but not urgent (stuff like going to the gym, blogging, meditating etc) which otherwise get squeezed out by the exigencies and distractions of everyday life. It’s based on the so-called ‘Seinfeld Method’ of instilling habits by marking the daily completion of associated tasks on a calendar by crossing out that day. Thus you measure ‘streaks’ and compete with yourself to surpass your ‘best streak’. The psychological assumption underlying this is that you’re much less likely to avoid the task in question (“I don’t want to go to the gym today, I’m tired and it’s raining outside” or “I don’t want to write 1000 words today, I’m travelling for four hours and the seats on London Midland trains are really uncomfortable to type in”) if you have a visual representation of your past completion of the task for X number of days. I have no idea if this is universally true but it certainly works for me. Habits you seek to form are what Charles Taylor would call second-order desires i.e. “I want to want to go to the gym”. Goal Streaks gives added weight to the second-order desire by visually embedding it in a representation of progress over time. In doing so it avoids the familiar (akratic) situation of the first-order and second-order desire being in direct conflict e.g. I don’t want to go to the gym but I want to want to go to the gym.

OmniFocus has the steepest learning curve of any software I’ve ever used. It took me well over a year to learn to use it properly but I now couldn’t imagine living without it. It’s based around the principles of the Getting Things Done (GTD) system which in essence amount to: (1) write everything down (2) regularly process what you’ve written down (3) either discard what you’ve written down, file it for future reference or turn it into an actionable task. The software allows any idea to be immediately captured wherever you are. I find this is often on my phone and, given my continued inability to type accurately on an iPhone, it’s usually in garbled short hand. The point is to distinguish having the idea from evaluating it and working out how to put it into practice. It’s easy to distinguish these as cognitive tasks but, in practice, they often run together – OmniFocus allows you to file fringe thoughts (as C Wright Mills might say) and stray ideas in a reliable inbox, accessible from anywhere, which can be revisited later to evaluate the ideas and draw out their practical implications. It can sound very sterile when written about in the abstract but my experience of the process is one which can facilitate an intensely creative orientation towards ideas. In an important sense GTD is what I’d call a ‘reflexive technology’ (i.e. an ideational construct which serves to augment our capacity for reflexive deliberation) and OmniFocus is the technical means through which this is accomplished on a practical day-to-day level. I used to do much the same thing with a notebook but it was pretty messy and ineffective compared to using OmniFocus.

My point is not to sing the praises of OmniFocus and GTD (though I do like doing that with both) but rather to try and illustrate how I seem to have an equal but opposite approach to Raul. I’ve tried scheduling everything down to the minute in the way he does and it just doesn’t work for me – I rapidly become preoccupied by whether or not I’m doing the thing I’m ‘supposed’ to be doing at a given moment (usually I’m not) and the constructed order soon starts tumbling down around me. What I love about OF + GTD is the flexibility it affords – it incorporates a similar degree of organisation but it decomposes the rigidity of an intricately planned schedule into concrete tasks. So for each day OF produces a to do list based on the tasks, projects and start/end dates I’ve entered into the software (building
from the inbox where the ideas go). Some tasks are recurring (e.g. updating the various websites and twitter feeds I manage), some are one off but many are sequential aspects of an overarching project §. The software lets you plan a project in terms of detailed step-by-step tasks and then only shows you one task at a time. The database might contain thousands of discrete tasks but it only shows you a small number at any given time – I rarely have more than 6 or 7 items on my to do list for a given day. What makes the software so hard to get to grips with is the challenge of making sure the small number of tasks it shows you at a given moment in time are the right tasks. The software simply offers tools for registering, organising and representing what you want and might want to do. It doesn’t answer the attendant questions for you but it does force you to think them through in a way which you are otherwise unlikely do.

How do you schedule your academic life? If you’d like to share your reflections then get in touch: Mark AT MarkCarrigan.Net

1930
I have no musical pedigree, or ability. I have experienced this 'lack' the more so since moving to the village of Mickleham, which seems to have more than its fair share of talent. Stand-out musicians include Clare Kennington, a superb soloist on the violin, and sister Georgie, whose jazz singing I have enthusiastically blogged about already. Annette has joined an impressive choir presided over by Juliet Hornby, with Lynda Chang (and sometimes Tracy Kennington) accompanying on the piano, so I am aware of what 'amateurs' can do. (I should add here that David Kennington too shares the family's gifts and more than holds his own in the choir.)
