Welcome to the Sociological Imagination (2010-06-01 16:46)

This magazine stands as a consciously tentative and perhaps fleeting first step towards a much larger and longer term aim. A vague idea became a concrete plan as a result of a BSA funded day school ([1]The Politics of Sociology) which took place at the University of Warwick in January 2010. What struck me most about that highly stimulating day was the near tangible sense of energy and enthusiasm which a diverse range of attendees brought to the event. It was a rare occasion when usually private causes became the subject of public discussion and, furthermore, the day’s discussion was framed by the idea of negotiating between the two. It hinted at the enormous critical force and transformative energy which the constraints of academia too often leaves inchoate and unarticulated. The Sociological Imagination represents a cautious attempt to build on this day school and offer an ongoing forum within which the ethical and political commitments underlying much sociology can be explicitly and passionately linked to the actual practice of social research itself.

Pierre Bourdieu (2003) argued that the energy and expertise of social science could be rescued from its self-imposed confinement in the ivory tower of academia if the anachronistic opposition of scholarship and commitment (a 'scientifically unimpeachable form of escapism') was left behind. Under such conditions social science could oppose the 'reactionary think tanks, which support and broadcast the views of experts appointed by the powerful' with the research of critical networks which bring together individual social scientists into a 'collective intellectual' capable of establishing and pursuing its own aims and agendas. Bourdieu offered a potent vision of the emancipatory potential of a politically liberated social science:

"It must work to produce and disseminate instruments of defence against symbolic domination that relies increasingly on the authority of science (real or faked). Buttressed by the specific competency and authority of the collective thus formed, it can submit dominant discourse to a merciless logical critique aimed not only at its lexicon ('globalization', 'flexibility', 'employability' etc) but also at its mode of reasoning and in particular at the use of metaphors (e.g. the anthropomorphization of the market). It can furthermore subject this discourse to a sociological critique aimed at uncovering the social determinants that bear on the producers of dominant discourse (starting with journalists, especially economic journalists) and on their products. Lastly, it can counter the pseudo scientific authority of authorized experts (chief among them economic experts and advisors) with a genuinely scientific critique of the hidden assumptions and often faulty reasoning that underpin their pronouncements [...]"

It can organize or orchestrate joint research on novel forms of political action, on new manners of mobilizing and of making mobilized people work together, on new ways of elaborating projects and bringing them to fruition together. It can play the role of midwife by assisting the dynamics of working groups in their effort to express, and thereby discover, what they are and what they could or should be, and by helping with the reappropriation and accumulation of the immense social stock of knowledge on the social world with which the social world is pregnant."

Particularly when it comes to the positive functions which Bordieu describes, it’s difficult to see a path from here to there and even more difficult not to feel naive in hoping for such a progression. Nonetheless this is what the Sociological Imagination hopes to do through functioning as an open forum within which graduate students, early career researchers and established academics can establish networks, coordinate activity and collectively negotiate the politics of sociology. Please [2]make contact if you would like to get involved.
This magazine stands as a consciously tentative and perhaps fleeting first step towards a much larger and longer term aim. A vague idea became a concrete plan as a result of a BSA funded day school ([1]The Politics of Sociology) which took place at the University of Warwick in January 2010.

---

Kate Purcell (2010-06-12 01:32:09)
Please add me to the mailing list. I was completely unaware of this group and would have loved to attend the meeting (-obviously I don’t read Network closely enough, which is kind of ironic given that I used to edit it many, many years ago. Partick Ainley put me onto you. I am actually at Warwick, a Professor in the IER.

Whose Order is it Anyway?: Imageries-cum-Rhetoric of (Anti)Globalization (2010-06-01 17:08)

Politics as a mediating act in society, notwithstanding its various definitions and descriptions, is not only a multidimensional activity; it is multivocal too. Thus, relativism lies at the core of the 'political'. It is because politics comes to life when we interact with one another and confront others’ ideas, perspectives, opinions and values on issues of common concern.

Communication being a social process of meaning generation carved out of such interactions, multivocality among numerous interlocutors is absolutely indispensable in the process. Politics with its simultaneous thrust on control, negotiation and bargaining, has communication as its source, content and on occasions, even as goal. Yet, in the contemporary era, amidst much hype about the Information Age and Communication Revolution, the great paradox lies in the contraction of the communicative space insofar as politics is concerned. The ‘subalterns’ (a la Gayatri Spivak) can speak, the members of the ‘political society’ (a la Partha Chatterjee) do act and the ‘counterpublic’ (a la Nancy Fraser et al) do communicate, as various segments of the ordinary people— marginalized and excluded. However, the dominant hegemonic forces, with leverage over the dominant modes of communication, tend to ensure that the marginal and the excluded and their struggle for articulation remain both invisible and inaudible. This brings us to the complex and sensitive issue of the communicative dimensions of alternative politics.

The main contention of this essay rests on two contending and contrasting concepts— ‘Global Village’ and ‘Another World’. The shrill rhetoric of Global Village, sponsored by the dominant political economic forces having overwhelming control over the distribution of wealth and power in the world, seeks to steamroll and marginalize the different and dissenting voices while the cry for ‘Another World’ privileges multiple and differentiating voices. The latter, notwithstanding the hurdles that we would mention in the ensuing discussion, is of much importance because it takes us away from the pessimism which arises, as in the case of Rajni Kothari, out of the idea that there is an "erosion of alternatives at different thresholds of human enterprise".

The problematic idea of the Global Village— originally conceptualized in the early 1960s by Marshall McLuhan, the maverick sociologist, in The Gutenburg Galaxy, and extended beyond its original attributes by the shakers and movers of the so-called New World Order, is not only found on a global scale among the powers that be— the political class and the bureaucracy. Paradoxically, it is also much prevalent among a large section of social science scholars, including, most ironically, among those specializing in (Political)Communication Studies. In their search for the disciplinary status and in seeking to emulate the more rigorous social science disciplines the scholars of
Communication Studies have unleashed a process of ‘disciplining’ which in turn has steadily divested them of the ability to reveal the complexities of ‘alternative’ communicative forms, symbols and relations— marked by as varying issues as human capacities, practices, styles, strategies, languages, discourses and images.

The ancillary contention of this essay is that the search for the transformatory axes in politics cannot be realized by any ready-made ‘alternative’ as it can only happen through painstaking nurturing of different and diffused non-dominant/ non-mainstream communication channels which question and contest the dominant order of things. Harold Lasswell, though by no means a scholar of alternatives, in a classic essay on “The Structure and Function of Communication in Society” (1948), had provided a pioneering formulation of political communication by advancing a set of apparently simple but extremely potent questions: “Who said what when and how?”. Keeping in mind that ‘alternative’ is a contested and somewhat slippery term, when we embark on the visualization of politics beyond the dominant- mainstream forms we can extend the Lasswellian formulation to pose the moot question: whose order is it any way?. In their long and relentless efforts to theorize politics the social scientists in general have been excessively long the Positivist-Empiricist mode and the Modernization Imperative in which the contesting modes are regarded as illegitimate or redundant. In this mode political communication was mainly understood in terms of voting behaviour and campaign styles. The communicative foundation that supported such exercise was based on a linear model of information diffusion— often described as the Bullet Theory— by which the people are supposed to be the passive target-cum-recipients of the messages sent by the political actors. In this scheme the subtler forms of "manufacturing consent” were not addressed. The later postmodern influence, notwithstanding its tirade against the centralization of power and the Bullet theory, has not brought a radical change in the prevailing scenario because in its denial of the grand narrative it does not address the mechanics of any macro order.

In the days of the inequitable globalization we increasingly hear the announcement of the “death of utopia" and the "end of history", which emerges not only from the act of colonization of the political and economic institutions but also of the aesthetic and expressive faculties as well (Sinha, 2010). The latter breeds “ monoculture of the mind”. The Global Village project not only effects material exclusion of the vast majority of people it also leads to symbolic exclusion which is effected through the denial of the “power of renaming”. The very idea of the Global Village is much hyped because it perfectly serves the interests of the globally dominant political forces to hide the tremendous disparities and discriminations. Who says that discriminations do not exist in village?

It necessarily follows that any meaningful and effective exploration of the possible and plausible alternatives to the fast-paced construction of the Global Village needs a simultaneous focus on the role of communication both as a facilitator of status quo and as a means of change. As a power-laden process of meaning generation and meaning circulation, through which the ‘reality’ is constantly produced, maintained, transferred and transformed, the process of communication, on the one hand, facilitates production and reinforcement of the dominant order; on the other hand, it also gives birth to and intensifies what we would prefer to call the zones of exclusion— both material and symbolic— of the dominant scenario to provide clues to possible routes of transformation.

In this backdrop the need of the hour is to be aware of the dangers of the ‘ritual’ communication— which enforces ‘voluntary’ submission to ‘appropriately’ patterned behaviour— by exploring ways and means to critique and subvert the high-pitched process of mainstreaming. But it has to be done by being in the mainstream and not by disengaging from the prevalent order or by engaging in a head-on-collision wit it. Here we have in mind the "De-linking” thesis suggested by Samir Amin and the “cultural dissociation” thesis advocated by Cees Hamelink— both of whom had once advocated detachment respectively from the prevalent international economic order and international communication order but later revised their stance to explore alternatives from within the prevailing order itself( Amin,2003; Hamelink, 1994). Their earlier theses, so to say, were radical and attractive but impractical. If the successive protest movements against the current show of globalization raise the possibility of a "new dawn" in the struggle for alternatives they remain overwhelmingly struggles not only by communication but in communication. If communication is the infrastructural backbone of the discriminatory mainstream politics it would remain so for progressing towards any viable alternative global order as well. The fundamental distinction between the two cases
would be that in the mainstream form— as illustrated by the idea of Global Village— a singular kind of communication 'order' is being promoted, but the search for alternative politics should rely on diverse orders which question the mainstream politics.

Then again, the task ahead is not easy. Thus, Tejaswini Niranjana aptly observes: "Within the new globalization, the paths to the first world will be more clearly defined than ever, rendered easier to traverse. Other locations on the map will appear all the more blurred, all the more difficult to reach." [Italics mine]. Then again, as we have hinted earlier, the issue of alternative is not a simple one and any attempt to address this issue should avoid simplistic and facile generalizations. At the core of this issue lies the question of alterity of alternatives. In most studies on alternative modes, in the zeal to produce one, the alterity question is not addressed adequately, if at all, with the result that in these studies there is some kind of taken-for-grantedness about the specific kind of alternative being advocated.

If alterity connotes difference from particular others, did the alternatives that are being regarded as so, have sufficient alterity in the sense of having completely different constitutive rationale and order? Or are they basically trying to advocate a supposedly alternative order on the basis of the same constitutive logic, say of development? If, for instance, the erstwhile socialist countries wanted to constitute an "alternative social order" by following the capitalism-friendly logic of industrialism and technologism, could that ever ensure the alterity of the much-publicized alternative? A detailed discussion of this predicament of the received socialist paradigm is beyond the scope of this note but we need to refer to it as an important case to substantiate the point.

To reiterate, the translation of the imaginary of Another World to reality is to be fraught with caution. Let us take just two instances while there are many more to substantiate the point. First, the case of the World Social Forum (WSF). At the ground level this is quite evident in the successive meets of the WSF numerous voices, often in conflict and contention with each other, came under one rubric to usher in dialogue on "Another World is Possible". The defining feature of the WSF was aptly described by Samir Amin, one of its prime exponents, in this manner: "We have to look at what is new in a different way". With the participation of the trade unions, peasant organizations, women's organizations, youth organizations, indigenous people's organizations, non-government organizations, voluntary agencies and so forth— all coming together without any compulsive desire for codification of the discourses on dissent— the WSF served as a platform for the articulation of a breathtaking range of views. Yet, in course of time the WSF has been subject to criticism that it has been co-opted by the mainstream forces and in the process it has been blunted. The criticism includes the point that a number of participants in the WSF were there to raise the bogey of 'alternative' to get funding.

In the academic arena there is the need to accord greater thrust towards viewing ordinary people as potentially 'active actors', rather than passive, obliging masses. No less important, the stress should also be on the tentative and 'unfolding' nature of explanations as distinct from 'complete' and instantaneous ones. Departing from the third world social scientists' frustration, caused by the fall of the erstwhile 'model' socialist states and the decline in the Non-Aligned movement, which as we have mentioned earlier, would lead even Rajni Kothari, a pioneering critique of the mainstream order, to lament the 'world without alternatives' there is a gradual realization that where there is dominance, there is resistance. The old adage incidentally may well be the mantra of alternative politics for nor just challenging but reshaping the existing world, privileging the celebration of human agency and creativity— with the amplification of the voice of the marginal as the point of departure.

Lost Generation? Paying more for less (2010-06-01 17:24)

With customers queuing to get into HE, it would be irrational from a business point of view for government not to raise fees as high as it can. It is therefore almost inevitable that – urged on by the Russell Group – the recommendations of the Browne review will be accepted and fees raised for 2011 entry variably by course and institution to create a free market in undergraduate HE to match that already existing for postgraduates and overseas students. This is notwithstanding the previous anti-fees policy of the Lib Dems for whom so many students apparently voted.

What concerns government is how much the market will bear – between £5,000 and £7,000 per annum by most current estimates, though with the Magic Five (Oxbridge, Imperial, UCL and LSE) able to go over £20,000 for nearly all their courses. Oxford has been saying for many years it needs this much just to cover its annual undergraduate teaching costs and it is still cheaper than the private school fees that the parents of approximately half its entrants have paid previously.

Despite promises of bursaries and scholarships, such fees will take higher level education beyond the aspirations of most school leavers who are unwilling to shoulder the burden of this additional debt. As the school leaving age rises to 18 in 2015, government clearly expects them to settle for cut-price, second-rate provision in local former-polytechnics, or to enter apprenticeships without jobs in FE colleges as these predictably replay 1980s Training Without Jobs (Finn 1987).

Meanwhile, outside the university bubble

Youth unemployment for 16-24 year olds is around one million with one in four out of work for a year or more and one in three 16 year-old school leavers unemployed. Total unemployment is however only just over two and a half million, even as measured by the Labour Force Survey that gives a higher figure than the Claimant Count which government usually quotes. Although at 8 %, this is the highest since 1994, it is moderated by the numbers of people who are working part-time as well as by the increasing numbers becoming students. The Office of National Statistics confirms this: of the 8.1 million it lists as ‘economically inactive’, 2.3 million and rising fit this category.

What seems to happening is that many people – including many students – are working part-time rather than signing on. This includes those volunteering and on unpaid internships and placements. Students who have worked their way through sixth-form, college and university continue in this part-time pattern while racking up increasing debt for further training and other courses, including the large numbers who now go on to postgraduate level.

This is consolidating a new pattern in employment with five types of ‘graduate jobs’ described by Elias and Purcell in 2004, starting with ‘traditional graduate jobs’ that include medicine, higher education and science (12 %), alongside ‘modern graduate jobs’, eg. in management and IT (13 %), plus ‘new graduate jobs’, eg. marketing and sales (16 %). What Elias and Purcell call ‘niche graduate jobs’, eg. in leisure and nursing, are also holding up at 21
% of graduate destinations. However, it is 'non-graduate jobs' that are the largest occupation for 38 %, even three years after graduation. With so many in this last category, a further tranche of jobs – in parts of retailing for instance – may become open only to degree holders.

This has a domino effect on those who would previously have taken these jobs. As graduates take A-level jobs, those with A-levels take GCSE-level jobs and the unqualified have nowhere to go. Yet, while the relative advantages of being a graduate might hold up in a ‘labour queue’ for employment, the ratio between graduate earnings and graduate costs will fall as the balance between well-paid permanent employment and casualised ‘Mcjobs’ continues to tilt, making the undergraduate cake no longer worth cost of the fee candle.

**Overschooled but undereducated to be overqualified and underemployed**

No one would seriously claim that the rush of applicants for UK university and college places represents a new found enthusiasm amongst the nation's youth for higher learning. Nor that the record levels of qualification of the applicants represents a new accumulation of knowledge or wisdom. Indeed, grade inflation – as indicated by the ‘labour queue’ described above - is recognised by all but government, university Vice Chancellors and the heads of exam boards. A generation of students and teachers at school, college and university are certainly studying harder, but not necessarily learning more.

For many students and their teachers, education is an alienating and instrumental affair. Students learn what they have to, when they have to and in many cases by whatever means they have to. The perception of this situation is not lost upon them, as a final year Education Studies student at the University of Greenwich summarised in 2004:

‘Students learn to connect their self esteem and what they may achieve in later life to their exam results... Over-assessment has made subject knowledge and understanding a thing of the past as students are put through a routine year after year, practising what exactly to write and where in preparation for exams’.

This cramming is endemic: the traditionally English system of selectivity in education now goes on much longer, lasting from primary to postgraduate school, with students in 'elite' universities churning out essays just to keep ahead of the competition.

New Labour’s widening participation policy with its target of 50 % of 18-30 year olds in some sort of HE was nearly met for women at least. It proved popular with parents who saw their children being given ‘chances’ they did not have. Yet, as an authoritative summary of the results of this initiative declares, ‘These policies have not led to fair or equal access to equal types of higher education or outcomes in the labour market’ (David 2009, 4–5 with original emphasis). Instead, as repeated in conclusion with the same emphasis, ‘systemic and systematic forms of inequality for individuals and institutions across subjects and levels of education have increased since 2000’ (150). Indeed, the entrenched tertiary tripartism between Russell, Campus and New universities reflects exactly the polarising divisions in society, so that the phase of widening participation now drawing to a close may only have served to soften up the
system for a free-market in fees differentiated by subject and institution.

**What is really going on**

Our book, *Lost Generation? New strategies for youth and education*, reviews the relationship between young people, the education system and the occupational structure. We argue that the post-war class pyramid has been recast in the context of persistent unemployment. The new technology and the growth of services has enabled automation and outsourcing while concomitantly, new management techniques have reduced many of the established 'professions' – like teaching – towards the condition of waged labour.

Education to all levels has been complicit in both ‘upgrading’ occupations in expanded services, sales, middle-management and administration and ‘degrading’ largely part-time and low-paid jobs at the base of the occupational structure with no or largely worthless vocational qualifications.

Rather than resembling the ‘diamond’ that would result from continued absolute social mobility pulling more into the middle, the class structure has gone pear-shaped. This is reflected in a number of recent statistical studies of the occupational structure which show large numbers of people relying on poor wages for poor work. At the same time extremes of wealth and poverty have polarised.

The result for increasing numbers of young people is like climbing up a down escalator where you have to run faster and faster simply to stand still. This is what fuels the hysteria over educational competition for academic success. In schools, colleges and universities you are expected to work more and more to achieve less and less, so that ‘You have to go to university to get what 30 years ago you didn’t even have to have A-levels for’, as an FE student put it to us. Rather than helping young people to ‘move up’, educational qualifications are now essential to avoid falling to the bottom.

The disappearance of the youth labour market has convinced young people and their parents of the necessity of staying in full-time education for longer. This results in a ‘prolonged’ transition to adulthood – that is if they are able to make a transition at all. In the absence of work, education has not only become the main instrument for social control of youth but is also a new source of division amongst young people. Students are divided from non-students but also amongst each other in a competing hierarchy of FE/ sixth-form and HE institutions. Only those from elite universities are likely to be guaranteed the ‘graduate jobs’ above. Up to one in three are likely to be ‘underemployed,’ having to enter occupations previously performed by non-graduates – assuming they find a job at all. With up to one third of men and one fifth of women between 20 and 34 still living with their parents, dependency continues for much longer as student debt accumulates and the housing market remains difficult/impossible to enter.

**Overcoming individualised perceptions**

130
The competitive ‘standards agenda’ in schools and the ‘widening participation’ programme in F &HE have individualised perceptions. Thus, it is not surprising that surveys and interviews show students, even though they are aware that different types of courses attract people with different social characteristics, consider class differences as unimportant in the determination of their destinies and see their college or university as ‘treating everybody the same’. One implication of being asked to take responsibility for their own learning is that students regard their own failure as the consequence of individual inadequacies so that ‘You only have yourself to blame’.

While recognising the role of business and mass media in the promotion of a new identity culture, we dispute post-modern claims that the disappearance of the ‘old certainties’ of class from the consciousness of young people will result in their ‘forcible emancipation’. Neither is it the case that inter-generational inequalities are now the main dividing line within society as Willets alleges (2009).

Instead, we argue that even though young people may not be ‘class conscious’ in the traditional sense, class differences in economic wealth continue to determine access to the ‘good schools’ that ensure class advantages are maintained. For example, the 7% of the population (12% in London) still able to afford private education can rest assured that not only are 50% of ‘A’ grades at A-level achieved by this sector, but that one in three of those being privately educated will gain three grade ‘As’ so that a place at a Russell university, while not guaranteed, is much more likely.

Even if average student debt continues to rise along with fees, up to 100,000 students are predicted to be living in ‘hand out homes’ bought by their parents, while those from routine/manual backgrounds receive less than half the amount from their parents compared with those from professional/managerial backgrounds. They are also more likely to be living at home and attending local universities to save money, so that many of these ‘new students’ to whom participation has been widened have more in common with ‘non-students’ than with their campus-based counterparts.

As high rates of youth un-/underemployment persist, we conclude state intervention is urgently required in the youth labour market. We also argue that, despite the divisions between them, young people have the potential to take collective action in new alliances between teachers and taught to change the way that education is organised.

Kate Purcell (2010-06-12 01:52:46)
Agree with most but not all of this. The problems are the widening of inequalities of opportunity between those who do and do not ‘benefit from’ HE, the escalating costs and implications discussed above, and the huge disparities within HE in the benefits they are able to access if they do go. However, most DO perceive, by default, that they gain a fair bit (our surveys have indicated so far that they would mostly do exactly the same again, even despite difficulty in obtaining employment, or appropriate employment). Yes, you go into retail and catering management via universities and colleges rather than by getting a job and working your way up, but is that altogether a bad thing if they do get jobs they think appropriate for somenbody with their skills and knowledge (and the majority - though not all - do after c.3years - not all or most of which is spend trying to ‘develop careers’)? Interesting - and this one will run and run. See Futuretrack http://go.warwick.ac.uk/futuretrack (I think) where we are tracking 2005-6 UCAS applicants through HE from application to two years after completion of undergraduate courses. If you know any 4th year undegrads approaching graduation who are not participating in this survey, please tell them to contact me and we’ll send them a link to the Stage 3 survey. This is an independent survey and migh even provide better evidence than hitherto available about what happens, who gets good and bad jobs, how and why - viz. qualifications, attributes and socio-economic background, gender, ethnicity, kind of school they went to, region they live in etc...

[...] and Patrick have written about these issues for Sociological Imagination in the past: see their first and second articles for more commentary on these [...] 

Post-PhD, my career as a sociologist has not been a conventional one. I’ve done much of what sociologists do on a daily basis: I’ve taught in universities, conducted research projects, published scholarly articles and books, applied (sometimes successful for grants), attended conferences, reviewed journal articles and examined PhDs. However, for various reasons, I have never held a full-time academic position, instead constructing a ‘portfolio’ career that is at its best exciting and flexible and at worst insecure and low-paid. Further, I also do a lot of work outside the academy, including writing for magazines and blogs and conducting research in the Jewish community.

When I try and articulate what it is that ties the disparate threads of my career together, the word ‘public intellectual’ often springs to mind. I resist it though: in the UK at least the term tends to be bestowed rather than claimed for oneself; we live in a society where to describe oneself as an intellectual risks hubris. In this country at least it is only those at the absolute pinnacle of academia – Richard Dawkins, John Grey and the like – that tend to be called public intellectuals.

Despite the problematic connotations, a public intellectual is still something I aspire to me. This is only in part because the term helps me make sense of my often baffling career path. It is also because I don’t want to be defined entirely by the fact that I do academic work. One of the most unfortunate developments in sociology has been that the identity of sociologist is almost exclusively taken on by academic practitioners of sociology. This is in contrast to
psychology, for example, in which self-defined and publicly recognised psychologists work in universities, hospitals and in many other situations.

The academic confinement of sociology is a symptom of a wider – and much noted - problem of the isolation of academic knowledge within the universities. The spread of impenetrable jargon, managerialism and bureaucratisation have all played their part in producing this situation. The RAE has effectively penalised academics for attempts to communicate with non-specialists (the effect of the upcoming REF’s ‘impact’ agenda remain to be seen). Despite this, academics can and do become public figures but, depressingly, for reasons I have never quite been able to fathom, sociologists do not have the public profile that historians, psychologists and – above all – natural scientists do. Laurie Taylor is very much an exception.

So I was pleased to discover Katharyne Mitchell’s lively and inspiring collection of essays by public scholars. Few of the contributors describe themselves as public intellectuals, although some do embrace the term public scholar, yet they all embrace a vision of scholarship that is intrinsically tied into public activity and communication. Contributors range from well-known figures such as Howard Zinn and Terry Eagleton to less well-known scholars (and it would have been nice here if there had been brief bios for each of them – a surprising omission). Reflecting the interests of the editor, many of the contributors are geographers, but sociologists appear too, most importantly Michael Burawoy who used his presidency of the American Sociological Association a few years ago to argue forcefully for a ‘public sociology’.

‘Practising Public Scholarship’ provides a useful resource for those thinking how to push forward the public dimensions of their work. Some contributors recount experiences of teaching beyond the academy (Paulo Freire’s ‘Pedagogy of the Oppressed’ is quoted several times); some talk about ‘action research’ that involves research subjects in their work; others discuss their political activism and how it can complicate and enrich academic life. While most contributions are autobiographical, some also offer advice for aspiring public scholars – I particularly liked Dennis Raphael’s uncompromising ‘rule’ for being a public scholar ‘Be true to your beliefs. Have no fear’.

It was another rule from Dennis Raphael’s list that raised the most difficult question concerning this book: ‘Get tenure’. Many of the contributors to the volume mention tenure as providing a vital degree of security in conducting public scholarship and for some their public scholarship did not develop until after they got tenure. But what about those who haven’t got or will never get tenure? It is here that the collection reveals its North American bias: in the UK and in many other countries we do not have tenure. It’s a salutary and depressing fact that practically no one in the collection even mentions the need or possibility of changing the academy itself. I can see why you might not want to bite the hand that feeds you within a university system that allows for tenure, but there is no ignoring the fact that in the UK the very possibility of public scholarship is impeded by the university system itself.

Nor does the book challenge the conventions of academic publication. This collection of shortish, punchy essays by gifted and often controversial communicators is eminently readable and deserves to be read widely. But academic publishing can reduce even the most accessible book to obscurity: while there is a paperback edition the price is steep, the cover is dull as ditchwater, there’s no list of contributor’s bios and the book was barely publicised (I found out about it by chance, nearly 2 years after publication). The ever-present requirement for academics to publish in academic publications, together with the lack of imagination of many academic publishers, is a potent force for restricting academic knowledge to the ivory tower.

The unspoken message running through ‘Practising Public Scholarship’ seems to be to find an academic base, complete the requirements of academia and then reach out to the public. This is undoubtedly a practical and achievable message however I found myself frustrated by the lack of attention to the need to change academia itself. Maybe this is too hard and maybe we just have to live with the university system as it is. Still there is plenty that can be done by academics to foster public scholarship and this book gives many examples and some good advice as to how to do it. In my attempts to be a public sociologist I will certainly be drawing on the various examples of the book’s contributors.
Keith Kahn-Harris is, amongst other things, an Honorary Research Fellow at the Centre for Religion and Contemporary Society, Birkbeck College. His website is [1]www.kahn-harris.org

Benjamin Geer (2013-09-26 19:46:36)

"Get tenure" is no longer a realistic strategy in the US, either, because tenure-track jobs are being phased out, and teaching is now mostly done by adjuncts hired on a per-semester basis, for less money than fast-food workers, with no job security, much like instructors on zero-hours contracts in the UK. The urgent question, which this book apparently doesn’t address, is how to survive as a critical sociologist when stable academic employment is vanishing.

Middlesex Philosophy Campaign Update (2010-06-11 12:42)

For the last month and a half staff and students in the Middlesex Philosophy department have been waging a campaign against its closure. As a hugely successful department, its mandated closure by the university’s administration (background [1]here) placed those involved at the forefront of the fight against marketization within British higher education. The Dean of the School of Arts and Humanities at Middlesex acknowledged the department’s research success but argued that it made no ‘measurable’ contribution to the university as a whole and that the university could generate more revenue if the department was closed and resources were switched elsewhere.

It seems there has been a partial victory. More details can be found [2]here. This is from the update that has been circulated:

The campaign to save our philosophy programmes has just won a partial but significant victory: [3]Kingston University in south-west London announced today that it will re-establish our [4]Centre for Research in Modern European Philosophy (CRMEP) at Kingston, by employing the four senior staff in Philosophy at Middlesex (Eric Alliez, Peter Hallward, Peter Osborne and Stella Sandford). Our MA and PhD programmes (full-time and part-time) will be re-launched at Kingston this September, and all current post-graduate students will be invited to move along with the staff. Institutions in France and Germany have also made significant new proposals for collaboration with the CRMEP, which may allow it to expand the European dimensions of its work considerably in the near future.

Call for Contributions: Social Research in an Age of Austerity (2010-06-12 12:18)

A new coalition government pledges an unparalleled age of fiscal austerity and a new universities minister promises radical 'reform' of higher education: what does the future hold for the British university in an age of fiscal austerity?

What is this political and economic climate likely to mean for social research? How can social researchers adapt to this climate? How can social research assist in understanding and resisting the imposition of austerity?

Articles and polemics are invited which relate to these themes. Submission details available [1]here.

Ben Baumberg (2010-07-22 08:08:38)
The link doesn’t work here - can you update it? Thanks! Ben

Sociological Imagination (2010-07-22 11:17:23)
Fixed! Thanks for pointing it out

The Idea of the University (June 24th to 26th) (2010-06-13 15:16)

The Idea of a University will be exhibited at Mead Gallery in the [1]Warwick Arts Centre at Warwick University, 24-26 June as part of [2]Fierce! Festival’s Interrobang: Regeneration ([3]see here).

The Idea of a University maps the spatial and historical generation and regeneration of the University of Warwick from the 1960s to the present day. Drawing on archival and interview data, the multi-media installation and events will enable visitors to explore and interrogate how ideas and ideals about the University have shaped, and continue to shape, the geographical, cultural, political and intellectual landscapes of its border location on the outskirts of Coventry.

The exhibition probes wider questions about the social, political and pedagogic spaces of higher education.

The research, known as the Spaces and Stories Project, has been carried over the past year by a collaborative team of students and staff in Sociology and History at the University of Warwick. The project has been jointly funded by the Reinvention Centre for Undergraduate Research and the Higher Education Academy’s History Subject Centre.

The exhibition will be open from 11 am -11 pm, Thursday 24 to Saturday 26 June. During the three days, in addition to the exhibit, there will a series of participatory discussions, salons, celebrations, artistic and activist events: some planned, some spontaneous. To receive a programme of events and to receive an invitation to the opening party, please [4]email.

Review of 'The Meaning of David Cameron' (2010-06-14 08:00)

It might come as a surprise that this is not actually a book about David Cameron. It does however shed more light upon the political and historical significance of the new Prime Minister than any book about the man himself ever could. As Richard Seymour puts it, “the real subjects of this book are the historical forces galvanising the Tory leadership ... the deep structural transformations that have taken place in the UK in the generation since the zenith of Thatcherism”. The Meaning of David Cameron is a broad and compelling survey of the last 40 years of British history which emerges at a profoundly opportune moment: the neo-liberal project stands in crisis at the same time as the apotheosis of this project ascends to high office.

The relative brevity of this book is belied by its laudable scope. It is an ideology critique taking aim not just at ‘progressive conservatism’ but the broader language of modernization and meritocracy which prepared the discursive ground for this latest vacuous instantiation of such rhetoric. It is an economic and social history offering a potent and comprehensive account of the structural and cultural changes which facilitated the emergence of Thatcherism, New Labour and now Cameronism. It is a passionate rehabilitation of the conceptual categories of class and struggle at a time when such theoretical tools are less in fashion and more in need than ever before.

The book is divided into three chapters respectively titled ‘apathy’, ‘meritocracy’ and ‘progress’ and Seymour’s critical intentions are clear from the outset as all three terms come with scare quotes in chapter titles. The most commanding section of the book is contained within the first chapter as the author offers a critical history of British politics leading up to the recent election. Beginning with British enfranchisement, which he convincingly argues was largely a concession to ward off the threat of social revolution, Seymour offers a fascinating historical account of British democracy in terms of the shifting constraints and enablements placed upon working class agency. He offers an account of the post-war welfare consensus as having “absorbed some working class demands” for reform and “stopped them going too far”.

However even this relatively meagre degree of structural accommodation to grassroots reformist pressures (as Seymour observes the Attlee government had only nationalised 20 % of British industry and had done so to preserve that which could not survive alone rather than as a result of any intention “to redistribute power and wealth from the capitalist class to the majority”) fostered a reactionary backlash. Through the rehabilitation of long discredited free market doctrines and their well-funded intellectual advocacy, figures like Friedrich von Hayek and Milton Freidman were able to develop an increasingly prominent intellectual critique of state intervention which was seized upon by the new right throughout the 1970s to explain recurrent economic crises. However unlike her friend General Augusto Pinochet, who seized power and brutally forced free-market doctrine upon the Chilean people, Thatcher accepted the need to create a political consensus in support of her goals. This initially involved carefully coordinated attacks upon labour (see for example the [1]Ridley plan) but, as the new right’s grip on power was consolidated, grew to use social and economic policy in order to pursue their ideological goals through attacks on manufacturing, limiting public housing and promoting financialisation:

“The destruction of manufacturing saw manufacturing employment fall by 30 % in the UK between 1979
and 1990. This slash-and-burn represented a faster rate of de-industrialisation than in comparable European economies. Union membership fell by almost a half. As a side effect, it also hollowed out many of the social bases from which the left drew its strength and in which cultures of resistance were maintained [...] By rationing housing, the government helped send house prices soaring. After 1983, the Tories imposed a moratorium on public housing, with the rate of annual construction falling from 160,000 in 1975 to 25,000 in 1990. The level of housing expenditure fell from 1.4% of GDP in 1979 to 0.4% in 1990. And owner occupation increased in the same period from 60% to 72%. Homeowners were encouraged to treat their houses as asserts against which they could borrow, to pay for the consumer durables that stagnant wages no longer would.”

However these efforts did not produce the ‘landslide’ electoral victories that the Tories are popularly believed to have won in the 1980s, as the antiquated first-past-the-post system meant that around 42% of the vote in 1983 and 1987 translated into 61% and 58% of seats respectively. Seymour argues that Thatcher was able to win elections through persuading a significant minority of the cultural virtues of neoliberalism (“that what they wanted above all was not the safety nets and security of the post-war era, but the flexibility, risk and protean adventure of free market competition”) and a larger portion of the electorate of their economic investment in these transformations. High unemployment, homelessness and poverty may have reemerged as a pervasive features of the British landscape but some of the population found their disposable incomes soaring, buttressed by rising house prices and the easy availability of credit.

Rather than challenge these transformations New Labour embraced them as part of a ‘modernising’ project: a superficially plausible psephological critique relating to the need for Labour to move beyond their core constituencies eventually morphed into a deeply ideological embrace of the free-market. The architects of New Labour uncritically accepted much free market dogma and seized upon the financial markets in particular as an engine of economic growth. They derided talk of socialism and redistribution as anachronistic ideological baggage and argued that a ‘modern’ party must accept the reality of ‘globalisation’ while trying to utilise continual economic growth to fund programs of public spending driven by leftist values. This attempt to utilise the ‘dynamism’ of finance for social ends led to an unholy marriage between New Labour and the wealthy: ministers came to deify the ‘wealth creators’ and promulgate their perceived virtues. Progress was seen to consist in bringing the apparent expertise of business into the public sector. A pragmatic analysis of how to pursue leftist goals in an undoubtedly changing world ultimately led to the most profound betrayal of those goals imaginable... and it paved the way for a ‘progressive conservatism’ aiming to irrevocably entrench the revolution of the 1980s through unprecedented spending cuts, the effective privatization of the education system, a committed attack on the expansion of higher education and the remoralization of poverty.

This is a powerful book, as Seymour utilises the erudition he regularly exhibits on Lenin’s Tomb to great polemic effect without sacrificing the analytical rigour which so often characterises his writing. It pursues a number of distinct aims and yet it somehow manages to be more than the sum of its parts. Perhaps this is because the overarching purpose of the book is at heart a simple one. While this purpose pervades the book it is at its most explicit in the final paragraph when Seymour directly explains the ‘meaning of David Cameron’:

“Cameronism comes with irenic intonations, soothing, anaesthising language about change, just at the time when an epochal social crisis with deep political polarisation is about to be visited on this unhappy island-state. Just as Margaret Thatcher launched a bellicose administration with a pacific quote from St Francis of Assisi, so David Cameron comes to us as an agent or discord, distress and social misery, with an olive branch thrust towards his opponents. What is the meaning of David Cameron? He means war.”

At a time when the coalition government is committed to cuts which will affect our “whole way of life” Seymour offers a timely critique of a radical right wing agenda (‘rethinking the role of the state’) presented as an unavoidable solution to an otherwise insurmountable problem. Furthermore he offers a great insight into the transformations within political culture which have allowed such an agenda to be presented as a ‘progressive’
project. Inevitably for such a short book there are questions raised which lack answers: for example how does the Con-Dem agenda fit into the wider ‘politics of austerity’ in Europe and beyond? Nonetheless this is a valuable and judicious book which deserves to be read by all those interested in the future of British politics.

It might come as a surprise that this is not actually a book about David Cameron. It does however shed more light upon the political and historical significance of the new Prime Minister than any book about the man himself ever could. As Richard Seymour puts it, “the real subjects of this book are the historical forces galvanising the Tory leadership ... the deep structural transformations that have taken place in the UK in the generation since the zenith of Thatcherism”. The Meaning of David Cameron is a broad and compelling survey of the last 40 years of British history which emerges at a profoundly opportune moment: the neo-liberal project stands in crisis at the same time as the apotheosis of this project ascends to high office. The relative brevity of this book is belied by its laudable scope. It is an ideology critique taking aim not just at ‘progressive conservatism’ but the broader language of modernization and meritocracy which prepared the discursive ground for this latest vacuous instantiation of such rhetoric. It is an economic and social history offering a potent and comprehensive account of the structural and cultural changes which facilitated the emergence of Thatcherism, New Labour and now Cameronism. It is a passionate rehabilitation of the conceptual categories of class and struggle at a time when such theoretical tools are less in fashion and more in need than ever before.

United for Education Day of Action (June 21st) (2010-06-14 18:40)

This will be a joint union day of action around the country in defence of education in further, higher and adult education as part of the “United for Education” campaign. The seven unions have called for protests, meetings and rallies to take place in workplaces all over the country and already dozens of events have been organised. In the week when David Willetts called students a [1]“burden on the taxpayer” and with more funding cuts widely anticipated in the emergency budget, this is an opportunity to send the Coalition government a clear message that education is too important to be slashed. Bringing together UCU with NUS, EIS, ATL, UNISON, Unite and GMB, “United for Education” aims to be a vehicle for uniting the entire further and higher education sector to call on the new government to stop the cuts. Read more about United for Education [2]here.

*WHAT YOU CAN DO:*

1. Meeting in Westminster: As part of the day’s activities, there will be a meeting in Parliament at lunchtime on the 21st, with speakers from all the seven unions, as well as MPs, in committee Room 12 at 12pm. Contact Lisa Johnson for more information about getting along to this event at [3]ljohnson@ucu.org.uk or call UCU on 0206 756 2603 2. What’s happening near you?: You can see what events are taking place around the country [4]here. If your college or university is not listed, contact your branch to find out what’s happening. 3. Sign and circulate this online petition to the government [5]here.

Charles Wright Mills' Sociological Imagination and why we fail to match it today (2010-06-15 12:00)

Charles Wright Mills' body of work was substantial by any standards but for someone who died at the age of forty-five it was remarkable. The range and substance of Mills' work is impressive but even more so is its originality, vitality and humanistic motivation: in short, its sociological imagination. In his still celebrated if now less influential work, *The Sociological Imagination* (1959), Mills addresses issues of sociological theory and method and particularly the practical application of the subject. However, in this piece I refer to a wide range of Mills' work to illustrate that he was not only a great sociological mentor but also practised what he advocated.
Mills’ own sociological imagination was inspired by what he referred to as the classic sociological tradition the main feature of which is ‘the concern with historical social structures: and that its problems are of direct relevance to urgent public issues and insistent human troubles (S I: 28). Mills links personal troubles with public issues and threads biography into the historical structural dynamic. The achievement of the classic tradition lies in the creation of models of society that illuminate the impact of social change on people and on their potential for response. These models generate and inform theory but are developed at a more general level than specific theories. Thus Marx’s dialectical model of historical change and Weber’s concept of the role of ideas in history give orientation to theory and research. For Mills the issue is not about which model is ‘correct’ but their ability to illuminate large vistas of the social landscape. In addition to clarifying the relationships of the triad of social structure, historical change and biography, Mills argues that sociological imagination necessarily generates political perspective because of the understanding it gives of the human condition (S I chapter 10). Mills himself was emphatic in drawing practical conclusions from his sociological work. This brought him into sharp conflict with what he referred to as the ‘crack-pot realism’ of managerial liberals such as Daniel Bell whom he felt were reducing social issues to mere matters of ‘expert’ planning and administration. Similarly, he attacked ‘abstracted empiricism’ within sociology - the gathering of facts with little reference to their wider meaning or application. Mills’ Ph.D. was on American pragmatism and all his work carries the tone of someone who intended to make a difference.

Mills’ work amply demonstrates the principles underpinning his concept of the sociological imagination. In less than ten years he published three books that substantially analysed the social structure of the United States. The first, New Men of Power (1948) presented the leadership of the American trade union movement as integrated within rather than a challenging the American economic establishment. The second, White Collar (1951), analysed the rise of the new American middle class largely employed in the proliferating offices of the public and private sectors. This was followed by his magnum opus of structural analysis The Power Elite (1956) that remains a standard reference for understanding the workings and overlaps of the American economic, military, and political elites. This triad of publications had almost an anticipatory as well as contemporary relevance. It describes a declining and weakened industrial working class with an increasingly self-interested leadership; a white-collar class cemented within a still highly unequal occupational structure by media-led consumerism and its own desire for security; and a substantially autonomous elite only marginally disrupted in its pursuit of power, wealth and status by democratic processes. This was a very different vision of the United States and of Western societies than that adopted by those
he saw as ‘conservative liberals’ such as Talcott Parsons and Daniel Bell who declared an ‘end of ideology’ long before Francis Fukuyama made the same mistaken judgement.

As Mills’ edited collection of classic sociological reading, *Images of Man* (1960) shows, he particularly admired European sociology. He was less impressed with his contemporary American colleagues. The one structural model that Mills found utterly wanting was Parsons’ social systems theory which he saw as prime example of ‘grand theory’. Mills’ ridiculing of Parsons’ abstract style had a serious point behind it – that such abstraction can take on a life of its own, divorced from the realities of everyday social life. More substantively, Mills argued that Parsons’ emphasis on consensus legitimised the social status quo and failed to address what for Mills is fundamental to the social dynamic – power conflict. In contrast to Parsons, he focused on who takes decisions and in whose interest and argued that elites invariably pursue their own self-interest (‘the idea of the responsibility of the powerful is foolish’ SI: 213). As he succinctly observed: ‘Men (sic) are free to make history, but some men are freer than others’ (SI: 201).

Mills regarded ‘abstracted empiricism’ as the mirror opposite of ‘grand theory’ but as having a similar outcome – a failure critically to address the status quo and therefore a tacit endorsement of it. He associated abstracted empiricism with the proliferation of bureaucracy and what he saw as the reduction of social and moral matters to issues of management. Mills was as suspicious of ‘experts’ and ‘managers’ as of the elites they served arguing – again contra Daniel Bell – that fundamental matters of domestic and foreign policy should be widely debated. Like Habermas, and perhaps a little romantically, he occasionally harked back to a period when better-informed ‘publics’ debated key issues of policy. Mills certainly made his contribution to re-igniting such debates.

Mills’ model of society was an elites/mass rather than a class one. It is very much the first part of this dual model that Mills is remembered for – whether or not one agrees with it. A problem with the elites/mass model is that it tends to see the ‘mass’ as somewhat inert. In fact, Mills did share the view of many of his ‘conservative liberal’ antagonists as well as that other luminary of the left, Herbert Marcuse, that the masses were indeed rendered dully somnolent by the tedium of routine work and the soporific effect of the mass media. However, unlike his liberal critics, Mills embarked on an intellectual struggle to produce a new radical analysis of social change in the distinctly discouraging context of the conservative and reactionary nineteen fifties. His own analysis precluded him from privileging the traditional working class or, still less, the new white-collar class in the search for a key agency for change. However, Mills demonstrated a consistent concern for both the new poor of mature capitalist society and for those of the emerging world. As far as the former are concerned he had a prescient understanding of how what came to be referred to variously as ‘the dependent population’, ‘the underclass’ and ‘the marginal’ would become perceived as almost the residual ‘problem’ of modern society – resistant to endless plans to organise them. About the poor of the emerging world Mills was able in his later writings to be more optimistic. Although he railed against what he saw as the abuse of power in the bullying of Castro’s Cuba (Listen Yankee, 1960) and American militarism (The Causes of World War Three, 1958) he realised that in time the balance of power would shift – as, indeed, we are now seeing.

In so far as Mills did tentatively observe an emerging agency for change in Western societies, it was among intellectuals, particularly young intellectuals. This was not mere wishful thinking on his part as he lived long enough to witness the stirrings of radicalism among young people in higher education both in the United States and Europe. As the following quotation from Mills’ *Letter to the (British) New Left* shows, he was sensitive to the need to re-explore the ethical and cultural values of radicalism: ‘As for the articulation of ideals, there I think your magazines have done there best work so far. That is your meaning – is it not – of the emphasis on cultural affairs.’ Mills had an enormous influence on the values and thinking of American student movement of the early nineteen sixties and had he lived might have been able to guide it away from the excesses of the late sixties. *The Port Huron Statement* (1962), the manifesto of the newly formed Students for a Democratic Society (SDS) amply reflected Mills’ belief in participatory democracy and practical humanism.

It is not difficult to imagine that Mills might have found himself at odds with the dominant contemporary
state and corporate directed regimes of research and of the constraints they put on young scholars. His comments in *The Sociological Imagination* on research and the problem of funding remain relevant. He of course recognises the need for funds but also warns against the conditions that can come with it. He suggests that sometimes it may be better to work small-scale but independently rather than chase expensively funded research whose findings and interpretation may be ‘managed’ by the funding agency. What he MIGHT have made of the current state dominated research regimes is anybody’s guess. In a piece of advice that may seem trite and simplistic in the light of the complexity of the contemporary context of research, Mills’ advocates that the researcher should *think* and *observe*. But it is precisely because Mills’ makes what he terms ‘the craft of sociology’ accessible that is his genius

Mills’ book, *The Sociological Imagination*, has inspired generations of young and not so young social scientists. This is partly because he wrote a great book – once voted the second most important sociological book of the twentieth century after Weber’s *Economy and Society*, partly because he practised what he advocated, but also because he was an inspiring and, in the best sense of the word, idealistic human being. Mills the sociologist, campaigner and character fused to generate a charisma to which there is no recent or present comparison in social science. He retained a grounded utopianism that he defined as a commitment to an attainable but radically fairer and more equal future. His message is no less relevant now.

what does it mean when he says the creation of models of society that illuminate the impact of social change on people and on their potential for response? how does it change people?

Mike O'Donnell (2017-06-16 18:38:42)
Mills - and I agree with him - argued that sociology should clarify to people how social change is affecting them. He wanted social description and analysis to illuminate personal experience. Thus understanding the social structural and policy causes of unemployment could facilitate collective action to do something about it and at an individual level assist those affected not to 'blame' themselves. There are endless examples where understanding social processes can enable more effective response - although as another sociologist observed - the point is not just to understand the world but to change it - for the better, of course! Plenty still to do. Mike.

María Martínez: Story of an Indigenous Woman (2010-06-16 11:00)

María Martínez Aldana was born in 1939 in Ixtlahuaca, a small village located in the municipality of San Martín de las Piramides in the state of Mexico. María does not know exactly the day of her birth, “I have two birthdays”, she says, smiling, but what she knows is that this year she will celebrate her 71st birthday. Although she has slowed down in recent years, Mariquita, as she is normally called, still runs the family house and looks after two of her eleven grandchildren as their primary carer. Growing up after the Mexican Revolution at the time when the Mexican government launched a de-indigenisation movement of the population in order to create a unique Mexican identity, María lived through the time when many indigenous men and women migrated to the urban areas of Mexico as the only option to improve their living conditions (CDI 2006, Oehmichen Bazan 2005, Reyes Ruiz 2010). María Martínez is my grandmother and my chief inspiration for conducting sociological research in the areas of gender, indigenous people and migration. Since my parents were both finishing their professional training and working at the same time, I lived most of my childhood at my grandparents' house. In fact, it could be said that I was essentially raised by my grandmother. Given my long personal association with María, the story I tell here may be different from those recorded by oral historians or journalists who usually interview their subjects in two or three sessions. The tale I tell here is one I experienced and heard many times while growing up at María's home, and through more recent deep conversations with her. For the purposes of this work María agreed to be taped and to make public her life-experiences.
I also recall conversations that I held with María’s mother, Altagracia (my great-grandmother) in my frequent visits to her place before she died in 1996. Thus, the close relationship and affection that we feel for each other has given me the courage to risk writing the story of this indigenous woman in my own words but relying on hers for descriptions of the most dramatic events in her life. Feminist scholars, anthropologists, and others have been debating the value of recording life histories for many years. Women’s lives stories, under a feminist approach, may allow to document their lives and activities, which were previously largely seen as marginal and subsidiary to men’s, and to understand women in context (Bryman 2008, Friedlander 1994). Nevertheless life stories can also be seen as exploitative and of limited generalisability (see Skeggs 2001). I must admit that I had great reservation in making my grandmother’s and family history public for the purpose of an article, but I decided to proceed for two main reasons. First, I see María’s story as a way to contextualize issues about gender relations among indigenous communities in Mexico, indigenous identity and de-indigenisation in Mexico, and especially the struggles of indigenous women in the realms of rapid and almost forced modernisation and development in Latin America. In this work I refer to María as an indigenous woman, even though the story I tell does not focus entirely in her indigenous origins. If this sounds contradictory, it should, for that is precisely the point. The fact that María was born in a poor peasant community with pre-Hispanic vestiges and that she was denied the right to learn the indigenous language marks her as descendant of those whose culture was diminished five hundred years ago and who have since been condemned to occupy the bottom rung of Mexico’s socio-economic ladder. While María never expresses shame about her indigenous origins, she sees her life and the lives of her relatives as a steady struggle to improve their socio-economic circumstances, a struggle often requiring the rejection of those traditions identified as “indian” [sic] and acquire, when possible, attributes associated with upward mobility which involved (and still involve) the aspirations of the white western society. My second reason for writing about María’s story is simple and direct: she had a tough but wonderful story to tell which gave texture and inspiration to the ‘social aspects’ I want to explore and analyze. Thus, in this work I present María’s story in two sections. The first one is dedicated to María's childhood and her upbringing. Here I relate the social environment where María grow up and the opportunities and/or disadvantages that, as indigenous person and woman, she faced. The second section relates to her migration to Mexico City and her incorporation to the labour force, again under the circumstances that her indigeneity and gender represents. In this section, I also recount María’s hasty partnership and maternity, and then I briefly end with her current life situation.

**María’s story**

**Childhood** María Martínez Aldana is the 12th of 14 children. Her name at birth was María Ascención Martínez Aldana García, but later on she regularised her birth certificate and decided to be officially named María Martínez Aldana. María’s story reaches back to the days of her grandparents, one of whom was still alive when she was a young girl (her father’s mother Dominga). María’s grandparents lived through the Mexican Revolution of 1910. She said that they
were not originally from Ixtlahuaca (she does not know where exactly they came from) but they were forced to move to this previously isolated region because María’s grandfather did not want to be recruited by the Mexican army or by the Zapata’s army during the revolution: "they [her grandparents] did not like to be involve with guns". María’s mother, Altagracia, married with Vicente (María’s father) when she was fourteen. Altagracia did not go to school and as María points out "she was all the time pregnant". Altagracia had fourteen children but, according to María, she may have being pregnant more than twenty times. Unfortunately some of her children died soon after they were born. Altagracia started work when María was around six years old selling aprons and clothes in small quantities at the market of San Juan, a two hours commute from Ixtlahuaca by donkey. Vicente was originally from San Luis, a village near to Ixtlahuaca. Since a young age, Vicente worked in an hacienda[i] that produced pulque[ii]. Vicente was in charge of extracting the aguamiel[iii] from the cactuses and of the fermentation process. Apart from his work in the hacienda, Vicente owned a small piece of land where corn, beans and squash was cultivated for family consumption. Meat consumption was rare but when this was affordable mostly came from Altagracia’s flocks of chickens and turkeys. The family home was very modest; the house consisted of one room with a thatched roof and dirt floor. Vicente, Altagracia and their fourteen children lived there, they slept in petates [iv] or wooden boards and cooked in a corner of the room. They did not have any water, electricity or drainage services until 1996, the last time I visited the town. In my frequent visits to “el rancho” (as we used to call Ixtlahuaca) I remember collecting potable water from a community pipe and going to the toilet in a latrine located around fifty meters away from the main house. María recalls daily life in Ixtlahuaca with humour: "look, at the end of the day it was easier. We did not have to do any household work apart from cooking. Not even sweeping the floor! It could not be dirty...it was made of dirt!" Neither men nor women in the family wore shoes or sandals. Women used to wear naguas (skirts) and men dressed in white trousers and tops, a typical outfit wore at that time by indigenous men and campesinos (peasants) through Mexico. Nobody in the family worn underwear and they had at most three changes of clothes. When Maria talks about her childhood, she refers to it with mixed feelings. She highlights extreme poverty as part of her upbringing but she also recognises that she had unforgettable happy moments. Since María was one of the youngest children, she emphasized the figure of one of her eldest sisters, Irene, almost fifteen years older than her, who taught her many things: My mum was very busy with the other children and her sales. My mum was all the time pregnant, so my sister was like my second mum. My mum said that at the same time I was born Irene also had her first baby and she used to breast feed me because my mum did not have enough milk for the other children. María never have a doll or toy, but she created her own by painting faces on long flat stones, along with her younger sisters Mercedes and Juana. “We also used to play with pinto beans. Those with white spots were our ‘cows’ and we built barnyards with little pebbles for our ‘cows’”. One of María’s greatest memories refers to January 6 of every year when the family celebrated Altagracia’s birthday. As María mentioned, this was the date when they ate a traditional mole[v], played music and danced: “I think that was the only day when my parents had some fun. I used to have fun too! I stepped on my father’s sandals and I danced with him”. María has nothing but great admiration for her grandmother Dominga, whom she describes as a woman with strong personality but with a great heart because “she used to defend my mum from my father’s abuses”. María recalls one occasion when Dominga beat in public her own son Vicente because he beat Altagracia. Once, María says, Dominga even put her son in jail when Vicente beat Altagracia so harshly that Altagracia bled from her head: My grandmother Dominga and my sister Erminia went and talked with the judge... or like the police in the community [the village was ruled
under customary law] and he took my father to the jail. Dominga would do everything to defend my mum. María remembers with sadness that her father discharged his rage or solved his problems by getting drunk with pulque and beating María’s mum: “Mercedes and I tried to stop him, but he was very strong...he beat my mum in the face”. María went to school until third year. Her mother was against it. Altagracia wondered, if none of María’s previous brothers and sisters went to school so why should María have to go? But María’s father realised that she was interested in learning and allowed her to go to school: "I sat under the sun next to my father when he was reading something. He knew how to read... a little bit, so I asked him all the time about the meaning of the letters". She started school when she was nine years old and she walked (without shoes) every day around six kilometres to the nearest primary school. "I loved going to school. I even remember that the name of the school was María Elena Vargas de Cruz. I was a very good student, I got great marks but one day my parents decided that enough was enough". María stopped going to primary school in order to look after her younger siblings and to start working. Altagracia found María a job as a babysitter; she used to look after a little girl. María remembers that with her first payment she bought herself a pair of plastic sandals and a dress for her mum. In her teens, María became a problem for the family when she became fourteen years old and showed no signs of “becoming a woman”. With no sign of having a period, Altagracia took María to the doctor of San Martin de las Piramides because she was worried that something was wrong with María. María remembers very well that the doctor told her mum: “everything is fine with her; there are women that get their first period until they are 16 or 17. Let her enjoy her childhood, she will be fine”.

Going to Mexico City and getting married

With so many in the family and not enough income to cover their basic needs, María was sent to Mexico City to work as a maid in wealthy houses. First she was sent to learn the skills with her sister Irene who was already a full time cleaner of two wealthy single men that lived in Colonia Anzures[vi]. María recalls the first time she went to Mexico City or El Distrito, as she calls it, with a mix of melancholy and astonishment in her eyes. María saw the city as a big monster which intimidated her but at the same time captivated her. Can you imagine getting off from a donkey and getting into a bus? (she laughs) Then when I arrived at El Distrito I saw people living in a different way. They had water, electricity, all the services... I liked that. I also saw that women in the city were different, very elegant with stilettos and nice clothes! And me (she laughs) I was wearing my sandals and my naguas like India [sic] María[vii]. It was at that time when Irene cut María’s braids, and according to María it helped her to disguise her origins and to keep her hair tidy. While working as a maid in Colonia Anzures, María kept visiting Ixtlahuaca every so often to bring money to her family and to work in the fields when there was not enough work in Mexico City. Then, during one of her frequent returns to her town she met the man who is now her husband. María was sixteen years old when she eloped with Carlos (my grandfather). María narrates that she met Carlos through her brother in law, Margaro. Margaro was married with Marciana, María’s sister, and Carlos was Margaro’s nephew. Getting married, or more accurately, taking a partner and having children for María seems to have been a rite of passage. As she says, “every woman in el rancho had to have a man. So I thought ... I also have to get married. There was no other option; my destiny was to get married". A few months after María eloped with Carlos she fell pregnant with her first child: “one should have babies, although I was scared because I was very young and I did not know what it meant to be a mum”. She also stopped working as a maid and settled down with Carlos in Mexico City. Carlos and María got married few weeks before the arrival of their first child because at that time the Mexican government required that parents were married in order to register a child. Along with her six children, María kept working in ‘informal’ jobs such as selling wool in los tianguis (flea markets), knitting jumpers, or cooking typical Mexican snacks that her children sold door to door. As a housewife, as she calls herself, María remembers the rewarding experience of selling Avon beauty products: "I enjoyed selling beauty products. We [the fellow sellers] used to meet every so often and have breakfast together, and the best seller obtained prizes. I once got a hanging clock as a prize". Nowadays María still lives with Carlos, has eleven grandchildren, three great-grandchildren and two more will be born soon. She nowadays battles diabetes and her
recently diagnosed senile dementia. 

**[i]** Hacienda is a Spanish word for an estate. Some haciendas were plantations, mines, or even business factories. Haciendas originated in land grants, mostly made to Spanish conquerors in Latin America. 

**[ii]** Pulque is a milk-coloured, somewhat viscous alcoholic beverage made from the fermented sap of the maguey plant (cactus), and is a traditional native beverage of Mexico. **[iii]** Aguamiel is the sap of the maguey plant. Also called honeywater, it has been used in Mexico as a medicine. In its fermented state this produces pulque. 

**[iv]** Petate is a bedroll used in Central America and Mexico. Its name comes from the nahuatl word petlatl. The petate is woven from the fibers of the palm of petate. 

**[v]** Mole from the nahuatl mulli or molli (sauce or concoction) is the generic name for several sauces used in Mexican cuisine, as well as for dishes based on these sauces. In contemporary Mexico, the term is used for a number of sauces, some quite dissimilar to one another, including black, red, yellow, and green moles. 

**[vi]** Colonia Anzures is a upper middle class area in Mexico City. 

**[vii]** La India Maria was a character on TV that portrays and ridicules indigenous people in urban areas of Mexico. The character speaks a mix of Spanish and indigenous languages and it is dressed in traditional garb consisting of traditionally braided and ribboned hair, colourful native-type blouses and skirts.

**Death of Educational Opportunities in Birmingham (June 21st) (2010-06-17 07:00)**

**Death of Educational Opportunities march on 21 June in Birmingham**

I am writing to give you advance notice that there is going to be a march taking place from Alpha Tower to Matthew Bolton campus of Birmingham Metropolitan College on 21 June. The march will be between 12.00 and 2.00 pm. Further details can be obtained from Joe Rooney whose can be contacted [1]here.

**Save our Jobs - Birmingham Metropolitan College- please sign the petition**

As you will be aware, hundreds of lecturing jobs are to go in the West Midlands because of cutbacks in adult provision funding, despite a recession and a clear demand for further education opportunities for all. Please show your support and sign our petition calling for Michael Gove to investigate one of the largest colleges in the country - Birmingham Metropolitan College - and look into their aggressive approach to redundancies despite unnecessary spending on cars, flowers and building work.

Please follow this [2]link and show your support. We are aiming for over 2000 signatures by the end of June.

Review of 'Bonfire of Illusions' by Alex Callinicos (2010-06-18 08:44)

At a time of historically unparalleled intellectual oversaturation it was surely inevitable that dissecting the financial crisis would become something of a cottage industry within academic publishing and highbrow journalism. What’s surprising is how long it has taken for a full range of authors to get in on the act. We’ve seen the business journalists, the political commentators and the economists: now it’s time for the philosophers and political theorists. Hot on the heels of Slavoj Zizek’s treatment of the crisis comes Alex Callinicos’s Bonfire of Illusions, an intriguingly pacey and readable analysis of the crisis from one of Britain’s most accomplished Marxist academics. The book is framed through the identification of two concurrent crises (the ‘credit crunch’ and the brief Russian-Georgian confrontation over South Ossetia) and how their fall out has changed the world we live in. As Callinicos respectively titles the two essay length chapters, we now see ‘finance humbled’ and ‘empire confined’.

As might be expected in a world of 24 hour news cycles and an enormous proliferation of political commentators, a number of common narratives have emerged about the genesis of the financial crisis. Most commonly it is argued that it began with the growth of the subprime mortgage market in the United States. Some claim that the seed of the crisis were sown with the Thatcher government’s ‘big bang’ liberalization of financial markets in the 1980s. Alternatively many place the blame on a ‘culture of greed’ within global finance and the moral failings and cavalier outlook of a reprehensible banking elite. In contrast to these narratives, Callinicos offers an analysis of the crisis as being symptomatic of “a much more profound and long-term crisis of over accumulation and profitability.” He argues that neoliberalism, as a political agenda and legislative framework, itself stood as a response to this deeper underlying crisis and that rather than our present circumstances being indicative of any sort of breakdown in capitalism as such, they are best understood as political and economic events bringing the underlying structural contradictions within the neoliberal settlement to the fore.

This analysis rests on the claim that all three main centres of advanced capitalism (North America, Western Europe and Japan) have undergone a significant decline in their rate of economic growth relative to the boom years of the 50s and 60s. Callinicos places the onus for these two decades of growth on the ‘permanent arms economy’ which developed in both the USA and the USSR. He argues this offset increasing labour costs until the Nixon administration slashed arms spending at the end of the 1960s. This seems to be the weakest point in his analysis, as it is a surprisingly monocausal explanation for someone who is both a Marxist and a Critical Realist. For instance it ignores the 1973 oil crisis, the expansion of containerization and new communications technology.
Callinicos argues that once US arms spending ceased to offset the pressure of rising labour costs, the long term tendency for the rate of profit to fall began to reassert itself. This invited aggressive attempts by business to reduce labour costs through confrontation with unions which was buttressed by the efforts of new right political administrations in the US and the UK. Again his argument seems to miss a crucial step here as an expansion in off-shoring and inward migration simultaneously placed a downwards pressure on working class wages. However unlike industrial confrontation the roots of this were structural rather than agential. Nevertheless the result was further wage-repression. As Callinicos quotes Robert Brenner:

"Between 1979 and 1990, real hourly compensation in the private business economy grew at an average annual rate of 0.1 per cent. The trend in these years for hourly real wages and salaries alone (excluding benefits) for production and non-supervisory workers was worse, falling at an average annual rate of 1 per cent. At no time previously in the twentieth century had real wage growth been anywhere near so slow for anywhere near so long."

In western economies increasingly reliant upon consumer demand for their growth, wage repression engenders an increasing structural contradiction: the same workers whose wages are under attack to ensure profitability must also keep spending on consumer goods. This engenders an increasing degree of financialisation which extends throughout the economy, as debt-financed consumer spending comes to take centre stage as the engine of economic growth. These processes reached their apotheosis in the recovery that followed the burst of the dot com bubble at the start of the 21st century. The Federal Reserve slashed interest rates as a response to the twin crises of the dot com crash and the 9/11 attacks which had the effect of fostering a climate of overly easy lending and an ensuing frenzy of consumer demand. At one end of the spectrum American workers were "encouraged to borrow in order to sustain their basic consumption at a time when their real wages have actually fallen". Whereas at the other soaring house prices massively buttressed the disposable income of the upper middle class:

"households, encouraged by the rise in property values and rock-bottom lending costs, increased borrowing and spending. In 2005, US households extracted $750 billion against the monetary value of their homes, two-thirds of which was spent on personal consumption, home improvements and credit-card debt. The resulting surge in personal consumption (along with a sharp increase in public expenditure fuelled by the war on terrorism and a rise in American competitiveness thanks to the fall in the dollar promoted by the Bush administration) pulled the US out of recession and helped to put the entire world economy on a boom path."

However it was a boom sustained by an even greater bubble (compounding existing trends present throughout the neoliberal era) than the dot com bubble which caused the recession it was designed to counter. This bubble sustained a new era of speculative finance. As Callinicos puts it "the drive was to take advantage of the cheap credit conditions to build up leverage as high as possible and thereby to maximize profits". He notes how this involved soaring leverage ratios (loans to equity) of x25 at Goldman Sachs, x29 at Lehman Brothers, x32 at Merrill Lynch, x33 at Bear Stearns and Morgan Stanley. It also involved an enormous increase in subprime mortgages with the top 25 US originators thereof (responsible for $1000 billion in subprime mortgages between 2005 and 2007) have spent $370 million on lobbying since the late 1990s. The political influence of finance capital reached its peak at the same time as the bubble became rampanently unsustainable. As mortgage defaults began to increase sharply in 2006-2007 the house of cards began to fall and "banks, worried about their own losses and suspicious of others’ plight, stopped lending to each other."

The second chapter looks at the geopolitical ramifications of the crisis. The most interesting aspect of this section is its discussion of the internal politics of the European Union and how the financial crisis brought longstanding rifts to the fore. While monetary policy had been centralised through the institution of the European Central Bank there was no such equivalent for fiscal policy. This asymmetry suddenly became hugely problematic when it suddenly became imperative that response to the financial crisis be coordinated:
"The power to tax, borrow and spend remains firmly with the member states. But, as we have seen, this was a crisis in which fiscal policy took centre-stage, both to recapitalize the insolvent banks and to compensate for the fall in effective demand with greater government borrow and spending."

With the benefit of hindsight it seems obvious that not only was this structural discrepancy unsustainable but that the problems it causes would be compounded by the resurgence of diverging national interests at a time of global crisis. Callinicos hints at the EU's future being contingent upon its successful resolution. However what form could this take? Recent defeats in national referendums suggest a pervasive absence of will for a move towards the federalised EU which would be necessary for fiscal policy to be centralised with any degree of democratic legitimacy. If this antipathy towards European federalism holds true and the restaged Irish referendum is left as the anomaly it looks likely to be then the only obvious alternative for the preservation of the EU is the non-democratic centralisation of fiscal policy.

Can we make sense of the European wide spectre of ‘financial austerity’ on this basis? It certainly seems to shed light on events in Greece, as an empirically dubious sense of alarm within the bond markets (fuelled by partisan politicians, politicised mass media and overly powerful rating agencies) led to a realistic possibility that the country might default on its sovereign debt. The EU stepped in with a billion-dollar bailout but only on the condition that the Greek government effectively subordinate its economic sovereignty to the demands of EU technocrats: raising the retirement age, freezing or cutting pensions, freezing public sector pay and raising VAT. A radical fiscal agenda likely to undermine the long term stability of the Greek economy is being imposed through the agency of pan-European institutions against a domestic backdrop of furious protest and resistance.

It is frustrating that Callinicos only addresses the politic of austerity tangentially given that his own analysis elucidates the relevant dynamics so clearly. This is forgivable in a book of little over one hundred and fifty pages. Likewise it is inevitable given that recent events were developing while the book was in press. However it does hint at the one flaw that nevertheless defines this excellent book: it’s simply too brief. I was left throughout with the impression that this could have been a magnum opus where the author drew on a lifetime’s learning to comprehensively take stock of our contemporary predicament and offer plausible pathways out of it. As it stands Callinicos gives very little space to crucial subjects. For instance climate change is given less than a page. It’s a very interesting section, replete with insight about collective action problems and the ecological consequences of competitive capital accumulation but it is, nonetheless, less than a page. As a whole such brevity is a crying shame because in practice it means that far from offering a ‘bonfire of illusions’ Callinicos has handed us a few firelighters and pointed us in the direction of a conflagration yet to be. Even so this is a superb book which exhibits engaging though authoritative scholarship of a kind which is sadly too rare.

The Sociological Imagination | KCL's Alex Callinicos debates the Financial Time's Martin Wolf on the Future of Capitalism (2010-06-19 15:29:49)
[...] As a follow up to yesterday's review: [...]
Downing Street from 11am onwards to greet George Osborne as he leaves to present his austerity day budget. Later in the evening local protests will be taking place nationwide.

More details about the campaign and local protests available [1]here. I'll be at the Birmingham protest on Tuesday. As Richard Seymour argues [2]here large protests will make it difficult for the coalition to present the 'coming age of austerity' as representing some sort of reluctant national consensus. So while the budget itself may be something of a fait acompli these protests represent an important first step in building a broad base of resistance to the cuts. There's an excellent analysis by Paul Krugman [3]here of the fiscal irrationality (let alone the political unacceptability and moral reprehensibility) of swingeing cuts.

On Being a Stateless Actor (2010-06-21 08:00)

I've fallen in love with the phrase “non-state actor.” If nothing else you can credit the Pakistani government for coming up with fig-leaf expressions like this one to hide naked lies which is the essence of the state itself.

For years and years I've not voted. Usually the reason is that my name is never on the voter's list and I'm too
lazy to get it enrolled merely to have the opportunity to choose between a worm that sucks blood and a blood-sucking worm. The meaning is the same and the difference grammatical in terms of what comes first, the “worm” or the “blood.”

People who overstate the importance of voting as central to democracy are liars. Democracy is not just about voting. Democracy is about having real choices in your private and public life. In a country like India only money can buy you those choices. They’re not rights that come with birth. Citizenship does not ensure those rights and neither does voting make a difference at a fundamental level. The poor simply have no choice. Those who think that to vote is the main issue – they’re people who’re not looking for real change.

Like all pseudo-liberals from the educated classes who think that they are “clever, classless and free” but in fact are “fucking peasants” in heart and mind, for years I saw myself as a non-state actor. It’s not state of mind that I’m referring to. It’s the state as government that Tolstoy describes as “an association of men who do violence to the rest of us.”

The terrorist is indeed a stateless actor and it takes a government as brutal as the Pakistani to arrive at the phrase “non-state actors.” It takes a government as brutal as the Indian one to agree with that because we’ve plenty of them in this country and in fact they’re in the majority. We also call them the working classes or the poor and the downtrodden. It takes a government as violent, ruthless and manipulative as the American to understand that. If Israel did not know this little secret of brutality by any means, it would’ve been long kicked out of the Palestinian territories. Therefore these governments are united in their determination to preserve the right to violence.

In his defense of the Baader-Meinhof group during their infamous trial in the seventies – some might even have the memory of the hijacked Lufthansa flight in 1977 done by the Red Army Faction (RAF) for the release of the RAF prisoners - this is what the French writer Genet had to say: “If we reflect on any vital phenomenon, even in its narrowest, biological sense, we understand that violence and life are synonymous. The kernel of wheat that germinates and breaks through the frozen earth, the chick’s beak that cracks open the eggshell, the impregnation of a woman, the birth of a child can all be considered violent. And no one casts doubt on the child, the woman, the chick, the bud, the kernel of wheat.”

This is the violence of the non-state actor who intends to leave no stone unturned to counter the brutality of the state. Genet further adds in the same essay: “The more oppressive brutality becomes, the more will the violence that is life be required to the point of heroism.” The poor are non-state actors and the terrorists directly or indirectly represent the anger of the oppressed albeit in a sinister manner – the oppressed who are every minute reminded of their oppression in the face of glaring wealth and luxury of the rich.

The poor in this country have a different view of what terror is all about. It’s not the view of the media or of the envious middle-classes who’re busy competing with one another for the leftovers of the rich. Forget about what people say before a camera. Just take a look at what they say behind a camera. The media did a great job in making the government look like fools and the terrorists like heroes or anti-heroes.

The common people that include students and the unemployed and everyone denied of a basic standard of living have a grudging admiration for the terrorist and their admiration comes from the fact that the terrorist is disrupting the system that is destroying them body and soul. What the terrorist is doing is what they’re incapable of doing but nevertheless would like to do.

This is the reality on the ground. The US is the most hated and unpopular regime on earth. The Pakistani and Indian governments are the most slavish and despicable regimes in South Asia. They’ll do anything to please their
American masters. Rich and powerful people are hated in this country for their decadent lifestyles and their cynicism.

Commenting on the killing of Israeli Olympians in Munich by the Palestinian organization Black September in 1972 none other than Sartre said: "Terrorism is the atomic bomb of the poor. The only weapon available to the Palestinians is terrorism. It's a terrible weapon but the poor and the underdogs have no other weapon. Violence exists. It exists in regimes run by police who are themselves violent. People who are victims of such regimes can do no other than respond with violence. I see it as a valuable political gesture."

The exploitative leadership of these groups whether it’s the LTTE, the Lashkar-e-Toiba or the Jaish-e-Mohammed – they know how the poor feel. They’re no different from the governments they’re fighting against. They’re geniuses when it comes to channelizing anger and destructive energy and leaders with the potential to run giant corporations. The leaders and the organizations are guilty of being state-driven actors because they are doing what the state expects of them and they’re not directly involved in any conflict. They prey like vultures in a desert on the unhappiness of the exploited.

As long as the brutality of hunger, poverty and injustice do not come to an end, the brutality of the terrorist, the jihadist, the Maoist and every other "non-state actor" will continue with a greater violence – not just to make a point but to communicate a deceptively simple message that they’re not going away any time soon.

ravikumar (2010-06-22 05:12:44)
Prakash Kona here rightly points out to the constant othering process taken up by the state against the angered, deprived, poor who in retaliation take up arms against the system. Cynicism has become the norm in India and its counterpart Pakistan wherein any struggle against state oppression is labeled as terrorism, naxalism or whatever ‘isms’ that a dictionary could contain. In pointing out succinctly that violence and life go parallel, Kona is striving to show the perpetual struggle for a free, liberated space that all mortals crave for.

The author has raised more questions than even addressed. equating life with violence is perhaps just another one form the long list of dystopian ambitions that the world painted here can aspire to, here maybe even terror can be justified. right and wrong do not remain important anymore.

Prakash Kona (2010-06-23 17:14:14)
Violence in itself is neither right nor wrong. We cannot have an abstract theory to speak about violence. A woman who is being raped has a right to be violent towards her assailant. A violent situation produces violent results. Abstract TV intellectuals like to believe that “terrorism” as a form of violence is wrong because it is wrong. That’s not an argument. That’s merely a statement that means nothing. It’s like saying I’m hungry because I’m hungry. The cause is the effect of the cause. The violence that is life is life to those whose have nothing to lose; to those pushed into poverty and powerlessness violence is an act of self-preservation; to “me” it is “wrong” because I’m not one of them; but to them it makes perfect sense. Those conditions that produce the violence must be changed instead of going by absolute categories of “right” and “wrong” which serve the interests of those who create the violent situation and are responsible for it.
Sign the United for Education petition! (2010-06-21 14:04)

Today is [1]United for Education day and there's a range of protests and events taking place across the country. Details can be found [2]here. For those who can't make it: sign the petition online [3]here.

Review of 'Living on Borrowed Time' by Zygmunt Bauman (2010-06-22 11:00)

I'm sure I wasn't the only person looking forward to Zygmunt Bauman's reading of the financial crisis. I imagined that such an analysis might represent the culmination of his work on liquid modernity, decisively unpicking the antinomies which led the global economy into its precipitous collapse and signposting potential pathways out of it. Therefore it was a little disappointing when Bauman's first treatment of the crisis didn't come in the form of a monograph. Living on Borrowed Time consists of a series of dialogues between Zygmunt Bauman and Citzali Rovirosa-Madrazo. These cover an eclectic mix of topics ranging from genocide and biotechnology to love and utopia.
Bauman offers his analysis of the ‘credit crunch’ in the first dialogue. Drawing on Rosa Luxemburg’s account of capitalist imperialism as involving an unceasing search for new lands to exploit, Bauman suggests that the debt-financed consumer boom in western societies represented the colonisation of our intimate hopes and desires. As such he argues that, far from being any end to capitalism, the recent crisis merely represents “the exhaustion of the latest grazing pasture”. It is not an outcome of the banks’ failure but a fully predictable consequence of their drive to engender a pervasive and ongoing indebtedness across the populace.

Central to this process was the introduction of the credit card which normalised the continuing servicing of debts rather than the expectation of their prompt repayment and, as such, altered our existential orientation towards the future. As with much of his recent work, Bauman is offering little which is analytically new here but is rather thematizing generally familiar social ideas in his own moral philosophical style. In doing so he offers an evocative portrayal of the ethical limitations of consumer capitalism:

“Today, in a setting successfully transformed form one of a society of producers (profits made mostly from the exploitation of hired labour) into one of a society of consumers (profits made mostly from the exploitation of consumerist desires), the ruling business philosophy insists that the purpose of business is to prevent needs from being satisfied and to evoke, induce, conjure and beef up more needs clamouring for satisfaction and more potential customers prompted into action by such needs.”

Another highlight of the book is his compelling analysis which situates the 21st century national security state in terms of the collapse of the post-war welfare settlement. He argues that whereas the state once grounded its legitimacy on the alleviation of “market-produced insecurity”, it now seizes upon personal security as a basis for legitimation. However unlike the insecurity produced by the market the existential dimensions of the ‘terrorist threat’ must be “artificially beefed up, or at least highly dramatized, to inspire sufficient ‘official fear’ and at the same time overshadow and relegate to a secondary position the economically generated insecurity about which the state administration can and intends to do nothing”. The effect of this ‘beefing up’ is that the non-materialization of threats can be presented as a “result of the vigilance, care and goodwill of state organ”. Bauman offers a potent image of western societies cycling into fear and despair, as every non-materialized threat serves to affirm the underlying fears of the populace and the illiberal measures taken by the state to counteract these ‘threats’.

Overall though the book seems to lack coherence. It is difficult to see how the ‘conversations’ fit together as a whole beyond the slightly vacuous claim in the blurb that they cover the ‘pressing moral and political issues of our time’. Similarly it is often hard to follow the thread within particular conversations. The responsibility for this deficiency rests with Bauman’s interlocutor who often fails to pose her questions clearly and, at times, exhibits an intellectual enthusiasm for the exchange which detracts from its clarity. I don’t think she can be blamed for this, as I imagine I’d probably react quite similarly to the opportunity of an extended dialogue with Bauman. Nonetheless it does detract from a book which, though unlikely to persuade Bauman’s detractors of the value of his recent work, offers enough periodic insight so as to outweigh its deficiencies.

Terry Wassall (2010-06-23 14:23:22)

I think an observation by Mark Fisher in his book Capitalist Realism, relates to you review rather nicely, that the primary forms of social control under current capitalism are indebtedness and fear. You and your readers may be interested in the forthcoming conference for the launch of the Bauman Institute at the University of Leeds - web site and details [1]http://www.sociology.leeds.ac.uk/bauman/conference/re-thinking-global-society.php. Before the end of July a Bauman Institute community section in the web site will be launched which interested individuals can join and participate in. Incidentally the Website field in this comment form seems to only accept a limited number of characters, too few for me to add my Uni staff page.
David Harvey on the BBC’s Hard Talk (2010-06-23 09:00)

How many people saw this when it was originally on TV a few weeks ago? It’s a very interesting example of a high profile academic on mainstream TV. I thought he acquitted himself rather well, particularly given the consistent oversimplification of his interlocutor. It would be interesting to get other people’s viewpoints though. Did he do well? How could he have done better? Should he have been on the program in the first place? There’s a comments facility below the videos, although unfortunately it requires that you register.

Suggest links, resources and features (2010-06-23 14:59)

We are trying to build a collection of [1] general links, [2] campaign links and [3] resources. However the internet is a rather large place so if you have any suggestions at all please do get in [4] contact. Likewise we welcome any suggestions about new features which the Sociological Imagination should incorporate. Current plans include a discussion forum, events calendar and a news wire - what else should we include? Again please get in touch if you have any ideas.

Call for Contributions: Public Scholarship and Private Commitment (2010-06-24 10:00)

Why do you care about your research? What is it that makes you want to spend your time exploring this area of the social world? What does it mean for you to gain understanding of these aspects of social life? Our answers to these questions often encompass the biographical, ethical and political. However these aspects of our involvements are often relegated to the background, as the factors seen as relevant to scholarship are too frequently construed in narrowly intellectualising ways.

The Social Imagination is intended as a space in which private commitments can be reconciled with public scholarship. Therefore we are soliciting contributions ([1] articles, polemics or research profiles) which explain how the two are linked and thus address the aforementioned questions. For submission details see [2] here.
New Politics? Even for Asylum Seekers? (2010-06-25 09:00)

Life under New Labour wasn't a lot of fun for asylum seekers. Five rafts of primary legislation in the 13 years that the party was in power progressively worked to limit asylum seekers rights and access to basic support. From the 1999 Immigration and Asylum Act to the 2007 UK Borders act, asylum seekers were subjected to forced dispersal, the end of benefits entitlements (and the introduction of an alternative support system offering poor quality housing and financial aid 60% of normal benefits), biometric ID cards, tagging, the proliferation of arbitrary immigration detention and compulsory regular reporting to monitoring centres. They were banned from taking employment, appeal rights on asylum decisions were diminished year on year, and failed asylum seekers were pushed off the edge of the welfare cliff completely: essentially left destitute.

Over the course of this sorry period in the history of immigration policy in this country, refugee community organisations, NGOs, charities, academics, social movement activists and left wing politicians (the Greens and Respect mostly) have been fighting for the rights of asylum seekers. Those lobbying for change have focused their work in the following key areas: the right to work, an end to immigration detention (and child detention specifically), reintegration of asylum seekers into the mainstream benefits system, an end to violent, forced and unexpected deportations, the inclusion of sexual orientation in recognition of asylum claims, and access to healthcare for refused asylum seekers.

Such campaigns have not been the sole purview of the Left. Even the Tory MP Iain Duncan Smith felt moved to speak out with publication of ‘Asylum Matters’ by right wing think tank The Centre for Social Justice in December.
2008. The report was highly critical of the treatment of asylum seekers, and particularly the denial of the right to work. When even the Tories are worried about the state’s treatment of asylum seekers you know you should be worried.

Indeed, James Graham wrote in this month’s [1]Red Pepper magazine

“one of the sticking points in the Lib-Lab talks on which Labour was unwilling to concede concerned locking up the children of illegal immigrants. This pretty much says it all. There are a great many things that worry me about the Conservative-Lib Dem coalition but I am confident that we will end up with a freer, more human society as a result. And that is about as damning an indictment of Labour as it is possible to make” (p.12)

Is he right? In the run up to the general election earlier this year the [2]Refugee Council, [3]Liberty and the [4]Scottish Refugee Council called on candidates to sign a pledge to “remember the importance of providing safety to people fleeing war, torture and persecution in debates on asylum and immigration”. 1,031 parliamentary candidates signed the pledge, including the men who are now Prime Minister and Deputy PM. Both also promised to investigate ending child detention at the Citizens UK leaders debate a week before the election.

Positive though these moves were, neither the election pledge on asylum nor the commitment to consider ending child detention are legally binding commitments to action. So now that the ‘new politics’ has been loudly declared, what can we expect for asylum seekers, a group quite desperately in need of a new politics? Early signs were good: Nick Clegg announced an end to child detention just 6 days after the general election. Surely this was a signal that a new approach was, if nothing else, possible. Unfortunately, just four days later Damien Green, the newly appointed immigration minister, announced that there would in fact be a review of alternatives to detention for minors and the current system would stay in place until this had been completed. Campaign groups were angered, with [5]End Child Detention Now reporting

"when they said 'we will end child detention,' they meant 'Keep on arresting babies'... We are witnessing an orchestrated attempt to co-opt children's charities and refugee and asylum seeker welfare organisations in the hope that by including them in dialogue and a pledge of future action the new administration will secure their silence and compliance."

What other indications do we have of how the coalition government will deal with asylum seekers? The coalition manifesto (aka [6]‘The Coalition: Our Programme for Action’) reiterated the plan for a review on child detention. It secondly pledged to “stop the deportation of asylum seekers who have had to leave particular countries because their sexual orientation or gender identification puts them at proven risk of imprisonment, torture or execution” (p.18). Again, this sounds good, and is notable in that it has not been the focus of such a high profile campaign as some other issues. However, as Bernard Keenan noted in the [7]Guardian, “as a statement taken out of context, it is legally meaningless until it is translated into policy changes by the Home Office. On the face of it, it doesn’t really change anything.”

The manifesto thirdly states “we will explore new ways to improve the current asylum system to speed up the processing of applications” (p.21). Nothing new there. New Labour made the same claims in several White Papers during their reign but rather than improving justice for asylum seekers, it has led to a progressively more restrictive asylum system with fewer rights of appeal.

Other signs suggest that this old politics of asylum is likely to continue. On the 8th June the [8]Guardian reported a leaked memo which indicated that “government lawyers have warned high court judges that last-minute legal challenges should not be allowed to ‘disrupt or delay’ a deportation flight to Baghdad due to leave Britain early tomorrow.” Forty eight men were deported the next day and have since reported that UK Border Agency staff used violence against them in the process. Two days later plans for ‘reintegration centres’ were announced, to legitimate
deporting under 18s back to Afghanistan at a time when the news is awash with reports of the ongoing instability of large parts of the country. Neither the new Immigration Minister Damien Green nor Home Secretary Theresa May, have yet made speeches on asylum. The picture so far is good in certain respects but scratch just below the surface and the old politics is alive and well. The acknowledgement of sexual orientation is to be welcomed, but it is unclear how the manifesto pledge will translate into concrete change. Child detention is an emotive topic and a good PR move. Should children be detained in prisons without charge, having not committed a crime, for unspecified periods? Few would answer yes and as a consequence an end to child immigration detention is unlikely to face serious political opposition. Whether this move will result in the splitting up of families or other draconian measures which are potentially equally as detrimental to asylum seeking children, however, remains to be seen. Furthermore, when it comes to adult asylum seekers, the majority of whom are single males, arguing for an end to detention without charge requires the decriminalisation of the language of asylum, something the coalition may not be ready for. The 2010 general election was dominated, as so many before, by the unchallenged assumption that immigration per se is probably a bad thing but that we tolerate it because we know we need skilled migrants in certain sectors to keep the economy going. For asylum seekers the unspoken intersections of race and class in this story mean that their value to this country, or our duty of care towards them, is rendered meaningless. A deafening silence around the involvement of the UK in current refugee producing situations facilitates this displacement of responsibility. On these fundamental issues there is little to suggest that the new politics of the Lib/Con coalition will mark a clear break with the past. However, there are yet signs that the Lib Dems will be able to temper Tory prejudices and score some wins for asylum seeker rights. We watch and wait.

The Universities Minister speaking at Oxford Brookes (2010-06-26 15:00)

Universities Minister David Willetts at Oxford Brookes giving his first keynote speech on education to an audience of university vice-chancellors:

[EMBED]

Call for Polemics (2010-06-27 10:00)

Academic publishing can often be a frustratingly slow affair - particularly for those attempting to engage with a social world which seems to change at an ever increasing rate. Therefore we are looking for contributions of polemics: shorter and sociologically informed commentaries upon current events addressed to the middle ground between
journalistic political commentary and academic papers. Contributions should be submitted [1]here.

David Cameron and the Erasure of Social Class (2010-06-28 08:00)

One of the most curious features of the recent UK election was the ambiguous media treatment enjoyed by David Cameron's class background. While the fact of his privilege was unassailable, with Cameron himself telling ITV that his was a "very posh, very privileged upbringing", the moral salience of this fact for assessing the man as a future Prime Minister was roundly denied by everyone to the right of Old Labour. Perhaps this is unsurprising given the political expediency of such a rhetorical strategy in defence of a party led by the most nakedly privileged leadership that it, historically the party of the privileged, has enjoyed for many decades.

Even so it raises the question of the political and cultural circumstances which renders such a strategy both obvious and plausible. I would argue that it represents the culmination of liberal individualism, as a questionable (and once widely questioned) picture of an atomistic social world becomes entrenched in cultural common sense and begins to shape the limits of the thinkable. Given such an understanding any personal characteristic (someone’s socio-economic background and even their political views) which is not a consequence of an individual's immediate choice is seen to be beyond criticism because to criticise it would transgress the idea of tolerance which colonises ever greater areas of argumentative space.

On a purely political level this is problematic because it leaves matters off stage which should surely be subject to debate and scrutiny. However I want to argue that it’s also conceptually incoherent, in the sense that it’s simply not possible to offer a thoroughgoing appraisal of candidates for office which makes no mention of the social circumstances which shaped them.

The realist theorist Margaret Archer suggests that human identity comprises an I, Me, We and You. She argues that the development of an adult identity necessitates the movement through these four stages and that, throughout our lives, shifts in our identity occur through ongoing cycles of such movements. 'I' is our internal sense of self, 'me' is our objective social placement, 'we' is our collective action within society and 'you' is the aggregate of these factors with which others within society are able to ascertain and know about us. The aforementioned rhetorical strategy (and it is a rhetorical strategy though the cultural framework upon which it draws isn’t and is correspondingly much more pervasive and dangerous) serves to censor the 'me' and the 'we'. Their moral relevance to the assessment of a person is denied and, furthermore, any suggestion that they should not be left 'off stage' is seen to be, at least potentially, prejudicial.

The result is that any sense of Cameron’s objective social placement (the sheer wealth & privilege into which he was born) is seen as being off limits. To mention it invites accusations of 'inverted snobbery', 'prejudice' or, worse, 'the politics of envy'. Likewise political discourse quickly loses any sense of his membership of a collective group pursuing collective aims which serve some interests within society and work against others. The result is a narcissistic, childish and contradictory politics. It embraces the 'I' suggesting that we ought to judge based on
personal character and other virtues while castigating discussion of those factors (the ‘me’ and the ‘we’) which serve to shape and define who this man is, what he cares about, how he views the social world, who he is allied with, what his interests are etc. This leads to the evacuation of an intellectual space which can be filled by the work of professional advertisers and marketers, paid small fortunes to craft an image and control public perceptions.

Review of 'The Aftermath of Feminism' by Angela McRobbie (2010-06-29 07:34)

Is feminism as a movement no longer indispensable? Is it redundant or too aggressive for contemporary society? In The Aftermath of Feminism Angela McRobbie argues that the contemporary social and cultural landscape (especially in the global North) could be called post-feminist, an era marked by “anti-feminist sentiment”.

Through the book, McRobbie explores contemporary society of the United Kingdom and argues that we are currently witnessing a post-feminist condition; a condition that sees feminism taken for granted in the belief that gender equality has been achieved. McRobbie states that feminist values have indeed been incorporated into governmental policies and popular culture, but those values that have been incorporated stem from liberal feminism, which has eroded feminism(s) related to social criticism. McRobbie successfully highlights her argument through exploration of glossy magazines, popular television shows, films like "Bridget Jones' diary" or the "Ten Years Younger" Channel 4 series, and offers an analysis of how obsession with femininity and middle-class whiteness in popular programmes undermines feminism as a whole.

Slogans such as "woman have made it" or “freedom of choice” are contested by McRobbie, who instead argues that contemporary society has created a 'successful and individualistic female' who is able to compete in education and work as a privileged subject of the gender mainstreaming policies adopted by the UK’s New Labour Government. Based on the work of Ulrich Beck and Anthony Giddens, the author draws on the concept of “female individualization”, which suggests that the contemporary young woman is now in possession of greater agency allowing her to have an impact on society. McRobbie names this greater female opportunity and choice the ‘post-feminism masquerade’. The post-feminist masquerade, she argues, is a new form of gender power which re-establishes the heterosexual matrix in order to secure masculine hegemony. This new form of gender power is particularly insidious, as it takes place under the pretence of "women's own choice". Furthermore, McRobbie states that the post-feminism masquerade also works as a mechanism of exclusion and helps re-establish colonisation by restoring whiteness as the cultural dominant discourse (69).

To make her point, McRobbie focuses on four key areas: the fashion beauty industry, education-employment opportunities, sexuality-reproduction and globalization. These areas highlight the so-called successes of feminism, whereby women today are able to validate and demonstrate their “own lifestyles choices”. However, while women have progressed in education and employment, the global fashion and communication complex make sure that white, masculine hegemony is reassured. In this case, these industries work to re-establish racial hierarchies by undoing multiculturalism – in the case of Black and Asian woman – and, instead, advocate integration and assimilation into white dominant society.

Drawing on Butler’s concept of “illegible rage”, McRobbie argues that feminine melancholia is incorporated into current definitions of what it is to be a normal female. In other words, the struggle faced by women in order to
represent and emulate the modern woman, well depicted in glossy-fashion magazines has produced a "pathological" young woman (e.g. anorexia, drug and alcohol abuse, mutilation). Such pathology is normalised and glamorised by the fashion industry through extra-skinny and sad-faced models (110).

McRobbie perceives a "movement of women" which she recognizes as a requirement of the contemporary socio-economic system. To contextualize her argument, McRobbie takes the genre of 'make-over' television programmes where women are transformed in order to be full participants in contemporary labour market and consumer culture, especially the fashion industry. Through examining Bourdieu and Butler, McRobbie questions the assumption that social divisions are nowadays increasingly feminised. In a detailed analysis of 'make-over' programmes she finds that female solidarity is broken along other divisions, such as the global North and South. Such divisions among women are characterised by "intra-female aggression" in a post-feminist climate filled with competitiveness, bitchiness and violence.

In The Aftermath of Feminism McRobbie gives a wake-up call to those who celebrate gender equality and argue that women have achieved the same level of education and work-labour participation (or in some cases better, according to statistics) as their male counterparts. To those who assume that feminism is an obsolete movement, McRobbie presents a well-written work which demands that we pay attention to the inequalities women continue to face. In this case, McRobbie attempts to 'de-mask' the masquerade of equality supported by a "gender mainstreaming" discourse.

Regrettably, McRobbie's argument seems to ignore and in some cases demonize the pleasure that women might actually find in choosing a 'kind of fashion style'. McRobbie tends to generalize women that enjoy opportunities hard fought for by feminist movements as 'cultural dopes' unwittingly subjected by the fashion industry. The Aftermath of Feminism is presented in a highly-sophisticated and theoretically complex form leaving room for scholars to further analyze post-feminism and its several representations not only in Britain but also in social arenas around the world.

Newswire (2010-06-30 09:00)

As you may have noticed there's a list of stories and links which appear on the right hand side of the page under the title 'newswire'. The idea is to collect interesting news stories and opinion pieces each day which are likely to appeal to readers of the website. We're looking for a few people to help keep it updated - if you're interested in doing this then please get in [1]touch. It's a very simple process involving a shared [2]Twitter account. Also feel free to add us directly if you're a regular Twitter user.

1. m.a.carrigan@warwick.ac.uk
Support the union at Manchester college - sign the petition! (2010-06-30 14:00)

Management at the college have taken the unprecedented action of de-recognising the union in the latest phase of a bitter dispute over the imposition of new contracts. Please take a moment to sign the [1]online petition which calls on the Board of Governors to ensure that the college meets to the union to resolve their differences. There's more information about the dispute [2]here. The recent action sets a worrying precedent for further education in Britain and it's important that the union at the college get widespread support.

1.2 July

Vince Cable announces cuts to funding for students (2010-07-01 08:00)

The Higher Education Funding Council for England (HEFCE) has received a revised grant letter from the Secretary of State for Business, Innovation and Skills, Vince Cable, that says specific funding for 10,000 students starting university this year will be axed from 2011-12, on top of a previously announced drop in funding. UCU have [1]argued that the letter exposes the Liberal Democrats' pro-university rhetoric during in the election as lacking any substance and accused the party of lacking credibility.

This move seems to be just one part of a much wider attack upon the current arrangement of [2]higher education within the UK. With Lord Browne's [3]report due in the next few months (and seeming likely to provide a technocratic justification to what is a predominately ideological assault upon the university system) the only chance of resisting these cuts will be from widespread resistance within higher education (undergraduates, postgraduates, academics and auxiliary staff) and hopefully grass roots resistance from [4]within the governing coalition.

3. http://www.timesonline.co.uk/tol/life_and_style/education/article6909645.ece

Willetts considers private takeovers of public institutions (2010-07-02 09:00)

There's a worrying story in the Times Higher Education [1]this week relating to the government's willingness to consider private companies taking over public universities. David Willetts has apparently come under intense pressure from BBP (and other private education providers) to begin an opening up of the university system to private corporations and thus far he has said that such companies have a "significant role to play" in the government's
future plans for higher education. BBP have actually commissioned a report from law firm Eversheds which maps out the regulatory framework within which such takeovers could become viable, as well arguing that the inclusion of "external providers" are necessary to ensure a "a properly diverse sector". There's a UCU report on the issue available [2]here.

Intriguingly this seems to precisely the same rhetoric utilised by News Corporation's James Murdoch when [3]attacking the BBC earlier this year. Murdoch argued that the scope of the BBC’s activities were "chilling" and that such state-sponsored journalism was a "threat to the plurality and independence" of news provision. The most obvious way of undercutting this discourse is to offer concrete accounts of how certain public goods are unstable or unlikely when provision is expected to take place through profit driven organizations. At the end of the day this notion of 'diversity' within a given sector makes little sense without some unstated assumption that this serves the public interest. In this sense the debate hinges on an empirical issue and one that needs to be comprehensively won if we are to avoid perhaps irreversible changes to higher education.

Discussion forum (2010-07-03 09:15)

We now have a [1]discussion forum accessible through the tools option on the navigation bar at the top of the screen. There’s no need to create an account in order to post on there, as its accessible through most existing online accounts e.g. google, facebook, yahoo etc. It’s a place to discuss issues and ideas relating to higher education, social science and public scholarship. Similarly feel free to leave comments or ideas about the website. We welcome any and all ideas about things we could do or feature.

The Humanities and Social Sciences (2010-07-04 10:00)

[1]
Great one. Makes a point certainly. Any kind of distinction that creates fences between various knowledges is problematic - even something as seemingly different as geometry and poetry. At the level of reality knowledges by their very nature come together to serve humanity's struggles with nature. For heuristic purposes, yes - distinctions might be essential. But to treat them as ends in themselves only serves vested interests, by which I mean professors in universities who need to keep their chairs warm for themselves and their proteges - not to mention this criminal system that thrives on divisions rather than celebrate differences.

I'd agree with this to an extent but I think there are intrinsic limits to interdisciplinarity. There are often unacknowledged complementarities between disciplines which, through careful theoretical and methodological work, can be drawn out and rendered practically useful (applied linguistics and qualitative social research is what I'm thinking of in particular). Ironically enough the main obstacle to recognising these unactualised potentials is the specialist knowledge which identifying them would allow us to transcend (if you see what I mean).

There's a round up of the days activity on the United for Education campaign's [1]website. Overall it seems to have been covered by a really pleasing range of media outlets. For instance see [2]here and [3]here. As further cuts gradually take effect on a day-to-day level, it's really important that this campaign continues to receive attention and support. I think all involved thus far should be applauded for their efforts and hopefully the campaign can continue to grow.

1. http://unitedforeducation.org.uk/
While tourism is one of the defining features of contemporary society and an important source of economic growth, its study has remained relatively marginalized within the social sciences. However, since the 1980s a substantial body of literature crossing the disciplines of tourism studies, sociology, social psychology and geography has developed (p. 2), leading to insights regarding the form and function of tourism as an industry and a social practice. In drawing upon this interdisciplinary body of work, Tourist Cultures highlights the main debates and different theoretical approaches which have been applied to tourism. In bringing sometimes opposing perspectives together, the authors argue for an approach to tourism which is subject and space centred. In so doing, they offer a theoretical perspective which is capable of dealing with tourism's complexity and which reaffirms tourism as an important area of sociological study.

Tourist Cultures outlines tourism as a form of social interaction that is highly relevant to the construction of individual identity and space. Separated into two distinct parts – ‘Tourist Selves’ and ‘Tourist Spaces’ – one of the starting premises of the book is that tourism requires a holistic approach that takes into account both the macro dimensions of structural power relations but also the micro level of daily lived experiences and interactions. In taking the macro and the micro into consideration, the book provides an approach to tourism that is sensitive to global structures as well as class, gender, race and ethnicity, and the power relations that structure these social differences, but also an approach which makes room for agency and resistance through embodied interaction in tourism space. While various scholars have suggested that global tourism leads to the domination of local cultures and in turn their homogenization, Tourist Cultures provides an alternative perspective, suggesting instead that the complexity of interactions that occur between tourists and the toured in local tourist space can lead to a hybridization of culture (p. 106-109) – or “tourist cultures” – which transcend notions of domination.

In seeing tourism as a form of social interaction one of the book’s main tasks is to challenge the idea that tourists are only “flâneurs” – visitors to space that merely gaze upon its otherness and the ‘Others’ who occupy it (p. 6-8). Instead the authors introduce the idea of tourists as “choristers”, individuals who not only gaze, but also interact and engage with places and local inhabitants (p. 11-12) and, in so doing, (re)construct their individual identities while simultaneously helping to (re)produce tourist space and tourist cultures. Thus, the book argues that one of the main impetuses behind tourism is its ability to act as a source of identity construction. Tourists travel to experience ‘Other’ space and people, a process which is thought to give them greater insight into themselves and allow for personal growth and change (p. 36). However, in traveling to experience ‘Other’ space and people, tourists do more than construct their “traveller identity” (132-133); through their interactions they play an important role in constructing the symbolic meaning of travel space and the cultures found there. In this regard the authors draw upon
geographer Soja's concept of "thirdspace" - the simultaneousness of space as being both real and imagined (127) - in order to highlight how tourism space has both tangible and intangible dimensions and how these dimensions interact with, help form and are formed by the various people(s) who inhabit it. These processes are exemplified through discussions of female sex tourism, backpacking, virtual tourism, as well as tourism in natural and urban spaces.

This process, as the authors outline, is imbued with power relations. Dominant discourses of the 'Other' help to shape tourists’ expectations and interpretations of their travel experiences. However, in following the social interactionist perspectives of Mead and Giddens, Tourist Cultures makes room for subjective interpretation and embodied actions which can, ultimately, challenge and alter dominant discourses. The authors argue that how people interact and live in physical space helps to create its "social value" - the "meanings people attach to place" (p. 11). Forms of tourism which see local ownership and involvement in tourism production and allow for social interaction based on mutual respect are presented as having the ability to reaffirm local value while at the same time allowing for dynamism and change as a hybridization of cultures takes place (109).

While a complex theoretical work, Tourist Cultures is well-written and easily assessable to the new tourism researcher. In providing a more nuanced and flexible framework for understanding tourism based on social interaction, Tourist Cultures offers a way out of dichotomous thinking which has often trapped tourist scholars. While this theoretical perspective is refreshing in that it also seeks to go beyond discussions of tourism as good or bad for local communities and cultures, the specificities of how local resistance can take place remains relatively undeveloped. Thus, while the authors highlight local ownership and forms of tourism that make room for interaction and the development of social value as a route to sustainable tourism, the difficulties in fostering these forms of tourism are only briefly touched upon. In this case, while the argument is made that analyses which take into account both macro and micro levels provide for a more thorough understanding of tourism's complexity, the book's prime focus remains on the micro level which leads it to under assess how the global political economy of tourism may affect possibilities for, and forms of, local resistance. In the end, while the idealism of the book is attractive, further empirical support is needed to help lend it credence.

Sociology blogging at the University of Leeds (2010-07-07 10:00)

Round about the beginning of this academic year, September 2009, the University of Leeds, like nearly all the higher education institutions in the UK, was preparing to make the cuts imposed by the Government in response to the economic crisis. About the same time a number of commentators in the media and in government circles were questioning the value and relevance of arts, social science and humanities research in our Universities given that so much public money was spent on it. They questioned their contribution to public debate and policy and their “value for money” claiming that a great deal of money was being spent on esoteric and marginal research that was only of interest to specialists and was disseminated mainly through obscure journals and even more obscure conferences. These criticisms caused understandable anxiety at a time when Universities were being encouraged to restructure and look for substantial savings and prompted a number of counter initiatives.

Perhaps the most recent example of this is the publication by the British Academy of [1]Past, Present and Future: The Public Value of the Humanities and Social Science[2], a document that is a direct response to the “drastic funding cuts to university and research budgets [that] will imperil the massive contribution to the UK’s economic, social and cultural life made by the humanities and social sciences”. The document highlights the “enormous
reservoir of public value” that the humanities and social sciences generate and demonstrates, with examples, “their contribution to Britain’s health, wealth and international reputation”. The criticisms and economic threats also prompted discussions amongst social science academics and researchers about how they could engage more effectively with a wider public audience.

During the previous summer I had participated in the design and running of a number of workshop sessions for academic staff and postgraduate students on how to begin to develop a digital presence and reputation using a variety of so-called Web 2.0 tools and platforms. One of the topics covered was using blogs as a research tool and for connecting with a wider network of researchers and interested individuals. Generally this provoked a lot of interest and good intentions. In practice however very few subsequently started blogs of their own. Follow up surveys found many did not start their own blogs because of the time commitment and doubting that the pay-off would make it worth while. A few expressed concerns about exposing their work and ideas to critical public scrutiny. There was some indication however of a willingness to get involved in a collaborative effort where there was some support and guidance on writing blog posts and any commitment would be shared.

The challenge to engage more effectively with a broad public audience and the conclusion that staff and postgraduate students would be willing to collaborate in a blogging project if suitably supported prompted a group of us in the School of Sociology and Social Policy at Leeds University to start the [3]Public Sociology blog last October 2009. The aim is to encourage a wide variety of different types of post including reports on aspects of research that may be of public interest, reports on events attended, commentary on current issues where a sociological take would illuminate, personal opinion pieces, book and film reviews, and just about anything else that could be of interest if presented through the filter of a sociological imagination. We have a very informal and supportive editorial process where draft posts are password protected so that colleagues can view and comment and the authors can modify posts before they are made public. Editorial comments tend to concentrate on style and terminology rather than content as we are trying to encourage an accessible more informal and journalistic style than that which we tend to use for academic writing for a specialist audience of peers. This usually involves trying to be more succinct!

The intention from the start was, once up and running, to explore the possibility of opening up the blog to contributors from other universities and maybe try to attract guest contributors from a variety of other institutions and organisations. Our main concern has been, and still is, the sustainability of the project. Research on blogs of this type reveals that most eventually grind to a halt as the initial team of enthusiasts lose interest, lose heart or simply move on. The ones that succeed are those that have a committed group of editors and regular contributors but also draw on a wider network of contributors who post on a more occasional basis. One way to ensure the sustainability of joint authored blogs like this is to join with other blogs of similar outlook and objectives in a loose supportive coalition that link to one another, comment where appropriate on each others’ posts (any blogger knows what great encouragement it is to get interested comments) and even perhaps guest post on each other’s blogs. This would increase the audience for each blog through overlapping readerships. It could also lead to the development of a community of like-minded bloggers and readers that takes on a momentum of its own and perhaps could feed into face-to-face conferences, events and local meetings as well as on-line collaborations. You never know.

Can the government’s new ‘axe-man’ really pretend to run an independent inquiry into fees? (2010-07-08 09:00)

Former BP boss Lord Browne has been parachuted into government as the ‘lead non-executive director’. He has been asked to use his experience to help make Whitehall work in a more businesslike manner. Rather worryingly he apparently represents a foretaste of things to come, as he will come to oversee a string of senior business figures who will be made non-executive directors on the board of every Whitehall department’ which suggests that Conservative rhetoric about the ‘post-bureaucratic’ era notwithstanding the technocratic tendencies of British governance are alive and well.

However from the standpoint of British academia the more pressing question is where this appointment leaves the independence of his inquiry into university fees.

UCU general secretary, Sally Hunt, released the following statement:

“I am very concerned that Lord Browne has accepted this position. The independence of the fees review from government is paramount and the position of its chair integral to that. Accepting a job from David Cameron, a man who made it quite clear during the election campaign that he wanted university fees to stay, clearly brings the legitimacy of the review’s independence into question.

In the interest of this review retaining any legitimacy he should resign. We would also call for the whole objectives of the review to be revisited and for it to focus on ensuring students are able to fulfill their potential. We see no reason why people should be left behind because of cost.”

Between plagiarism and writing a bad book (2010-07-09 08:00)

The choice is a tough one and I prefer the former. A bad book is a sign that one lacks imagination. Plagiarism is proof that you’ve some imagination. I prefer being accused of some imagination to none. An honest person would rather write a bad book. Honesty is a sign of lack of imagination. It’s not a coincidence that most criminals are imaginative people who stay in the public eye while the honest ones are condemned to die unknown. The worst thing about the honest is that they’re unbearably boring. They neither gossip nor slander – that bread and wine of the imagination!

The ones that “fabricate” the past are the writers I admire the most. Postmodern writing to its credit has turned fabrication into a virtue. No one experiences everything they write about. Dostoevsky is not all the four Karamazov brothers in the novel The Brothers Karamazov. A writer imagines such a possibility. Story-telling is an art that places demands on those who undertake it. The performer is on stage and must do everything possible to compel the audience to stay engrossed. Remember the rowdy crowd at the Barafonda Theater in Fellini’s Roma
where the performers and audience are actually in a dialogue even when they hurl words and objects at each other!

The first performers in history were the prostitutes. For the most obvious reason that they could do what you would not expect from "respectable" women – simulate an orgasm. The first simulation was dissimulation and theater gained a lease of energy after the disastrous transition from a communal way of life to the stage of private property. In the matriarchal societies where religion was married to performance, the theater did not have an esoteric quality to it. Daily life was the theater and men and women the players. Class society declared a war on performance. Ideology or keeping the masses drugged with lies became intertwined with performance. Performance lost its spiritual quality but the soul of the performers did not rest in peace. They continued to protest ever since.

The magic of performance is not about virtue. If dissimulation is accepted as a dimension of living from which there is no escape I see no reason why it should not be so in art. The temptation to plagiarize comes from the need to be someone other than yourself. How can you be yourself in a system that places copyrights and patents ideas attaching a name to a concept? If we accept that as being right, plagiarism far from being something to be ashamed of, is something to be admired and emulated.

There is another possibility. You can plagiarize and still write a bad book. That is unforgivable and the mediocre of the world fall in this category. I remember a teacher at school scolding a boy caught for cheating in the exams. He scolded the boy for cheating without knowing how to cheat. Maybe he was ironic but the teacher knew that cheating was an art or he would not have ended up being a teacher. Einstein has a point: "The secret of creativity is knowing how to hide your sources." No writer understood this little trade secret better than Shakespeare who came up with countless characters and each one unique and bearing the stamp of creative genius.

Fatih Parlak (2010-07-09 18:07:12)
I certainly agree with you. I think that there is no possibility of not plagiarizing in this age in which everything is documented or stored somehow, somewhere. While recycling materials is OK, why not recycling ideas, providing that it is somehow different. However, I can’t help wondering why I got lesser mark in your Semiotics class due to plagiarism. :D:D:D (just joking!!!)

Naveena P K (2017-08-29 13:25:27)
Even though I have plagarised in most of my assignments,I clearly know that it just gives me momentary escape. It will help only in short run and ultimately you will have that sort of guilty feeling, that could tell you that, you could have given a try atleast .But it is always be good to write a book or anything that is your own which is sometimes difficult because every time , you prefer easy way .Yes I think being what you are or preserving your individuality is better than forging things. Even if you come up with a very bad book you can say that it’s yours and you have put your blood,sweat in it.

Naveena P K (2017-08-30 08:59:43)
I don’t think that people really like to read repetitive things. They expect something new from a author. May be the person may come with a bad book ,but still there is a chance that he/she will come with better one. There is no sort of imaginations or expectations with those authors who plagarised.

Labour MP Tom Watson calls Michael Gove a ’miserable pipsqueak of a man’ (2010-07-09 22:08)

Democracy Village (2010-07-11 10:00)

This is an intriguing short film exploring [1] Democracy Village, an anti-war protest camp occupying Parliament Square. They’re currently facing eviction so if you’re in that area of London then pop in and take a look because it probably won’t be there for much longer. In fact [2] Brian Haw has become such a fixture of Parliament Square (3322 days and counting) that I suspect MPs will secretly rather miss his ranting though affable presence in the square.

Review of ‘One Dimensional Woman’ by Nina Power (2010-07-12 07:40)

One Dimensional Woman is aphoristic and polemic from the start. As the author asks as the beginning of the book: “where have all the interesting women gone?”. In this slim volume the philosopher [1] Nina Power attempts to answer this question. Through doing so she offers a compelling account of the place of women within contemporary society and a challenging riposte to the depoliticising tendencies within third-wave feminism. Her main complaint is with the “apparent abdication of any systematic political thought on the part of today’s positive up-beat feminists” which she suggests bears some responsibility for the uncritical reproduction of an idea of female emancipation which “coincides so perfectly with consumerism”: self-expression through consumption, self-confidence through sexuality. It also stands critically blunt in relation to the [2] feminization of labour.
My favourite part of the book was her exploration of the role of sex in society through an inquiry into the cultural history of pornography. Power begins the chapter by counterpoising the empty and mechanical nature of contemporary pornography (“the sheer hard work of contemporary porn informs you that, without delusion, sex is just like everything else – grinding, relentless, boring”) with the joie de vivre she finds in vintage pornography (“the first thing you notice in these early films is the sheer level of silliness on show: sex isn’t just a succession of grim orgasms and the parading of physical prowess, but something closer to slapstick and vaudeville”). Whereas the latter “abounds in sweet expressions and moments of shared affection”, the former acts as a grim reminder of our own alienation: “sex is a type of work, just like any other”. For instance Power points to the bewildering proliferation of porn’s taxonomies since the onset of the internet age. Similarly she observes that one of the most successful porn films of all time involved 251 sex acts performed with 70 men over a 10 hour period. Modern pornography represents a triumph of instrumental reason (more choice, more variety, more sex) and, in so far as it increasingly shapes prevailing cultural understandings of sexuality, it insidiously entrenches the alienation which feeds it.
Another enjoyable section of the book is Power’s insightful (and genuinely funny) analysis of the phenomena of Sarah Palin in terms of Lancanian psychoanalysis. Through an intriguing perusal of the many facebook groups devoted to Palin (“I would totally do Sarah Palin”, “Sarah Palin is HOT!”, “I’d bang Sarah Palin”, “Sarah Palin is stirring things up – and I’m excited!” etc) and the mainstream coverage of her, Power offers an intriguing assessment of the likely future presidential candidate’s political and cultural significance:

“America has found its new hero(ine), and she’s a woman who turns the insults that every successful woman has hurled at her (dog, bitch, flirt) into ammunition to shoot dead her accusers. She turns maternity into a war-weapon, inexperience into a populist virtue and feminism into something that even the Christian right could approve of ... although Palin didn’t manage to make Vice President this time around, what she represents – a kind of terminator hockey-mom who calls herself a feminist – is something quite new”

However like many of the other ideas within the book, this one remains ultimately undeveloped. This is inevitable given how short the volume is and Power should be applauded for writing such an accessible and enjoyable text. Nonetheless in spite of its relative brevity this is a complex and multifaceted book. It’s aphoristic style facilitates a range and scope which would otherwise be impossible. There’s something immensely satisfying about a challenging, polemic and enjoyable academic book which can be comfortably read over the course of a long train journey. It’s also another impressive addition to [3]Zero Book’s eclectic range of titles.

REF to be delayed by a year (2010-07-13 08:00)

In a recent [1]speech David Willetts has confirmed that the [2]REF will be delayed by one-year in order to “figure out whether there is a method of assessing impact which is sound and which is acceptable to the academic community”. While it’s difficult to know how much of this decision can be said to ensue from protest against the ‘impact agenda’, it undoubtedly signal that the next year will prove crucial in determining the future state of research within British higher education.

Read more about UCU’s campaign on the subject [3]here.

Review of 'Sociology of Intellectual Life' by Steve Fuller (2010-07-14 09:00)

Given the brewing conflicts within British higher education it seems like an opportune moment for a thorough sociological analysis of academia. Such an analysis would supplement the expansive literature on the subjugation of higher education to market forces through a careful consideration of the consequences this process holds for the state of intellectual life and production of knowledge. This is the promise which Steve Fuller’s new book hold outs. The Sociology of Intellectual Life is divided into four chapters framed around Humbolt’s ideal of the modern university. The first relates to the institutions itself. The second considers its ideological justification. The third examines the kind of person the university hopes to produce. The fourth draws these strands together in an affirmation of the crucial virtue Fuller sees as absent within modern academia.

In the first chapter Fuller presents the university as a solution to what he terms ‘the modern problem of knowledge in society’: how can knowledge be universal in its scope while also universally accessible? In pre-modern times there was no such problem because knowledge was seen by its nature to be an elite possession which conferred authority. This was supplemented by an enlightenment ideal of the democratization of knowledge through the institution of the university. However this ideal now finds itself under threat on all sides, as managerialism increasingly prevails within the university in response to pervasive outside demands that learning be subjugated to all manner of market imperatives.

In the second chapter Fuller offers a sociological exploration of the status of philosophy in this modern academic environment. He traces a decline from the magisterial Kantian understanding of philosophy as a discipline which grounds all else to one which simply offers clarification of the intellectual output of other disciplines. In the process philosophy is seen to have ceded something crucial to the special sciences which in turn weakens the support it can offer to the ideal of knowledge which is universal in its scope.
In the third chapter Fuller considers the changing role of the intellectual. He attempts to recover a sense of “the intellectual as someone who is clearly of academic descent but not necessarily of academic destiny”. He suggests that a distinguished history of the intellectual can be traced from the court intellectuals of enlightenment Prussia through the expansion of academic tenure to the modern public intellectuals able to enjoy commercial success. However this traditions find itself under threat through an increasing aversion to intellectual risk-taking on the part of modern academics driven by an interest in the insular affairs of their discipline and a fear of the consequences which public involvement might hold.

In the final chapter Fuller advocates improvisation as a process through which intellectual life might find its redemption. He suggests that the costs associated with intellectual risk-taking on behalf of academics leaves it far too easy “to defer to the orthodoxy and to discount its dissenters”. He sketches out an image of a new academic culture more heterogeneous in its standards and more tolerant of dissent:

“So what would an improvisation-friendly academia look like? Certainly standards of public performance would shift. We would become more tolerant of people who speak crudely without notes, if they can improve as they take questions from the audience. But we would equally become less tolerant of people who refuse to take questions simply because they stray from their carefully prepared presentation. Instead of ‘sloppy/rigorous’, we would apply the binary ‘expansive/limited’ to describe the respective intellects of these people.”

It is here that Fuller’s arguments are at their most plausible. He’s surely correct in his claim that improvisation goes unrewarded (and indeed is actively disincentivised) within contemporary academia, as an overly restrictive career structure increasingly demands the sort of instrumental planning which too often precludes taking the time and effort to go out on a limb. Where his account is less plausible is in its embrace of ‘bullshit’. Though the application of this term might often represent a pernicious anti-intellectualism within mainstream culture, it can equally stand as a forthright affirmation of intellectual standards in the face of poor reasoning and vacuous arguments. Rather than accept ‘bullshit’ we should continue to affirm standards for scholarship while loosening the formalities associated with such standards on a situational basis: redefining academic conventions to suit new forums and new media on a case-by-case basis. In this way it might be possible to communicate research more easily beyond the academy (and more productively, creatively and agentially within it) without undermining the intellectual standards which ensure that academia has something to offer the wider life of society.

Thinly Veiled Persecution (2010-07-15 09:00)
This week the lower House of the French parliament voted to ban French residents from wearing the Niqab –the full face veil. Of the 337 members of the French national assembly taking part, 336 voted for the bill and one against. The majority of members of the Socialist party refused to participate in the vote.
This is a piece of legislation which specifically targets a minority group, approximately 2000 Muslim women in France who wear the full veil. If the bill gets through the Senate in September, Women who wear the Niqab in public will be taken by the police back to their homes where they must remove it, or face a fine. Those found to be forcing women to wear the veil will risk a prison sentence. There are two issues which these measures apparently address: the control over women's physical appearance, and the protection of women from oppression. If this piece of legislation sought only to prevent women from being forced wear particular dress by others, it would render itself illegitimate since it simply moves the power of force away from family over to state. But this is not about female oppression. It is about the state sponsored persecution of Muslim women as part of a wider European trend of politically endorsed Islamophobia.

When we begin to pick apart the argument of 'force' or 'coercion' around women's dress the whole thing begins to crumble. Should girls be forced to wear school uniforms which they hate against their will? Should workers be forced to wear any uniform against their will because of the economic necessity of staying in their job? Are many women coerced into injuring their feet, backs and knees by wearing high heels under the weight of social and cultural pressure? Trivial examples perhaps, but do any of these examples of 'force' or 'coercion' seriously warrant national legislation?

But of course, the French state is not concerned here to protect women from being forced to wear certain clothes because of social, cultural or economic pressure. People with copious body piercings are not going to be escorted home for their own protection against the coercion of the cult of a youth sub-culture. No, this is about the threat posed by these 2000 women to the French way of life and the values of the liberal state. If they choose to express their religion in this way, they cannot possibly be French. If their are forced against their will to reveal their faces, an act which for some is comparable to being forced to walk around topless, then France will be more cohesive, more homogenous, less at risk from terrorism. Do any of these arguments stand up to even a moment of scrutiny? Will the targeting of Niqab wearers really make Muslims in France feel more integrated, less in inclined to join a radical terrorist group and bomb Paris?

The most likely outcome of this legislation is that Muslims in France will feel even more persecuted than ever before. Muslims, but especially Muslim women who choose to wear the head scarf (or if they dare, the full veil) will feel targeted for surveillance and less welcome in France, less a part of French society, than ever before. What is especially worrying is that such targeted oppression of women, and violation of their rights in international law, apparently garnered support from the majority of the French population, and there is no reason to believe that it would not be so in other European countries. Indeed, there is already widespread support for a similar measure in Belgium. Liberty, equality, fraternity this is not.

Where next for a region of the world which continues to cultivate an image on the world stage as the home of freedom, democracy and justice? Whose entry criteria include strict rules on the protection of minorities and civil liberties? We can only hope that the veil of hierocracy is lifted sooner rather than later.

**Background:**
The ban on face-covering veils, or niqab, will go to the Senate in September, where it is also likely to be passed. Its biggest hurdle is likely to follow when it is scrutinised by the French constitutional watchdog scrutinises it.

The main body representing French Muslims says face-covering veils are not required by Islam and not suitable in France, but it has expressed concern that the law will stigmatise Muslims in general.
France has Europe’s largest Muslim population, estimated to be around 5m of the country’s 64m people. While ordinary headscarves are common, only around 1,900 women in France are thought to wear face-covering veils.

**Event: New Activism or Old Politics? (2010-07-15 14:20)**

**New Activism or Old Politics? Sounding student reaction to HE’s crisis**

This free, one-day event will discuss likely student reactions to the impending cuts and rising fees in higher education.

30th September 2010, 11am – 4:00pm

Room 404D, Main Building, University of Aston, Birmingham

**Participants include:**

- Patrick Ainley, University of Greenwich
- Ben Little, University of Middlesex
- NUS speaker (hope to get Clare Solomon, Pres elect ULU)
- Joyce Canaan, Birmingham City University (Chair a.m.)
- Sarah Amsler, University of Aston (Chair p.m.)
- Jonathan Ward, Studentforce for sustainable development
- Esme Hannah, PhD Student University of Leeds
- Dora Meade, Student Led Discussion Network Co-ordinator University of Leeds

**Timetable:**

10.30 Registration

11.00 Welcome Patrick Ainley, Network co-ordinator and co-author *Lost Generation? Continuum 2010*

11.15 Ben Little - ‘Radical Students? The importance of universities within activist networks’

based on his edited e-book: *Radical Future – Politics for the Next Generation*

178
12.00 NUS speaker or Dora Meade + Leeds University Student-Led Discussion Network

1.00 Lunch

1.30 Jonathan Ward - ‘Brown Dystopia or Green Hope?’

2.15 Esme Hannah - 'Student Politics, past and present'

(+ Dora Meade with Leeds Network if confirm Clare 12-1)

3.00-4.00 Plenary discussion

The event is free and all staff and students in UK Higher Education are welcome to attend but please register below.

A full guide to travelling to Aston, including campus maps, is available at the website below. The Aston campus is a short walk from Birmingham New Street train station. The University has a car park and visitors passes can be provided – please email...

Aston uni campus guide: http://www1.aston.ac.uk/about/directions/

**NETWORK EVENT BOOKING FORM: Student Experience Network** Thursday 30th September 2010

It is free event please confirm attendance with Carol Salmon at [2]csalmon@srhe.ac.uk

**Jeremy Rifkin on the 'Empathic Civilization' (2010-07-15 16:35)**

[EMBED]

__________________________

The Sociological Imagination | RSA Animate and Jeremy Rifkin's Empathic Civilisation (2010-07-21 09:16:38)

[...] a follow up to his lecture here’s Jeremy Rifkin’s concept of empathic civilisation explored through the medium of [...] 

**An Activist Ethnography (2010-07-16 08:55)**

The politics of the activist community, as we have briefly explored, is a broad church of the left, and with a few exceptions, the anti-capitalist left. This anticapitalism is manifested in a number of environmental and social campaigns on campus and in the West Midlands area. The politics of Warwick activism should be understood as
such, and whilst an interesting subject in itself, it doesn’t require a separate section in this report. Before we look any further at the development of the group in relation to the Aldermaston action, it might be a point of interest to look at some of the key identity markers within activist communities. Identity markers can be found in everything ranging from clothing, humour and language, to food and drink. Without delving too deeply into any one of these we can observe how the politics of activism is often applied in day-to-day life.

The bring-and-share meal

The bring-and-share is a lynch pin of student activism. Members of the Aldermaston affinity group frequently joked about the pulling-power of the bring-and-share over and above any sense of social duty or conviction. Facetiousness aside though, the act of sharing a meal that everyone has in some way contributed towards is a tangible and enjoyable example of the anarchist principle of reciprocity and mutual aid. All but one member of the Aldermaston group was vegetarian, and among those a significant minority tend to live on a vegan diet. This is fairly common amongst activists, either for ethical reasons or environmental reasons, or a combination. In the case of the latter particularly, a vegetarian/vegan diet is an example of reflexivity and the day-to-day application of politics.

Last year's S0.21 sit-in coincided with 'Go Vegan Month', and the arguably difficult transition to a vegan diet –most beers, snack foods, and even meat substitute products contain animal produce- was made easier by the support of an entire group which shared the responsibility for cooking good vegan food on a massive scale. The bring-and-share lunches in the Gaia space offered, on a smaller scale, the same support. Whilst members of the group bought some foods from Gaia, a significant number of dishes were homemade, including risotto, falafel, salads, and vegan cakes.

Perhaps the most notable food combination connected with activism is pitta bread and humous. This, along with falafel is a staple part of any bring-and-share. Evidently neither originate from Western Europe; the Mediterranean and Middle Eastern cuisine suggests a cultural import possibly associated with the pro-Palestinian ethos of many activist groups. This is an unsubstantiated claim, but arguably not without some merit. Humous was voraciously consumed by the Aldermaston group to such an extent that one group member brought twelve pots with her on the outward journey!

Smoking

The act of smoking amongst activists is something that has been covered in David Graeber's Direct Action: An Ethnography, and whilst only two members of the Aldermaston group were regular smokers, it is still worth mentioning how the idea was often mooted that support roles for non-arrestables should include rolling cigarettes –all three arm-tubers would be incapable of doing this themselves with at most one free arm.

Language and humour

By no means are all of Warwick's student activists studying for degrees in politics, sociology or history, however the use of certain vocabulary indicates at least a passing acquaintance with these fields of study. Conversation often includes esoteric terminology. Frequent reference to 'prefiguration', 'reflexivity', and 'heteronormativity' is a distinctive trait of Dissident Warwick, and the collective that produces it. This type of language's use in everyday
speech is perhaps more remarkable.

It is also fairly problematic. One of the Warwick anarchist group—and broader activist community’s—oft-voiced concerns is how many people perceive it to be a revolutionary vanguard. The common usage of academic and esoteric language seems to perpetuate this perception. Perhaps aware of this, or at least aware of how bizarre the straight-faced use of the above terms in a social environment is, the use of academic language has begun to inform the humour of the group. In an equally perplexing and exclusionary fashion, the group’s humour has become largely self referential.

For reasons all but forgotten—though usually cited as originating during the Faslane preparations in 2007—the group finds great amusement in suggesting actions or protests that take place ‘in waves’. Another saying that has become commonplace in the last few years is the disparaging remark, “X has/have no analysis”; mostly used to decry the ‘reformism’ (another black word) of the moderate left.

In reference to the group’s constant use of compound phrases like ‘anarchofeminism’, ‘anarcho-pacifism’, ‘post-Marxist’, ‘neo-liberal’, such prefixes are used to describe seemingly incongruous nouns. ‘Neo-laddish behaviour’ and ‘post-sexist’ can be understood without the prefix, which is solely used to denote the fact that a member of the group is doing or being it in a facetious manner.

Drawing more directly from the PAIS degree programme, a mock-credence is given to J.S. Mill’s notion of ‘lower pleasures’ and hedonism. If someone wishes to make fun of another person in the group, accusing them of preferring ‘lower pleasures’ will suffice. This should not be understood as a permanent or embedded aspect of activist identity. As we have explored, affinity groups at university are inherently transient, and so to are the stylings of its humour. Arguably more analytically important is the prominence of foreign languages—most particularly Spanish—in activism. A number of the chants, slogans and songs most associated with socialism, communism and anarchism aren’t in English. The Internationale (French), and Bella Ciao (Italian) are both notable, deriving, in the case of Bella Ciao particularly from the anti-fascist struggles of the twentieth century.

Spanish is the predominant influence however. ‘Compañero’ is used among the Warwick group interchangeably with ‘comrade’, and in written form the malecentric grammar that gives primacy to the masculine in a mixed address (compañeros) is rejected in favour of the gender-neutral ‘compañeras’. Four members of the Warwick affinity group (although not of the Aldermaston group) have spent around a year in Latin America, two of whom spent the majority of their time in Chiapas, Mexico, visiting the Zapatista liberation movement. As a result, eight out of 24 pages in the latest issue of Dissident were given over to studies of the Zapatista struggles for autonomy and in gender issues.

Clothing and symbols

The rejection of capitalism and the unjust relations of production that capital entails means that activists’ clothing tends to reflect this. The collusion of many high street labels in sweatshop labour has been both the focus of campaigns, and informs the dress habits of the community. Most recently in early 2009, Russell Corp, a subsidiary of Fruit of the Loom, sacked over 1,000 workers in its Honduran factory for attempting to unionise. Fruit of the Loom are a major provider of apparel to universities. A pan-Atlantic universities boycott, including support from People and Planet in the UK eventually led to the reinstatement and compensation of the sacked workers.

In terms of identity, the Aldermaston group’s clothing tended to reflect the politics or musical taste of the wearer. In this respect there is no profound distinction (in using clothing to express your identity) between the activist community and anyone emblazoning a Top Shop design across their t-shirt. Briefly returning to the notion of a pro-Palestinian ethos mentioned in the bring-and-share section, the keffiyeh is a common accessory in the Warwick group, and the activist community internationally. This is hardly a recent import, but it is less and less a distinct marker of activist identity, or as an identifier of sympathy with Palestine. The keffiyeh has been increasingly
coopted by high-street shops as a generic fashion item. The name keffiyeh has been shed in favour of the anglicised ‘desert scarf’. According to Amazon.co.uk's webpage, the desert scarf is ‘stylish and versatile...[a] must have fashion accessory for both girls and guys- 8 colours available’. For the activist at Warwick then, authenticity and foreign origin seem to be the crucial distinguisher (along with referring to the keffiyeh by its ‘proper’ name), now that the identity marker has been diluted to include any fashion-conscious person.

In a final digression about the co-opting of once potent symbols of resistance for radical politics by the capitalist system, one of the Aldermaston group was canvassing for support on a new green initiative on campus in late 2009. In spotting a student wearing a t-shirt with a large CND ‘peace’ logo he approached her, expecting to find a kindred spirit. The girl, looking perplexed as to why he would walk across the entire length of the Piazza to speak to her, told him that she had “no interest in politics”. Our group member apologized, explaining how he had made an assumption about her based on her t-shirt. She cited the logo’s fashionableness and continued on her way.

In summary then, whilst there are some markers that the activist community continues to identify with after a decades-long history, the continued depoliticisation and marketisation of some of these symbols and items of clothing by capitalism has led to a nuanced reinvention of the identity marker, be it through the language used to describe the item (as with the keffiyeh/desert scarf binary), or its authenticity. Is it perhaps an understandable response to the alienation of many identity markers that certain elements of activist identity, such as the use of overtly political language in everyday speech, have been emphasized, as if in compensation?

Activist Identity: conclusion

It seems fitting to finish this section with a brief look at the politics of identity in relation to activism. In The Condition of Postmodernity, David Harvey puts forth a dichotomy between the ‘politics of being’ and the ‘politics of becoming’. Whereas liberalism, Marxism, and particularly anarchism are exercises in the politics of becoming – where the focus is less about what you are than what you can become; they all see themselves as universal, and not applicable just in a particular time and space- the predominant trend now, Harvey argues, is the politics of being, which, conversely is less about becoming anything than what you are.

It is a form of identity politics located exclusively in the present tense, where geography, ethnicity and language are particularly relevant.
In the postmodern world, where so much is in a state of flux, he posits that the politics of being, and the often sectarian identity politics that this entails, has risen in prominence to counteract increasing casualisation and fluidity in the labour market, and social relations, and in doing so, provide some much needed psychological stability.

When we consider the above sections on activist identity through Harvey’s analytical standpoint I believe we can show that despite immediate appearances, the activist community is still within the framework of a ‘politics of becoming’. Whilst some traits of activist identity might indicate an exclusionary or vanguardist community, as with the use of language or the perceived fundamentalism that an anti-capitalist stance comes with, others, such as the bring-and-share, are the epitome of mutual aid and an inclusive community.

Indeed, the ‘prefigurative’ politics of most activists (where the ‘modes of organization and tactics undertaken...accurately reflect the future society being sought by the group’25) are inherently forward looking. The simultaneous feminist, green, and LGBTUA+ agendas that particularly define Warwick activism are the politics of emancipation, tout court.

This is an abridged version of a larger paper. Contact [1]Chris Browne for original copy.

1. C.J.Browne@warwick.ac.uk
Having become a self-defined 'activist' at some point in 2008, the stories told by older members of my affinity group at Warwick University always held great appeal. When they spoke of old protests, sit-ins, and comrades in direct action, certain people who I had never met before seemed vividly real and familiar, and their actions distorted and aggrandised through an informal kind of oral history. The actions themselves suffered a similar distorting effect in the mind of a new, and relatively inexperienced activist. The most interesting thing, I found, was how these people and their activism were not lodged merely in the recesses of my contemporaries' memories as the artifacts of some by-gone era. Rather, the events they described took place only a few years ago -2005, 2006, or 2007; as for the people, they had finished their undergraduate study often the previous year, or two years before. And yet, in my mind at least, they were definitely part of 'history'.

Much has been said of the drawbacks of very short institutional memories, particularly in universities, and the historicisation of very recent events that goes with that. My own experience as a journalist as well as an activist reinforces this view. My first year writing for the student newspaper was 2007. I recently came across an article I had written in December of that year, about private military and security companies; for the life of me I cannot recall writing it. The physical archives of the newspaper for that academic year are also extremely patchy, with most of the editorial staff having made off with what issues were left at the end of their tenure, leaving none for the archives and posterity. Within a year, I would think less than 1 percent of students at Warwick will recall the politics or the scandals that marked that year. Very recently, coinciding with the 40th anniversary of the Warwick Files Affair -where during a sit-in of an administrative building, secret files collected on student radicalism were discovered- I have been searching through the Students' Union archives, in order to produce an article about activism and the Union at Warwick. The most frustrating thing has definitely been how a series of one or two issues will chart the development of a student rent strike or an occupation of the Senate building, but then a several-month gap will appear in the records leaving no recourse for the archivist to find out how the struggle ended. Although I wrote the Aldermaston 2010 Ethnography before I embarked on my current project, the same rationale underpins both of them. In two years time, all but one of the Aldermaston group will have graduated, and save for an article published in the online edition of the Boar, there would have been no written evidence of the group's existence, and only scattered evidence -again in the Boar, and more crucially in 'Dissident Warwick'- of the vibrant radicalism that has been resident at the University in the last few years.

The Ethnography attempts to draw together the reality of the activist scene in early 2010, with even the most mundane observation given credence. I wrote it originally as part of my degree course, though it soon expanded...
beyond its initial 2,000 word remit when I realised the important role it could play in this particular area of social history. The process of writing it, as if often the case, helped to draw out certain thoughts, and links between theory and the life of the Warwick activist. This is especially true of the section on activist identity. The ethnography’s publication in this journal is most welcome, as it will be able to reach a wider audience, especially in years to come.

-ethnographic writing, I find, tends to become ever more fascinating as it slowly becomes part of history.

For the last three years I have been studying History and Politics at the University of Warwick. I have spent an equivalent amount of time working for the student newspaper, the Boar, and it is perhaps my journalism, rather than my academic pursuits, which have merged most favourably with my activism. The Aldermaston Ethnography is the most lengthy example of this writing.

The Sociological Imagination | The Privacy of Public Sociology (2010-08-08 10:16:05)

[...] a retort to Michael Burawoy’s conception of Public Sociology here’s Mathieu Deflem on the privacy of public [...]

John Snow vs Zac Goldsmith (2010-07-17 16:34)

Recent entry to parliament [1]Zac Goldsmith (Conservative MP for Richmond and son of billionaire financier [2]James Goldsmith) makes a fool of himself defending [3]allegations that he broke election financing rules. Is this strategy something a spin-doctor recommended? If so is it a sign of things to come? It’s difficult to watch this and not worry that a new wave of Fox news-esque right-wing belligerence is going to manifest itself in the relation of British politicians to the media.

[EMBED]

Patrick Macartney (2010-07-20 14:23:18)

A very interesting clip Takes not answering the question to a new level! The ConDems seem to be getting good at this e.g. 'This is because the previous government left us in a mess/ biggest deficit ever/ did not tell us how bad things are etc! How long will the public put up with this? Cracks started to appear in last weeks question time with the heckling of the Tory Francis Maud.
We need issues addressing not just ignoring,

Sociological Imagination (2010-07-20 22:38:41)
Another striking example was Michael Gove on Radio 4 on Monday (http://www.newstatesman.com/blogs/the-staggers/2010/07/today-programme-bbc-interview) who literally refuses to substantively address a single question and instead attacks the BBC... Are we seeing the work of the next generation of spin doctors who have rationalised the 'dark arts' of Campbell et al, taking them to new heights of obfuscation and dissimulation?

'Things cannot go on the way they are' (2010-07-18 09:00)
An intriguing (though depressing and plausible!) [1] talk by Slavoj Žižek about the prospects faced by Western democracy. He paints a grim picture of a society where "all small personal pleasures will be kept" but democracy is gone. As he puts it: "things cannot go on indefinitely the way that they are". Do we face an all or nothing situation? Radical action or conclusive destruction?

Prakash Kona (2010-07-22 03:14:44)
I had the privilege to listen to Zizek some time January this year. Derivative in many ways, but that’s alright. Not to be original is not a serious flaw. It never was in fact. While assuming that it is polemics, certain things Zizek says need to be put in perspective. I stopped taking him seriously the moment he said that Gandhi was more “violent” than Hitler (http://atrocitynews.wordpress.com/2010/01/14/gandhi-more-violent-than-hitler/). It’s fashionable these days to attack Gandhi and Gandhism and find faults with his kind of nonviolence. Interestingly, those who attack Gandhi wouldn't dare to live like him for a single day of their lives, the simple reason being that they cannot do so. A life that follows the Sermon on the Mount to the letter is not something Gandhi’s critics would embark on even for a joke although there’s nothing funny about it. Gandhi defies European rationalism and any rationalism for that matter. His insights into the nature of colonialism are profound and the success of the Black Civil Rights Movement in the United States lead by Martin Luther King is proof of the universality of his views. Though rarely acknowledged, in almost every area of humanities and social sciences you are bound to come across his insights in one form or another. There is no writer, activist, researcher or revolutionary in the 20th century who is untouched by Gandhi’s views. To merely say that Ambedkar who lead the Dalit struggle against upper caste oppression "was better than Gandhi" is to miss the framework of the Gandhi-Ambedkar debate which is colonialism. Unfortunately in the past three or four decades the Holocaust Industry crooks (that Norman Finkelstein talks about in his book The Holocaust Industry) have made the suffering of every other group on this planet look irrelevant compared to that of the Jews under the Nazis. In the most shameful and degrading manner they profited from that suffering as Finkelstein shows with documented evidence. The space for thinking other things has seriously been curtailed for obvious reasons. The modernization of Europe beginning with the Renaissance cannot be understood without colonialism as the background for most of the path-breaking changes. Colonialism not only is the background to the Gandhi-Ambedkar debate but also the background to Gandhi being Gandhi and Ambedkar being Ambedkar. Most western intellectuals – Zizek is not an exception in this regard - refuse to acknowledge colonialism and its avatar globalization or corporate colonialism as the essence of any attempt to give a historical framework to notions such as development or underdevelopment or radical change for that matter. Capitalism as an institution exists in the west thanks to neocolonialism. You cannot be anti-capitalist without attacking the base which is colonialism. Revolutionary socialism will destroy this base before anything else.
I largely agree with what you’re saying and I believe that Zizek would too. As I read the 'Gandhi is more violent than Hitler comment’ Zizek is suggesting that Hitler stayed within the socio-political parameters of capitalism (playing at stretching them in order to save them) while Gandhi was genuinely revolutionary: Nazism was not radical enough, it did not dare to disturb the basic structure of the modern capitalist social space (which is why it had to invent and focus on destroying an external enemy, Jews). This is why one should oppose the fascination with Hitler according to which Hitler was, of course, a bad guy, responsible for the death of millions—but he definitely had balls, he pursued with iron will what he wanted. ... This point is not only ethically repulsive, but simply wrong: no, Hitler did not 'have the balls' to really change things; he did not really act, all his actions were fundamentally reactions, i.e., he acted so that nothing would really change, he stages a big spectacle of Revolution so that the capitalist order could survive.

Iron Man and the “bigger-dick” US foreign policy in the Third World

I don’t think I would have the strength to go through an Iron Man movie but for my nieces and nephew who were eager to watch it. In this barely analytical review, I’m paraphrasing the first chapter of Eric Cheyfitz’s The Poetics of Imperialism titled “Tarzan of the Apes: US Foreign Policy in the Twentieth Century” spiced with notes from George Carlin.

I just completed The Devil finds Work - an uncannily insightful book - by the black writer James Baldwin on racism in American movies. Iron Man is an arrogant, patronizing, racist prick who stands for everything that makes the United States such a crazy drunk ape of a regime. He just belongs to the long line of James Bonds and Supermans and Rambo and other dickheads who are out there to save white Americans and their families from the wretched others. There’s a point Baldwin makes over and again: what is missing or rather repressed in white American consciousness is blackness. This blackness takes myriad forms from the “blacks” themselves to communists, Arabs and gays. The stupidest American movie gives you an idea of what this hidden face of blackness is all about.

Individuals become individuals and groups are able to enter into association as groups concealing something about themselves. There is a universality to the hidden blackness and the murders and genocides of history are because men have not been able to come to terms with their dark selves. This blackness of history is fairly contextualized in how white America deals with the third world. America’s foreign policy is the teacher at school combined with the bully of a policeman on the street.

Literally speaking, reality is not black and white. A rich and exploitative Indian shares in white colonial consciousness just as much as a poor and exploited white shares the darkness of the colonized. Racism must be redefined in global contexts. Brown and black elites across the third world are viciously criminal and defy any simplistic notion of essential ‘race’ in understanding why some men have made it a business to dominate so many others.

Back to the movie: stereotype number One and the one we’re most familiar with: the black guy unthinkingly loyal to the American flag; Lieutenant Colonel James Rhodes, played by Terence Howard; this one black guy like the dumb white woman is the background to the almighty smart Tony Stark supremely wealthy and supposedly as bright. There are at least one thousand movies with black guys confirming to the white guy that he’s the real man that the rest of the world wants to be; if you want to know why the black guy is psychologically necessary to justify white manhood please read James Baldwin who has the last word on the subject.

Complementing the black guy – the giver of certificates of masculinity to white men – is the dumb white woman who may not exactly be a certificate giver but something equally commonplace; she confirms to the white guy that he’s not gay; his sexual credentials are safe henceforth; he need not worry about being desired by other men or falling in love with an enemy who might happen to be male.

186
I don't know if Iron Man's assistant - Gwyneth Paltrow in the film - was playing dumb but that was the dumb-est white woman on screen. I don’t think such a dumb white or a woman of any other race, religion or region walks on this planet. Women as a rule ain't dumb. Period. Somehow the role was done with such conviction that it is hard for me to believe that the woman was acting. If she was in fact acting I mean it's a performance of a life time. For dumb people to act intelligent is much easier than for any person to act dumb. If you act dumb you're dumb - that's in reality. On screen, to act dumb is to act dumb – something you don't have to be in reality. Angelina Jolie who I think is pretty dumb in reality comes out real smart on screen. Not surprising because she understands the role better than she understands herself.

Someone should’ve thought of calling the movie ironic man instead of Iron Man. The movie is filled with men and ironies and since they go together in real life it comes as no surprise that it did well at the box office. The sad irony is that there are no iron men in life. A man who dreams of being more man than what he is suffers from an incurable emotional impotence. Iron Man is the perfect example of a man incapable of relating to the world around him. An emotionally impotent social order produces emotionally impotent leadership and Iron Man is that unconscious wish for domination meant to disguise the void – a void reflected in the foreign policy of the United States.

Iron Man in the third world is just another word for phallic domination. Those meaningless wars that the US is fighting outside its borders serve no ultimate purpose. They bring out what is horrible in just about any man; the side of a man that any humane society is expected to curb, that instinct to pillage and murder that has no place in a just order. [1]George Carlin brilliantly summarizes those insecurities that make war, what he calls “a lot of prick-waving.”

War is a whole lot of men standing out on a field, waving their pricks at one another. Men are insecure about the size of their dicks, and so they have to kill one another over the idea. That's what all that asshole jock bullshit is all about. That's what all that adolescent, macho male posturing, and strutting in bars and locker rooms is all about. It's called "dick fear!" Men are terrified that their pricks are inadequate and so they have to compete with one another, to feel better about themselves, and since war is the ultimate competition, basically, men are killing each other in order to improve their self-esteem! You don't have to be a historian or a political scientist to see the bigger-dick foreign policy theory at work. It sounds like this: "What, they have bigger dicks? Bomb them!" And of course, the bombs and the rockets and the bullets are all shaped like dicks. It's a subconscious need to project the penis into other people's affairs. It's called "fucking with people!"

Movies like Iron Man are about “fucking with people.” If Iron Man could win the wars for the US wherever they're dumping arms and using the latest technology to fight ill-equipped though relentless enemies, Americans would not be having all the problems on the ground that they do. Local people are there to stay and they'll do everything in their power to fight the 'civilized' beast that has come to destroy them.

The lesson for the US is very simple: Shut down your thieving corporations. Forget about the criminal loans given to criminals by the World Bank and the IMF. Get out of Afghanistan. Get out of Iraq. Get out of the Middle East. Get out of Latin America. Get out of Africa. Get out of the third world. Take your arms and your high technology and vamoose. You’re not wanted there. There are no iron men to protect you. The war is long lost. It's the battles that delude you into believing that you will win.

You're absolutely right about that stupid film. Thank you again man Prakash. You're the new Said from India. The hell with the rest.

ibrahim (2010-07-22 14:30:03)
Its very true. Multi-disciplined funny analysis of the global imperialism.

Emma McIntosh (2010-09-17 05:16:51)
I'm sorry but that was just a one-sided rant with no question as to the ideologies of nation reinforced throughout the film, let alone the concept of movies not actually being real. Of course no iron man exists in the real world, hence the need for films. This argument could be aimed at almost any american based movie - take Avatar for example; Theres the token "good guy" that isn't actually good and is just out for himself, the evil authoritarian power of the government, the loyal army pilot etc. Any movie can be broken into such elements. Tony Stark embodies everything people aspire to be, he is successful, rich, good looking, a genius, and a superhero. People like him do not exist, and that is the point. Its two hours of entertainment to give people a little hope, so why not enjoy it.

Opediah Stain (2012-09-05 20:58:47)
If you actually watch the film, it is exactly the opposite of what you just said; save the first 20 minutes. A 'prick' as you described, has a life changing experience and then attempts to show the world the 'darkness' caused by their negligence and destroy the arms he created to fight the wars. You pulled that rant out of your arse.

Anti-capitalism: thinking the unthinkable? (2010-07-20 08:00)

Slavoj Žižek famously said that it is easier to imagine the end of the world than the end of capitalism. Others claim we are now in a post-political era, in the sense that the neoliberal world view and agenda are so embedded in our background assumptions and common sense that what passes for political discussion and argument takes place within the neoliberal framework. As Mark Fisher puts it in his book, Capitalist Realism (2009 Zero Books), "Capitalism seamlessly occupies the horizons of the thinkable". Fisher claims that capitalism, as an economic system, far from being threatened by current anti-capitalist sentiments and movements, feeds on and exploits them both ideologically and commercially. They are no threat as, to all intents and purposes, "capitalism is the only show in town". It may not be perfect but it is the best we can hope for.

In the main the anti-capitalist movement’s agenda is limited to mitigating capitalism’s excesses rather than replacing it, to reducing poverty and injustice, ‘third world’ debt relief, and so on. Public and political reactions to the recent ‘emergency budget’ mainly focus on issues like the enormous bonuses still being paid to CEOs, corporate directors and bankers, the fact that the reduction in corporation taxes pretty well matches the proposed savings on child benefit, child tax credit and child tax funds, and that reductions in housing benefits will hit pensioners, people with disabilities, carers and working people on low incomes. All very necessary criticism, but ultimately about how to share the gains and pains produced by the capitalist economy, not challenge the system.

So, what we have all swallowed whole allegedly are the neoliberal values and beliefs that are shaping and restricting our ability to frame problems and imagine solutions. According the David Harvey neoliberalism is

... in the first instance a system of political economic practices that proposes that human well being can best
be advanced by liberating individual entrepreneurial freedoms and skills within an institutional framework characterised by strong private property rights, free markets, and free trade. The role of the state is to create and preserve an institutional framework appropriate to such practices. (page 2 A Brief History of Neoliberalism Oxford 2005).

What can possibly be wrong with that, one may ask? Quite a lot it seems. A book published this month (Neoliberalism and Everyday Life edited by S Braedley and M Luxton 2010) illuminates the ways that neoliberal policies (e.g. the deregulation of markets, the transfer of public services to private providers and so on) to ensure market expansion and growth have also inevitably expanded social inequalities of gender, race and class, and of opportunity and ability. The standard defence of neoliberal economic policy is that by encouraging individuals to maximise their wealth the poorest will benefit as the wealth 'trickles down' to them and make them better off too. However, empirically it is very hard to show this has happened. In the UK and USA for example the evidence for a growing concentration of wealth at the top at the expense of the bottom 10%, a process that appears to have accelerated with each successive recession, is hard to refute. If anything the evidence seems to show a ‘trickle up’ mechanism is in operation.

If neoliberalism is so damaging to society (not to mention the environment on many accounts) challenging its assumptions and imagining non-neoliberal economic and political practices would seem to be a valuable, perhaps essential task. It would in fact be our patriotic and humanitarian duty. But if Žižek, Fisher and the post-political theorists are correct, the task seems to require thinking outside a box we are not aware we are in. Or the feeling there is nothing outside worth wasting our time imagining and risking being labelled a delusional fantasist. None the less, one might hope that academic social scientists with their celebrated academic freedom and independence of mind would be in the vanguard of this project. And there are some hopeful signs. But, if Fisher is right about capitalism’s immunity to anti-capitalist ideas and movements, then an academic demolition of the basic principles of neoliberalism will surely not be enough. Not that an anti-capitalist practice would be straightforward either. There have been several attempts to identify other sorts of values in practice, in alternative and ‘transitional’ life styles and communities, or examples in everyday life of caring and sharing that offer brief glimpses of a better way to live. But arguably these can be seen as accommodations and adaptations to a selfish, materialist and uncertain world rather than a challenge to it.

It is also the case that neoliberal government culture and policy frameworks largely set the policy research agenda. Tim Jackson, at the British Sociological Association’s conference on society and climate change, noted that environmental issues could not be understood without reference to the problems associated with global capitalism. He concluded that any realistic specification of sustainability has to be informed by a sociological focus on the nature of capitalism and growth and the resulting social structures and environmental impacts. But in so doing we are in danger of being charged with being polemicians rather than social scientists. If this happens we may find we are ‘no further use to policy’. Jackson was referring to a warning given earlier in the conference by Malcolm Wicks, a former Minister for Energy, in his opening speech, that if scientists, including social scientists, become polemicians, they would be “less valuable to government”.

This fear is echoed in a recently published review of the state of UK sociology by an international benchmarking panel (http://www.esrcsocietytoday.ac.uk/ESRCInfoCentre/Images/Sociology %20IBR %20Report _tcn6-36279.pdf). Misgivings were expressed about the consequences of being either too close or too distant from policy makers. Being close means a good position to attract funding but being in danger of losing control of the research agenda. Being distant and producing results and findings that do not fit into a pre-set (neoliberal?) policy agenda could be seen as irrelevant, politically inopportune, and so dismissed. And, with the current threats of ‘restructuring’, funding cuts, threatened pensions and possible redundancies (the ‘shock treatment’ of the neoliberal response to the current financial crisis), this is not a propitious time to risk the ire of university management or research funders. As Fisher says, the primary methods of social control in today’s advanced capitalist societies are fear and indebtedness.

Great article. My own thesis is looking at the applicability of post-politics to the Occupy movement and your argument is therefore very close to my own research. One slight mistake, your initial quote ‘its easier to imagine the end of the world than the end of capitalism’ is actually attributed to Frederic Jameson.

RSA Animate and Jeremy Rifkin’s Empathic Civilisation (2010-07-21 09:00)

As a follow up to his [1]lecture here’s Jeremy Rifkin’s concept of empathic civilisation explored through the medium of [2]animation. It’s part of a new series being produced by the [3]RSA (whose strap line reads ’21st century enlightenment program’) and they are thus far proving hugely successful. The Rifkin animation alone has been viewed over 350,000 times on You Tube. It’s disseminating core aspects of his thinking to a wide audience of people who (a) might have known about his 600 page [4]magnum opus and yet never got round to reading it (b) who would not have heard of the book and instead meet its central ideas through an incredibly engaging form of presentation. I’m increasingly convinced that this is only a sign of things to come and that the full uses of the internet (particularly web 2.0) for facilitating intellectual life remain relatively untapped.

[EMBED]

A lost generation of learners? (2010-07-22 09:00)

Recent [1]reports suggest that up to a quarter of a million could miss out on UK university places after a 12 % rise on last year’s record number of applications. Sally Hunt, the general secretary of the University and College Union, has responded to the release of this data:

Today’s figures make frightening reading. Other countries are increasing the number of graduates to compete in a high-skill knowledge economy, yet our government seems intent on doing the opposite. It is not scaremongering to talk about a lost generation of learners.

The decision not to fund student places properly and to make savage cuts to higher education will come back and haunt this country and will lead to a huge skills deficit.”
Supporting an interesting study (2010-07-22 11:30)

We have been conducting a large online international study investigating peoples’ wellbeing called - The International Wellbeing Study. This study has been running since March 2009 and basically investigates peoples’ wellbeing over the course of one year.

We would very much appreciate your assistance in informing your contacts of this study via additional email lists. This study is completely anonymous, easy to do, takes about 25 to 30 minutes for each assessment point, and participants don’t have to give any of their personal details. The only participation requirements is that participants are at least 16 years old and that they agree to fill out these questions every three months for a year; five times in total. To participate and/or to find out more about the study look [1]here.

If a person participates, he or she will receive an e-mail summary report of their scores, and also go into the draw to win one of fifteen $100 Amazon.com vouchers. They will also be given the opportunity to opt-in to one of three free wellbeing orientated internet courses after they have completed the first three assessments.

I am more than willing to answer any further questions you may have.

Again, many thanks in advance for your help and assistance!

Kind regards,

Carolina Alfonso

Hospitality (2010-07-23 09:00)

In the reluctant church of hospitality,
Where echoes of empire deafen the crowd,
Promises of liberty, justice, freedom,
Are signed by the hands of the just and the proud.

The invisible mass silently flooding,
Stealthily sneaking by sea and by air,
The fever of fear contagiously spreading,
Like a wild fire victim to impotent stare.

In the bitter refuge of sanctuary,
Where echoes of torture mumble mute pleas,
Gagged fear awaits asylum in a letter,
Carried on freedom’s reluctant breeze.

wonderful poem, saying more, with less, than most sociology.

Imposter (2010-07-24 10:00)

[1]

MY HOBBY:
SITTING DOWN WITH GRAD STUDENTS AND TIMING
HOW LONG IT TAKES THEM TO FIGURE OUT THAT
I'M NOT ACTUALLY AN EXPERT IN THEIR FIELD.

[Comic: A series of four panels showing interactions between students and an expert in different fields. The expert asks about logarithms, Ugric family inclusion, ranking people, and deconstruction. The students take varying amounts of time to answer.]
Government won’t back graduate tax say senior Tory sources (2010-07-25 10:00)

Vince Cable’s plans for a graduate tax look set to fail as senior Tories [1]brief against it. Their reticence apparently stems from a feeling that it would be unfair for high earning graduates to be forced to pay more than the value of their degree and that graduate taxation could lead to a ‘brain drain’ out of the UK. UCU general secretary, Sally Hunt, told BBC News that coalition government infighting might make a good spectacle for the Westminster village, but students were more interested in knowing if they would have a place at university this year and what exactly the future cost of a degree might be.

Richard Thaler on Nudge (2010-07-26 08:00)

An engaging lecture by [1]Richard Thaler on the concept of [2]Nudge. Along with his colleague [3]Cass Sunstein (author of some superb [4]books on the internet) their work briefly became [5]hugely fashionable last year. Interestingly it seems to have been dropped somewhat as the financial crisis has reshaped the political landscape. It’s still worth listening to though because behind the third way era platitudes (“a new way of thinking about politics which is neither left nor right”) there’s genuinely worthwhile empirical research here being applied in an intriguing way.
The disciplinary force of new media? (2010-07-26 10:03)

At the weekend a left-wing blogger made an off hand comment on Twitter that one might have expected would have just faded away within a few days. Luke Bozier tweeted that:

> Gordon Brown’s WebCreator website is not befitting of a former Prime Minister. Tangent should be ashamed. http://gordonbrown.org.uk

The company in question produce a lot of Labour websites. I don't recall ever seeing any that look particularly impressive and it's difficult not to agree with Luke that Brown's new website is poor. It looks like a site produced through a free template rather than the work of an elite web design agency. Imagine Luke's surprise when he received the following communication from Tangent:

> I respectfully suggest you delete that tweet, issue no more similar ones and generally try to sell your products in a more professional way. I really don't like the prospect of either a public slanting match or legal action, but if I need to protect my company's business and reputation, I will.

However the story has since started to grow through new media. It's trending on Twitter. More coverage of it here, here and here. In my mind this a perfect example of the emancipatory force of new media: it partially overturns the asymmetry of organizational and communicative power which makes legal threats from a corporation to an individual so effective. Obviously there are countervailing tendencies (cultural fragmentation, isolated privatism, hedonistic distraction) but we need to carefully assess the actual consequences of this technology as it is played out on a day-to-day level.

Perhaps at some point this might involve recording and cataloguing incidents such as this so that web scholars have an extensive databank of empirical case studies through which to develop theoretical understandings of the social changes wrought by the internet. My fear is that so many fascinating instances like this (which, in part, reveal real structures underlying our mundane experience of the internet) are likely to be lost simply because they are too small, too mundane and too individually insignificant.

Too often the debate about the internet seems to be stuck between the boosters (e.g. the next generation of digital technology will usher in a new cyber utopia), the moralists (e.g. technology is undermining the moral fabric of human society) and the cynics (e.g. all new technology has created a moral panic and therefore we should dismiss the significance of contemporary technology). It's only through cataloguing and analyzing the small, mundane and insignificant that we can get beyond these polarized positions and really start to understand the impact digital technology is having on social life.
Rethinking the World (2010-07-27 09:00)

To think the world is to keep the world the way it is. To rethink the world is to change it.

To change the world is to challenge the way majorities are used to thinking about the world.

A thought is a creative demon and like a virus it multiplies itself. The Buddha too acknowledged the power of thoughts. To rethink is to infect the world with the virus of a social revolution that will lead to "a new world, a decent world that will give men a chance to work, that will give youth a future and old age a security" (Chaplin in The Great Dictator)

To rethink the world is to disprove the prejudices of your teachers at school, your parents, the rest of the family at home and the neighbors on the street, to see alternatives where the doors are closed, to accept the way you are, to give those who never had a chance a chance to be themselves, to embrace elements in a tradition that lead to the future, to use criticism in the form of argument and polemics to deconstruct the enemies of a classless society, to unlearn each day what you've taught yourself the previous day, never to put personal loves and hates before the truth, to know the truth the way the victims of injustice experience it, Father Zossima asks the question in The Brothers Karamazov: "After all what am I worth, that another man, a fellow creature, made in the likeness and image of God, should serve me?"- the question is a secular-democratic one as well – what justifies the violence of those who have against those who do not have, what justifies governments dictatorial or otherwise imposing agendas that represent the needs of some as opposed to the many, what justifies millions having to kill their sense of human worth to fulfill the whims of a few, to subvert power elitism in every possible way is to rethink the world.

‘I’ don’t believe in the supremacy of the "we" over the 'I'. I don’t believe that in some mystical way I echo the thoughts of millions outside me. That is vanity if not outright self-deception. I don’t believe either that I’ve to live up to a particular ideal popular prejudice creates for me. If I say what I say it is because I’m backed by a certain experience of reality. I don’t understand "life" in an abstract sense but in a concrete manner as "living."

The person who writes this column is neither an "I" nor a "we" but somewhere guided by a sense of what things should be like, somewhere certain without being absolute, somewhere unsure without being insecure, somewhere willing to understand, somewhere less than willing to compromise, somewhere embracing a changing world, somewhere unwilling to make change a goal in itself, somewhere willing to let go because nothing is more disastrous to a social revolution than a bunch of private egos consumed with hatred settling scores with the world, somewhere fighting it out all the way – Che Guevara is not about having the photograph of Alberto Korda on the t-shirt but to know that revolution is the answer to injustices that millions experience every day of their lives.
I haven’t rethought the world. I keep rethinking it over and again because a fool has the last word on everything and I choose not to be that.

Fatih Parlak (2010-07-28 01:42:17)
rethinking the world, as I see it, should be crowned by any possible way of re-making the world. But this would probably fail. As Baudrillard claimed in 'In the Shadow of the Silent Majorities', we think (and rethink) individually; and therefore there is no society that can think. Rather, what we have is a mass of people far from any thinking ability. With this in hand, a revolution would never be truly accomplished. Therefore, my dearest friend, I feel the same dilemmas as you do, between having a rethinking ‘I’ which is highly utopian in itself, and an irresponsible ‘we’ which constantly disappoints the former one. Tragedy is that the former cannot do without the latter.

Reclaiming 'political narrative’ from New Labour (2010-07-29 19:47)
There was a fascinating [1]article by Gary Younge on the Guardian’s website at the weekend. He argues that the last few months of British politics has seen the right enjoy considerable success in establishing a dominant framework within which mainstream political debate plays itself out. If you listen to the mainstream news on British TV or radio it would seem there is unanimous agreement that New Labour’s profligacy has caused a budgetary crisis and in order to make up for 'living beyond our means’ it is necessary for the new coalition (as a post-political government of national unity) to impose unavoidable austerity measure.

The coalition government have successfully entrenched a prevailing narrative which legitimises their radical 'slash-the-state’ agenda while casting the blame for any ensuing social hardship onto the former government. In many ways this is pure [2]propaganda resting on an entirely fictional account of international finance, political agendas and economist history. Yet however nakedly ideological this picture may seem to us, it is indisputably compelling:
As we in Britain edge towards an autumn of swingeing public sector cuts, it is crucial that the left reframes popular understanding of the origins of, and options emerging from, this economic crisis. So far the right has made all the running. According to [3]Ipsos Mori, in March the number of those who opposed the Tory strategy was double that of those who backed it. By the end of last month the tables had turned, with 44% [4]backing swift deficit reduction and 35% against it.

The narrative draws upon a metaphor of the 'public household' (i.e. understanding public finances in terms of managing a household) which helps reduce the abstract and complex systems of global finances to the concrete realities of everyday life. As Cameron asked in the TV debates, "Who hasn’t had to make sacrifices because of the recession?" Leaving aside the fact that 23 cabinet members are millionaires and can likely say "I haven’t!" to that question, it is important to recognise not just that the implicit analogy is false (managing a household budget and managing a national budget are different endeavours with different logics) but that fighting against it should involve an appreciation of its simple plausibility as well as its factual inaccuracies.

Given the role that 'political narrative' played in the New Labour project, it’s reasonable for the left to be cautious when it comes to narrative. However unless we wish to acquiesce to the austerity agenda being imposed across Europe, it’s surely necessary for us to consider how to effectively, plausibly and powerfully tell our stories.

Call for book reviewers (2010-07-30 09:30)

As some of you may have seen on [1]Facebook, the Sociological Imagination is looking for book reviewers. This is a chance to practice your writing, share your thoughts on a topic and get a free book in the process. There are submission guidelines [2]here.

Here are a few suggestions of books that we’d like to see reviewed:

- Ben Carrington, Race, Sport and Politics: The Sporting Black Diaspora
- Adrian Franklin, City Life
- Barry Smart, Consumer Society
- Natalie Fenton, New Media, Old News
- Richard Giulianotti & Roland Robertson, Globalization and Football
- Nick Couldry, Why Voice Matters: Politics and Culture after Neoliberalism
- Craig Calhoun, Community
• Rosi Braidotti, The Posthuman
• Susie Scott, Making Sense of Everyday Life
• Angus Bancroft, Drugs, Intoxication and Society
• Peter Miller and Nikolas Rose, Governing the Present

If none of these take your fancy then feel free to suggest a book and we'll try and obtain a review copy for you. Please get in touch to arrange or discuss further.

The Affair that Ended in Rape: Researching Australian Footballers and Sexual Assault (2010-08-02 10:00)

In 2006, when I began research into Australian football and sexual assault for my doctoral thesis, I was a footy fan. No, I was an Australian Football League fanatic: a 'Proud, Passionate and Paid Up' member of the Hawthorn Football Club, as numerous bumper stickers on my old car attest. At the games, week in, week out, rain, hail or shine, with my dad, my sister and my brother, my mood for days wholly dependent on the outcome of those two short hours on the weekend. When it came to umpiring, although I wasn't as one-eyed as some supporters, and could on occasion concede that a free kick paid against the Hawks was warranted, more often than not I was yelling about the 'soft' decisions that went against 'us' and the 'obvious' rule-breaking thuggery of the opposition that the umpires ignored. It's probably a mentality that most fans share, at least to some extent − as you stand up for your best friends or family against anyone else, and believe in them, I believed in and defended my 'teammates' against accusations of weakness, softness, unfair play and any number of on-field indiscretions.

When the first highly-publicised cases of sexual assault came to my attention in 2004, I, like many others, took this loyalty a step further: I sided with the accused footballers against all outsiders, namely the women who made rape complaints against them. I recall now with shame the way I dismissed the complaints as false when I heard that, in both cases, the women had initially had consensual sex with one player. My research was in part motivated by that shame, and the desire to fully understand what I was involved with as a football fan. I also sought to explain how a series of seemingly simple newspaper narratives could so easily convince a professed feminist such as myself to dismiss women's words out of hand.

Examining the media portrayals of cases involving players from both the AFL and National Rugby League, I began to uncover structures within the football leagues − discursive and practical − which protect footballers against
being held accountable for sexual assault (see Waterhouse-Watson 2007; 2009; 2010a; 2010b). Football representatives, as well as many journalists and media commentators, construct narratives which portray the complainants as ‘gold diggers’, ‘women scorned’, ‘predatory women’ and/or ‘groupies’; all blame is therefore deflected away from the footballers and onto the women involved. The women are portrayed as vindictive liars. Despite more than twenty cases being reported in the media since 1999, involving at least fifty-six players and officials, not one person involved in elite Australian football has yet been made to stand trial on a charge of sexual assault. The cases are effectively prosecuted through the media and result in acquittal. I further uncovered a broad system of interlocking discourses and narrative patterns that endorse masculine violence, construct women’s and footballers’ bodies, their roles and capacities, and describe a ‘rape culture’ – that is, an environment which condones and facilitates rape.

Although I remained a member of the Hawthorn football club and still enjoyed the game into the 2008 season, my enthusiasm for football waned as my research progressed – a possible consequence of which I was aware before I commenced my PhD studies. It became increasingly difficult to maintain my position as a fan the more I discovered about the ‘rape culture’ inscribed in football and its systematic maintenance through the mainstream media. Fans are ‘part of the team’ and as such they are implicated in its players’ actions off the field as well as on. Just as a fan can say to a rival supporter ‘we thrashed you on Saturday’, supporters of the Canterbury Bulldogs, involved in the most infamous sexual assault case, reported being taunted as rapists themselves during the 2004 police investigation (Brown 2004), as if the fans, too, had been involved in the incident. Female fans in a study by Peter Mewett and Kim Toffoletti (2008) had to develop strategies for reconciling the alleged rapes in order to continue participating in the games as supporters: they blamed the allegations on the actions of Rogue Men, Predatory Women, and uncontrollable male sexuality, as a means of justifying footballers’ behaviour, exonerating the culture of football from blame, and/or dismissing the allegations. To do otherwise would call into question the integrity of their own teams and the game itself, as well as implicating the fans themselves in the alleged rapes. My strategy was to tell myself that all the problems ‘really’ lay with other clubs, but not with ‘my’ team. My Hawthorn would never behave like those other clubs.

My ‘love affair’ with football ended suddenly and irrevocably – in the greatest of all football ironies – during 2008, the year when my once-beloved Hawks took out the premiership cup for the first time in seventeen years. The catalyst: my discovery of the details of a 1999 case in which at least two Hawthorn players and a club official allegedly raped a woman in Hawaii (Murphy 2004). I had been (dimly) aware that such a case existed, but, given the findings of my research, I did not have the option of laying blame on Rogue Men or Predatory Women. In maintaining the subject position of fan I was unable to admit the possibility that ‘my’ team could have done anything wrong. But, like Mewett and Toffoletti’s interviewees, I (subconsciously) constructed other explanations for the existence of the case, telling myself that as it had received scant publicity it must not have been very serious, or was completely unsubstantiated. But one day, wearing my Hawthorn membership scarf as I worked, I finally read the articles that gave details of the alleged victim’s police statement and the responses of Hawthorn officials. I was utterly betrayed. What the players and team official allegedly did to the woman was horrific. And there were the same patterns of denial and blame I identified in the other cases, the same thinly veiled accusations of lying even though it is uncertain what possible benefits a Californian woman might have to gain by inventing a story of rape by Australian footballers, in Hawaii, and declining to press charges. The incident did not even become public in Australia until five years after it occurred. And unlike the other cases I investigated, as a member of the team responsible, I was implicated.

I took off my membership scarf. I have not watched another football game. I did not renew my membership in 2009 and will not again. And I cried, a lot, because my ‘teammates’ destroyed the thing that I loved.

The sheer numbers of cases, and the attitudes of the clubs and leagues, have caused internal conflict for many fans, although the majority have not abandoned the sports entirely, as I did, but found alternative strategies for negotiating their fandom. In 2004, a group of rugby league and Australian Rules supporters set up [1]Football Fans Against Sexual Assault, an organisation ‘aimed... at positive action, the sorts of things they’d like to see football codes do to restore the game to an esteemed place in their hearts and minds’. The group, led by rugby league
supporter Kath Haines, has had some measure of success, with both major leagues adopting at least some of the
recommendations that FFASA put forward in [2]Towards Champions, an open submission. FFASA members clearly
see their active work to fight sexual assault from ‘within’ football as a legitimate means of maintaining their fandom,
and their successes testify to this. Real fandom is a matter of the heart, not the head, and if the heart wishes to
remain loyal to football, the head make the necessary negotiations. It is highly likely that, had I never read about the
Hawthorn case, I would be a fan to this day – albeit a somewhat cynical one.

I cannot, and do not wish to make grand pronouncements about how fans should negotiate their position in
light of the high rate of alleged sexual assault perpetrated by footballers. It would be unfair, hypocritical, and
probably quite untrue for me to suggest that to remain loyal is to condone sexual assault. What I can say, however, is
that public opinion matters to the leagues, so large numbers of fans continuing to express their disgust may prompt
the AFL and NRL to take greater action to change the culture of the sports, thus challenging the 'rape culture'. There
is certainly something to be said for working for change from within. For myself, I will continue to write about it, and
hope to convince at least some people of what needs to be changed in football. But my fan days are over.

Kate (2010-08-12 13:07:12)
Brilliant article! It’s so easy to accept the media’s slant on a story and defend the celebrity - the familiar. I’ll be reading the
paper with a more critical eye now, especially when football is involved!! :)
A similar episode I came across last year involving another code and the Cronulla Sharks:
http://www.bbc.co.uk/blogs/thereporters/nickbryant/2009/05/if_i_had_a_gun.html Tracey Grimshaw threw up a
question for society in general - "Even though no charges were ever laid, her experience should rightly redefine the notion of
consent, and whether a star-struck 19-year-old could even be deemed capable of consenting to the scenario she ultimately
endured......" Comments on this blog piece seem to be split on whether or not the woman in question deserves sympathy. On
a related note, it seems like media coverage outside the Aussie football codes has been somewhat different. Shane Warne, the
cricketer, was shamed as a nymphomaniac when news of his numerous affairs broke out (at least that’ the impression I got. I
could be wrong). What explains the inconsistency in media coverage?

Deb Waterhouse-Watso (2010-08-13 16:23:14)
Thanks for your comments, Usha! Yes, the case on 'Code of Silence' (the incident you're referring to) does call into question
the whole notion of 'consent'. I've actually written about this (as yet unpublished), and I argue that this kind of 'group sex'
scenario is an act of male bonding. The woman is in one sense incidental to the process, but just an object to be ridiculed and
denigrated in order to bolster the footballers' sense of superiority in their masculinity. In this case, the 'sexual contract' (to use
Carole Pateman's term) is actually made between the men, and does not involve the woman at all, so her consent (or more
pertinently her willingness) is, in effect, irrelevant to the process. And when the inherent power imbalance is brought into
the equation - not to mention the sheer intimidation of a dozen rugby players and staff members entering the room uninvited
and insisting on 'sex' - whether or not she nominally agreed, she probably felt she had no choice. Consent is therefore
meaningless. Regarding the differences between cricket and football, although they operate on the same paradigm, I think
the two cases (or types of cases) you're referring to have some quite fundamental differences. In the case of Shane Warne,
there was incontrovertible evidence of his affairs, and as far as the public knew, his wife had engaged in no unconventional
sexual activity (such as group or casual sex, or an affair). Therefore she could be portrayed as a victim simply because she
did not transgress the norms of femininity. In the cases of (alleged) sexual assault, most of the complainants engaged in
consensual sex with one or more footballers prior to the alleged rape. In the absence of independent witnesses, the alleged
victim's credibility, like all rape complainants', is assumed to be suspect, which is reflected in blog entries as well as general
media reporting. The prevalence of belief in myths about sexual violence, and about rape complainants in particular, really
come into play, so beliefs that women lie about rape underpin the bulk of the discussion. Therefore the complainant is cast
as a groupie slut who wanted it, or a predatory woman who hunted down the players for sex. the belief that consent to sleep
with one person signals consent to sleep with any number of others also features prominently. So I guess it really comes down
to the old virgin/whore dichotomy. Of course, there is also the particular place football holds in the national imagination, and
it would be interesting to see whether a rape case involving a high profile cricketer (or cricketers) would attract the same kind
of attention.

Usha (2010-08-14 07:06:21)
Thanks for your reply, Deb! I fully agree that the Warne and football scandals are fundamentally different. Yet, it's your last
point that spurred my thinking originally. Because the way tabloid media usually works around the world, any hint of a sex
scandal is seized to bring down an idol. At least, that was my understanding. Yet, in the case of these football scandals, both
the media and part of the public seem unwilling to look at the accused as solely/fully culpable, even though words like 'rape'
and 'consent' were involved. Another thing that instantly came to my mind was related to gender power imbalances and
feminism in Australia. The one thing one constantly read after Julia Gillard's takeover was symbolism and what it meant for
the hitherto male-dominated Australian society to have its first female PM. Several references were made to Germaine Greer's The
Female Eunuch. It really seems like a hollow politically-expedient gesture in the light of the aforementioned episodes, doesn't
it? I completely agree with your explanation of 'consent' in the context of the rugby incident. It all sounds eerily similar to that
true-life Jodie Foster movie The Accused, doesn't it? Look forward to reading your work on 'Code of Silence' when it is published!

Sport and Byronic Bad Boys | Evelynfrances's Blog (2010-10-09 10:10:32)
[...] I recently spoke to Dr Deb Waterhouse-Watson, lecturer in English at Monash University. She specialises in researching
assault allegations involving footballers. [...]
The United States is an amazing country. On the surface it looks like it has the tremendous potential to solve the third world’s problems in a day or a week at most. On the other hand the third world has no greater and more dangerous enemy than the United States. You just have to watch an American news channel to see unadulterated lies about others and how filled with contempt is this nation for the rest of the planet. Except for a small minority of dissenters the rest of the nation is pied piped by the media into utter stupidity and brainlessness that we don’t see anywhere else.

American intellectuals by and large are the biggest cowards on earth if not the most self-righteous. You can say anything about anybody but not a word about American foreign policy or Israel because whatever you say might cost you your position given the clout that the pro-Israel lobby has in the United States. The American intellectual is busy inventing excuses or apologies that justify the worst forms of atrocities and murders that his country is doing to others on this planet. Such is the nature of brainwash in this country that it would’ve embarrassed George Orwell and left him speechless.

For some reason the rest of the world hates Americans, is envious of American way of life, wants to hurt and kill Americans, is anti-Semitic too these days – a new addition thanks to the pro-Israel lobby, anti-democratic, anti-fun, anti-everything in fact that an average American would think gives meaning to his or her life. Borat – a painfully unfunny comedy about a Kazakh shown in the worst imaginable light is one example of what an average American might think is funny. How one can say so many ugly things about others without dying of shame is a mystery to me! Even Osama bin Laden and the Al-Qaeda look more respectable than this. And the movie Hostel about an ex-communist East European nation where children commit unthinkable murders on streets and are anti-American too – these are all too real reflections of a soul that rots with the stench of its own wrongdoings. That’s the soul of a nation with a history of genocide and slavery.

Finkelstein’s book: The Holocaust Industry (2000) is a hauntingly truthful book. It’s a book along with a few others that I’ve time and again recommended students, friends and strangers alike to read. For two reasons the book is important: one is that truth is important both in politics and life and the second, as important as the first is, that truth must be spoken even if it means going against one’s own country or the community or group that one comes from. The son of Nazi holocaust survivors, Finkelstein’s passionate attempt to expose the exploiters of Jewish suffering by turning the holocaust into an industry gives an unforgettable dimension to the book. A sequel to The Holocaust Suffering is: Beyond ‘Chutzpah: On the misuse of anti-semitism and the abuse of history’ argues among other things of how history has been distorted if not outright abused by scholars such as Alan Dershowitz to suit the current interests of Israel and the United States. Both the books deconstruct arguments based on fallacious viewpoints with the use of truth that comes from facts.

Speaking of his parents in the Introduction of the book Finkelstein says:

“The time is long past to open our hearts to the rest of humanity’s sufferings. This was the main lesson my mother imparted. I never once heard her say: Do not compare. My mother always compared. No doubt historical distinctions must be made. But to make out moral distinctions between “our” suffering and “theirs” is itself a moral travesty. “You can’t compare any two miserable people,” Plato humanely
observed, “and say that one is happier than the other.” In the face of the sufferings of Afro-Americans, Vietnamese and Palestinians, my mother’s credo always was: We are all holocaust victims.”

And of course “we” are. Everyone who lives his or her life under the boot of another man is a holocaust victim. Those employers – very familiar on the Indian landscape – are Nazis in fact who treat their employees or workers as if they were less than dirt. That is not all. Victims of hunger and poverty across the third world are holocaust victims. They haven’t chosen to be there. They’re brought into a situation which leaves them no choice but passively suffer. The only alternative left to them is fight or die.

The Pope endeared himself on two counts. One with the Vatican approving the inclusion of ‘social sins’ among which are environmental pollution as well as social injustice which causes poverty or “the excessive accumulation of wealth by a few” and by his scathing criticism of colonialism in his book Jesus of Nazareth. Benedict puts it brilliantly when he accuses colonialism of having destroyed native cultures and made people rootless left to their own inhumanity, greed and cynicism. The mercenary character of people living in the third world, the basic dishonesty we encounter in daily life as being almost normal, the need to be violent in verbal and non-verbal ways, the tendency to be dominant and servile at the same time – these things that are a familiar aspect of third world living come from our colonial past that continues in various forms right into the present.

Culture creates in-built discipline and ways of coming to terms with reality. In the haven of one’s own language and culture one is most oneself. Deceit is normal in any third world street. You always have to be prepared for the worst. More often than not you’ve to look out for yourself. But, this is not us. I’m not saying we had a golden past before colonialism. All I’m saying is that for sure we would’ve overcome most of those limitations within our own time and space. We did not have to be colonized for that to happen.

"The topical relevance of the parable (of the Good Samaritan from the gospel of Saint Luke) is evident. When we transpose it into the dimensions of world society, we see how the peoples of Africa, lying robbed and plundered, matter to us. Then we see how deeply they are our neighbors; that our lifestyle, the history in which we are involved, has plundered them and continues to do so. This is true above all in the sense that we have wounded their souls. Instead of giving them God, the God who has come close to us in Christ, which would have integrated and brought to completion all that is precious and great in their own traditions, we have given them the cynicism of a world without God, in which all that counts is power and profit, a world that destroys moral standards so that corruption and unscrupulous will to power are taken for granted. And that applies not only to Africa...The victims of drugs, of human trafficking, of sex tourism, inwardly devastated people who sit empty in the midst of material abundance...Karl Marx painted a graphic picture of the 'alienation' of man; even though he did not arrive at the real essence of alienation, because he thought only in material terms, he did leave us with a vivid image of man fallen among robbers." (Jesus of Nazareth 198)

A man fallen among robbers! That defines the true face of colonialism. The absolute evil of third world leaders, rich and powerful elites, CEOs of multinational companies, hollow as Faustus before Mephistopheles, they’re the true wretched of the earth. In abandoning the person on the street they created systems that bring out the worst in a human being. They peopled the world with holocaust victims in the form of cheap labor whose existence is bare survival.

The American way of life has caused irreconcilable contradictions in the cultures of the developing world. It has destroyed the best that local cultures offer in the making of a person. Like a virus American way of life has eaten into the spirit of the local and turned people into greedy mercenaries that would gladly abandon their brothers and sisters fallen on the streets of the world. If Americanization meant the spirit of Thoreau and Walt Whitman I would
gladly embrace it body and soul because such a dialogue would’ve brought out the best in us. Needlessly to say it is not. Americanization in the third world means grab as much as you can and you’ve no responsibility towards others.

Said Gandhi in all innocence: “I am only hoping and praying....[that there] will rise a new and robust India, not warlike, basely imitating the West in all its hideousness, but a new India learning the best that the West has to give and becoming the hope, not only of Asia and Africa, but the whole of the aching world.” The India I live in with the worst you can think of running the show is cultureless as a pig and without any spirit to innovate. It’s a dead man with a body soullessly moving into the future without any sense of direction.

Men like Chomsky and Finkelstein give respectability to the notion that there are dissenting Jews and not all Jews agree with what Israel is doing to the Palestinians. Honesty we attach to Jews in the same way that we attach hospitality to Turks and generosity to Arabs especially the Palestinians. These are way of making positive generalizations about people as opposed to negative stereotyping. Honesty that borders the ridiculous – is how I refer to Finkesleitin’s books in general. You almost cannot help laughing at his scathing attack of the Holocaust industry crooks that used historic suffering to make profits. There’s nothing human about it. You feel disgust rather than pity.

If Hitler thought that British rule of India was enviable you only have to guess what British imperialism actually meant in practice. Nazi cruelty knew no bounds. All those characters in the novels of Marquis de Sade pale before the horrors of the Nazis though I must say that Pasolini’s movie "Salo" is a brilliant insight into fascism. Finkelstein does not deny the holocaust. Movies and books that simplify the sufferings of Jews do not deserve to be taken seriously. The European Jews suffered and nothing is more terrible than belittle the suffering of another human being.

I saw the Battle of Algiers to visualize what Israel is doing in Palestine. It’s what the colonizer does to the colonized. America’s friendship has helped Israel perfect the art of colonialism. Jews who live in Israel seem to have a memory block. They forgot the days when they were what Gandhi called the “untouchables” of the west. That’s exactly what Finkelstein is critical of. "The staggering dimensions of Hitler’s Final Solution are by now well known. And isn’t the “normal” history of humankind replete with horrifying chapters of inhumanity? A crime need not be an aberrant to warrant atonement. The challenge today is to restore the Nazi holocaust as a rational subject of inquiry. Only then can we learn from it. The abnormality of the Nazi holocaust springs not from the event itself but from the exploitive industry that has grown around it...The noblest gesture for those who perished is to preserve their memory, learn from their suffering and let them, finally, rest in peace."

Jews are an interesting minority. "I am not Jewish but I am sure there must be some somewhere in me. I hope so" said Charlie Chaplin. A minority that produced none other than Spinoza to Marx and Freud and Einstein and Feynman might have a lot to speak for itself. But, Jews and Israel are two different entities. When I think of Israel nothing but disgust fills my heart. The brutality of Israel toward the Palestinians whose lands they’ve robbed, using force and treachery of every kind makes you sick. Not to forget that they are doing the job of America’s policeman in the Middle East. With a history of the holocaust that they claim for themselves how they could dehumanize themselves to such an extent is a mystery to me!

If there is really some historic memory of what they went through under Hitler, the Israeli on the street should defy the system oppose it in every possible way and fight for justice to the Palestinians. The American Jewish lobby only shows itself in the worst possible light when it puts a stranglehold on the truth by terming anyone against Israel as being anti-semite. As it is no one takes them seriously any longer. What is worse it might actually be a trigger to justify anti-semitism.

To be honest Gandhi has the last word on the question of Palestine. If the Jews of Europe took his words seriously their lives would be a lot better. They had no right to go and occupy Palestine. It’s a state founded on murder
in the same way as the United States which is part of the empathy they’ve for each other I believe. Says Gandhi:

"Palestine belongs to the Arabs in the same sense that England belongs to the English or France to the French. It is wrong and inhuman to impose the Jews on the Arabs. What is going on in Palestine today cannot be justified by any moral code of conduct. The mandates have no sanction but that of the last war. Surely it would be a crime against humanity to reduce the proud Arabs so that Palestine can be restored to the Jews partly or wholly as their national home. The nobler course would be to insist on a just treatment of the Jews wherever they are born and bred. The Jews born in France are French. If the Jews have no home but Palestine, will they relish the idea of being forced to leave the other parts of the world in which they are settled? Or do they want a double home where they can remain at will? This cry for the national home affords a colorable justification for the German expulsion of the Jews."

What they are doing now is even worse. The rest of the world spits on the United States and Israel and they seem to be completely oblivious to it. How can such people walk on this planet I could never understand! Even a buffalo has more shame than them. When people die in Europe and America they’re tragedies. When they die in other parts of the earth these things just happen. In principle the American Jewish lobby is as evil as the Nazis. If they’ve not built concentration camps – they’re doing something as bad in being a part of the American foreign policy – which is to persecute the Palestinians and manipulate the Arabs to suit their vested interests. If anyone thinks he or she is a Jew and calls him or herself one – how can you think that what Hitler did is wrong and what America or Israel is doing is right? How is it possible that the same logic that accuses the Nazis is used to excuse Israel? In my view both are the same.

Pasolini’s *Salo* and Costas Gavros’ *Amen* touch on what fascism is all about in a much more serious manner than *Schindler’s List* and *Life is beautiful* the latter being rather frivolous. *The Pianist* in fact has a much more vivid picture of Nazi cruelty. *The Pianist* had its heart rending moments that I did not feel with *Life is beautiful*. Both *Schindler’s List* and *Life is beautiful* dilute the role of Christian Europe in the persecution of Jews which even Shakespeare would not do. Nazi cruelty is a phenomenon in itself that can be explained only through the simple idea of racial superiority – a disease that infected the soul of Europe and whose manifestation is colonialism. How can a man go through so much without killing himself is the first thing that comes to your mind when you see the *The Pianist*. The artist in Szpilman – the creator and the survivor and more than that a preserver of memory and one who celebrates life – that’s what the movie is all about. The face of Szpilman though at the end of the movie did not carry that absolute suffering that was his plight. It had a benign look which kind of made me see the actor rather than the character.

Being Finkelstein – honest and daring to offer full public support to Hezbollah that fought Israel in Lebanon and drove them out! It’s difficult to [1]ose a job for what you believe in. It’s difficult to be critical of the country you live in especially like the United States where dissenters are in a hopelessly small minority and can very easily acquire a bad reputation. I respect anybody who speaks for third world interests. I respect anybody who is critical of colonialism. I respect anybody who understands that third world suffering is what makes first world comfort. Not to see this simple fact is what makes one blindingly stupid. This stupidity is a virtue in the United States where average people are drugged by the media day in and day out and kept sedated for most of their lives because it suits the system to have it that way.

Your writing is powerful, sometimes poetic. It tears at the heart. But what are we to do? Left-liberal progressivism is a fragmented shambles of redundant complexity. There is no ideology, no leadership, not even an ethic which unites. If modernity is dead, where is postmodernity? Some French dudes use the term so we think that is what it means? They got it wrong. We need to get it right. Here is a start. Premoderns are oriented to the past - traditionalism. Moderns are oriented to the future - goals, targets - progressivism. Postmoderns are oriented to the present, to experience, to immediacy. That's simple. It's a start. And it's true.

eric... thanks much for your comment. Left or right - these are just labels my friend. don't pay too much attention to them. what is more important is what the egyptian writer naguib mahfouz said in his "nobel prize acceptance speech": "One day the great Pyramid will disappear too. But Truth and Justice will remain for as long as Mankind has a ruminative mind and a living conscience." human injustice is temporary and ultimately conscience will triumph. this may not seem like a solution to the corruption and dishonesty of powerful people but as an attitude it is bound to reinforce the belief that change is not just a possibility but a reality.

Welcome to the portable e-soapbox of a sociologist with too much time on her hands. Milena Kremakova is fascinated by too many things and refuses to devote her time single-mindedly to any one pursuit. In this column she gives voice to one of her thinking selves: that of a perpetual traveller comfortably stuck between the positions of outsider and insider, geared to discover the unusual even in the most mundane setting, and always having something to say (or show). She pledges to irregularly scribble thin, unabashedly empirical quasi-ethnographic observations, loosely driven by pre-developed concepts, while promiscuously recycling insights from sociological theories.
Profile of writer: Milena Kremakova

Milena’s academic background involves 1.5 bachelor degrees (an eclectic but incredibly stimulating degree in European studies with specialism in law, and a loved but unfinished degree in Sociology – both from Sofia University), two MAs (in European Studies from Sofia University, and in Social and Political Thought from Warwick), and an ongoing doctorate in sociology and social policy. In her academic daytime as a doctoral student, she is currently preoccupied with the effects of post-socialist labour marketisation on individual lives.

Milena thinks in English, Bulgarian, and Russian (in no particular order) and understands varying degrees of German, French, and Italian. She is an omnivorous reader with undivided and eclectic academic and personal interests, including but not limited to:

- the social uncertainty of post-socialist transformations;
- EU-developments;
- actor-network theory (Latour and Callon);
- social construction of labour markets, welfare, and statistics;

- the theory of justification (Boltanski, Chiapello and Thevenot);

- and the admittedly overly specific but fascinating world of maritime work.

[1]

In social research, Milena advocates qualitative methodologies that follow the Weberian tradition, and multi-method research approaches in which various qualitative/quantitative methods are not separated but used creatively as complementary tools adapted to do different research jobs. On the side, she does photography and hopes some day to know enough mathematics to be able to understand chaos theory (non-linear dynamics).

Robert Shiller on Animal Spirits (2010-08-05 08:00)

A fascinating interview with the author of the recent book [1]Animal Spirits (how human psychology drives the economy and why it matters for global capitalism). Definitely worth a listen for anyone who has an interest in heterodox economics. I was struck during the interview with quite how sensible (in the rather mundane and obvious sense of the term) what Shiller says is and yet, as I understand it, he’s still considered something of a radical within economics.

Call for Interviews (2010-08-07 10:00)

Plans are currently in motion to bring a number of interviews to the Sociological Imagination over the next few months. However we'd like you to help us bring an ever wider selection of interviews to the website. If there's anyone you'd like to interview (academic, writer, campaigner etc) then please get in [1]touch to discuss. We're happy to help you arrange and carry out the interview if you're unsure of how to do it.

A reminder about our two Calls for Papers (2010-08-09 08:00)

Social Research in an Age of Austerity
A new coalition government pledges an unparalleled age of fiscal austerity and a new universities minister promises radical ‘reform’ of higher education: what does the future hold for the British university in an age of fiscal austerity?

What is this political and economic climate likely to mean for social research?  How can social researchers adapt to this climate? How can social research assist in understanding and resisting the imposition of austerity?

Articles and polemics are invited which relate to these themes. See [1] here for submission guidelines.

Contributions also welcome on themes relating to socially and/or politically engaged social research!

Public Scholarship and Private Commitment

Why do you care about your research? What is it that makes you want to spend your time exploring this area of the social world? What does it mean for you to gain understanding of these aspects of social life? Our answers to these questions often encompass the biographical, ethical and political. However these aspects of our involvements are often relegated to the background, as the factors seen as relevant to scholarship are too frequently construed in narrowly intellectualising ways.

The Social Imagination is intended as a space in which private commitments can be reconciled with public scholarship. Therefore we are soliciting contributions ([2]articles, polemics or research profiles) which explain how the two are linked and thus address the aforementioned questions. For submission details see [3] here.

The Strange World of Terence Kealey (2010-08-10 09:00)

A fascinating [1] feature from the Guardian Education on Terence Kealey. Since 2001 Kealey has been the Vice Chancellor of Buckingham University. He’s a passionate (another word would be shrill) advocate of private education which is quite appropriate given Buckingham’s unique status:

Kealey, who is 58, calls himself a passionate libertarian and that’s what you’d expect from Buckingham, which was founded in the 1970s as Britain’s only “independent” university. Other universities are technically independent, but Buckingham alone refuses to accept money from Hefce (Higher Education Funding Council for England). Its home students pay annual fees of £8,640 (for degree courses that take two years), though they are eligible for state loans and maintenance grants just as their lecturers are eligible for research council grants. No minister can tell Buckingham what to teach or how to spend its money. Kealey thinks all universities should be like this.

The prevailing winds are in his favour. The idea of setting public bodies free from state control is increasingly popular with all political parties. Kealey thinks it is time for more private universities, and is exploring the idea with philanthropists. Meanwhile, established universities face severe funding cuts, restrictions on admissions and even closure.

Usha (2010-08-14 14:27:39)
Oh dear. That article was.........surreal.

Cité-seeing in Milan (2010-08-12 09:00)

20th July, Milano, Piazza della Vetra

'A new colourful Milan, more and more like the city in which we would like to wake up every day'.

This quote from Ron English’s Absolut Elvis Presley wallpaper in Piazza della Vetra (next to the church S. Lorenzo maggiore) in Milano marked the beginning of my new conscious mode of conquering space: cité-seeing.

Cité-seeing uses the traveller's body in a physical act of moving as a tool for conquering a new place. The cité-seer shares the sight-seer’s fascination with new places. However, he does not hunt for a limited number of pre-set, universally significant, 'large' monuments. He avoids the formidable and instead navigates the new space, immersed in the 'small' normality of the everyday life of a city or village. He sees Paris not as the home of the Eiffel tower, but as a bustling web of streets and lives, layers of history, colours, shapes, smells, and sounds. For the sight-seer a city is a predictable entity, pre-digested by tour-guides, neatly packed and served in labelled morsels. For a cité-seer it is novel, endless, and valuable in its own peculiarity.
Cite-seeing differs from sight-seeing in yet another respect: its focus on the traveller’s physical presence in the new place. Compared to the tourist’s homage to a monument, cité-seeing is an egoistic act with reversed perspective aimed at exploring one’s internal self through immersion in an external space. He does not seek monumental sights but ephemeral impressions of normality. He attempts to inhabit the new space, blend into it without passing value-judgements, runs away from his preset expectations, accepts the place rather than measuring it against a default yardstick. For a sightseer, cities can be ‘worth seeing’, or not. For a cité-seer, any city is worth being in.

Sight-seeing is a slow affair, less rushed than the sight-seers’ mission of collecting tokens and snapping images of key sights, albeit it is still faster than the immersed life of the locals. The cité-seer is an invisible quasi-inhabitant: he does not take away anything from the place, unlike the sight-seer, although he does not give to it like a local would, either.

The sight-seer’s trajectory is linear while the cité-seer meanders and lingers. His trajectory does not blindly follow the de-localised ‘highways’ laid between sights of interest (such as famous cathedrals, palaces, monuments, or museums), designated for tourists, and avoided by locals.

All this makes the cité-seer’s position somewhat awkward: although he is less visible, kinder and more appreciative of the place than the sight-seeing tourist, his glance is deeper, his presence – more lengthy, his interference with local life – more annoying to locals. He is an encroachment on both day-to-day local life, and that fraction (if there is one) of local industry that capitalises on tourists. He is not a typical tourists, but neither is he a local: he may or may not speak the language, and often does not look local enough. He attracts attention and disappoints the
expectations of eager salesmen. He is an invisible quasi-inhabitant.

Yet in some ways the cité-seer can become more local than the locals, because he appreciates those over-looked or outright dismissed, shameful or unexciting, elements of the urban scene: sights of destruction and decay, incongruencies, empty streets, un-unusual architecture of residential areas, cheap local markets, dodgy local pubs, street signs, and other dusty artefacts of everyday life. Cité-seeing is a crash course in becoming almost local to a particular place by consciously accumulating a significant number of singularly insignificant impressions.

The cité-seer glance hovers both below and above that of the sight-seeing tourist and that of the local. He takes in the overall ambience of a place, as well as a plethora of speck-sized details. If the local’s vantage point makes his vision two-dimensional (lacking perspective), and the tourist’s is distorted and sight-targeted (with monumental sights blown up out of balance and the rest reduced to a blank map); the cité-seer vision is simultaneously micro- and tele-scopic. His glance is fluid, converging with, but never collapsing, into either of those two: one extreme renders the cite-seer blindly insensitive, while the other extreme makes him a quasi-local.

* 

I have sat in front of a church from the 1pm to the 1.30 pm bell. The ice-cream is finished, but no one is kicking me out, because I am not in. Part of my fascination with Italy is based in the relaxed authenticity of the urban surroundings (one can argue that all buildings are a copy of something else, but since the course of time has erased their ancient Greek originals, they now seem authentic to us). In summer especially, the inside blends in with the outside; human-built things blend in with naturally growing things. I am not enjoying ice-cream (with artificial additives) in an Italian style decorated cafe with pictures of ruins or churchwalls and statues on the walls, or witnessing copies of the ruins in a paid museum, under neon lights. Instead, I am physically sitting on the ruins of a wall under an old laurel tree, in an 'authentic' old square adjacent to an ancient church that have seen more summers than I ever shall. The gastronomic pleasure of ice-cream is only a fraction of experience: indivisible from the necessity of lunch, the merciless July sun leaving its marks on my back, the cultural consumption of a sight of interest, the linguistic adventure of communicating in a foreign tongue, and countless more minute elements that constitute the act of cité-seeing.

[...] In 2011 the Idle Ethnographer wrote about Milan [...]
of higher fees and increasing privatisation in education. NUS and UCU will be writing directly to all of your VCs and Principals calling on them to support our campaign to defend education provision, access and quality by signing up to our coalition and by granting release for the day of the national demonstration.

UCU general secretary, Sally Hunt said: “The very fabric of the further and higher education system is under threat from the current government. Its policies are more likely to encourage ignorance than to promote education. Plans to increase the cost of accessing universities and colleges will hit millions of ordinary families, crushing ambition and thwarting aspiration. Meanwhile suggested further cuts to budgets of more than 25 % will see an estimated 50,000 college and university staff join the dole queues. While other countries are investing in education to beat recession, this country is cutting back. That is why we are teaming up with the National Union of Students (NUS). Only by working together can we build an effective coalition to challenge the cuts and call on government to change course and fund our future.”

Aaron Porter NUS National President said: “This is a crucial year for education. The future of education funding is being hotly debated and we face the threat of the most drastic retrenchment in public spending for sixty years. The student movement has played an important role at moments like these in the past. We must do so again now. To do this we must work with our allies and reach out to those in our communities who will feel the impact of these debates. We need to build for a year of action on a scale that we have not undertaken since the higher education bill six years ago and the first landmark in this year will be our joint demonstration with UCU. If you haven’t already please make contact with your UCU branch and organise to make this the most successful demonstration of recent history.”

UCU says student support lottery must stop (2010-08-16 10:00)

UCU said yesterday that it was ludicrous that the amount of financial aid students currently receive is random and that universities with a good track of widening participation can only offer meagre support to their students. Responding to a report from the university access watchdog, OFFA, Sally Hunt said: “How much financial support universities offer students is a complete lottery. Universities doing the most to attract students from the poorest backgrounds are unable to offer those students the vital funds they need to survive at university.”

Car Boot Sale (2010-08-17 08:00)

In this episode, a sneaky ethnographer of East European origin embarks on a quest to deconstruct one of Britain's informal institutions: The Local Bank Holiday Sunday Car Boot Sale. Below are her unabridged and unabashed field-notes.
Don't fall for the 50 pence earrings: it's a trap!

Rather than participant observation, this is an exercise in observant participation. Observant participation is a variant of the ethnographic method of participant observation, first described by Polish researcher M. Kaminski who wrote a book based on his experience in as political prisoner (Kaminski, Marek M. (2004) Games Prisoners Play: The Tragicomic Worlds of Polish Prison). Now, you might think that a car boot sale is no prison, even though you are confined to a narrow patch of a few square feet. But the ethnographic method works, regardless.

**Background**

*(locals may skip this section)*

The car boot sale (hereafter CBS) is a curious local custom in the UK. Its role is to construct a temporary space-time continuum for exchanging small-scale goods outside the remit of the official market. Goods sold or acquired on a CBS are not subject to any local or government tax and are tacitly exempt from customer protection regulations. They are also extremely cheap compared to similar items available through the official market. The only (potentially) formally recorded monetary exchange taking place is a small fee paid to the owner/manager of the place in which the sale takes place (usually a local sports pitch) by salespeople arriving in their personal vehicles. The fee is paid for each sales vehicle regardless of any profit made, amount of goods, size of vehicle, number of salespeople, or any other criteria. It simply gives the payer the right to establish a temporary 'sales-pitch'.

The CBS obeys the cyclical nature of social time: it always takes place on a non-working day, customarily occupying the first half of the day on a Sunday or Bank holiday Monday (Bank holiday Mondays are another peculiar UK custom: they are Mondays *de facto* treated as weekend-days on which banks and most other commercial establishments and institutions are closed, happen several times a year).

The origins of CBS were unknown at the time of participation and writing – perhaps some of the readers could shed light on them?
Field notes

My first car boot sale ever began with a dream and a fiasco. Fortunately, the fiasco was contained in the dream, and the dream itself was not a nightmare. In my dream, I was desperately trying to sell my car to someone for a pound. They thought it was a rip off.

Luckily, when I woke up, I still possessed a car (which I needed for going to the car boot sale in), but it was also 8 am. Just like most people, normally I subscribe to the view that 8 am on a Sunday is, in fact, ungodly early. However, CBS-goers are a special breed of people akin perhaps to hill-walkers, morning-joggers and horse-racers. So don't be shocked to find out that by waking up at 8 am I had massively overslept by about two hours. Thanks to my bargaining with the other ignoramus in my dream, I was now too late to be able to use the limited time-slot of CBS. The window of opportunity was mercilessly closing up on me.

The cold shower and an inhumanly strong cup of black Turkish coffee woke me up somewhat, but I was still hesitating whether to go, or to devote my morning to more intellectual pursuits. A mundane detail swept away my last hesitations in favour of the less honourable pursuit. There was no milk left in the fridge and I was forced to consume my cereal drenched in hot water. This was too much even for a poor grad student. I now had two clear goals ahead: to make at least as much money as to buy two pints of milk and cherry scones from Sainsbury's (in addition to making some interesting ethnographic observations).

I loaded the car, marvelling at the amount of stuff I had accumulated within twelve months. For two months now, random objects that I didn't really need had been slowly finding their way into various containers scattered around my room. All three containers – a grey suitcase (itself acquired on a boot sale for a pound), a reusable shopping bag with an elephant on it, and a large cardboard box, were now full to the brim.

I also filled a rucksack with provisions, water, a bottle of sun-screen and a book (not for sale), and poured all my loose change in a fanny pack (don't ask me why I own a fanny pack). The rucksack and fanny pack together weighed probably half as much as the items for sale, but I wasn't going to allow my first (and probably last) experience as a saleswoman to be darkened by ridicule. Of course, I also took a straw hat – for looking professional; and a jacket – for British summer weather.

I drove out at 8.50 am: far too late for a responsible salesperson. My slackness confirmed the first rule of the market in reverse: profit drives action (or, in my case, my un-reliance on profit had allowed me to slack off). This observation was an important reminder of a key trap of qualitative studies: unless you are very invested in your field, you risk slacking off and allowing your fieldwork to become un-rigorous; yet, if you are too invested, you risk "going native". As a field researcher, you just can't win. Unless of course you research car boot sales – then you could at least earn some money.

The sale took place at a rugby field only 0.160 km away from my house, but I had to drive through five sets of traffic lights in order to get there (this made the journey almost a mile long). I also had to go around the junction twice, until I mustered enough courage to break the rules and drive a ten feet stretch in the forbidden green bus lane. I was immediately followed by four other cars. This excessively quick normalisation of deviance took me by surprise (being in Britain, I did not expect so many cars to break driving regulations). I did not know whether to rejoice or to worry: the good news was that even as late as 9 am, I was not the latest seller to arrive at the pitch; the bad news was that the pitch was full and I was also in direct competition with those four naughty cars (all brimming with goods for sale).

Having driven 1.5 km instead of 160 metres, and stopped at ten red traffic lights, I confidently drove into the rugby field that hosted the sale. 'Is it too late to get a sales pitch?', I asked the three blokes who were standing at the gates, holding plastic buckets full of bucks. I had been practising this phrase in my head ever since I had got in the car.
and the butterflies in my stomach had been practicing ever since, too. They (the blokes, not the butterflies) said ‘It’s alrigh’, and told me to drive to pitch 65. I had no idea where that was, so I just drove all around the field until I saw the end of a row. There I parked in the grass, next to a large family who were unloading a mountain of really good books for sale. I had to force myself to turn a blind eye to all the books on history and art, all sold for one or two quid. The two pints of milk and the cherry scones beckoned and grinned at me. I had no choice but to show endurance in the face of the luring jackets of the books.

One of the first cars at the car boot sale. Hoping to flog all this crap to unsuspecting Coventrians. Proud to own a car and use it.

I took my stuff out of the car and spread it on a blanket on the ground, then perched myself on a softer blanket and began waiting for the crowd to invade my little pitch at the very end of the line. A small stream of people stopped by. Those who did, probably did so out of pity: “Let’s stroll past that girl at the end of the line, she must feel lonely. Ah, and she hasn’t got anything interesting to sell. Poor darling”. Not a minute had passed when an old gentleman appeared, armed with a notebook, pencil tucked behind his ear, entirely unimpressed by the lack of customers and my blatant lack of profit. I disarmed him by offering to voluntarily part with £7, in contribution towards the sales pitch. He snatched the money and evaporated. He also seemed to give me a receipt for the seven quid, but it must have been made out of fumes, because it also evaporated.

The wind wasn’t on my side: it was obviously backing up the customers, and trying to lift things from my improvised stall without paying for the purchase. The four books I had managed to tear off my bookcase and put up for sale were flapping their pages like fat domestic chickens forced by a strict mummy-chicken to attend Sunday flying classes. Worse still, the wind was about to lift off the ground the determined saleswoman herself. My propensity to fly created some funny chat-up situations with potential clients. The cheeky bastard actually earned me a few pence, so in the end I didn’t report the wind to the police.

At 9.20 am I made my first sale (ever!). Unfortunately, I have no recollection of the item I sold, but I do recall receiving a pound coin from an itinerant tradesman with a busy expression on his Ethiopian face. I’d seen him before (and heard him mention Ethiopia to a customer). He earns his bread and beer by buying and re-selling things at car boot sales. How many people are out there, for whom car boot sales are a key way of earning money? I also wonder
why I forgot what I actually sold. Perhaps, that is my psychological defence against disappointment, because the item probably cost more than a pound.

Then I sold a few more things. An intergenerational conglomerate (grandmother, mother, and ten-year-old daughter) critically examined my four old pairs of shoes and after a deliberation lasting about a quarter of an hour bought the old pair of black pumps for a quid. I had got them for years ago for £10 (a lot of Bulgarian money at the time) from a very cheap shop in Coventry, so selling them made me feel a bit nostalgic. I played on my first piano concert wearing those shoes (the quality of the music was the same as that of the shoes, but the memory is just as dear, too). It was no surprise that the young girl hated them. I had worn them out and they were not very comfortable and did not look very cool; worse still, according to the mother, they were going to be worn during the following school year. The mention of the word "school" killed all signs of potential pre-teen enthusiasm. However, she yielded to parental pressure and handed me the pound with a guilty smile.

A tiny jubilant lady bought Al Pacino's *88 minutes* for £0.50. I convinced her that it was a thriller (even though I had never watched it). She was delighted – that was exactly what her grandson liked...oh, these boys – well, he's a young man now, at 18. She was so lovely that I'd have given her the thriller for free. I would never make a good salesman. I'd be too tempted to rip off noxious people and give presents to lovely ones.

Someone took advantage of the familial humdrum around the black shoes and snatched my new ballet pumps for £1... they had cost me 10 pounds. But I couldn't care less, because I had now made broken even and even made a profit of £0.70 and could finally commence working for myself!

At 10 am my smiling muscles were hurting, but I continued smiling and saying 'Hi', 'Hello there' and 'Morning, Sir' (to the rare surly-looking male). My sales continued with variable success. There was no crowd, but I was rewarded – not financially – by numerous awkward 'Hi'-s and 'Hello'-s, as well as a variety of half-embarrassed, half-treasure-hunting glances. An old biker, melting in the sun in heavy black gear and clutching a helmet with clumsy charm, said I smiled beautifully and that I should continue doing so, because I was cheering everyone up. I thanked him and followed his advice – not out of duty to the unknown leather-clad knight, but because the smile was now glued to my face and my mandibular joint refused to move.

Soon thereafter, I sold the Merchant of Venice for £0.50 (what irony). Still not sure why, though, because now that I think of it, I was intending to see the film again. (now that I think again, it also has Jeremy Irons in it. Damn. ) Still, that was an interesting example of a purely impulsive purchase on part of the customer, and of an exercise in emotional manipulation on my part. I put on my cheeky hat and chatted up a young man passing by. After a brief exchange concerning the weather, I bribed him a McVitie's chocolate digestive biscuit. After that he was ready for anything, but I had already changed into my Scrooge hat and was more than content to let him off with all jeremyironeses and venetian merchants, after I had got my fifty pence.

I received another, more direct proposition from an aging Irishman who said I should accompany him to Dublin. He bought something minute for ten pence and stayed on for a chat for far longer than needed. While I laughed and tried to explain to some impatient customers how much my coca-cola glasses cost, he elaborated on his plan. He was going to Ireland in September and would stay for three months, and I was very welcome and there was nothing I should be afraid of. The rugby pitch in-house harassment officer was not in, so I couldn't report the overly zealous Mr Patrick, and I had to deal with the matter myself. I said he was very kind but I didn't think I could do that. To my surprise, that was enough to make him bid a very polite farewell and clear off. This incident convinced me that I would never venture to the equivalent to an English CBS in a less civilised country where a brusque 'thank you' would not be so easily recognised as an outright refusal.

A few quiet minutes, and the juggernaut of profit took me up again. A well-dressed lady took my wacky red hat for £0.50. I had fallen in love with the hat and rescued it from the Cat Protection charity shop in Kenilworth once,
but the hat WHISPERED when worn, and I didn’t want to go mad. Now this lovely lady with a penchant for bright hats will have go mad instead.

Then my big moment came in the face of a lady wearing a traditional blue dress and blue head-ribbon. She bought various stuff for £5. I was chuffed to get rid of the junk and even get £5 for it – while she was pleased with an amazing bargain. She also asked whether I spoke French. I didn’t wish to subject her to my French for fear that she would return the stuff and run away, but it turned out that she came from France and just thought I was French. So much for my typical Slavic accent. By the way, in the course of the day, at least ten people asked me where I was from, so I also managed to make some geopolitical progress on behalf of my country. I told them and showed them photos of green mountains and monasteries printed on a set of Bulgarian coasters which no one had bought. (I also had to say one too many times that yes, UK is nice, but yes, of course I miss my home-country - which, to be quite honest, I don’t, but there was no use trying to convince anybody of this, especially when you want them to buy your stuff). Perhaps now a few more people in the world know where Bulgaria is. This might help them feel better the next time the country crops up on 'Who Wants To Be A Millionaire'.

By 11.30, everyone seemed to have started packing their unsold goodies in the boots of cars. The previously buzzing rugby pitch was looking rather dead. I said goodbye to the book-loving family on the neighbouring pitch, bought a book about samurais from them (goodbye, two hard-earnt quid!) gave their kids a box of crayons, and drove off. I tried to give it another shot, so I stopped next to the gates and managed to sell 'What women want' to an aged Irish couple. They are guaranteed a good laugh and some embarrassment with their favourite Mr Gibson.

So, what is today’s balance?

All in all, I made £19.15; subtracting £7 paid for the sales pitch makes 12.15; minus another £2 for a book I bought from my neighbours (naughty me!). So, not counting petrol, I made a mere £10.15 in one whole morning (not counting the hours spent slowly amassing the stuff for sale, and any loss made by not selling the stuff for more money on e-bay). The meagre pecuniary gain is offset by a most peculiar finding: a simple lunch never tasted as good, as it did that day, after wasting away a whole morning just sitting in the sun... It also felt good to pay for my milk and cherry scones with a handful of coins.

Perhaps I shall see you on your local rugby pitch one Sunday (but I am most definitely not going to Ireland to hang out with elderly philanderers).

Continuous Partial Attention (2010-08-17 21:56)

"In the case of continuous partial attention, we're motivated by a desire not to miss anything. We're engaged in two activities that both demand cognition. We're talking on the phone and driving. We're writing an email and participating in a conference call. We're carrying on a conversation at dinner and texting under the table on the Blackberry or iPhone.

Continuous partial attention also describes a state in which attention is on a priority or primary task, while, at the same time, scanning for other people, activities, or opportunities, and replacing the primary task with something that seems, in this next moment, more important. When we do this, we may have the feeling that our brains process multiple activities in parallel. Researchers say that while we can rapidly shift between activities, our brains process serially [...]

Over the last twenty years, we have become expert at continuous partial attention and we have pushed ourselves to an extreme that I call, continuous continuous partial attention. There are times when cpa is the best attention strategy for what we're doing; and, in small doses, continuous partial attention serves us well. There are times when cpa and ccpa compromises us.

The "shadow side" of cpa is over-stimulation and lack of fulfillment. The latest, greatest powerful technologies are now contributing to our feeling increasingly powerless. Researchers are beginning to tell us that we may actually be doing tasks more slowly and poorly.

And that's not all. We have more attention-related and stress-related diseases than ever before. Continuous continuous partial attention and the fight or flight response associated with it, can set off a cascade of stress hormones, starting with norepinephrin and its companion, cortisol. As a hormone, cortisol is a universal donor. It can attach to any receptor site. As a result, dopamine and seratonin –the hormones that help us feel calm and happy – have nowhere to go because cortisol has taken up the available spaces. The abundance of cortisol in our systems has contributed to our turning to pharmaceuticals to calm us down and help us sleep. Read about email apnea to understand how our relationship with screen-based activities plays a role in this fight or flight response."

Steven Slater and Late Capitalism (2010-08-18 08:00)

For those of us who first became interested in politics during the era of the internet and twenty-four news, it can feel a bit weird being out of the loop. That's why on my recent holiday, deprived of the guardian website and BBC news, I found myself watching a embarrassing amount of CNN. In between the constant self-promotional adverts and strikingly poor analysis, one story stood out above all others: for the seriousness with which it was dissected and discussed, as well as its sheer repetition over the course of the week. Depressingly it wasn't the flooding in Pakistan but rather the antics of rogue flight attendant [1]Steven Slater who, faced with an abusive customer, quit on the spot
and exited the plane via the emergency evacuation chute, purloined beer in hand.

[EMBED] Slater now how has 200,000+ friends on facebook. His act has spawned close to a hundred groups and pages on facebook, as well as countless web memes. Why has his action resonated so widely? The obvious answer, as countless pundits have earnestly suggested, is that his actions have inspired people "overstressed and overworked" across the western world. In the rather hyperbolic words of a business psychologist interviewed in the above video, "this was a statement of freedom. A statement of liberation". What’s interesting is the extent to which even the silliest coverage of Slater’s act has dealt in a familiar concern of the organized left: poor working conditions and [2]emotional labour. As Colin Horgan has recently [3]argued on the Guardian website, Slater is a "rebel in a dehumanising society". There’s clearly a literal truth in this claim. However this poses the question: what does it say about our society that this is a form of rebellion which has attracted so much praise? Regardless of what you think of the messy intricacies of actually existing trade unionism, there’s a morally worthy core there: the idea of collective action, working together to improved shared conditions, striving for reciprocally improving welfare. Yet it often seems to be completely absent from our shared horizons. Trade unions get regarded with hostility, distrust or apathy while the actions of a flight attendant who swore at passengers, quit his job without any thought and now potentially faces several years in prison receive such widespread praise.

Media, Intellectuals and Masses (2010-08-19 08:00)

Nothing is more dangerously addictive than the media which like the pool of Narcissus can absorb you body and soul. You fall in love with the face that is your face. You are obsessed with the voice that is your own voice. You believe in your own reality. Everything else is secondary to this one and only reality that is yourself. In Sylvia Plath’s poem "Mirror" the persona says:

"I am silver and exact. I have no preconceptions. Whatever I see I swallow immediately Just as it is, unmisted by love or dislike. I am not cruel, only truthful -"

The media is not a mirror because it has "preconceptions" about its own ability to make or break reality through the power to affect imagination. Like the world of objects in Plato it is twice removed from reality and yet it assumes that no reality is possible without the image that is contrived. What George Seldes says about the press applies to the media as a whole: "The most sacred cow of the “media” is the media itself."

Dr. Johnson couldn’t have put it better when he said: “Every man is prompted by the love of himself to imagine that he possesses some qualities, superior, either in kind or degree, to those which he sees allotted to the rest of
the world;" The media plays on our vanity, our need to be seen, to be watched, admired and envied. But, at the end of the day we know who or what we really are.

Since reality must be converted into a media byte we don’t know what is real and what is not. We don’t know how much of the feelings people display before a camera are real or just a performance meant to trigger anticipated reactions. Motives are impossible to judge given the fact that images are carefully chosen, information that comes as news cunningly doctored, and what happens behind the surface is far more complex than what appears with deceptive simplicity before our eyes.

Media has to be used strategically by all intellectuals who mean to subvert this existing order to make way for a more just one. Whether the image corresponds with the truth or not, truth will not stop being truth. Truth is on the side of those who suffer injustice and are determined to fight back. No amount of media lies can defeat the truth. If lies worked all the time the slaves in the Roman Empire would’ve been slaves for eternity. Ideology that comes with brainwash collapses before truth.

The criminalization of politics in India would not have been possible without the consent of intellectuals. Louis Althusser speaks of the Ideological State Apparatus (ISA) which means institutions or individuals that generate the language, logic or argument to justify a system of repression. Doctors and engineers top the list in the category of "intellectuals" who are happily indifferent to this system of repression because it does not affect them and in fact their secure lifestyles are possible because they submit to this order. Not any better are lawyers and the teachers in the universities. These are the more respectable version of Bollywood. Fundamentally not any different though. Bollywood is cheap, undisguised and blatant. These traitors have a look of respectability which makes them worse. They don’t want to give up the security of their positions by raising their voice against this order. Why should they? They’re getting paid for all the masturbation and lies.

The million dollar question is: how can we ever have a nation without radical change as the only possibility in view! To quote Walter Benjamin: “The tradition of the oppressed teaches us that the "emergency situation" in which we live is the rule. We must arrive at a concept of history which corresponds to this.” The real intellectuals who will explain and solve the current series of crises plaguing the third world will emerge from the rock bottom. We live in an “emergency situation,” which means a situation that makes it extremely difficult for common people to make both ends meet. It means survival is impossible for the poor and downtrodden without a fight.

The media gives a superficial gloss to the ideological apparatus that forms the basis of repression. I mean at the end of the day the media is a performance like in Genet’s play The Balcony where appearance is the only reality. It’s not about people or individuals. It’s about appearances multiplied by appearances. We need to come out of appearances. We need to come to terms with a face that is not an image. That’ll be the job of the real intellectual of the masses who will articulate the real needs of real people and not the imaginary ones of those who love and live for themselves.

ibrahim (2010-08-20 07:32:04)
Very beautifully written and provokingly analyzed easy-going critical text. The literature premises (such as Sylvia Plath and Jean Genet ) and ancient Greek myths to reach to a presumed conclusion makes Mr Kona’s ideas look even more pretty. It is also equally joyful to see philosophical element such as Plato in the media critique which is something media faculties generally poorly fails to take them into their particular contexts.
ibrahim (2010-08-20 07:40:54)
P.S: I just wondered how many media studies lecturer and studens heard and care about George Seldes.

Kelly Jo (2010-08-23 15:38:27)
"Not any better are lawyers and the teachers in the universities. These are the more respectable version of Bollywood. Fundamentally not any different though. Bollywood is cheap, undisguised and blatant. These traitors have a look of respectability which makes them worse. They don’t want to give up the security of their positions by raising their voice against this order. Why should they? They’re getting paid for all the masturbation and lies."

I have to say, it seems you’re being a bit hard on yourself without ever really confronting yourself. Do you consider yourself a traitor? Worse than a Bollywood producer? If so, I would have to disagree with you and remind you of Wittgenstein’s defense of language as use, which I take as pretty restorative of a sense of agency. Although I can’t speak to the role of Bollywood in reinscribing the present social order, I can say that you, as a university professor, made a profound impact on the life of my mind. So, even if you are paid for “lies and masturbation” I thank you. Honestly, I’ve been trying to rethink this whole perversity that’s been made out of the recurrent “mirror” image—as if humanity is total perversion. I reject that claim. Being here has reminded me of the year we knew each other in Cyprus. During my transition from NYC to Magosa, I was reading Winterson’s "Art and Lies," in which she claims, "There’s no such thing as autobiography. There’s only art and lies." When we write, we write ourselves—regardless of the pronouns we are taught to use to disguise it. In addition to your reference to "persona," another Bergman work comes to mind. His 1961 “Through a Glass Darkly," in which Karin tells her family and all her viewers that she must make a choice. She must choose between a reality in which God is either the "stone-faced" spider-like creature of her dark "psychosis", or find a place in another form of reality, ostensibly in the looking-glass described in the reference to Corinthians. We too must make this choice in our working lives, our intellectual and spiritual lives, and our daily lives. To end on a lighter note, I am reminded of Zizek’s ideas on the San Francisco celebration of National Masturbation Month in his first chapter of "Violence." "...the French philosopher Alain Badiou set out in a perspicuous way, today more than ever one should insist on a focus on love, not mere enjoyment: it is love, the encounter of the Two [sic], which ‘transubstantiates’ idiotic masturbatory enjoyment into an event proper." Ironically, the metaphor is apt here and now. As I sit here at my desk in Hyderabad, a New York transplant, and write to you while we are living in the same city again. Understandably, it can’t be helped to sometimes feel to only be touching oneself in this vast nerve center called the internet.

ibrahim (2010-08-26 13:15:26)
@ at Kelly Jo: your words seem to be a bit obscure. they are not concise to the heart of the problem. Can you please try to be incisive without being plain instead of subtle implications?

Kelly Jo (2010-09-19 22:28:23)
@ Ibrahim. I am not sure which "heart of the problem" you are referring to. If you would like to tell me what you think I should be talking about, I’d be happy to be more incisive, "without being plain” of course.

Niall Ferguson on the Ascent of Money (2010-08-20 08:00)

An interesting talk by arch-Conservative historian [1]Niall Ferguson on the history of finance. While Ferguson’s politics might not be to everybody’s tastes (witness his recent [2]interview in the New Statesman) he is an increasingly influential public intellectual with a genuine talent for popularizing academic history: his [3]Ascent of Money was popular as both documentary and best-selling book. He’s also found himself a surprising topic of [4]tabloid interest. Given his ongoing [5]links with the present Government it would be surely be a mistake to ignore the man.

Interview with Alan Morrison (part 1) (2010-08-23 08:00)

Alan Morrison (b. 18 July 1974) is an English poet for whom poetry is about changing the world rather than describing it. In complex and radical ways though not without conflicts, Morrison brings together his life and art to argue for “every individual’s right to a home and to food in their belly.” His most recent book “Keir Hardie Street” is published by Smokestack press.
Prakash: In “Why I Write” George Orwell says: “And looking back through my work, I see that it is invariably where I lacked a political purpose that I wrote lifeless books and was betrayed into purple passages, sentences without meaning, decorative adjectives and humbug generally.” Do you think a statement like this somehow describes your work as a whole in the sense that your politics is intertwined with your poetry or does your poetry have an independent character outside the framework of politics?

Alan: I recognize that quote from Orwell, I think he was referring to Keep the Aspidistra Flying! which is a witty and sometimes pertinent novel, but arguably a bit repetitive at times. But he was being a bit hard on himself and on the book, since it does address incidentally unusually gritty themes such as Gordon Comstock’s scraping together his small change to see if he has enough to get him through one day taking his girlfriend out. So it is a social
novel still, and political, but more a black comedy. Firstly, my poetry does have an independent character outside
the framework of politics, and many of my poems in my previous two volumes have been a variety of subjects, tones
and styles, but why is it I often ask myself that I keep coming back to the same domestic social themes, of beggars
on the streets, of poverty – both of my upbringing and associated memories that have left an indelible mark on me
since, and that of others in society...?

I don't fully know, I just seem to instinctively itch to use my poetry for social and political subjects in the
main; I think poetry is, or at least should be, about society and people – politics – as much as ideas and feelings and
personal desires. It is an intrinsically political art-form, though over the past thirty odd years – not un-coincidentally
simultaneous with the deeply scarring and anti-artistic Thatcherite mentality in the UK – it has, like so many other
creative mediums, become ever more inward-looking, solipsistic and apolitical; establishmentarian in many respects.
This is all immensely depressing. But yes, my poetry does have I think an independent character apart from the
politics; there's an equally dominant emotionalism, a confessionalism I suppose (also a bit unfashionable these days),
especially related to my upbringing, my family, my own tempestuous mentality and troubled coming of age – but
then much of this inevitably seeps back into the politics again: the awakening of my socialist conscience through
first-hand experience of poverty in the very real going-to-bed-often-hungry sense, and in the trap my family were in
during the Thatcher period, when the successful went up and up and the unlucky were left to pretty much fend for
themselves apart from basic state support (even food hampers left for us sometimes by the local Parish: we'll be
returning to such alms of course in Cameron's new 'Big Society' of charity-run public services). Also, starting to write
poetry around the age of 16 or 17, while living in a run-down cottage placed contrastingly in a picturesque hamlet in
Cornwall with stunning countryside all around, there was, particularly in my earliest poetry, a very strong pastoral
aspect, and my earliest influence was John Keats, especially his Odes; William Blake and his more urban social songs;
and Shelley, particularly 'Mask of Anarchy'. I considered myself originally a neo-Romantic poet.

I'm a Romantic at heart, and would describe my politics as essentially Romantic or Christian Socialism (cue
William Morris, Keir Hardie, Nye Bevan). I've been guilty of indulging in verbalism in poetry many times, not so much
a love of as an obsession with words, their sounds and music and tangibility on the page; poetry for me is like painting
with words, layering the lines, employing as full and rich a diction as possible, a style I've recently coined 'impasto',
which adorns my latest work, Keir Hardie Street, most obviously; a certain Dylan Thomas Under Milk Wood influence,
but also the metaphorical social balladry of John Davidson (whose 'Thirty Bob a Week' has to be my favourite poem I
think); other influences being the lyrical and figurative combinations of Alun Lewis, Harold Monro, and the masterly
aphorismic work of Eliot. But in the case of Keir Hardie Street, my most verbally ambitious poem to date, part of its
purpose is to convey a verbal impression, as well as a meaning and narrative, through a baroque use of language, a
very musical, almost vaudeville verbalism, in keeping with its Edwardian London setting and themes. Other poems
have differed in success in the past in terms of whether the use of language in some way overrode the clarity of the
meaning, the substance. But it's something I guard against by making sure to infuse sufficient music, rhythm, tempo,
and most of all, emotional depth into a poem, whatever its approach in language is. Whether I succeed more than I
fail is up to the critics and readers to decide.

But for me, poetry is above all about the love of language, and too much work I read today in the contempo-
rary mainstream seems almost to demonstrate a contempt for language, or at best, an almost puritanical suspicion
of it (while ironically often dealing with deeply self-indulgent, quotidian and hedonistic subject matter). For me, a
prime example of this kind of navel-gazing writing is that of Hugo Williams, which makes his comment in coverage of
this year's Forward Prize, which he judged, all the more ironic: he bemoans that too many books are being published
in poetry at the moment, 147 entries for the Forward Best Collection, and he talks of many collections seeming to be
published 'just because they're there' – this shows a breathtaking lack of self-awareness since his latest volume has
been criticised by some for similar reasons, for seeming tokenistic, as if just churning out the same old stuff again,
even of being so self-referencing to his previous books, including an actual rewriting of one previous poem, that he
must be one of the few poets publishing today who can be accused of self-plagiarising. Not such a solecism if the
earlier poetry being re-hashed wasn't so pedestrian in the first place. But it seems a sign of our times in the UK that
hypocrisy reigns supreme, that it is almost trendy nowadays to openly accuse others of what one is guilty of oneself.

What's depressing however is that those such as Mr Williams just can’t see their own faults. His barbed snub of Derek Walcott – who was not shortlisted for the Forward, coincidentally with Ruth Padel as its Chair this year, who famously smeared the latter in the chase for the Oxford Poetry Professorship last year – was also very telling: he used the term ‘florid’ as a drub of Walcott’s far superior oeuvre, which to me smells of the old green-eyed monster. Between Walcott’s ‘floridness’ and Williams’ quotidian prose-poetry, I’d choose the former every time! What he calls ‘florid’ I would call ‘poetry’; what he calls ‘poetry’, I would call ‘prose’. And Padel’s brazen grand-standing in spite of her previous behaviour which would have irreparably damned practically any other poet who didn’t have her reputation and kudos (and dare I say ‘connections’), is symptomatic of the UK’s current top-down amorality where quite contrary to David Cameron’s ‘do the right thing’ mantra (whatever that means anyway), it’s very cool to cut corners; to cheat (unless one is on benefits of course, in which case, that’s an entirely different ball game, as you’re at the bottom of the heap). That’s capitalism.

Praksh: Thatcherite policies in the 1980s while they dismantled the welfare state also unleashed the forces of production that put Great Britain on the road to becoming a "globalized" developed nation which would not be possible with the good old welfare style of functioning with the state playing the role of a protector or caretaker of citizens. Do you think that such a concept of welfare state can be sustained given the rise in immigrant populations, radical changes in the areas of information and telecommunication technologies and the fact that globalization has perpetuated new forms of individualism to combat any possibility of a combined effort to challenge corporate power?

Alan: Thatcher didn’t actually dismantle the Welfare State, though she probably wanted to, and certainly started chipping away at it as much as she could. What she did dismantle was the British socialist tradition by leading a pogrom on the industrial Labour heartlands and imposing savage legislation to limit the powers of the Unions. Just as today the Con-Dem Government are using the excuse of the Government deficit to bring in a new age of selective austerity and savage cuts on the Welfare State and Public Sector, not to mention planning to privatise much of the NHS, Thatcher’s Government used the excuse of the Winter of Discontent of the late 70s, where debatably Unions were holding the Labour Government to ransom, as a justification for practically wiping all their powers away. Of course, the British rarely seem to remember the equally horrendous Winter of Discontent of the early 70s – which happened to be under a Tory Government. Memory can be very selective. What Thatcher did to this country was even worse than all the anti-socialist and anti-community practical measures she forced in: she practically killed the spirit of this country, and with it, the hitherto still vital and genuinely progressive post-War socialistic/communitarian consensus. I was born in 1974, but I can remember the late 70s still so vividly, and what I remember, in spite of the proverbial problems and upheavals of those days, was a completely different country, a far better and kinder country, than the one that has mutated since Thatcherism set into the nation’s consciousness and polluted it with all the worst and most philistine traits. I remember a softer country, a little like contemporary Sweden (which I visit quite regularly as my girlfriend is Swedish): a true society where class barriers are far less noticeable, where people respect one another, where there isn’t such a massive wealth divide, where there are proper public services and everyone is willing to contribute significantly more tax in order to fund them. No two tier half-privatised tabloid-brainwashed celebrity-obsessed junk culture as we have in the UK today.

When I was last in Sweden, I found myself feeling a disconcerting sense of nostalgia for England, of missing particularly its inimitable countryside and folkloric heritage, even its historical radicalisms – but on returning of course, I realised that country is more than just a flight away, it’s an age away, it’s in the past; but that past lives on in some of us. It’s an odd and deeply unsettling thing to feel like a foreigner in one’s own country, but I always have,
because my political convictions and cultural attitudes are more (Continental) European than English. The island mentality is a curse; it is narrow and quite suffocating; and the British Empire was after all the one on which the sun never sets, since we dismantled it ourselves – and its potent ghost still lingers on, which is a deeply isolating delusion, and one which our new Tory Government are already feeding with their ridiculously out-of-touch patriotism.

To return to Thatcher: ironically, while the monetarism of the 80s might have put the UK more on the global map, She (who must be obeyed) was simultaneously dismantling British industry and manufacturing – cue the Miner’s Strike – and so contributing in advance to the parlous situation we have today where we are an almost entirely unproductive country industrially speaking. This will now disenfranchise our country greatly in the economic global recession. So I would dispute that Thatcherism actually did this country any favours at all, even in the capitalistic sense. It, along with the betrayal and selling-out of New Labour and the Blair years, has ruined our country, body and soul. And to drive the final nail in we have a sham-Coalition, basically Tory administration, gleefully rubbing their hands as they can finally cauterise what’s left of our Welfare State, NHS and Public Sector and damn the consequences. It is also deeply ironic that just as Barack Obama is beginning to construct the USA’s first and belated attempt at a Welfare State and NHS equivalent, we British pioneers of universalism are now starting to dismantle our own.

Prakash: Can you speak about your e-anthology: EMERGENCY VERSE: Poetry in Defence of the Welfare State and in support of a Robin Hood Tax on the City.

Yes, this was something I had to do, and quickly, hence the title, which is also a titular response to the Government’s ‘Emergency Budget’: their plan to cut £11 Billion from our already vastly depleted Welfare State presents the most devastating threat this nation has ever faced, even beyond that of Thatcherism which of course started off this ruinous course along the path of Neo-Con-Liberalism. I predict escalating unemployment, homelessness, protests, riots, serious public discord and community chaos in the months and years ahead if such vicious legislation is not fought and opposed every inch of the way. At the moment, most people in this country seem to be drifting around in some sort of dream world swallowing all the deeply specious spin from the Con-Dems that everything is to do with the previous Government’s deficit, when the reality is the deficit itself is only the tip of the iceberg, and the real black whole has been caused by the crimes of the City and Banking Sector – who incidentally have got off scot free with a mere £2 Billion levy.

It’s staggering that only a year on from the G8 protests in London, the demonstrations in Threadneedle Street, the smashing of RBS windows, the utter disgust and hatred of the Bankers, and then the same scorn thrown at the expenses-cheating MPs, that only two months in to a cobbled-together and electorally illegitimate Con-Dem Coalition without a proper mandate, that many people are now being blindly acquiescent like zombies to the continual mantra of ‘deficit, deficit, deficit’ and ‘unavoidable cuts, unavoidable cuts’, that instead that radical rage of last summer has mutated into a Public Sector-trouncing, anti-benefit claimant attitude at large (cue our new DWP Minister scapegoating those whose ‘curtains are shut during the day’), which is deeply disturbing and utterly uncalled for. Many people have already forgotten the true culprits and benefit cheats of society: the MPs and the Bankers. It’s no surprise the Tories are seeking to Divide and Rule by pitting the Private Sector against the Public, the taxpayer against the benefit claimant (Incapacity Benefit is taxable but recipients don’t pay tax on it as it is below tax threshold - but they are still supposed to declare IB as taxable income to Inland Revenue!) – but what is a bit of a surprise is how swiftly and credulously the public fall for such low tactics (though of course our media Murdochracy plays a big part in that).

A Cabinet of multi-millionaires tell us all to tighten our belts saying ‘we’re all in it together’ – what they actually mean is, ‘they are all in together’ in subsidising the grand-scale theft of the Banking Sector by cutting our Welfare State and tipping thousands of Public Sector workers into unemployment, only to tell most of them thereafter to...
start volunteering in return for their benefits, or have those cut too. It’s beyond parody or satire this issue, it is quite simply the most outrageous offensive of any previous British Government against its own people, particularly the poorest and most vulnerable (certainly not those with the broadest shoulders), simply because they don’t have the guts to stand up to the City and Rupert Murdoch. They then have the temerity to cover all this behind the spin of ‘Big Society’, a new national community – yes, but of slaves! So *Emergency Verse* is genuinely an emergency campaign: the poets of this country need to get off their prize-hugging podiums for once and back onto their traditional soap boxes and use the power of their words to oppose the oncoming storm of cuts that will devastate this country for generations to come. We are on the brink of becoming not just a Class system but a Caste System.

It’s interesting to note too that, warts and all, during Callaghan’s government of the late 70s, just prior to Thatcher’s narrow 1979 election victory, the UK was the most socially equal country in Europe. Now, after Thatcherism, after New Labour, thirty odd years down the line, we are practically the most socially unequal society in Europe. That is the legacy of Thatcherism, privatization, globalization, deregulation; of free market capitalism (a misnomer anyway, since all markets lead to monopolies). So, I invoke Marx and Engels with the rallying cry *Poets of the Nation Unite!* And so far, 60 have, contributing some powerful and angry poems to what promises to be as much a petition of poems as poets, a campaign in raw verse, utterly against the Government Budget, against the Welfare State cuts, against privatization of the NHS, and in favour of a Robin Hood Tax on the City and the wealthiest in society. Through such a tax, we could rein in more than enough money to sort out the nation’s debt, without touching anything or anyone else. The Con-Dems are choosing ideologically to do ‘the wrong thing’ (Mr. Cameron), rob the people of the little they have, let the culprits get away with it and continue amassing their gratuitous wealth and continued bonuses, and then have the absolute cheek to say, ‘we’re all in it together’. Until I see David Cameron surrendering his salary and volunteering as Prime Minister while also redistributing some of his inherited wealth to the poorest, he and his cronies have no right whatsoever to say such things. It’s true British patch-over-the-problem hypocrisy of the worst kind.

*Emergency Verse* will be circulated electronically to all newspapers, journals and Government departments once it is completed, with a covering letter listing the contributors by way of official petition, an open declaration of literary opposition to this Government and its vicious policies, and the promise of further campaigns and public readings to follow. When one thinks of the sacrifices made by British poets during the World Wars, and, most ideologically, in those who volunteered to serve the Republican cause in Spain in the Thirties, who put their very lives where their mouths and words were, I think contributing poems to this campaign is the least the British poets of today can do. Beyond this e-anthology (which will be essentially an electronic book), I will continue to oppose and speak out against this Government through the outlet of *the Recusant*.

*To be continued on the Sociological Imagination tomorrow*

---

*Interview with Alan Morrison (part 2) (2010-08-24 08:00)*

Prakash: The media has made it terribly unfashionable to use words like “socialist” or “communist” or “leftist.” In fact any seriously pro-poor position makes it difficult for writers and researchers to find a platform to their work. How do you describe yourself and what kind of a platform have you been able to create for yourself to talk about your work and find an audience for it?
The media is half the problem as in any capitalist society; most of our national newspapers are currently like a kind of Falangist phalanx – the worst are of course under Murdoch’s plutocracy, the nastiest being The Sun, News of the World and the deeply insidious Mail. The Telegraph is for the intelligent Tory (if that’s not a contradiction in terms), but still shamelessly right-wing, as is The Times, which is a truly arrogant and unpleasant paper. The Left only has The Morning Star, which I read. The Guardian has long degenerated into a trendified muesli-munching realpolitik for the chattering classes, more pink than red, lately yellow, but then back to pink after the Lib Dems betrayed the British electorate to the devastation of a Tory administration. Yes, you never hear the word ‘socialist’ anymore; now it’s euphemised as ‘progressive’ or ‘centre-left’ or ‘left-of-centre’ – anything to appease the middle-classes and erase images of Union banners and class struggle. A fellow left-wing friend of mine once coined it perfectly: he said being a socialist these days in the UK is like being a Jedi, a Ben Kenobi hiding out in a hermitic wilderness replete with figurative cowl. But the thing to remember about the Jedi is they all have lightsabers tucked away.

I’m a socialist; in that I believe in fundamental human equality, in every individual’s right to a home and to food in their belly; I believe in true equality of opportunity, in social meritocracy; I believe that it should be a fundamental right of all people to have homes, irrespective of whether they have employment or not – in this country it’s almost impossible to secure work if one is homeless anyway. The more I visit Sweden, the more backward, almost feudalistic I perceive the UK with its archaic class system, the farce of titles and honours, aristocracy and monarchy – one would think we’d never even had a Welfare State or NHS or one of Europe’s most constructively left-wing Governments between 1945 and 1951 under Clement Attlee. Thanks to Thatcherism, the path to greater social equality was abruptly truncated in the 80s and has never recovered since. New Labour shamefully continued the Thatcherite revolution and apart from one or two tokenistic left-of-centre pieces of legislation – like the minimum wage, which is still not a living wage – left this country with a still enormous wealth divide, and the worst mortality rates for the poor since the Thirties so I’ve read. By pursuing further privatisation initiatives in the Public Sector, they also cleared the way for the Tories to come in and finish the job off.

We had a brief window of hope after the election with the potential Rainbow Coalition of left-of-centre parties – including the SNP, Plaid Cymru and Green, Caroline Lucas of Brighton Pavilion being possibly the best and only truly socialist MP we now have – but seemingly a combination of lack of will on both Labour’s and Nick Clegg’s parts, in spite of Gordon Brown quite admirably stepping down as Prime Minister, has led to the most absurdly ill-matched Coalition in British political history: a Coalition of Opposites, since the Lib Dems were, at the time of the election, the most left-wing party left in Parliament – yet they joined with the most right-wing! It makes no sense, except to finally conclude with much regret and disappointment that the Lib Dems really are the unprincipled opportunists the two main parties always accused them of being. Shame on Nick Clegg – from loud-hailing electoral radical to Tory prop within a matter of weeks – and the rest of the Lib Dems for betraying this country to what is already proving to be the most out-of-touch and ruthless administration we’ve seen since Thatcher’s.

In terms of finding a platform for my political poetry, I never deluded myself that I would find one within the very insular and closed-ranked mainstream – not only because it is unfashionable to be too political in poetry today, as in anything, including politics! – but also because stylistically my poetry comes from a completely different tradition to that currently dominant in British poetry. Whereas most fashionable contemporary poetry seems to be descended from lines drawn from the Irish school of the 60s onwards, certain post-confessional American influences, English and Welsh parochialism of the likes of Norman Nicholson, R S Thomas, Betjeman and Larkin, and Georgianism, I trace my own stylistic links back through the political poetry of the Auden/Spender school, through Eliotian Modernism, the Anglo-Welsh ‘khaki poetry’ of Alun Lewis, Wilfred Owen, Isaac Rosenberg et al, the ‘shadow Georgians’ of the likes of Harold Monro and WH Davies, through to the Rhymers’ Club of John Davidson et al, Thomas Hardy, and back to the Romantics, then Blake of course, possibly as far as Milton and the political pamphleteers Gerrard Winstanley and John Lilburne. Some of my influences are Anglo-Scot – Davidson, Monro – and though I am third generation English, I count myself Anglo-Scot in terms of ancestry and bloodline, both my father’s
and mother’s sides of the family being Scottish about three generations back; Morrison is a clan name of course (I’m apparently entitled to wear the kilt), and my ancestors along that line were mostly probably Scottish crofters (the Morrisons were also ancient Bards to the MacLeod clan).

So mine is a kind of cross-over poetic heritage, it just so happens it’s not particularly fashionable at the current time but I suspect it may be again in the future. I believe poetry needs to tackle the Big themes – for a Big Society!? – such as society, politics, poverty, class struggle (because we are now blatantly engaged in a legislative Class War again in this country), mental illness, history, love, fate, death. Is it any wonder the general public have gone off poetry for so long now when the average poem in a national supplement is often some self-indulgent, quotidian meditation on the tedium of the literary middle-class lifestyle, replete very often with rather gauche sexual innuendo, fruit metaphors, dull and insipid navel-gazing that only the poets and their friends seem to like but not many other people. It’s so ironic since only a brief scan through the poetry being published by legion smaller presses in this country shows just how rich, diverse and relevant much contemporary poetry actually is, it’s just that it only seems to be the more diluted and non-committal prosaic and knowingly ironic writing on the whole that seems to be popular with the bigger imprints and media outlets. It’s deeply puzzling, although I think further into my own generation, things are starting to change a bit, poets are starting to question the establishment more. I set up the Recusant precisely to champion distinctive poetry and writing that stands out from and at a tilt to the madding crowd of the mainstream (the title basically means ‘to not conform to something one doesn’t like or agree with’, derived from the old term for secretly practising Catholics during early Protestantism).

I knew I was always going to be taking a difficult path with my own work, chiefly because I wasn’t prepared to water it down and compromise its purpose to fit with current fashions. Fortunately early on I became involved with a shadow poetry network which sought to promote and publish unconventional and distinctive writing, often with a left-wing undercurrent, and my earliest collections came out as limited edition pamphlets through Simon Jenner’s Waterloo and Barry Tebb’s radical Sixties Press. It was a slow process but worth it, since I feel by and large I’ve kept the integrity of my work against all the odds and against all the superficial temptations of conforming to secure quick recognition. For me, to write what one’s heart is not in is utterly pointless, better not be a poet at all. Too many poets today seem to unquestioningly subordinate their true voices to the whims of bigger publishers and prize panels, I suppose the proverbial Trojan Horse approach – but nine times out of ten, once the Horse gets through into the sunny uplands of literary celebrity, it has long since emptied and ends up ringing hollow.

I was lucky to get offered a full collection at 32, relatively young these days, especially for poets who don’t go through the smoother channels of UEA-style courses and the like. This was a chance small press newly emerging, Paula Brown Publishing (who sadly since went bankrupt), who were at that early stage of taking risks, and produced a very generously sized book for me, which was a tacit early Collected Poems really, since it included most of my entire oeuvre up to that date (1991-2006). Amazingly, The Mansion Gardens broke through some of the establishment barriers, garnering significant critical praise in journals, most notably from William Oxley in The London Magazine of Sebastian Barker. Almost simultaneously, through the years, my play for voices Picaresque had been performed and given significant notices. 2009 saw my second full collection published by Waterloo Press, which garnered even better reviews in the likes of Stride, Tears in the Fence, The Journal and other magazines and was shortlisted for Purple Patch Best Collection 2009.

Keir Hardie Street (officially published in March 2010), has also since received much critical praise; an original shorter draft of it appeared at the back of The Mansion Gardens, but Andy Croft of Smokestack Books offered to republish it in its new extended form alongside another reworked older published long poem, ‘Clocking-in for the Witching Hour’ (originally Sixties Press, 2004). Smokestack felt like the natural home for these, my two most political long poems to date: it is precisely presses such as Smokestack, which presents itself as a champion of radical British poetry, that helps poets such as myself find a platform in an otherwise very streamlined and media-packaged poetry scene.
I am now working on my next volume of smaller poems, again for Waterloo Press, which will come out early next year under the title *Blaze a Vanishing*. Beyond that, I anticipate more long poems, since it’s my favourite medium; I am currently working on one addressing the current ‘Big Society’, working title *Ripe*, an excerpt from which will be included in *Emergency Verse* – it will probably be seen in some ways as an echo – though entirely unconscious, since I’ve only just read it – of Michael Horovitz’s *A New Wasteland*, which is a masterly work, a veritable Bible of the Left, and which I will be excerpting too with the poet’s permission in *Emergency Verse*. I also have a series of poems written specifically around my time as Poet-in-Residence at Mill View Psychiatric Hospital, *Captive Dragons*, which will probably appear next year at some point in pamphlet form, though I don’t know with which imprint as yet. I am also planning on finishing a new play for voices, *The Heaven Thieves*, about an early 20th century social altruist who owns a charity which clothes and feeds the local poor but who can’t stand the sound of people eating, which I hope will prove to be a more Swiftian, satirical and philosophical dissection of the socialist mentality than anything I’ve written before. It is basically written as a blank verse-play in the template of Eliot’s *The Cocktail Party*. **Prakash: Would Alan Morrison be Alan Morrison without the poetry?** It’s almost impossible to answer this, since poetry, expressing myself through words and using words to orchestrate their own kind of music, feels like an inseparable part of my identity; poetry is my lifeblood, it’s what I go to sleep thinking about, what I wake up thinking about. It’s probably not healthy to be like that, but it seems I have no choice. It’s how I’ve been made and how the sum of my experiences in life so far seem to have shaped me. There’s never been any other choice for me but to doggedly pursue my poetry no matter what life throws at me. But I think there is another Alan Morrison hidden away deep inside me, the original article, ironically a natural clown, an amalgam of highly sensitive but tigerish energies (I call myself ‘the nervous tiger’), and though I say it myself (many others do too), a burdensomely large heart, too large to bear sometimes. Ever since I can remember I’ve found it very easy to love, to feel sorry for or pity others, which I suppose is where my heart-on-sleeve socialism spawns from; I’d say I’ve always been a little morbidly addicted to sadness, ever since I was a child. I think sometimes that small bewildered but irrepressibly expressive Alan tries to climb out from the rather more gloomy, serious-minded, angry ranter that’s clouded him since, who is prone to reclusion and obsessiveness (though the latter is a symptom of the obsessional neurosis I’ve suffered from since childhood, a less-exposed nuance of OCD, which is known as Pure-O; one of my earliest long poems, *Feed a Cold, Starve a Fever*, is all about my formative years and the development of this incapacitating egodystonic illness which has significantly affected my life). I would say though that the Alan Morrison I have become would not be the same one without the poetry; and without the poetry, I’m not sure Alan Morrison would be here today at all – it’s been my true lifeline. **Prakash: What are the things in your life that make you who you are?** Impossible to say without trying to be entirely self-objective, which is probably impossible. Being an obsessional and somewhat melodramatic thinker, I always say, unlike Alice, I try to think three possible things before breakfast. I suppose the poetry of course makes me the poet, though I feel it is up to others to use that term, not oneself, since it is a high title to claim for anyone; even if true poets actually self-anoint and don’t rely on panels to tell them they’re poets. I live entombed in books, which probably makes me quite bookish, though I don’t see myself that way. I’m as passionate about music – of many kinds – as I am about literature; I think most poets are frustrated song-writers – that is, until they discover the full musical power of words. But writing poetry is certainly its own kind of composition. Being the archetypal Cancerian, I am very shy, hyper-sensitive, and extremely homebirdish; I like to be among familiar things, I like peace and quiet, space to think and write. I am intrinsically monogamous, and naturally treat any relationship as if it is the original article, ironically a natural clown, an amalgam of highly sensitive but tigerish energies (I call myself ‘the nervous tiger’), and though I say it myself (many others do too), a burdensomely large heart, too large to bear sometimes. Ever since I can remember I’ve found it very easy to love, to feel sorry for or pity others, which I suppose is where my heart-on-sleeve socialism spawns from; I’d say I’ve always been a little morbidly addicted to sadness, ever since I was a child. Being an obsessional and somewhat melodramatic thinker, I always say, unlike Alice, I try to think three possible things before breakfast. I suppose the poetry of course makes me the poet, though I feel it is up to others to use that term, not oneself, since it is a high title to claim for anyone; even if true poets actually self-anoint and don’t rely on panels to tell them they’re poets. I live entombed in books, which probably makes me quite bookish, though I don’t see myself that way. I’m as passionate about music – of many kinds – as I am about literature; I think most poets are frustrated song-writers – that is, until they discover the full musical power of words. But writing poetry is certainly its own kind of composition. Being the archetypal Cancerian, I am very shy, hyper-sensitive, and extremely homebirdish; I like to be among familiar things, I like peace and quiet, space to think and write. I am intrinsically monogamous, and naturally treat any relationship as if it is the last (though have been proved wrong on two previous occasions). I am very private, quite sceptical of people, and, I hate to say, occasionally misanthropic (like most socialists at heart, since we not only want society to change, we want people to change too). But if ever anyone needs my help, no matter who it is, the door will be open to them; I would never turn anyone away who needed my help. I like to think it’s that old parable of the Good Samaritan which I’ve never been able to shake off from my school days when we were very much weaned on such things, having been to a Catholic primary school called English Martyrs in Worthing, my years at which left a lasting impression on my mind and my views on the world. I am a non-practising, lapsed Catholic; but I am a believer, at least in the survival of the human personality beyond the death of the body, but my Christian beliefs are more in line with Baptist ideas than any other denomination (particularly the belief in universal salvation of the likes of Pelagius – I cannot stand Calvinism or extreme evangelicalism, and see Capitalism very much as a material-based Calvinism. Max Weber’s *Protestant Work Ethic and the Spirit of Capitalism* being a key text in this, I have originally gone to University
in Reading to study Sociology, though I later switched to Ancient History, and found how little had changed). I’m certainly a dreamer, a Romantic in the idealistic sense, an egalitarian, a believer in true meritocracy of ability but emphatically not in any material sense – I believe in universal material equality; I’m distinctly un-materialistic, my only real possessions being books and music – but I do like comfortable surroundings and a bit of ornamental clutter too; by nature I’m quite conservative funnily enough, but socially and politically, quite the other thing altogether, and it was the direct experience of poverty that converted me to the light of socialism. I’m a nostalgist to my core: most of my tastes are historical, in literature, art, music, television, film, in pretty much anything. I think we have to delve deep into the past in order to trace the future. Mentally and ideologically, I’m a refugee of the Seventies really; I’ve always felt I was born either way after or way before my time, and could easily see myself at the turn of the 20th century as, well, basically, exactly the person I am today, except fitting in a little better. I’ve no interest in money, never have had, except as a means to secure more freedom and time for my writing pursuits – time is definitely the most precious commodity in life. Ultimately, I’m one of life’s volunteers, I need to be self-autonomous, I can’t be slotted into routines, I’m uninterested in material rewards, I simply need space and time and love in which to flourish and create. Rather a pity, therefore, that I live in such an oppositely motivated society. But in terms of what in my life makes me who I am, well, memories do really, memories of injustices, poverty, struggle, alienation, not fitting in, absences – I was often absent from school as a boy, partly due to my illness – and ‘shadows’ and ‘ghosts’ have always played a part in my consciousness as sort of self-motifs; I seek to make a mark through the shadow of my words if you like, impressed myself through my writing, the anonymity of being a writer has always appealed to me, the ability to engage publicly through publishing without having to prostitute one’s own personality. I like to keep myself as private as possible. There’s always been a tension here of course: wanting to both be in the shade and out in the sun at the same time. Like another Cancerian, George Bernard Shaw, life for me is indeed a matter of ‘so little time, so much to do’. And there really is so much to do.

**First as tragedy, then as farce** *(2010-08-25 08:00)*

An [1]RSA animate video presenting a recent lecture by iconclastic Slovenian philosopher [2]Slavoj Žižek. It’s an accessible introduction to the area he’s worked in recently (particularly in [3]first as tragedy, then as farce) for those unfamiliar with Žižek and an entertaining distillation for those who know his writings well. The only downside to the animated video is the lack of Žižek’s customary and utterly hypnotic hand gestures.

**There is no alternative?** *(2010-08-26 08:00)*

If the new government is to be believed, we stand on the verge of unparalleled fiscal catastrophe. We suffer from an unprecedented ‘debt crisis’ of a scale more egregious than the government knew and with consequences more severe than it could have feared. It demands bold action and tough choices which will effect “our whole way of life”.

236
Therefore they intend to carry out the necessary actions in “a way that strengthens and unites the country” because “we are all in this together”.

In spite of the quasi-Churchillian rhetoric in which this plea for unity is couched, it’s not exactly appealing stuff. However our new Prime Minister recently offered an intellectual case for austerity presented with a degree of clarity which was heretofore lacking. In short there are three reasons why our new political elite feel compelled to nobly and reluctantly take a scythe to our allegedly out of control public sector:

Firstly David Cameron claims that in and of itself increases in public sector borrowing are bad. As he puts it "the more it has to repay, the more lenders worry about getting their money back; the more lenders start to worry, the less confidence there is in our economy."

Secondly, investors will withdraw their money from Britain unless "they're confident the economy is being run properly" and the economy will suffer as a result. Thirdly, any higher interest rates that will result from failure to action will hurt “every family and business in the land” through the higher mortgages and lower employment they entail.

In essence these justification can be boiled down to two core claims: unless the deficit is dramatically cut the markets will punish the British economy (perhaps losing our AAA credit rating in the process) and the brunt of this impact will borne by ordinary people across the country. As an apparent retort to those who might blame this apparently dire situation on the bank bailouts, Cameron argues that this crisis predates the current recession and casts a long shadow over Labour’s entire time in office. Could there be a more damning indictment of the past government and a more pressing case for urgent action? If we accept the claims made by the government then their case does indeed look insurmountable. There’s just a little problem: most of them aren’t true.

Underlying these arguments is an assumption about market rationality. It is assumed that unless governments demonstrate a willingness to engage in ‘fiscal reform’ then markets will foresee a never ending era of profligate spending and, as Cameron argues, lose confidence in the economy and cease lending. Yet Spain recently implemented drastic austerity measures with cuts of €15bn and a government pledge to bring the Spanish deficit down 11.2 % of GDP to 3 % of GDP by 2013. This involved freezing pensions and significant cuts to public sector wages. However as the prospect of a general strike looms, the country’s debt has been downgraded by rating agencies concerned that the these cuts "will materially reduce the rate of growth of the Spanish economy over the medium term". Perhaps this suggests that the markets have more sense than politicians are ascribing to them?

The economist Paul Krugman argues that "slashing spending while the economy is still deeply depressed" will be costly because it will depress the economy further and ineffective because this will in turn depress income through taxation. In practice advocates of austerity are arguing that countries must cut “not because the markets are currently demanding it, not because it will make any noticeable difference to their long-run fiscal prospects, but because we think that the markets might demand it (even though they shouldn’t) sometime in the future.”

The suffering that austerity brings will worsen our fiscal position rather than strengthen it and yet it is claimed that unless we embrace austerity the markets will punish us for our fiscal irresponsibility. At least in part this may be explained by an irrational veneration of markets as angry gods to be appeased (rather an as aggregates of financial actors). Likewise it can in part be explained by what the economist Joseph Stiglitz has labelled ‘deficit fetishism’: the tendency to focus on one side of the balance sheet without looking at the economic impact of deficit spending. It
may be logical for individuals to pay off debts as soon as possible but these

In spite of their deliberate obscurity the government’s plans for austerity are beginning to take shape. All 2.5 million claimants of incapacity benefit will have their work capability reassessed. Penalties for benefit claimants who don’t accept jobs will be more stringently enforced while schemes such as the Future Jobs Fund are likely to be scrapped.

The business secretary Vince Cable has revived plans to privatize the Royal Mail. The new government are pressing ahead with plans to privatize the Channel Tunnel rail link. The bank involved in many of the key privatizations of the 1980s and with close links to the conservative party (NM Rothschild) has pitched for a privatization of the road network which would raise £100 billion. This furthers the impression which emerged last year that behind the scenes the conservatives were preparing for a large scale program of privatization. Similarly outsourcing companies are preparing for a unprecedented boom in their business as the new government is expected to dramatically extend the role of private companies in backend public sector services while education reforms amount to the coming privatization of state education.

What’s going unremarked upon is the scope of the radical right-wing agenda the government intends to push through with the Liberal Democrats an eager party to this spirited attack upon the public sector. This should be no surprise given the ascendancy within the party of the Orange Book liberals (Clegg, Cable and Laws) who enthusiastically embrace the dogma of the free-market. Far from the financial crisis heralding the death of neo-liberalism it actually seems to have led to its end game: one last attempt to ‘roll back the state’ and institute the mythical free-market.

University of Warwick CSWG Call for papers (2010-08-27 08:00)

The Centre for the Study of Women and Gender at the University of Warwick would like to invite postgraduate students from any institution working in the field to present at the Graduate Student Seminar Series for the coming academic year 2010/2011. We welcome submissions from a number of disciplines on any gender related topic. This year, as well as welcoming conventional papers, we also encourage innovative and creative methods of presentation (such as the use of visual or more interactive materials, for example).

The annual Graduate Seminar Series provides a friendly, informal setting for graduate students to give presentations and exchange ideas relating to women and gender studies. Seminars aim to be interactive, and at each meeting students present for twenty minutes each on a topic of their choice, followed by a question-answer session and general discussion. Attendance is open to everyone, both faculty members and students, within and outside the university. Seminars will take place on two or three Wednesdays per term at 5pm (dates TBC).
The goals of the seminar series:

- To provide a safe and comfortable venue for students to present their research, to fine-tune conference presentations/possible publications or to simply get used to the idea of speaking in front of a group.

- To encourage everyone to get together informally to learn about what the student community in the UK are working on in relation to gender/feminist studies.

This centre is interdisciplinary and draws its membership from across the university. It aims to provide a focus for research and teaching on women and gender in the university and to facilitate the development of interdisciplinary research in the area of women's and gender studies. Women's and gender studies has been established for around twenty years at Warwick; the Centre itself was established in 1993 and in the summer of 2002 it became a research centre based in the [1]Department of Sociology. For more information about the Centre please visit: [2]http://www2.warwick.ac.uk/fac/soc/sociology/gender/

Abstracts should be:

- Maximum 200 words

- Submitted along with a brief biography of the author; including their institution and department, and research interests.

- Submitted by September 3rd 2010

- Email abstracts to Katy Pilcher: [3]K.E.M.Pilcher@warwick.ac.uk

Roger Scrutton on the Uses of Pessimism (2010-08-28 10:00)

Support an Interesting Study (2010-08-29 08:00)

Dear Colleagues,

My name is Minu Mathews and I am a postgraduate researcher at the Institute of Psychological Sciences at the University of Leeds.

I am writing to ask if you would be interested in taking part in a new and exciting cross-cultural study that looks into the effect of work on employee well-being and health behaviour. Specifically, the study explores the demands you experience in your everyday work-life and the resources you adopt when coping with them. If you are interested in taking part and you are currently working in the UK, please contact the address below for more information.

The initial questionnaire takes 20 minutes to complete and the second phase of the study (which is optional, but I hope you will enrol in) involves the completion of brief daily diaries.

The only criterion to take part in this study is that you have to be working in the UK. If you know of anyone else who might be interested, please do pass this on to them.

Do not hesitate to contact me at M.S.Mathews08@leeds.ac.uk if you have any questions at all.

Kind regards,

Minu

This study has obtained ethical approval from the Institute of Psychological Sciences, University of Leeds (10007-11).

Dr. Richard Moreno (2010-09-02 03:21:04)
Hello you all, I learned about you guys from Mr. David Barsomeon here in Denver, Colorado. I majored sociology undergraduate experience. I really like the science of sociology. It’s not perfect, but better than most other social sciences. I am retired and 100 % disabled veteran. I’d sure like to know more about your soc. group you are forming up. Please send me info the group: Dr. Richard Moreno, 1534 So. Cape St. Lakewood, CO. 80232. I’ll send you resume and maybe I could fit in some place the
Reflections on a year spent studying asexuality (2010-08-30 08:00)

I was a little confused when I first encountered the term asexual. The person who used the term defined as asexual and yet, living with him at the time, I knew he had sex. Or at the very least that he sometimes brought people home who then spent the night. In common with most people, my initial sense of the term was some half-remembered throwback from secondary school Biology. So it was a little confusing to me that he apparently slept with people. It was the questions raised by this situation that fostered my initial interest in asexuality and, as I got answers, I found myself confronted by more questions which only amplified my newfound curiosity about the subject. By the start of 2009 I had resolved to satisfy my curiosity (in the process putting some of my training in social research to good use) and in the somewhat ephemeral space of time precariously lodged between my personal life and my PhD, I began a research project exploring asexuality and what it meant to asexual individuals.

As well as the asexual individuals I already knew, I found participants through the Asexuality Visibility and Education Network (AVEN) and the Asexuality Live Journal. The front page of the AVEN website defines an asexual as ‘someone who does not experience sexual attraction’ and due to the popularity of the site this definition has been highly influential. However as I soon found out, it was not exhaustive. Behind this ‘umbrella term’ lay a wide variety of people who related in a whole host of different ways to sex and romance. Some asexuals are indifferent to sex and, in the context of a relationship, are happy to have it because they know it’s important to their partners. Others find the prospect abhorrent and are utterly averse to the prospect of sex (although I heard many sad tales of people subjecting themselves to an experience they hated because at that point they didn’t feel it was ok to say they didn’t want to). Some asexuals are ardent romantics and want nothing more than to find someone special to share their life with. Others prefer to find companionship through friends and family, with no interest in finding a partner. What unites them is a common experience of feeling alienated from a society which,
particularly for young people, places a great burden on sexual experience as a sign of self exploration and growing up. For a lot of asexuals this left them feeling "broken" (this was a common phrase used) and abnormal. At least it did until they discovered the asexuality community and for the first time began to feel that their orientation was ok.

Overall the research has been an enormously positive experience for me, at least apart from my partner's initial fears that the whole thing was a convoluted preliminary to coming out as asexual myself (apparently this used to happen with some frequency in the early days of modern sexuality studies). The idea that romantic attraction and sexual attraction are distinct (though for many people related) things has clarified a lot in my personal life. It's also helped me understand the confusing encounters which too often plagued my adolescence. I'm much more comfortable with the fact that sex is something which only really makes sense for me within the context of a committed relationship (whereas I'd previously felt shy at expressing this thought around some of my more libertine friends). I've also been left with the strong conviction that the recognition of asexuality is not just important for asexuals but for everyone else as well.

For instance consider the impact that the struggle for gay rights has had on society and culture more widely. At its worst the increased awareness and visibility has produced phenomena such as the mock-lesbian Nuts-style porn shoots and the meterosexual cliché. At best though it has worked to make the world a safer and more humane place in which to live: more tolerant of sexual diversity, more aware of sexual choice and more open to sexual difference.

So why did the fight for gay liberation have this impact? At least in part it was down to the ideas which it established in the popular consciousness. For instance it wasn't until people started calling themselves homosexual that it made sense for other people to call themselves heterosexual. Up until that point, it had simply been taken for granted and, as such, escaped scrutiny either by individuals or by society more widely. As adjectives both homosexual and heterosexual were coined in 1892, in an English translation of work by the early sexologist Krafft-Ebing. However, as a noun heterosexual didn't enter common usage until the 1960s.

Similarly I think that a wider recognition of asexuality would inevitably give rise to a much deeper understanding of what it is to be sexual. Despite the pervasiveness with which the importance of sex is affirmed within our culture, we're often profoundly inarticulate about the role that sex plays in our lives and why it is important to us. At least in terms of the younger generation, we're far more likely to discuss sex (good sex, bad sex, weird sex) then we are the place we presume it ought to occupy in our lives. We're so prone to seeing sexuality as a marker of personal fulfilment that we rarely stop and ask ourselves where we, as individuals, stand in relation to it and what importance it genuinely holds in our lives. Crucially some of us don't feel particularly free to say that, while we may want sex, it holds no great importance in our lives (at least not relative to other things like friends, romance and love).

Nowadays most people know someone from the LGBT community and, in many cases, this acquaintance forces them (at least fleetingly) to think about their own sexuality and what it means to them. What would happen if most people knew someone from the asexual community? I think, or at least hope, it would lead the rest of us to think more deeply about sex and in the process clarify where it stands for us in relation to romance and love. In short it would help us all to be a bit clearer about what matters to us and why. Perhaps then we'd all see that there's more to life than sex and, more to the point, we'd be a lot clearer about what that 'more' is.

Differentiating top grades at A-level (2010-08-31 11:00)

Latest [1]figures show that as large as one in five A-levels taken by pupils at private schools achieved the top A* grade, compared with the national average of one in 10. This year’s shortage of university places together with the contrasting figures between A-level results between private and state schools have heightened the concern that most privileged pupils will continue to dominate university entry.

In differentiating between top grade achieving pupils, some universities (Cambridge, Imperial, UCL and Warwick) – have adopted the A* as part of their offers this year. Whereas a number of schools have introduced the new Cambridge Pre-U qualifications, which were either taken alone, or alongside A-levels.

Michael Gove, education secretary, plans a major shakeup of A-levels and has indicated scrapping AS-levels and introducing more exams at the end of A-level courses to "revive the art of deep thought".

Interview with David Barsamian (2010-09-01 08:00)

David Barsamian is an American radio broadcaster, writer and director of Alternative Radio, a weekly political program broadcast on 125 radio stations in a variety of countries. He has written widely on American foreign policy,
corporate control, the media and propaganda.

Mark: Almost two years after a once in a lifetime financial crisis, finance capital seems more powerful than ever, as governments across Europe impose draconian cuts under the guise of austerity and fiscal responsibility. Why has the left been unable to articulate and fight for an alternative at a time of widespread discontent?

The question assumes that there is an organized and substantial Left. I find that problematic. The Right on the other hand controls state power and its representatives craft legislation to serve the needs of its corporate sponsors. The Right is also heavily funded by foundations. The discontent is largely unfocused although generally directed toward the banks and ruling elites. As unions have been greatly weakened, most dramatically in the United States, organized resistance, in the form of strikes, boycotts, workplace occupations, is episodic and is not sustained. The financial crisis has been used by corporations to make further cuts in jobs and reduce benefits. Workers live with the fear of unemployment. There is full scale class war going on to roll back many social gains particularly in Europe. The protests in Greece seem to have subsided. As the crisis continues there is always the possibility that workers will rise up. At the moment such revolts are sporadic.

Mark: How has American foreign policy changed under Obama’s Whitehouse? In spite of the assumed promise of a radical break with the Bush administration it seems, at least on the surface, as if many of the changes have been matter of diplomatic tactics rather than strategic aims.

Hardly at all. It is simply old wine in new bottles. At home Obama is a devout capitalist. Abroad he is a dedicated imperialist and believes the U.S. must "lead" the world. Obama said, "Now make no mistake, the nation will maintain our military dominance. We will have the strongest armed forces in the history of the world." Recall he presented himself as the peace candidate during his presidential campaign. He presides over a massive military budget and an empire of bases straddling the globe. He has expanded the war in Afghanistan, kept troops in Iraq, bombs Pakistan, Somalia and Yemen, and refuses to bring to justice Americans who are guilty of war crimes. In West Asia, it is more of the same. He continues to give Israel a blank check for its colonial policies while providing a full check to that country in the billions of dollars. He gives Israel diplomatic cover in the UN and other international fora. He props up feudal regimes and monarchies such as Egypt and Saudi Arabia. And he threatens Iran with "all options are on the table." The major change from Bush has been one of rhetoric and style. Otherwise it is business as usual..

Mark: How much influence does the media hold over contemporary politics? How should we go about trying to resist this influence? Could you say a little about the initiatives you are involved with towards this end? I'm thinking of things like Alternative Radio and Z Mag.

I began Alternative Radio (www.alternativeradio.org) in 1986 because I was fed up with corporate media. I think it is important to go beyond a critique to offer positive solutions. This is important not just politically but also
for psychological reasons. Simply complaining gets old and boring very fast. The media landscape is rapidly changing and progressives must position themselves to take advantage. Digital editing has made the production of films and radio documentaries much easier. Influence is difficult to measure. Lack of historical knowledge and political illiteracy in the U.S. is very high. It's our job to change that and provide alternatives.

Mark: Many readers of the website will be familiar with your interviews with Noam Chomsky. What has it been like working with him? Are we likely to see less public intellectuals of Chomsky's calibre emerging from universities in the future?

Chomsky is a rare figure. Working with him has been a joy and education. He practices the solidarity he preaches. He's exceptionally witty too. I don't think universities have or should have any special monopoly over public intellectuals. They can come from other parts of society.

Mark: A lot of the readers of the website are PhD students and early career researchers. How can this next generation of academics best aid ongoing social and political struggles?

Education and agitation. Find kindred spirits. Be humble. And always keep your sense of humor.

The knock-on effect of an over-subscribed Higher Education system (2010-09-02 08:00)

The record demand for university places in 2010 has had an immense impact not just on Higher Education, but also Further Education, with some A-level students opting to go back to college to take further FE courses (as discussed in this [1]article). This prospect in itself has a knock-on effect on recent school leavers (GCSE) who now go head-to-head for college places with their A-level counterparts.

Another knock-on effect has seen newer universities (for example, Greenwich, UEL etc) attract a different kind of student. In the past, these universities would typically attract students from surrounding areas, mature students or those with lower A-level grades. 2010 has seen a marked shift where students are clamouring for university places at universities they might not initially have thought of attending.

In the article [2]Feeling the Squeeze, Greenwich university’s head of admissions, Bev Woodhams, acknowledges the reality of the changing student profile at the university, "things are bound to look different this year. It’s a smaller pond, with more fish".

Only time will tell what the impact of the 2010 race for university places will have on the overall landscape of education as a whole.

A 'dead cert' for a career in politics (2010-09-03 08:00)

It appears that if you want a career in politics, a 'sure-fire' way to achieve this is to study Politics, Philosophy and Economics (PPE) at the University of Oxford, as documented in this [1]article.

In fact six members of the current cabinet, including the prime minister, foreign secretary and chief secretary to the treasury, are Oxford PPE graduates. Across the major party lines, Oxford PPE is the course of choice. In the House of Commons there are believed to be as many as 35 Oxford PPE-ists, compared with 20 Old Etonians.

Unsurprisingly, many Oxbridge graduates occupy a dominant place in the nation's elite circle, enjoying a lucrative and deterministic path.

Nonetheless, not all PPE graduates are happy with their subject choice, The Observer's Nick Cohen, an Oxford PPE graduate, says he now regrets switching to this "silly degree" from history while an undergraduate:

"It's a degree for generalists, and British society has always loved generalists," he says. "But I think we'd certainly benefit from more scientists and engineers at the top.

"It's far easier to condemn Eton or the failure of the comprehensive system. But I went to Oxford, Christopher Hitchens went to Oxford, Ian Hislop went to Oxford - who are the people who are going to eviscerate the phenomenon?"

Call for Polemics (2010-09-04 08:00)

Academic publishing can often be a frustratingly slow affair - particularly for those attempting to engage with a social world which seems to change at an ever increasing rate. Therefore we are looking for contributions of polemics: shorter and sociologically informed commentaries upon current events addressed to the middle ground between journalistic political commentary and academic papers. Contributions should be submitted [1]here.

The Illusions of Democracy in a Third World Country (2010-09-06 08:00)

In a democracy you only have to remove the fig-leaf called the “vote” and you see the naked interests of power shamelessly parading before your eyes. It is this fig-leaf of democracy that separates India from Pakistan. In Pakistan the thieves decide the government and in fact they are the government. In India we elect them. Oh, for fig leaves!

Democracy makes sense only when the poor, the deprived and the homeless have an opportunity to come out of their poverty, deprivation and homelessness. That’s not what democracy in India is all about. It’s about crushing individual aspirations, abandoning common people to criminally inclined employers who treat employees like their possessions, robbing the young of emotional joys through a vicious system of body control, living in a system that brings out the beast in a man – that turns men into cold-blooded rapists and murderers, destroying the villages in a way that leaves the peasant weak and helpless to encounter the onslaught of globalization, putting decent people in jails because they know how to protest and they do it, giving people on the streets no chance to defend themselves except through this expensive piece of fiction called the ‘vote’ – this does not constitute a ‘real’ democracy in any sense of the term.

The democracy that we have and celebrate through the ‘vote’ hardly changes the reality on the ground. The Congress led-UPA is a liberal fascist coalition of parties and the Prime Minister Manmohan Singh who is the darling of corporate India will one day have a chapter in his autobiography titled, “How to pimp your country for peanuts.” With the way the UPA conducted itself on the nuclear deal I’m convinced that this government is a pawn of the World Bank and the IMF not to mention the government of the United States. I have no respect for Manmohan Singh either as a Prime Minister or as an individual and I’m certain that the so-called “Gandhi” family that abused the name of the Mahatma is responsible in a big way for India’s poverty and backwardness.

The Kerala-West Bengal brand of Marxism is a sheer mockery of Marx and socialism. In India Marx should be spelt as “marks” and not Marx because we understand money better than we understand a human being. Those who claim to espouse Marxism and those who have made it a full-time job to be opposed to it – both are hypocrites. The Left in India is an upper class and upper caste mafia that keeps trying to fit reality into theory in which they are
pretty good by the way. It should be the other way round in fact.

It is impossible to forget the role of the Indian media in this charade of a democracy. The news channels and newspapers are owned by rich and powerful people. No one expects the editors they choose to be George Orwells or Robert Fisks. Barring a few journalists with commitment to social and political change, the media is by and large the bastard child of corporate India.

Writing is an art form and a writer or a performer is a creative artist. How can you sell your soul to the devil and still be an artist! These are morally irreconcilable positions as far as I'm concerned. Yet we see the entire media reproducing untruths upon untruths. How can you lie so much and not be affected in your personal life! James Baldwin is right: “People pay for what they do, and still more for what they have allowed themselves to become. And they pay for it very simply; by the lives they lead.” The life they lead is a punishment in itself.

I don't think those editors of newspapers and news channels that do everything possible to scuttle the voices of individuals and serve their corporate bosses can ever have a happy personal life. All the money and power in the world will not give a man either love or peace of mind. Fortunately they come from within because that is in the justice of nature and not of man. Like Shakespeare’s Macbeth the rich and their cronies have murdered sleep because their crimes will not let them rest for a single moment. They’re condemned to live lonely and loveless lives. With the spirit destroyed by the cancer of power how can the body be alive!

Stating an alternative is as important as stating the problem. Some form of communism is essential to this nation is what I've always maintained. We're too poor and too dangerously divided with a small group of people having access to the wealth and resources of the nation while the majority is actually a ‘minority’ in this nation. That must change. We don't need criminal employers who exploit their employees. We don't need hotels. Turn them into hospitals. We need public transport. Not private vehicles that have turned the roads of the cities into a veritable nightmare. We don’t need westernization. We need to be ourselves. We need originality and not just mimicking lifestyles alien to our culture and history. We need local languages and local ways of doing things that ensure that people are not fighting a war within themselves like we’re doing at this point in time. We’ve to give dignity to every kind of work and person and end colonization in all its forms.

We need to empower women and put them in positions of responsibility at every level of governance which includes the police and the army and the courts. We can expect a more nonviolent society than the one we have. Politics should be effectively separated from power. In other words a politician is a servant of the people. Not their master. A sincere person would gladly take the position because it means service and not stealing from the masses. The crooks will look for other jobs in the mean time.

People have a right to live a life the way they think is good for them – which only means every other right is guaranteed to the ordinary person except the ‘right to exploitation’ which is not a right but a sickness of the body and soul. Development will be real because there won’t be prostitution on the streets. Society will be healthy as a whole and so will the social animal be likewise. “You may say that I’m a dreamer/But I’m not the only one” (John Lennon, Imagine).
Fund our Future – Building for the 10th November (2010-09-06 14:32)

UCU has written to all branches this week asking them to organise joint meetings with their campus Students’ Unions to make arrangements for building a massive turnout for 10 November’s national demonstration against education cuts. Good progress has been made by the organisers on arrangements for the march and rally, as well as for an after-rally social event. We will be enclosing full details of these with the official launch of the 'Road to the demonstration' campaign on 16 September. In the meantime, contact your branch to ask what is being arranged and how you can help. Watch this space for more. You can read more about Fund our Future [1]here.

From UCU Campaigns Update E-mail

There will a Sociological Imagination meet up at the demo in London. More details will be posted nearer the time.

A working bibliography of public sociology (2010-09-08 08:00)

This bibliography of public sociology will be available [1]here as an ongoing resource.
FROM THE ASA

The 1988 ASA Presidential Address by Herbert J Gans

The 2004 ASA Presidential Address by M Burawoy

BOOKS on Public Sociology

First published before 'public sociology' popularized and therefore not written with Burawoy's conceptualization in mind. This book is a critique of the writing style of professional sociologists (under the scientific aura) which made it inaccessible to the public reader. Ironically, the book itself was criticized by its own extensive use of postmodern terminology.

About everything commendable about the idea of Burawoy

“Producing Public Sociology: Contributions from Berkeley Faculty”

Our Most Popular Posts of 2013 The Sociological Imagination (2013-12-25 08:03:48)

[...] Getting a Ph.D. will turn you into an emotional trainwreck, not a professor […]

Suggest links, resources and features (2010-09-09 08:00)

We are trying to build a collection of 1]general links, [2]campaign links and [3]resources. However the internet is a rather large place so if you have any suggestions at all please do get in [4]contact. Likewise we welcome any suggestions about new features which the Sociological Imagination should incorporate. What else should we include? Again please get in touch if you have any ideas.
A reminder about our two Calls for Papers (2010-09-10 08:00)

Social Research in an Age of Austerity

A new coalition government pledges an unparalleled age of fiscal austerity and a new universities minister promises radical 'reform' of higher education: what does the future hold for the British university in an age of fiscal austerity?

What is this political and economic climate likely to mean for social research? How can social researchers adapt to this climate? How can social research assist in understanding and resisting the imposition of austerity?

Articles and polemics are invited which relate to these themes. See [1]here for submission guidelines.

Contributions also welcome on themes relating to socially and/or politically engaged social research!

Public Scholarship and Private Commitment

Why do you care about your research? What is it that makes you want to spend your time exploring this area of the social world? What does it mean for you to gain understanding of these aspects of social life? Our answers to these questions often encompass the biographical, ethical and political. However these aspects of our involvements are often relegated to the background, as the factors seen as relevant to scholarship are too frequently construed in narrowly intellectualising ways.

The Social Imagination is intended as a space in which private commitments can be reconciled with public scholarship. Therefore we are soliciting contributions ([2]articles, polemics or research profiles) which explain how the two are linked and thus address the aforementioned questions. For submission details see [3]here.
Don’t Let Them Get Away With It! (2010-09-11 08:00)

When in Rome You’re Nobody (2010-09-13 08:00)

When Rome was attacked by Visigoths, Saint Augustine responded by writing “City of God” where he contrasted the earthly city with the heavenly city. In some sense, Rome was the City of Man, decadent and craving for earthly pleasures as opposed to the City of God that comes from seeking divine joy.
I did not like the movie “Time of the gypsies” because it showed the gypsies in such a poor light. Emir Kusturica is a good director. He understands technique. But, he has no vision. The content does not transcend the form of the movie. It stays within limits as you would expect from a student who performs well in the exams but is not a creative genius who can dissent with the teacher and defy the exam. One important scene in the movie is set in Rome when the protagonist Perhan who from an innocent and kind human being turns corrupt and mean, meets his lost sister Danira that he dearly loves. The meeting however ends with Perhan’s death that follows the death of his innocence.

Indian politicians can be deeply thankful that there is a scoundrel called Berlusconi leader of the Forza Italia political movement who heads the government in Italy and who is as corrupt, degenerate and right-wing as themselves. With Berlusconi coming back to power in 2008, there is little doubt that Italy is heading towards fascism and this time the target will be the poor immigrants.

Globalization in its attempt to create a common market has alienated more people than can be imagined making it possible for the right-wing to capitalize on the anger and frustration of common people and throwing them into the arms of nationalists who feel that they’ve lost ground since the so-called European Union. The anti-immigration phenomenon is going to rise dramatically in days to come and the curse of nationalism that Europe brought upon the world will raise its ugly head to fight the social and emotional vacuum created by globalization.

The Rome in Augustine is not the same Rome in Kusturica where the gypsies that are non-entities to the mainstream Italians are settling scores. Nor is it the Rome from where Berlusconi runs his government. Just as the Japan I love is in the movies of Mizoguchi, Kurosawa and Ozu, the Rome I know is from the movies of Rossellini, Pasolini and Fellini. One is “Rome, Open City” (1945); another is “Mamma Roma” (1962) and the third “Fellini’s Roma” (1972). All of them use neo-realistic techniques, Fellini to a lesser extent, in an attempt to capture reality as “reality.” When Pasolini said, “In truth, my only hero is reality,” he was referring to a certain approach to the subject of reality.

Rome is a city where redemption is possible. Because the hero of the city is none other than Jesus himself. He lives among the outcasts – the beggars, the drunks, the prostitutes, the pimps, the failures, those whose existence is immaterial to mainstream society. Dostoevsky says that: “The most pressing question on the problem of faith is whether a man as a civilized being can believe in the divinity of the Son of God, Jesus Christ, for therein rests the whole of our faith.”

There is a certain love of the personhood of Jesus that we see in most artists of the war generation and after on the continent. From Bunuel to Tarkovsky it is Jesus whom we need to believe rather than the risen Christ. The Church in ignoring the former has made us forget the reality of the person to the imaginary need of salvation. Jesus the human person is the reality. The Christ of the Catholic Church is far from the reality. Rather, it’s a failed institution something close to a failed state of affairs.

There’s something of the marginal Rome in Rossellini, Pasolini and Fellini. Jesus is the superstar of that Rome. He takes the form of Giorgio the diehard resister who is murdered by the Gestapo in Rossellini’s “Rome – Open City.” In Pasolini Jesus is the prostitute Mamma Roma – the outcast of the city. In Fellini, Jesus is the city itself upon whose body the drama of our lives takes place. But the closest to the Jesus-figure in Fellini are in the movies “Nights of Cabiria,” “La Strada” and “La Dolce Vita.”

Life itself revolves around the possibility of discovering Jesus the person. The loss of this person in our lives is
an absence that cannot be filled. Both victims and victimizers are in need of this person to stop the war of "all against all" which is the essence of survival. Only Jesus can bring such a peace because only Jesus is willing to choose to make the sacrifice.

One actor who stood out as the archetypal Roman was Anna Magnani in "Mamma Roma" who also played in Rossellini's movie. I thought she was more Roman than Giulietta Masina as Cabiria. Anna Magnani was Mamma Roma, the same way that Peter O'Toole was Lawrence of Arabia, Anthony Quinn was Omar Mukhtar, Malcolm McDowell was Caligula and Ben Kingsley was Gandhi. It was an epic performance by Magnani without in fact being an epic.

The movie was an anti-epic filled with anti-heroes. One unforgettable scene is when Mamma Roma sees her son Ettore as a waiter in a restaurant and the pain in her joy is so great that she breaks into tears. However such a joy can only be short-lived for the outcasts of the world. What makes her Jesus-like is the fact that she is never understood and as Pasolini says: "Death does not lie in not being able to communicate but in no longer being able to be understood." Her life is thus one long story of dying.

The Rome where Jesus is the protagonist lurking in the margins of the city when the whole world sleeps, the Rome of the saints and prostitutes and fascists and pimps and working classes, the Rome – an external layer of Christian morality beneath which lies the ancient dust of a pagan world, the Rome where the Church and the modern world fight their cultural battles, that is the Rome of nobody and everybody. It is also the Rome of Rossellini, Pasolini and Fellini.

Do you want to be a news editor? (2010-09-14 08:00)

The Sociological Imagination is currently trying to recruit one or two more news editors. This would involve identifying news stories relevant to the site, collecting pertinent links, writing a short commentary and e-mailing it in to be posted online. There would be no fixed time commitment for the role. It would literally just be a case of picking certain new stores (relating to the intersections between higher education, politics and the interests of social scientists) and writing a couple of hundreds words about them to provide evaluation and context. If you're interested or would like to discuss the role then please get in contact.

Pathology and Asexual Politics (2010-09-15 08:00)

The asexual community has only existed for about ten years, and its existence is due in large part to the growth of the internet. The center of the community is the Asexual Visibility and Education Network (AVEN, asexuality.org), which defines an asexual as "a person who does not experience sexual attraction." The site contrasts this with celibacy, which it asserts is a choice, whereas asexuality is a sexual orientation. The main political goals of the asexual
community are visibility, acceptance, and understanding. One major means for this involves academic outreach and our representation in academic discourse.

I first discovered the asexual community in fall 2007, my first semester of graduate school. Even before I eventually decided to identify as asexual, I have wanted to find out as much as I could about the subject. My own attempts to understand the matter, as well as the realization that I had substantive contributions to make, have led to my involvement in academic outreach. (For instance, I run the site [1]asexualexplorations.net, which "exists to provide promote the academic study of asexuality.") I have taken a particular interest in the diagnosis Hypoactive Sexual Desire Disorder (HSDD) in the American Psychiatric Association’s *Diagnostic and Statistical Manual of Mental Disorders*, which led to my involvement in the “AVEN DSM Taskforce,” a group that lobbied the DSM-5 Sexual Dysfunctions Subworkgroup trying to make DSM-5 more asexual-friendly. I have remained interested even after we completed that project.

**Asexuality and the Question of Pathology**

After the formation of the asexual community, it was not too long before the community became aware of the fact that in the DSM, there is a disorder about not being interested in sex. (The diagnosis is also in the ICD, but the ICD attracts less controversy). As one of the major political goals of the community is to convince people that there is nothing wrong with not being interested in sex, this diagnosis is not especially helpful for that goal.

In considering what kind of approach the asexual community should take toward the matter, one question that seems like a good starting place is whether asexuality is a sexual dysfunction. I have sometimes seen the question posed as an either/or: Is asexuality a sexual orientation or a sexual dysfunction? Some authors (e.g. Prause & Graham, 2007) have done data collection regarding asexuality and claimed that their results suggest that asexuality is not a sexual dysfunction. Such claims are likely good for our politics, but they make absolutely no sense to me.

There is a considerable literature on defining disorder, a task known to be difficult (many authors think impossible). Most authors, however, agree that at least some amount of value judgment is involved. Often these value judgments are quite uncontroversial: death, pain, and inability (or greatly increased difficulty) in accomplishing everyday tasks, are fairly universally regarded as negatives that, if possible, should be prevented. For the ones other
than death, if they are not prevented, they should be cured if possible, and if not, treated to make the problems more manageable and/or to slow/prevent worsening of the condition. With regard to asexuality, there is the question of what harm it causes. It does not cause death or pain, and it only causes disability if we define it as such. This was, in fact, part of the rationale for including the sexual dysfunctions in DSM-III (Spitzer, Williams, & Skodol, 1980; Spitzer, 1981) without a requirement of distress—the complete sexual response cycle was regarded as normative such that any “inability” to experience such was defined as an impairment in an important area of functioning (c.f. American Psychiatric Association, 1980, p.6).

A core part of people’s intuitions about what is a disorder (including sexual dysfunctions) is that something has gone wrong in the individual. Something is not working how it ought. In my own view, the oughtness inherent in this question means that science cannot answer it (though it can inform an answer.) This view is controversial—some consider function of some part of an organism to be objectively definable (e.g. the heart is for pumping blood.) While I am skeptical,[1] even if we accept that, objectively, the heart is for pumping blood, what is sexual attraction for? What is sex for? The main answers I’ve seen are a) procreation/finding a partner for such, b) pair-bonding, and c) declaring agnosticism with a skeptical attitude towards those who presume to know [2] My own view, option (c), renders problematic the entire notion of “sexual dysfunction.” A further issue is what I call “the brute fact of the optionality of sex.” Having sex and being interested in sex are optional in a way that eating, breathing, and having a heart that pumps blood are not. It is possible to never have sex and never want sex and it not create any problems in a person’s everyday life. This renders problematic the whole notion of functional oughtness for sexual attraction/interest, making problematic the very notions of “sexual function” and thus “sexual dysfunction.”

As I do not think that asexuality objectively is or is not a sexual dysfunction, the question I think we should be asking is whether regarding it as such makes sense conceptually and pragmatically. Conceptually, I do not think that it does. Pragmatically, we need to be cautious—what effect, if any, this diagnosis has on asexuals is unknown. We simply do not have the data. Posing the question in this way motivates us to ask another essential for asexual politics: how is asexuality different from HSDD? There are two kinds of answers to this question: extensional and valuational/practical. Extensional differences—who fits which group—are often the only ones that come to mind. They are, for instance, the only ones addressed in Bogaert’s (2006) discussion of the matter. This line of thinking seems to stem from treating asexuality and HSDD as somehow “objectively existing” rather than as more nominalist type categories. I am more interested in valuational and practical differences.

One such difference is that HSDD focuses on lack of sexual desire, and asexuality on lack of sexual attraction. HSDD is a more negative valuation of sexual disinterest and asexuality a more neutral/positive one. HSDD was created by physicians (Kaplan, 1977; Leif, 1977) and is diagnosed by clinicians. The conceptualization “asexuality” was created by asexuals, and the designation—an identity—is self-assigned. Moreover, the conceptualizations HSDD and asexuality will give rise to very different research questions. However, one important similarity should be noted: lack of interest in sex often causes difficulties in people’s lives that they want help with. [3] Both asexual identity and HSDD are conceptualizations that exist to try to help people deal with these issues.

Asexuality vis-à-vis Pathology

In discussing how asexuality is different from HSDD (i.e. why the DSM does not say asexuality is a disorder), perhaps the most commonly raised point concerns the fact that since DSM-IV (American Psychiatric Association, 1994), for a diagnosis of HSDD to be made, the lack of sexual interest must cause “marked distress or interpersonal difficulty,” although the second half of the disjunction is often ignored. Asexuals are not distressed about it, therefore they do not have this disorder, therefore the DSM does not say that asexuality is a disorder. Some people seem satisfied with this, but others do not. I can think of three reasons that one might not consider this sufficient. First, many people are distressed about their asexuality before identifying as asexual, and there is concern for these people. Second, not every condition that can potentially cause distress or interpersonal difficulty is included in the DSM. Including some but not others creates a real asymmetry and a sense of negative valuation (even if not a
mental disorder" label) for those that are included. Many in the asexual community are concerned about mental health professionals that will try to "treat" the asexuality of asexuals who are seeking out therapy for some unrelated issue. Third, as long as HSDD remains on the books, there is fear that the pharmaceuticals will someday get the FDA (Food and Drug Administration) to approve a drug for it (that probably will have small, but statistically significant, efficacy), and they will engage in massive "educational campaigns" to create distress about lack of interest in sex (see Anderson, 2005). [4]

A political question that those challenging the pathologization of asexuality must ask is whether to challenge the pathologization of asexuality only or whether to challenge the pathologization of sexual disinterest more generally. This is an important question because asexuals seem to be a small minority of the people not interested in sex [5]. This question parallels two general approaches I have seen among those supportive of asexuality. The first is to limit the domain of "sexual dysfunction" and to distance asexuality from it. This approach often involves placing strong emphasis on the requirement of distress (e.g. Brotto, 2010) and claiming that some data supports the view that asexuality is not a sexual dysfunction (e.g. Prause & Graham, 2007). Also falling in this approach is a suggestion by Brotto (2010), who proposes adding a comment in the DSM that this diagnosis does not apply to asexuals. The second approach is to question the notion that lack of interest in sex is dysfunctional or to question the very notion of sexual dysfunction. To date, the second of these has not been given much voice from within the asexual community, but there are some outside of the asexual community who have been advocating a similar position (e.g. Tiefer, 2004). For those favoring this second option, I recommend three approaches:

(1) Make alliances with people in and supportive of the New View Campaign (newviewcampaign.org), which focuses on sexual problems rather than sexual dysfunctions and rejects any kind of universal sexual norm.

(2) Use asexuality as a wedge for highlighting existing problems with HSDD. This includes the fact that HSDD is such a diverse group, it almost certainly fails Spitzer and Endicott’s (1978) requirement that a disorder be a syndrome rather than a symptom. I know of only a few authors who have even dared to raise this question (e.g. Leiblum & Rosen, 1988), likely because the answer is intuitively obvious and unfavorable for HSDD. However, I would go farther and argue that sometimes lack of interest in sex is a symptom of some disorder, sometimes is “normal variation” and sometimes is an adaptive response to a negative situation (e.g. as a response to relationship problems; see Bancroft, Graham, & McCord, 2001). Another line of argument is to highlight DSM-IV-TR’s (American Psychiatric Association, 2000) absurd suggestion that the difficulty in distinguishing between pathologically low levels of sexual interest and “low normal” levels of sexual interest is the lack of “normative data.”

(3) Do qualitative research on asexuals experiences in therapy (for issues related to or unrelated to their asexuality), on people’s experiences of sex-therapy getting treatment for HSDD, and on the effects of this diagnosis in personal conversations and in educational settings. This research is vitally important for asexual endeavors. It is entirely possible that the situation is not as serious as some may think. In any research project, the results virtually always prove more complicated than whatever hypothesis the researcher first had in mind.

Conclusion

The questions of the relation between asexuality and HSDD are likely to remain important to the asexual community and our allies, and there are multiple approaches that can be taken that are worth exploring. Because of the pragmatic issues involved and the lack of available data, caution is needed, as is research on the effects of this diagnosis. Also, it must be recognized that the situation is complicated by the fact that the DSM-5 Sexual Dysfunctions Subworkgroup is proposing to replace HSDD with Sexual Interest/Aversion Disorder (SIAD), possibly splitting it into one diagnosis for men and other for women, [6] and what these changes would mean for the asexual community are unclear. Further, asexual are not the primary group HSDD/SIAD is intended for. Given that there are many non-asexuals who may qualify for this diagnosis, their good must be considered in whatever strategy is taken. There are no easy answers, but it is important to ask the right questions.
References:

[1] I doubt it is possible to go from “in living organisms the heart pumps blood; if the heart does not pump blood the organism dies” to “the heart is for pumping blood” without regarding being alive as normative.

[2] The difference between (a) and (b) can be seen with homosexuality, which is a dysfunction according to the former, but not the latter.
If asexuality never caused anyone any difficulties, there would be need to discuss these issues, nothing for people to try to figure out, no political goals to accomplish, and thus no asexual community. Likewise, HSDD/ISD were first regarded as disorder in part because of people presenting to clinicians with this issue.

In the US, pharmaceuticals can advertize directly to the general public.

The impression is that most asexuals’ have always not been interested in sex, whereas most people with HSDD have not, although I am not aware of any data confirming these impressions.

The average Briton spends almost half their waking life using media and communications? (2010-09-16 08:00)

A fascinating report by regulator Ofcom sheds light on contemporary patterns of media and communication usage. See the executive summary [1]here and full report [2]here. It’s suggestive of a degree of ongoing growth in usage which perhaps still hasn’t been picked up by the slightly slower paced practice of academic researchers. As the slightly breathless video embedded below asks: "Is social media a fad? Or is it the biggest shift since the Industrial revolution?" It goes without saying that there’s an excluded middle between the two extremes but increasingly I’m much more inclined to the later view than to the former. It’s important that a well meaning scepticism towards naive boosterism about technology doesn’t preclude our taking stock of the sheer enormity of the changes taking place in human communication and organization.

[EMBED]

Screw the First Amendment (2010-09-17 08:00)

Has the United States a monopoly over lunatics like the pastor Terry Jones who intends to burn the Quran on September 11 and the erstwhile President George Bush Jr.?

In other countries these people are thrown into prisons or more likely into a doghouse if it's Eastern Europe or South Asia. In China they’re shot dead and in Russia the mafia takes care of them. Though I've always thought prisons are inhuman, some form of restraint has to be applied on men like Bush Jr. and Terry Jones for a society to go on. The US is the only country on earth where you can be a stark raving lunatic, insane to the core, rabid crazy, total idiot, congenitally disordered and become a pastor or a president. It's a mystery that the rest of the world is yet to comprehend.

Then they've things like the First Amendment which guarantees the right to be an areshole without having to worry what others think about it. Though the Amendment is a good thing in principle unfortunately its abusers are more in number than those whom it helps. Second, it does not guarantee - as in the case of Pastor Terry Jones – that you will not infringe upon the feelings of others especially if they don’t belong to the cultural and social space you come from.

On mainstream American TV channels you never get to see intelligent and rational men and women like Chomsky or Finkelstein or Naomi Klein. Full coverage over a period of hours, days and weeks is given to primitive right-wing sorts who've declared a war on humanity. These people have the First Amendment to do the jerking off part for them. Laws that allow lunatics to do whatever they like – there is something wrong with such laws. What is sicker is that the media gives a platform to such lunatics and hijacks the spaces of social and political change.

I don’t think any man has a right to be indifferent to the feelings of others. It does not matter whether the world was made in seven days or if the universe evolved from a cloud of dust or if it is standing on the back of a turtle. These are ideas at the end of the day. A human being is a human being and must be treated like one no matter where they come from or what they look like or what they believe in. Obviously Pastor Jones’ idea of God has its origins in a vengeful, spiteful, bitter and violent man up there in the skies spewing hate and venom against those who politely disagree with him. Coincidentally the God that Pastor Jones happens to believe in is as insane as himself. It is quite clear that the pastor never heard of the line from the New Testament about doing “unto others as you would have them do unto you.”

The first right that goes above and beyond every other right is that each individual person is entitled to basic human dignity which means that they don’t get used and exploited in any manner. The potential to violence of the strong must be effectively curtailed to disallow them from preying on the weak and the vulnerable. This must be a universal law cutting across nations and societies.

Secondly and as important is that rights are learnt whereas restraints are understood. Those who don’t understand restraints, they have neither learnt their rights nor have they earned them. Enlightened laws and a society snoring on the couch of the past don’t go together. Where the stupids are in a majority – this applies to most nations on earth – you educate them with the restraints and don’t just give them rights because they shoot their mouths off like their shoot off their arseholes.
While rights can be positive or negative responsibilities will always be positive. Those who think they are not responsible for the lives of others or what happens to the world I don’t think they should enjoy the best that life has to offer. Unethical men and groups are entitled to no rights at all. Cruel and cynical types–George Bush Jr. and the majority of Republicans–hopeless men of whom you can expect nothing, they should be restrained and prevented from doing harm.

Ultimately it’s about power and no man must be completely trusted with it. There are pastors in the form of mullahs and priests and religious and political ideologues of every hue and color who want power for themselves and to suppress people who are not in a position to resist; likewise there are George Bush Jrs everywhere who think that they’re born to fulfill imaginary destinies by crushing and dehumanizing the world around them. These are a small group of lunatics across the planet who unfortunately have too much power in their hands. Their agenda should be conclusively brought to an end if humanity must’ve a future.

The politics of spirit: sainthood as performing politics (2010-09-20 08:00)

In his bleak and tragic vision of human nature as corrupt and power-driven, William Golding, the author of Lord of the Flies, a book for all times, does not fail to disclose a ray of light in the character of the saintly Simon who is the
only one with the profound insight that the beast is within each and every person. The enemy we’re looking for outside is the one that is always already within. Simon – like Christ - is murdered by the other ignorant louts in the story who’re caught in their deceit and hunger for power.

*Lord of the Flies* is a political novel. If opportunism is the nature of the game then it’s fair that everyone is a loser in some sense. The beast does not spare anyone. In their greed for power one form of destruction will be replaced by another. Treachery will be replaced by greater treachery. History teaches us that. The saintly Simon arrives into the awareness that there is no escaping the beast. The beast within has to be confronted in the dark realms of the soul. Simon is murdered because he’s mistaken for the beast itself. The beast is the victor though that does not stop Simon from going to the tribe to tell them the truth about the beast. The beast will not allow Simon to do that. It is Simon’s knowledge of the beast that endows him with some kind of saintliness.

*Saint Genet - Actor and Martyr* is the title of Sartre’s book on Jean Genet, a criminal, homosexual, outcast and literary genius. The thesis of the book is that Genet is both saint and performer. Both are deeply intertwined according to Sartre. The saint is guided by the need to reveal as in the case of Simon. Genet as a great artist reveals. That’s where his "sainthood" comes from. He knows the dead-end, the bottom, the hell that others dread and the narrow road from nowhere to nothingness.

Sainthood is *performing politics* where the performer knows that it’s a performance. Simon’s knowledge of the beast is his knowledge of himself as performer. Socrates attributes evil to ignorance and the author of *Bhagavad Gita* to delusion. Says Krishna: “And that penance is described as dark, which is performed under a misguided conviction, with pain to oneself, or for the destruction of another.” The “misguided conviction” is a betrayal of the performance.

My first illustration of the performer who knows that it’s a performance is Joan of Arc. Joan is a mixture of Mirabai and the Rani of Jhansi. She has the boundless piety of a mystic such as Mira and the incredible valor of the Rani who fought British Rule of India in the 19th century. Like a man she can ride a horse and fight battles while her feminineness takes a maternal form in leading the French to defeat the English. Of Catholic saints, apart from Francis of Assisi and Teresa of Avila, Saint Joan interests me the most for her revolutionary character and her relevance to radical change in the twenty-first century. The role of religion in politics is a contentious one that has no final answers. The role of the deeply religious is equally contentious. Neither is the case with Saint Joan. It’s an understanding of politics as performance that makes her unique and she is not the only one. Sheikh Bedrettin, the revolutionary who fought the Ottoman Empire in its early years, and celebrated by the communist poet Nazim Hikmet in *The Epic of Sheikh Bedrettin*, combined religiosity with a sense of justice that is almost divine. Like Joan, Bedrettin identifies religion with a vision of equality for all beings and justice to the poor and downtrodden whether they are Turks, Greeks or Jews.

To be able to sing together pulling the nets all together from the sea, together to forge the iron like a lace, all together to plow the soil, to be able to eat the honey-filled figs together and to be able to say: everything but the cheek of the beloved we all share together everywhere... - *The Epic of Sheikh Bedrettin* – Nazim Hikmet

Both Bedrettin and Joan in different ways anticipated the central theme of Liberation Theology which is that poverty is sin or morally unacceptable because it brought the worst out of a human being and that religion must take the side of oppressed humanity. This is reflected in the Vatican II under the leadership of Pope John XXIII: Human society, as we here picture it, demands that men be guided by justice, respect the rights of others and do their duty. It demands, too, that they be animated by such love as will make them feel the needs of others as their own, and induce them to share their goods with others, and to strive in the world to make all men alike heirs to the noblest of intellectual and
spiritual values. Nor is this enough; for human society thrives on freedom, namely, on the use of means which are consistent with the dignity of its individual members, who, being endowed with reason, assume responsibility for their own actions. And so, dearest sons and brothers, we must think of human society as being primarily a spiritual reality. (Peace on Earth) Hinduism being a social order rather than a religion per se rarely offered itself to political liberation. Its appeal to 19th century Orientalists lay in the fact that on one hand it exuded a philosophical charm in dismissing this world as an illusion while on the other hand it perpetuated deep-seated conservatism in the oppression of so-called untouchables and women. Gandhi’s version of Hinduism stands as an exception to the rule and his ecletic mind could combine Thoreau’s Civil Disobedience, Ruskin’s Unto this Last, the Sermon on the Mount from the gospel according to Saint Matthew, Tolstoy’s The Kingdom of God is Within You and the Bhagavad Gita along with Tulsidas’s Ramayan – and put them in the same cauldron to arrive at a world-view that can broadly be considered universal to awaken the masses of rural India. When Gandhi says, “I cannot conceive politics as divorced from religion” he essentially means to say that religion as a moral discourse can be a platform of social struggle. Religion as embodied in the moral performance of resistance to evil. Such a performance is embodied in the individual person. There are no followers or leaders. There are individuals and more individuals. In the poem “You” says Borges: I speak of the unique, the single man, he who is always Alone. It is this individual person that must reflect the struggle of a people. Someone like Gandhi with a strong sense of otherworldliness refuses to believe that he is alone in this struggle. Such is the conviction in God’s role in the struggle that at the point when he is about to be lynched by a mob in South Africa and is forced to take a rickshaw pulled by a man, Gandhi says: I had never sat in a rickshaw before, as it was thoroughly disgusting to me to sit in a vehicle pulled by human beings. But I then felt that it was my duty to use that vehicle. I have experienced five or seven times in my life that one, whom God wishes to save, cannot fall even if he will. If I did not fall I cannot take any credit for it to myself. It is not about God saving him from being lynched by the mob. It is more about God revealing himself in saving Gandhi from an act of unrighteousness. Gandhi, Saint Joan and Malcolm X – all three of them are in the habit of attributing to the divine a role and purpose that is greater than what can be conceived by an individual. In George Bernard Shaw’s Saint Joan we see a humble, peasant girl in all innocence proclaiming that the Saints Margaret, Catherine and Michael, whom she calls “the voices” told her to drive the English out of France. At the tender age of sixteen when most girls would be lost in dreams of the future, the illiterate peasant girl went to lead an army that would eventually throw the English out of France. But the price of the “sainthood” is as political as the “voices” that inspired her to go to battle against the English. Betrayed by the very people for whom she had fought with her life, she was eventually tried for heresy and burnt at the stake. The transcending moment of Joan’s life is not her death but the “voices” themselves that sent her to war. You see her speaking about the voices to Dunois in the following dialogue which also brings out the essential rustic in her:

Scene V DUNOIS. Are you angry, Joan? JOAN. Yes. [Smiling] No: not with you. I wish you were one of the village babies. DUNOIS. Why? JOAN. I could nurse you for awhile. DUNOIS. You are a bit of a woman after all. JOAN. No: not a bit: I am a soldier and nothing else. Soldiers always nurse children when they get a chance. DUNOIS. That is true. [He laughs].

Her politics however show to the end of her life when she must denounce her enemies for murderous deceit and their attempt to kill her soul by imprisoning her body. It is a turning point in the play when she realizes that it is better to die than live like a caged animal. For one like Joan with a spirit born to be free, such a life would be meaningless anyway.

JOAN. Yes: they told me you were fools [the word gives great offence], and that I was not to listen to your fine words nor trust to your charity. You promised me my life; but you lied [indignant exclamations]. You think that life is nothing but not being stone dead. It is not the bread and water I fear: I can live on bread: when have I asked for more? It is no hardship to drink water if the water be clean. Bread has no sorrow for me, and water no affliction. But to shut me from the light of the sky and the sight of the fields and flowers; to chain my feet so that I can never again ride with the soldiers nor climb the hills; to make me breathe foul damp darkness, and keep from me everything that brings me back to the love of God when your wickedness and foolishness tempt me to hate Him: all this is worse than the furnace in the Bible
that was heated seven times. I could do without my warhorse; I could drag about in a skirt; I could let the banners and the trumpets and the knights and soldiers pass me and leave me behind as they leave the other women, if only I could still hear the wind in the trees, the larks in the sunshine, the young lambs crying through the healthy frost, and the blessed blessed church bells that send my angel voices floating to me on the wind. But without these things I cannot live; and by your wanting to take them away from me, or from any human creature, I know that your counsel is of the devil, and that mine is of God.

Malcolm X like Gandhi and Joan has the tendency to attribute divine role in crucial moments of his life. All of them have the tendency to believe that they are saved by a power greater than themselves. A criminal and thief like Genet, Malcolm X rose to become the antithesis of his previous self. He threw away his last name “Little” and replaced it with “X” which is a stroke of revolutionary genius like Gandhi who threw away his western clothes for a simple loin-cloth empathizing with the poorest of the poor, because X symbolized the absence of the past for the blacks in America who were brought there as slaves. In The Autobiography of Malcolm X, rather ironically written by Alex Haley with Malcolm as a narrator and protagonist, we see the impetuous Malcolm telling the story of his life on the streets. In the chapter “Caught” we see an instance of divine intervention to save the lost criminal. In Malcolm’s own words:

“One hand was in his pocket. I knew he was a cop. He said, quietly, ‘Step into the back.’ Just as I started back there, an innocent Negro walked into the shop...The detective, thinking he was with me, turned to him. There I was wearing a gun, and the detective talking to that Negro with his back to me. Today I believe that Allah was with me even then. I didn’t try to shoot him. And that saved my life...They’d had me covered. One false move, I’d have been dead.”

It’s not Malcolm’s common sense at work over here. It is Allah who makes sure that Malcolm does not do the mistake of taking out his gun because that would have meant certain death and there would be no Malcolm X to fight the cause of the Black revolution in America. All this talk of divine intervention in Joan and Gandhi and Malcolm X can be dismissed as a strategic device or way of talking or way of believing or reinforcing the belief that the cause one is fighting for is a just one and so great is the justice that it comes from God himself. But it is more than that. These are transcending moments when what Nietzsche calls the will to power of an oppressed group defines itself. In that sense Joan and Gandhi and Malcolm X tend to see themselves as vehicles through which the divine conveys its message. In essence sainthood is a political discourse is the point I’m trying to make. I don’t mean to imply that “saint” function in the consciousness of being a saint in the existential sense of the term. No one chooses to be a saint. You can choose to be good and that can be quite arbitrary as well. What we attribute to sainthood is a definition with certain parameters. Sainthood is relative therefore. What I’m interested in is the purity of motive – the conviction that this is the way things should be done and not any other as we see in Joan, Gandhi and Malcolm. The goals are serious and the challenges enormous. The awareness of death as a reality to be embraced and the fact that you’re performing a role predestined for you in all consciousness – this is the point where saintliness becomes political. That’s what the saintly Simon understands when he’s convinced that the beast of ignorance is within us and can be overcome through radical effort.

Coalition once again demonstrate their commitment to localization (2010-09-20 15:34)
Can private universities solve the issue of limited university spots? (2010-09-21 08:00)

The issue of limited places in England's higher education system has sparked [1] a recent debate about the value of expanding the system through private universities. Universities Minister David Willetts is promoting a Higher Education bill which would enable private universities to grow and evolve, but UCU head Sally Hunt and various lecturers have warned against such profit-driven universities, citing the US system and concerns about how those universities receive public funds. In defense of privatisation, BPP University College of Professional Studies, which is the first private sector institution to gain university college status in over 30 years, argued that it is misleading to make comparisons between universities in the US and the UK because of their vastly different regulation and funding systems. The government, however, has indicated that a university’s status of public or private is not the key issue amidst the greater pressure it faces over university places and funding. For further explanation of the current funding situation facing universities, click [2] here.

i.l.iliyas (2011-12-28 06:03:33)

Ben: Diary of a Heroin Addict (2010-09-22 08:00)

As a bright schoolboy from a loving, middle-class family Ben Rogers was expected to make a success of his life. Raised in a quiet, picturesque village Ben was a Boy Scout, loved cricket, played in the school orchestra and looked forward to the annual family holiday. But despite his privileged start in life Ben found himself on the road to ruin, injecting heroin up to four times a day.

During his last months, Ben kept a video diary of his drug use and desperate attempts to come off heroin. Ravaged by the drug, Ben’s body began to break down: he developed DVT and his veins were rendered so useless he had to inject into his groin. Despite his family’s best efforts, Ben couldn’t stop. He was haunted by, and hooked on, heroin.

Event: New Activism or Old Politics? (2010-09-22 12:00)

New Activism or Old Politics? Sounding student reaction to HE’s crisis
This free, one-day event will discuss likely student reactions to the impending cuts and rising fees in higher education.

**30th September 2010, 11am - 4:00pm**

**Room 404D, Main Building, University of Aston, Birmingham**

**Participants include:**

- Patrick Ainley, University of Greenwich
- Ben Little, University of Middlesex
- NUS speaker (hope to get Clare Solomon, Pres elect ULU)
- Joyce Canaan, Birmingham City University (Chair a.m.)
- Sarah Amsler, University of Aston (Chair p.m.)
- Jonathan Ward, Studentforce for sustainable development
- Esme Hannah, PhD Student University of Leeds
- Dora Meade, Student Led Discussion Network Co-ordinator University of Leeds

**Timetable:**

10.30 Registration

11.00 Welcome Patrick Ainley, Network co-cordinator and co-author *Lost Generation?* Continuum 2010

11.15 Ben Little – 'Radical Students? The importance of universities within activist networks' based on his edited e-book: *Radical Future – Politics for the Next Generation*  

12.00 NUS speaker or Dora Meade + Leeds University Student-Led Discussion Network

1.00 Lunch

1.30 Jonathan Ward – ‘Brown Dystopia or Green Hope?’

2.15 Esme Hannah – ‘Student Politics, past and present’  
(+ Dora Meade with Leeds Network if confirm Clare 12-1)

3.00-4.00 Plenary discussion

The event is free and all staff and students in UK Higher Education are welcome to attend but please register.
A full guide to travelling to Aston, including campus maps, is available at the website below. The Aston campus is a short walk from Birmingham New Street train station. The University has a car park and visitors passes can be provided – please email...

Aston uni campus guide: http://www1.aston.ac.uk/about/directions/

It is free event but please confirm attendance with Carol Salmon at csalmon@srhe.ac.uk

1. http://www.lwbooks.co.uk/ebooks/radicalfuture.html

10th November National demonstration: new joint website launched (2010-09-23 08:00)

A reminder to members to make a date for their diaries of 10 November. With massive cuts already announced, 25% more cuts expected in the Comprehensive Spending Review and indications that science and research funding may also be slashed, this is our opportunity to put political pressure on the Coalition government. Make sure you will be there and contact your branches to see what is being organised for the day. The NUS and UCU national demonstration now has a joint website, which you can view here.

From the UCU Campaigns E-mail

Liberal Democrats push to move graduate tax forward (2010-09-23 12:00)

While the debate continues regarding how to accommodate more students into the UK’s university system, another one gains steam beside it: how to fund those university spots. On Tuesday, 21st of September, grassroots Liberal Democrats at the party’s conference in Liverpool voted to campaign to replace rising tuition fees and student loans with a graduate tax. The tax would be sliding so that graduates who earn less pay less for their degrees, while those secure higher-paying jobs would pay more. However, the Institute of Directors says such a tax could lead to a ‘brain drain’ as students seek to study abroad in avoidance of such a tax. It also suggested that companies employing graduates would shoulder the burden of the tax as graduates would then expect higher salaries to compensate for their tax rate. Details of how a graduate tax would function are still unknown, while an independent review being led by Lord Browne is expected next month. The review is examining options between raising tuition fees and introducing a form of graduate tax. It is anticipated that Browne is likely to suggest significant fee rises.

Demonstrate at Tory Party Conference (3rd October) (2010-09-23 17:41)

Right to Work has called a national demonstration outside the Tory Party annual conference on 3 October. David Cameron’s party are meeting in Birmingham. We will assemble at 12 noon and, after a rally, the march will set off at 1pm.

The demonstration is supported by:
The PCS, NUJ, UCU and CWU, NUS, ASLEF, the Labour Representation Committee, nationally, as well as many local trade union and campaign bodies.

Speakers include:
John McDonnell MP, Mark Serwotka, general secretary of the PCS, Romayne Phoenix of the Green Party, Dr. Jacky Davis from Keep Our NHS Public, Birmingham Respect councillor, Salma Yaqoob, Linda Burnip, campaign co-ordinator Local Housing Allowance Reform Group, Dina Garane, Greek trade unionist and leading activist in general strikes, and Portuguese Left Bloc MP, Jorge Duarte Costa.

The march will assemble at 12 noon at Lionel Street, Birmingham B3 1AG. If anyone reading this would like to meet on the day then just send an e-mail or a facebook message before then.

1. mailto:m.a.carrigan@warwick.ac.uk

Become an SI columnist (2010-09-24 08:00)

As you may have noticed we have added two columns to the website in the last few months: [1]rethinking the world and the [2]idle ethnographer. Would you like to be our third regular columnist? If so then please send a 300 word pitch to the [3]editor. The only criterion is that the pitch somehow relates to our [4]aims. Beyond that the idea for the column is entirely up to you.

SI needs a Book Reviews editor (2010-09-27 08:00)

As the Sociological Imagination is starting to grow, we’re trying to find more people to assist with the running of the site. Do you want to be our book reviews editor? The role would involve:

- Keeping track of new publications that will be of interest to SI readers
- Liaising with publishers to order review copies
- Helping and advising reviewers
- Editing submitted reviews for the site

If you’re interested then please get in contact with the [1]editor to discuss further.
Why do people love sport? Article by Simon Kuper (FT) (2010-09-27 12:00)

In his last contribution to the Sports column of the Financial Times, Simon Kuper considers the underlying emotional pull of watching sport. For him, being a sports fan gives us a rare chance to return to a long lost, careless childhood:

"There is no mystery about why people play sport. It is fun. It releases endorphins that make you happy. It keeps you thin. It can even keep you alive. But why watch other people play sport – and worse, why argue afterwards about how they played? ...

...For many adults, their one escape from worry is being a sports fan. Watching sport, you can become eight years old again. ... You cannot control who wins. And at bottom, you know it doesn’t matter. ...When England fail in the World Cup people don’t jump off tower blocks. They just go to work."

Work-for-free graduate employment culture (2010-09-28 12:00)

The continuing rise in graduate unemployment has seen a sharp increase in public sector organisations using unpaid interns. The economic and employment crisis of recent years has seen this type of working practice expanded to different sectors, including higher education as this [1]article suggests. The 1994 Group of universities – a group of research-intensive educational institutions, have advertised for “dynamic, talented, questioning” individuals with “excellent communication and analytical skills" and a “demonstrable interest in higher education”. This, in theory, appears to be attractive graduate job, but is in actual fact a work-for-free intern position.
The increase popularity of unpaid internship by recruiters has posed a financial dilemma for many graduates and raised questions work place exploitation. Ben Lyons, co-director of Intern Aware, believes that "working for free is impossible for the majority of graduates". Tanya de Grunward, author of Dude, Where's My Career? The founder of graduatefog, says the practice is exploitative:

"Can they seriously claim to be working for the good of our country's young people, when they are taking advantage of their most junior workers like this? In the case of the 1994 Group, its members are among the most prestigious universities in the UK. Considering how much money those interns, and we are assuming they are likely to be graduates, have just spent on their education, I think these ads are an insult to graduates."

In response to the advert, the 1994 Group says its internships are carried out on a volunteer basis. A spokeswoman says: "The 1994 Group believes in providing worthwhile opportunities for graduates, which enhances their learning of work place practices. The group does so in the form of internships, which are undertaken by the individual on a volunteer basis.

Joining the Advisory Board (2010-10-01 08:00)

In order to help the Sociological Imagination expand we’re hoping to add two more members to our advisory board. At least over the next year or so, it would mainly involve discussing ideas and building a strategy for the long term development of the site. So while the role would involve a significant creative commitment, it would not necessitate a particularly large time commitment.

Our aim is to put together an advisory board (current members can be seen [1]here) which includes a diverse range of perspectives. Discussion will be informal and online. Critical views and robust debate about the nature, direction and purpose of the website are most welcome. If you would like to apply then please send a CV to the [2]editor with a short attachment explaining what you believe you would bring to the role.

[EMBED]
Manifestations of Islamophobia and the Loyalty of Muslim Converts (2010-10-04 08:00)

*This short article is an amalgamation of two chapters from my thesis which are more theoretical and rigorously argued than demonstrated here. I welcome feedback on any of the points raised in this article. I can be reached at [1] l.moosavi@lancaster.ac.uk

Anyone who follows events relating to Muslims in 'the West' will know each week brings more bad news. It seems that wherever in Europe or North America that Muslims are, they are subjected to surveillance, interrogation, and restrictions that seem to be spurred on by Islamophobia, but crucially, which also perpetuate Islamophobia. Some well known examples from the last month are the recent ban on the niqab in public spaces in France, the widespread condemnation of a mosque being built near to 'Ground Zero', and the proposed 'Burn a Qur’an day' that was called for and acted out in several locations. Closer to home, a recent investigation by The Independent found that “Hundreds of British Muslims leaving and returning from holidays abroad face harassment and intimidation by security forces when they pass through UK airports and seaports”. It seems that it is a well established fact that Islamophobia is firmly embedded in the experiences of Muslims living in predominantly non-Muslim societies then. My own doctoral research focuses on the experiences of Muslim converts in Britain, particularly in relation to their experiences of Islamophobia and in this short article I will explain some of the findings that I deduced from the 37 in-depth interviews I conducted with Muslim converts from Greater Manchester.

Since The Runnymede Trust published a report entitled 'Islamophobia: A Challenge for us All' in 1997, there has been much discussion about how much of a problem Islamophobia is. Many Muslim organisations and individual Muslim activists claim it is one of the most prominent and tolerated forms of prejudices of the 21st century, while others claim it is exaggerated. One of those in the latter camp is Kenan Malik who has argued in an article entitled Islamophobia Myth (2005) that the severity of Islamophobia has been greatly exaggerated in order to silence criticism of Islam and stifle free speech. This sentiment that Islamophobia is minimal was echoed by Sayeeda Warsi, a member of the Conservative cabinet who was recently described as 'Britain’s most powerful Muslim woman', who recently said: "From my own humble beginnings of [sic] daughter of an immigrant mill worker, to be, at 39, Chair of the Conservative Party, the youngest member of the House of Lords and have a seat at the Cabinet, I think sends out a very strong message to people of all backgrounds, but especially to Muslims and Muslim women to say there is no glass barrier anymore. That glass barrier has been broken". For Warsi, the glass barrier of Islamophobia, and perhaps also sexism, no longer seems to be a hindrance in the lives of Muslims in Britain, which she feels is reflected in her professional success. But can the success of one woman who identifies as a Muslim truly mean that Islamophobia is not a major problem? The experiences of the Muslim converts I interviewed lead to some interesting observations. To some extent, the Muslim converts’ experiences support the notion that Islamophobia is not as severe as many fear because they had very few experiences of being physically or aggressively confronted due to
being Muslims. Moreover, the anti-discrimination laws that are in place seemed to give them sufficient protection from blatant forms of institutional discrimination, allowing them opportunity to educate themselves and embark on careers that they desired. In a nutshell, the Muslim converts were able to go about their lives without facing insidious Islamophobic attacks. Some may assume this is because Muslim converts are not visible as Muslims but in fact, many of the Muslim converts I interviewed were visible as Muslims because they had appropriated beards or certain types of clothing that marked them out as Muslims. So crucially, the Muslim converts I interviewed had not experienced much threatening Islamophobia even though they were often visible as Muslims. This led to a conclusion by Alison, a 20 year old university student, where she said: "I think people are making Islamophobia out to be bigger than it is, especially like the media. I think non-Muslims are quite friendly towards Muslims in the sense that... as long as they don't feel threatened and don't feel that Islam is being forced on them, they're very happy to allow Muslims and any religious group to practice their belief" (Alison). This is a positive and optimistic point that is rarely mentioned when discussing Islamophobia, but indeed, the starting point for all discussions about Islamophobia must be that very much a pressure that they felt they had to cope with, often leading to paranoia that everyone around them very often does not mean Islamophobia didn't surface in their lives whatsoever, but only that it appeared in different guises. Rather than overtly manifesting, the Islamophobia they were familiar with was of a much more subtle nature. For example, while none of the Muslim convert women who wore a headscarf had ever had their headscarf pulled off their head, all of them had been subjected to comments – sometimes as banter, sometimes of a more sinister nature - where they had been made to feel inadequate or foolish for wearing a headscarf. The Muslim converts had often been called 'Taliban', 'Terrorist', 'Paki', and 'Bin Laden' for example. Moreover, the Muslim converts knew that there were instances when they had been judged or reacted to in particular discriminatory way due to being a Muslim, even if it was left unspoken. The subtle Islamophobia they experienced was along the lines of verbal insults or supposed jokes about their Islamic beliefs, experiences that might seem tolerable but which deeply troubled them. This observation about the way in which Islamophobia manifests being more subtle than overt is crucial to be aware of. It is a common and unfortunate mistake made by well meaning non-Muslims to assume that Islamophobia only refers to instances when Muslims are physically attacked. For example, while none of the Muslim convert women who wore a headscarf had ever had their headscarf pulled off, all of them had been subjected to comments – sometimes as banter, sometimes of a more sinister nature - where they had been made to feel inadequate or foolish for wearing a headscarf. The Muslim converts had often been called 'Taliban', 'Terrorist', 'Paki', and 'Bin Laden' for example. Moreover, the Muslim converts knew that there were instances when they had been reacted to in particular discriminatory way due to being a Muslim, even if it was left unspoken. The subtle Islamophobia they experienced was along the lines of verbal insults or supposed jokes about their Islamic beliefs, experiences that might seem tolerable but which deeply troubled them. This observation about the way in which Islamophobia is displayed being more subtle than overt is crucial to be aware of. It is a common and unfortunate mistake made by well meaning non-Muslims to assume that Islamophobia only refers to instances when Muslims are physically attacked. For example, I was surprised that even the most prominent Muslim organisation in Britain, The Muslim Council of Britain, had named an event I attended in the Houses of Parliament in March 2010 which was designed to expose the importance of challenging Islamophobia: 'Tackling Islamophobia: Reducing Street Violence against British Muslims'. As is commonly done, the MCB had focused on the more blatant form of Islamophobia, 'street violence', failing to recognise it can take more everyday and subtle forms which are just as troubling. While it is important to strongly condemn the shocking and disturbing overt examples of Islamophobia such as when Marwa El-Sherbini was stabbed to death in a court room for being a Muslim in 2009, one should not forget that Islamophobia is also about the more mundane and subtle instances where Muslims are judged out, mocked, and ridiculed because surely, these more minor instances still cause much distress and are the foundations that lead to the more shocking and brutal instances of Islamophobia. This understanding of Islamophobia mirrors an understanding of racism that has been offered in recent times by Philomena Essed (1991), who has argued that despite widespread beliefs in North America and Europe that racism is no longer a major issue, racism has merely taken on a new semblance in the form of 'everyday racism', a type of racism which frequently appears in mundane interactions and is not always so strikingly prejudiced. More recently, Barbara Trepagnier has argued in her book Silent Racism (2006) that we still live in an era when the majority of 'white' people think they are anti-racist but are still involved in perpetuating it in discreet ways. For Essed and Trepagnier, whether it is made visible or not, 'everyday racism' or 'silent racism' is ever-present and will continue to manifest in subtle ways regardless of our hopes that race no longer matters. I believe that efforts to understand Islamophobia in a similar manner must also be made, leading to recognising that Islamophobia is more often than not in the form of 'everyday Islamophobia' or 'silent Islamophobia'. Yes, thankfully Islamophobia doesn't manifest overtly in many situations meaning the Muslim converts had few clear-cut Islamophobic experiences to narrate, but no, unfortunately that doesn't mean that Islamophobia is just a 'myth' as Malik claims. Rather, Islamophobia is
typically more subtle, covert and harder to detect. One of the consequences of the consistent yet subtle repetition of Islamophobia is that it leads Muslims to feel certain ways about how they relate to the non-Muslims around them. The typical attitude that the Muslim converts had towards how they felt non-Muslims was captured in the words of Laura, a 35 year old mental health nurse, who said: "So many people don’t like Muslims, hate Muslims..." (Laura). This is troubling because it reflects the way in which the everyday experiences of some Muslims in Britain lead to them conclude that they are disliked and even hated. There are all sorts of unfortunate implications for the individual Muslim due to internalising this perspective such as developing the same type of self-hatred that Frantz Fanon (1967) has explored in relation to colonial complexes, but there is also a more macro societal implication, which is that Muslims can feel alienated from British society, less likely to feel as though they belong here and are valued citizens. The frequent stigmatisation of Islam and demonization of Muslims in Britain then, does not encourage a more ‘cohesive’ society, but one where Islamophobia causes Muslims to feel as though they don’t belong. There has been alot of discussion about whether Muslims can ever feel as though they belong in Britain and whether they can be loyal to British society with those who are less optimistic pointing to 7/7 to offer an example of Muslims born and raised in Britain who murdered fellow British citizens. What is not included in this discussion often enough though is the extent to which experiences of Islamophobia prevent Muslims in Britain from feeling they have a place within the nation. The Muslim converts I interviewed were unique individuals and so it is difficult to generalise about how they saw themselves in relation to British society, but nonetheless, I believe I can categorise the Muslim converts into two types with regards to their feelings about being loyal to Britain. The first type of Muslim convert was the one who perhaps fits the stereotype of the Muslim who refuses to integrate. These Muslim converts were adamant that Islam came before anything else and their allegiance was totally sided towards Muslims and they had the desire to emigrate out of Britain. For example, Zach, a 25 year old trainee teacher, said: "First and last I belong to the Muslim ummah and that’s it really... I cannot hold allegiance to Britain in the same way [anymore]" (Zach). It is tempting to overlook such positioning because it can reinforce stigma about Muslims that they are lacking loyalty to Britain. Yet, I believe it is important to recognise that such feelings do exist amongst some Muslims, but just as importantly, it is crucial to also recognise that these same Muslims who seem to be anti-British were still living lifestyles whereby they co-operated with non-Muslims and even admired certain achievements or traits that they perceived to be established in Britain. Furthermore, the majority of the Muslim converts were those of the second type, which were those who were comfortable reconciling their Islamic identity with their British identity. They perhaps occupied a ‘third space’ of ‘hybridity’ as Homi Bhabha (1994) explained was increasingly common in the complex post-colonial societies we live in. So whilst the Muslim converts reported being interrogated repeatedly about their loyalty to Britain and even faced numerous instances when they had been labelled as ‘traitors’, the majority of my interviewees still identified as 'British Muslims', admiring British people and British society, and desiring to make a contribution to wider society. In fact, in some cases, it was the case that becoming Muslim had meant the Muslim converts had become more loyal to Britain because they felt Islam taught social responsibility and consideration for wider society. This was a position taken by Sumayyah, a 24 year old A Level student, who made the following comments: "Well I suppose I'm very proud to be British now that I'm Muslim. Before I didn't really think of it. Before I was Muslim I just thought about myself but now I'm Muslim I'm very proud to be a British Muslim because... I just am! Now I'm very proud to be a British Muslim, yeah, yeah I am" (Sumayyah). Such accounts where Muslims talk about their loyalty and dedication to British society are rarely mentioned, perhaps because they don’t allow the sensationalist ideas about a radical 5th column to be maintained. There was a clear link between experiences of Islamophobia and feelings or non-feelings of belonging/loyalty though, where those who had felt that Muslims were most victimised were also those who were less likely to feel they belonged comfortably in Britain. For example, the problem according to Michael, a 28 year old software programmer, was not that Muslims didn’t want to belong in Britain, but that others, through their Islamophobia, did not give them space to feel as though they could be ‘at home’ in Britain: "I guess [Muslims] can feel truly at home in Britain in themselves... but whether or not people will allow us to feel at home is a different thing. I think there is an opportunity there but whether or not people will allow us to feel that way is a different thing" (Michael). This sends a clear signal of the necessity of obliterating Islamophobia of all kinds if Muslims are expected to feel as though they are valued and equal citizens in Britain. This point is given even more credence after noting a recent poll conducted by Gallup which found that 77 % of Muslim identified with the UK compared to just 50 % of the general public. This suggests that not only are Muslims generally fairly loyal to Britain and British society, but also
that, they are even more patriotic than the general population! This is not surprising given the masses of resources that have been pumped into ensuring that Muslims in Britain identify as British Muslims. The major obstacle in realising the plan to have a society where Muslims feel comfortable living alongside non-Muslims and vice versa is not Muslims lack of willingness to integrate then, but rather, the everyday and subtle forms of Islamophobia that repeatedly surface and make Muslims feel as though they are inferior and different from other citizens, which is one more reason why the irrational fear or hatred of Islam and/or Muslims, that can take violent forms but more often takes subtle forms, must be challenged more vigorously.

Bibliography

These comments are taken from a recent interview she gave to The Muslim News which can be found here:

Please visit my website, select POEMS, then select no 104 on the Index, a long poem called "The New World Order". Islamophobia is Zionist Central Command’s latest project, completely engineered and totally artificial, and follows many proud achievements in the past. Also please get to know my new book about Islamophobia, select ENOUGH! Islamophobia from my homepage. Wake up world!

Maddy Abbas (2010-10-08 16:03:34)
I think you make a really useful distinction between 'everyday' racism and the more extreme examples of racism that are usually given as indicators of Islamophobia. I agree think it is important to think about Islamophobia in more nuanced ways as it is those everyday interactions that shape people's identities - those extreme examples can be put down to one-offs, but knowing that you are going to have to deal with Islamophobia on a daily basis in more subtle ways will have a huge impact and I think this needs to be taken into account more in our discussions of Islamophobia. Point well made, thanks Leon! My other comment would be that you talk about visual markers such as beards, and wearing the hijab, but what about 'racial' markers
such as skin colour? What effect do you think these may have on Islamophobic attitudes and how Muslim converts are treated?

Courtney Hamilton (2010-10-21 23:10:07)
I think the author has fallen into a intellectual trap when he uses the word 'Islamophobia'. The word itself is highly problematic - indeed, the word itself is more or less irrational. What does the word Islamophobia actually mean? This article fails to interrogate the word and its meaning. According to my dictionary a phobia is defined as a morbid or irrational fear. In the U.S, the National Institute of Mental Health define phobias as a form of mental illness with degrees of severity, from mild anxiety to full blown panic attacks. To paraphrase Karl Marx, sociologists have only interpreted the world; the point however is to change it - but, how on Earth are we supposed to change an Islamophobic society, or an individual Islamophobe? With cognitive behavioral therapy perhaps? Herein lay the problem with the term Islamophobia, which is to all intents and purposes, a modern-day buzzword that transforms real political prejudice against Muslims into a psychological condition - a condition that is only susceptible to psychiatric treatment.

University Education: A Luxury for the Rich? (2010-10-05 08:00)
In the aftermath of the shortages of university places this summer, comes another development – a potential rise in tuition fees. At present, the current cap for tuition fees is £3,290, but under a free market, universities would become free to charge more than £10,000 a year for course. The sharp rise would automatically price out many poorer students of a university education, as this [1]article suggests.

A report by Lord Browne recommends that universities should be allowed the keep all the income from tuition fees up to an annual level of £10,000. The report also puts forward that universities should be allowed to cross this threshold if they pay a rising proportion of additional income into a central fund that could be used to help support students from poorer backgrounds.

If the recommendations of the report are accepted, it could have an enormous impact on the current university system, levels of student debt and the politics involved in accessing higher education in general.
Vince Cable, the secretary of state for business, innovation and skills and David Willetts, the higher education minister, are convinced of the need to increase fees alongside "progressive" measures to help the poorest.

Aaron Porter, president of the National Union of Students, said: "If this is true, then Browne's attempt to deliver a free market in higher education is a proof that he is seeking to price out the poorer students. The average debt already is in excess of £25,000."

Review of ‘New Media, Old News: Journalism & Democracy in the Digital Age’ edited by Natalie Fenton (2010-10-06 08:00)

New Media, Old News: Journalism & Democracy in the Digital Age is the culmination of a multi-year team research project conducted under the auspices of the Goldsmiths Leverhulme Media Research Centre. Editor Natalie Fenton and eight other Goldsmiths researchers deployed ethnography, interviews, and qualitative content analysis to study the effect of new media upon news and current affairs journalism 'that purports to be for the public good and in the public interest, even if this is experienced as no more than an ideal ethical horizon both by those who produce it and those who consume it' (3). Twelve tightly interlocking chapters revolve around the following question posed in the specific context of the UK journalistic field: Is optimism about the democratizing potential of new media warranted?

Unfortunately, the answer to this question is, with hardly any exception, a resounding negative. Although there are occasional attempts to moderate the book's pessimistic tone, it is hard not to conclude from the team's research that the case for democratization through new media is grossly overstated and that traditional structures of power will not be overturned. New media, they find, has both enabled and accelerated shifts in journalistic practice that results in, among other things: the homogenization of news content across competing outlets and multiple platforms; improper, sometimes outright unethical, sourcing of articles; a deterioration of working conditions for journalists; increasing reliance upon a few, trusted mainstream sources at the expense of marginalized voices; and forces on the periphery of the journalistic field such as NGOs acting only to reinforce existing practices instead of reforming them.

Chapters can be roughly divided into those focusing upon mainstream, corporate journalism and those focusing upon alternative news media outlets. All of the contributions to this book are superb, and because the high quality is so consistent none are especially standout. Of particular interest to students and sociologists new to the
study of journalism, however, is James Curran’s ‘Technology Foretold’, an analysis of the unrealized hype that seems to accompany every new media form, from cable television to the dotcom bubble, and a chapter co-authored by Angela Philips, Nick Couldry, and Des Freedman on the characteristics and pre-conditions of ethical journalism. On the other hand, those seeking the cutting edge will undoubtedly appreciate original case studies of the openDemocracy website by James Curran and Tamara Witschge and the press release culture of NGOs by Natalie Fenton.

In sum, *New Media, Old News* is a sobering and thoroughly-convincing antidote to any lingering utopian notions of Internet-centred ‘techno-optimism’ (188). But if we cannot rely upon new media to cure journalism’s ills, what can be done? Fortunately, Rodney Benson’s concluding chapter offers the following three-part prescription: ‘first, to maintain and even strengthen the autonomy of core mainstream media, whether public or private; second, to maintain and expand diversity at the margins (using the state to promote speech that is under-produced by the market, when necessary); and most of all, third, to figure out ways to connect the two’ (199). It’s a tall order to be certain, but reformers and researchers alike have Fenton’s book to thank for advancing the conversation in such fruitful directions.

Sutton Trust claims overseas student fees could present pattern for future (2010-10-07 08:00)

The possibility of rising tuition fees has been headlining the news in the recent weeks and months, while anticipation over the official review of university fees being conducted by Lord Browne is mounting. In the midst of that anticipation, education charity Sutton Trust has just conducted a [1]study which focuses on overseas student fees. The report discusses how those fees have risen drastically as a result of being unregulated and used to subsidize home-fee paying students.

Sutton Trust has used overseas fees to argue that such a pattern of unregulated rises can and may be replicated for all degree courses if tuition fee rates are allowed to be raised. As such, the Trust recommended a comprehensive package of grants, loans and other forms of support for students who would be unable to afford higher fees, as well as suggesting that those from low income homes should be offered a first year at university for free.

In light of the fact that Lord Browne’s review is still to come, reports like this one from the Trust support growing anxiety over the situation facing students in the future. To that point, UCU General Secretary Sally Hunt said, “As we approach the delivery of the university funding review we are hearing more and more dark rumours about what Lord Browne might recommend. However, we are hearing no radical or progressive options. If the funding review simply lists ways to squeeze more money out of students and their families then it will have spectacularly failed its remit.”

Review of “The European Identity: A Faltering Project” by Jurgen Habermas (2010-10-08 08:00)

In the timely work, “The European Identity: A Faltering Project” by Jurgen Habermas, we find four principal concepts: transnational authority, transnational public spheres, a European identity and normativity shaping the book together and yet each of them existing in conceptual isolation.

The need for different kinds of international organizations is the guiding light of the book. The weaknesses of nation states in an increasingly interdependent world society account for the growing need of another kind of world order. The roles of Human Rights in this new order as well as identity are paid tribute to: the sovereign national states that lost much of their autonomous decision making power are operating almost like structures which exclusively implement human rights within their national borders. It is at this point that public spheres come to play and a relation between public spheres and supranational institutions emerge. Habermas claims that the need for a transnational authority can only be attained by the empowerment of transnational public spheres. However, in our time, it is the nation states which are holding the national public spheres trapped within themselves. The main challenge in attaining a transnational public society is the lack of responsiveness of national public spheres to one another.

A similarity can be drawn between national identities and national public spheres. It is of utmost importance to bear in mind that nation-states and national identities also have gone through historical processes which constructed new collective identities during the 19th century. Nonetheless, creation and empowerment of a transnational public sphere is not similar to the possession of historical memories and the historical processes that the nation states have gone through. This is the point where the work of Habermas shines at its best: it is not the creation of public spheres but the transformation of them which needs to be aimed at. What would prove to be fruitful is rendering existing national public spheres more responsive to one another, with the influence of media which goes beyond "infotainment" (from an Adorno and Horkheimer, “Dialectic of Enlightenment” point of view) and offers substantial commentaries that would prove to be the strongest tool along the way. Transformation of national public spheres needs to be accompanied by a transformation of the power of nation-states along a cosmopolitan path rather than undermining their zone of influence.

The pathway pointed out to seems a difficult one with very many obligations rather than a natural one which flows easily. This is why we find normativity and idealism and arguments defending these two concepts in the book. Habermas stands firmly on the optimistic spectrum and defends his optimism with a theoretical claim: “The cynical recognition of an unjust world does not point out to a lack of knowledge, but to a corruption of the will”.

Another relation between two seemingly distinct concepts that emerges from the book is that between social theory and legal theory. This growing relationship is raised by discussing legal concepts such as the role of international treaties as basis of legitimation for governance beyond borders. “Which one can embrace which, legal theorist
the sociologist or the sociologist the legal theorist?” Habermas asks. Regardless of the answer, the importance of contemplating the two ideas not in isolation but as strongly related concepts seems to be one of the most important conclusions that can be drawn from this new book. The harmonious picture presented in the book shows the symbiotic relationship between theory and practice; theories discussed are firmly grounded in the world, and ideals which may be charged with normativity are always supported by concrete examples. “Social Sciences and Philosophy have drifted further apart than the founders of critical theory could have ever imagined” Habermas states in the Preface. “Europe: The Faltering Project” is a good example to explain why behavioural political science should regret digressing from theory.

**Foreign Accent Syndrome (2010-10-09 08:00)**

There are thought to be only 60 cases of Foreign Accent Syndrome in the world. People who have it start speaking with an entirely different accent.

Kay Russell, from Bishops Cleeve near Cheltenham, suffers from the extremely rare neurological disorder. After a serious migraine, she woke up with what sounds like a French accent.

Doctors believe it is triggered following a stroke or head injury, when tiny areas of the brain linked with language, pitch and speech patterns are damaged.

Lucy Mayblin (2010-10-11 09:15:01)  
Urrmmm... bit of a random article?! Amusing though. I'd like a Franch accent!

Milena Kremakova (2010-10-12 21:37:58)  
You're right, er, we just thought it was a stunning piece of news, perhaps we should have mused on the social consequences of sudden change of accent which is normally perceived as integral to personality, like part of one's body! :)

Sociological Imagination (2010-10-12 07:02:37)  
Probably the least sociological thing to have gone up on the website thus far but I thought it was interesting! I've always thought a German accent would suit me...

Milena Kremakova (2010-10-12 21:39:13)  
ah, no one asks me whether I'd like a Slavic accent ;-}
In recent years, blogging became increasingly popular all over the world (well, predominantly, but not exclusively, all over its European and North-American parts), exploding traditional ideas of news reporting, journalism, literature - and challenging the public-private divide. Blogs exist in a quasi-public environment which exposes thoughts and images that would formerly have remained tucked away in heads, diaries, photoalbums, and closets. Blog contents are both abundant and varied, yet more frequently thin, rather than profound: as a famous anonymous quote goes, 'never before have so many people with so little to say said so much to so few.'

Blogs devoted to food, fashion, handicraft, hobbies, pets et al., have one thing in common: their writers and readers indulge in pretty things. They are an epitome of conspicuous consumption (Baudrillard): they skirt (pun intended) the surface of meaning, and hail the meaning of surface - literally - by endorsing the value of prettiness as a reason for blogging. In the sea of blogs about fashion, there is a small niche of blogs which mix two stereotypically incongruent fields: academia and fashion.

[2]

[3]
It is worth noting that, in one sense, the content of these blogs is strictly non-academic. They focus entirely on the visual and material “package” with which academic jobs seem to be associated. The multitude of successful blogs that share a very similar language and imagery suggests that the importance of this particular material package is accepted by more than just the blogs’ authors. In another sense, however, these blogs are academic - but not scientific. The adjective academic - devoid of discipline specification - can, in fact, serve, as an umbrella term for the everyday life (Goffman) that has come to surround work in academic institutions; or, as other sociologists put it, the ways in which academic work is grounded and embodied. In the blogging tradition of exposing all that is private, it is only logical that problem of clothes worn by academics deserves its niche on the blogging market.

The academic fashion genre opens up many potentially sociological questions. Are blogs about ‘fashion and academia’ actually blogs about academic fashion; fashion in academia; fashion which is out of, but should be in, academia; fashion and appearance as an integral part of today’s academia; fashion as a wish or as reflected by some people working in academic jobs?

[4]

The magical... and its traces in the mundane.
Are these blogs exploiting fantasies, filling up a void (in the lives of contemporary academics, or in fashion?), promoting a certain lifestyle (and affirming the "po-mo" necessity of having one), mixing the unmixable, affirming (or breaking?) gender stereotypes? Are they a quest for consumption that individualises its consumer, a fight against the tendency to turn into "mass produced", grey-collar academic workers? Are they outlets for the shy, earning tools for the enterprising (many of these blogs use banner advertisement as a tool for earning money), or just one of the plethora of all possible quasi-work, quasi-rest, past-times for people employed in academic jobs?

As I am no specialist in either gender studies, leisure, or fashion, I shall leave my new discovery for you to browse, judge and reflect on - and, hopefully, comment!

Below is but a short selection of blogs about fashion and academia:

[5] 

Academic Cinderella

[6] Fashion for nerds 's statement reveals the stereotype: its author works "in an environment where fashion takes a back seat to... well, everything." The blog is an outlet for creative and expressive impulses, redirecting them away from of the author’s usual 9-5 "habitat": "Since stylish clothing in a company full of scientists is a bit like pearls before swine, I decided to create this blog, where perhaps my daily efforts can be more thoroughly appreciated"

[7] Fashionable academics are a group of co-authors, who write their blog with the conviction that "Accessorizing and knowing how to dress with style, in addition to researching, writing articles, and being good teachers, help to make for a balanced life"

The authors of [8] Academichic introduce themselves as "a consortium of feminist academics, in the Midwest and Northeast, on a crusade against the ill-fitting polyester suit of academic yore."

[9] The glamorousgradstudent introduces herself as a "scientist and PhD student with a penchant for pretty..."
things".

[10] What would a nerd wear is "an archive of grad student style" created by a "bike-riding bookworm".

"[11] The Return of Peacockery" is a title of a post on fashionableacademics.blogspot.com

Here Comes Everybody: the power of organising without organisations (2010-10-12 08:00)

How is social media reshaping social organization? In this short lecture [1] Clay Shirky attempts to answer this complex and pertinent question. This website itself can be taken as an interesting example of social media, as affordable internet hosting and content management systems have facilitated a form of intellectual communication which sits between informal social networks and formal academic publishing. It can be hard to gain analytical purchase upon a phenomena so embedded in our daily practice: while Shirky’s work is far from the final story, it’s an interesting starting point.

Browne Report Recommends Lifting Cap on Tuition Fees (2010-10-12 11:02)

The much anticipated university finance review by Lord Browne has been published today and does indeed recommend that the current £3,290 cap on tuition fees be abandoned, as many speculated it would. It proposes a free market approach to tuition fees and contains exemplary models which show tuition fees rising upwards of £12,000 a year.

[1] Lord Browne’s report, however, doesn’t advocate for unchecked rises. It advises that universities which charge more than £6,000 a year would have to put part of that fee towards subsidizing student borrowing, more
necessary in the face of steeper fees. Browne claims to be mindful of student needs, explaining that his plan would not leave students with debts like mortgages and that they would only be required to pay back their loans once their earnings reached £21,000 per year. Even Browne, though, acknowledges that this new competitive approach to university funding could mean that universities, like other competitive businesses, fail to succeed and must close. The report claims that they will now compete not only over students, but also fee levels and new providers of education.

This proposed increase in fees is at odds both with the election pledges of Liberal Democrats as well as the UCU lecturer’s union, which described the review’s plan as “the final nail in the coffin for affordable higher education.”

University of Sanctuary (2010-10-13 08:00)

What is the idea of the university? Perhaps the university should be the creator of knowledge, the repository of ideas, the temple of learning? These may or may not chime with your idea of the university, and if they do the aspirations doubtless seem in tension with the realities of the institutions which you have encountered. But have you ever thought about the idea of the university as a sanctuary? The use of ‘sanctuary’ here refers to a safe haven for people fleeing persecution, also known as asylum seekers and refugees. Could universities be places where asylum seekers and refugees are welcomed and supported, as part of a broader project of making the places where they find themselves living more welcoming? Is this part of your idea of the university? For two groups working in Sheffield and Bristol, that is just their vision. Here I report on their work.

Last December at the [1]University of the West of England in Bristol, [2]Dr Ibrahim Seaga Shaw launched the [3]Refugee and Migrant Support Hub (RMS Hub). It began with a [4]CARA (Council for Assisting Refugee Academics) funded pathfinder research project in 2008 on what the existing and required structures were for making the university more welcoming to refugee academics. Their report can be found [5]here. The Hub, launched in response to this work, provides support for refugee and asylum seeking scholars (and potential scholars), research, training, and knowledge exchange. They liaise with faculties and departments across the university, providing a single point of access to facilitate academic and educational opportunities for scholars at risk and forced migrants who might be the scholars of tomorrow. Bursaries and fee waivers are part of the help on offer, as is clear advice on the transferability of qualifications obtained abroad. In June the Hub hosted a conference on ‘[6]Education without Borders’ as part of [7]Refugee Week. It is necessary for the Hub to reach out beyond the university and so part of its remit is to engage with community groups and NGOs who work with asylum seekers and refugees in order to attract attention to the opportunities on offer at UWE.
The Sheffield project was inspired by the RMS Hub and is really in the early stages of development. Earlier this year a small group of staff, students and City of Sanctuary activists got together to discuss the possibility of creating a University of Sanctuary associated with the City of Sanctuary project. In the proceeding months they have facilitated the University of Sheffield signing up to be a Sanctuary affiliated organisation. City of Sanctuary is a social movement which began in 2005 with the aim of making cities more welcoming to asylum seekers and refugees. In practical terms this involves starting projects, bringing people and organisations who are already doing work to help asylum seekers together, getting the local council to commit to the label ‘City of Sanctuary’ and endorsing its sentiments (a significant barrier for some cities gaining the Sanctuary badge), and encouraging businesses and other organisations in the city to pledge to do their bit. Such organisations might, it is proposed, include universities. Thus sprung the idea of Universities of Sanctuary.

The group in Sheffield contacted the university STAR (Student Action for Refugees) group and organised an open meeting for STAR reps and other interested parties. The initial meeting was small but over time word got around and volunteers started to get into contact with the initiators. In the following three months the group managed to get the University to sign up to be on the list of CARA affiliated organisations. Ideas being floated are bursaries for asylum seekers and refugees to study at the university, fee wavers for asylum seekers, moving to charging asylum seekers domestic fee rates as opposed to the international fees that many are currently subject to. Allowing asylum seekers and refugees to use university facilities such as the library free of charge is another possibility. Law students offering their skills through legal advice and research (such as country situation reports) has also been touted. Swansea University already has a Law and Asylum Group doing just this. Students and established academics acting as mentors, and increased prominence of the work of CARA in the institution are possible. The expansion of volunteering opportunities with refugee supporting organisations is another free activity. Finally, awareness raising amongst the staff and student body through special events, campaigns and training sessions would facilitate myth-busting on asylum related issues.

The sceptic in you is asking ‘but what about the money?’ In these cash strapped times, not to mention in the age of the neoliberal university, funding support for refugee and asylum seeking scholars might not be a top priority for British universities. The Bristol based Hub obtained funding from the Bristol Legacy Commission, match funded by the university, while the initial pathfinder project was funded through CARA. One idea suggested in Sheffield is getting the alumni association to propose that members fund or part fund a refugee scholarship in a particular department. Collaboration with public and private organisations for vocational courses is also a possibility.

In Sheffield the idea has taken off so quickly because senior staff in the university are keen to make it work on a personal ethical level. But there are benefits to be had for the university which make the idea ‘sell-able’ if the ethical commitment isn’t necessarily there. For example, the RMS Hub business plan 2009-12 states that

“The Hub will be an answer to demand of professional development and training from an increasingly culturally diverse local population. It will also help UWE: (1) boost student recruitment, especially mature students, (2) fulfil equality and diversity commitments to its staff and student body, and (3) enhance widening participation and promote human rights across the University and its federation”.

Speaking the language of ‘corporate social responsibility’, ‘community relations’, ‘equalities’, ‘widening participation’, ‘employability’ and ‘CV building’ might prove vital in getting official university endorsement of the project. To some extent, then, the track to follow depends on which priorities the university values most – not all have aspirations to widen participation.

Much of the potential of creating a University Sanctuary lies not in simply funding places on courses but in a whole range of activities which make the university more welcoming and raise awareness of asylum issues amongst the university community. These things don’t need to cost anything. With the badge saying ‘we are a University of Sanctuary’ comes a challenge to staff and students alike to be creative with the concept, to see where the idea takes
them. There are clearly challenges and barriers to this aspiration becoming a reality. The neoliberalisation of higher education, funding cuts, legal constraints on what asylum seekers can do, the fear that with high level endorsement what is a grass roots movement at heart could be co-opted by senior university managers... But there's something in it isn't there? The seed of an idea that could just take off. It’s up to us to help that seed to grow.

Milena Kremakova (2010-10-13 16:33:39)
Very innovative idea (not in the sense of "new", but in the sense of "how did no one think of this before")!

The Sausage Factory (2010-10-13 13:43)

Yesterday saw the publication of the latest Really Open University offering ‘The Sausage Factory’. It was a direct response to the [1]Browne Review of UK higher education funding and offered a critical reading of the recommendations proposing a lifting of the fee cap. The publication predicts the privatization of universities, the narrowing of participation and a ‘brain drain’ of top researchers to countries with a more hospitable HE environment. Read The Sausage Factory [2]here.

The Really Open University was started by a group of students and staff at the University of Leeds in opposition to the neoliberalisation of higher education. You can find out more about them [3]here.
Food Adjectives (an exercise in deconstruction) (2010-10-14 08:00)

If someone had told me twenty years ago that some day I would yearn for the simplicity of socialist consumption, I would have laughed. In 1988, I was seven, the country's economy was crumbling down, electricity was rationed (a scheme known as 3:1 or later 2:1, e.g. 3 or 2 hours with electricity, 1 without), the supermarket shelves were empty, and I was sent out at 7 am each morning to queue for a litre of milk and two half-litre jars of yoghurt, because the shop opened at 7.30, and by 8 am, there was no milk left to buy. When I was a child, there was enough food, but very little variety: one type of rice, one type of butter, two types of bread (white wheat and brown rye), a couple of brands of chocolate, one brand of chewing gum... The socialist world's attitude to food was pragmatic: food was a necessity, not a luxury product.

Yet, as I find myself in England in 2010, I realise that I have forgotten what food shortage was like. Instead,
there is a deficit of substance, clothed in an overgrowth of branding symbolism. The childish fascination with the bright coloured wraps of foreign sweets - a rare treat, accessible only to kids whose fathers travelled abroad for work - has vanished. I wonder if today's kids are ever fascinated by this carnal carnival of colours - most likely, they just take it for granted. I find myself thinking how nice it would be to walk into a shop and come out with a loaf of white bread, half a kilo of pork sausages, a half-litre glass jar of cows' milk yoghurt, a kilo of cheese, and two kilos of ripe tomatoes - no colours, and no adjectives added.

Instead, I drive into a supermarket attached to a petrol station and purchase 'Unsweetened Greek style probiotic yoghurt' in a multicolour plastic can. The yoghurt is organic, suitable for vegetarians (but not for vegans), needs to be refrigerated and, once opened, must be consumed within 3 days. It tells me to See Lid for Use By Date, warns me against trying to freeze it (as if anyone would want to freeze yoghurt!), and restricts my culinary experiments by directing me to "Splash the yoghurt over fresh fruit or meringues, or curries, or stews". I begin to doubt whether I ever really knew what yoghurt is, what it is for, and how it is eaten.

Admittedly, for a foreigner, reading all the information printed on a typical can of yoghurt is very educational. But this takes away the bread of ESL teachers - and locals don't even appreciate it. Why bother? I take out my plastic spoon, dig in, swallow the offence, and sublimate my indignation at being treated like a child, by performing an exercise in deconstruction.

The information which comes as an integral part of the food we buy serves multiple roles: it tries to advertise, advise, direct, guide, educate, prescribe, safeguard (both consumer and producer), seduce, suggest, and warn, all at once. It expects consumers to be also readers, and members of one epistemic community who all understand the complex language used to convey the information. The abundance makes sense, if we see the bits of data as answers to questions. Asking those unvoiced questions allows us to "read" the meta-text of the yoghurt wrapping and understand the public "debate" which is taking place on yoghurt cans all over the European Single Market.

The first revelation is that this can of yoghurt has been produced under organic standards. I know what "organic" means now, yet, the adjective "organic" retains for me some of the first impression I had, when I first heard it used in relation to food. The unknown word sounded synonymous with plastic, rubber, polystyrene, petroleum, and paint. It had to mean something unhealthy, tasteless, and artificial, something that came in a test-tube. In the best case, it was redundant: what can a vegetable possibly be, if not organic? Could it be made up of non-organic matter, devoid of living tissue molecules, such as amino acids and carbohydrates? Of course, the adjective "organic" is not used in the obscure personalised sense which I have just evoked. It is part of a publicly accepted system of symbolic meanings. It is a key word whose use allows the producer to make several points at once: endorse the cutting-edge scientific discoveries, subscribe to the "benevolent" group of producers who are concerned with their consumers' health, distinguish his product from the "dark" side of careless producers who insist on producing unhealthy food, and legitimise charging a higher price.
Yet another example is the note on the potential ability of probiotic bacteria contained in the yoghurt to "support digestive health" as "part" of their "daily diet". The presumption of being ill until proven healthy pathologises an unsuspecting and perhaps healthy consumer. This discourse also enfranchises microbes as social actors by endowing them with the power to control the health of humans (remember Latour’s fascinating analysis of the "Pasteurisation of France" - in French called Les Microbes: guerre et paix, 1984).

Some of the information seems to state a truism: apparently, the yoghurt contains cow’s milk. What else could yoghurt possibly contain? Cow’s hoofs? The way health-related information is presented also serves to invent and "launch" new social groups, e.g. "nut allergy sufferers" (for whom this particular yoghurt is allegedly unsuitable, as I find out from a pretty sign made of a blue square and circle).

All these carefully worded phrases reveal a recent shift in the world of food. Food is no longer unquestionably good for you. The abundance of food calls into question its value. Health – and digestive health, in particular – is no longer an entitlement that can be taken for granted: it is a success which no longer depends on nature. It must be strived for and achieved. It has been de-naturalised. However, the responsibility is too heavy, to be placed solely in the hands of the consumer. The yoghurt producer – forced by the relevant government or non-governmental agency – takes over (or accepts, in exchange of money) some of that responsibility.

(To be contd. After I have my yoghurt and negotiate division of power with its friendly bacteria. )

Reclaiming Learning - introduction (2010-10-15 08:00)

The Challenge: "Given that structures function to give persons powers, the specific use that agents make of these structural capacities is not pre determined by the nature of the structures themselves. Alternative courses are open to agents: they may simply perform the routine actions that are necessary to reproduce the existing structures, or they may seek to modify or altogether to transform those structures." (Callinicos, 2006:190)

The Questions: Is there something fundamental to our species that creates conditions and dimensions of being that enable people to take those 'alternative courses' of action - the submission of our will to the structures we have created historically and our capacity to challenge the very foundations of these structures - and to do them almost at that same time and in the same spaces. To submit, to resist and to change make up the contours of our lives, are they separate geographical lines, do we ascend and descend across submission, resistance and change or are these 'impossible contours' that cross the life span vulnerable to a past, those practices, that project people into their present, that moment of choice when the very structures that bear down on us provide that possibility of a future that is cast in front of us as a shadow? The crucial point here is that the shadow moves and turns as we turn corporeally. The future thrown before us is within our material grasp precisely because the structures we erect provide a capacity for us to submit. If we have that capacity to do something, we have it in moments before the act, do those moments provide that space that may yet provide years of servitude or struggle?

These moments contain the past, those historical, social and cultural locations that form some of the shapes that we call identity, reality, life. They do bear down on people and to deny them is a facile gesture, to be born in a disabling society is to, at that very moment, take on those disabling characteristics. What you then do across the life span with this reality forms the basis of Sartre’s "Roads" (The Last Chance Roads Of Freedom iv, Translated by Vasey, Craig, 2009, London, Continuum.) and the challenges of the grapes of wrath:

Ma: Scared, ha! I ain’t never gonna be scared no more. I was though, for a while it looked as though we was beat, good and beat. Looked like we didn’t have nobody in the whole wide world but enemies. Like nobody was friendly no more. Made me feel kind of bad, and scared too. Like we was lost and nobody cared.

Pa: You’re the one that keeps us goin’, Ma. I ain’t no good no more, and I know it. Seems like I spend all my time these days thinkin’ how it used to be. Thinkin’ of home. I ain’t never goin to see it no more.

Ma: Well, Pa. A woman can change better than a man. A man lives, sorta, well in jerks. Baby’s
This essay has a point of departure, the process of learning, however running through it is a debate about the relationship between our condition and what might constitute our nature.

Human nature is an evolving multi dimensional process, in which the different dimensions of life (see below) conflict and also bond to push forward learning and development. The complexity of this process is deepened when we realise that both learning and development are both dimensions that push and draw individuals through life. At any one time historically - over centuries, decades weeks and even moments the dominance of particular social, cultural and historical dimensions bear down on our nature, our energies, our foresight, our curiosity. This is the human condition, the point is that this condition is not a given, it is the external expression of a particular set of relationships between the dimensions of life - usually the spatial and temporal moment in our development that we see, at that moment, as the given and taken for granted. But there is a tension here because the condition emerges from multi dimensional struggles across the life span. So such struggles can have catastrophic and barbaric outcomes and at the same time those outcomes are only recognisable as barbarism because we also experience and strive for justice, mercy, knowledge and the power to have all these things. That this profoundly human experience has been invested in god should, given the record of our condition over centuries, be hardly surprising - the point is it is we who invest in god, and the argument is should that considerable investment in our spiritless world be re - directed (See Marx's arguments on this in the later sections of this essay) so that nature and condition can provide the social space for the free development of each individual.

Many people might argue that these questions and such deliberation is both tendentious and subject to prolixity, why not just get on with life? 'Getting on' is however the problem: The very words resonate with disability, how do we 'get on'?

Born into a home in which I was deeply loved and well cared for it came as a surprise to me that at the age of 11 I was a 'failure' along with many others in our educational institutions in 1963. I had to get on in a secondary school and remember creating a social and psychological haven in being 'average' in that system. Having failed I relocated myself in the B stream of that school as average in relationship to my friends in the C stream, 'B' ness prevented friendship with those in the D stream.

That life in school was the beginning again of my political and social consciousness, that past in which I shaped an identity that refused to fit in even in my own fantasy of averageness. There in 'B Land' I took on a socialism, stimulated partly by my mother, and used that knowledge to keep that fracture line that partly separated me from my friends. It was the beginning.
So if we imagine our lives as a series of beginnings, using Brendan Kennelly’s evocative poem ‘Begin’ (Astley, N. 2002, Staying Alive, Bloodaxe Books) as inspiration, I can count my days at Lancaster University, an attempt to be a probation officer, the period of dropping out in Stockport as beginnings. Through out these days and in 32 and continuing years of marriage and raising three children I have charted the multi dimensional struggles of every individual through my own experiences, particularly of those successive working class struggles in the 1980’s, 90’s and ’noughties’ to hold onto the post war social and economic settlement.

Intellectually much of this experience and practice was moulded by my participation in the struggle between Stalinism and Trotskyism in the context of that assault on Social Democracy by successive Governments since the fall of Edward Heath’s government following the 1974 miners strike. That political frame of reference for my own modest involvement in working class politics was broken in my professional and personal engagement with the effects of pit closure and the attempts at regeneration of what are urban settlements in rural areas - the pit villages.

The break led me to conclude that the human experience of pit closure and top down regeneration initiatives required a return to Marxism on the following basis.

It became clearer to me as I researched both closures and regeneration that the first interest of both individuals and groups of individuals was their position as human beings submitting their will, often as community volunteers, to the structures of regeneration through a process that manipulated the capacity of people to act even in the dire circumstances of local long term unemployment, ill health, poor housing and weak transport infrastructure. The ideology of empowerment and building social capital was parasitical on this capacity to act, modifying and manipulating it, making that capacity to act one that was given by the structures of regeneration in the context of local deficits that could only be met if each individual and group submitted themselves to the financial governance and strategic direction of external regeneration bodies.

In these circumstances traditional ways of thinking about how people could organise their own resources and capacity for change simply did not meet the realities of experience in these isolated communities. In order to begin it was necessary for me to strip away the past as a fossilised set of ideas and look for the kernel of development and being in our humanity. A series of questions emerged:

What process would allow me to do this?

Which thinkers could help prevent personal submission and collapse before the process of ‘getting on with it’ crushed ideas and innovation?

At what point in both development and ‘becoming’ were people both at their most innovative and practical in dealing with social, economic and cultural isolation and at the same time most vulnerable to manipulation and modification?

My point of departure was in the very process that is uniquely located in every individual’s capacity to both think and act, a process subject to the struggle between those structural forces that would reduce it to the acquisition of discrete skills and that collective capacity for people to share the process and its contribution to thought, action and self development

That process is learning and its relationship to the emergence and becoming of identity. That is where I would begin again.
A useful discussion at this point would be how we work out the relative importance of these resources, as Brecht said, "Learn the ABC, it's not enough but learnt it". It may well be however that the skills Brecht refers to can only be of use when we both individually and collectively recognise that they help us to construct in words the kind of living together that leaps of the page and into our practices, but first the practice and then the words. Historically we have tens of thousands of years through which our practices developed, many are inscribed into our actions today, how do we develop those historical and cultural traces in our practices that celebrate the actions we call just, fair and kind in daily life? How can we create practical conditions in which people have the space to stop doing as they are told because they have begun to see that the taken for granted, the common sense, literally 'the way we do things round here' is not the way we want them to be. In this sense the major critical resource created by reciprocal self development could be an incredulity toward those narratives (no apologies to Lyotard!) that dress as human practice, added value, quality, fit for purpose and at that barbaric end of capital's march across our planet, that appalling concept collateral damage. When we become simply incredulous that any one could propose that we manage the change in global temperature rather than stopping that rise, we have started that process of development that potentially impels us to gather greater and more resources to defeat such proposals. At such times we may even decide we need both the practice of direct action and the lexicon of science. This is reclaiming learning at the very centre of self development.

The reclaiming of learning begins with a return to Vygotsky (1978, 1986) and I would argue at this point a useful point of departure for the rescuing of the revolutionary content of Vygotsky’s work, material for further work. Indeed the contribution to learning set out below offers up a series of points of departure for discussions about how we can transcend our current condition and contest that the latter is the end game of a deep and pervasive pathology. The central discussion is to what extent can an examination of the process of learning raise our understanding of human nature so that we can practically use that understanding to transcend our current human condition, the point is that human nature in its fully rounded multi dimensional sense creates the conditions for the emergence of the human condition and therefore is engaged dialectically with the genesis and continued historical and cultural development of the condition, the former is our first base for transcending a condition that Suzuki has called a "blind date with disaster" (News paper interview Suzuki 2008).

Vygotsky proposed that the development of a fully rounded human psychology has a multi dimensional gene-

318
sis that develops from and emerges in a series of domains that have historical, social and cultural characteristics. These characteristics work as dimensions that shape human life and in turn take on a shape from the practice that constitutes life, in this sense life and human practice are constantly mediated, as Brecht observed "everything changes, you can make a fresh start with your final breath." It could be argued that my position is little more than a restatement of Activity theory, "both dialogism and activity theory move from the social to the individual in their analyses. The object of analysis is neither texts nor minds nor conceptual schemes per se but what is in between-the social intercourse." (Russell 1997:509) However in pursuing the notion of humanity as self development I want to develop a point of departure from systems, methods and theories that apply our understanding to the subject, understanding, and rather attempt to get inside understanding, it is an attempt to negate those social vectors that introduce modified and manipulated notions and concepts of humanity, that transform the latter into a historically and culturally located human condition through tendentious claims that it was ever thus. Points of departure will be a recurring motif in my essay as will the theme of beginning, precisely because one of our most basic and rich conceptual frameworks for understanding is our grasp of movement in time and space and our desire to control that motion, even as we feel that it controls us - "time, you old gypsy man, will you not stay?" The first beginning takes up Vygotsky’s conceptual framework for human development, our development as a species on the basis of four inter related genetic domains, the phylo genetic, socio-cultural and historical domain, the onto genetic and micro genetic domain (Wertsch 1985).

Essentially the individual carries a location as an individual within a family or small social group, neighbours, friends and so on, however this personal history is located in the social space that the group inhabits, this is a complex arena in which many different individual histories meet both as products of relationships generated in small groups and in unique relationships with others from other groups. This ‘dance to the music of time’ (Powell 1997) takes place in the context of the multi layered development of the species across human history, it is here in this continually developing social space that cause and effect in the emergence and development of our identity struggle both against and with each other. This is not an emergent plea for relativism, rather it is an assertion that the complexity of social life, our understanding of who and what we are become active dimensions in the genesis of human beings - a real struggle to be takes place on a daily basis and in turn goes some way to explaining the remarkable resilience of the human being even in conditions that leave biological life flickering at its end.

It is almost as though the individual is subject to and active in many beginnings, the maturation process of each beginning may well take place in the continuing history of the species as a whole, in particular cultural, national or socio economic formations but both the beginning and the process of maturation also find their place in the development of the individual across her or his own life span. In this bold sense, I would argue that each individual carries the whole of human history in their physical frame, repeats, develops and changes that history in the relationships each individual enters into socially. So every particular action, practice and thought contains that universal material that provides the shape and depth of our common humanity - the point is we make that humanity, its metamorphosis into the human condition cannot be traced in linear fashion back to some original sin or set of actions. The human condition is the visible manifestation of that continuing struggle between the dimensions of life that we call the social, cultural, psychological and indeed biologically genetic. Precisely because learning actively engages with all these dimensions, and because we have a social field of practice where we engage in learning on a fairly formal basis I feel it is a good place to begin an investigation of who we are and crucially use that ability to explore ourselves to provide the ontological basis for a challenge to notions that this is as good as it gets, and that only the management of our condition needs to be attended to. In this sense I’m not concerned with constructing a learning theory or with making claims for particular theories of learning because my claims about learning rest on the multi dimensional form and content of learning. The struggle between form and content is illustrative of my approach. Take the example of that learning which takes place in a particular kind of schooled environment in which particular kinds of knowledge are culturally transmitted in classrooms of people whose sole commonality is their age. What interests me is that the dominance of that dimension and the dominance of disciplinary models for the transmission of knowledge - the classroom and the teacher - work together to marginalise, push away, other dimensions and act to manipulate an individuals perception of their ability to understand the
world. Learning theories (Wood, 2005) can help us to construct models for educational practice that can go some way to ameliorating this situation but this particular use of theory often sterilises the theory, reducing it to the status of an educational tool. This is what happened to Vygotsky, whose desire to both understand mind and change minds so that the socialist construction of society could form a new material basis for communism was effectively excised with the first publication of Thought and Language in 1962 and the promotion of an image of Vygotsky "as a sort of early neobehaviorist of cognitive development" (see John-Steiner & Cole's report of this image, 1978: ix).

In this sense I reject the notion that learning is a managed social skill or set of skills that can be theorised, rather I say it is the practical manifestation of the workings of those complex and contradictory dimensions that make us human.

The process of learning unfortunately is often characterised in very simple terms, there are those who would claim that our learning is much like the working of software in a computer and that we are hard wired inside our brains to particular kinds of learning and ways of living. The notion that mind is just the result of electrical connections that take place in the grey matter in our heads is also very strong, I think Tallis (Guardian interview June 2008) is right when he says that such people are neurotheologists. The brain has a pretty fundamental role to play, in that strong force in the shaping of the interplay between the dimensions of learning that actually characterise, and in their turn shape the process, as it unfolds in our practices (Damasio 1999). However this social unfolding of the process, its actual working, in turn has some fundamental effect on the development of our cognitive process, indeed on the growth of the brain (Johnson 2001). Again as Tallis says in the same article "the brain is a necessary condition for consciousness but it is not a sufficient one. Selves also require bodies, material environments and human communities."

The process we call mind emerges from this movement of forces, a movement that can be pictured as a complex interplay of dimensions. Dimensions that both give form to learning and are also contained in the process of learning as it unfolds, locating us in the world driving forward our development as embodied situated individuals (Shotter 2005). The claim here is that there is no separate mind, spirit or soul guiding or informing our understanding of the world and our place within it but nor are we just grey matter.

The question is how do we get into the nature of mind (Vygotsky 1978)? Vygotsky sets out the path clearly through the investigation of the process of learning. This investigation is a process in itself and it might just get us closer to that understanding that answers those questions at the heart of a philosophical enquiry into being.

"Where do we come from, what are we, where are we going?" Gaugin.

We live in, as Marx's memorable critique of religion (Marx/works/1843) had it, "a heartless world and....soulless conditions", the question remains how in these spiritless times as Cyril Smith (1998) put it "can six billion human beings live on this small planet without destroying each other" and it might be added 'completely' despite, through climate change, the most appalling oppression and exploitation and war, their best attempts to do so.

So what model of learning will enable me to move on and make the claim that inside the process of learning we can truly seek out what it is to be human and use this humanity to confront in the most practical of ways the human condition and in this profound confrontation use that humanity to transcend that condition that could ultimately destroy the species.

This confrontation, humanity against the human condition, is framed on two sides by death, individual death and potential species death. These dimensions are forces that drive us forward and there strength is pretty undeniable, but dare I say it there is another dimension, weak, frail (a century of the most awe inspiring savagery illustrates this contention) but constantly grounding us - social life. Its time span for some of us is brutally short and for others interminably long, this grounded truth is were we begin.
At this point siren calls from two perspectives can distract the wanderer, one is the collapse into a post modern relativism that actually denies that there are absolute truths. Eagleton’s (2004: 13) definition of the post modern is useful here,

"By 'post modern', I mean, roughly speaking, the contemporary movement of thought which rejects totalities, universal values, grand historical narratives, solid foundations to human existence and the possibility of objective knowledge. postmodernism is sceptical of truth, unity and progress, opposes what it sees as elitism in culture, tends toward cultural relativism, and celebrates pluralism, discontinuity and heterogeneity."

It is at this point that I’m always tempted to say that death is a pretty bloody final truth, so let’s work back from that into life and the possible truths we might find tangled up in the dimensions of learning, development and being. The other call, not so far removed from post modern relativism, is from those who suggest that the whole project has an absurdity that cannot be worked with or against and that basically death awaits us amidst the nihilism of life. These views of the human condition and the collapsing of the latter into our humanity do little more than let the oppressor and exploiter get on with their mutually interdependent work.

Of course these philosophical meanderings (all of them from the top of page 1) maybe regarded as having little to do with learning and a lot to do with prolixity and tendentious. Instrumental rationalism (Lave and Wenger in Daniels, 2005)) underpins the notion that learning is that process through which we gather knowledge about our world through the acquisition of two kinds of knowledge, knowledge of the parts of the world and knowledge of how those parts fit together. The world as a jigsaw problem enables the thinker, learner, person to detach their species responsibility for the problems of the world and to get on with the entirely practical (read non or anti philosophical) task of sorting out the problem, welcome giant sunshields! Down with plastic bags!

Of course it is entirely legitimate to say that learning about ourselves and our world has to start somewhere. Learning about climate change, learning how the economy works, prosaically in the practice of every day life learning how to drive a car or manage your money - the latter practices restricted to the worried wealthy of the north. For an estimated one billion people, learning about every day practice is curved very sharply from birth in the slums of the "megacities" in the south (Davis, 2007:5). The point is every one has to start somewhere with something and this too is my point of departure.

Reclaiming Learning – the dialectic of learning (2010-10-16 18:00)

All thinking, a valuable dimension in the process of learning, sort of kick starts things, starts by abstracting or isolating certain features of a practice or process, we concentrate on these features to the exclusion of others (Lenin 1972). So we begin with "the objectivity of consideration (not examples, not divergences, but the thing itself)" (Lenin, 1972: 221). But at the very start of this process of isolation we begin a new process of re-formation, "the entire totality of the manifold relations of this thing to others" (Lenin, 1972: 221). Look, when I began learning to drive I was taught my cockpit drill - mirrors, neutral gear and so on. Isolated activities admittedly but drawn back into the purpose of it all - driving that car from the kerb into the open road.

On its own, each specific learnt activity has the air of fiction around it, "an isolate is something that has been dragged from its environment in space, time and matter. By itself, therefore, it is a fiction, for dialectically nothing
can be free of environment; but it is a real fiction in the sense that it really does have an objective existence" (Levy, cited in Guest, 1941: 47). Effectively learning does begin with a negation of the facts of an interconnected world but then itself has to be negated in order for us to understand the part played by that 'little bit of learning' in our practices. It is said that the tendency toward the negation of the negation is obscure, actually I would argue that it enables learning because it is that tendency that binds learning to development, more accurately, drives development in the following way: Development can be pictured spirally rather than in a linear way because as it emerges from, develops from, learning it draws to itself and also in itself creates changes (an increase / decrease in our understanding of something as we study it both in isolation and in its connections) that negates a previous state of affairs but not entirely because elements of that previous state of affairs remain, contributing towards new understanding, new practice (Vygotsky 1978).

The negation of the negation, essentially the re-formation of the process, pulling together learning, development and being is contained inside that tendency within the process of learning where we continually begin again but crucially with a little bit more material. In this sense the tendency contains both revolutionary 'DNA' - it can help us explain those leaps in development (remember Leo the late bloomer? Kraus 1971) and evolutionary 'DNA', those developments that fossilise in our very being and enable us to refine and effectively use the tools of learning in the process of mediation (used here in Vygotsky's conception of the process 1978) - we commonly call them skills. The use of the biological analogue is deliberate, within the biological dimension of life notions of evolutionary and revolutionary development are debated and revealed, why shouldn't other dimensions, other aspects of human life reveal this inter-related set of processes.

The tendency is therefore an entirely practical theoretical exposition of how we learn and develop, I can well imagine those who seek to and succeed in compartmentalising learning, modularising our thinking, breaking learning up into the acquisition of discrete skills and ultimately reifying our very being into a series of capitals - human and identity capital (Becker, 1993, Cote, 2005) that in themselves are then deployed to create a social capital (Harris, 2002) will be only too happy to condemn the concept as nothing more than the febrile imagining of long dead German philosophers, last sung about on Monty Python's flying circus.

There is however nothing fevered in the fate that awaits us if we do not begin, through our learning and its practical relationship with our world, to grasp what is going on, what our role is in confronting that condition and how we confront it with a fundamental critical resource - our common humanity. At this point it is necessary to be absolutely clear about the shape and content, the raw material, of humanity. Marx put it this way through a definition of labour power: "The aggregate of those mental and physical capabilities existing in a human being, which he exercises whenever he produces a use - value of any description" (Marx, 1977: 164). This definition describes human energy and that capacity to produce both the loftiest ideals about how we should live and the techniques and tools that enable us to go on living. The claim being developed here is that learning is that process through which we discern our world and also reach out to and grasp our humanity. Humanity is a powerful capacity that through the mediatory process of learning is transformed into practices that utilise our energy to both act on the world and change it.

Language has its part to play at this point,

"One of the most difficult tasks confronting the philosopher is to descend from the world of thought to the actual world. Language is the immediate actuality of thought. Just as philosophers have given thought an independent existence, so they were bound to make philosophical language, in which thoughts in the form of words have their own content. The problem of descending from the world of thoughts to the actual world is turned into the problem of descending from language to life
We have shown that thoughts and ideas acquire an independent existence in consequence of the personal circumstances and relations of individuals acquiring independent existence. We have shown that exclusive, systematic occupation with these thoughts on the part of ideologists and philosophers, and hence the systematisation of these thoughts, is a consequence of division of labour, and that, in particular German philosophy is a consequence of German petit-bourgeois conditions. The philosophers have only to dissolve their language into the ordinary language, from which it is abstracted, in order to recognise it as the distorted language of the actual world, and to realise that neither thoughts nor language in themselves form a realm of their own, that they are only manifestations of actual life."

(Marx, K. 1976: CW, Volume 5: 446 - 447)

Language – how living embodied beings make sense of their world, language in the form of written and spoken words alongside non verbal behaviour of all kinds is embedded and imbued in these categories of cultural artefact. Every cultural and social encounter between individuals involves words, gestures and behaviour that enables the individual to make sense of their perception and place in the world, a world of shared activity situations and struggles. It is inside this sensuous human activity that purposeful and directed use of language in all its forms enables individuals to grasp what appears to be external knowledge about the world and make it their own. At first glance when two individuals communicate using words nothing appears to have been created however in actually talking about something they have created a new relationship. This may well be the continuance of an existing relationship or a new albeit ephemeral one based around a request or instruction. Vygotsky had much to say about the role of the word as a unit of analysis in gaining an understanding of what takes place when a child begins to appropriate and independently use the words repeated to them by adults in their particular social and cultural settings (Vygotsky 1978). So across the life span from childhood into activity in various fields of practice the discussion about the link between the ‘apparently’ independent thought of individuals and the social environment in which those thoughts appear to begin their existence in social practice can focus on the cultural artefacts of semiotic mediation as units of analysis. Vygotsky’s contribution to an understanding of the content of semiotic mediation - language use in social and personal interaction - is explicitly set in the context of that discussion about what actually constitutes being.

Work on the relationship between the individual and the social through language was undertaken by one of Vygotsky’s contemporaries Volosinov (see Morris, 1998) in his critique of the language systems of Saussure and Von Humboldt (Swingewood 2000). John Parrington’s 'In Perspective: Valentin Voloshinov' (Parrington 1997) was instrumental in helping me construct this section of the essay with its able synthesis of the key issues these theorists dealt with 80 years ago.

In this work of relating thought to action, through the conscious preparation of projects in the mind both Marx and Engels described language as the practical consciousness that enables individuals to communicate their internal consciousness to others through words. It is my contention that words contain that consciousness and significantly declare and completes that consciousness practically in the social space.

This notion of language as practical consciousness was developed by Volosinov (Morris 1998) in his critique of Sausurre and Von Humboldt. Volosinov recognised Sausurre’s attempt to provide an objective explanation for the structure of language and he saw in the tradition of Von Humboldt a powerful plea for the creative role of the individual in producing language as a means of communication. What Volosinov did in his critique was to transform Von Humboldt’s creative individual into a social individual whose grasp and use of language was embedded in the social and cultural space in which she/he moved. Sausurre’s system was examined in direct relation to this social context so that the evolution and development of the structure of language (langue) was explicable in terms of the (parole) which directly expressed the practice of sensuous human activity. Language was part of social development and as an act of social beings it contributed to that development.

Saussure, according to Volosinov (Morris 1998) argued that language was a closed system of signs with a structure
that could be studied on its own terms and for its own sake. In this sense de Saussure examined ‘langue’ – the abstract concept of language rather than ‘parole’ the manifestation of language in speech. Von Humboldt proposed that language was a creative act of the individual and that humans had an innate capacity for language use. This theoretical lineage – an abstract system of linguistic rules and the humboldtian concept of the innateness of language as a system of communication was developed and synthesised by Noam Chomsky in the 1960s’ (Parrington 1997).

Chomsky developed the notion that language was more than a behavioural manifestation of individual response to external stimuli simply acquired by imitation. He argued that the individual's potential for language was universal and separate to the performance of that language in speech and written form. Chomsky placed the human subject at the heart of the debate about what constituted language. He proposed that human beings are born with a basic linguistic template into which any specific language fits. The proposal is a strong one: babies do learn their respective languages extremely quickly and with a high degree of accuracy. Given Chomsky's claim that each person is born with an innate sense of language rules his theory does allow creativity with language. All the basic template does is to provide a guide for people to make themselves comprehensible to others. But here in lies the problem with Chomsky's hypothesis if all the template does is provide a launching pad for the whole human community to utilise language creatively across the life span then it has to be asked of Chomsky – where does the individual creativity come from?

For Vygotsky the task of locating the development of individuals and the creativity individuals bring to bear on their own development began with Marx. He recognised that both Marx and Engels did not develop a comprehensive linguistic theory (See both Vygotsky 1976 & 78, particularly the commentaries by his editors). However in both Marx and Engel's work there was a valuable starting point for his investigation in that both men recognised that language arises out of the need of individuals to communicate in the various social spaces they find themselves in.

Spaces that act on them through the social intercourse of others and on which they too can have a profound effect through the articulation of their thoughts about what is possible and desirable in social and personal development (Marx and Engels, 1970). Vygotsky’s perspective focused on the psychological aspects of language development in order to demonstrate the process outlined above. For Vygotsky language was the means by which reflection generalisation and thought processes took place. He was concerned to root this social conception of speech in the development of individuals from infancy and spent some time in developing experimental techniques with children in order to validate his hypothesis. At this point it is worth noting that Vygotsky was attempting to provide a solution and explanation for the socially rooted development of individuals in the context of work being undertaken by Volosinov in philosophy (Morris 1998) and Mikhail Bakhtin in sociology (Swingewood, 2000). Bakhtin's work grounded the notion of the self and the autonomous individual in the latter's relationship with the other.

What is important here is that Bakhtin did not deny individuality rather he celebrated it as a distinctively social public and collective phenomenon. Vygotsky's contribution to this model of the social development of the individual was an attempt to answer the question - how did each individual come to the point where she/he could celebrate their individuality with others in a communication that had meaning for both the individual and the other?

Developing the dialectical process.

This is a complex discussion grounded in the discourse of what constitutes being, We can get into this process because of those dialectical connections that essentially negate isolation, making our humanity integral to the process of learning, development and being.

There is nothing mystical in this process, learning and development move as a result of the struggle - the working of dimensions both against and with each other in the actual self movement that characterises the relationship of learning and development. This is the site of that energy, elemental and potential power that drives that conscious struggle we all engage in to make sense of our world through the daily new beginning of mind. Look, on this discussion of dimensions, I'm not just dealing with the social, cognitive and emotional dimensions of learning (Illeris,
The dimensions that both drive and act as a skeleton shaping the relationship between learning development and being emerge from that relationship as well. Take the dimension 'future', in order to make sense of our learning in the present we have the gift of our past but we drag into this temporal relationship another dimension, one that doesn’t exist other than in our minds - the future. We create both a point of time and a space that we fill with our plans, these then direct from our future how we conduct our present and modify and manipulate the process of learning which in turn drives a particular kind of development. The future becomes a powerful ideological dimension, those social and political forces that can, by dint of material power today, convince the rest of us that a particular future is inevitable (TINA!) will drive that fiction deep into our consciousness, the fiction will earn its objective status and again inevitably my equally objective opposition to that future will be reduced to a purely subjective opinion, deserving only a place in the footnotes on those pages that deal with our past. (See the extended quotation on page 5 where Suzuki’s argument is laid out).

This is the struggle. When a student says it’s difficult, when they don’t get the discourse that a critical humanity existent in all of us comes before, pre figures, all opinions all notions all accepted ways of being, when the process of learning is so manipulated and modified by ideas, notions and concepts that take on the shape of natural dimensions in the process of learning they literally have to re-configure their thinking. A contradiction emerges in their study. Their taken for granted common sense view of the world is literally assaulted by the apparently ‘purely’ theoretical concepts that leap and dance from the pages of the book or paper they read. There is real opposition here, between theoretical concepts naturalised into practice and held in our consciousness and those theoretical positions that would seek to ground our practice in a common humanity that negates current social practice, theoretical positions that would, for instance, take the concept of social capital (see Field, 2000 for significant discussion and for definitions of these terms in the context of the field of Practice) and its notions of bonds, bridges and governance (Baron, Field and Schuller, 2000) and annex its rational kernel - the social, freeing entirely natural human relationships from the vector capital, a vector in the sense that it carries into the human relationship the notion that some how the social is external to our experience, something that we have to consciously build within particular parameters, suggesting that if we are left to our own devices that capital will take on negative connotations, we will not use it properly. Classically working class communities, for instance the former mining villages of the UK, that have experienced a catastrophic economic attack, have been subject to the kind of regeneration experiment that sought to introduce bridging social capital because, it was claimed, the kinds of social bonds found within such communities weakened new initiatives in economic regeneration. The point being made here is that a particular ideological formation captures the way we live, distorting entirely natural reactions to intense social stress and then serves up a way of being that insists that social regeneration requires external stewardship to draw in new bridging social capital because the communities themselves have a social (capital) deficit (Rees 2005).

When confronted by such discussions and conceptual struggle, when faced with a new reality in which common sense and taken for granted practice is revealed as nothing more than a set of dominant theories about how we should conduct our earthly affairs the learner (all of us now!) is faced with that conceptual struggle in which opposites have shape and content and motion precisely because of the existence of opposites. This is the real meaning of that conception of their unity, their unity and interpenetration emerges from their opposition and that struggle that ultimately requires that a particular way of living and being becomes dominant and expunges past practices, Zizek (2008) has some provocative and compelling arguments on this issue of taking this struggle of opposites to its natural conclusion. My argument here is that yet again this struggle is one of the key dimensions of learning, that acts to stimulate and drive not just the acquisition of new knowledge but our apprehension and use of that knowledge to create new ways of living.

The multi dimensional process of learning drives development because of its inter connectedness, it is a sensual link between us and the world, it places the human being in the world. So learning when not fictionalised, modified or manipulated enables us to embark on apprehending the world through the combined process of splitting up our practices (the beginning of critical analysis) in order to see those parts in their inter relationship (incidentally this is the analysis / synthesis process that completes the theoretical element in the total process of critically
reflective practice, its often mistakenly elevated into Hegel’s method as a whole (see Beiser, 2005 for a discussion on how Hegel is misunderstood) - that’s not the case and simplified models of thesis, antithesis and synthesis should be rejected as a mechanical modification of a sensual embodied process that actually takes place in our world naturally and socially. This is an intensely material process as well - when we learn about the multi faceted multi dimensional world we live in we can only do this because learning is inextricably woven into this reality through our actions in the world. We take on the weight of the world (with apologies to Bourdieu, the term La Miser du monde goes to the heart of the struggle I’m struggling with here! Bourdieu, 1999: viii) and fight this weight. It’s in this daily fight with all its negative notions of misery and difficulty that we see something of that humanity, at least the possibility of a definition of that humanity in our desire to develop freely, to be rid of misery, want and fear, to begin again. Marx concretised this struggle when he wrote:

"Man appropriates his comprehensive essence in a comprehensive manner, that is to say as a whole man. Each of his human relations to the world - seeing, hearing, smelling, feeling, thinking, observing, experiencing, wanting, acting, loving - in short, all the organs of his individual being are the manifestations of the human reality." (Marx, 1974: 299-300).

In this sense we are equipped comprehensively to deal with the quantitative weight of our world, to deal ostensibly with the raw material of reality and qualitatively shape and act on that reality through our unity with it in our lived practice. In this practice made up of hard work, slumber, reflection there are other tendencies at work promoted and driven to dominance at those times when our grasp of reality enables rapid and diverse development.

This led Vygotsky to consider development as "a complex dialectical process, characterised by periodicity, unevenness in the development of different functions, metamorphosis or qualitative transformation of one form to another, intertwining of external and internal factors, and adaptive processes" (Vygotsky, 1978: 73). A cooked dinner or a revolution have quantitative features - fish or the inability of the rulers to continue ruling - but it is conscious sensual practical active human learning that drives our development, provides us with that visible ability to cook that fish beautifully or on a slightly grander note make that revolution, no ruler no matter how incompetent or corrupt gives up the power. This is the dialectical process we call learning, it’s not the moribund stalinized philosophy of long dead states, but the processes of life revealed at that point where the dialectic of learning spirals with the dialectic of development and new possibilities of living are opened up to us, new in the sense that we can practically grasp those possibilities, old in that sense that our drive to develop lies deep in our cultural historical genesis, it’s worth quoting Suzuki at this point:

"Those early humans are not numerous, large, strong or fast, or endowed with special sensory abilities. There is little to indicate the spectacular trajectory this naked ape is about to follow.

But if we watch them for a while, we can recognise their special secret: their behaviour reveals that they are intelligent. The human brain endowed us with a massive memory, insatiable curiosity, inventive-ness, and an ability to think in abstracts. These qualities more than compensated for our lack of physical and sensory abilities. That brain created a notion of a future, even though the only reality is the present and our memories of the past. And because that brain invented a future, we recognised that we could affect that future by what we do in the present." (David Suzuki: The Guardian, Society Guardian, Environment, 12.03.08: 9.)
that belies crude mechanical interpretations of Marx’s work. Very careful reading of just one of Marx’s theses on Feuerbach reveals the richness and humanism that is contained with in us all and revealed dialectically in Marx’s writing.

"The materialist doctrine that men are products of circumstances and upbringing, and that, therefore, changed men are products of other circumstances and changed upbringing, forgets that it is men that change circumstances and that the educator himself needs educating. Hence, this doctrine is bound to divide society into two parts, one of which is superior to society (in Robert Owen, for example).

The coincidence of the changing of circumstances and of human activity can be conceived and rationally understood only as revolutionising practice."

(Marx, 1976: 7)

Reclaiming Learning – beginning again (2010-10-17 08:00)

Learning then is that process in which the material world crashes into my consciousness, it is a space of both stress and possibility, a profoundly active process in which I continually contest who I am, where I may have come from and where I may be going. At every turn in the road I seek a way of moving, a particular way but that particularity contains a universal, a conception of life that acknowledges movement, backward sometimes but usually in the society I live in a movement forward, the use of what I have learnt being put some instrumental end. This moving forward, future, progress, keeping going, "running faster" become the universal motif’s of learning in our 'learning society'.

The cultural and historical particularity of this notion of time in learning can be illustrated by reference to those human beings who think and act very differently because their relationship to the world is mediated, using Vygotsky’s understanding of this term, by cognitive processes that put the future behind them and the past in front of them. Nunez and Sweetzer (2005) conducted research amongst the Aymara speaking indigenous people of the Andes highlands of Bolivia, Peru and Chile.

They found that older Aymara people gesticulated and spoke about their temporal positions in terms of the past being in front of them, in front of their eyes and bodies - because they could see the past through their experience of it. The future lay behind them because they could not see it. This was part of a social, cognitive, emotional and physical approach to the present that has resulted in a distinct social and cultural way of being and identity. Given the historical development of this part of the south with the development of urban living dominated by the social and cultural mores that insist we all move faster and faster forward younger Spanish speaking Aymara no longer gesticulate, speak or hold themselves bodily in ways that deny the future. The future they see is dominated by their position in the urban market economy. An individualist and instrumental view of self is embedded in social, economic and cultural relationships through learning to live in a particular way in society. Learning becomes that process of acquiring skills that develop human capital and employability.
The point being made here is that human learning is that natural process where complex biological and social dimensions play with and against each other as humans develop and create their sense of being (See Lewontin and Levin 2008 for a scientist's view of the dialectics of nature and biology). We can choose to think and therefore act differently and herein is the heart of learning, the active process of thinking and living, theory and practice, those contradictions that that in their unity make up the whole of our lives, Marx (1977: 174) put it in this way,

"We presuppose labour in a form that stamps it as exclusively human. A spider conducts operations that resemble those of a weaver, and a bee puts to shame many an architect in the construction of her cells. But what distinguishes the worst architect from the best of bees is this, that the architect raises his structure in imagination before he erects it in reality. At the end of every labour-process, we get a result that already existed in the imagination of the labourer at its commencement. He not only effects a change of form in the material on which he works but he also realises a purpose of his own that gives the law to his modus operandi, and to which he must subordinate his will."

This sensuous relationship between the individual and the world she inhabits needs reclaiming, as Shotter (2005: 6) says,

"in our interactions, we do not experience ourselves as living and acting in a neutral space of simple inert physical objects. As living, embodied beings, we can, at each moment in our interactions with the other and otherness around us, not only 'go out to meet them', so to speak, with the appropriate anticipations and expectations at the ready, but we can also have an evaluative and anticipatory sense of 'where' we are with them, and of 'where next' we might go with them—that is, we can have a shaped and vectored sense of how we are placed and how things are going for us in what we might call the landscape of now."

That embodiment, that being in the world, no matter how thrown in we may feel is again summed up by Marx (1970) when he declared that we are born into conditions we did not choose but we can go on to make our own history. So I claim it is our very nature (there is a human nature dialectical in content and form) to seek our selves through the world and to seek self development. For this to happen across the life span we have to actively attempt to transcend the social space we live in through a conscious struggle for new ways of seeing and to do that we have to plan and plot in our own minds and then establish principles that both work practically in the field of education and at the same time address and provide a philosophical basis for a practical grasp of our humanity so that we can use it to conquer the human condition.

It is the social dimension of learning that provides the critical resources for this work and in particular the principles, insights and perspectives of popular adult education. Work on popular adult education, particularly its radical core, is extensive and there is a long history of the struggle for "really useful knowledge" (Johnson 1979 and Thompson 1980), so a question could be asked about its relevance and use here in this paper, surely a sign posting to the literature would be sufficient?

My defence is that this literature and the practical projects of popular and adult education contain those principles that act both as a theoretical resource for action and at the same time are contained in that action, a discussion taken up by Aronowitz in his latest work on schooling and education with its focus on Gramsci and Freire (2008). This dialectic working inside each principle provides the motion for development precisely because it involves people working with each other, talking with each other, acting in social contexts, that leads to conflict and consensus in a way that celebrates both purpose and a sometimes joyous messiness, Eagleton's point (2007:174) that "what we
need is a form of life which is completely pointless" is found in these principles in the sense that they celebrate human life and learning as it is, explicitly rejecting the instrumentalism that would have us learning for work and then leisure rather than just for life itself. What needs to be added to these principles is an engagement with how our collective practice (again a working principle in transformative educational movements) works through the contradiction of conflict and otherness, given that our drive to self development requires that sensual relationship with the other that can descend into the barbarism of the human condition or ascend to that point where "we shall have an association, in which the free development of each is the condition for the free development of all" (Marx, Engels, 1970: 53).

In dealing with these principles it is absolutely apposite to begin with practice and the question of how we direct practice and what the intention of that practice is. If the ultimate aim is the pointless then notions of leaders and led carrying out instrumental action has to be rejected. Practice is in this sense directed (a contradiction in itself) toward self development through non - hierarchical relationships between those who consciously direct their intellect toward change and development toward that world where we celebrate the pointless and those struggling toward an awareness of their place and a contestation of that place. The principle of a rigorous democracy is contained in these relationships in such a way that those at the centre of such relationships cannot modify or manipulate the relationship, holding back self development through a mono logical re - creation of that ideological abomination, TINA (there is no alternative).

Alternatives begin with a necessity, the necessity to break oppression and exploitation, the twin drivers of war and poverty that both in turn trap billions of people in those parts of the planet subject to the ravages of climate change and ecological crisis. There is no debate here, we should only be discussing and acting on the self development of billions of people through an identification of what strategy and what tactics globally and locally address the needs of people - needs that engage with liberation from exploitation and oppression and liberation for our humanity. An aside here, The Internationale is often sung as "the international unites the human race", correctly sung it becomes "The Internationale is the human race." The late Dr Max Adereth recounted that too me many years ago at Lancaster University.

To be true to our dialectical premise however principles need to have both something of the grand and something that speaks directly to people. The engagement of individuals in education programmes needs that refinement of the universal (liberation in both senses) into the particular. In this case programmes of education and study are negotiated and open, learner and teacher both bring critical resources to the meeting and allow that open space in the meeting for the creation of new resources. Wrigley’s notion of open architectures of learning (2006) I think is a particularly good example of practice that liberates and importantly is an operational strategy that introduces people to the notion of a shared education.

The principled dimension running through these concepts is that the oppressed and exploited have histories that have been systematically erased, in some cases in the most ferocious and bloody manner. These histories contain the building blocks of modernity, The English ruling class took over 150 years to build their economic 'revolution' on the bodies of the enslaved, colonised and working class of these islands. Stalin took rather less, a decade, but at the risk of being accused of simplifying historical process it was the same bloody spaces being created, the time frame was different. These spaces in history are the socio - genetic footprint of the vast majority of the human race. It’s this footprint that is revealed when people begin to use that history to shape possible futures from present action and study. This is not an archaeological exercise or some study in folk history, the political struggles and socio economic dimensions of history are part of, inform all current practices. Practice can move forward through our understanding and utilisation of history’s lessons today. This negation in a real sense carries forward the unfinished business of history, namely the throwing off of the rule of capital that emerged to liberate human power and then enslave that power to its continued production, thereby negating its early promise and in its production of that antagonistic contradiction - it frees and enslaves at the same time - providing a material basis for its demise. The problem here is that its totalising presence contains the possible destruction of the whole species as it both globalises the planet and stuffs itself with the wealth of the planet. The image of a system engorging its own being is a powerful
and disturbing one, the point is that from this historical standpoint we can see the embryo of that possibility in
capital's genesis and the mistakes we made at those epochal moments when we challenged its power. This point
of both learning from failure and possibly failing again is discussed in Zizek (2008) hopefully we can go beyond failure.

This is the point where our engagement with each other, our education of each other becomes that struggle
for knowledge that celebrates the complexity of knowledge and its relationship with our struggle to know what
and who we are. If you read through Lenin’s early 20th century prose, e.g. "clerical obscurantism" this is what he
precisely said in 1915,

"Human knowledge is not (or does not follow) a straight line, but a curve which endlessly approximates a
series of circles, a spiral. Any fragment, segment, section of this curve can be transformed (transformed
one sidedly) into an independent, complete, straight line, which then (if one does not see the wood for
the trees) leads into the quagmire, into clerical obscurantism (where it is anchored by the class interests
of the ruling classes). Rectilinearity and one sidedness, woodenness and petrification, subjectivism and
subjective blindness - voila the epistemological roots of idealism. And clerical obscurantism (= philosophical
idealism), of course, has epistemological roots, it is not groundless; it is a sterile flower that grows on
the living tree of living, fertile, genuine, powerful, omnipotent, objective, absolute human knowledge."
(Lenin, 1972: 363)

The language may appear overdrawn to a 21st century audience, but Lenin's insistence in these notes is for real
struggle over knowledge and not the easy dismissal of knowledge, it is an argument for the practical grounding of
that struggle that should engage every one concerned with the human condition.

Reclaiming Learning – concluding thoughts (2010-10-17 14:00)

Here at this point of conflict inside the spiral process of knowledge as ideas, concepts, principles and insights are
fought over, we begin the process of positioning ourselves, a stage in the struggle for self development. This is a
point of the highest personal anxiety, where Lenin's straight line becomes a path of escape from the spiralling of
learning, development and being, this is the point where the claim for a quiet life, for non involvement, is grounded
and grows on that tree and is therefore culpable in the struggle. There is no opt out clause here, except death. This
is also the point at which we can begin that practical questioning of our place in the world, those myriad straight
lines of common sense ideas and taken for granted positions that lead us into our own 21st century quagmires. At
this point take time to reflect, cast off academic propriety (you probably already have on reading this...well done for
getting this far) and just think of the absolute and almost stunning banality of such 'clerical obscurantism' as human
capital and nudge economics (Thaler and Keller 2008) a text damned and silenced within a year by the world banking
and economic crisis, a banality then that locates regular historically located crises in our humanity rather than in its
condition at one point in time and social space.

The possibility of despair is great, that comes with the almost crushing weight of the world (the human condi-
tion), so it is precisely at this point in the struggle that a recognition that what it is to be human (self development,
to know that I'm human) emerges from that process we call relationships with others that can drive forward those
collaborative projects that actively challenge the attenuated conceptualisation of the individual that underpins
dominant notions of identity, notions that will admit the relevance of relationships but not their primacy in creating self, Bakhtin’s dialogical self, if you will (Shotter 2005).

It should be clear at this point that the relationships we enter into do not have some mystical quasi spiritual status that draws us into being. There is no plea here for a volk at worst or some vague sense of community at best. No, rather it is a sense of self and identity that develops through the struggle with others, so that at any one time it can contain those emotional dimensions of self that we call happiness, sadness, purpose or lack of purpose.

This is the process of learning, we can use the skills of reading, writing, speaking in this process but we should not reduce the process to these human skills, in this sense the skills we acquire in the field of practice that we call education become part of those critical resources we can use with others to drive forward our development as a species. This return to Vygotsky becomes an advance that is so wonderfully encapsulated in Brendan Keneally’s poem (2003: 60),

"Though we live in a world that dreams of ending
that always seems about to give in
something that will not acknowledge conclusion
insists that we forever begin."

Not a bad place to begin a point of departure into our future on this planet and not a bad definition of a reclaimed learning that will not acknowledge that this is as good as it gets.

We begin with a history and the formidable weight of human productive energy, if we can believe that the expropriation of that history and the utilisation of that energy can be combined and then act on that combination we not only reclaim learning, we also create a new critical resource for all those social and economic struggles against capital. That resource historically points to the contradiction in capital that it has both freed and enslaved. At the same time with the development of this resource we could begin to locate the development of freedom in our self development (Humanity) and locate slavery (oppression and exploitation) in those social and economic structures we have thrown up in a collective development of the species since our emergence as a qualitatively different species (modern Homo sapiens sapiens) some 200,000 years ago (the Human condition). The starting point is a questioning of that claim that there is a fundamental human pathology as old as modern homo sapiens that can be called the human condition. The journey should continue with the process of negating those early collective endeavours of hunter gatherer societies (our humanity then) with an examination and celebration of how collective development today can lay the basis for a free self development, it is not a denial of 200,000 years and it may contribute to another 200,000 years of life for us on this planet.

This is essentially the struggle between our common humanity and the human condition revealed through a re-appropriation of that process that both pulls us into the world and enables us to grasp that world and change it, the process of learning.

"What is to be done?"

The danger of conclusions is that they precisely sign off, draw a line, end!

But not to conclude provides no beginning for any one else, this is not some clever (or conversely puerile) paradox.
How can a conclusion stimulate thinking and ways of acting that begin with our capacity to act on the structures we live and work within? In the literature of Trotskyist sects you often found the part sentence, "The working class must.....!" Very much like the stopped clock there were occasions when their demand for our action was right, only to be ossified as space and time in the social world moved on from midnight. So there is the problem, how does the owl of Minerva change its habits and take wing at dawn instead?

This is no time for lists of proposals for a range of social forces to follow. Rather it is the time when, while resolutely resisting all the attacks on whatever gains that have been made in existing society we also set out all the intellectual and practical resources we have for claiming our identities, our individuality, our foresight as human beings.

We should struggle at every level of society, a dialectical moment, process, when we embark on the struggle against capital throughout society. So at these moments the most apparently modest intervention in the personal resistance to our modification and manipulation resonates with universal resistance and, crucially with new collective ways to encourage and stimulate self development.

Remember that the bigger battles, the resurgence of Trades Unionism, the resistance to global exploitation and war not only strengthen people materially they create a confidence and an intellectual space for each individual to participate in change. For Academics mired in regimes of conformity, trapped in the ideology of the global knowledge economy, the simplest attempts to, say, transcend modularisation provides that light at dawn for new practices, new ways of being that here today actively act on that moment when we all realise our capacity to either submit or challenge: Let me end with a big thought and one of my beginnings!

I began here with a quote cited in 1986 from the work of an educational philosopher who is considered to have been an analytical philosopher of Education concerned only with the analysis of 'strictly defined methods and techniques' in pursuing an understanding of Education ethically and cognitively. It is slightly naughty because this where my interest in Peters begins and ends, for me the rather dated concern to get things right has been outstripped by the breath taking progression of human development and destruction that actually necessitates a return to those bigger questions. The question I propose is reasonably simple, can I in my discussion, teaching and learning about one of the foundational disciplines of Education Studies, Philosophy, set out on the path proposed rather contradictory by Peters, who consistently rejected such 'big' thinking in his work? Or maybe the 'can' is wrong, should I in fact be getting on with this task as part of a much bigger project of developing critical thinking and practice in the field?

I will start (again) with a fairly bald statement. Education as a field of practice is dominated by big ideas: dominant ways of thinking about education are governed by a set of assertions about the process of learning and the practice of teaching. Process and practice are judged to be worthwhile and useful if they:

1. Play a measurable (quantifiable) part in child development. This incorporates notions of what constitutes childcare and upbringing and is enshrined in the Every Child matters agenda and the common core of skills for the children's workforce. That current government policy may cut the public service expenditure in children's services does not erode dominant ideas about family, upbringing, discipline and the discourse of responsibility and obligation placed on each individual, a discourse with roots in possessive individualism.

2. Explicitly develop measurable skills across the life span. The dominant trope here is that the process of learning and the practice of teaching come together as training. Training is the recognisable and quantifiable relationship between a provider and purchaser underpinned by an instrumental rationalism that dominates in the field of practice precisely because each person enters that field of practice as an individual:

"The self - governing individual constitutes the ultimate unit of the social sciences; and that all social phe-
nomena resolve themselves into decisions and actions of individuals that need not or cannot be further analysed in terms of superindividual factors.” Page 888, Joseph Schumpeter (1954) History of Economic analysis, New York, OUP.

“**The important doctrine that all social phenomena, and especially the functioning of all social institutions, should always be understood as resulting from the decisions, actions, attitudes, etc., of human individuals and that we should never be satisfied by an explanation in terms of so-called collectives (states, nations, races etc.).’** page 91, Karl Popper (1945) The Open Society and its enemies, London, Routledge and Kegan Paul.

Methodological individualism of this kind however does not sit with a libertarian approach to individual conduct in the dominant discourses, ideas and concepts at play in current educational practice, policy and vision. Rather it is coupled with and underpins a neo conservative moral project emphasising the duties and obligations that frame instrumental rationality in current strategy and policy. The purchaser and provider are at work producing particular products and commodities. The student / pupil begins her instrumental journey as a purchaser of the product and at the end of the process emerges as a commodity herself in what is asserted to be a global market in the knowledge economy. This ideological slight of hand is one shared by most policy makers and politicians and taken for granted as the ‘given state of affairs’ by many people on the field of practice. This ideological construct, globalisation, is in effect the conceptual framework for disciplining training and education precisely because each individual is obliged and has a duty to take her place in a world dominated by:

- The Global Knowledge economy and a global managerial and technocratic staff.
- Global Governance: Global discourses of governance
- Global Super Capital: The ‘myth’ of the ‘stateless and nationless multinational company.
- Global space and time.

Process and practice are judged to be worthwhile and useful if therefore they can be disciplined in a dominant paradigm: schooling. This paradigm is the site of struggle over who disciplines and indeed forms the ideological struggle between those whose conception of free schooling would place that discipline firmly in the hands of capital and those who remain wedded to some form of social democratic model of control in the global knowledge economy.

Herein lies my problem, there are clearly very strong political, economic, social and philosophical ideas at play here. To respond with polemic and rhetoric at the level of appearances is fine, we can point out that free schools as policy will not lead to parental control precisely because economic reality dictates that the resources of capital are required to fund educational institutions. The point is however I remain trapped within a particular paradigm, I can refer to and quite rightly defend the gains of the post war settlement, or what remains of that settlement, but I cannot free myself from the ideological terrain on which my intervention takes place. This is the point at which I need to reassess the critical resources I have at hand in order to effectively challenge the historically specific rule of capital in my field of practice. I have to work and re work ideas, concepts, methods of thinking that I have inherited to make that move that challenges hegemonic ideas about how we should educate, teach and learn, that challenge in turn needs to return to practice, helping overturn mere
existence through the actualisation of experience. This simply is the point at which not just I, but many of us, refuse to live, exist, in the old way and begin a process of experiencing practice that actively creates transitional ways of being, of becoming, of developing that constitute new material forces not just at the local level, but internationally: at this point I acknowledge my intellectual debt to the struggles of those in the global South who have got on with that task:

"The Philosophers have only interpreted the world in various ways; the point, however, is to change it." Karl Marx (1976). Collected Works, London, Lawrence & Wishart: p 8.

The key issue here is that the move towards a critical teaching and engagement with the process of learning is trapped, as much as my head might create phantom freedoms I remain part of the academy, part of a schooled and disciplined environment, part of a categorising and controlling network with Brecht’s challenge ringing in my ears:

'As man is only human, he must eat before he can think, fine words are only empty air, they are not his meat and drink.'

I’m trapped and complicit in a world that offers fine goods to those of us lucky enough to live and breathe in one small part of the global north and one small part of our structured and at times overwhelming social space. In this context the temptation to simply give up is powerful, but help is at hand in the very depths of my subject field, in the historical reach of human thinking and practice across history, in the critical resources I can work over with colleagues and students. This is where I (no! We) can begin.

What do you think?

Hi there, I’m indebted to work done in Popkewitz and Fendler ‘Critical Theories in Education (1999), Routledge, pages 118 - 120 by Stef Callewaert for providing a framework for dominant paradigms in education and schooling, often re reading one’s work in public is an important part of both developing one’s thoughts and recognising their genesis. The work on globalisation is clearly based on my reading of Terry Wrigley’s writing for JCEPS. My next task is to take up some of the conceptual work I have done recently around Hegelian conceptions that Marx firmly grounded on their feet. It is often said that Marx turned Hegel on to his head, but actually that is where Hegel began! Marx’s grounding of the dialectic however does continue to raise the problem that it its focus on species being and its development could be regarded as narrowly ableist. Where does becoming and development lead when memory, for instance leaves? John.

Thanks for your info it will assist in my research.

Social Scientists Go To a Robotics Lab (2010-10-18 08:00)

[1] Steve Fuller, Nick Lee, Frances Griffiths and Ann Adams at the University of Warwick are conducting a project within the ESRC-funded programme "Understanding Individual Behaviour". Their project [2]Mimetic Factors in Human Behaviour: Health and Well-Being focusses on the human ability to imitate others, in order to understand the biological, psychological and social mechanisms underlying this process (mimesis) and of their interaction with one another and with environmental factors. In this video, a team from the project visit a robotics lab to see if mimetic factors apply to robots:

I Am Redneck, Hear Me Roar (2010-10-19 08:00)

Y'all call me Bubba. Some years ago – never mind how long precisely – having little or no money, and nothing particular to interest me in Southeast Missouri, I thought I would move away, get an education, get a job, and join former Labor Secretary Robert Reich’s "knowledge workers" feasting at the table of the global economy. I was just like everyone else – reaching out to grasp my own little share of the rusty old American Dream of personal prosperity and the consumer goods that came along with it... but, a funny thing happened on the way to the forum... I mean, at Will Rogers Auditorium... that changed everything for me.

In the winter of 2000, I bought tickets to the “Blue Collar Comedy Tour” and got to hear Jeff Foxworthy tell redneck jokes up close and in person. I also got to hear Larry the Cable Guy explain that Al Gore lost the election because a handful of rednecks from a Dade County, Florida trailer park didn’t know how to operate a voting machine. I suppose if those same machines were designed to look like those video poker “eight liners” or a cigarette machine that our political landscape would have been a whole lot different in the first decade of the 21st century. Essentially,
George W. Bush won the election because a handful of rednecks could find “Jones” on a jukebox but couldn’t find “Gore” on a punch card. If ballots had only looked more like those Bingo cards, the disaster of George W. Bush’s presidency could have been averted – that is, assuming that us rednecks had the good sense to vote with our wallets and not cast ballots based on the emotional manipulations of a Karl Rove or a Lee Atwater.

I enjoyed the show because I am a redneck and the show helped to alleviate the homesickness that I felt being so far away from my kinfolk back in Missouri. “The Blue Collar Comedy Tour” gave me the nostalgic feeling of being back home in Missouri on my grandma’s back porch clowning around with my uncle and cousins. It resonated with the self-deprecating humor that has been culturally ingrained in me. It reminded me of what I would later discover to be “Rabelasian Carnivale.” Gail Sweeney discussed this in “The King of White Trash Culture,” a chapter in the book, White Trash: Race and Class in America. For Sweeney, “carnival is a place of laughter, bad taste, loud and irreverent music, parody, free speech, bodily functions, eating and feasting, a place where excess is glorified” (254). Sweeney goes on to paraphrase the literary theorist, Mikhail Bakhtin when she writes: the carnivalesque inhabits the space that counters and subverts institutions of authority and repression, the dominant hegemonies of Church, State, and, in capitalist democracies, Industry. The pleasures of the carnival are subordinate pleasures: unruly and lower class, vulgar, undisciplined. During carnival, the working class are not working; they are out of their place and out of line (254). “The Blue Collar Comedy Tour” is a representation of that “Rabelasian Carnivale” and I suppose that is what made me want to go in the first place. While I enjoyed the show, at the same time, I was offended by the obviously upper middle class couple that was sitting in front of me and laughing louder than I was. They weren’t rednecks… they weren’t white trash… why were these interlopers laughing at my jokes… at my kin? Having been raised in a community that is known more for its ability to raise up sawmill and factory workers, truck drivers and Wal Mart employees, than bankers and other captains of capitalist industry (those same “knowledge workers” that I had hoped to join at the global economic trough), I wanted to jump over my seat and ask them what they thought was so damn funny. What gave them the right to make fun of us rednecks? For the first time in my life, I think I fully understood how the “n word” functioned in African-American culture. Self-deprecating humor is one thing, but making fun of “the other” is an entirely different can of worms. That self-realization led to me to another question: “Why does it seem like it is OK to make fun of rednecks?” “Why are us hillbilly, white trash, lint head, cracker, rednecks any different than any other group in our supposedly politically correct, diverse, and inclusive society?” My experience at “The Blue Collar Comedy Tour” enabled me to start thinking about my own redneck identity on a peripheral level, but it took the tragedy of the World Trade Center bombings on September 11th, 2001 to really bring my academic/ political interest in my redneck, white trash, hillbilly, cracker identity to the center of my intellectual and political life. Many people have memories of where they were and what they were doing when the twin towers fell on September 11th. I slept through it. I was finishing my Bachelor’s Degree at the time and in order for me to graduate, I had to take classes during the day a couple days per week and take another class online. The only way to keep the lights on and food in the fridge while I was doing it was to work all night long at a night club as a disc jockey. I woke up about noon and discovered that all
hell had broke loose in New York and all classes were cancelled in Texas. I saw all of the replays of the events on the television and felt sympathy for the families who had lost their loved ones that morning. I also tried to come to grips with my own fear about what could happen next and, just like everybody else, had that special anxiety of waiting for the next shoe to fall. Then I went to work. All was quiet at the night club that evening. I guess no one really felt much like suspending the social order and engaging in the Rabelasian Carnivale of Kentucky Whiskey, Budweiser Beer, and country music in light of the events of September 11th. As a result, I got off of work a little early and drove back to my apartment at the university about two o'clock that morning. Not only was I a poor college student, but I was a poor college student from a poor family. While some of the more well to do college students could live nearby the campus or even across town in some of the nicer apartments, I lived in the least expensive university housing I could find. My roommate (a good ole boy from Arkansas) and I were the only two American students in our housing unit. Everyone else was from either India or Pakistan. When I got home from work that night, I noticed a university police officer walking around my apartment complex. Out of concern for my roommate and my neighbors, I asked him why he was there and was shocked when the officer explained that there were a lot of international students in my building and the administration was concerned that some of the "rednecks" might want to avenge the terrorist attacks so they asked the police to patrol the housing unit to make sure that no one got hurt. Since very few, if any, of the folks from the larger community knew that our university even had international students much less where those international students lived, I wasn't exactly sure if that meant that the officer and/or the administration was concerned about me, personally, or my "good ole boy" roommate from Arkansas, but it really didn't matter, I was still insulted. I guess that move shows how much faith that folks actually have in the politically correct society that we live in and the diverse curriculum of the public schools. Many of our students were young and had spent their entire lives learning that although everyone is different in their own way, everyone matters, and yet, the administration still believed that those students that they "allowed" to enter their university because those students had a high school diploma, the proper prerequisites, and the right SAT scores were still capable of a good old fashioned lynching. September 11th taught me that everyone matters and that everyone should be given a chance... that is, everyone except for us rednecks because no matter how much they teach us, how much we learn, and how much we are exposed to other cultures, they still believe that when push comes to shove, we will still lynch people because that is just who we are, that is just our nature. As a result of September 11th, I could no longer see instances where folks that I did not consider "one of my kind" used terms like redneck, cracker, hillbilly, or white trash as being just a matter of what many would see as just "language" in 21st century America. Suddenly, I became acutely aware of an undeniable reality that I wish I could choose to ignore. I left Missouri to get an education, get a job, and, as my grandma says "be somebody." I was too blind to see that I already was "somebody" and that all of the institutions that I had hoped to join when I completed my education and became a "somebody" would never see me as being a "somebody" in the first place. I would always be a redneck, hillbilly, white trash, cracker to them no matter what I did and that they believed that all of the kinfolk that I left behind in Missouri to come to college in the first place, were less human than themselves. At that point, I decided that I would rather be anybody than their kind of "somebody." I was mad that I had busted my ass for the last several years, making good grades, winning literary awards, and being what I considered to be the best student that I could be, just to discover that I was society's "other." The redneck, hillbilly, cracker, white trash "other" was not just any kind of "other." We weren't "pigmentally challenged" in that one could not see how we differed from your ordinary run of the mill "whiteness." We were not "other" because of the visible characteristic of skin color. Our lot in life was much worse. We had some cancerous dark spot on our souls that made us rednecks – something that was born in us and could never be removed through either operation or education – a cancerous dark spot that must be concealed and suppressed – an identity that must be sublimated. In spite of our outward appearance of whiteness, we were, as Dorothy Allison writes in her book, Trash, "men who drank and couldn't keep a job; women, invariably pregnant before marriage, who quickly became worn, fat, and old from working too many hours... and children with runny noses, watery eyes, and the wrong attitudes" (vii.). I can assure you that after 9/11 I had an attitude. For me, a redneck who wanted to move up beyond his raisin', I had already experienced what Icarus experienced when he flew too close to the sun. I had crashed and burned as result of my own hillbilly hubris and knew that no matter how high I flew, I would never be anything more than the redneck, white trash, hillbilly, cracker that came to the university with a pocket full of tuition and would likely leave with nothing more than a pocket full of broken dreams. After all, I would always be a redneck, white trash, hillbilly, cracker. What good were those dreams to me now? Those dreams were
for others and not me because I was trash and the best I could do was “claim [my] heritage with a full appreciation of how often it has been disdained” (Allison xvi). I was not William Matthew McCarter, I was a redneck, white trash, hillbilly, cracker... an interchangeable adjective or noun that applies to me and mine and ours indiscriminately. I might as well be Montgomery Ward Snopes, a character in William Faulkner’s novel, The Mansion, who says:

I don’t remember just when it was, I was probably pretty young, when I realized that I had come from what you might call a family, a clan, a race, maybe even a species, of pure sons of bitches. So I said, Okay, okay, if that’s the way it is, we'll just show them. They call the best of lawyers, lawyers’ lawyers and the best of actors an actor’s actor and the best of athletes a ballplayer’s ballplayer. All right, that’s what we’ll do: every Snopes will make it his private and personal aim to have the whole world recognize him as THE son of a bitch’s son of a bitch (html). That’s a job that rednecks can do well...be Snopeses... The son of a bitch’s son of a bitch...but aren’t there enough of us rednecks trying to do that? Does the world need another Montgomery Ward Snopes? Perhaps I could stay in school, read everything I could get my hands on, and then one day be an academic’s academic? Ordinarily I would say that it is possible, but 9/11 reminds me that I am a redneck. Perhaps I could become a redneck’s redneck. But, what about an academic’s redneck or a redneck’s academic – a hybrid? Maybe I will be a son of a bitch’s son of a bitch, an academic’s redneck or a redneck’s academic before I complete this article, I don’t know, although I am sure that you, my audience, will have established an opinion on this matter by the time that you have finished it. I can say one thing, I won’t pretend to be something I’m not while I write this so called academic discourse or at anytime thereafter. Socrates says to “know thyself” and in order to “know thyself” one must first engage in what educational philosopher Paulo Freire calls “conscientization,” which is the process of becoming critically conscious of the sociohistorical world (html). Through that “conscientization” we rednecks can “speak [our] word and that by “naming the world,” we can “achieve significance as human beings” (Freire, html). Therefore, I will sound my “rebel yell” – my “barbaric yawp” and achieve my human existence through that naming. “I am redneck, hear me roar.”

Lori McVay (2011-01-10 15:01:49)
As a recent Sociology Ph.D. recipient who grew up in rural West Virginia, I took this article to heart. At best, I am a proud representation of my family’s “redneck” heritage. At worst, a researcher using academics to justify my worth as a human being. Somewhere in the middle is a powerful confluence of the wisdom, work-ethic, and curiosity of generations of hard-working men and women. I’ve traveled half the world and am still, at heart, a West Virginia girl - and proud of it.

SI Interviews - Karen Throsby on autoethnography and swimming the channel (2010-10-20 08:00)
As part of her research into channel swimmers, [1]Dr Karen Throsby recently swam the English channel herself and was kind enough to talk to the Sociological Imagination about it as the first in a new series of podcasts.

As Karen put it on her research [2]Blog, ""I will just say that it was an extraordinary, brutal, intoxicating, frustrating, exciting, painful, exhilarating, exhausting day that I will never forget."

Jon Snow, Revolting Student turned Blogger (2010-10-21 08:00)
In a climate of far reaching cuts in every sector the government can get its hands on, Higher Education in Britain is in for a battering over the coming years. Decreased research funding, decreased teaching budgets, and a lifting of the fee cap the only solution on the table -despite the predicted outcome of a 3 tier HE system to the benefit largely of the rich. In this context, HE needs all the help it can get.

Now, Jon Snow wears great ties. This, we British TV viewers know. He interrogates interviewees every night on the Channel 4 News with a BBC-esque air of impartiality (if slightly contrived at times). But on his [2]blog Snow has no particular public to please and, perhaps because he assumes nobody reads it, tells us what he thinks in the rambling manner of someone who as been told blogging is the big new thing but isn’t really convinced. Happy news, then, that Snow has been putting his weight behind HE in recent weeks.

Last Wednesday Snow was at Leeds University for a review of the state of higher education when a group of protesting students burst in to the room. In Snow’s words

"What an experience! I haven’t been “live” in a student union since I was thrown out of university myself. [3]Here we were at Leeds University last night reviewing the state of higher education with a couple of hundred students, academics, and parents when a bunch of revolting students burst in. I suddenly found myself broadcasting whilst confronted by the very people of whom once I was – a revolting student."

He has suggested that the current cuts to HE are likely to lead to a brain drain in Britain which has been as yet unforeseen by the Treasury. This is something which the Times Higher Education magazine has been raising recently, though to an internal audience of academics. Whether it is a real danger is perhaps beside the point, not waiting to find out if threats lead to action is perhaps a better course of action.

So well done Jon Snow! God knows British Higher Education needs some supporters outside of the academy.

Demo against education cuts - November 10th (2010-10-21 15:00)

NUS and the University and College Union (UCU) are jointly organising a national demo, ‘Fund Our Future: Stop Education Cuts’ on Wednesday 10 November 2010, in central London.

The demo is part of our strategy to influence the Coalition Government. NUS and UCU firmly believe that education changes the lives of individuals, families and communities. Education and skills will also be key to our economic recovery.

Staff and students in further and higher education are coming together to build an unprecedented coalition to fight against the cuts that have been imposed upon our communities, as well as to resist the prospect of higher fees and increasing privatisation in education.

More information about the demo can be found on [1]facebook and the [2]web. If you'd like to meet other people from SI on the day then [3]e-mail me before the day. This is one of the most important demonstrations in years. With huge cuts and radical restructuring in higher education it’s crucial that we start to take a stand and fight back now.

Beyond Immigration – the impact of the permanent cap on Higher Education (2010-10-22 08:00)

Over the past few months, Tory-LibDem Higher Education policies have been under the spotlight, mainly due to the controversial issue of students’ fees. However, there are also other, less apparent, aspects implicit in the political plans of the coalition which could have a huge impact on Universities. One of these concerns immigration. By April 2011, the government aims at introducing a permanent cap on [1]immigration. Whilst consultations on the final draft of the bill are still taking place, an increasing number of commentators are now emphasising how the policy could pose a serious threat on the UK Higher Education system, by limiting altogether the number of 'skilled workers' coming to the country.

If no amendments are made to the proposal, UK Universities will have to face both major cuts in funding and a significant reduction in the ability to recruit students and staff from abroad, especially if they are non-EU. The negative impact of this "double whammy" on Higher Education seems to have been largely underestimated by the government.

An immigration system that does not support the efforts made by UK Universities to attract talents from abroad,
would affect and undermine such aspects as academic quality, research excellency and the economy of universities. Moreover, the new arrangement could encourage a brain-spill from within the UK. The long-term effects of such a short-sighted approach could be devastating, as the cases of other countries (Australia and Italy, for example) clearly illustrate.

Browne's plans will drive whole fields of knowledge into decline (2010-10-22 13:13)

The Guardian, Friday 22 October 2010

The Browne report on higher education funding and student finance is wide of the mark in every respect (Universities: Shock at big cuts in teaching budgets, 21 October). The proposal to scrap the present tuition fee limit of £3,290 in favour of potentially unlimited fees set by universities themselves will load future generations of students with unacceptable levels of debt in order to pursue the democratic right of higher education. Those who benefited from a free, publicly funded, higher education should not tell future generations that they must now take on mortgage-sized debts to pay for the same privilege. We cannot begin to see how this arrangement could possibly be "progressive and fair".

Second, the proposal to cut the teaching grant distributed to English universities by £3.2bn, with a 100% reduction for the arts, humanities and social sciences, is a disaster for higher education, culture and the economy. The Browne report in effect proposes the privatisation of the arts, humanities and social sciences in England. It recommends that the state should no longer have any investment in these areas and that individuals should pay for them. The consequences will be to drive entire fields of knowledge into irreversible decline, leaving the country with one of the lowest public investments in higher education in the industrialised world.

Browne imagines that an unfettered market in tuition fees will free so-called elite universities to compete with the world’s best. On the contrary, if there is no public funding, then there will be no cap on student numbers for institutions. Humanities departments in "elite" universities will only survive by increased student recruitment, serviced at low costs. And what prospect is there that research in the arts, humanities and social sciences will survive the cut in the research budget?

We call on all the vice-chancellors of universities in the UK to voice their implacable opposition to the Browne report. It is their persistent call for increased fees in the past decade that has led Browne and his committee to their short-term, and ideologically driven, conclusions. But Browne does not propose an increase in "top-up fees", rather the abolition of public funding to entire fields of academic life.

It is time to put aside the myth of "mission groups" that allows ministers to divide and rule the sector; to defend the very idea of the university; and to protect the life chances of future generations of students in England. We urge all academic staff to contribute to the NUS/UCU demonstration in London on 10 November.

Dancing your PhD? (2010-10-24 08:00)

Writing a doctoral thesis can often turn into a solitary affair, perceived by everybody (sometimes even by the author) as a terribly complicated and neverending exercise. This project offers a fun way of bringing PhD theses from various disciplines - from molecular biology to childhood psychology - out into the light of day. Perhaps you know somebody who would like to dance their PhD in next year’s edition of the competition?

Dancing your PhD: is this idea madness made possible by the Internet, or a stroke of genuis which can help redefine the ways in which we understand - and do - scientific research?

Read and watch videos [here](http://gonzolabs.org/dance/videos/)

[...] This is why, we need more initiatives that keep such as “Dance your PhD” (see our post on 24 Oct 2010) or “Matt Might’s "Illustrated guide to Ph.D.". Even if you [...]
Omar Abdullah, the Chief Minister of Kashmir and President of Jammu and Kashmir National Conference has a fine English accent albeit fake and sure knows how to make a speech prepared before one or two or many mirrors look extempore: “

I don’t know why should I fear the nuclear deal. It is a deal between two countries which, I hope, will become two equals in the future” says Omar in 2008 while defending a fraud nuclear deal made by the Manmohan Singh government – in anticipation of being the head of a puppet government whose strings are pulled by a bunch of robbers in New Delhi – who themselves are puppets of a global mafia in Washington.

There are neither decent armies in the world nor decent policemen. Stanley Kubrick’s "Full Metal jacket" (1987) makes the point rather well: armies exist on this planet to kill – not to do social justice or any justice. To take a line from Che Guevara that I’m fond of quoting, the Indian army is a bunch of

"wild bloodthirsty animals determined to slaughter, kill, murder and destroy the very last vestige of the revolutionary or the partisan in any regime that they crush under their boots because it fights for freedom."

The Kashmiri on the street fights for freedom – freedom from poverty, underdevelopment and humiliation of being suspected and mistreated in the land of his or her birth. The streets have turned into oracles prophesying the doom of the exploiting classes. The leaders are shaking in their pants and looking towards the government of India to send in more forces to suppress the masses. Merely with stones and infinite determination they’re able to resist a powerful army that has no qualms about murdering innocents because it is their job to do so. Though apparently leaderless these are well-organized groups who know how to turn the streets of their cities into virtual battlefields. To turn them down as angry and frustrated mobs would be cynical. They know what they’ve been through and after being lied to for decades by the leaders, the administration and the Indian government they’re prepared to fight for power ironically inspired by a sense of powerlessness.

Struggles are defined not by how they originate but how well they can be sustained. It is here contradictions manifest themselves. The worldview sustaining a prolonged struggle must be clearly understood. Religion as a matter of fact and Islam in particular that puts the justice of God above that of man cannot be the ideological framework of revolt. Islam which is essentially peaceful as a religion stands for preserving the social order and not disturbing or detracting from it. It does not encourage revolutions – after all it is the job of God to take care of the poor and the powerless. Your job is to place your trust in him and live up to what the Book says. Such an attitude is futuristic. Therefore the revolt must not be Islamized lest it lose its radical character.
Secondly, to attack Christian schools and churches – nothing is more self-defeating than that. The Christians in Kashmir have absolutely nothing to do with the intended burning of the Quran in the US; nor do the Christians in other parts of the world. It’s a political struggle for power and not a Muslim-Christian thing. If some day Kashmir must become an independent state it should know how to treat the Hindu and Christian minorities. Without their support they will never have autonomy – simply never. Kashmir – the word itself – and the region carries a sacred association to Hindus of the valley and other parts of India. Any attempt to politically Islamize the region would be fatal not to mention unfair to its minorities. A revolt must base itself in equality and social justice along with a concept of modernity that will give women the political space to articulate themselves and the young the opportunity to make decisions with regard to their lives. If power is only for the men and the women and the young have to continue with the second fiddling – the revolt has failed in an important way.

Most importantly for a revolt to succeed in the modern world it must have an international character. While it takes local roots, to reduce the struggle to narrow ethnicity-based nationalisms does not grip the public imagination any longer. Nationalism is a dying discourse and must be finished off as quickly as possible to make the earth more inhabitable than what it is.

Revolts that happen on facebooks and twitters are not revolutions. They take too much time and kill the essence of what should be happening on the ground. A social revolt is a time for education and genuine camaraderie. Psychological and social barriers need to be broken down and a sense of sharing must prevail among individuals and groups.

Forced by relentless round-the-clock curfews to live like prisoners in their own homes and having to face a violent army with barely any weapons except their own hands – the Kashmiris on the streets have acquired the first lesson in political education which is to fight by any means necessary.

A tiered university system (2010-10-26 08:00)

In the aftermath of Lord Browne’s review on higher education, we are all left wondering the overall impact it will have on higher education in England. Some commentators suggest that Lord Browne’s recommendations will led to a tiered higher education system where elite universities such as Oxford, Cambridge, LSE and Kings could charge up to £12,000 per year in fees alongside not-so elite universities charging less. It is clear then that, students with the right grades and
finances for elite institutions will not be affected under Browne’s report. However, students from poorer backgrounds will effectively have to settle for less prestigious universities to suit their wallets – if they can obtain a university place.

The prospect of a stratified higher education system might be new for the UK, but it is commonplace in America as this [1] article suggests. The US system at present operates a well-resourced upper tier of selective institutions, which mainly caters for rich and white students, whereas the lower tier caters for poorer students and students from minority and/or ethnic backgrounds.

The full impact of Lord Browne’s review is not yet fully realised, but its ramifications for affordable education are already being felt.

“An Area of No Man’s Land”: Policing Protest in Australia’s Capital (2010-10-27 09:00)

Canberra, as the home of Federal Parliament since 1927, has been a focal point for demonstrations and other forms of political protest, primarily on the lawns outside Parliament House (and Old Parliament House). Particularly since the political and cultural radicalism of the late 1960s and early 1970s, what Greg Langley called the ‘decade of dissent’ (Langley 1992), the Government has attempted to strike a balance between the public’s right to political expression and the maintenance of law and order. My work has explored the historical continuities and discontinuities that exist in the history of the relationship between the Federal Government, the criminal justice system and protestors in Canberra since the 1970s. This history demonstrates the tension between allowing protests to occur and their handling by the authorities. Informed by the theories of David Garland, I argue that the Government’s handling of protest in Canberra depicts an exercise in ‘structured ambivalence’ (Garland 2002: 111).

The influence of British law

Patrick Parkinson has aptly stated that ‘[t]he tradition of law in Australia is... a received tradition’ and it ‘cannot be understood without some appreciation of the idea of law as it was developed through some seven centuries in Britain prior to the settlement of Australia’ (Parkinson 2009: 4; 3) With Australia’s political and legal systems inherited from Britain, British law has had two major impacts upon protest in modern Australia. The first is that under common law, there is no protected right to protest. Although the Australian Constitution makes no explicit mention of the right to protest - it is implied as a freedom of political communication with many limitations (McGone 2005: 276).
The second is that British public order legislation (inherited by Australia prior to Federation) had evolved since the fourteenth century, with various Riot Acts established to disperse unruly crowds, when no idea of universal democracy, as we know it, existed. Although the states had created legislation for dealing with protests and other points of public order, the Commonwealth had no such legislation. (The Australian Capital Territory had introduced the Unlawful Assemblies Ordinance in 1937 to deal with protests and public order issues during the last major upswing in political and social radicalism) The utility of these British legal precedents was debated at length in 1971, as the McMahon Government introduced the Public Order (Protection of Persons and Property) Bill into Federal Parliament. The pretext used by the ruling Liberal Party to introduce the legislation was that the British laws were outdated and were unable to cope with the upsurge in protests and other radical political activities in the late 1960s. The Government saw these protests as ‘fraught with the risk of discord and... of violence’ (HOR 1971: 926) and that current laws were inadequate. One of the nefarious elements that had emerged (which the Government felt inadequately equipped to deal with) without this new legislation was a ‘sit in’ protestor who demonstrated on Commonwealth property. George Hannan elaborated on this ‘threat’ in the Senate in a debate on the Public Order Bill:

Commonwealth premises have been to some extent an area of no-man’s land... [R]ecently we had in Melbourne people who I would in fact describe as hoodlums but who describe themselves as protestors, who attempted to set fire to wastepaper baskets in the General Post Office....

We have seen in this country in recent times a growth in what has been euphemistically described as ‘sit-ins’. Only the States of New South Wales and Victoria have appropriate legislation to deal with this particular activity (Senate 1971: 1078-79).

The new legislation was introduced as part of a response to what was viewed as an unprecedented wave of political and social radicalism, but in many ways, the collective institutional memory of the ‘decade of dissent’ has continued to inform how the Government has reacted to demonstrations and other forms of protest, while at the same time, political and social movements (and how their relationship with the institutions of the state) have changed. In my work, I have been able to identify certain themes in the history of protest in modern Australia and government responses that illustrate this conflict between collective memory and contemporary modes. These are:

**The hierarchy of rights – the right to protest v the rule of law**

One of the recurring debates is the tension between the right to protest and law and order concerns. Nearly all those involved in the debate, in Parliament, in the criminal justice system, the media and the wider public, agree that the freedom of political expression and the right to protest is an integral part of modern democracy, but it is often combined with limitations upon this right – the caveat that all protests must be ‘peaceful’ and protestors must obey the ‘rule of law’ is often stipulated. Any violent, or even mildly disruptive, activities are nearly always condemned by the Government, with many protestors portrayed as subversive or deviant. But there have been changes in opinion over the kind of activities undertaken by protestors. In the early 1970s, the ‘sit-in’ was criticised by both Liberal and Labor politicians (see: Senate 1971: 1078-79), but nowadays this tactic is viewed as a relatively peaceful action, seemingly preferred to acts of ‘vandalism’, such as when a crowd of protestors broke away from an ACTU rally outside Parliament House in 1996 and smashed the glass doors of the building, which is often highlighted and condemned by politicians and the press.

**The space of protest**

Since the 1960s, there has been a continual debate over what spaces should be available for public protest and how access to this space should be administered by the authorities. A general consensus has been formed that the lawned areas outside Old Parliament House and Parliament House should be available for short-term, peaceful demonstrations (with temporary structures), which must not interfere with government functions, tourism or road-
ways, although this is subject to various restrictions by the Federal Government, the ACT Government and the police. Kurt Iveson (2001: 368) has argued that this limits protests to the realm of ‘symbolic’ action, rather than direct action.

However the process of legitimisation of protest activities in public space can change. One example of this change is the Aboriginal Tent Embassy, established on the lawns outside Old Parliament House in January 1972, was originally perceived by the Government as an illegitimate site of protest and eventually dismantled by the authorities (Robinson 1994; Lothian 2007). Newly digitalized documents from the National Archives of Australia show the level of distrust amongst the Government and ASIO towards the Embassy and the concentration of surveillance placed upon the site. But since the mid-1990s the Embassy has been recognised by the Australian Heritage Council as ‘a site representing political struggle for all Aboriginal and Torres Strait Islander people’ and the structures are, more or less, accepted as a permanent feature. (AHC n.d.)

But at the other end, the public space open for protest and demonstrations has dramatically decreased as policing techniques have changed from confrontation to co-option and the denial of space for protest activities. Public order policing in Australia has developed, in line with policing strategies developed in Britain, Europe and the United States, towards securing spaces, such as the space around government buildings, financial/business districts and city centres more generally, and preventing protestors from entering these ‘sensitive’ areas. This policing strategy flows on from what Greg Martin (forthcoming) has described as the ‘neoliberalisation of cities’ and the ‘privatisation of public space’, where cities are moulded into ‘hospitable environments for corporate investment, retail, tourism and other high-end services’, while the ‘socially and economically marginalised’ are excluded.

**Policing methods**

There has been a significant amount of material written on the shifts in methods used in policing demonstrations and scenes of public disorder in Australia over the last thirty years, as protest movements and policing techniques both change. Rather than the straightforward confrontation between protestors and the police during the 1970s and 1980s, since the 1990s, policing methods have focused containing protest activities, surveillance and the denial of space for protest. Greg Martin (forthcoming), David Baker (2008), Kate Epstein and Kurt Iveson (2009) have all demonstrated how these techniques have been used in other Australian cities and the same processes have been used in policing protests in Canberra. Alongside this, an issue raised by protestors and civil libertarians has been how the policing of protests has been informed by national security and counter-terrorism concerns, with the introduction of post-9/11 legislation under John Howard having the potential to subject protestors to extraordinary police powers and penalties. (see: Hocking 2004: 200-202; 238-239; Lynch & Williams 2006: 16-18).

The police also encourage negotiation between the authorities and protest organisers over the boundaries of the protest and protest actions. The National Capital Authority (2003: 3) has published guidelines for protest organisers in Canberra, stating while formal approval is not required to conduct a protest or demonstration in the ACT, ‘it may be in your interests if you are planning a protest or demonstration to discuss your plans with the relevant authorities’. These negotiations rely on ‘good faith’ between the authorities and protestors, which is not always present and can lead to significant conflicts of interest. An example of these points is the AIDEX demonstration in 1991, where clashes between the police and protestors led to hundreds of arrests and many injuries (see: McIntyre 2008).

**The Inquiry into the Right to Protest**

Between April 1995 and December 1996, the Joint Standing Committee on the National Capital and External Territories conducted an inquiry into the issue of the right to protest with the ACT, with a final report (including recommendations) published in 1997. The documents of this inquiry provide an understanding of the many competing interests that need to be taken into consideration in the ways that the Government (and other institutions
such as the police) handles demonstrations and other forms of protest. The contested interpretations of how the authorities should deal with protest in Canberra was not limited to various protest and social movement groups that provided written submissions and testimonies, but was also demonstrated by the conflicting testimony given by various branches of the government, the civil service and the police. The documents of the Joint Standing Committee illustrate very clearly the 'structured ambivalence' (Garland 2002: 111) of the authorities in dealing with protest and public order issues. This is further demonstrated by the outcome of the Joint Standing Committee, which failed to provide definitive guidelines for the right to protest in Canberra or resolve some of the competing issues highlighted, such as juxtaposition between the right to protest and the rule of law, or the issue of co-operation between the authorities and potential protestors, or the subject of available space for acts of protest.

I would argue that since the 1970s, the issue of protest in Canberra has been continually negotiated by the authorities in both theoretical and practical terms, taking into account both historical precedents and modern challenges, as outlined above. The relationship between the right to protest and the rule of law is continually debated in Australian politics, but there seems to be little chance of a resolution between these tenets of democracy, but all those involved must acknowledge the tension between these facets of political life in Australia.

This work is based on research conducted as part of my fellowship at the Australian Prime Ministers Centre with the Museum of Australian Democracy in Old Parliament House, Canberra. Please direct any comments, criticisms or questions to me at: evan.smith@flinders.edu.au

**Indigenizing Approaches to Research** (2010-10-28 08:00)

What does it mean to see the world through Indigenous eyes, to come to understand the ontological worldview that Indigenous peoples assert as an essential component of their existences? These questions have more than just theoretical relevance; for Settler peoples, understanding Indigenous ways of knowing is necessary for understanding the nature and causes of Indigenous-Settler conflicts. Eminent Lakota scholar Vine Deloria Jr. asserted from the 1960s through to his passing in 2005 that colonial conflicts are rooted in deep philosophical and ideological disjunctures between colonizing Settler peoples and Indigenous resisters (see for example: (Deloria, 2006, 2003, 1997, 1988). Maori scholar Makere Stewart Harawira (2005) has linked divergent ontological and epistemological production of knowledge to the creation of very real social and political conflicts between Indigenous and Settler peoples.
Global networks of power have and do support colonialism, and interconnected networks of state and capital have and continue to concentrate the profits of colonization into the hands of imperial elites while impoverishing and oppressing others. This situation is untenable, unjust and must change. As Settler academics the relevance of Indigenous ways of knowing and being has extended beyond the academic or the material; it has become a deeply personal project, necessary to critical engagement with our histories, our biases and unquestioned assumptions, and our privileges and responsibilities, both individually and as members of larger Settler society. We call on researchers in all disciplines to engage with Indigenous ways of knowing and doing in order to improve research practices, and to rebalance Indigenous-Settler relations worldwide.

Setting the Terms

Many words are and have been used to discuss the groupings of people involved in the colonization of what are now settler states: Indian, Native, Aboriginal, First Nations, Euro-American, white, non-Aboriginal, non-Native. Today, the dynamic discussions and use of two terms has become central to both how and what is being described and interrogated: Indigenous and Settler. Both are at their most useful when used as positional political identities, deriving from culture, self-identification and community identification. Choosing to employ the term ‘Indigenous,’ in addition to being an attempt to move away from other collective terms now considered offensive, works to foreground historical and on-going contestation of colonialism. Scholars of Indigenous politics, Jeff Corntassel (Tsalagi) and Taiaiake Alfred (Kanienkehaka) argue this is central to contemporary Indigenous identities:

Indigenousness is an identity constructed, shaped and lived in the politicized context of contemporary colonialism. The communities, clans, nations and tribes we call Indigenous peoples are just that: Indigenous to the lands they inhabit, in contrast to and in contention with the colonial societies and states that have spread out from Europe and other centres of empire. It is this oppositional, place-based existence, along with the consciousness of being in struggle against the dispossessing and demeaning facts of colonization by foreign peoples, that fundamentally distinguishes Indigenous peoples (Alfred and Corntassel, 2005).

Following Corntassel and Alfred's definition, and in this paper, the term ‘Indigenous peoples’ in the context of North America and comparable settler states refers to peoples whose societies predated European colonization, who exist in complex social and spiritual relationships to land, and who remain primary targets of colonialism. Continuing debate and discussion around the term ‘Indigenous’ helps to ensure that the concept remains flexible, responsive
The term ‘Settler’ is also helps to move beyond essentializing or imprecise terms. Often, the inversion ‘non-indigenous’ or ‘non-native’ is used to denote Euro-Western peoples in North America. Political theorist Adam Barker (Settler) has identified that such inversions tend towards ignoring the complexities of Settler societies and normalizing non-Indigenous society; both preclude important analysis and action. Engaging with the developing field of Settler colonialism (Veracini and Cavanagh, 2010), Barker defines Settler people as including: “most peoples who occupy lands previously stolen or in the process of being taken from their Indigenous inhabitants or who are otherwise members of the ‘Settler society,’ which is founded on co-opted lands and resources” (Barker, 2009). In this way, the term ‘Settler’ is not an ethical or moral judgment but rather a descriptive term intended to recognize “the historical and contemporary realities of imperialism that very clearly separate the lives of Indigenous peoples from the lives of later-comers” (Barker, 2009).

Indigenous Knowledge

The rise of Indigenous knowledge within the academy in the North American context began in the 1960s. This decade marks the beginning of the American Indian and Red Power Movements, commonly associated with the New Social Movements of the middle-to-late 20th century (Day, 2005). Inspired by international anti-colonial struggles, these groups brought Indigenous peoples together from diverse backgrounds to call for governments to honour treaties signed with Indigenous nations, and to challenge cruel treatment and oppression of Indigenous peoples across the continent. The occupation of Alcatraz Island and the town of Wounded Knee, and protests like the Trail of Broken Treaties and the Mohawk blockade of the St. Regis Bridge remain enduring emblems of these struggles. This period also saw the beginning of an ‘Indian renaissance’ in literature, led most notably by Lakota scholar Vine Deloria, Jr’s Custer Died for your Sins: An Indian Manifesto (1988 [1969]). Focused on the goal of sovereignty without political and social assimilation for Indigenous peoples, this work represents a strong assertion of Indigenous knowledge in the academy and concerted contestation of the intellectual paradigms perpetuating subordination of Indigenous peoples. Through the 1970s and 1980s, Indigenous intellectual leaders, including Deloria, Ward Churchill and Hawaiian scholar and activist Hauani-Kay Trask, became well-known experts and commentators on Indigenous perspectives and struggles (Deloria, 1994, Deloria, 1997, Deloria et al., 1999, Churchill, 2002, Trask, 1999). Their groundbreaking work helped to create space in the academy for Indigenous students and scholars to begin studying and researching from explicitly Indigenous perspectives and paradigms. It is important to note, however, that this process has not been smooth; rather, it is the result of ongoing social, political, and intellectual engagement between Indigenous activists and academics on one hand, and institutions regarded as colonial but also potential sources of agency, on the other. In the past twenty years, Indigenous scholars have built upon, challenged, deconstructed, and reconstructed earlier work, and have combined new points of view and types of analyses into a vibrant and diverse intellectual and cultural discourse. New concepts established through post-colonial studies, post-structural analyses, and the expansion of a "global" Indigenous consciousness (Niezen, 2003) have contributed to a growing academic and discursive field, that has also featured the mastering of ‘traditional’ academic disciplines in order to articulate and advance Indigenous knowledge within and outside the academy. Distinguished scholars such as Alfred and Corntassel in Political Science, Waziyatawin (Dakota) in History, and Linda Tuhiiwai Smith (Maori) in Education put Indigenous knowledge, methodologies, priorities, and protocols at the core of their work (See: Smith, 1999, Alfred, 2006, Waziyatawin, 2008). As Smith describes,

[the past, our stories local and global, the present, our communities, cultures, languages and social practices – all may be spaces of marginalization, but they have also become spaces of resistance and hope. It is from within these spaces that increasing numbers of indigenous academic and researchers have begun to address social issues within the wider framework of self-determination, decolonization and social justice (1999).}
As described above, individual experiences comprise the “evidence” in Indigenous knowledge production, while the social necessity of Indigenous knowledge production leads to a discussion of its relational characteristic. This includes “inanimate” objects from the smallest rocks to the earth as a whole (Stewart-Harawira, 2005). As such, Indigenous knowledge is experiential. Indigenous ways of knowing were traditionally critiqued in the academy for a lack of “rigor” in that they did not follow the Western scientific method of hypothesizing and testing against a body of evidence (Deloria, 1997). This critique was based in ignorance of Indigenous methods of gathering, hypothesizing about and analyzing other Indigenous peoples) identity (2000). This close relationship to land and the recursive functions of nature have established Indigenous knowledge as functioning on circular, integrated dynamics, rather than the linear, extrapolative dynamics of (Western) "scientific" knowledge (Jojola, 2003). As such, Indigenous knowledge is that which arises in particular ways, from particular experiences, with particular places and non-human life. It should be no surprise, then, that colonization, especially in its settler colonial form, is a contest for control of space through the redefinition of social and cultural relationships to specific places. Colonial power that disconnects peoples from their lands not only serves the purpose of invalidating and disrupting the generation of Indigenous knowledge; it also frees places from the powerful, counter-definitional force of collective Indigenous understanding. Indigenous places can only be exploited by temporally-driven colonial understandings after the Indigenous-place relationship has been disrupted. This relationship to place establishes the basis for the second characteristic: Indigenous knowledge is experiential. Indigenous ways of knowing were traditionally critiqued in the academy for a lack of "rigor" in that they did not follow the Western scientific method of hypothesizing and testing against a body of evidence (Deloria, 1997). This critique was based in ignorance of Indigenous methods of gathering, hypothesizing about and analyzing bodies of evidence. Rather than decontextualize pieces of evidence for easy analysis, Indigenous ways of knowing are based in the experiences of each individual on and with the rest of the world (Deloria and Wildcat, 2001, Jojola, 2003). This experiential process is the source of, among other things, the oft-noted depth of ecological and biological knowledge in most Indigenous traditions (Alfred, 2005). This experiential method of generating knowledge made knowledge production an individual responsibility and also a social necessity; one’s own experiences were analyzed through comparison and synthesis with the experiences of others. Further, concerns, contradictions, or questions arising from this social analysis required further experience to address, setting up a cyclical system of knowledge that mirrors the cyclical dynamics of Indigenous sacred places (Deloria et al., 1999, Jojola, 2003). Stemming from colonial severing of relationships to land, Indigenous peoples in a literal sense lose the ability to experience the sources of Indigenous knowledge. Indigenous academics in the 20th century have worked diligently to find ways to recreate these experiences in spite of and directly in opposition to colonial interference (Deloria and Wildcat, 2001, Smith, 1999). The social necessity of Indigenous knowledge production leads to a discussion of it’s relational characteristic. As described above, individual experiences comprise the “evidence” in Indigenous knowledge production, while the analysis is both personally and collectively reflective; this collectivity is part of what generates Indigenous peoples cultural and social cohesion (Alfred, 2005). However, the relational characteristic of Indigenous knowledge implies far more than just relationships between humans. Indigenous ontology is premised on the understanding that all life possess its own intelligence which can be learned from and interacted with; it is further premised on the understanding that all things in the natural world are alive or, more accurately, participate in the life energy of the universe. This includes “inanimate” objects from the smallest rocks to the earth as a whole (Stewart-Harawira, 2005). As such, dreams and visions are considered important sources of knowledge production as they are seen as a way of relating to the spirit/immaterial consciousness of places (Deloria et al., 1999). Long-standing relationships to place are seen as essential to the experiences that generate Indigenous knowledge. Indigenous peoples’ objections to environmental destruction – or more accurately, environmental exploitation – are often misread due to the application of environmentalist ethics backwards through time, reading a contemporary, contested ideology onto peoples for whom the
very concept of “environmentalism” as it is understood now would be incoherent (Cronon, White 1993). Rather, Indigenous peoples’ relationships to place are more akin to relations between sentient beings worthy of equal respect, and dependent upon each other for survival. Little Bear describes Blackfoot “rituals of renewal” as essential for the continuation of both Blackfoot society and the ecological systems in which Blackfoot society is embedded (Little Bear, 2004). These rituals serve to continually reinforce relationships to place, and deepen ties of respect, understanding, and intimate knowledge.[3][3] The specificity of Indigenous knowledge is a function of the other three characteristics. Because Indigenous peoples perceive knowledge as deriving from specific places, often through specific experiential actions (such as ceremony) which enact the relationships to specific beings – human and otherwise – all knowledge is considered valid only within the scope which created it (Little Bear, 2000, Jojola, 2003). Even a piece of knowledge that is vital to the identity of a people, such as Holm et al’s conceptualization of “sacred history” as an intrinsic component of Indigenous “peoplehood” (Holm et al., 2003), would only be considered true for the Indigenous peoples of a particular place. In Indigenous knowledges, there are no contradictions, but there is almost always a proliferation of truths. From Knowledge to Praxis Published in 1999, Linda Tuhiwai Smith’s Decolonizing Methodologies: Research and Indigenous Peoples remains one of the most comprehensive works yet written on the uses and abuses of Indigenous knowledge in the academy. Smith establishes that viewing and researching Indigenous peoples and societies solely through the ontological and epistemological framework of “the academy” – the established, rationalist, positivist, Western-scholarship framework – is inherently racist and oppressive (1999). As such, research structures which rely solely on these concepts need to be understood as impacting negatively on Indigenous peoples, and also as structuring Indigenous and Settler peoples into oppositional, hierarchical identities founded on racist notions of “progress”, and thus they must be rebuilt. In Indigenizing the Academy: Transforming Scholarship and Empowering Communities editors Waziyatawin (aka Angela Cavender Wilson) and Devon Abbott Mihesuah (Choctaw) expand on Smith’s work by undertaking specific analyses of the ways that Settler and other non-Indigenous academics have collaborated with deeply colonial projects, as well as suggesting necessary changes in the academy to challenge current oppressions and create space for Indigenous peoples, histories, and methodologies in the academy (2004). Waziyatawin states: Many [scholars] have assisted in our colonization and the perpetuation of our oppression in myriad ways, including celebrating the myth of Manifest Destiny, making light of the genocide and terrorism experienced by our people, and holding firm to a progressive notion of history that forever locks our people’s past and our “primitive” existence into a hierarchy where we occupy the bottom. More recently, many historians are guilty of... focusing solely on the resiliency of Indigenous people while refusing to offer an honest and critical indictment of state and federal governments, leaders, and all the citizens of America who have been complicit in our bodily extermination, cultural eradication, and assaults on our lands and resources. Most historians have been accomplices in a great conspiracy to ensure Indigenous subordination (2004). To counter this, Smith calls for a reclamation of control over Indigenous ways of knowing and being through Indigenized research paradigms (1999). It is important to note that the current discussions as to what an Indigenous research framework actually is and how it functions in practice remain vibrant, dynamic and contested. Given the relatively recent assertion of the validity of Indigenous knowledge these discussions are far from complete. The form of Indigenous research paradigms are fluid and flexible, and are based on the following principles:

• **Intent.** The motivation and intent of a project must be clearly articulated. As Smith notes, research is never neutral, it is always political (1999); the politics, aims, potential impacts (including representation, construction of authority, voice, social struggle) must be considered, and clearly discussed at every stage of the project. Drawing on the importance of relationality to Indigenous knowledge, researchers must identify the networks of accountability in which they operate. This awareness helps to ensure that work is ethical, consistent with the goals of self-determination and decolonization. Ethical research must take into account the impact of the study far beyond conventional considerations, including a need to assess the consequences for ancestors, future generations, and the non-human world.

• **Reciprocity.** Indigenous knowledge is relational and therefore demands a commitment to reciprocity within the basic theoretical framing of a research project; Indigenous peoples’ oppression and exploitation under colonialism and by Settler society demands an equally material and ethical commitment to reciprocity. The parallels
between the physical reshaping of colonized space to extract wealth and the conceptual colonization of Indigenous knowledge to extract value in the forms of both exploitable techniques and methods for ensuring obedience are clear. Extraction models of research are inappropriate, and at all stages, researchers must be willing to share their work and results, and to engage in discussion with the groups/individuals involved in the project or who may be impacted by the work.

- **Respect.** Indigenous knowledge and pedagogies differ in source, process, and content to Euro-American epistemologies. Researchers must develop understanding of the specific cultural, spatial, and spiritual contexts of their work, and must consider sources of knowledge including stories, visions, oral histories, modes of speech, places, and non-human actors. It is the responsibility of the researcher to learn appropriate protocols, and to be aware that authority will change depending on context.

- **Decentring and denormalizing.** Indigenous knowledge, in so much that it is bounded and specific, rarely asserts claims of universality; Western academic knowledge has not extended the same respect. The greatest imposition upon Indigenous knowledge is Western assertions of universal and exclusive knowledge that render Indigenous understandings irrelevant or disempowered regardless of how they are generated or articulated. As an example, in our own researches, we focus on the tension between Indigenous and Settler societies, rather than researching an exotic Indigenous other, therefore attempting to situate Indigenous and Settler knowledges as mutually interacting and challenging perspectives.

An Indigenous research paradigm operates as a dynamic process (Jojola, 2003); it does not allow for universal statements or absolute truths. Part of the intent of Indigenous epistemologies is that knowledge production remains in tension between individual and social perceptions, meaning that the value of the knowledge generated is found in the further knowledge that can be generated through critique and consideration. **Indigenous to Indigenize** The Indigenous scholars we have cited in this paper are working to support Indigenous students, researchers, academics, and communities, and they call explicitly on non-Indigenous and Settler academics to join in the project of decolonizing knowledge production in the academy (Mihesuah, 1998, Mihesuah and Wilson, 2004). If the issues raised in this paper seem far removed from your specific area of research, consider the following: colonial exploitation of Indigenous societies resulted in the resources and wealth, which drove the Industrial Revolution and empowered the neoliberal capitalist state to become the standard bearer of military, economic, political and juridical power. In a very real way, the present wealth and power of the United Kingdom and other G8 states, as well as the current material and social deprivation of Indigenous peoples in settler colonial states, are intimately connected through the primacy of a particular way of coming to know and understand the world, ourselves, and our perceived others (Niezen, 2003). Colonialism continues today, and so does colonial oppression, violence, dispossession, and the assertion of a narrow range of possibilities for human social action and interaction. As Settler scholars Adam Barker (2007) and Paulette Regan (2006) have both identified, ignorance – especially intentional ignorance – is necessary for continuing, contemporary colonialism. As Regan notes, “what we deny is our complicity” (2006). Shifting to an Indigenized method of knowledge production - that is, to take on the challenge and possibilities of engaging with Indigenous ways of knowing - has the potential to starkly reveal these ignored complicities; making room for Indigenous modes of inquiry within the academy ensures structural support for such an endeavour. Alfred cites “a framework of Euro-American arrogance” as fundamental to contemporary colonization (2005). Few actions could go as far, both symbolically and in reality, to dismantle this framework as understanding, acknowledging, and advancing Indigenous knowledge and ways of knowing which can "move scholars toward a stronger sense of professional and ethical accountability" (Weber-Pillwax, 1999). The importance of this two stage process – first revealing "ignored complicities" and then addressing them in part through the use of Indigenized research paradigms and methodologies – cannot be understated. Further, this type of "Indigenized" research does more than simply contrast hidden colonialism or tick boxes of professional and ethical accountability. Engaging with Indigenous knowledge can help to reveal a suite of possibilities for reconsidering our understanding of social and political life today. This method of conducting research is achievable and usable by both Indigenous and non-Indigenous (including Settler) peoples, and the very act of adopting this methodology and
positionality is the first step in asserting the validity of Indigenous knowledges as contemporary, vibrant, and even necessary to a nuanced understanding of how we can coexist as peoples, now and in the future.

**Bibliography**

[5][1] The inclusion of some Indigenous material is happening in many areas in the academy, but is often limited to superficial consideration, such that it is not considered a serious critique or challenge to the ‘normal’ way of doing things. Wildcat and Deloria (2001) discuss this in detail. [6][2] Of course, Indigenous ontologies are heterogeneous and multiple; however, as per Stewart-Harawira (2005), I am generalizing with respect to the common, basic elements of an Indigenous ontology which are generally accepted as shared. [7][3] We differentiate “intimate knowledge” – the knowledge generated of, with, and by place through interaction – from the Western scientific ideal of “objective knowledge” – knowledge gained through impartial and dispassionate observation – for two reasons. First, intimate knowledge relies on a continuous and dynamic set of relationships; this implies that intimate knowledge is constantly changing as relational conditions change, rather than concretized Western knowledge. Second, objectivity – as many commentators have noted – does not truly exist; objective knowledge often reflects the preconceived biases and expectations which humans carry over from their interactions within hierarchical human societies.

Interesting article!

Fred Turner (2015-01-09 20:39:37)
This article centres your own settler privilege. What makes you think you can talk about indigenous knowledge, ontologies or even begin to understand indigenous peoples. This comes off as though you are “indian experts” and if you really want to assist indigenous peoples quit “using” them to advance your own publications (which is clearly the case here).

Sociological Imagination (2015-01-09 20:45:57)
What an astonishing set of assumptions to make - what do you know about the authors?

Emma Battell Lowman (2015-03-10 10:14:56)
Hi Fred, it’s good to hear such passion in a response. We (the authors) are experts in Settler studies - that is, non-indigenous peoples who live on Indigenous lands and benefit disproportionately from settler colonization. The only way to make sense of the settler colonial reality of places like Canada, the US, Aotearoa, Australia and many others, and to work to change our present situation, is to engage from the position of own grounded Settler identity with Indigenous peoples, histories, theory, and de/anti-colonial struggle. We frame our work through understandings of the Guswentha (Two-Row) Treaty, which directs us to deal with issues in our own communities always in relationship with Indigenous peoples. As you’ll see from the bibliography of this piece, Indigenous scholarship is front and centre, and I’d encourage you to read further in this area. Indigenous scholars are leading the way, and our understandings are based on their work and learning with and from such experts as well as with decolonizing Settler and non-indigenous thinkers. You may also really enjoy our upcoming book (out this autumn with Fernwood Press) Settler: Identity and Colonialism in 21st Century Canada!

At first, I was excited to see that an indigenous author has written about indigenizing approaches to research only to have my bubble burst when learning that non-indigenous academics have written it. Emma, you said it yourself that indigenous peoples are leading the way. Then why not let indigenous academics write about indigenizing research from their own lens and worldview? I think it’s fair to say that indigenous peoples are capable of speaking for themselves, specially when it comes to research. The title and the article comes off as if you have done the work but it looks like once again you and the co-author are benefitting off of indigenous peoples hard work. I look forward to reading your book, I hope there is a chapter on privilege in it!

Richard Dawkins vs Steven Rose (2010-10-29 08:00)

A fascinating debate between the world famous [1]Richard Dawkins and the somewhat less famous [2]Steven Rose. While the former is renowned as a populariser of Darwinian theory, the latter is a proponent of [3]systems biology (non reductive and emergentist approaches to Biology) and also a political activist.

Donald Duck Meets Glenn Beck (2010-10-31 08:00)

[EMBED]
I graduated from the University of Manchester in 1987 with no debt. I paid no fees and received a maintenance grant to earn a degree in Politics and Modern History. If my seventeen year old son were to follow in my footsteps he would graduate with debts of at least £50,000 and were he to study in London that could rise to £90,000. In the space of a generation we have witnessed the destruction of the public university.

The Browne Report released a few weeks ago, and effectively rubber stamped in the savage public sector cuts announced subsequently, was simply the final nail in the coffin. Under the beguiling but misleading title ‘Securing a Sustainable Future for Higher Education’ it effectively announced that university degrees are no longer considered a public good but a private investment. Accordingly, it is the individual student, not the public, who will pay its cost. Tuition fees will rise from £3,225 to a minimum of £6,000 rising to a potential ceiling of £12,000. State funding will fall from £3.5bn to just £700m - a total of 80 % but a 100 % cut in areas like the arts, humanities and social sciences that apparently have no public utility.

The cost of a university education may be charged to the individual student but they will be forced to pay for it through the sort of debt-financing that governments across the world now consider so inappropriate for themselves. The scale of national debt is so ruinous we are told it requires emergency austerity measures (like all state intervention these days couched in the inevitable military metaphor of Osborne’s ‘war of welfare and waste’). Students, meanwhile, will be encouraged to take on loans based upon an imagined future income. They will effectively gamble that the loan will eventually pay-off by enhancing their future job prospects and earning power. It will be a hedge against their future security. What are effectively sub-prime loans are guaranteed by the state. Higher education is now modeled on the types of financial speculation that has helped get us in to this mess.

It is thankfully still just about inconceivable that primary and secondary education could be treated in this way - indeed, Osborne claimed he would be investing more in these areas. There at least it seems education remains something that serves a public and social function. Clearly something magical occurs when one turns eighteen and your education becomes a matter of personal not public gain.

When education becomes a private investment not a public good the principle of universal provision necessarily falls by the way. It used to be a central pillar of the British higher education system that all institutions offered a similar range of degrees at the same price (if not with the same prestige). A degree in biochemistry at Cambridge cost the same as one in cultural studies at Liverpool John Moores. In making students customers of educational services Browne opens up the English and Welsh university sector (Scotland has it own more sanely run system) to the vagaries of student demand. Different universities will compete with each other charging variable rates for different degrees depending on the quality of their service and the branding of their product. Everyone recognizes that Departments and programs be cut, many will be reduced to teaching factories where the link between teaching and research is severed, and some campuses will close altogether or be sold off in pieces.

As so often in Britain when business is the model we are told this is how things are done in America. Indeed, it is. Last week the State University of New York cut its programs in Classics, French, Italian, Russian and Theater. In the last two years the University of California has raised its tuition by 32 %, introduced furloughs for its workers that represented an effective 8 % pay cut and are now seeking to restructure the pension packages of its employees.

There are however real differences between the American system and the model being developed in Britain. The now ailing public universities in America existed in a diverse sector with privates (ranging from the small liberal
arts colleges to the Ivy League campuses with their enormous endowments), community colleges and the rapidly expanding for-profits like the online degree factory the University of Phoenix. Private endowments and federal programs like the Pell grant scheme enable both public and private universities to at least be seen to maintain ‘access’ to a diverse student body. Yet even they seem unable to prevent the fortification of privilege amongst those social and ethnic groups most able to take the loans to gamble on their futures. The rest are likely to be driven in increasing numbers to for-profits who offer a faster, cheaper, denigrated, on-line education.

The lessons to be learnt from the American experience are that fees will continue to rise, unequal access between rich and poor will become structural to the system, and the for-profit sector will grow. Buckingham University, once the only for-profit private in the entire UK, may well become the model. In July, the Minister responsible for higher education, David Willetts, made BPP (now owned by the Apollo Group, parent company of the University of Phoenix the largest online for-profit in the US) the second for-profit capable of granting degrees in the UK. With Obama’s administration accusing Apollo and co of using public funds and federally guaranteed student loans to leverage more private debt from students the for-profts are turning their attentions to the UK. Encouraged by David Willetts the for-profit sector awaits in the wings hungry to buy up or ‘rescue’ the publics that will surely fail in the years ahead.

Many politicians and university administrators present the Browne report as a reasonable response to the expansion of student numbers at a time of austerity and shrinking public budgets. Quite apart from the falsity of the choice between rising student fees or reduced numbers of students it is an argument that belies the length, depth and scale of the present crisis.

Firstly, it is not unique to England. Across Europe and the Americas students and their teachers have been protesting against the same processes: the public disinvestment of higher education, rising fees and levels of student debt, the expansion of management and administrative systems for measuring efficiency or ‘excellence’ of services, the quest for new fee-paying consumers online or overseas, the casualization of academic labor, the restructuring of pensions. Yet, the destruction of the public university in England is widely seen as a test-case where these processes are unraveling faster and further than anywhere else.

Secondly, the storm has been brewing for decades. There should be no wistful nostalgia for a once pure public university. In the nineteenth century the great ‘redbrick’ provincial universities were founded on the alliance between industry and ivy. In the post-war period a good deal of academic research served a decolonizing state uneasily placed in the cold war arms race as the student protests of the late 1960s recognized. It was hardly news then when in 1970 Edward Thompson railed against the erosion of intellectual life and academic governance by the captains of local industry that ran Warwick University, Ltd. And, of course, despite the faux radicalism of the new universities that enabled the system to expand after the Robbins Report of 1963, universities remained the preserve of a privileged elite charged with running the welfare state with just 457,000 students in 1971 – 14 % of the age group.

If the public university had always been a faustian bargain with industry and the state the rules of the game certainly began to change decisively during the 1980s when I was a student. First came the effective freeze on hiring following the Howe budget cuts of 1981. In 1993 when I was appointed to teach at the Department that had taught me it was the first permanent appointment in over a decade. Next came the stripping of the student maintenance grants I had marched unsuccessfully to protect in the mid-1980s. And then there were the infamous administrative systems for auditing the efficient use of public funds at universities by measuring the productivity of academic labor: research outputs by the Research Assessment Exercise from 1989, teaching by the Quality Assurance Agency in 1993 renamed the Teaching Quality Assessment in 1997. One consequence of this, consistent with the merging of the former polytechnic sector in 1992, was the growing incentives on a frequently dwindling and increasingly casualized labor force to admit more students and teach ever larger classes. Inevitably these auditing systems not only greatly increased the amount of time academics spent talking or writing about the research or teaching they would do if they only had the time to do it. It also catalyzed the staggering growth of management personnel.
New Labour only made things worse. Faced with the systematic under-funding of the universities, the expansion of student numbers (funding per student fell 40% from the mid-1970s to the mid-1990s), and the decline in real terms of academic salaries, they answered the call of the last official review of the funding of higher education handed from one government to the other – the Dearing Report. If Dearing enabled the introduction of a £1,000 for tuition (and the final abolition of the maintenance grant in 1999), by 2006 it had increased to a variable rate up to £3,000. The final indignity came with the shift from the RAE measurement of academic’s research productivity – which, in the name of generating ‘output’ had arguably produced a great deal of increasingly specialized and unexciting publications – to a concern with its utility or ‘impact’ under the absurdly named Research Excellence Framework from 2008. Unsurprisingly, as universities now answered to the Department of Business, Skills and Innovation, impact was measured in increasingly narrow and economistic terms.

Before rushing to join the denunciations of our short-sighted and philistine politicians we have to accept that no-one within the English university sector emerges from this process with much dignity. Administrators have grown fat, plumping up their personnel, enlarging their office and buildings, as well as inflating their salaries. Most damagingly they meekly accepted the economistic logics that drove the auditing of productivity and were naive enough to believe that the introduction of fees would supplement, not replace, state funding. They have turned away from the public they are supposed to serve in the quest for new ‘markets’: professional schools, overseas students, and creation of empires with institutions that franchise their degrees.

The Last Professors of the public university have hardly fared better. They have been only too content to learn and internalize the new rules of the game in the name of self-advancement. I was one of the new breed of entrepreneurial academics who had only ever worked in this system. I quickly learnt that research grants came to those who spoke whatever language the research councils were speaking in, that one had to recruit postgraduates to generate income, that quantity not quality of publications was the measure of scholarly productivity. Those who went on research leave or won big grants for research projects were happy to hire replacements and assistants on short-term contracts. At the opposite end others seemed content to become stars, to play musical chairs as institutions competed for prestige through big names with long CVs of publications, and to see their professorial salaries climb into the stratosphere in the name of their new market value.

The past twelve months has seen many wake up from this bad dream. As respected individuals, programs and Departments – all festooned in the baubles of research excellence and prestige indicators - have been cut students and their teachers have mobilized. There have been marches, protests, online petitions, teach-ins and occupations. These struggles have been very local – at Sussex, Middlesex, King’s College, etc – but those involved were in conversation with or at least virtually connected to protests elsewhere in Berlin, Berkeley and Buenos Aires. It has been on these front-lines that the defense of the public university has begun to be articulated. And it has been the targeting of the arts and humanities in the cuts that has made it possible.

The humanities, along with the arts and even the interpretive social sciences, have become the true test of the public value of higher education. As the recession grips market models of utility and efficiency have surely been exposed as a dangerous fallacy so this is a good moment to re-articulate the purpose and role of humanities and social sciences in ways that justify renewed public investment in them. We could have expected more from those like the British Academy or Arts and Humanities Research Board that institutionally represent the humanities in the UK. Instead, they have effectively caught themselves in arguments about economic impact and the capacity to aid national economic recovery that they are doomed to lose (see the Arts and Humanities Research Council’s Leading the World and the British Academy’s The Public Value of the Humanities ). We should not be surprised then that the Browne Report recommends the complete withdrawal of public funding for the teaching of the arts, humanities and social sciences in contrast to the STEM subjects that will continue to be supported.

The defense of public universities is intricately tied to arguments that can establish the public value of the humanities. We need to get beyond the hand-wringing of those who believe only philistines require the humanities to
be justified just as much as the meek reproduction of the government’s own vocabularies of impact and value. We can and should remind the world that it is our classes that students want to take. Despite a decade of the rhetorical marginalization of our disciplines in the UK as not relevant there are more studying in the arts, humanities and social sciences (1,073,465 in 2008/9) than in the STEM subjects (829,115) and they are growing at a faster rate (a 28% increase since 2001/2 as opposed to 20% increase for STEM). Indeed, in all likelihood, the arts, humanities and social sciences are cross-subsidizing the more expensive STEM fields that teach fewer students in more resource heavy infrastructures and laboratories.

Why then do we face increased demand from students for the arts, humanities and social sciences? There is no one reason why students take these classes and we do not need a one-size fits all justification of their public value. There are for sure those that rightly view these subject areas as helping them prepare for the world of work without necessarily providing a clear career trajectory in the social field or the knowledge and culture industries. Students recognize that even vocational training can not ensure life-long careers any longer. Instead they require a set of skills – of critical thought and analysis, of reading and digesting materials quickly, of making presentations and convincing arguments across a range of media – that equip them for a flexible labor market in which they may work across multiple sectors.

We need, however, not stop at these instrumental ends. We should be gratified to recognize that students are no less concerned with becoming citizens of the world. They realize that the humanities provide them with not just an education in the issues and problems that face our global society but the forms of analysis that allow us to connect our particular local experiences to sometimes global processes. They also provide the language training necessary for us to understand the perspectives of other cultures. No less importantly, given the democratic deficit and seemingly growing disenchantment with our political system, the humanities teach our students the critical skills they require to become active and valued citizens of our democratic life. Often they teach them that it is possible to think of themselves in new ways, to discover a new identity and to forge around it a politics they share with others that challenges and enriches our democracy.

Finally, the humanities, like the arts and social sciences, offer us the opportunity to think otherwise. In an age in which the financialization of everyday life appears to demand an economic value is attached to everything we need to be reminded that this was not always the case. The humanities speak to different systems of value, different orders of pleasure and enjoyment, that we can all enjoy – of imagination, beauty, laughter and wonder. It is these qualities after all that make us fully human, that enable us to appreciate what is unique about our own culture as well as what it is we hold in common with the rest of humanity.

A good deal is at stake. We must defend the vision of a publicly funded university able to support classes in subjects that do not generate economic benefits. Economic utility is not the measure of who we are or who we want to become.

Journalist handcuffed and arrested by Tea Party senate candidate’s private security (2010-11-02 08:00)

The editor of the Alaska Dispatch website was arrested by U.S. Senate candidate Joe Miller’s private security guards Sunday as the editor attempted to interview Miller at the end of a public event in an Anchorage school.

Tony Hopfinger was handcuffed by the guards and detained in a hallway at Central Middle School until Anchorage police came and told the guards to release Hopfinger.
Inequalities Blog (2010-11-03 08:00)

Inequalities: a new blog, and a call for contributors

We are pleased to introduce [INEQUALITIES](https://inequalitiesblog.wordpress.com/), a new online forum dedicated to cross-national research and debate around different kinds of inequality.

The blog will be updated three times a week (Mon/Wed/Fri) with a mixture of articles, shorter posts and interviews focused on the labour market, social security, health, politics, education, crime, and other areas of inequality.

We are hoping to attract both readers and contributors – with contributions ranging from comments on existing posts, through to writing articles for the site.

If you’re interested in writing something for Inequalities, then see our guidelines for contributors and then just get in touch through the site.

We look forward to an exciting and engaging conversation!

Best wishes,

Brendan Saloner & Ben Baumberg

From students to customers – neoliberalism and the UK teaching landscape (2010-11-04 06:05)

It is official: Sociology is a ‘low-cost’, ‘non-priority’ discipline, the government says.

It is now clear that the cuts on higher education included in the Comprehensive Spending Review are going to hit harder the disciplines that have been put under these headings (i.e. arts, humanities and social science). In short, if the government proposal to remove statutory funding to ‘secondary’ and supposedly ‘cheap’ subjects becomes reality, there will be a remarkable increase in the tuition fees for the students intending to study, say, Sociology.

On the one hand of this argument certainly stands a general line of criticism on the commonsense mantra that science-based subjects are more important than others to the economy of the country (and are therefore worth a higher level of government investment). But there are further implications on the government’s rash decisions. Crucially, the cuts could instil a transformation of the teaching landscape, by introducing a new(-liberal) approach to higher education revolving around the rather disturbing idea of ‘customer-students’. If students in the ‘low-cost’ disciplines will have to pay much higher fees than their colleagues in other fields, then they could start rising their level of expectation on the ‘product’ (knowledge, that is) they choose to purchase.

On the positive side, students could certainly start taking their studies more seriously. However, there is a wide range of negative effects and attitudes that could lure into the education system if study starts to be regarded purely as a form of consumption. For example, the students-teachers relationship could be affected – and transformed into a customer/service-provider rapport. Moreover, a further risk could be that humanities, arts and social science subjects may increasingly end up being squeezed out from smaller and less-funded institutions which cannot afford their (financial and human) costs.

____________________

Usha Iyer (2010-11-04 18:28:33)

"He added that while much remained uncertain, he expected that the survival of humanities subjects would depend "enormously" on individual institutions' missions, as well as their future funding. "One thing that could happen is that humanities subjects emigrate further and further 'up the food chain', leading a thriving existence in high-prestige research institutions but getting squeezed out in smaller, more regional and less well-funded institutions," "That looks like the likely scenario, I think.

Research Seminar at UCLan on November 19th (2010-11-04 14:57)

White is the New Black?

The 2010 'Football Frenzy' and the New Zealand Imagination

Mark Falcous

University of Otago/Te Whare Wānanga o Otāgo

In the context of the contested ‘sports space’ of Aotearoa/New Zealand, this seminar contributes to ongoing critiques of the socio-cultural presence of sport.
Interlocking processes including: demographic shifts and immigration; emerging indigenous politics, weakening colonial attachments; and heightened global interdependence have led scholars to describe the national imagination of Aotearoa/New Zealand as ‘in crisis’ (e.g. During, 1989; Flearas & Spoonley, 1999). Such shifting economic and cultural forces have led to ongoing and shifting evocations of the national self, with sport a significant domain. Thus this research explores the sports press as rich a site in which the contested boundaries of national communities are established, defined and reinforced. Conceptually, this research is informed by critical approaches to media, the problematisation of nationalist discourse (Hall, 1992), and postcolonialism. Thus I adopt a critically discursive approach to coverage of the national men’s football team – the All Whites – surrounding the 2010 FIFA world cup. The analysis focuses on how particular national anxieties and contradictions are ‘resolved’ in press coverage, the apparently shifting presence of football (nee soccer), and the spectre of long-established themes of New Zealand nationalism.

Mark Falcous is a senior lecturer in The School of Physical Education/Te Kura Akoraka Whakakori at the University of Otago, Dunedin, New Zealand.

Usha Iyer (2010-11-04 17:05:02)
I would like to add that this event is free of cost and all are welcome to attend. The details are: Friday 19th November 12-1.00pm, Room 202 Greenbank Building University of Central Lancashire Preston, Lancashire For further details on this and forthcoming events, please write to UJIyer@uclan.ac.uk

Re-viewing Luis Bunuel’s “Land without Bread” (1933) (2010-11-05 08:00)

“Land without Bread” is a fascinating documentary from the younger Bunuel, an extraordinary attempt to portray the sufferings of peasants of Las Hurdes in Spain, very intensely done although without the controlled irony of his later work.

To admirers of Bunuel’s work, the documentary gives an insight into some of the techniques he is fond of applying as a filmmaker. On the emotional side you see a Bunuel who can be deeply persuasive and compelling in a way forcing his audience to think along with the narrator. This is unlike the later Bunuel who leaves the audience to draw their own conclusions and is more realistic in his insight that the poor are people before they’re poor and that poverty is a social condition thereby implying that the poor are as much capable of the excesses of the bourgeoisie as anyone else. This we see for example in the movie Viridiana where the holier-than-thou protagonist ends up almost getting raped by one of the beggars she picks from the street in order to change their lives.

If Dali accused Bunuel of being a “communist” and “atheist” this documentary lends credence to the accusation. There is a sense of commitment to the subject more than the art form. The commitment takes the form of urgency and perspective and the audience is spared of the detachment you would expect from a documentary filmmaker. Bunuel makes demands on his viewers. However, if you remember that this documentary was released in 1933, these are the pre-war generation viewers and fascism is on the rise, the sidelining of artistic demands to political ones becomes kind of obvious. Much later Charlie Chaplin’s The Great Dictator (1940) attempts to do
something similar in placing political commitment above formalistic ones in his relentless attack on the Nazis and in making a Jew the hero of his film.

The stark realism of the documentary shows in a couple of scenes with animals. A donkey that is eaten away by bees and a goat that falls down the mountain. Apparently Bunuel slaughtered both the animals to give a dimension to his perspective something that would not be very amusing to a modern audience oriented towards animal rights.

You cannot deny that the human suffering of the village is real. You can see the poverty that made fascism possible in Spain. It almost seemed like this was a European colony in Asia or Africa. Such was the poverty of its inhabitants. It’s a poverty that makes artists, poets, saints, revolutionaries and fascists a reality in the same breath. The scene of the little girl lying on the street and ”whose gums and throat are inflamed” and that is dead two days later was a particularly poignant one. Says the narrator at one point: ”The realism of a painting by Zurbaran or Ribera is nothing compared to reality itself,” thereby acknowledging his limits as an artist in the face of the grim reality faced by the poor and downtrodden. Interestingly, the narrator highlights one segment of reality over that of another. The poverty and pain is emphasized and not the ability of the poor to survive at all costs in this pitiless environment.

My favorite line in the movie is when one of the miserably poor school kids writes on the board a maxim in the book which says: ”Respect other people’s property!” Somewhere the narrator subtly echoes what Proudhon says that ”property is theft.” In respecting ”property” as a social and moral value the poor become complicit in their own oppression. You would expect such poverty to destroy the inner character of the people. But, it does not. ”Despite the misery in which the Hurtanos live their moral and religious sense is the same as anywhere else in the world.” Ideology in the form of religion and morality works at a certain level to keep them subjugated forever.

The conclusion of the film makes the argument all the more evident without mincing words:

_The misery shown in this film is not without remedy. Elsewhere in Spain, hill people, peasants and workers have achieved better conditions through mutual self-help._ They have made demands of the authorities for a better life....will give impetus to the coming elections and lead to a Popular Front government. The military rebellion backed by Hitler and Mussolini seeks to bring back the privileges of the rich. But the workers and peasants of Spain will defeat Franco and his cronies. With the help of anti-fascists from all over the world civil war will give way to peace, work and happiness. And the miserable homes you saw in this film will disappear for ever.

If that did not happen and in fact the poet Lorca was murdered in 1936, the same year that Franco assumed power and was the head of Spain until 1975 the year of his death - that does not take away the historical value of the documentary itself. It’s the attempt of a great artist to divorce reality from aesthetics and in the process create an alternate aesthetic. It’s an idealist at work here with the tools of realism. It’s an artist who is responding to the needs of his generation while at the same time envisions a future that “will give way to peace, work and happiness.”

**Fears build over higher student fees (2010-11-08 08:00)**

As the coalition government prepares to publish its response to Lord Browne’s review, anticipation builds over the likelihood that students may face fees upwards of £9000 per year.

The fee rises are intended to compensate for the public funding which has been withdrawn from universities as per the most recent Spending Review. Aaron Porter, the president of the National Union of Students (NUS) has argued that it is an unfair situation to remove teaching funding while expecting students alone to financially support universities, while students are threatening protests.

In response to student protests and Lib Dem MPs who also signed pledges to vote against any fee increases, the Universities Minister David Willetts is expected to announce a funding package shortly which will include measures like outreach programmes, summer schools and scholarships aimed at widening access. These measures would be particularly aimed at universities charging the highest fees.

Further coverage of the current debate can be found in Sean Coughlan’s BBC article [1]here.

**Review of ‘Globalization and Football’ by Richard Giulianotti & Roland Robertson (2010-11-09 08:00)**

Globalisation and Football is an engaging, accessible and comprehensive sociological study of the political economy of the world’s most popular sport. The authors Richard Giulianotti & Roland Robertson fuse disciplines to trace the historical evolution of football, its interplay with processes of globalisation, all against the backdrop of the socio-economic and political developments of the day.

In a lot of ways, Giulianotti & Robertson pick up from their earlier works. Borrowing from Robertson’s work, Globalisation and Football begins by explaining to the reader the waves or phases of globalisation witnessed by human history: germinal, incipient, take-off, struggle-for-hegemony, uncertainty and millennials.

This six-phase model of globalisation is the framework for a historical analysis of football against the backdrop of major political, cultural and socio-economic events of that era. Unlike other studies that equate globalisation with western modernisation processes, the objective of the authors is to highlight the historical complexity and the myriad roles played by actors and institutions both in the global North and South in aiding the globalisation and development of football. Further, the authors use four elemental reference points: the individual, national societies, international relations, humankind. Every chapter dissects the role of each reference point in the evolution of football.
What this means is that besides the growth and spread of the sport itself, careful attention is paid to the highly evolved 'business' models that constitute the governance and organisation of football today. The book equates the top football clubs in the Big Five countries (England, Germany, France, Spain and Italy) with trans-national corporations and discusses them in the light of neo-liberalism and neo-mercantilism. This necessarily calls for a closer look at the disparity between these top clubs and national football associations of smaller countries. Also under the scanner is the complex relationship between football's multi-layered governing structure- FIFA, national associations (both big and small), elite leagues, lower divisions and the cash flow and popularity of each. The top clubs have successfully capitalised on the explosion of satellite television in established and emerging markets, merchandising opportunities and the popularity of big stars. The book also analyses trends in fan and supporter cultures, multiculturalism in football, laws on movement of players within the EU and overseas players at top European clubs.

The disparity in finances and stature is even bigger between the Big Five and their clubs on the one hand, and the African and Asian football associations and clubs on the other. Additionally, the privileged position of the Home Nations within the governance of football (International Football Association Board), the allocation of places in the World Cup, gender and sexuality in football are issues that polarise opinion and raise tensions. All of these have resulted in a rather skewed balance of power and development within the membership of FIFA.

The authors do highlight some admirable developmental and peace initiatives through the medium of football undertaken by FIFA, other governing bodies of football, the UN and affiliated organisations, governments, NGOs, etc. As a result of this intense analysis, the authors help us understand the almost unparalleled influence and reach of football by casting it as a metric, mirror, motor and as metaphor of globalisation.

Heavy though all this may sound, the content is paced and explained in an easy-to-grasp manner. The book is extremely accessible and chronological with lucidity in both language and narrative style. Every chapter begins with the introduction of relevant concepts and theories followed by empirical evidence. The book is a treasure-trove of information, well-explained concepts (most of which should be familiar to students of sociology), illustrative examples, telling facts, trivia and anecdotes. As mentioned by the authors in the beginning, the book spans all major footballing countries and continents.

Conceptually, the book is extremely rich; it furthers established concepts in various disciplines. The authors borrow from and advance concepts, ideas and discussions in globalisation, global-local-'glocal' studies, connectivity, 're-territorialisation' and 'de-territorialisation'; sociology, social change and social network analysis; ethnicity, migration, identity, 'Americanisation', nationalism, transnationalism and cosmopolitanism; politics, economics and political economy; and civil society. References are also made to contemporary political developments and socio-economic movements such as the World Social Forum that has presented itself as an alternative to the World Economic Forum. The book posits that the sociological fields of race, ethnicity, post-colonialism and post-imperialism will feature prominently in the globalisation of football in the future. The authors leave us with the suggestion that sociologists ought to approach such global areas as football using 'methodological glocalism' as opposed to 'methodological cosmopolitanism' or 'methodological nationalism'.

This book is a marriage of sorts between various disciplines and concepts. By putting football at the centre of it all, it gives due recognition to the undeniable influence, reach and complexity of the sport. This book could undoubtedly be useful as part of the curriculum of students of sociology and cultural studies, globalisation and development, international relations and history of sport. For a wider complementary study, students could look at other titles by these two authors. The authors write authoritatively on all of these diverse subjects in what is a highly welcome multi-disciplinary study.

The Web, and "the right to be forgotten": back to Habermas? (2010-11-11 08:00)

Internet regulation is lagging behind the development of the Internet itself. Within about two decades of wide public use, the web has accumulated a huge amount of personal data, and it may seem surprising that only in 2010 is this idea beginning to take legislative roots. Will the new legislation, if adopted, stop the web from sprawling over and appropriating public lives? Perhaps, we shall then be back to a modern, Habermasian understanding of the public and private spheres?

Or, perhaps, not just yet.

In Pictures: 50,000 March for Higher Education in London (2010-11-11 12:00)

An estimated 50,000 university and college students and academics marched in Westminster yesterday. They were protesting against the raising of tuition fees to £9000 per student per year of study and the cutting of government funding for teaching in the arts and social sciences. Protestors marched down Whitehall, past parliament, before taking over Millbank House, the Conservative party headquarters. Some made it to the roof of the building, being watched by thousands on the ground chanting and burning placards. The media are reporting that this is the largest student demonstration in a generation.
Nina Power has written a brilliant article in the Guardian today about the protests and media response. Read it [1]here.
I'm surprised that no one has contributed a comment to this website after the student protests! I was very impressed by the numbers. And the violence done to Tory Party HQ did not bother me as much as the lack of organized purpose in doing so.
(Such ‘violence’ is being trumped up mainly because the police didn’t expect it, not because of its actual severity.) Specifically, the person(s) who managed to get to the top of 30 Milbank should have read some manifesto that stated concrete demands that could then be made talking points in the media and possibly Parliament. Instead the action was too easily dismissed as simply the work of an aimless rabble. Moreover, the impact of the protest is being dissipated by news programmes juxtaposing Alan Porter and Clare Solomon, i.e. the good cop and bad cop of the protest. They spend more time bickering between themselves than stressing their unity against the tuition hikes. My advice: Violence of the sort on display yesterday is not so bad if it is seen as the spearhead of a unified front. But it is a disaster if it’s easily disowned as the product of a fringe movement that then opens up internal divisions within the student ranks about what the protest is supposedly about.

Here, I believe, Porter missed an opportunity – and Solomon played it better (though as a team they just cancelled each other out). The idea of recalling Liberal MPs who renege on not raising tuition fees in university-based constituencies is a powerful move and should be pursued publicly and doggedly. This is the sort of political action that would open up serious discussion in media. However, we academics need to figure out more creative ways of justifying and financing higher education because it’s clear that the current system is unsustainable – and unfortunately the government is right on this basic point.

Elizabeth Gould – How experience influences the brain (2010-11-14 08:00)

[EMBED]
In his article, "The Rubicon of class: Sontagist camp and predialectic sublimation", prof. Paul Brophy from Yale University critiques predialectic and neocapitalist sublimation, contrasting them within the conceptual paradigm of consensus...

Often, post-modern theory gets accused of being two parts ramble, one part fluff ["Only two parts ramble? Rather, two-thirds ramble, two thirds fluff", a matematician friend remarked upon reading the draft version of this post]. Derrida is derided, Rorty seen as contorted. The common tendency of post-modern theorists to reject hard and fast notions of truth and reality, and their incredulity towards grand narratives, are taken by their opponents as signs of intellectual weakness. The typically complex language of post-modern theories irritates some, but entices others - but perhaps both camps miss the point (if there is one to be made at all).

In a rather cynical post-modern fashion, the

[2]Postmodernist Generator (click on title to follow link)

takes up and creatively uses the idea of mystification which is characteristic of this strand of social theory. The online generator mocks the idea of text, using randomised key words to produce at the click of a mouse dummy essays,
much resembling \textit{lorem ipsum} page fillers used by type-setters. A superficial reader who skims instead of reading might be duped by the buzz-words into accepting the perfectly formatted page as "real" text.

But what is "real" text - and how much sense does it have to make, in order to make any sense? The po-mo generator is not the first to disparease the mystique of post-modernist text by camouflaging itself as one. Recall the [3] Sokal hoax in which [4] Alan Sokal, mathematician and physicist, submitted a sham article in the critical theory journal Social Text*. As Sokal readily admits, it had been conceived as an experiment to test the journal’s intellectual rigour and find out whether it would "publish an article liberally salted with nonsense if it (a) sounded good and (b) flattered the editors’ ideological preconceptions." [‘*’]

The article got published and although it itself did not make any sense - it spawned an enormous amount of "meta-text". If the purpose of academic publications is to create debate, this one seems to have achieved it.

It is not certain who stands behind the po-mo generator. Professor Sokal, is that you?

[*]

Belgium's Jupiler League

[1] Belgium's Jupiler League (Belgium's top domestic football division) has diminished into a stepping stone for many players, looking to settle in bigger leagues. It goes without saying that Belgium is not the only country to suffer a spiralling decline in the UEFA [2] co-efficient league table. Walter Smith recently [3] noted the demise of Scottish league football with an increasingly uneven playing field. More striking in the case of Belgian football is its historic pedigree prior to its current also-ran incarnation - Belgium, as a national team, had its high between the late 70s to the latter 80s, not only qualifying but also reaching the 1986 World Cup semi-final. Belgian clubs were
also comparable to any of their European counterparts; between 1975 - 1990, in all three UEFA club competitions, Belgian clubs figured in eleven finals and produced four winners (RSC Anderlecht winning the UEFA Cup in 1983, the UEFA Cup Winners’ Cup in 1976, 1978 and K.V. Mechelen in 1988).

Contemporaneously Belgium, as other smaller leagues, have their bigger dominant clubs - Standard Liège, RSC Anderlecht and Club Brugge. There is a two fold problem here - the stronger Belgian clubs compete, unevenly, with their superior continental rivals and the rest struggle to compete with their dominant domestic rivals. A similar scenario appears not in only in Belgium but in other European leagues. With the league winners automatically qualifying for the Champions League group stage and earning from its cash-pot, domestic competition become further skewed and imbalanced.

The defining moment, continentally at least, traces back to both structural economic changes and the liberalisation of the transfer market, following the [4] Bosman ruling (1995) both interrelated. The socio-economic shift from Fordist models of economic management to a trans-national movement of capital, de-regulation of markets and an increased involvement of trans-national corporations in public life, encouraged both an international movement of labour - in this case football players - and media conglomerates to aggressively acquire sports markets and even ownership of historic clubs. Sociologist Anthony King views this in terms of social [5] rituals as a more broader metaphor of lived forms that are instilled into society’s members and traced back to different periods of social transformation. He [6] states that "the new geography of European football parallels wider developments in the post-Fordist, globalised era in which the forces of multinational capital have increasingly subverted the former unity of Keynesian national economies".

In accordance this transformation can be read into two distinct models of club management, termed by [7] Andreff & Staudohar as ‘Spectators-Subsidies-Sponsors-Local’ or SSSL in contrast to a ‘Media-Merchandising-Markets’ or MCMM model. Clubs still relying heavily on ticket sales and local sponsors face insurmountable odds - Italy’s Serie A only [8] averages attendance at 56 % of average stadium capacity but three Italian clubs feature in Deloitte’s top [9] twenty wealthiest European clubs, all three generate their largest revenue from broadcasting rights - Juventus receive 65 % of their income from broadcasting. In terms of broadcast rights the Belgian Jupiler League, as a whole, brings in 44.7 million for a three year deal and about 14.9 million Euros annually. Contrast this with the Premier League whose [10] contract from 2012/13 to 2009/10 (3 seasons) brought in a “total amount of 3,538 million Euros, of which 1,556 million euros on the sale of international rights. English clubs have at their disposal 1,179 million Euros per season to distribute to the 20 clubs in the Premier League”. Both Dutch and Belgian clubs earn more from match day revenues and sponsorship than broadcasting, mainly domestic broadcasting, and while not completely immersed in the SSSL model, still rely on more local factors than bigger clubs; many of whom are trans-national in their own right.

The effect of the Bosman ruling

In this setting the Bosman ruling was mainly in the interest of the bigger leagues and clubs - players may have more power than before but are more likely to choose more lucrative terrains, a supply-side logic empowering the richer clubs. The impact of the Bosman ruling in concentrating players in the bigger leagues is demonstrated by the percentage of players in each league at the 2010 World Cup - 57 % of all players present played their football in the big five European leagues (France, Spain, England, Italy and Germany). This can be contrasted with the 1970s when prominent players of the ilk of [11] Rob Rensenbrink, [12] Arie Haan, [13] Grzegorz Lato , [14] Włodek Lubanski, and [15] all plied their trade in Belgium.
Instead of the Bosman ruling leading to heightened competitiveness between leagues, the opposite was to happen - players are willing to offer their services to the highest bidder and their respective clubs are willing to let them go early, in fear of losing their worth when out of contract. The case of Mesut Özil demonstrates not only a chasm between the big five European leagues and the rest but also the chasm between certain clubs within those five leagues themselves, with Real Madrid maintaining serious financial clout to manoeuvre in the transfer market. Until the signing of Özil by Real Madrid, realistically only four to five clubs were with the competitive potential and revenues to pry Özil away from Werder Bremen.

Leagues, as Belgium, find themselves losing promising players to the bigger leagues and with a poor retention of players, many Belgian clubs are a stepping stone for players to gain playing experience and then seek contracts in the more lucrative leagues. Richer clubs have exploited this environment forming partnerships with Belgian clubs that offer a pool of younger talent to be tapped into - Manchester United's partnership with Royal Antwerp FC and Liverpool FC with K.R.C. Genk are examples.

**UEFA adapting to neoliberal realities**

Trudo Dejonghe and Wim Van Opstal both argue that enacting the then Fifa 6+5 proposal would introduce an element of competitiveness to club football - this may be partially true but does not necessarily disperse or modify income generation - the bigger clubs are still able to invest into better academies, select more accomplished players within their national locality and operate as global behemoths, attracting global talent. The 6 +5 rule or the current measure enforcing a minimum of eight 'home grown' players in a club's squad are all attempts to tie clubs to their national geography but all these measures do not drastically alter the current football terrain. Furthermore it can be argued that such measures are there to protect international football, member associations and combat further de-regulation, eroding UEFA's powers and control over the game. More importantly - as Volker Eick observes concerning FIFA and to an extent this is generalisable to UEFA - bureaucratic organisation as UEFA seek to strengthen their member organisations and by extension their control over these same organisations. This without considering that UEFA have their own international football tournaments to maintain, which brings in considerable income - Euro 2008 generated a net profit of 250 million Euros.

Yet UEFA would find an ideal scenario in some balance between increased re-regulation and the bigger clubs modelled on the MCCM model, with de-regulatory forces generating much of their income. Attempting a balance and conceding to the richest clubs is none more salient than in the case of the UEFA Champions League; not only was a sum of £746m paid out between the 32 participants but the pay significantly increased as a team progressed in the competition - usually the bigger teams from the bigger leagues (13 of the last 16 in last year’s competition, 2009-10, coming from the big five leagues).

Moreover this is none more apparent than UEFA singling out of a further media market pool stated as "the estimated available amount for the television market pool - £337.8m - will be distributed according to the proportional value of each TV market represented by the clubs taking part from the group stage onwards". This is somewhat like a generous add-on pay to clubs from the bigger leagues with fertile domestic television markets, singling them for a greater share of the cash-pot.

Perhaps this is to the detriment of football as a spectacle but this of little concern to anyone outside those with serious interest in the game and football is just that - a game of leisure. But the centralised organisation of football, as any social activity, is both affected and affecting in its milieu. This is everything and including the exploitation of African football players, many minors, viewed as a cheaper talent pool than their European counterparts. Football is a competitive industry and clubs still predominantly in the old SSSL model find themselves increasingly lagging behind with revenues and profits dwindling, so it is predictable that Belgian clubs were implicated in accusations of player trafficking and a football slave trade - agents buying and offering players to whatever bidder.
UEFA is an important player but the broader social setting harbours an increased plurality of global actors. [26] Derek Layder views institutionalised bureaucratic organisations and market forces as both systemic elements that reproduce and more importantly "mediate relations of power and "relations of ruling." The mediation of relations of power and "relations of ruling" entails that UEFA not only respond to market forces but plays an active role in adapting and elaborating these same conditions - UEFA, as FIFA, affect and are affected by neoliberalism. It is in this sense that UEFA should not be seen as merely a guardian of market interests but often in conflict with forces of de-regulation and de-territorialization - protecting the local and representative national football associations and promoting an integration that does not compromise national sovereignties. Nevertheless UEFA organises club competitions bringing in high yields but enacts pressures from other powerful actors contesting and at times eroding UEFA's own mediatory capacity. As sociologist [27] Zygmunt Bauman posits living in a more liquid, deregulated and fragmented social world does not negate the continued relevance of past formations only that "we do not live, after all, once in a pre-modern, once in a modern, once in postmodern world. All three 'worlds' are but abstract idealizations of mutually incoherent aspects of the single life-process which we all try our best to make as coherent as we can manage".

If past solidity persists, than objective stratification and ironically centering powers of the liquid present are posterior elaborations. It is in this backdrop that smaller leagues, as Belgium, are caught in a tug and more often lose out.

GET REGISTER FOR THE NEXT FOOTBALL TRIALS Are you looking to play football/soccer in the UK? A number of non-league clubs at steps 5-7 of the English Football Pyramid are keen to recruit new players and you could be one of them. Contact me, and you will get help with getting the necessary work VISA's if you don't already have a European Passport, and help with accommodation. You will have the option of playing in either the Midlands or West Country. A number of bigger clubs regularly send scouts to watch games in these leagues and there is a good possibility that you could be taken on by them in the future. What To Do Next & The Process Of Getting Signed Up By A Club Register for the trail send your cv Choose Your Venue Make Your Trial Payment Complete Your Player Profile Attend The UK Football Trials Event (your chance to impress with a high UKFT rating) If You're Good Enough, We'll Get You Sent To A Club Interested in a football trail in England,i am agent patel from united kingdom there will be a football trial next month in Chelsea division 4 kindly send your cv. May Allah be with you. Best Regards patel jayeshkumar Email: inshallhsocceragant@hotmail.com +447035900084 +447024061399

Review of ‘Why Voice Matters: Culture and Politics after Neoliberalism’ by Nick Couldry (2010-11-17 08:00)
In an era in which the neoliberal tenets and conditionalities, after threatening to become the ‘lore’ of the so-called good governance, are also seeking to pervade popular imagination, voice as an articulation of critical insight has become all the more important for our survival. In the preceding era, from Hirschman to Habermas, and from Bakhtin to Foucault, voice has been problematised, though not exactly in the same epistemo-methodological way, in social theory. But somehow the theme needed a cutting-edge analysis in the aftermath of the steep ascendance of neoliberalism in the contemporary era. Indeed the volume under review serves that purpose well.

Judging from his experience of the UK and USA the author’s point of departure is the built-in mechanism of neoliberalism, which makes the offers of voice, as he points out, ‘unsustainable’ by either denying it or making it illusory. To add from the reviewer’s experience in India and in some other developing countries, perhaps the scenario is a bit more complicated and the mechanism a slightly more subtle— revealing a mixed dose of denial and construction of illusion, which in turn makes voice ‘unnecessary’ and ‘redundant’. Thus, in India the government
adopting the neoliberal market reforms in 1991, notwithstanding its minority status in the then parliament, had proclaimed (in the strange logic of the then Prime Minister, Narasimha Rao) that any parliamentary debate on the issue would be ‘inimical’ to India’s positive image abroad. Such is the power of neoliberalism in silencing voice in the world’s largest democracy! No doubt, the author hits the proverbial bull’s eye when he associates neoliberalism with ‘self-harm’ (p.135).

Voice, in the author’s scheme of things, is a connecting term that on the one hand, challenges neoliberalism’s unilateral claim of market triumphalism, and on the other, generates alternative view of politics based on people’s capacities for social cooperation. In this scheme there are two prime analytical categories: voice as a value and voice as a process. To cut a long narrative short, the first category refers to ‘the act of valuing, and choosing to value, those frameworks for organizing human life and resources that themselves value voice (as a process)’. Voice as a process involves giving an account of one’s life and its conditions. In a supposedly integrative framework the author explains that valuing voice involves close attention to the conditions under which voice as a process is effective, and how broader forms of organization may subtly undermine or devalue voice as a process. The successive chapters in the book—dealing respectively with the crisis of neoliberal economics, the predicament of neoliberal democracy, role of the media, philosophies and sociologies of voice, and the last one based on the visualization of post-neoliberal politics—are developed meticulously on the basis of these categories.

There is little doubt that neoliberalism sustains and expands itself on the basis of market fundamentalism—the market being the be-all and end-all of not only economy but also of the social and political organization. But at the same time, to make a provocative remark, not all the critiques of neoliberalism of the contemporary times have been able to derive solid counter-points which can serve as a foundation to the visualization of alternative(s) to it. The socialist alternative has proved to be too inflexible and reductionist to negotiate with the nuances and complexities of the neoliberal times. The various radical alternatives have been tempting but they remain too local in conceptual framework and spatially scattered to effect the kind of synergy that is needed to at least put up a reasonable degree of resistance to the adversary which succeeds in weaving the local and the global in its own interest. “Down with neoliberalism!” is an attractive slogan, perhaps full of good intentions, but the battle of the wits is much more complicated.

In epistemological terms, the common methodological deficiency of the critiques has been the failure to weave the theory with practice in accordance with the emergent order. In the face of such deficiency the neoliberal school, in what can be described as a concessionary gesture, continues to produce some ‘internal critiques’ which, for obvious reasons, remain confined within a fixed cognitive and conceptual orbit. No wonder then that the shrill cry of the ‘end of history’ would, notwithstanding its astonishingly weak logic, continue to subsume the voice in the way we mean here. The author himself admits this in the following words: ‘Neoliberalism’s discounting of voice is so deeply embedded that alternative discourses that value voice will not simply emerge as if from a vacuum.’ (p.17).

The author displays remarkable ability to intellectually navigate through various streams of neoliberalism by exposing, with simultaneous invocation of less radical critique of Richard Layard and (arguably) more radical critique of Amartya Sen. The critical pitch is heightened by his explanation, in political terms, of why neoliberal democracy is an oxymoron. While there is a general tendency among the scholars in both media studies and in studies on neoliberalism respectively to exercise ‘mutual indifference’, at least beyond a kind of superficial linkage, the chapter which analyses the role of the media in amplifying the neoliberal values—especially the focus on the reality show—has a number of clues for further consideration, especially in the context of the author’s contention, that too in the so-called Media Era, that in imagining social organization beyond the purview of neoliberalism one has to look beyond the media.

The chapters on the philosophy and sociologies of voice also make interesting reading but it seems that Foucault could have gained a little more attention from the author. In this context it is not just the more coherently
formed and more frequently discussed concept of governmentality, but especially the half-formed and somewhat more fluid notion of biopolitics, call for greater and more intense focus than is accorded in the book. There is yet another point to be noted. While the author succeeds quite well in providing us with an in-depth analysis of the impact of the organizational-constitutive logic of neoliberalism on voice the fact remains that in the contemporary era there are a number of instances of the people ‘willing’ to give up some of their freedoms to get greater security in return. This has been particularly evident in the post-9/11 world in which the neoliberal regimes did not lose much time to enact some potentially repressive acts. To what extent this phenomenon is related to the well-designed trade-off between considerations of welfare and those of security and to what degree it strategises terror to suppress voice are complex but fascinating areas that need to be probed deeply. Then again, this strategy perhaps has lot to do with the notion and practice of biopolitics.

The most distinctive feature of the book is that in exposing the *modus operandi* of neoliberalism in the ideational and practical terms it resorts to a kind of back-and-forth movement of the methods and practice of the same. This is important in addressing a force which is exceedingly complex. While it would be premature to imagine an impending end of the neoliberal wave that now rules the world, real-time, intense academic endeavours, such as the one found in the slim but idea-packed volume, would go a long way to highlight the importance of critical articulation against what at the end of the day surfaces as the attempted cultivation of the monoculture of the mind.

---

**The book that defined my thirtieth year (The Brothers Karamazov by Dostoevsky) (2010-11-18 08:00)**

Christ was thirty when he started on his mission of changing the world. Siddhartha Gautama was twenty-nine when he decided to renounce the world and become the Buddha. I was somewhere between my twenty-ninth and thirtieth year when I began reading Dostoevsky’s *The Brothers Karamazov*. Imagine a bucket of cold water splashed on your face at 3 A.M in the dead of winter somewhere close to the North Pole. That was the experience I had when I reached the final page of Constance Garnett’s translation of Dostoevsky’s last novel. I thought I was dying. I wasn’t. I was merely coming out of one phase of my life in order to enter another. It’s the caterpillar in the pupa stage fully formed and ready to come out as a butterfly. Such is the lightness with which the book filled my heart.
Only Shakespeare and Dostoevsky can make you feel with every character in their works. You feel with the cruelty of the elder Karamazov, the obsessions of Dmitri the oldest brother, the cold rationality of Ivan that violates the human spirit, the epileptic Smerdyakov who throws bread to a dog with pins in it, the sweet and saintly Alyosha, that embodiment of human goodness Father Zossima, the proud and erratic Grushenka, Ilyusha the child who is dying because he has seen his father humiliated by Dmitri, the story within a story of Jesus coming to the city of Seville and thrown into a prison by the Grand Inquisitor who mocks Christ only to be kissed by him at the end of the narrative, the novel convinces you of what Hamlet says: “There are more things in heaven and earth, Horatio, / Than are dreamt of in your philosophy.”

If *The Brothers Karamazov* defined my thirtieth year it’s because it freed me of the cynicism of early youth. I took too many things seriously until that point including my own self, but how people felt I did not. For the first time I reversed the equation and made an attempt to know people for what they are and not for what I want them to be. The tendency to imagine that you know people is a vain and self-centered one. Interestingly there is something about your own self that you’re destined never to know. The book made me see that “there are more things in heaven and earth” than what I could dream of philosophizing about.

Can we trust human nature or are we to pity and embrace it – this is the question that haunts Dostoevsky. Not to believe in the goodness of humanity would mean you’re condemned never to know the sweetness of living. To believe in such goodness is at the same time madness because you become vulnerable and lend yourself to hurt without any reason at all. “People are not bad. They may be weak sometimes” says the impeccably beautiful protagonist (played by Irene Jacob) in the last movie of Kieslowski’s trilogy *Three Colors: Red* that celebrates friendship and trust. The line is a strange one because though she has every reason to feel pessimistic about people she refuses to despair. This refusal to despair simply means you live without being hedged by defense mechanisms and love life for what it is.
That’s a very Dostoevskyean stance: to see people as “weak” and not “bad.” You don’t judge people too harshly and you’re freed of the suspicion that comes from a mentality trapped in the past. If Shakespeare sees human beings as performers, Dostoevsky sees them as victims of an almost fatal “weakness” that each one individually has to come to terms with at a moral and spiritual level. To be saved or to be damned is a choice that you make for yourself. The price is what you pay as a person though the outcome of the choice will either benefit or destroy those around you.

Dostoevsky can forgive many things – almost everything, like “Jesus” himself, the hero of his novels. The most reluctant to forgive however and hardest he is on cynics and cynicism which he sees in the rise of western individualism that he’s never tired of ranting against; because, like Tolstoy he views material progress as an evil working contrary to the spiritual emancipation of humanity. Dostoevsky’s heroes are ultimately innocent – their innocence comes from their knowledge of man’s capacity to sin against his neighbor – in failing his neighbor man has failed God; and Dostoevsky’s heroes are out to demonstrate the innocence that knows that in the end it must suffer betrayal by the ones you love the most.

I vaguely recollect a critic who says that Tolstoy was benevolent but Dostoevsky was kind. The distinction is important: benevolence is a conscious desire to be good; kindness is instinctual and spontaneous. The latter pervades Dostoevsky’s writing as a whole. The love and friendship that Alyosha shares with the kids is one of the most spontaneous episodes in the narrative. That strange and questionable phrase “unconditional love” – Dostoevsky is the only writer who can make you want to believe in it. The world is cruel and cynical but Dostoevsky wants you to love it and be filled with generous feelings towards it. People are born to be happy no matter how much they’ve to suffer for it in the process. The deeply moving funeral scene following Ilyusha’s death at the end of the novel celebrates life and friendship in a mystical, transcendental way:

"Karamazov, we love you!" a voice, probably Kartashov’s, cried impulsively.

"We love you, we love you!" they all caught it up. There were tears in the eyes of many of them.

"Hurrah for Karamazov!" Kolya shouted ecstatically.

"And may the dead boy’s memory live for ever!" Alyosha added again with feeling.

"For ever!" the boys chimed in again.

"Karamazov," cried Kolya, "can it be true what’s taught us in religion, that we shall all rise again from the dead and shall live and see each other again, all, Ilusha too?"

"Certainly we shall all rise again, certainly we shall see each other and shall tell each other with joy and gladness all that has happened!" Alyosha answered, half laughing, half enthusiastic.

"Ah, how splendid it will be!" broke from Kolya.

"Well, now we will finish talking and go to his funeral dinner. Don’t be put out at our eating pancakes — it’s a very old custom and there’s something nice in that!" laughed Alyosha. “Well, let us go! And now we go hand in hand.”
"And always so, all our lives hand in hand! Hurrah for Karamazov!" Kolya cried once more rapturously, and once more the boys took up his exclamation:

"Hurrah for Karamazov!"

With Tolstoy you’re constantly impressed by his greatness; *Anna Karenina* and *War and Peace* are indeed extraordinary works of art. You can’t be impressed with Dostoevsky; you can only love him and his characters. You laugh with them, you weep with them, you share their jealousies and their obsessions just as much as you share their need to love and be loved. They fill you with boundless pity and affection for a sad and a beautiful world that continues to be sadder and more beautiful than ever.

“Life’s unfair?” Cultural differences between UK and US (2010-11-19 08:00)

What does “fair” mean? Is fairness related to responsibility, liberalism, freedom of choice - and "freedom" to deal with the consequences - whether you win, or lose? Or is it more about everyone following the rules and "playing the game", rather than trying to win it - a kind of "social glue" that binds a society together by taming the differences between its members? And who exactly gets to define what “fairness” is?

Between the amusing and the sociological, this article deals with cultural differences in relation to the concept of fairness (read article [here](http://www.bbc.co.uk/news/world-10869722)).

"My mobile has just committed suicide": humans, machines, and anthropomorphisation

Have you ever heard someone rant at their computer, as if it were a living creature? Ever done it yourself? This brilliant short [1] article deconstructs anthropomorphic usage of language in relation to machines using examples from the life of hackers, and suggests that:

"The key to understanding this kind of usage is that it isn’t done in a naive way; hackers don’t personalize their stuff in the sense of feeling empathy with it, nor do they mystically believe that the things they work on every day are ‘alive’. To the contrary: hackers who anthropomorphize are expressing not a vitalistic view of program behavior but a mechanistic view of human behavior."

(The excerpt is Pt. 4, Jargon Construction, from The [2] Jargon File - a very lengthy "compendium of hacker slang illuminating many aspects of hackish tradition, folklore, and humor" - but just as very worth reading, full of insights and humour. I keep it tucked in my "favourites" bar and read bits of it between my afternoon cups of coffee which is the time of day when my computer often refuses to co-operate with me and instead gets stuck working on its updates. I can’t help thinking that Bruno Latour would love to read this.)

The significance of the 'spending review' and the true choice we will make now, whether we want it or not

What is at stake in the British government’s spending review announced some weeks ago, is not a question of so-called 'cuts', how massive they will be and whom will be most affected; that is a merely technical problem which takes for granted the nature and scope of the real problem. Nor is it only a question, absolutely unacceptable as this is, of the hardship which hundreds of thousands are bound to undergo. The gravest problem lies elsewhere.

The facts are plain and well known: a number of major banks lost inconceivable amounts of money while the bankers amassed and continue to amass unbelievable sums for which they pay ridiculous taxes. To avoid the banks’ collapse, governments poured in billions of public money to bail them out, thus becoming heavily indebted. But 'financial markets' don't like such public deficits, so governments are quick to plan massive public spending 'cuts' in order to reduce the deficits and please 'the markets', that is, the banks and the bankers. Any mention of tax rises for the well-off is considered blasphemous, while a campaign just launched against '[1]benefit scroungers' (seemingly a very serious thing, as it includes '[2]benefit cheat hit squads') is not directed at the true scroungers and cheats responsible for the catastrophe, but is the usual ferocious campaign against the poorer and less fortunate. To add insult to injury we are told by ministers that the 'cuts' which will destroy hundreds of thousands of family lives and bring havoc to the whole country are 'fair'.
How is this possible at all? Four elements account for this situation: an oligarchy of wealth as ruling group - in truth a plutocracy; a doctrinaire and extremely contagious political ideology: managerialism; an easily recruitable executive following: a growing managerial class which occupies key positions in all institutions and at all levels through the society; and a standard set of governing tools made up of managerial indicators and above all indebtedness (compulsory debt-incurring) to which ‘all and each’ are yoked: individuals, including ever younger people such as students, institutions and entire countries.

These four elements make a totally poisonous ‘cocktail’ - poisonous for anything to do with human dignity, love for the job well done and for the public good, freedom, democracy and justice. How does it work? As any such oligarchy in history, the defining features of the current one are: tireless quest to squeeze everything out of those beneath them, parvenu disdain for learning and culture, and total impunity (the only difference with the old oligarchies being that this one is the result of a subsidised capitalism). As for those who are not part of the oligarchy, it is basically a question of unfitness for a free or political way of life, that is to say, of servitude; but the servitude is voluntary because, in reality, women and men do not mind yielding their liberty and abdicating their responsibility through servile submission, since in the process we become petty tyrants ourselves, and this is a role we seem to end up enjoying, to the point of mistaking it for the responsibility and liberty we have just surrendered.

This is the kind of human beings that the current regime demands, promotes and shapes. It requests them from the very beginning, from the cradle, as the case of university students shows: by yoking students to huge long-term debts, that is, to what governments all over the world now reject for themselves like the plague, the recent Browne’s review of HE (strangely called an ’[3]independent’ review) despite the unmistakable belonging of its author to the aforementioned oligarchy) seeks to make sure that students will be consumers and nothing but consumers. The difficulty is that a university degree proper is not something one can just ‘buy’, for buying something is the easiest thing to do if one has money, but a degree demands effort and dedication, qualities which nobody in their right mind has ever attributed to consumers. That is why claiming that ‘students’ paying more will demand ‘more’ (Browne’s review) is sheer sophistry. ‘More’ of what? Indeed such ‘students’ will demand more easiness, more good-timeness, and will request their qualifications regardless. Pleasing and flattering angry consumers: that will be ‘teaching’, the only ‘teaching’ permitted by the managerial indicators of ‘student’ satisfaction. But it was never a question of teaching or education; rather the purpose is to transform HE into a market, that is, into yet another profit-yielding machinery to feed the oligarchy with what it cherishes most: cripple human beings.

We can thus see the true alternative the so-called ‘cuts’ place before us, here and now: either to consecrate a situation of servitude whereby a country governed like a herd of cattle continues to feed the oligarchy with its daughters and sons, or to show the resoluteness of able and responsible women and men to, both collectively and individually, stand up against this infinite injustice and start to define our own fate. Only hardship without dignity and pride should be feared. This is the choice: want it or not, we will choose, and it will be the result of that choice what we will bequeath to those coming after us.

Steve Fuller on Student Protests (2010-11-24 08:00)

I was very impressed by the numbers who protested in London ten days ago. Indeed, the violence done to Tory Party HQ did not bother me as much as the lack of organized purpose in doing so. This ‘violence’ has been trumped up mainly because the police didn’t expect it, not because of its actual severity. Had I managed to get to the top of 30 Millbank, I would have read some manifesto that made demands sufficiently concrete to be made talking points in the media and possibly Parliament.

Instead the action was too easily dismissed as simply the work of an aimless rabble. Moreover, the impact of the protest was dissipated by news programmes juxtaposing Alan Porter and Clare Solomon, i.e. the good cop and
bad cop of the protest. They spent more time bickering between themselves than stressing their unity against the tuition hikes – perhaps because they hadn’t worked out their common interest.

My advice: Violence of the sort that was on display is not so bad if it is seen as the spearhead of a unified front. But it is a disaster if it’s easily disowned as the product of a fringe movement that then opens up internal divisions within the student ranks about what the protest is supposedly about. Here, I believe, Porter missed an opportunity – and Solomon played it better (though as a team they just cancelled each other out).

The idea of recalling Liberal MPs who have reneged on not raising tuition fees in university-based constituencies is a powerful move and should be pursued publicly and doggedly. (Wow – Liberals are the biggest Pharisees in our midst today!) This is the sort of political action that would open up serious discussion in media, especially given the Liberal Party’s overall vulnerability.

However, we academics, regardless of party, need to figure out more creative ways of justifying and financing higher education because it’s clear that the current system is unsustainable – and unfortunately the government is right on this basic point.

I have signed the manifesto of the Campaign for Public Universities, but I have a specific take on it. Let’s start with the manifesto statement:

The UK Campaign for the Public University is open to all. It is a broad-based campaign with no party or other political affiliation. It has been initiated by a group of university teachers and graduate students seeking to defend and promote the idea of the university as a public good. We believe that the public university is essential both for cultivating democratic public life and creating the means for individuals to find fulfillment in creative and intellectual pursuits regardless of whether or not they pursue a degree programme.

My take on it is the following: It remains an open question whether state taxes are the most economically feasible way to promote universities as a public good. Higher taxes simply force everyone to reorient their default consumption to something that someone else deems beneficial. Not surprisingly, there is resistance. In contrast, if we operated more on a church model of financial provision (as in the US), then those who have already benefited from a university education, regardless of the careers they have subsequently pursued, would feel grateful and motivated (the two participles that jointly define obligation) to enable others to enjoy the same opportunities (defined here as what they themselves experienced as students) so that the recipients may also do good as well (however they come to define it). This ‘pay it forward’ mentality is an open-ended version of a gift-giving economy, in which the benefactor is respected not by their recipients’ pursuit of a similar career but by their drawing on a comparable enhancement to their potential provided by a university education.

In other words, the hope is that potential donor students will find some far-seeing teacher who would enable them to explore possibilities that benefit humanity as a whole. From a political economy standpoint, the rest is about how long before the knowledge regularly generated by universities translates into knowledge that is beneficial to society as a whole, regardless of their relationship to this less than fortunate elite mode of production.

Cuts, Fees, and Solidarity: Why the Telegraph’s Janet Daley was wrong to say the demonstration was “self-serving” (2010-11-25 09:00)

The morning after the demonstration in London against education cuts the Today programme on BBC Radio Four carried an interview with two newspaper columnists - John Harris of The Guardian, and Janet Daley of The Daily Telegraph. A question posed to both of them: was yesterday's protest by students in London a watershed moment for the government?

In answering this question Janet Daley misrepresented protest in general and this protest in particular, misrepresented the social benefit of education and misrepresented the function of general taxation.

There were at least two points to the protest: a proposed 40% cut in higher education funding and a proposed tripling of student fees. Daley seems not to have been aware of the cuts aspect of the protest. The most commonly heard chant on the day was “no ifs, no buts: no education cuts.” The protest was also against an increase in the size of personal fees charged to students. Daley seems to have forgotten that students in higher education already pay tuition fees. Ignoring these two major aspects of the protest allowed Daley to make out, wrongly, that the protesters were ‘self-serving.’ She said:

“In my day, student demonstrations were about not ones own interests, you know, we weren’t fighting to have other people pay for our education, we were fighting for civil rights, for black voters in the south, and against de facto segregation in the north and against the Vietnam war, and as a result I think those demonstrations really did capture the imagination of a generation. What these demonstrations seem to be about is something much more unrealistic and self-serving which is to say that the whole of the society should pay for your education.”

On protests in general Daley spoke as though fighting for the interests of your own social group is a bad thing. When one is being treated unjustly it is not a bad thing to fight for ones own interests: there were plenty of black Americans in Daley’s day fighting for their own civil rights and for the rights of other black people against injustice. It is wrong to imply that to fight for your rights is ‘self-serving’.

In saying that the demonstration in London was self-serving Daley is mistaken. It was a demonstration of solidarity. As well as students from the NUS (many of whom will have completed their degrees before any proposed cuts would take effect) there were members of the University and College Union (UCU – which co-organised the demonstration) and of the National Union of Teachers (NUT). There were demonstrators from War on Want, and from the Coalition of Resistance. Many of these people already have their education and have already had the whole of society pay for their education. Now they are resisting an attack on higher education and defending the social good that higher education brings – this is not self-serving.

Daley did acknowledge that higher education is a social good, she said: “Now I actually agree that the state should make a contribution to higher education, that it’s a social good in itself, and the state will continue to do that because there are still going to be grants to universities.” But, as the demonstration pointed out and Daley ignored, the government proposes to cut the state grant to higher education. The proposed cuts would mean that the cost of teaching anything other than a STEM subject (science, technology, engineering and medicine but also now including maths a few modern languages) are met entirely by the students taking that subject – the government is proposing to block all social contribution via state funding to the teaching of non-STEM subjects; as a state we would be making no collective contribution to non-STEM subjects and would thereby shirk our collective responsibility for the social good they can bring.

It is this collective responsibility for the social good of higher education that Daley has entirely misunderstood.
She contradicted her own acknowledgement of the social good of higher education in saying that: “What it’s doing is switching the burden of that cost to the people who are actually benefiting from it” - in fact we all benefit from the contribution that all higher education subjects can make to society and we all benefit from knowing that people can go to college and university no matter what their family wealth.

Daley misrepresented the way that general taxation works. She said: “what you’re asking people to do, people who will never earn anything like the university graduates who are making this demand, is pay for their education.” There are two mistakes here. First, not all university graduates become high earners; a degree is not a transaction in which you are buying yourself a highly paid job. Graduates who do not earn large salaries can be found working in charities, voluntary organizations, public sector organizations, and in small and large businesses across the nation. Second, through general taxation we all pay for all of our state projects, including until now higher education – “people who will never earn anything like the university graduates” have not paid for higher education alone, society as a whole has met the cost. Contrary to what Daley says, to pay for higher education through general taxation would mean that low- and middle-earners, their children and grandchildren, brothers, sisters and friends would not barred or discouraged from higher education for lack of personal wealth.

This demonstration was not self-serving but a demonstration of solidarity. It was a demonstration against cutting higher education. It was a protest against proposals that further increase and individualise the cost of a higher education. It was a demonstration that stood for the right to higher education for coming generations from all backgrounds. It was about fighting to keep the opportunity of higher education open to people who do not have the wealth to buy an education. It was about fighting against condemning people who want higher education, but who are not wealthy, to a working life that begins with personal debt.

Jane Salisbury (2010-11-25 13:53:30)
“In my day, student demonstrations were about not ones own interests, you know, we weren’t fighting to have other people pay for our education”...well no Janet Daley - you didn’t need to did you - they already were.

Grad school in pictures: “The illustrated guide to Ph.D.” (2010-11-26 08:00)

It is hard to explain what PhD research is, using words: there seems to be a consensus about this across disciplines, from qualitative sociology to mathematical physics and beyond. As someone who has been doing one for over three years, and will soon be... perhaps... tentatively... approaching... completion, I can vouch for this! This is why, we need more initiatives that keep such as "Dance your PhD" (see our [1]post on 24 Oct 2010) or [2]"Matt Might's Illustrated guide to Ph.D.". Even if you have never even considered doing a Ph.D., it is nice to be of the role of new researchers in the big picture. To know that somewhere, some dudes wake up each morning, sit at their desks or go out in their research fields or labs in order to continue “chipping away on the rock-face of science” with their tiny axes and “turning coffee into theorems” - some of which might, only might, one day, change our idea of the world.

New column! “Visual Sociology” call for reader submissions (2010-12-01 08:00)

For all professional and/or novice visual researchers out there: the Sociological Imagination is pleased to announce its new column dedicated to "Visual Research". To celebrate its beginning, we are launching a continuous call for reader submissions.

The call is open to all our readers. One piece of visual research work will be featured each Friday. The SI reserves the right to use the submissions on the website at any time after they have been sent to us, after explicitly notifying their authors by email. If you’ve sent us an image and change your mind for any reason, just [1]e-mail us and we
promise not to post it. Scroll down for submission guidelines.

[2]

Guidelines for submissions:

How to submit: Please [3]e-mail us with ‘SI Visual Sociology’ in the subject line.

How many: Authors may submit up to three separate pieces of work (we shall consider more numerous applications on a case by case basis – i.e., if we really like them!).

What information: Every submission must be accompanied by the following information:

• title of the work;
• full name/s, or artistic pseudonym/s, of its author/s;
What counts as "a piece of visual research"? What ratio must there be between image/s and text? We side with Becker (1995) in abandoning methodological purism, and leave to your discretion the decision what and why classifies as visual sociology/anthropology (as opposed to documentary, photojournalism, art, or any other visual-based genre). The editorial team also reserves the sole right to decide whether to publish any submission. Submissions may range from image/s with text to text with image/s, as long as images and analysis or story are integral to one another.

Type of image: Any images/photographs are acceptable: black-and-white or colour; new shots or old scanned shots from your archives – as long as you have the rights to distribute them; and there are no restrictions regarding any artistic or photo-processing technologies used in the production of the images.

Format and size:

- JPEG format
- 1:1.5 ratio and any resolution suitable for publishing online (the images the SI normally posts are scaled down to 440x294 pixels, or near)

Legal issues: Any persons present in the photographs MUST be notified, be aware, and not oppose the publication of the images. If in doubt, consult this guide on photographers’ rights:

http://www.sirimo.co.uk/2009/05/14/uk-photographers-rights-v2

Copyright: The submissions will be distributed under the following conditions

Creative Commons Licence Attribution 3 (allowing for non-commercial distribution of shared works):

"This work is licensed under a Creative Commons Attribution-NonCommercial-NoDerivs 3.0 Unported License."

* Becker 1995 Visual sociology, documentary photography, and photojournalism: It's (almost) all a matter of context, Visual Studies, Volume 10, Issue 1 & 2 1995 , pp. 5 - 14 (the article can be downloaded here, or viewed in html [here] )
Review of 'Research Is Ceremony: Indigenous Research Methods' by Shawn Wilson (2010-12-02 08:00)

Paperback ISBN: 97815526662816
Emma Battell Lowman
University of Warwick

In Research Is Ceremony: Indigenous Research Methods, Opaskwayak Cree scholar Shawn Wilson sets out to describe and explain an Indigenous approach to research, and to demonstrate how this research paradigm can be put into practice. What Wilson contends is that “the shared aspect of an Indigenous ontology and epistemology is relationality” and that the “shared aspect of an Indigenous axiology and methodology is accountability to relationships.” (7) While these principles are simply stated, understanding the implications and challenges for researching in accordance with them is a complex undertaking. Drawing on “a combination of methods, including participant observation, interviews with individual participants and focus group discussions” (40) and working in relationship with others investigating similar questions and issues in Indigenous research (and whose voices play major roles in the text), Wilson has created a comprehensive study of the theory, history and practice of Indigenous research.

Mohawk scholar Taiaiake Alfred has called for ‘means ends consistency’ in approaches to Indigenous political and social liberation, and this ethic helps to describe Research is Ceremony - this is not just a book about Indigenous research methodologies, this is a book that embodies this practice. To do so, Wilson employs a creative textual solution to help make the book accessible to a wide spectrum of readers – Indigenous and non-indigenous peoples, academics and other researchers, experts and amateurs. Two distinct writing styles/voices are used throughout the text, distinguished by different typeset. One is a more familiarly academic and is used to lay out the abstract/theoretical and academic context of the book. This ‘voice’ describes the structure of the research, provides definitions of key terms (such as research paradigm, ontology, epistemology, methodology, axiology, Indigenous, and Dominant - p33-35), discusses dominant research paradigms (positivism, post-positivism, critical theory, and constructivism - p35-37), and the chronology of research about, with and by Indigenous peoples from 1770 to the
present (p45-54). The other voice is more personal, and takes the form of a letter to Wilson’s three sons.

The intent here is to communicate in a more direct way with the reader in order to help develop a relationship between the reader, Wilson, and the ideas discussed. This is the voice that lays out the personal/intimate context of the research including the stories of how Wilson came to this work, and the relationships and people that supported and generated this research. As the book progresses, the voices become less distinct as the readers have developed enough familiarity with the intent, context and ideas being discussed so as to no longer require the distinction. And there is great gentleness in the care Wilson takes to situate readers unfamiliar with Indigenous ways of knowing, and to practice respect towards the Indigenous individuals and contexts with which he has learned. Such bi-cultural work carries risks of incompleteness, omission or inadvertently causing offense (both by what is said and what is unsaid), but Wilson approaches this project “with a good heart” (7) and with humility and respect, explains or apologizes for any possible gaps in communication.

One of the strengths of Research is Ceremony is what Sean Wilson deliberately chooses not to do: he acknowledges the important role of Indigenous critiques of Western research paradigms and processes, and the harm they have and continue to do to Indigenous individuals and communities (Maori scholar Linda Tuhiwai Smith’s 1999 Decolonizing Methodologies is, perhaps, the most well-known of this movement) by ‘standing on the shoulders’ of these scholars, his intent is to focus explicitly on describing and practising Indigenous research and methodologies. In this way, he deliberately avoids the trap of wasting time and energy justifying the need for Indigenous research paradigms and the validity and value of Indigenous approaches to research. Wilson asserts that this work has been done, and it is critical that we go beyond tendencies to compare Indigenous research paradigms to mainstream research “in order to develop theory, practice and methods that are uniquely Indigenous.” (16)

Wilson defines “Indigenous” as a term “inclusive of all first peoples - unique in our own cultures - but common in our experiences of colonialism and our understanding of the world” (16) and suggests that examining the aspects of an Indigenous research paradigm can help to address “the bigger question of what it is to be Indigenous.” (13) It has been recognized for some time that Indigenous ontologies or “ways of knowing and being” are both fundamentally different from common, Western understandings (especially in the academy) as well as key to valuable insights into the human condition, the relations between people(s), and the relationship between humans and the earth itself. Following a uniquely Indigenous research paradigm contributes to the rearticulation of these insights, otherwise potentially lost through the interference of colonization.

Readers familiar with some debates and discussions about Indigenous research methodologies and the rise of Indigenous approaches in the academy may be surprised to see some scholars/works not represented in the bibliography - Susan Hill and Angela Cavender Wilson for example, are conspicuous by their absence. However, Wilson makes no grandiose claim to have written the definitive work on Indigenous research methodologies. Rather, he works explicitly from his involvement and embeddedness in a network of relationships with researchers and practitioners who work primarily in the area of Indigenous education, and does generate examples and conclusions applicable to Indigenous and Indigenized research across a broad spectrum of inquiry.

Reading Research is Ceremony is no passive exercise: in accordance with the principle and practice of relationality, the reader is called to develop a relationship, via the text, with both the author as storyteller, and the ideas presented. And this is the crux of Wilson’s argument: the purpose of a ceremony is “to build stronger relationships or bridge the distance between aspects of our cosmos and ourselves,” (137) and this is exactly what research does. As we work together and think together, we come into relationship with each other and each other’s ideas. Once in relationship, there are responsibilities, and also new arrays of possibilities. In accordance with relational accountability, the role of the reader engaging with Research is Ceremony carries responsibilities: to listen respectfully and not to judge, to internalize the information presented, and to form our own conclusions. Further, Wilson asks us to be willing to change our conclusions as new relationships develop that permit us different points of view, and different experiences. (134) As we read this book on methodologies, being called upon to uphold such explicit responsibilities
and relationships may be an unsettling experience especially for those of us rooted in traditional, academic practice. But do not worry! We’ve just become part of an Indigenous research paradigm!

Readers need to walk away from (or with!) this book with an understanding of the centrality of relationality and relational accountability to Indigenous research paradigms and practices. However, the biggest gift is of possibilities. Wilson rises to the challenge of explaining and practicing an Indigenous research paradigm in a thoughtful, kind, and comprehensive way. No matter your geographic location, area of study, or previous familiarity, Research is Ceremony is an excellent resource for those seeking to understand the considerable benefits and challenges inherent in engaging with Indigenous thought and practice.

“"We are no longer the post-ideological generation; we are now the generation at the heart of the resistance" (2010-12-03 09:00)

[1] On 10th November 2010 an estimated 55,000 people marched in London against UK government plans to raise higher education tuition fees from £3200 to £9000 per student per year, while simultaneously cutting all public funding for social sciences, arts and humanities subjects and reducing it significantly for science subjects. When the protest reached the Conservative party head quarters ('Millbank Tower') thousands of protestors stood outside chanting, some made a bonfire in the courtyard with the placards and a few others were involved in more confrontational acts such as smashing windows and daubing graffiti on the walls. A number also made it into the building and on to the roof. At the time, the government spin machine went to work trying to delegitimize the students' concerns as a consequence of the actions of a 'violent minority'. They were initially successful. There was an outpouring of disdain from commentators on the left and right, and even the president of the National Union of Students expressed his disapproval. The day looked set to be recorded as a one off, a voicing of concern by a minority of academics and students. Yet, two weeks later, on Tuesday 24th November, there was a national day of action, called by the National Campaign Against Cuts and Fees. 135,000 university and school students as well as academics came out, and this time they protested in their local areas. There were protests in most major cities, with the ‘kettling’ of school pupils as well as adults in London providing some of the most dramatic scenes, and a number of universities saw students occupying lecture theatres or other learning spaces. Then, on 30th November a second national day of action saw more universities 'go into occupation', more protests around the country, and sit-ins in a number of city council chambers, most notably in Birmingham. A total of 18 universities saw occupations on the first 'national day of action' (24th November), increasing to up to 25 on the second (30th November). These include SOAS, UCL, Warwick, Leeds, Birmingham, Edinburgh and Oxford. At UCL the university management called in the bailiffs, at Warwick they put guards and later police on the doors, refused to allow students to leave the room and return to the occupation again (there were no toilets in the room), banned public speeches and lectures through the doorways and turned on the air conditioning to freeze the occupiers out. Leeds VC Michael Arthur called the police, as did most other university managers. The police have been acting alongside university officials and to maintain a political process in which
proper debate is being suppressed, with thousands of people kettled in London for 9 hours last week, many of them children. One observer said that never at any protest had he seen police officers look ashamed at what they were being asked to do. Meanwhile, lecturers at many universities delivered food to occupiers, gave ‘free’ lectures and offered public support for the actions. The Unite Union is trying to set up a national collection for the occupations, Green Party politicians and musicians have made an appearance, Noam Chomsky has publicly commended them, and messages of solidarity have been sent from people all over the world. What is interesting about these occupations is that students are not simply sitting in a room and refusing to leave. Every occupation has expressed a desire to create an alternative learning space to a neoliberal market driven place of education. Six months ago young people were widely criticized for being a depoliticized generation only interested in facebook and shopping. One of the most powerful messages emerging from the recent occupations and protests is that this, at least for a significant minority, could not be further from the truth. Expressing this sentiment, the occupations have spilled out into the public realm with Leeds University students planning a take-over of a vacant area of their city for a week long educational project and discussion on the spending cuts more widely. Goldsmiths students have given a five minute lecture in a bank in the guise of the ‘University of Strategic Optimism’, and UCL students last week created a ‘flashmob’ protest outside Topshop on Oxford Street in protest against tax evasion on the part of the owner, Philip Green. These occupations are being widely covered in the media and supported by letter writing campaigns and petitions to university VCs, MPs and newspapers. There has been a sudden proliferation of not only media but also academic comment on the topic, with social networking sites leading the way. Sally Jefferson, a Cambridge student said of the occupation at her university “we’re inspired by the solidarity we’ve received from academics, students at other universities, and local residents”. Those speaking out in solidarity with the students also feel inspired. At the National Coalition of Resistance (the purpose of which is to resist the austerity measures generally, in all sectors) conference last Saturday Lyndsey German of the Stop the War coalition was typical of the speakers when she said that “the students have changed the whole discussion, we must stand up with them”. Barnaby, a school student perhaps expressed the sentiment of his peers most succinctly when he asserted “we are no longer the post-ideological generation, we are now the generation at the heart of the resistance”. Deferred gratification: key to success? (2010-12-05 08:00)

The ability for delayed or deferred gratification is the ability to control impulses and postpone the fulfilment of a desire - the opposite of instant gratification. This short talk by Joachim de Posada revisits the famous "Stanford Marshmallow Experiment" (originally done by Walter Michel, launched in the late 1960s and published in 1972). While Michel found a positive correlation between pre-school age children’s ability to delay gratification with their later educational achievements. De Posada takes this further and generalises that the ability to defer gratification is crucial for any kind of success, and is especially key for entrepreneurial success.

University reform – assessing the potential for changes from within (2010-12-06 08:00)

In the aftermath of the recent students protest and the consequent wave of occupations in University campuses across the country, it is interesting to assess what could be done to change and ameliorate the UK higher education system from within, and not only from without. In this sense, the role of academics could be crucial in reforming and restructuring the teaching and research systems, as intelligent reforms could have the effect of reducing the need for university fees.

For example, according to [1]Michael Collins, one way to overcome the much feared discrimination between art & humanities and STEM (science, technology, engineering & maths) subjects could be that of embracing the 'liberal arts' academic model found in the USA. In the author’s perspective, the combination of vocational and humanities subject could avert the emerging view of students as ‘cogs in an economic machine’. In practical terms, it is argued that this approach could have the potential of saving money and increasing both the personal and the public value of university degrees. Crucially, these changes should be started off from within academia.

Certainly, the view provided here explores just one of the many possible options to improve the UK Higher Education institutions – nonetheless, it can be valued for shedding light on the fact that intellectual activity is not a mere product sold on the market, and should not be based on measurements of value derived from sheer market competition.

Introducing: the Campaign for the Public University (2010-12-07 08:00)

The UK Campaign for the Public University is open to all. It is a broad-based campaign with no party or other political affiliation. It has been initiated by a group of university teachers and graduate students seeking to defend and promote the idea of the university as a public good. We believe that the public university is essential both for cultivating democratic public life and creating the means for individuals to find fulfillment in creative and intellectual pursuits regardless of whether or not they pursue a degree programme.

A reminder about our two Calls for Papers (2010-12-12 08:00)

Social Research in an Age of Austerity
A new coalition government pledges an unparalleled age of fiscal austerity and a new universities minister promises radical 'reform' of higher education: what does the future hold for the British university in an age of fiscal austerity?

What is this political and economic climate likely to mean for social research? How can social researchers adapt to this climate? How can social research assist in understanding and resisting the imposition of austerity?

Articles and polemics are invited which relate to these themes. See [1]here for submission guidelines.

Contributions also welcome on themes relating to socially and/or politically engaged social research!

Public Scholarship and Private Commitment

Why do you care about your research? What is it that makes you want to spend your time exploring this area of the social world? What does it mean for you to gain understanding of these aspects of social life? Our answers to these questions often encompass the biographical, ethical and political. However these aspects of our involvements are often relegated to the background, as the factors seen as relevant to scholarship are too frequently construed in narrowly intellectualising ways.

The Social Imagination is intended as a space in which private commitments can be reconciled with public scholarship. Therefore we are soliciting contributions ([2]articles, polemics or research profiles) which explain how the two are linked and thus address the aforementioned questions. For submission details see [3]here.

The antagonistic university? A conversation on cuts, conviviality and capitalism. (2010-12-13 08:00)

Anja: Let me begin by posing three questions. Firstly, it’s becoming increasingly apparent that modes of labour are appropriating cognitive, communicational and affective skills. What does this mean to you for the political potential of academic and collaborative work?

Secondly, given that there are massive cuts being proposed to the education sector through a regime of austerity measures, and given that the current labour paradigm is one that produces precarious, alienated, competitive and individualised relations between workers, do you think that the university as an institution (and the kinds of labour it engenders) is a potent site of struggle and strike?

And thirdly, what kinds of collective relations between people and modes of organising do you think are possible for the university struggles, and where do you think we should place our emphasis? How can we negotiate a transversal between micro- and macro- political desires, anxieties, exhaustions, solidarities and hopes? (Please feel free to comment on strategies you think are useful for building more caring and collective common worlds in general as well if you like).

Jamie: Personally, I’m cautious of suggesting to others where to put their energies. There’s a certain mode of
politics, which involves developing a macro-political analysis, a declaration of the state of the political landscape and suggestions for appropriate actions based on that analysis. Now, this mode of politics can certainly have a role to play. At the same time, I would not want to overestimate it. As Anaïs Nin has been credited with saying, the map is not the terrain. Any analysis of the political landscape is necessarily an abstraction, an invention of the mind. Likewise, it seems to me that what we call the university is also an abstraction for ‘it’ is only the continuous effect of social relations. These relations may be premised on the assumptions that the university does exist, that it is real, that it’s rules must be followed, that it engenders certain kinds of labour. What happens if we relate without letting those assumptions determine our actions, our affect? What happens to what we call the university when relations within it are based on play, mutuality, compassion and listening? Does it become a different place, even if only in particular moments?

There’s a little book I like by the Quaker activist and educator Parker J. Palmer called Let Your Life Speak. Instead of trying to work out the right thing to do, the right way to live, where one should put their energies, he suggests an introspective listening. “The soul,” he says “speaks its truth only under quiet, inviting, and trustworthy conditions.” It is my experience also that insights arise when the bodymind is quiet, whether through meditation, walking in the woods, gardening, or simply through a certain acceptance of everything as it is. Even the things that hurt or trigger fear. This acceptance can also make space for a very different mode of politics that is not based around the idea of struggle, but on the direct experience of connection. It’s like that line from Guattari’s Chaosophy that you noted in your copy, Anja, something like "we don’t need to destroy capitalism but to stop producing it." For what is there to struggle against? What does it mean to struggle against a way of relating to ourselves, each other and the land of which we are a part? For myself, I’m more drawn to methods of relating differently, in ways that may not produce capitalism or other patterns of domination. And to do this effectively, I’m learning to work with where I and others are at rather than to struggle against anything. I’m particularly inspired, here by the practice of nonviolent communication (NVC) which is based on the radically compassionate assumption that everyone is doing the best thing they can imagine to meet their life serving needs. And so for me, the key to revolutionary change is in nurturing our capacities for imagination, for empathy, so that each of us is able to imagine ways of meeting our needs but also respect those of other beings.

What we call the university is certainly one place to do this! I remember attending a masterclass in the performative social science at Bournemouth University, a space to explore different ways of communicating about research than producing journal articles. It was inspiring in many ways! One painful image, though, that stays with me, is walking through one of those long university corridors with the fluorescent lights and a woman who is doing postgraduate studies saying to me that she has been advised by her supervisor to make sure that any conference paper she gave was “bullet-proof.” I immediately think of Foucault’s reversal of the famous aphorism in his declaration that "politics is the continuation of war by other means." Politics as war is common in academia – we might think too of the commonplace discursive violence in peer review or the endemic nature of bullying within universities. Nonviolent communication can take the wind out of these sails by showing understanding and compassion for the needs that underlie the aggression, sarcasm or rigidity of communication. The practice can also help us to connect with the pain, anger, fear or frustration we may feel when spoken to in that way by sensing what we are really wanting in that situation – perhaps respect and understanding. Pain held on to can stew into resentment, what Nietzsche referred to as the moralising revenge of the powerless, which only serves to further produce relations of disconnection and control. A release of pain or anxiety, on the other hand, may allow for more fluid, convivial relations – an alternative to politics as war, as struggle.

And this, it seems to me, is where collaboration, whether academic or otherwise, can be immensely powerful. Sure, we can learn to practice meditation or presence or awareness on our own, but it is so much easier and so much more powerful with others. And in collaboration, we can help each to develop our capacity for compassion and imagination so that instead of producing capitalism, we might produce something very different.

Anna: My immediate response to these questions starts in a similar place to Jamie’s, so here I’d like to discuss
one of the questions he poses: “What happens if we relate without letting those assumptions about the ‘rules of
university’ determine our actions, our affect?” In many ways I think this questions guides my academic practice.
Or, perhaps more honestly, I am motivated by its converse: ‘What happens if I follow those assumptions?’ My
answers to this leads back to Anja’s questions – If I buy into those assumptions I am left feeling both self-destructively
competitive and alienated from the politics and people I care most about. The subjects of my work and partners
of my collaborations are turned into objects; they are instrumentalised, they are what stand between me and the
next publication, post, promotion. I feel angry and overworked. The aspects of academia that originally provided
passion and promise (collective knowledge production, researching subjugated histories) are obscured behind the
race to the top of the ivory tower. While I am more reticent than Jamie to speak of this in terms of nonviolence and
spirituality, I find it difficult not to bring the bodymind into it because it is my health, my wellness that is at stake if
I play by those assumptions. Playing by the assumed rules breeds bitterness. Bitterness runs so deep through the
veins of academia, poisoning its lungs, making it harder and harder for us to breath. I have already watched so much
brilliance, so much creative energy fall prey to bitterness. When I catch myself falling, I try to remember this question
like a mantra: How else can I relate? What else can I make?

Practically speaking this generally involves strategies of avoidance. Avoid, at all cost, academics, conferences,
competitions and committees that will fill me with rage and bitterness. These are usually quite easy to identify
in advance. The wording of CFPs, the list of topics and speakers, the entry costs and requirements are all signs
of the politics and goals of a space, project or process. If admission is £250 with no reduced rate, it’s a sign that
accessibility is not a major concern. This matters and will be reflected in other aspects of the event. Other times
you may not know a place, process or project is poisonous until you are already in the throes of it. Here, if you are
lucky, you band together with other miscreants and form an alliance, a temporary autonomous zone of ‘I hate this
conference/process/project.’ The friendships that form in the TAZ of capitalist academia can last days or lifetimes.
They are the pop-up spaces where academic solidarity is built. On less fortunate occasions I find myself retreating
into my overpriced hotel room, opting for ‘alienated with minibar’ over ‘alienated and still at the table without any
alternative dietary triangle sandwiches’. At other times I have elected to pull out of events, projects and applications
at late stages. While I am often left feeling guilty for leaving others hanging, it is sometimes necessary for my
mindbody health to get out. As Marilyn Frye writes about the politics of separation, the act of saying no can be a gen-
tial and affirmative. The more I learn what not to get into, the less I find myself having to politely retract participation.

Of course, deciding what not to participate in is only one part—though a crucial and under-discussed part—of
adhering to the mantra: How else can I relate? What else can I make? Strategies of avoidance are perhaps most
important because of what they produce, the mindbody energy I need to relate and make differently, to build
nourishing collaborations and focus my energy on projects that embody those reasons I became an academic: working with others to produce collective knowledge about histories of resistance that are too often left forgotten
or untold. It is this bringing to life both in my subjects and in my working relationships with colleagues and students
that keeps me here. At moments like this, when the present and future of our resistance as educators takes on a
heightened significance, the university becomes a site of increased potential where the knowledge we make in the
classroom can transform our students’ perception of themselves as active political participants.

Anja: Thank you both for being so open to conversing in ways that are conducive to dialogue and generosity -
to assembling vocabularies that are open to different ways of thought and relation. When I was considering the kinds
of questions to propose here I wanted to find trajectories that could engender movement between different political
scales, to address governance strategies, reforms and labour conditions as well as how to experiment with more
covivial and caring modes of relating and collaborating. I find this to be a thread through both of your responses, so
this is what I would like to continue with.

In a recent text ‘The university is a factory; lets treat it as one’, the commune analyse the labour and social
conditions of the contemporary university as an institution synthesising intellectual and capital production. They pick
up on the trend that has appeared over the past few years of locating the university as a site of labour in a way that
could be described as a 21st century cognitive factory (which is not to negate the existence of material factory modes of production), and the researcher/scholar as the ‘cognitariat’, seen for instance during the Middlesex occupations and in the university occupations and strikes in the US. While I find this kind of translation problematic, it does serve a dramatic purpose, that is to say it highlights the exploitative and precarious environment that the university is productive of. Since the advent of the latest financial crisis, there has been growing fears about scarcity within educational institutions that play out co-incidental terrains of knowledge, pedagogy and labour: the decimation of non/lower-earning (less conducive to vocational outcomes or industry linkages) departments and courses, fee increases, redundancies of staff (academic, administrative and service), casualised contracts, lower qualities of teaching, greater demands on outputs, new managerial and measurement systems. The dream of the passionate scholar, the sage, the public intellectual, engaging students in slow and considered process of learning and teaching has transformed into the reality of the adjunct lecturer struggling to write job applications and journal publications, attend conferences and prepare lectures on poor remuneration, good faith, and the idealistic hope of a tenured position one day in the future. This is nothing new. And nor is it necessarily as dialectic. But speaking about the university as a factory allows us to delineate a field of struggle through polemics. Such polemics serve the function of calling attention to the economic and political conditions through which the university as an institution is performed.

At the same time, to stay within this economic and ideological discourse is to neglect that, as Jamie pointed out, capital is also a social relation, as is the university. We need to stop producing it, as Guattari puts it. The way that we engage with one another as colleagues, teachers, students – our relations, affects, our compassions and solidarities, as much as our jealousies and insecurities – are reiterative of the ways of being and acting that constitutes the university, as much as its institutional and economic structure is. This is something picked up by Anna when she discusses the ways in which academics at times treat one another, how collaborations and collective work can become instrumentalised and alienated. This also has to do with fear, and with scarcity. Anna offers a strategy of avoidance to deal with this, and Jamie calls for nonviolent methods of communication. To add to this, I would like to appeal to notions of conviviality, friendship, care and solidarity. What seems to me to be lacking from many of these situations is a deep awareness and reassurance of others as allies rather than as competitors. From relatively early on in the university we are pitched in competition with one another. This plays out quite ferociously when one reaches the postgraduate level, having to run the gauntlet of criticism from peers and superiors as a rite of passage. At post-doctoral level, this competition extends into the job market, publications and networks. Time and time again we find ourselves in a position to sell ideas that are collaboratively and dialogically developed as individual property. This is part of the regime of intellectual property. At the same time, we are encouraged to make tactical ‘links’ with other institutions and bodies. It is hardly surprising that such an ecology breeds anxiety and conflict.

What we might try to practice in order to deal with these imperatives are ways of listening and responding that are caring. I think that it is important to acknowledge panic and collectively try to reassure it, without denying it. We cannot pretend that the economic market does not affect how we relate, as friends and as colleagues. But this does not need to be the sum of our capacities to reflect and to act. Correlative to Jamie’s call for listening I’d like also to call for articulation, to finding ways to articulate our desires and our needs to one another. To share and be open about our vulnerabilities and our psychic and somatic wellbeing, to collectively address our common situations, to being considerate in finding pathways for re-appropriation that are not only individualised and to finding the means to negotiate and to meet these needs. This might also engender ways of dealing with alienation. By being empathetic and convivial we might find it easier to be reassuring and respectful of the capacities and needs we have of ourselves and of each other, which can lead to ethical and political practices of knowledge production that depart from those endemic to capital.

By relating through solidarity rather than competition we open space for refusing the structures upon which the university is founded. This may be terrifying. It may mean delving into territories that feel more uncertain then we currently inhabit. Are they really, though? Capitalism fuels itself on fantasies such as that of those countless others ready to take over whatever work you may have if you are unwilling, if you refuse. If we collaborate with one
another to collectively organise our working conditions, to determine our own agendas, do we run this risk? Perhaps. But at the same time we make space for alternatives. And what we definitely create are different ways of relating to one another that are the foundations for acting in solidarity. Bifo Berardi, in Precarious Rhapsody, proposes that what is necessary is the creation of a ‘recombinant function, a function of subjectivity capable of spanning the various domains of social production, and recombining them within a paradigmatic frame that is not dependent on profit but social utility’. This is something that can transverse the university and beyond, to engender common ways of being and collaborating that are not confined to the imperatives of competition and intellectual capital.

Jamie: Since we began this interview over a month ago, massive cuts in education and other public services have been proposed by the national government and protests have begun. Yesterday, the 24th November, I joined the demonstration in Bournemouth. Afterwards, I find myself reflecting on your invitation, Anja, to consider the importance not only of listening but also of articulation. This event had little of either, following a fairly standard formula of gathering, walking with police escorts, pre-printed Socialist Worker placards and sporadic and half-hearted chanting directed at Tories and bankers. (In other words, I ached for a sense of connection, of imagination, of meaning!) To be fair, I did meet a woman working at a university who is very excited about the idea of a social centre for Bournemouth and I had a beautiful walk on a sunny day with a friend of mine who has just moved to town. I’m sure there were probably other forms of listening and articulation occurring throughout the march and after of which I was not aware. So, in no way do I wish to diminish the significance of this event. In many ways, it was wonderful. My question: what might be even more wonderful?

I would have loved to have heard directly from more of the people present. How were the various university students, school students, lecturers and others feeling about the proposed cuts? What were they wanting out of education? How do they feel about the institutions of which they are co-creators (including when that co-creation takes the form of enacting subjugation and more or less conforming to disciplinary norms)? What would they value? What would they like to see nurtured or transformed? What would they like to see destroyed (or perhaps composted or released) to make space, to free energy, for something new? And what would I like? Learning to articulate one’s desires is, as Anja notes, crucial to autonomy. I would still, however, place the emphasis on listening; what can one meaningfully articulate without first listening carefully to oneself? I cannot speak my desires until I know what they are. Sure, I can say the things that pop into my head, but unless I am listening deeply, these are rarely as profoundly true as they might be. For myself, these thoughts are more likely to be very intellectualised, very protective and very self-conscious of how I’m perceived by others unless I’ve given myself quiet space in which to listen to myself. My impression is that this is also true for others. Of course, I leave it to the authority of your own experience to say whether or not this is true for you.

And so, I echo what Anja says about the importance of empathy and suggest that it might begin with oneself. In the nonviolent communication training I did in Edinburgh, we were invited to imagine that we each had empathy tanks; our capacity to give empathy to others depended on how much we needed empathy ourselves. Stopping and listening with empathy and without judgement (or with a release of judgement) to our own feelings, our own desires, can give us a greater capacity to empathise with others. It can clear bitterness from the heart, the lungs. Or rather, this is my experience and what I’ve heard from others of theirs. Saying no, as you suggest, Anna, can be a way of stopping, of taking time away from what is painful or emotionally overwhelming. Listening for the yes behind the no, the desire behind the strategy of avoidance might also be very helpful in these situations. What is it that you’re wanting that you not getting in a particular moment? How might you ask for it? How might you accept the pain of not having it?

I’m less comfortable using words like allies and comrades because that, to me, implies enemies; it suggests that particular conflicts over strategy are inherent and nearly essential. As though some of us really were, in the truth of ourselves, Marxists or anarchists or feminists and others really are, in the truth of themselves, capitalists or statists or patriarchs. I can be dominating, competitive. And those I might label my enemy can be deeply caring and cooperative. What violence might I do by drawing a line between us and declaring myself on the "right" side?
For me, nonviolence or perhaps gentleness is based on the insight that we are all fundamentally interdependent. Even further, I would say that we are all part of the same thing, made of the same "soul-stuff" as Voltairine de Cleyre put it in her rejection of a punitive "justice" system. I do appreciate this in a spiritual sense, for example in the radical equality of Quakers and other non-hierarchical spiritual traditions, which recognise a divine light in each of us. For those less comfortable with talk of spirituality, we might see it in purely physical terms. We are all part of an ecosystem. Our bodysminds are not separate beings; we are all interbeing, interbecoming. We are made of the same physical stuff: carbon and oxygen and more from the food and air, which comes through bodies of beings past and present. To compete, either with colleagues or with ideologies, is, it seems to me, to imagine a separation, which is not real. It is a product of the mind, an abstraction projected on to the world. In this, I like Jiddu Krishnamurti's reminder that "Relationship is direct, not through an image." Direct relationship, direct action, direct democracy: they are all linked for me. So, rather than attempting to communicate with one's image of a person as friend or enemy,同志 or competitor, what would it mean, what would it feel like, to perceive the other directly and with compassion? What relationships, what forms of organisation, become possible only when we let go of idea of who the other is, of who we really are and of how we want others to imagine us?

So, I'm not entirely in agreement with the phrase "we cannot pretend that the economic market does not affect how we relate." I might say instead that we might acknowledge the ways in which we find our fears of poverty or loneliness or death leading us into strategies of doing work which is not our passion, not our desire, in order to get money or the esteem of those whose opinions we are encouraged to believe really matter. If this is accurate, in order to stop producing capitalism we might each need to learn to notice these fears arising, to notice the strategies we are drawn to out of these fears, to allow the fear to be there without letting it push us into the strategies which do not deeply sustain us. What we call capitalism does meet some of our needs, or else it wouldn’t exist. What might be even more effective, more sustaining, more sustainable? Or, as Anna asks, how else can we relate? What else can we create? I sense that we are much more likely to find out when we are present with our emotions, our desires and each other.

Anna: Before we end this discussion, I'd like to pick up on Jamie's final thoughts as they interconnect with my feelings about the current student protests and university cuts. First, I am moved and inspired by the energy, imagination and courage that characterize much of the current protest movement. I am also happy to see pockets of support from parents, faculty and staff that highlight many of the problems and challenges Anja astutely raises here. Yet, I also find myself feeling a bit saddened and I have been trying to locate where this sadness sprouts from. Jamie’s reiteration of my comments helps clarify this for me. I am sad because I do not want the university to go back to the same way it was. I do not want to fight only for what needs to stop, nor do I want to preserve the system we already have. A demand for ‘free education’ must be about far more than student fees. While I am not in complete agreement with the tenants of the Really Open University’s 3 Reforms, I find inspiration in their linkage of abolishing student fees with proscriptive for alternative means of funding and an abolition of the Research Excellence Framework and National Student Survey. As Anja says, the micro and macro dynamics of university life must be analysed in relation to each other. To add a few more final questions then: How can workable, sustainable alternatives be imagined alongside critiques of the university? How do we make both micro and macro demands as part of an 'anti-cuts' movement that is also centred on the wellbeing of our mindbodies and environments? How do we negotiate our desires—as students and teachers—to be accepted by (or into) the academe, with our deep understanding that its system of recognition is both the product and source of competition and precarity?

Anja: As a final point, I would also like to mention that what has been building in London since November 10 are waves of protests and occupations illustrating an active movement across constituencies. From strikes by tube workers and firefighters to the storming of the Lewisham Town Hall meeting to meetings and marches at Millbank and Whitehall made up of not only thousands of university students and staff but also teenagers and pensioners, solidarities are developing across often divided terrains. While these are in their incipient stages – they are fragile and temporal – they have the potential to grow and spread. In conversation at these actions desires for a general strike are being articulated, desires for a continuation of dissent and alternative ways of being and relating that are
being lived out in various sites across the country. Here it is not so much about the university returning to how it was, but the university becoming something else (as The Really Open University’s Three Reforms addresses), something not prescribed by the state, not only in economic terms but also about opening spaces for different practices of learning and exchanging knowledge in the present.

What such moments and spaces are engendering are common acts of politicisation, of ways of organising and collaborating. This is rife with antagonism and contestation, as well as sharing and generosity. It is easy to reduce the current dissatisfaction to a consumeristic attitude of students, but this ignores deeper, further reaching conflicts. What is happening now is a process that shows that things can be done otherwise, it shapes dialogue about cuts and fee increases through practices that are very rarely asserted or encouraged in the education system. And this can spark off and inspire momentum. At the same time, there is an awakening cognisance about labour, class compositions and struggles, about privilege and differential inclusion, in the university and beyond that usually tends toward obfuscation in student politics. The university is more widely being contextualised as a site of exploitation and casualised labour, from the cleaning and service staff, to administration and general staff, to sessional lecturers and some academics. The corporatisation of the university is being spoken about, as are the logistics of knowledge (re)production. The conditions of international students, their economisation and mobility, are being thematised. Such cognisance is imperative if a general strike is to occur and points of dissent are to connect. We are also seeing a diversity of tactics: direct action, playful cat and mouse swarming, non-violent occupations, marches, outreach to community and schools. Every day collective desires are becoming more visible.

As Anna and Jamie indicate, what we might consider is how we are to make this sustainable. What happens when energy flags, when we become disheartened, when we are kettled, cold, tired, frustrated and hungry? How do we translate these moments into ongoing conversations and negotiations? How do we take care of each other, with one another? How do we involve more workers (within and beyond the university) to solidarity and participation? What common vocabularies and languages can we find to work together and how do we embrace untranslatability, incoherence, awkwardness and strife? How do we find silence and respite, how do we listen when everyone is shouting? How do we understand processes of subjectivation that are not only relative to reform, to winning, to numbers and percentages, but also to affects, friendships and enmities? And how, most importantly, do we collaboratively determine the worlds we want to live into our many futures? We don’t have to have all the answers, the wish to ask and to listen is already something.

Jamie: I’m delighted to have had this opportunity to practice relating differently. Thank you, Anja and Anna, for this conversation intertwined with innumerable other acts around the world that demonstrate again and again that the dominant stories of how the world is or how we have to play the game are only stories. We need not believe them.

(The interview also appeared on http://london.indymedia.org/articles/6253 on 30 November 2010)

Anna Feigenbaum is an activist-historiographer and an Assistant Professor of Communications at Richmond, the American International University in London. She is a founding member of the Creative Resistance Research Network and an active participant in climate justice and migration campaigns.

Jamie Heckert is an interdependent scholar whose writing on ethics, erotics and ecology have appeared in a variety of publications. He lives in Poole, Dorset, where he is involved in his local Transition Town and a member of Crafty Fox Collective.

Anja Kanngieser is a cultural geographer and radio maker with Dissident Island Radio. She is a sessional lecturer in Media and Politics at Birkbeck College, University of London and a part-time researcher with the Centre for Cultural Research, University of Western Sydney. She is active at the intersections of worker self-organisation, radical politics, creativity and sound.
"History... is a nightmare from which I am trying to awake" says Stephen Dedalus in Joyce's Ulysses. Power is central to the nightmare of history. That has always been the case except where land was communally owned and women were empowered to make decisions with respect to their bodies. If Wikileaks was dangerous enough to provoke the powers that be (a phrase coined by William Tyndale, one of the early translators of the Bible into English who eventually was burnt at the stake for "heresy"), Julian Assange's plight would not be very different from that of Tyndale himself. "Leaks" could be as political as heresies if they threw light on the role of corporations - the powers that be - in manipulating the state machinery to serve private ends at the expense of the masses.
I sincerely fail to understand what Wikileaks is attempting to demonstrate by unleashing this deluge of information most of which is in fact common knowledge. Isn’t this a working of capitalism within capitalism – that this kind of seemingly “critical” information is accessible in corporate-driven societies no matter how hard we rant against their ills? Isn’t this another kind of manufacturing consent or something that would fill a global gossip column? What governments, leaders and diplomats think of each other in their cloakrooms is as uninteresting and pointless as the slander ordinary folks indulge in on a day-to-day basis to fill their time. The Wikileaks is a storm in an empty tea-cup and not anything that would wake you from the nightmare of history.

The above criticism is not to ignore the fact that Wikileaks is dishonest and unethical in the larger sense of the term. The only way that the agendas of governments and states can be challenged is with truth expressed as plainly as possible. The activism of men like Chomsky and Finkelstein or that of the journalist Robert Fisk falls in this category. Tell the truth and the lies of the powerful fall like a house made of cards. The naked emperor starts perishing with embarrassment unable to bear his stark nakedness. Truth has a child-like simplicity that sycophants find hard to understand.

The role of the state in the 21st century must be understood in the context of revolutions in the areas of media and telecommunications. To make or break lives is a dangerously simple thing. Attach a file to your email and click ‘send’ and the damage is done. This is something scary to the powerful as well. Frankenstein in his oedipal agony has forgotten the face of his “real” masters. The missile has deviated from the trajectory and is coming back to destroy its makers. The metaphor begs the question with respect to what kind of a state we live in.

The nation-state in the West is gradually disappearing to make way for the ‘global state.’ The global state is a coordination of vested interests operating beyond the bounds of passports and citizenship or in other words laws that apply to people on the street. The remnant of the nation-state in the third world is more by way of resistance rather than power. Pockets of the global corporate state are more than visible in spaces that powerful elites inhabit in very poor countries.

This is the “nightmare” in which we must examine what Wikileaks is attempting to do. No one trusts a politician anywhere on this planet and states and governments are laid bare before the common eye. There is nothing new about it. At the level of activism remarkably honest writers, socialists and other committed men and women have done everything they could, sometimes at great personal risk, to expose the wrongdoings of their governments. Yet the truth is simple. Autorickshaw drivers who barely make ends meet on the dusty streets of Hyderabad knew that Iraq under Saddam Hussein did not have any weapons of mass destruction (WMDs). The profound ignorance of average westerners is daunting to say the least. They continue to believe the lies that their insane power-hungry governments invent on a day-to-day basis with the active assistance of the media.
My point is that the truth is far more terrible than Wikileaks could dream of telling. Each and every one of us is implicated in that truth. We’re responsible for the millions of the homeless and the hungry across this planet. Says Bertrand Russell at the beginning of his autobiography “What I have lived for:” “Children in famine, victims tortured by oppressors, helpless old people a hated burden to their sons, and the whole world of loneliness, poverty, and pain make a mockery of what human life should be. I long to alleviate the evil, but I cannot, and I too suffer.” We too cannot alleviate the evil, but we don’t want to suffer. We want to ignore the fact that it exists. The absence of the angst shows in the kind of media frenzy we see among those who’ve access to these spaces. The obsession to be looked at is cancerously devouring those who mistake illusion for reality. The victimizers are victims to their own illusions. The seller of dope is a dope addict. The profit-monger stays far from it because his only addiction is to power that comes with ownership. No one can describe that addiction with singular admiration as the novels of Ayn Rand can do. Property is an objective state. The objectivity of wealth is that it is the face behind all the masks. The exploitative and hollow character of that face is what needs to be brought to light.

WikiLeaks is asking questions that are political while attempting to maintain an apolitical stance. Such a stance that does not declare where its real affinities lie is problematic. T. S. Eliot’s poem, “The Rock” famously asks the question: “Where is the knowledge we have lost in information?” Wikileaks is exactly the kind of information that is the enemy of knowledge. It is information that ends up being information - it informs and yet surprisingly no one comes out knowing anything particularly new.

Sociology and the cuts: blog by the BSA (2010-12-15 08:00)

"Sociology and the Cuts" is a new blog by the British Sociological Association. Read it here: http://sociologyandthecuts.wordpress.com/posts/

Suggest links, resources and features (2010-12-15 08:00)

We are trying to build a collection of [1]general links, [2]campaign links and resources. However the internet is a rather large place so if you have any suggestions at all please do get in [3]contact. Likewise we welcome any suggestions about new features which the Sociological Imagination should incorporate. What else should we include? Again please get in touch if you have any ideas.

3. mailto:m.a.carrigan@warwick.ac.uk

Call for book reviews (2010-12-16 08:00)

Sociological Imagination is looking for more book reviewers. If there’s a book that you would like to review then please contact the [1]editor and we will try and arrange a review copy for you.

1. mailto:m.a.carrigan@warwick.ac.uk
Why the cuts are the wrong cure (2010-12-17 08:00)

A reminder about our two Calls for Papers (2010-12-19 08:00)

Social Research in an Age of Austerity

A new coalition government pledges an unparalleled age of fiscal austerity and a new universities minister promises radical ‘reform’ of higher education: what does the future hold for the British university in an age of fiscal
austerity?

What is this political and economic climate likely to mean for social research? How can social researchers adapt to this climate? How can social research assist in understanding and resisting the imposition of austerity?

Articles and polemics are invited which relate to these themes. See [1]here for submission guidelines.

Contributions also welcome on themes relating to socially and/or politically engaged social research!

Public Scholarship and Private Commitment

Why do you care about your research? What is it that makes you want to spend your time exploring this area of the social world? What does it mean for you to gain understanding of these aspects of social life? Our answers to these questions often encompass the biographical, ethical and political. However these aspects of our involvements are often relegated to the background, as the factors seen as relevant to scholarship are too frequently construed in narrowly intellectualising ways.

The Social Imagination is intended as a space in which private commitments can be reconciled with public scholarship. Therefore we are soliciting contributions ([2]articles, polemics or research profiles) which explain how the two are linked and thus address the aforementioned questions. For submission details see [3]here

Review of ‘Exploring Disability’ by Colin Barnes and Geof Mercer (2010-12-20 08:00)

Kayleigh A. Garthwaite is a postgraduate researcher at the Department of Geography at Durham University.

Just over a decade after the first edition of ‘Exploring Disability’ was published, the second edition (minus Tom Shakespeare’s presence) has emerged amidst a growing interests in disability studies from a sociological perspective. As a result of this, Barnes and Mercer felt it apt to produce a second edition of the text to include not only an updated and revised version of the previous text, but also two new chapters that focus upon; firstly, genetics and their implications for people with accredited impairments and long term limiting illness conditions. The second chapter looks at disability and impairment in poorer or underdeveloped countries.

From the outset, the book very much takes on a stance which prioritises the rights of disabled people, beginning with a detailed description of the grass roots mobilisation of disabled people. Through discussing the work of major disability theorists, starting from within traditional sociological approaches to disability and then moving on to those working from within the social model or rights based perspective, the authors ensure that they are very much distanced from the notion of disability as a ‘personal tragedy’. This topic is covered in depth by the first two chapters of the collection.
Chapter 3 is crucial to help us understand sociological approaches to chronic illness and disability. A thorough review of illness and the social begins with Talcott Parsons’ (1951) classic functionalist analysis of the ‘sick role’ and finishing with post-structuralist analyses of illness. As the authors note in this chapter, above all what is clear is that ‘medical sociologists do not “hunt as a pack”’ (p. 69). This chapter recognizes the diversity of approaches and further explores these issues in chapter 4, which dissects theories of disability in more depth.

Chapter 5 features an even more timely consideration of disability policy and the welfare state, given the recent Spending Review (20th October 2010) and its’ implications for disabled people and people who receive benefits due to a chronic illness or disability. Tracing back the historical roots of the relationship between the state and disability policy, Barnes and Mercer devote a separate subheading to New Labour and how their buzz term of social exclusion related to disability. Further subheadings relating to education, employment, transport and leisure and social participation provide an even more convincing case for the wide ranging multitude of barriers that can impact upon the disabled population. Continuing in the same vein, chapter 6 focuses upon routes to independent living and the impact of social policy. The authors conclude that progress has been uneven; therefore, independent living is not something that can be achieved for all disabled people. This chapter leads on fluidly to the political process and disabled people in chapter 7. The following chapter examines the place of disability in culture and the wider media, exploring various stereotypes and generalisations that are often associated with disabled people. The authors point out that public opinion towards prejudicial images directed at disabled people has become more sensitive; however, further work remains to be done to avoid the stigmatisation of disabled people. Finally, chapters 9 and 10 represent the new chapters in this edition. The first chapter, ‘Disability and the right to life’, explores the minefield of ethics, euthanasia, eugenics and biotechnology. The authors conclude that often, the general view that living with an impairment is living with no life at all only seeks to reinforce the ‘personal tragedy’ view of disability, which in turn undermines the great strides taken in relation to the social and political rights of disabled people. Chapter 10 moves on to consider global perspectives of disability, given that the remainder of the book has focused upon Westernised culture and societies. Reflecting upon the growing internationalisation of disability politics and policies, this chapter identifies the differences between various countries and argues that ‘there is no globalized disability identity and culture’ (p. 264). However, the relationship between extreme poverty and disability are inseparable, with the chapter ending on the much emphasised point that disabled people have made progress through the establishment of their own organizations and through campaigning for social justice. Overall, this second edition of Exploring Disability outlines the relationship between disabled people and disability theory, all underpinned by an emancipatory disability research model as the basis for a continued sociological understanding and analysis of disability, which very much focuses upon the campaigning and pursuit of social justice and equality for disabled people, by disabled people. As mentioned, the collection does focus upon Westernised culture and societies, so if that’s what you’re interested in, then great. This second edition is a must read for not only those who are interested in disability studies, but sociologists who possess an interest in fairness and equality should also make sure they don’t miss out on this one.
with broad societal effects. Anything potentially damaging to kids’ self-esteem was axed. Competitions were frowned upon. Soccer coaches stopped counting goals and handed out trophies to everyone. Teachers threw out their red pencils. Criticism was replaced with ubiquitous, even undeserved, praise.

This 2007 [1]article in the New York Magazine reports on new research that dismantles the culture of over-praising. Praise itself is not bad: in a nutshell, praising someone for their hard work is good, but praising them for intelligence is not.

Student protests: support letter from Bulgarian students (2010-12-22 08:00)

Below is a public letter of support written by Bulgarian students on 19 December 2010 (reposted from http://studentskiglas.org/?p=328 )

To the British students, fighting against tuition fees raises:

Dear friends,

We have been following the current situation in the UK with great interest and we sincerely admire your unity
and purposefulness in the fight against tuition fee raises and the privatization of education. We would like to express our support for this endeavor. Your unflinching and resolute actions against government policies in the field of education inspire us to continue our own fight with even more determined steps.

We are facing issues similar to your own. Currently serious cut-backs in education system finance, enforcements of private interests and criminal violation of university autonomy have been undertaken. Many institutions of higher education in Bulgaria have been forced to shut down for the winter months due to a lack of finance. Gradually the student body here began displaying our discontentment – we have organized a few protests against the government’s lunacy, but as yet without significant results. In January we plan to renew the protests and we feel ready to take more radical action in our efforts to achieve our common goal.

We, the students of Bulgaria, would like to declare our solidarity with you and your struggle. We would be happy to stay in contact with you in the future.

In solidarity,

Students’ Organization Studentski Glas, Bulgaria

Evolutionary psychology: are we still haunted by the spectre of eugenics? (2010-12-23 08:00)

You can invariably trust the Idle Ethnographer to come up with a refreshing pre-Christmas read.

So, it is the beginning of the XXI century? So, we’ve had the Holocaust in Europe, the Apartheid in South Africa, and racial segregation in the US (and elsewhere) - and learnt our lesson? Is biological reductionism gone? Not at all. In fact, it is as resilient as a GMO weed.

[1]Satoshi Kanazawa is an evolutionary psychologist at the [2]London School of Economics and his work is an example of the pernicious influence of biological-based explanations of the social world. A recent [3]article in the Independent critically summarises his main points - but the problem seems to be deeper than whether we "like this science". Even if we could leave aside the incurable (and, to me, unacceptable) problems that biological determinism introduces into social science, how is it possible to accept such enquiry as science at all, when it is fraught with obvious methodological inconsistencies and linguistic trickeries?

The author claims to reveal the real reasons behind the "inconvenient truths" of the real world but in fact all he does is confirm and objectify tautologies and stereotypes - about gender (the purpose of all men is to get laid), about human nature (beautiful people have more daughters), about appearance ("nice people look nice, nasty people look nasty") etc. The "causal chain" is blatantly reversed, a small number of observed "facts" is taken to have been caused by other observed facts - with both sides of the equation being socially constructed and hence incommensurable. The claim that "scientists have more achievements in their young years" is proven by examining 280 biographies of academics. How is achievement defined? Can intellectual achievement - even in its institutionalised version of "academic achievement" - ever be seen as an objective fact? And the reason for this is that the goal of mating has been achieved, hence one does not need to be smart or do great deeds any more.

The premisses and conditionalities of the observation are taken for granted, as if what we observe is the truth - all of it, nothing but the truth. The scariest of it all: socially constructed notions, such as "attractiveness" or "smartness", are taken for granted, as 100 % waterproof, objective facts. Even old uncle Durkheim would be terrified - let alone Darwin.
Could it get worse? Yes. In this so called "research", self-ascribed categories such as "I am liberal/conservative" are taken at face value, as legitimate signifiers of ...well, of something, I am not sure of what, but these self-ascribed categories are then correlated with IQ results (also notoriously subjective and unreliable) in order to support a conjecture about smart people being liberal and dumb people being conservative.

"The basic premiss of evolutionary psychology is that the ultimate goal of reproduction is evolutionary success, and that includes human beings as well.".

This and many other statements reveal the "trick": in the middle of the statement, the subject changes. There is a slippage between two incompatible "subjects": reproduction (which/who allegedly has a goal, i.e. is implicitly constituted as the subject of the process); and "human beings". In Heidegger's terms: an unacceptable conflation between "being" as an abstract category and "beings" as concrete, individual entities who are, i.e. who possess/exhibit "being".

Last but not least, what is the purpose of the "research" - and what does it actually tell us? Let's not forget that it is not what you know about something that is important, but rather how you use it (as that Zen master told his student).

The humour value - I am tempted to assume that the whole purpose of this research is to amuse and divert - is rather low, too. If forced to read such things, I would prefer to read that book about thalassophilia (love of the sea) by [4]Charles Davenport (eminent American eugenicist). In [5]Naval Officers, Their Heredity and Development published in 1919 (written in 1917), he theorised the "gene of sea-lust" that naval officers apparently inherit. At least it is old. At least it is amusing. At least at that time Gregor Mendel's law of heredity were poorly understood. At least nazism had not happened... at least I have that gene, too.

A Mexican, a Kiwi and a Nigerian walk into a bar... a dose of (sociological) Xmas humour (2010-12-24 08:00)

You are not seriously checking out SI on Christmas Eve! Well, if you are - we have to make you laugh. And yes, this is sociological: if knowing about Others makes them less other, more human, there is no better way than sharing their humour. Enjoy this marvellous collection of jokes from many countries: read article by Joris Luyendijk in the

Happy Christmas! (2010-12-25 08:00)

Happy Christmas!

----------------------

Joining the Advisory Board (2010-12-26 08:00)

In order to help the Sociological Imagination expand we’re hoping to add two more members to our advisory board. At least over the next year or so, it would mainly involve discussing ideas and building a strategy for the long term
development of the site. So while the role would involve a significant creative commitment, it would not necessitate a particularly large time commitment.

Our aim is to put together an advisory board (current members can be seen [1]here) which includes a diverse range of perspectives. Discussion will be informal and online. Critical views and robust debate about the nature, direction and purpose of the website are most welcome. If you would like to apply then please send a CV to the [2]editor with a short attachment explaining what you believe you would bring to the role.

2. mailto:m.a.carrigan@warwick.ac.uk

Promoting events or projects on the Sociological Imagination  (2010-12-27 08:00)

If you have an event or project that you would like to promote via the Sociological Imagination then please don’t hesitate to get in contact by [1]e-mail or through [2]facebook. We’re happy to post up calls for papers, requests for participants and details of events.

1. mailto:m.a.carrigan@warwick.ac.uk

[1] The Really Open University

The Really Open University exists everywhere, it will not be a one-off event, but an ongoing process. It will be non-hierarchical, making a start at breaking down traditional student-teacher dichotomies. We wish to engage with other communities in Leeds, and beyond. This will form part of a transformation of everyday life.

We wish to create a university where people have a passion to get up and come in and engage in learning and knowledge production. We wish to break the process whereby education and knowledge production is linked to capitalist reproduction rather than towards the general social-good.

[2] The Freire Project

The Freire Project is dedicated to building an international critical community which works to promote social justice in a variety of cultural contexts. We are committed to conducting and sharing critical research in social, political, and educational locations.

[3] One Dimensional University

An interdisciplinary group of research students from the University of Bristol and Cardiff University. The PSS meets regularly to discuss areas of common interest and to support one another’s writing plans. Previous events organised by the PSS include a workshop on Eurocentrism (2008) and a workshop on Alain Badiou (2009). The PSS are: Maria Balen, Thomas Hayes, Andrew Holmes, Laura Morosanu, Lorenzo Silvaggi, Rosa Vasilaki and Filip Vostal. Join us on facebook: Philisophy of Social Science (PSS) Study Group

[5]

[6] Public Sociology

The Public Sociology blog is a joint project undertaken by staff and postgraduate students in the School of Sociology and Social Policy in the Faculty of Education, Social Science and Law at the University of Leeds. The project is part of a wider initiative to communicate with the general public about our research projects and findings and to offer occasional commentaries on issues and events of interest and concern where our various areas of expertise may make a contribution to public discussion.

The Transnational Institute (TNI) was established in 1974 as an international network of activist researchers (“scholar activists”) committed to critical analyses of the global problems of today and tomorrow. It aims to provide intellectual support to movements struggling for a more democratic, equitable and environmentally sustainable world.

[13] Inequalities Blog

This blog was set up by a bunch of young researchers – sociologists, political scientists, geographers, demographers, social policy scholars, economists – from universities on both sides of the Atlantic who wanted to create a space to critically discuss research on inequality, both our own research and the most interesting research we come across; and a community of people who want to try and tackle the injustices they see in the world by shedding light on things that would otherwise be invisible.
Happy new year... “Soviet muppets”: animation from 1924 (2010-12-31 08:00)

It is incredible how much an octagenarian piece of animation can tell you. I'll only give away a snippet of its background:

This is the first Soviet animation film ever made. It was produced in February 1924, by director Dziga Vertov and animators A. Bushkin and A. Ivanov. For its production the authors used a revolutionary (silly pun intended) animation technique involving flat paper puppets. The title, “Советские игрушки”, means “Soviet toys/muppets”; the plot is based on the political caricatures which Victor Deni (Виктор Дени) published in the daily «Pravda».

The movie shows a pig-like "bourgeois" whose gluttony knows no end and whose morality is "rotting" (to give you an idea of the popular symbols and phraseology of those days). The "morally rotten" man's fat belly is cut up by a centaurian figure composed of a worker and a peasant, to release an endless flow of money. The money is used to build useful things for the common people and the bourgeois is eventually defeated.

The movie has a peculiarly theatrical, rather bitter "happy ending". Out of the blue, a Red Army guy (красноармеец) appears, multiplies, and takes charge of the situation. The all proletarians join together to compose a New Year's tree (новогодняя ёлка - the Communists' secularised equivalent of a Christmas tree) on which, tree decorations, the enemies of the soviet society are hanged: the bourgeois, the prostitute, and the "servants of the cult" (служители культа - i.e. priests). Of course, the tree is crowned by a five-corner star.

[EMBED] P.S. Those patient enough to watch this surreal, yet painfully real movie until the very end may spot a prophetic visual reference to the EU... Just joking. I hope you all have a better New Year than the one in the movie "Sovetskie igrushki".

New Toolkit: Using Phone Interviews (by Annie Irvine, University of York) (2011-01-02 08:00)

New toolkit that may be of interest to you:

Using Phone Interviews - Annie Irvine, Social Policy Research Unit, University of York

This toolkit explores the use of telephone interviews in qualitative research. It discusses the practical and methodological advantages of the approach, including minimal travel time and cost and increased anonymity for

The two main methodological objections to telephone interviews are traditionally: the difficulty of achieving rapport with participants; and the lack of non-verbal communication. The toolkit discusses whether these concerns are well-founded, and suggests that their significance may have been exaggerated.

http://www.manchester.ac.uk/realities/resources/toolkits/phone-interviews/index.html

**About Realities toolkits**

Our toolkits are short documents on the practical side of doing research. Topics include: using music elicitation in qualitative research, ethics in research teams, recruiting participants by knocking on doors, participant-produced video, participatory maps, disseminating research by putting on an exhibition, informed consent for visual data.

http://www.manchester.ac.uk/realities/resources/toolkits

**Vital Signs 2 presentations on the Realities website:**

We are starting to put videos and audio of many of the presentations from our Vital Signs 2 conference on the Realities website. There are currently three presentation recordings (from session 5b) available to watch, with
more coming soon.

View the presentations at: http://www.manchester.ac.uk/realities/events/vitalsigns/programme/

See our website for working papers, research methods training events and presentation recordings.

Realities is part of the ESRC National Centre for Research Methods, based at the Morgan Centre at the University of Manchester.

Universities are considering a closer fit between degrees, job market skills and experience (2011-01-04 08:00)

A number of universities across the UK are considering awarding students who display "corporate" skills and job market experience extra marks towards their degrees. This potential accreditation comes as no surprise considering
the continued call for university degrees to be more vocationally based and focused on the skills students will need in the job market.

In this drive as this [1]article suggests, undergraduates on all courses at the University of Leicester, could earn credits for showing they could run a workshop or give a good presentation. Other universities, such as Durham and UCL are considering how to roll out the scheme of awarding extra marks for students' "corporate" skills.

Supporters of this course of action believe that students will now be more likely to select a degree based on how well it will prepare them for the job market, largely because students will soon have to pay up to £9,000 in tuition fees for each year of their degree.

Prof Anthony Forster, pro-vice-chancellor for education at Durham University, said Durham was reviewing its curriculum and exploring ways to "allow academic credit to be awarded for student employment or short-term community and work-based placements that have involved the application or development of academic knowledge and skills".

Cautiously, James Ladyman, a professor of philosophy at Bristol University, said "now we have this emphasis on the cash-value of a degree. Universities are focusing too much on the demands of the corporate sector. Our international students aren't going to come and study in the UK so that they can take corporate skills courses; they come to be taught by top academics."

Call for Papers: The University in Times of Crisis - Prospects for the Social Sciences (2011-01-05 08:00)

A one-day international conference is being organised by the Max Weber Study Group and the Theory Study Group of the British Sociological Association. Its purpose is to think about the current state and prospects of both the university and the social sciences and humanities. After years of having allowed themselves to be defined in terms of usefulness to the 'economy', social scientists and academics in general have to face up to the harsh reality and consider whether they have not simply surrendered their mission and responsibility.

With the total withdrawal of state funding for teaching of the Arts, Humanities and Social Sciences, debt-burdened students will be entering effectively privatised universities at a time when market recipes are demonstrably failing in all spheres of life. In addition, research funds will be severely cut and their allocation further subjected to indicators alien to serious scholarship. These are only the most extreme forms so far of developments taking place elsewhere, such as the EU's 'Bologna process'.

This conference seeks to explain how we have arrived here, to analyse the consequences of these developments and the possibilities for a free social science praxis (both in teaching and scholarship), and to set out the choices that may lie ahead and the responsibilities attached to them. The conference will be organised around the following thematic sessions:

1. The politics of higher education and social science, and the questions of university and social science autonomy, self-government and academic freedom today.
2. Academic vocation: its significance today and the possibilities for cultivating and strengthening it.

3. Managerialism and its ‘quality’ indicators in social science and education: what kind of human beings lie behind such indicators and result from their use? What kind of learning environment are universities promoting and shaping today in place of the praxis of teacher and student?

4. Contribution of contemporary social science and higher education to society: for example, in terms of clarifying fundamental problems, educating judgement and fostering maturity and autonomy. Are we, to follow Weber, fostering a world of thinking human beings able to conduct their own lives, or rather, a world of indifferent subjects of consumption?

The conference organisers invite the submission of one page abstracts addressing one or more of the above topics and questions. The conference will take place May 2011 and the venue will be London or Birmingham; both to be confirmed.

For further information and submission of papers, please contact:
Carlos Frade (University of Salford)
Sam Whimster (Editor of Max Weber Studies)
Gurminder K. Bhambra (University of Warwick)
Austin Harrington (University of Erfurt, Germany)

A reminder about our two Calls for Papers (2011-01-06 08:00)

Social Research in an Age of Austerity

A new coalition government pledges an unparalleled age of fiscal austerity and a new universities minister promises radical ‘reform’ of higher education: what does the future hold for the British university in an age of fiscal austerity?

What is this political and economic climate likely to mean for social research? How can social researchers adapt to this climate? How can social research assist in understanding and resisting the imposition of austerity?

Articles and polemics are invited which relate to these themes. See [1]here for submission guidelines.

Contributions also welcome on themes relating to socially and/or politically engaged social research!

Public Scholarship and Private Commitment

Why do you care about your research? What is it that makes you want to spend your time exploring this area of the social world? What does it mean for you to gain understanding of these aspects of social life? Our answers to these questions often encompass the biographical, ethical and political. However these aspects of our involvements are often relegated to the background, as the factors seen as relevant to scholarship are too frequently construed in narrowly intellectualising ways.
The Social Imagination is intended as a space in which private commitments can be reconciled with public scholarship. Therefore we are soliciting contributions ([2]articles, polemics or research profiles) which explain how the two are linked and thus address the aforementioned questions. For submission details see [3]here

1. http://sociologicalimagination.org/contribute/

UK Teaching Budget to be cut by 6% (2011-01-07 08:00)

While some Kent students continued their sit-ins over the holiday break and others are planning further demonstrations to protest the proposed tuition fee rises, the government decided that English universities are to face a 6% cut to their teaching budgets before teaching incomes are set to increase in 2012 from those raised tuition fees.

In a letter to Tim Melville-Ross, the Chairman of the Higher Education Funding Council for England, David Willets (Minister of State for Universities and Science) and Vince Cable (Business Secretary in the coalition cabinet) outlined the cuts, explaining that teaching grants would decrease from nearly £5 billion to £4.6 billion for 2011-2012. They explained that this was necessary as the government faces very steep challenges to its public spending budget.

In response, however, the vice chancellor’s body pointed out that such cuts before the planned tuition rises amounted to nearly 8% rather than 6. Furthermore, the teaching grant is projected to drop even further—down to £3.8 billion for the year 2012-2013, although the ministers project that this drop would be offset by higher tuition fees.

For further information about what the cuts to the teaching budget may mean for teaching salaries, university budgets, and allocations of university places, click [1]here.

Call for Papers - Social Science and Cultural Politics (2011-01-07 10:07)

Cultural politics is a concept used to label a complex range of social phenomena, frequently as diverse as media cultures and ideologies, forms of political action and social movements, institutional and professional cultures. However, social sciences themselves are driven (explicitly or otherwise) by ideological commitments and assumptions about their own role in society (this being particularly questioned at the moment, especially in the UK).

Social scientists conceive their own cultural politics, reflecting (or not reflecting) on their own 'culture'.

438
On the other hand, how the notion of ‘cultural politics’, as well as the subsidiary concepts of culture and politics, are addressed by current research projects concerned with the realms of political and cultural activity. From this angle, we encourage a wide notion of cultural politics, which could encompass topics like media cultures and subcultures, cultures of institutions and organisations, political cultures and forms of political activism.

The conference aims to discuss the ways culture is conceptualised as well as the implicit and explicit forms of its ‘action’ both inside and outside the academic community. The following themes/questions are intended as a (non-exclusive) guide of possible topics/clusters that could be presented at the conference:

**Theory.** How should we theorise culture? How should we theorise politics? Are such theoretical questions important for empirical research into culture and/or politics?

**Role of Academia.** How has the academia influenced changes in the politics of culture and cultural politics? What are the consequences of the different epistemological and ontological assumptions under which culture has been conceptualized in academic debates? How has culture shaped and challenged social science?

**Role of Media.** How do ideas about culture play out in media communities? How are subjectivities constituted in the context of media and new media forms of production and consumption? How are media institutions shaped and produced by professional assumptions and ideologies?

**Identity.** How do gender, class, sexuality, race and ethnicity intersect with the study of cultural politics? How does the politics of identity relate to the cultural arena? Has gender and/or queer theory challenged our views on culture? Public policies. How has culture been used in social policy design and implementation? Has the concept of race being replaced by the concept of culture in contemporary political debates? How has the concept of multiculturalism shaped the development of public policies? How subcultures affected and/or challenged stereotypes and the change or amendment of public policies/institutions?

**Politics.** How can we conceptualise politics, political ideologies and political institutions in the global era? In which ways have political cultures influenced the development of political institutions? How has culture contributed to the development of political activism and its political effects? Is there such a thing as a global culture and/or a multiculture?

The organisers welcome abstracts from postgraduates in any discipline, on issues within and beyond the questions and topics suggested above. Selected papers will be presented at informal seminars among peers, with each presentation lasting 20 minutes and 10 minutes for questions and answers. Papers should be presented to provoke discussion!

Please send an abstract (under 300 words including your personal details - name, institution, phone number and e-mail) to postgraduateconference2011@gmail.com. Deadline for submitting abstracts is 1st February 2011. If you have any questions or/and comments, please e-mail the organisers at the above e-mail.

Decisions will be made and informed by the 10th February 2011. The conference will take place on the 12th March 2011 at Warwick University premises.

‘Of our elaborate plans, the end’ (2011-01-10 08:00)

No wonder so many school and college students joined NUS on their latest protests. Unlike most Vice Chancellors, these teenagers and their parents can see tripled fees and HE funding restricted to Science, Technology, Engineering and Medicine marks the end, not only of higher education as it has developed since the war but – more broadly – of the whole effort to reform society through education and so better the condition of successive generations.
If carried into legislation, the Coalition's proposals will close a phase of progressive reform that began with the official introduction of comprehensive schools from 1965. These freed primary schools for child-centred education and prepared the way for expansion of further and higher education, including the polytechnic experiment. Unlike 11+ selection, which became a thing of the past in 80 per cent of English secondary schools and more in Scotland and Wales, reforming education at all levels no longer aimed to reinforce existing social hierarchies but sought to break down class divisions by opening equal opportunities to careers for all. The logic of comprehensive reform carried forward to inclusion of children with special needs, a common exam at 16 and a National Curriculum sold to teachers as an entitlement for all, as well as more recent widening participation in HE to nearly half of 18-30 year olds.

Now these efforts are to be abandoned as education returns to shoring up existing privilege. The Coalition's reception of the Browne Review of student fees compliments their cut of 40% of HE funding. Their new hard cap of £9,000 a year on fees leaves unfunded arts and humanities only for those who can afford such frivolous pursuits at elite and surviving campus universities – mainly overseas students and others who are seriously rich. For the rest, a market dedicated – like surviving HE research – to the interests of the private sector will offer vocational courses only in the STEM subjects as the remaining universities and colleges collapse and merge into a range of local e-learning hubs offering part-time and distance provision.

Perhaps the only good to come from this will be to recognise how impossible it was to expect education to change society in the first place by solving its economic problems. Now, along with the rest of what remains of
public sector welfare-state services, the Coalition intends to contract education out to the private sector. This will create their ‘private sector-led recovery’, of which ‘free schools’ and private universities are just the start. Gove’s ‘fair funding’ of schools lays the ground for vouchers as a way to get more parents paying for the legal compulsion to send their children to school as a ‘basic entitlement voucher’ can be topped up by those who can afford it in new fee-charging private crammers and existing independent schools.

Residual notions of the right to education in a good local school with progression to further and higher education are being snuffed out by competitive academic selection. As has been pointed out by all save Russell Group Vice Chancellors and others deluded enough to believe their universities can also eventually privatise themselves out of the system, differentiated fees will heighten the existing social hierarchy in which, as a general rule, the older the university, the younger, whiter, more male and posher its students.

However, it is these students – or some of them – who have had the confidence to lead the action against the cuts so far. By involving state school students robbed of their educational futures and FE students protesting against the loss of Educational Maintenance Allowances, these undergraduates have probably done more to widen participation and create a real enthusiasm for higher education than all previous institutional efforts.

While £27,000 for a ‘top university’ degree is a good deal for those who have been paying £30,000 per child per year at the likes of Marlborough College, the workings of the market in education will leave the elite and their feeder private and selective state schools severely exposed. The ‘brightest and best’ who win through this relentless competition are increasingly and transparently revealed as the richest and most privileged – no matter how many (or in all likelihood, how few) bursaries the Russell Group provide for poor scholars.

Michael Gove’s recent White Paper promised equal funding of post-16 provision whether in schools or FE, ‘levelling down’ to FE instead of up to schools. The dim and demented Gove’s prejudice towards traditional academic study, separated from horny-handed vocational learning (as he thinks of it), can only widen the gulf between school sixth-forms and FE, although we await Professor Wolf’s report on vocational qualifications for the details.

Meanwhile, Kenneth Baker returns with ‘technical colleges’, supposed to be sponsored by universities and FE to recreate 1944 technical schools which only ever covered 4% of all secondary schools because technical education was and is too expensive to provide without the employer-supported apprenticeships that fell apart in the 1970s. Since then employers have not required apprenticeships and the state through the Manpower Services Commission replaced them with Youth Training without jobs. Now colleges will compete with private training providers to deliver Apprenticeships without jobs.

So colleges may benefit from Gove’s apparent switching of widening participation from HE to FE, perhaps by offering more cut-price two-year Foundation ‘degrees’. FE has the majority of NUS’s membership – including one in ten of all HE students – and, as the latest demonstrations show, together with school pupils and teachers, F & HE students and lecturers are well aware that reduced funding and raised fees attack the whole so-called ‘Lost Generation’.

In fact, the strongest argument against raising fees and fully funding HE while restoring EMAs is what else are school and college leavers supposed to do?
Musical chairs: more candidates than ever miss out on a university education (2011-01-11 08:00)

Thousands of young people who were unable to secure a place at university last year have re-applied for degree courses for the coming academic year. The knock-on effect of the shortage of university places in 2010 is now going to have profound impact on the 2011 university application and admissions process as this article states.

In the run-up to Christmas, applications rose by 2.5% compared with the same time in 2009 - with a total of 335,795 candidates now chasing places for 2011 entry.

As statistics might suggest, competition for university places will be intense, as there will also be an additional 8,000 candidates chasing the same number of places as last year.

Just over 404,000 candidates were accepted for undergraduate study in autumn 2010. However, the latest rise in applicants ahead of the higher tuition fees in 2012 will mean that an increasing number of candidates will miss out on a university education.

The right protest for the wrong reasons (2011-01-12 08:00)

We've been here before. At the student march on the 10th November, all my memories came flooding back – young men and women with fluorescent hair and matching T-shirts, the shouts of ‘What do we want: free education! When do we want it: now!’, the adrenaline that comes from being a single individual within a happy, angry crowd. So for a moment 2010 felt just like 2002, bringing back a tidal wave of my own nostalgia for the protests against top-up fees.

But after the protests, I changed my mind. I now think it’s unarguable that graduates should pay for the cost of their education. Still, fees are the wrong way of doing this – and not just slightly, technically, wrong. For reasons I’ll explain, fees are sufficiently wrong that they sent me out on the streets again, back alongside the student protestors I recognised from eight years ago.

To begin with, though: what changed my mind about free higher education? Overall there are three findings that make a persuasive case. Firstly, people who go to university personally reap the rewards for this, as my friend Timo Idema has summarised. It’s hard to argue that I should be subsidised for going to university by non-graduates, given that I’m likely to earn considerably more as a result. Secondly, and counterintuitively, tuition fees were one of the more redistributive measures that New Labour introduced. Universities are dominated by the already advantaged – people like me, in fact – and the means-tested tuition fees meant lower subsidies for people from wealthier families.
Social mobility

Neither of these are ‘killer arguments’ though – they’re just not quite convincing enough. What really clinches the argument is that increasing fees will probably have no effect on social mobility. This seems surprising – [5]Yaz Osho has already written here about how poorer students are more likely to be deterred by high fees. [6]Research shows how poorer students are more likely to be debt-averse, and that middle-class students are more likely to use student loans [7]even though they have less need for them. Indeed, such arguments were the very reason I cared so much about fees to start with.

Yet I strongly doubt that the increases in tuition fees will have any effect on inequalities in HE. (Although [8]the idea that expanding HE has been mainly taken by poorer students is laughable, and requires a serious attempt to misrepresent [9]the evidence).

To begin with, increased fees will have relatively small impacts on incentives – particularly given the concessions that the student protests have forced from the Coalition. [10]The Government seem to have taken up the [11]Sutton Trust’s suggestion to give students from low-income households their first year of tuition for free, and have raised the [12]salary level at which tuition fees will be repaid. The similar bundle of raised fees and means-tested support in the face of the previous protests doesn’t seem to have [13]caused declining participation (although I’m interested if anyone has other analyses on this). And the [14]NUS plan for the graduate tax looks pretty similar to the latest versions of the raised fees. Whatever the details – and the details definitely matter – it doesn’t look like it will be a big enough difference between schemes to have a noticeable impact on mobility.
Obsessing about universities, though, is fundamentally missing the point. Earlier in the year I was dazzled by a presentation from the Nobel-winning economist James Heckman. He convinced me that HE structures are of minor importance in HE inequalities compared to everything that comes before them; indeed, disadvantaged students start doing worse at school from an incredibly young age, and relatively little changes after this. His answer? That we should focus on early-years provision, which can give disadvantaged students the cognitive and non-cognitive skills to have a better chance of going to university 15 years down the line. If the end of free education is the price we have to pay to have Surestart, then it’s worth it.

The right reasons for opposing fees

Despite this, the increase in fees and massive cut in state funding will be a disaster – for more reasons than one.

It is simply incredible that the Coalition want to end state funding for arts, humanities and social sciences. By doing this, the Tories and Liberals are telling the country they see no wider value of these subjects – a view that has been wonderfully skewered by Stefan Collini, and was one of the prompts for the Campaign for the Public University. There is no reason to think that this wider value can be maintained through a market mechanism; as any half-decent economist – in fact, even the bad economists – will tell you, anything that has positive side-effects to other people (‘positive externalities’) will be under-provided by the market.

This cavalier attitude to the fabric of British society can also be seen in the sorts of jobs that graduates are likely to do. A top US university replaced loans with grants in the early 2000s, leading to a wonderful experiment reported by Rothstein and Rouse in 2007. They found that “debt causes graduates to choose substantially higher-salary jobs and reduces the probability that students choose low-paid ‘public interest’ jobs”. Even if we later cancel these debts for people who do socially valuable work, another experiment shows that we prefer avoiding fees than repaying debts, implying that people’s career choices will still be affected. And this is without the vaguer, more unpredictable effects on society, with research suggesting higher fees may lead to lower marriage rates and fewer children.

For those of us wanting academic careers, working in universities will be revolutionised. My own university, LSE, has denied that it has any plans to become private – but given that the entire teaching grant will be abolished, it surely is only a matter of time before this happens. (If the 2004 top-up fees vote had been on the level of fees being discussed today then it would never have got through Parliament. Yet within a few years, this rise becomes accepted and even inevitable. Such is the nature of politics). Inequalities between universities will also deepen. My own union UCU thinks that a third of universities are at risk from these reforms, and this will be acute among those that teach students who go on to socially valuable but not highly paid jobs. Academic pay will vary more between the richer and poorer universities. And Claire Callender and Jonathan Jackson’s research suggests that poorer students are more likely to go to universities with low living costs that have easy term-time work – meaning that the already highly segregated student populations may become even more so.

The fierce debate on social mobility has led to a much better proposal going through Parliament than would otherwise have happened – just as we saw in 2004. Hopefully the ridiculous incentive for universities charging over £6,000 to avoid poorer students will be axed.

But more fundamentally, the obsession with social mobility has become a distraction. The real damage in raising fees rather than a graduate tax lies elsewhere – and as the Bill goes to the Lords and then back to Parliament for its Third Reading, we can but hope that this comes increasingly to the fore.

[27]Ben Baumberg is a PhD student in Social Policy at LSE, and co-edits the collaborative research blog [28]In-
equalities.

A good article that shifts the perspective in an interesting and important way. May I recomend the [1]About Lord Browne
website for more thought provoking analysis on what is wrong with the current governmental approach to higher education
funding. Caspar

Yaz Osho (2011-01-14 14:56:53)
Great article, very insightful.
Foreign Universities May Be Becoming More Attractive to British Students (2011-01-13 08:00)

There is speculation that increasing pressure on limited university places, in tandem with rising tuition fees, may be making the prospect of studying in other western European countries and even the US more attractive to British students. Representatives from British and American universities alike believe that the threat of higher fees and the insecurity over securing a university place are making universities abroad all the more appealing.

With the deadline for UCAS forms set as Saturday, January 16th, many students are well aware of the 209,000 students who didn't receive a university spot last year. According to the Fulbright Commission, which co-ordinates exchange programmes for British students to the US, more than 4,000 students attended its information day in September. That represents more than a 50% increase over last year. Although figures for European universities are harder to attain, many institutions are already reporting much higher degrees of interest from British students.

For more information and some student responses' to these pressures, see the Guardian's coverage [1]here.

Discourses of Dissent: Social Theory and Political Resistance (2011-01-14 06:00)

Public Symposium, Warwick Social Theory Centre

16th February 2011, 2-6pm, Birmingham Midland Institute

£10 waged / £5 student, unwaged
Discourses of Dissent is a one day symposium, open to all, which explores the relationship between social theory and political resistance. In light of the coalition government’s austerity agenda and the emerging movement against it, the event asks how academic research (with a particular focus on social theory) can help inform and sustain political resistance.

In doing so it will confront a variety of pressing questions standing at the interface between theory and politics. How do theoretical justifications of austerity work to constrain public debate? How does the current government’s incongruous blend of neoliberal realism and superficial progressivism relate to what went before it? What resources can we find in social theory to critique the coalition’s agenda and its relationship to the wider crisis of late capitalism? How can academic research in general (and social theory in particular) aid the cultivation and propagation of positive discourses which would allow us to break out of the ever narrowing political and cultural horizons which have defined the public life of the UK over the last three decades?

Confirmed speakers are Steve Fuller, John Holmwood, Ruth Levitas, Sasha Roseneil and Alberto Toscano. More speakers are to be confirmed in the near future.

**Round Table 1: Social Theory and the Politics of Austerity**

**Round Table 2: Envisaging Public Universities and Public Futures**

The event is being organized through the Social Theory Centre at the University of Warwick. It takes place on the 16th February, 2-6pm, at the Birmingham & Midland Institute in central Birmingham. For map, see here: [1]http://www.bmi.org.uk/map.html

For more details please contact Mark Carrigan ([2]m.a.carrigan@warwick.ac.uk) and see the website below.

SI Interviews – Steve Fuller on the Future of the University (2011-01-16 08:00)

In this podcast [1]Steve Fuller talks about the future of the university. At a time of crisis in the university, the discussion explores how academia has arrived at its present juncture and where it might go from here. It contextualises the present predicament in terms of the wider intellectual, cultural, political and economic factors which underlay these seismic shifts in academic life.

[sc _embed _player fileurl="http://www2.warwick.ac.uk/fac/soc/sociology/pg/current/phdstudents/current/syrgan/publications/podcasts/stevefuller.mp3"]The Future of the University

Steve will be speaking on these issues at [2]Discourses of Dissent in February.

Sociological Imagination – that’s what the political class needs (2011-01-18 08:00)
One of the very paradoxes of the tuition fees and education cuts’ odyssey that has heated the political debate over the past few months lies in the way in which political leaders seem to be utterly shocked by the anger and uproar
that their measures have generated throughout the public.

Following the sharp analysis of [1]Les Back, such incomprehension is rooted in the filters that class privileges place on politicians’ ability to understand and make sense of the social world. Once empowered and invested with the privileges of their role, it seems, politicians develop a pronounced detachment from the social reality of the country. As a consequence, they become unable to face up with sober senses what they are doing, and what could be possibly wrong with it.

From this angle, the widening of the class divide, which is likely to become the new rationale of the UK education system, is both symptom and symbol of the inherent lack of socio-logical perspective within the political class. Recently, Sociology has been classified by Conservative and Liberal Democratic politicians as a ‘low cost’ discipline - however, one might wonder how much (social and political) value their own policies could actually gain if only a pinch of ‘sociological imagination’ was added to them...

Moving On From Critique: interesting article and video from Warwick VC (2011-01-19 08:00)

[EMBED] A fascinating [1]article by Nigel Thift, Vice Chancellor of Warwick University, about the ongoing tension which the university system must resolve: Budgets. There is not enough money to go round every institution that wants to be a University of the old school but only a few brave institutions are willing to strike out in new directions. Social inclusion. In one way the growth of mass higher education systems may actually have reinforced the relative position of elites in that some universities can function as positional goods which illustrate the recipient’s status to an even greater extent than before. Star Player syndrome. The position of the top institutions has generally been cemented at the expense of institutions farther down the hierarchy by the way in which these institutions can draw money (and therefore talent) to them, and by rankings. Arts and humanities. The arts and humanities feel threatened by the growth of big science and medical schools but they have yet to find arguments with enough traction to produce the level of public support or a sufficiently generally accepted level of cultural importance that, quite rightly, they feel they need. The role of the state. The degree to which mass higher education should be regarded as a public good clashes with states (and taxpayers) willingness to pay for it. This tension has become a moment of political contest in many parts of the world but the resolution tends to stay political instead of being founded in principle. The third sector. Higher education is surrounded by a list of secondary players who are having primary forms of influence: recruitment consultants, management consultants, league tablers, think tanks, and so on. Unlike universities, the position of these players is generally unregulated and this must clearly be a concern as the global financial crisis has only too clearly shown. Research careers. Universities are producing large number of researchers who are unlikely to all have a sustained research career. Even though many of these will find excellent jobs in other sectors this must remain a concern. World problems. As I have noted in an online debate, universities are key to solving many of the world’s problems but the lifeboats have holes in them. In particular, it is not clear that universities are optimally organized to solve these problems in their current manifestation.

Sociological Imagination will be running a free day school in June at Warwick. It will include social media training workshops and a seminar about the potential uses for social media in the research process. Watch this space for more information.

Review of ‘Race, Sport and Politics: The Sporting Black Diaspora’ by Ben Carrington (2011-01-20 08:00)

Race, Sport and Politics is an intense sociological engagement with the intersection of race, sport and politics in twentieth century Britain and USA. Ben Carrington is a well-established and well-respected author in the areas of sociological theory, ‘race’, culture and sport and this book reflects his passion for the study of ‘race’ and sport.

Race, Sport and Politics opens with a thrilling account of the black American boxer Jack Johnson who, in 1908, defeated the white Canadian Tommy Burns in Sydney to become the World Heavyweight Champion. It was a pivotal moment in history. In 1908, at the peak of imperialism, social Darwinism, eugenics and ‘Muscular Christianity’, boxing epitomised all that was brave, courageous and physically strong in the white ‘race’. As a result, Johnson’s win greatly alarmed the white ruling elites around the world from his native USA to Australia where the epic event transpired (Carrington informs us that Johnson enjoyed the support of the Aborigines of Australia). Johnson’s win was seen as a potential trigger for a ‘black revolution’ having huge implications for imperialism which was based on a white supremacist ideology.

Taking this event as the starting point, Ben Carrington’s latest book, then, ‘is an account of the political meanings and the global impact of ‘the black athlete’ over the past century, the role of sport in the making and remaking of western ideas about racial difference, and the position of sport in the forging of gendered, national and racial identities within the broader African diaspora. ……………..throughout the twentieth century and into the present there has been a continuous struggle over the meaning of ‘the black athlete’…………….. The loss of political power, and the concomitant fears of sexual impotency, finds [sic] its corollary in the rise of the black athlete’.

Having established this, the book moves to a theoretical engagement with sport, ‘race’ and the human body in the wider social and political contexts of the day. Here Carrington engages with and invokes a broad range of social, cultural and literary theorists, among others, Gramsci on hegemony, Frantz Fanon, Césaire, Edward Said, Homi Bhabha, Gayatri Spivak, Allen Guttmann, John Hargreaves, Richard Gruneau, Anne McClintock, Paul Gilroy as well as
a number of present-day writers on sport history and postcolonialism.

Contrary to Guttmann, Carrington posits that like citizenship, ‘sports were born out of and from classed, gendered and racial inequalities’. The black boxer Jack Johnson is an important diasporic figure for Carrington because like other African-Americans Tom Molineaux and Jackie Robinson, the fame and opportunities denied at home were found outside the USA. However, the opportunity to challenge Tommy Burns did not come easily to Jack Johnson. There was severe opposition from various quarters. Boxing was one of the few arenas where a display of violence and physical prowess was sanctioned. Therefore, victory for a black boxer suggested to the ruling elites, an unacceptable subversion of the racial hierarchy and a challenge to white physical superiority [1]. As accounts of Johnson’s reaction show, to him, a victory against a white boxer represented successful resistance and response to racist imperialism [2]. Following Fanon, Carrington notes, ‘The colonial subject’s dreams of muscular prowess........imbue the category of sport with a form of physical release and symbolic power that resonates far beyond the playing fields and boxing rings from where they come. In this context we might suggest that sport becomes articulated with discourses of freedom and hope in the refiguring of the category of ‘the human”.

Carrington goes on to discuss violence, sexuality and desire in the context of ‘the black athlete’. Discourses on ‘the black athlete’ underwent various transitions in the twentieth century. Leading black intellectuals and leaders saw Jack Johnson as too brash, promiscuous and aggressive to be the ideal figurehead for the black struggle for emancipation even though his contribution did much to help the cause. Carrington then examines two former heavyweight boxing champions, the Briton Frank Bruno and the American Mike Tyson, in terms of the colonial binary good black-bad black. The level of acceptance and image enjoyed by them are contrasted and examined, as is their own embrace of their black identity. The book finally moves to a review and discussion of the state of multiculturalism in Britain today- the publication and media, political and popular reception of the Parekh Report of 2000, the London Olympic bid for the 2012 Olympics [3], the terror attacks of 2005, shift of the label of ‘outsider’ and ‘enemy’ from blacks to the Asian Muslim today, the fortunes of black and Asian British sportsmen (in particular Lewis Hamilton and Monty Panesar), and the role of sport as a catalyst for and an indicator of popular attitudes towards diversity [4].

The conclusion ties together the main points of the book- complex relationships between race and sexual desire, race and gender, race and nationalism, all analysed through the prism of sport and ‘the black athlete’. What remains to be seen is if the discourse on ‘the black athlete’ changes in the ‘Age of Obama’.

In the first couple of chapters, Race, Sport and Politics takes the form of an intense theoretical engagement with the topics in what is clearly an expert and advanced sociological study. As the book progresses, it picks up narrative pace and is enlivened by illustrative examples, posters and revealing contemporary events.

Carrington aims to make several important points through this book. To studies of ‘race’ and politics, the book offers an analysis of the perception of ‘the black (male) athlete’ from the days of Social Darwinism and eugenics to the present day. To social theory, Carrington wishes to contribute, through such a study of sport, race and politics, theory generated by sport instead of passive application of existing social theory to sport. Carrington brings into focus the step-motherly treatment meted to the sub-field of sociology of sport. He highlights the role of sport in culture and society to counter the general perception of sport as a disorganised leisure activity with no meaningful contribution to society. Inspite of some brilliant and rigorous work by an increasing number of academics and academic journals in this area, ‘mainstream’ sociologists tend to either pay passing attention to sport or ignore its potential completely. Their engagement ends with the mention of the great CLR James. A cursory glance at the sociology and culture studies departments of leading British universities confirms this to the reader. This book is an important contribution towards redressing this grievance of sociologists of sport and indeed, historians of sport who are faced with a similar neglect!

Along with Paul Gilroy, John Solomos, Les Back, Ian McDonald and others, Carrington is undoubtedly one of
the best-known names in the sociological sub-fields of sport, 'race' and culture.

Notes:

[1] On the other hand, the reader might recall that cricketers of Indian origin such as KS Ranjitsinhji ('Ranji') and his nephew KS Duleepsinhji have represented Oxbridge, MCC/England and Gentlemen (in the Gentlemen vs Players matches). Thus, while participation of non-white sportsmen in boxing was severely opposed, imperial cricket welcomed these non-white players (although their stories are not completely devoid of discrimination).

Unlike boxing, cricket- the epitome of all that was quintessentially English and artistic- was seen as an instrument of cultural imperialism and hence encouraged in the colonies. See the works of JA Mangan, Brian Stoddart, and various other writers on cricket and imperialism.

[2] See Beyond a Boundary by the Trinidadian Marxist writer CLR James for similar discourses on West Indian cricket victories over England.

[3] One might regard the successful London 2012 Olympic bid and the failed Football World Cup 2018 bid as particularly revealing. The 2018 bid contained contributions of inner-city children. Both bids used as their USP, the presentation of England and London as diverse and multicultural with emphasis on the ability of sport to contribute to social cohesion.

"It’s like living in the mind of a depressed hippie": Adam Curtis’s Story of "Oh, Dear"-ism (2011-01-21 08:00)

Adam Curtis is the author of many documentaries, among which one that he names, with jokingly-seriousness, "The rise of "Oh, dear"-ism". It is the story of the interplay between television reporting and world politics which began roughly a couple of decades after World War II. In this story, “noble individuals stand against corrupt political systems”. But are charitable actions always unambiguously doing good, and what are we to do when it is no longer clear who the "good guys" are? Below is a trailer:

[EMBED]
mind of a depressed hippie": Adam Curtis's Story of "Oh, Dear"-ism http://tinyurl.com/6dayqpv [...]

This isn’t a trailer, it’s a short film he was commissioned to make for Charlie Brooker’s Screenwipe series. It’s damn good though :) 

Milena Kremakova (2011-05-16 21:07:19)
Thanks for the clarification! I will correct. Do you know more about Curtis’ work? I really enjoyed this one.

Time and stress: article about alarm clocks (2011-01-24 08:00)

Happy Monday morning to all readers who find themselves in their offices right now. If you wonder how alarm clocks managed to make us so dependent upon them, read [1] this article in the BBC magazine.

[2]
CRESC: Centre for Research on Socio-Cultural Change (2011-01-25 08:00)

The Centre for Research on Socio-Cultural Change is a large research centre based at Manchester University and the Open University. As they describe themselves:

CRESC is a major ESRC-funded Manchester University/Open University research centre. Our social science and humanities researchers use state-of-the-art research methods to explore socio-cultural change.

Their website is worth a [1]look. Not only is there an enormous amount of interesting material on there (seemingly everything their large research team has produced over the lifetime of the centre) but the site itself represents a masterful example of research projects using social media to communicate with the wider world. Has anyone come across any better examples?

If so then please e-mail the [2]editor, as we’re keen to highlight impressive uses of social media within the discipline. It’s something which is still largely in its infancy but undoubtedly set to grow over the next decades. While the funding climate grows ever more hostile and departments are under pressure to demonstrate their capacity for public engagement and impact, easy to use & low cost publishing platforms will surely come to take centre stage.
Social Animal: article by David Brooks in the New Yorker (2011-01-26 08:00)

The conscious mind gives us one way of making sense of our environment. But the unconscious mind gives us other, more supple ways. The cognitive revolution of the past thirty years provides a different perspective on our lives, one that emphasizes the relative importance of emotion over pure reason, social connections over individual choice, moral intuition over abstract logic, perceptiveness over I.Q. It allows us to tell a different sort of success story, an inner story to go along with the conventional surface one.

A reminder about our two Calls for Papers (2011-01-26 08:00)

Social Research in an Age of Austerity

A new coalition government pledges an unparalleled age of fiscal austerity and a new universities minister promises radical ‘reform’ of higher education: what does the future hold for the British university in an age of fiscal austerity?

What is this political and economic climate likely to mean for social research? How can social researchers adapt to this climate? How can social research assist in understanding and resisting the imposition of austerity?

Articles and polemics are invited which relate to these themes. See [1]here for submission guidelines.

Contributions also welcome on themes relating to socially and/or politically engaged social research!

Public Scholarship and Private Commitment
Why do you care about your research? What is it that makes you want to spend your time exploring this area of the social world? What does it mean for you to gain understanding of these aspects of social life? Our answers to these questions often encompass the biographical, ethical and political. However these aspects of our involvements are often relegated to the background, as the factors seen as relevant to scholarship are too frequently construed in narrowly intellectualising ways.

The Social Imagination is intended as a space in which private commitments can be reconciled with public scholarship. Therefore we are soliciting contributions ([2]articles, polemics or research profiles) which explain how the two are linked and thus address the aforementioned questions. For submission details see [3]here

1. [http://sociologicalimagination.org/contribute/](http://sociologicalimagination.org/contribute/)
2. [http://sociologicalimagination.org/contribute/](http://sociologicalimagination.org/contribute/)

**No more gap year? A sarcastic view by David Mitchell (2011-01-27 08:00)**

David Mitchell offers a bitterly humorous view on the cuts in higher education subsidies [1]here.

But make sure you read everything up to the last sentence. And do not forget to read the comments...

[2]
"Hello Kitty has no mouth": essay on the soft power of cuteness in Japanese culture (2011-01-28 08:00)

Her blank eyes gaze at you from her white face, her button nose a sunshine yellow. A dainty bow rests askew on her left ear, the color matching the day’s adorable—not to mention perfectly coordinated—outfit. Cute, one almost overlooks an important feature: the mouth. Hello Kitty, the embodiment of cute, has no mouth. After more than 30 years, she remains a popular and recognizable character, with generation after generation of young girls falling in love—or at least consumer lust—with Hello Kitty, their zeal for collecting the fancy goods at times extending in adulthood. Why the interest (both love and loathing for the character) in Hello Kitty and all things kawaii? What factors have contributed to her rise and continued success on a global scale? Finally, what are the implications of a mouthless Hello Kitty in terms of gender stereotypes and agency?

...

A discussion of Hello Kitty is nearly impossible without an explanation of kawaii and the culture that surrounds the term. Historically, the rise of cuteness is traced back to the 1970s, with the popularization of cute handwriting and manga and disillusionment with earlier student riots and subsequent capitalization of those trends by the fancy goods industry ([1]Kinsella, 1995:225). Though the general meaning of the word is “cute,” the qualities and connotations associated with the term are many. As Kinsella writes, a survey among men and women in 1992 revealed a number of other terms associated with kawaii, including: childlike, innocent, naïve, unconscious, natural, emotional contact between individuals, fashionable, associated with animals, and weak (1995:237-240). Kawaii is a produced style and aesthetic as well as an inherent quality a person, place, or thing possesses.

...

Through cute images, the signifiers of infantilism—weakness, helplessness, childishness, and dependence—become things to aspire to or things to mimic. In an American society that lauds autonomy and independence, the underlying qualities represented by kawaii images, which are primarily associated with young girls, remain problematic. Without a mouth, Hello Kitty has neither voice nor agency. The image of Hello Kitty further perpetuates the stereotype of the docile Asian female.

i love hello kitty thats why i put hello kitty essay.

**President Hosni Mubarak has ordered a curfew in three cities (3.30pm), later extended to the entire country, which was supposed to start at 6pm today and last until 7am tomorrow morning but it has been roundly ignored as clashes have continued.**

Mubarak has sent in the army to restore order in Cairo, Alexandria and Suez but protesters cheered the army in some areas, calling on them to side with them against the police (3.43 pm). In some areas the army has done so. Soldiers have shaken hands with protesters in Alexandria and in Cairo. Demonstrators have clambered onto tanks in Suez and Cairo. There have also been unconfirmed reports of clashes between the army and police.

All bets are off at this point. It seems a lot less likely today than it did yesterday that Hosni Mubarak will stay in power. I suggest [1]Al Jazeera English for useful and insightful updates.

**Too much choice kills the choice: article in the 'Economist' (2011-01-29 08:00)**

On my fifth birthday, my mother asked me what I wanted for lunch: spaghetti or soup. I hesitated. Unexpectedly, she grew impatient. *'You have FIVE seconds to make up your mind. Decide.'* And she counted down. I hesitated for three and a half seconds, then chose one (I now don’t remember which). She said *'OK. Now remember: being able to make choices within five seconds is the most important thing you need to learn to do before you grow up.'*, and disappeared in the kitchen.

That was a quarter of a century ago, in the time before email, mobile phones and microwave ovens (and even in the time before different varieties of chewing gum had appeared on the shop shelves: I grew up in a socialist state). Ever since then, I have been trying with varying (and decreasing) success to implement this wise piece of advise. The Economist - as so often happens - have written the article I had always wanted to write: [1]here

**Discourses of Dissent: Social Theory and Political Resistance** (2011-01-30 08:00)

**Public Symposium, Warwick Social Theory Centre**

16th February 2011, 2-6pm, Birmingham Midland Institute
£10 waged / £5 student, unwaged

Discourses of Dissent is a one day symposium, open to all, which explores the relationship between social theory and political resistance. In light of the coalition government’s austerity agenda and the emerging movement against it, the event asks how academic research (with a particular focus on social theory) can help inform and sustain political resistance.

In doing so it will confront a variety of pressing questions standing at the interface between theory and politics. How do theoretical justifications of austerity work to constrain public debate? How does the current government’s incongruous blend of neoliberal realism and superficial progressivism relate to what went before it? What resources can we find in social theory to critique the coalition’s agenda and it’s relationship to the wider crisis of late capitalism? How can academic research in general (and social theory in particular) aid the cultivation and propagation of positive discourses which would allow us to break out of the ever narrowing political and cultural horizons which have defined the public life of the UK over the last three decades?

Confirmed speakers are Steve Fuller, John Holmwood, Ruth Levitas, Sasha Roseneil and Alberto Toscano. More speakers are to be confirmed in the near future.

Round Table 1: Social Theory and the Politics of Austerity

Round Table 2: Envisaging Public Universities and Public Futures

The event is being organized through the Social Theory Centre at the University of Warwick. It takes place on the 16th February, 2-6pm, at the Birmingham & Midland Institute in central Birmingham. For map, see here: [1]http://www.bmi.org.uk/map.html

From Journalist to Sociologist: Some Reflections (2011-02-01 08:00)

I never, ever wanted to be a journalist. But when an editor of a niche entertainment magazine about to go monthly came knocking at my door about a year and a half after receiving my bachelor’s degree, I was in no financial position to refuse. My newfound writing job put me on the periphery of the cultural industries in the United States, writing primarily about the then burgeoning sector of book publishing which was translating Japanese comics (called ‘manga’) for English-language release. It was, all things considered, a good fit with my undergraduate study in English literature and East Asian area studies, and in the past five years since I have begun freelancing, one lucky break has led to other opportunities, and I have written over a thousands magazine features, news articles, reviews, and more.

Although the pay was terrible and impossible to live on, this work was accompanied by one unexpected perk: I got a front-row seat at one of the most amazing spectacles of transnational cultural flow (from Japan to the United States and then onto the rest of the English-speaking world) in recent historical memory. The phenomenon captivated me, baffled me, and eventually brought me back to the academy in search of answers, first at New York University for a master’s degree, and then across the Atlantic to begin a PhD course in the Department of Sociology in the University of Cambridge. My doctoral research topic is manga publishing and the transnational production of print culture.

Relatively few people, I would presume, have written extensively on the same topics from the perspectives of both journalist and sociologist, and Sociological Imagination has asked me to share some of the insights gleaned from this experience. First of all, perhaps unsurprisingly, there is not the slightest doubt in my mind that my experience as a journalist has made me a better academic professional. Unfortunately, this is by no means a popular view. It is common practice to denigrate journalism and journalists in the academy—to say that a piece of scholarship is ‘too journalistic’, for example, is to render a grave insult. Yet behind this insult, I believe, are strong feelings of jealousy toward journalists, for journalists are extremely good at two important things with which many career academics struggle with daily: 1) Journalists know how to communicate ideas to large and diverse publics, and 2) they know how to crank out publishable pieces of writing at speed.

An extremely productive sociologist might succeed in publishing between two to four solo-authored journal articles per year. A full-time journalist barely scraps by with many more times than that volume of prose each and every month. As a freelancer, I was never doing even a fraction of that, but I estimate that during my busiest year, when I was also a full time student at NYU, I succeeded in publishing approximately 150,000 words and wrote significantly more than that. One learns, by living this sort of life, that writing is ordinary routinized labour, and figuring out how to survive—even thrive—in that daily grind, with its non-stop conveyor belt of looming deadlines,
will make one the envy of the academic world.

Well then, one might ask, is the inverse also true? Does experience as a sociologist make one a better journalist? Unfortunately, I do not think that the answer to that question is a particularly strong affirmative, and the epistemological orientation making a successful sociologist does not necessarily translate into success as a journalist. Hands down the most important distinction in my experience is that journalists simply do not relate to knowledge in the same way that sociologists do. The thrust of a positivist research agenda is to seek empirical evidence to be generalized as much as possible across time and geographic space; as such, sociologists seek to describe and analyze broad social formations, structures, and forces. Journalists, on the other hand, are fixated on the immediate, the novel, and the event. In their eyes, the patterns of history and society take a backseat to the simple question, ‘What’s happening right now?’

Furthermore, there are practical as well as philosophical considerations: I cannot in good conscience recommend that professional sociologists further contribute to the casualization of journalistic labour. In the five years that I have been writing freelance, I have watched my average per word pay rate drop like a stone by over two-thirds, and journalists in every sector of the industry are under constant, accelerating pressure to write more for less money. In fact, it’s to the point now where journalism is becoming a life stage for twenty-somethings like myself who, after finishing their bachelor’s degree, do it for a few years…until the pitiable salaries become intolerable. Many, again including myself, never make enough to live on and can only write insofar as they have income via other means, e.g. a different full-time job, support of a spouse or parents, or independent wealth. Salaried researchers who do a bit of journalism on the side are ultimately complicit in the erosion of a professional field.

Naturally, an army of inexperienced and disempowered journalists does not foster a particularly vibrant fourth estate. I would argue, therefore, that any assault upon professional standards is against the public interest, and it would be immoral for concerned sociologists to collectively take up professional journalism. Of course, sometimes it is impossible in practice to stake out the high ground, particularly if you need extra funds just to get by, but those fortunate enough to have a choice to make need to be realistic: Any contribution to the public good you make is likely to be modest at best, and the potential to do good for others must be carefully weighed against the certain long-term harm it will do to working journalistic professionals and the health of their profession.

It does not follow, however, that sociologists ought to abandon the world of journalism entirely. Quite the contrary; sociologists should be actively engaged with journalists and the journalistic field. Work to make yourself known—and known for something. Become familiar with those who write about topics related to what you do and where they publish. Get yourself on their proverbial Rolodexes and make yourself available as a reliable expert resource, a source of knowledge on call—or, even better yet, quotes. If your research has produced findings which you believe to be relevant to a wider audience, you might choose to write and distribute your own press release. Becoming a resource in the work of article and news creation makes the job of the journalist easier, and as someone who knows firsthand how stressful that can be, this is what I believe we as sociologists must do: make their job easier, not take it away from them.

Hi Casey, I am a student of journalism at the University of Cincinnati, OH and I used your article as reference on a sociology term paper on journalism in relation to sociology. Although it has proven drudgery via a horrible teacher and a Full-Time workload alongside a 4.0 GPA, your article proved very insightful and lightened my mood a bit. Thanks! - Emily

Peter Singer on Hegel and Marx (2011-02-02 08:00)

In this program, contemporary philosopher Peter Singer discusses rational Hegelian philosophy, and the historicism and organicism at its root. Hegel's theories of absolute idealism and of a dialectic, emphasize history in their development of a model of reality. His concept of this reality as ultimately spiritual, and of philosophy as organic and constantly changing, is examined. The theories of Karl Marx are discussed as essentially Hegelian, but a practical economic spin:

SI Interviews - Simon Williams on the Sociology of Sleep (2011-02-03 08:00)

In this podcast [1]Simon Williams talks about his new book [2]the Politics of Sleep. While sleep is often taken to be a entirely private and natural part of human life, in recent years it has been the subject of a rich vein of interdisciplinary research.

As well as exploring the political dimensions to contemporary discourses and practices of sleep, the interview addresses some of the broader questions which sleep raises, situating these issues in terms of theories of modernity and human nature.

New column! “Visual Sociology” call for reader submissions (2011-02-07 08:00)

For all professional and/or novice visual researchers out there: the Sociological Imagination is pleased to announce its new column dedicated to "Visual Research". To celebrate its beginning, we are launching a continuous call for reader submissions.

The call is open to all our readers. One piece of visual research work will be featured each Friday. The SI reserves the right to use the submissions on the website at any time after they have been sent to us, after explicitly notifying...
their authors by email. If you’ve sent us an image and change your mind for any reason, just e-mail us and we promise not to post it. Scroll down for submission guidelines.

Guidelines for submissions:

How to submit: Please e-mail us with 'SI Visual Sociology' in the subject line.

How many: Authors may submit up to three separate pieces of work (we shall consider more numerous applications on a case by case basis – i.e., if we really like them!).

What information: Every submission must be accompanied by the following information:

- title of the work;
- full name/s, or artistic pseudonym/s, of its author/s;
- contact e-mail address and/or other contact details.
What counts as “a piece of visual research”? What ratio must there be between image/s and text? We side with Becker (1995) in abandoning methodological purism, and leave to your discretion the decision what and why classifies as visual sociology/anthropology (as opposed to documentary, photojournalism, art, or any other visual-based genre). The editorial team also reserves the sole right to decide whether to publish any submission. Submissions may range from image/s with text to text with image/s, as long as images and analysis or story are integral to one another.

**Type of image:** Any images/photographs are acceptable: black-and-white or colour; new shots or old scanned shots from your archives – as long as you have the rights to distribute them; and there are no restrictions regarding any artistic or photo-processing technologies used in the production of the images.

**Format and size:**

- JPEG format
- 1:1.5 ratio and any resolution suitable for publishing online (the images the SI normally posts are scaled down to 440x294 pixels, or near)

**Legal issues:** Any persons present in the photographs MUST be notified, be aware, and not oppose the publication of the images. If in doubt, consult this guide on photographers’ rights:

http://www.sirimo.co.uk/2009/05/14/uk-photographers-rights-v2

**Copyright:** The submissions will be distributed under the following conditions

Creative Commons Licence Attribution 3 (allowing for non-commercial distribution of shared works):

![Creative Commons Licence Attribution 3](http://creativecommons.org/licenses/by-nc-nd/3.0/)

“This work is licensed under a Creative Commons Attribution-NonCommercial-NoDerivs 3.0 Unported License.”

Sally Hunt says further university funding cuts 'disastrous for the economy' (2011-02-08 10:43)

UCU General Secretary Sally Hunt used a piece in the Left Foot Forward blog to attack the government's latest cuts as a disaster for the British economy. Accusing the government of 'lazy thinking', she argued that the effects of the cuts would wipe out the economic benefits of higher education, further eroding the basis of growth. She also pointed to UCU research showing that the impact of university closures on regional economies would be catastrophic. Read more [1]here.

Universities are still reeling from the 80 % cut to their teaching budgets starting from 2012, announced in the comprehensive spending review (CSR). Now as part of the £1.8 billion cuts previously announced universities are set to lose £190million between April and July this year as teaching and research budgets are slashed. Read more [2]here and [3]here.

'You’re old, Facebook Newsfeed' – a poem (2011-02-11 08:00)

You’re old, Facebook Newsfeed, and terribly slow –

You have nothing of interest to say

“‘I’m cold’ or “The Smiths”; or “I want it to snow”

(From your cousin who lives in LA).

Amazing how friends are so free with their news

I can’t think what I’d usefully write.

“I’m tired” someone comments – “So how bout a snooze?”

Says one friend, who then ‘likes’ it – how trite!

Don’t worry, dear Reader, we’ll help you with this

We’ve got someone online all the time

Release your minutiae; you will find bliss

If it helps you, perhaps make it rhyme?

No use, Facebook Newsfeed, o generous host,

I’ll be keeping my thoughts in my head

The fact is I can’t help but read every post

And refresh several times before bed.

That’s wonderful, Reader, as we couldn’t say

That our work here at Langley is done
'Til you know how Dave's shoes are affecting his play
And that Angela's 'looking for fun'...
Well yes, but it's time that I don't want to lose
Without making some tiny amends...?
Since you seem to make changes whenever you choose
Could you find me some interesting friends?

‘We love each other’ and other Roma stories from Central and Eastern Europe (2011-02-14 08:00)

The findings of a recent study by AMALIPE, an NGO that serves the Roma community, show that many of the myths surrounding Roma lifestyle are outdated. These include marriage age, family size and the practices of arranged marriages and dowries. Seventeen-year-old Yanka and 20-year-old Vassil share their views on these issues as they prepare for and celebrate their wedding in Zlataritsa, Bulgaria.

It is generally thought that the Roma journey westward started in India more than a thousand years ago, though the group didn't appear in Europe until the fourteenth century. Estimates on the number of Roma in Europe today range between ten and twelve million, with most living in Central and Eastern Europe in conditions of social deprivation and often facing outright discrimination. The scant historical records on the Roma people and its dispersion through much of the continent account for centuries of negative stereotyping-and sometimes romanticizing-that portrays Roma as nomadic, mythical and exotic people who neither fit in, nor belong.

This project seeks to counter these age-old prejudices with twenty-five stories featuring personal insights into the daily lives of Roma people. Colorful but Colorblind, uses multimedia storytelling to promote social integration of Roma in Bulgaria, the Czech Republic, Hungary, Romania and Slovakia. The stories journey into Roma life in some of the newest EU member states, exploring contemporary Roma identities and culture and obstacles that Roma communities face in achieving equality. The stories were produced by teams comprising Roma and majority-community journalists from these countries in collaboration with graduate students from the School of Communication at the University of Miami.

Tihomir Loza
Project Director

Love for sale (2011-02-14 16:11)

...real human hearts are not gaudy, cast in gold or made of chocolate. Real human hearts are bloody, meaty, beating messes of fear and emotional flux. Cheap chocolatey sentiment distracts us from the fact that very few of us are truly alone. We have friends, communities, networks and families to rely on and live in a superabundance of human pleasure, passion, consolation and commitment. There is room for all of us, whether partnered, single, or in more complicated arrangements, to find love and fulfilment.

A love-ly [1]article in the Guardian makes a predictable, but well-argued point about the falsity of Valentine celebrations.

The Idealised Bourgeois Couple (Photo: Milena Kremakova/Idle Ethnographer TM)
In this podcast Catherine Coveney uses the case study of Modafinil (a revolutionary 'wakefulness' drug reportedly subject to increasingly widespread use amongst students, academics, professionals and shiftworkers) to explore the status and practice of cognitive enhancement within contemporary society.

---

Jed Bickman (2011-02-17 14:11:50)
Very interesting; my stream finked out partway through, so I will continue later...In a sense, cognitive enhancement seems to me to be the most valid use of psychopharmaceuticals, because that decision to use comes utterly of the individual's free desire. The individual is not considered to be a patient, is not pathologized, and is not forced to take. Perhaps we should shift our discourse around pharma away from pathology and towards enhancement.

The Future of the British City? A review of Ground Control by Anna Minton (2011-02-17 08:00)

The reconstruction of Manchester’s city centre after the IRA’s 1996 bomb stood as the background to my teenage years and, as is often the case with such things, I never really scrutinised or questioned the direction it took. I was 11 at the time of the bombing and had been watching cartoons on a Saturday morning before driving into the city centre with my mother. I vaguely remember us being stopped in the car by a hastily erected police cordon on the outskirts of the city but it was only later in the day, while at my grandmother’s nursing home, that we found out
what had happened. At the time the impact of the bombing seemed to be expressed solely in the immediacy of the destruction wrought; yet many years later, as I read *Ground Control*, it became clear quite how the events of that morning paved the way for a radical and, at the time, unprecedented experiment in city-centre governance.

Since 2000 the centre of Manchester has been run by a private company called City Co which, in its own words, “provides the vision, strategy and influence” necessary for “creating the trading conditions for business to prosper”. The Manchester city council describes it as follows:

Cityco is Manchester's city centre management company. Cityco is an independent, member-based organisation, which represents businesses in the city centre, primarily leisure, hotels, retailers, commercial property and professional services. The company’s main objective is to help create the trading conditions for business in the city centre to prosper; a broad aim, which we work towards in a variety of strategic and operational ways.

We are well-networked within the city and our close links with the City Council, the Police, transport bodies and other organisations allow us to help members resolve security and environmental problems. We lobby on behalf of members, for example, to improve late night public transport and regulatory frameworks, and undertake initiatives, including research, to inform the long-term strategic direction of the city centre.

Cityco also promotes the city nationally and internationally as a leisure and business destination, running inventive and successful marketing campaigns.

Far from being an isolated case, Cityco was the prototype for a new mode of city centre governance which became the heart of New Labour’s urban policy: the Business Improvement District (BID). It’s a policy imported from America, where it has spread quickly over the last 15 years. Businesses petition the local government to create a BID, the local government (in principle) determines that a majority of the businesses in the area want the BID and then the legislation enacting the BID is enacted. In the US, after the creation of a BID, all business property owners within the district pay a fee – even those who opposed its creation – while in the UK, in the absence of a property register, occupiers pay the fee. This fee pays, as in the case of Cityco, for activity intended to create good business conditions within the area.

Taken in a rather naive and literal sense this could be seen to practically amount to keeping the area clean, safe and attractive. However there’s a subtle but profound conflation at work here; good business conditions for the sort of retail and leisure outlets which usual dominate BIDs amount to circumstances which engender consumption and remove obstacles to consumption. As Anna Minton reports a BID manager telling her: “high margins come with ABC1s, low margins with C2DEs. My job is to create an environment which will bring in more ABC1s” (pg 45). If you fall into the most desire socio-economic groups and are coming into the BID in order to spend money then the BID represents a proactive attempt to shape the area to your immediate needs. This becomes progressively less true as the people concerned become less socio-economically desirable and less intent on consumption to the point where those who are uneconomical, or even anti-economic, become subject to outright harassment.

The Loiterers Resistance Movement are a group influenced by psychogeography who attempt to foster the creative exploration of Manchester. In 2008 they attempted to organize a festival of talks, walks and performances in the city-centre but faced resistance from Cityco at every turn. They were told that flyering without a permit would constitute littering and they would be fined. They were refused permission to pitch a tent as part of an outdoor
art exhibition on the grounds that it might encourage homeless people into the city. An event about pigeons came under fire on the grounds that it might “encourage people to like pigeons”. Members of the group who were asking passers-by about their use of the city-centre were questioned and subject to “vague” threats by Cityco’s wardens. Obviously though this is only example when many more could be cited. Indeed many go unreported.

It’s great to be a wealthy consumer within a BID; quite the opposite to be homeless, flaneur, protestor, busker, young or poor. So the idea that certain public goods (cleaning, security, entertainment) are necessarily common goods is misleading when those specific public goods are pursued by business as a means to an end. Particularly when these de facto governmental bodies come equipped with private police (such as Cityco’s wardens and rangers) and vast CCTV networks. Likewise their ambiguous status, as can be seen in the growing outsourcing of policing functions to private security and equal involvement in policing [2]operations, itself grants security guards de facto powers. Far from being private security guards, they are City Wardens who work with the police and increasingly have police powers; this leaves members of the public less likely to question them and individuals guards more likely to lie about or abuse their powers, at least when the individual would obviously be unlikely to take the matter to court. Likewise the extent of collusion between the police and private security (witness [3]EON and [4]EDO) elsewhere doesn’t inspire confidence in the accountability of these increasingly empowered and emboldened private security agents.

This is only one small aspect of the book but it stuck with me for biographical reasons. It’s also emblematic of the wider issues the book deals with, as market imperatives and the utilitarian individualism which goes with them literally consume public space: gated luxury housing, gated social housing, BIDs, CCTV, ASBOs, ‘malls without walls’. The attempt to provide control and security, as a business driven effort to attract well-off consumers and as a well-off consumer driven effort to repel the dangerous outsider, are radically transforming the spatial politics of the UK in ways which have yet to be adequately conceptualised; anger and protest at individual symptoms have yet to translate into a general understanding of the underlying problem which could provide an effective basis for resistance. Ground Control is an admirable attempt to provide such a basis but one which, at less than 200 pages, was always bound to remain incomplete.

Discourses of Dissent - Social Theory and the Politics of Austerity (2011-02-17 19:45)

A round table session from [1]Discourses of Dissent exploring how social theory can help us understand the politics of austerity. How do theoretical justifications of austerity work to constrain public debate? How does the current government’s incongruous blend of neoliberal realism and superficial progressivism relate to what went before it? What resources can we find in social theory to critique the coalition’s agenda and it’s relationship to the wider crisis of late capitalism?

‘Salad Slaves’: migrant labour in European agriculture (2011-02-18 08:00)

It is a public secret that the European agricultural industry relies heavily on cheap and precarious migrant labour: mostly Moroccans, West Africans, and, since about a decade ago, also Eastern-Europeans. Here is one of the few pieces of investigative journalism that shed light on the actual work conditions of the workers who form this invisible ‘labour force’. Time to Revisit the Port Huron Statement? (2011-02-18 14:14)

At the final discussion session of this week’s ‘Discourses of Dissent’ workshop in Birmingham, I raised the need for academics and students concerned about the future of the university to consolidate a positive position – something beyond simply protesting budget cuts and tuition fees. A model for such an activity is the famous Port Huron Statement of 1962, which established Students for a Democratic Society in the US. Inspired by C. Wright Mills, for the following decade the Statement provided the intellectual springboard for co-ordinating university resistance to the military-industrial complex that had colonized American campuses during the Cold War. Even the original rhetoric is worth emulating today. [1]Here is the statement. [2]

You may also find the Google-generated reception history of the Statement of interest.

Perhaps we need a second ‘constitutional convention’ meeting at Birmingham and Midland Institute to draft an updated version of this statement? Given the eloquence and forthrightness of the original Statement, it might be worth paying attention to how it was composed: My general sense is that, like the US Declaration of Independence, the main draft was by one hand (Tom Hayden playing Tom Jefferson) with various editorial inputs.

Lincoln to re-connect the university with its roots (2011-02-18 14:35)

Mike Neary, Professor of Teaching and Learning at Lincoln University, has just announced the formation of the [1]Social Science Centre, which promises to be a self-organizing cooperatively owned corporation (with teachers and students as peers) devoted to higher education – very much in the spirit of the original medieval universities. It is refreshing to see this ‘back to basics’ approach at a time when universities have lost their sense of identity by playing in too many fields at once.

It is worth pointing out that the general economic model of cooperative ownership for universities has received some sympathetic media coverage in recent weeks, including [2]here and [3]here.

Discourses of Dissent - Public Universities and Public Futures (2011-02-19 00:15)

A round table session from [1]Discourses of Dissent investigating how academic research, with a particular focus on social theory, might help us articulate and work towards a positive vision of shared futures which escape the discursive constraints which have defined the public life of the UK since the 1980s.

The session will also explore the practical resolution of the tensions facing the university system. What are the most pressing issues faced by universities? Is a satisfactory resolution of these tensions possible without radical reform? Is there a need to move beyond critique?

Neo-Liberalism as Utopia (2011-02-19 12:12)

During the 'Discourses of Dissent' conference, in response to Ruth Levitas' presentation about the continuing need for utopias, I observed that Neo-Liberalism is a very potent example of a utopian vision that through what might be reasonably called a 'conspiracy' has managed over the course of seven decades to become the dominant ideology in global political economy. It was a vision forged in response to the socialist turn taken in many capitalist nations after the Great Depression that appeared to be vindicating Marx's view of history.

It all began with the [1]Walter Lippmann Colloquium in Paris in 1938, which after the Second World War was regularly convened (under the guiding influence of FA Hayek) as the [2]'Mont Pelerin Society', named for the Swiss resort location of the first meeting in 1947. [3]A recent book canvasses the vast range of influences that have come from these meetings, which escalated once various welfare state and socialist regimes started to display cracks in the 1970s.

What makes neo-liberalism 'neo' is its explicitly positive attitude towards strong but focussed state intervention – namely, to ensure that markets enjoy maximum fluidity. This means, beyond traditional 'security state' notions of keeping the peace, the state also provides some minimal social services to the poor (but in much the same spirit) and importantly provides incentives that enable a critical mass of the population (say, 20-25 %) to become middle class but in ways that keep their efforts focused on growing the economy (and reaping its benefits) rather than participating in politics (which is left to rather ideologically neutral professional politicians).

From a sociological standpoint, a striking feature of neo-liberalism is its withdrawal of state from the business
of nation-building, or even society-building. Thus, today's so-called 'Big Society' initiatives are largely a continuation of the Thatcherite devolution of the sense of 'the social' to spontaneously formed networks. However, it would be a mistake to see neo-liberalism as anti-sociological: Rather, it is fairly seen as an elaboration of the sociological vision of Vilfredo Pareto, now rarely taught in social theory courses but arguably deserving a new lease on life to understand the deep structures of neo-liberal thought.

Here it is worth noting that Talcott Parsons included Pareto as providing the bridgehead between neo-classical economics and classical sociology in *The Structure of Social Action*.

[3]article in the Wall Street Journal

Social theory and method are inextricably bound up with one another, despite the convention of their separation and a recent tendency to differentiate them entirely by emphasizing technical training in particular methods over general education in culture and thinking. But to theorize, whether in Sociology, Philosophy, Politics, Anthropology, or in any cognate field in the Arts, Humanities and Social sciences means not simply to arrange empirical evidence, but also to seek to clarify the Ideals, Standards or Measure by virtue of a way of inquiry that is sustained and methodically pursued, so much so that we may speak of method(s) of theorizing.

Questions of method, or searches for the 'Way', just as the use of the powers of reason, cannot be reduced to a search for means to satisfy given ends, but must incorporate a discussion of the very ends of social and human life, including the question of meaning. Methods of theorizing are thus ways of attending to the world so as to bring into view, contemplate and articulate Standards of beauty, truth and the good life; radiant Ideals that illuminate and make possible an understanding and interpretation of our present practices and institutions, thereby enabling our education and self-transformation in light of such a Measure.

As Weber concludes in 'Politics as a Vocation' “all historical experience confirms the truth – that man would not have attained the possible unless time and again he had reached out for the impossible." Theorizing can thus be conceived of as the methodical reaching out for the impossible Measure. But as theoria and methodus have become differentiated we lose sight of the Ways towards recovering our Ideals just at a time when economic crisis, ecological catastrophe and political turmoil threaten to overwhelm us.

Last year’s ISTC meeting sought to transcend the cultural turn’s differentiation & proliferation of Habermasian, Foucaulian, Eliasian, subaltern, feminist, sub-disciplinary theories, a concern indicating an aspiration towards our recovering re-integrating, holistic methods of theorizing. This year’s conference continues this search for renaissance, inviting contributions seeking a reflective balance and harmony amongst the various currents in social & political thought at the fundamental level of theory and method, focus on their relation to the elusive but very real directive Ideals of human existence.

Papers are invited that speak to the topic from:

- Classical & contemporary social theory: working with our inheritance
- Methodology of Critical Theory
- Literary methods and Social Theory
- The interpretive tradition, depth hermeneutics & analysis
- The performative aspects of public life
- Media power and image magic
- Psychoanalytic method and social theory
- Phenomenology & hermeneutics
- Epistemologies and philosophies of knowledge today
- Asian philosophies and methods
- Socrates, Plato, and working with the Greeks today
- Political anthropology and reflexive historical sociology

Convenor: Arpad Szakolczai, Professor of Sociology, University College, Cork, Ireland.

**Why am I doing a PhD? By Sarah Smart (2011-02-24 08:00)**

As I sit in my quiet but chaotic study, staring out of the window and wondering whether I can justify stopping for another cup of tea, I find myself wondering why I have spent the last three years doing social research for my PhD. It is a question that I often see (or imagine I see) on people’s faces when they ask what I do, especially since a friend blustered in response to my explanation: “And are my hard-earned taxes funding you?”

My PhD is looking at secondary school pupils’ constructions of social justice. I have learnt not to tell the general inquirer this, as it is open to a number of misinterpretations, including the assumption that I am studying youth offending and that I am a radical communist. In fact, what I want to understand is how young people apply principles of fairness and justice to the social order that they see around them. I want to understand the different ways in which young people deploy concepts of fairness and justice to talk about their school and their society. I am attempting to do this by conducting a series of group interviews with small groups of 11 and 14 year olds in a range of different schools. I began with 110 participants, although there has been some attrition, so only about 80 have taken part in all three interviews. So far the groups have discussed what they think makes a fair or unfair school, examples of fairness and unfairness they see on the television and around them, whether they think a fair world is possible or desirable and what they think needs to happen to make the world fairer.

I often explain to my interviewees that my interest in my topic stems from my time working in education policy research, where I observed that many policy makers seemed to have no idea why I was so concerned about educational inequalities. While this is true, I think the interest in my topic can be traced much further back in my past. I might go back to the short period I spent living overseas as a child, my involvement in the Jubilee 2000 “Drop the Debt” campaign as a teenager, time living in and working in a deprived area of South Wales, or my experiences living in a diverse area of South London. As I learnt more and more sociology I began to make sense of these experiences using theories of habitus, structure, culture, agency and ethics. I became convinced that I live in a deeply unequal nation in a massively unequal world. I also began to understand that my actions contribute to maintaining and recreating that world order. I wrote in my initial research proposal that studying constructions of social justice is important because “constructions of social justice may be used to justify the reproduction of inequality, but they may also be used to challenge and transform unjust social structures”. So I began my research with the aspiration that it would prompt people to consider and debate constructions of social justice and thus take a step towards a fairer society and a fairer world.

Of course, I didn’t know when I set out to do the research that 2010 would be such an interesting time to be studying young people’s ideas about social justice. “Fairness” is trumpeted as the key principle behind decisions about cuts, and is also becoming a rallying call for protesting students. Within my secondary school participants, one group that two years ago told me they were unlikely to do anything to stop unfairness have joined the “Save our School” campaign, which they justify using the language of fairness and justice. Another group spoke passionately about the impact student fees might have on them, denouncing the proposals as unfair. I am still convinced when I go back to the foundation of the research that it is worthwhile and important.

And sometimes when I am in school with young people, I remember this and am encouraged. I look forward to days when a conversation with a teacher prompts them to say “I’ve never thought about it like that before,” or when a student says “I enjoyed talking about that, we never discuss that kind of thing in school.” But more often I find it is a struggle to convince myself that the research is worth doing. On days when casual acquaintances suggest that political affiliation is all in the genes, or when tell me there’s no point in researching fairness because Britain is a
land of opportunity, I despair. On these days I worry that understanding young people's ideas about social justice will make no difference to the world at all, let alone contribute to making it fairer. I guess ultimately it will be desperation that drives me to finish, rather than naive idealism. As for the impact of the research – we will all have to wait and see.

California's success in higher education: article in THE (2011-03-03 08:00)

Why are there so many excellent universities in California? A recent article in the THE dissects the success of this state's system of higher education. The answer seems to include having a good mix of both private and public institutions; appealing to a local student population but also to top international scholars; prioritising of innovation; and, in general, having a vibrant higher education 'ecosystem'. Read the full article [1]here

[2]
'Once upon a time there was a dog called Hosni’ by Prakash Kona (2011-03-04 08:00)

A Palestinian Arab student and friend of mine says: You can have a pack of dogs led by a lion but you cannot have a dog leading a pride of lions. That is the truth of the Arab world he added: we’re nations of lions being led by dogs. The end of the dog-regimes in the Middle East is nowhere in sight. But the Tunisians and the Egyptians just made a beginning, a beginning that’ll free West Asia of families of curs who live as if the world is without an end. Their world is without an end – that is for certain, because they live by the sufferings of the masses. They’re backed by arms that the criminal ruling classes and governments of western nations generously supply to third world despots from the “loans” given by the World Bank and the IMF to make sure that their raw material and their markets remain in tact. This is how the world turns on its own axis and revolves around the bitter sun that shines alike on the exploiters and the exploited.

As far as company is concerned Hosni has nothing to worry. The curs and mongrels of the world have always been united. It is their victims who succumb to imaginary divisions and refuse to unite in the face of the onslaught of ideology and repression. At a more philosophical level we’re dealing with two kinds of dogs: the existential dogs and the essential dogs. I’m not particularly fond of the existential dogs unless they happen to be street dogs for whom I’ve a grudging respect – they’re free. The rest of them are servants of the rich and they need a master – that’s the grievance I bear against existential dogs. But the essential dogs are the Hosni types. The third world is full of them. In the countries of Asia and Africa dogginess is not just a virtue but a conception of reality and a way of life.
I thought I would begin this piece with a more dramatic line such as: “A specter is haunting the Arab world - the specter of freedom and democracy.” There are no scepters in the third world. Only dogs and more dogs. The government of the dogs and by the dogs but for everyone.

Egypt has done itself good by throwing out a dog called Hosni. What about the military that has backed the dog all along. In what way are they less dogs than Hosni? What about the dogs in the American government trying to call the shots? Dogs generally work on a relative plane but the dogs that inhabit American politics – they function as absolutes. They are absolute dogs.

Pimps and moneylenders are the worst kinds of people on earth my brother tells me. The pimps are the ruling classes of the third world who’ll sell their mothers into prostitution if it means power to them. The moneylenders are the business classes and owners of corporations – the brothel-builders who’ll put their mothers for sale if it means profit to them. I refuse to call them dogs any longer. To shame any creature in the animal world by comparing them with the pimps and the money-lenders is an unfair proposition.

The less than bitter truth is that the poor are condemned to live the lives of dogs. The bitter truth is that the order of dogs is the only order that we see across the third world. The mafias run the show and the masses are brainwashed by the dogs of the media until their brains start bleeding and yet they are so drugged with lies and false hopes that they feel nothing.

With such indignation Blake describes the poverty of the poor in "Holy Thursday."

Is this a holy thing to see,  
In a rich and fruitful land,  
Babes reduced to misery,  
Fed with cold and usurous hand?  
Is that trembling cry a song?  
Can it be a song of joy?  
And so many children poor?  
It is a land of poverty!

And their sun does never shine.  
And their fields are bleak & bare.  
And their ways are fill'd with thorns.  
It is eternal winter there.

If fascism lost the battle in Europe it’s because the working classes took a stand against it. Countless people died but fascism and the fascists had to make an exit. The defeat of the exploiting classes is imminent. For the present however time is on the side of the dogs.

A scepter is haunting the third world; the scepter of Hosni and the dogs...

A reminder about our two Calls for Papers (2011-03-10 08:00)

Social Research in an Age of Austerity

A new coalition government pledges an unparalleled age of fiscal austerity and a new universities minister promises radical ‘reform’ of higher education: what does the future hold for the British university in an age of fiscal austerity?
What is this political and economic climate likely to mean for social research? How can social researchers adapt to this climate? How can social research assist in understanding and resisting the imposition of austerity?

Articles and polemics are invited which relate to these themes. See [1]here for submission guidelines.

Contributions also welcome on themes relating to socially and/or politically engaged social research!

Public Scholarship and Private Commitment

Why do you care about your research? What is it that makes you want to spend your time exploring this area of the social world? What does it mean for you to gain understanding of these aspects of social life? Our answers to these questions often encompass the biographical, ethical and political. However these aspects of our involvements are often relegated to the background, as the factors seen as relevant to scholarship are too frequently construed in narrowly intellectualising ways.

The Social Imagination is intended as a space in which private commitments can be reconciled with public scholarship. Therefore we are soliciting contributions ([2]articles, polemics or research profiles) which explain how the two are linked and thus address the aforementioned questions. For submission details see [3]here

Casting My Net wide*: Ethnography and today’s 'Knowing Capitalism' (2011-03-11 08:00)

Traditional anthropology and ethnography are all about daring researchers originating from civilised Western European countries venturing into unknown territories to spend half their lives living with fascinating, backward tribes. They defy the comfy practice of armchair theorising and instead theorise on scruffy notepads, sat on prickly palm-leaf mattresses, while risking being eaten alive by tsetse flies and Felidaes. If not consumed by carnivores, native diseases, or evil spirits, they tend to judge the native tribes by their own post-Enlightenment standards (despite their best intentions), and occasionally go native (because of their best intentions). They then come back to their native universities to hold professor chairs in departments of Social science and Humanities, and proceed to publish acclaimed œuvres on the mores of one tribe for the rest of their lives.

The image of the ethnographer/anthropologist which I so mercilessly caricatured above has now been outdated and superseded by more reflective and less self-glorifying views on the researcher’s role. But the reputation gained during anthropology’s infant years still haunts any social research which does not rely on skilful number-crunching, instead insisting on asking uncomfortable and vague questions, such as ‘why’ and ‘how’.

As the Idle Ethnographer, my quest is to subvert this lingering notion. I cast my nets wide. Among many other authors, I take inspiration from the socially awkward, but perceptive character in Kate Fox’s book [1]Watching the English. Wherever I find myself (even, in fact, especially at home), I watch, mingle, taste, take photos, ask questions, say uncouth things to test people’s reactions, never take anything for a final answer, and generally try to tease out a richer, if disconcerting, verstehen of what Goffman calls ‘the tissue and fabric of [...] life’ ([2]Asylums, 508
1961). I sincerely welcome questions and criticisms, because they are essential for that same understanding (or possibly also because I have been embarrassed so much that I have grown insensitive to embarrassment).

There is one important ‘HOWEVER’. In the contemporary British sociological tradition, qualitative sociology seems to enjoy a relatively higher status compared to other countries - as Savage and Burrows (in [3]The Coming Crisis of Empirical Sociology, 2007) point out, this happened as a ‘reaction to Parsonian functionalism from the 1950s’. However, they also note that there is a bias towards the comparatively ‘lightweight’ (or even flawed) method of in-depth interviews, rather than fully-fledged ethnography: 'A comparatively unusual feature of British sociology is its embrace of the 'in depth interview' as its preferred research method. Halsey (2004) shows that 80 percent of qualitative articles published in the British sociology journals in 2000 used interviews, a proportion which has steadily increased from about 50 per cent in the early 1960s. No other national tradition of sociology gives the in-depth interview such pre-eminence.' (ibid.)

At least one reason for the current proliferation of qualitative methods in UK sociology is somewhat dubious: namely, the dislike of mathematics-based methods harboured by some researchers and students in the social sciences. At least in part, the negative attitude towards ethnography is caused exactly by the widely-held assumption that those of us who rely on qualitative methods do so, due to being handicapped in our numerical skills (see, e.g., [4]'A Crisis of Number: Some Evidence from British Sociology’; or Payne,Williams & Chamberlain (2003) [5]Methodological pluralism). Even though I am only a PhD student, each time I present my research, I receive at least one question regarding my choice of methodology, and have to refute all over again explicit or implicit allegations of incapacity: that, presumably, I must favour ethnography because I dislike statistics, and not because it presents a richer conglomerate of methods which are immensely more appropriate, both in view of my specific research question, and in view of the resources available to me as a sole researcher. I have grown so accustomed to this accusation, that I automatically find myself pointing out the opposite: that I enjoy, and can do, mathematics and basic statistics, but that for the purpose of my PhD project, I happen to be interested in other types of questions about the behaviour and social arrangements of human beings. Even a five-year old knows that you need to choose the right method according to what it is that you want to achieve. For my research questions, statistical analysis is far less helpful than other methods – even though my results are not verifiable. This is not always a convincing cop out, but comparing my research to the sociological equivalent to chaos theory dealing with a multivariable system sometimes yields understanding laughter and occasionally helps*.

Joke aside, a rigorous qualitative+quantitative sociology is necessary more than ever. With the ever-growing scientific specialisation that has been going on in the social sciences, and especially in view of the increasingly marginal social role of professional sociology (discussed at length in the excellent article by Savage and Burrows cited above, drawing on what Thrift (2005), calls a 'knowing capitalism', in a book called 'Knowing Capitalism'). A better mutual understanding - and trust - of each other’s work by researchers on both sides of the lingering methodological divide is indispensible. Perhaps we need a constant reminder to awake us from the slumber of blind methodological allegiances that lead us to forget that the best research in any field - be it history, economics, sociology, journalism, natural sciences, or mathematics - makes use of all available methods and bits of information, and strives to create the most comprehensive, rich, and reflective story possible, in order to help us know more. And that good researchers are never idly resting on their methodological laurels, or assuming that yesterday's superiority guarantees them tomorrow's power.

*(Chaos theory deals the behaviour of dynamical systems which are so sensitive to initial conditions that even the smallest variation in them gives widely divergent results (see e.g. Gleick, J.(1987) Chaos: Making a New Science (see [6]excerpts) or this [7]blog for a brief introduction). Only that in ethnography there are a huge number of unknown variables, whereas mathematics has so far only found ways of dealing with small numbers of dimensions - which makes social research a hugely more complicated exercise.
* this is also a citation from Savage and Burrows, (2007)

The popcorn video is fake. I don't see anything that explains this on your site.

Sociological Imagination (2011-03-22 09:48:06)
Now there is! To be honest, we didn't know...

Paracetamol for social pain? (2011-03-13 08:00)

This recent (June 2010) article hypothesises that both physical and social pain 'may rely on some of the same behavioral and neural mechanisms that register pain-related affect.':
In the language of practice, I suppose, that means: keep a paracetamol handy in your wallet, in case a date goes wrong...

![Image of man writing on a blackboard](image-url)
Do you check your email before brushing your teeth in the morning? I must confess that I do, a habit I acquired as an undergraduate whose computer was nearer to her bed than the shared facilities down the hall. On hindsight, it’s shocking how this new medium went in less than a year from being an occasional diversion to a daily necessity. Many people have had similar revolutionary changes in their everyday practices with television, digital library catalogs, the Internet, and mobile phones, to name a few. Yet these media have become so utterly mundane that we rarely think to tell these remarkable stories.

Perhaps that is why media are too often not taken seriously. If you read, as I do, the online reader comments on [1]The Guardian's higher education coverage, you would see comment after comment calling the sociological study of the media is a ‘Mickey Mouse’ subject, unworthy of meaningful intellectual inquiry. Such views continue, even after having encountered them countless times, as both surprising and dismaying. As a researcher who hails from Mickey Mouse Country, a.k.a. the United States of America (where the name of its favorite cartoon mouse is never taken in vain this way), I would like to believe that I know better than the naysayers.
I know, for example, that new communication technologies such as the Internet and mobile phones have changed the world in a breathtakingly short period of time, but I still love filling my home with books. I know that the news media helped the Bush administration deceive us into war in 'The Greatest Show Ever Sold', to [2]quote Frank Rich. And I don't know exactly how much the Hollywood film industry is worth, but I do know that it is a really big number. Given the ubiquity of media in all arenas of modern societies, it is awfully hard to argue that media don't matter. Media have become a part of everything, everywhere.

Welcome, then, to the first installment of [3]'Mediated Matters’, a new weekly column series here at [4]Socio-logical Imagination which takes as its starting point the premise that media are important. I understand a medium to be any technology, from cave paintings to iPads, through which human beings store and express meaning. As the title implies, its thematic focus will be the sociology of the media in the broadest sense; this column is not solely—or even primarily—about journalism. Future columns written by [5]Yours Truly will be posted every Monday and may be expected to fall into two broad categories: 1) columns which contextualize sociological theories and empirical research related to the production, circulation, and consumption of mediated forms, and 2) columns which take particular media objects such as books and movies and use them elucidate particular sociological contributions to knowledge from any subfield.

*Media do in fact matter.* They enable certain forms of social action, while constraining others, and they both transform and are transformed by social forces. They promise new a siren song of opportunities, as well as new pitfalls, where producers can be powerful but so can consumers. From local news to literature reviews, comic books to Facebook, the so-called boob tube to YouTube, and gamer theory to cultural intermediaries, I invite you to join me in my ongoing explorations of this splendid, ever-shifting sociological terrain of matters mediated—together we are...
guaranteed to discover a world of inspiration and provocation in equal measure!

___________

Emotional management during research: A personal reflection (2011-03-15 08:00)

Dickson-Smith et al (2009: 61) suggest that ‘undertaking qualitative research is an embodied experience and that researchers may be emotionally affected by the work that they do’. They also state that this ‘emotional work’ (Hochschild 1983) is rarely theoretically or empirically investigated (Dickson-Smith et al 2009). Throughout this article I take a distinctly un-academic approach (and voice) to provide a personal account of my experiences of doing emotional work while conducting my PhD fieldwork. To add context, my PhD research focuses on disabled peoples' experiences of sexuality and relationships. The research begins from the idea that disabled peoples' sexualities are constructed in ways which may be disempowering, that their bodies and lives are largely degendered and desexualised, and that their sexual politics and cultures are inhibited within an ablest/disablist society. Thus, through collecting disabled peoples' sexual stories (in a variety of ways), the research seeks to explore experiences and understandings of sexuality, both in terms of these constructions, and the ways in which disabled people manage and negotiate them.
Throughout the article I provide some reflections. Firstly, on the considerable emotional challenges encountered during the research process and the ways in which these were managed through both successful and unsuccessful coping strategies. Secondly, I detail the ways in which my (disabled) identity and biography impacted upon this emotional management and my relationships with participants. In order to embody such discussions I use excerpts from my own research diary and quotes from participants. The article concludes by asking the ways in which we, as a community of (postgraduate) researchers, can do more to share our research experiences with each other for the benefit of ourselves and our work.

**Emotional management**

The emotional challenges experienced throughout my field work year and beyond were not something which I had seriously anticipated. Naively, I never contemplated that listening to the stories of others, through which tales of isolation, loneliness, self hatred, and great sadness were not uncommon, would be as difficult and impactful as it turned out to be. I certainly never thought that it would affect my well-being or make me question aspects of my own life and identity as a disabled person. Many of the stories I was told were ones of pride, self-confidence, resistance, and personal strength. However, many were not and (for me) embodied the oppression, discrimination, and prejudice many disabled people face as part of their daily lives. For example, I was particularly touched by one interviewee called Sally*:

“I feel my disability has a huge impact on my self confidence and self esteem. I lack the confidence to make new friends or to approach people. I don’t like going out places I know there will be a lot of people as I feel like everyone is staring at and judging me. I avoid eye contact and only talk to new people if they talk to me first. As a
result of my disability, [I am] extremely self conscious - I cover up with baggy hoody jumpers & scarves - and rarely leave the house...

But, in my head I have the ideal me - how I’d imagine myself to look and behave if I were ‘normal’ - not disabled. I’d have loads of friends - both male & female – I’d laugh lots and be daring, stay out late & be independent. I’d also have boyfriends, go out clubbing, to pubs, to festivals, & have real relationships.... My life would be radically different... I wouldn’t want to get involved with someone like me as I wouldn’t want to miss out on life or be held back, so I can’t expect anyone else to...”

- Sally, 21

To provide more of a background, my interview with Sally was carried out via email over several months. On reflection, this extended time period gave me the chance to emotionally invest in her story in ways that I didn't fully appreciate at the time. Sally's was a story which, with each email update, moved me to tears and kept me awake at night. I found it difficult to switch off from thinking about her. This was compounded by our interview coming to an abrupt and unnatural end – one day Sally didn’t reply and I never heard from her again. My coping strategy with this was predominantly through reflecting on why Sally’s story touched me so much. I’d heard similar themes regarding oppression and isolation from most other people in my sample, but something stood out about Sally.

I can now see that Sally's story, and the stories of the other young disabled people I interviewed, particularly resonated with me because many of the core themes were things I have felt/experienced prior to ‘coming out’ as a disabled person, thus linking with my own biography. Disabled academic Tom Shakespeare helpfully uses the analogy of ‘coming out of the closet’ within lesbian/gay cultures to refer to people with impairments identifying with the disabled label and ‘taking it on’ as a social identity (Shakespeare et el 1996). My ‘condition’ – muscular dystrophy – is congenital (from birth), and I experience it daily in a very real way in terms of a significant mobility impairment. However, after spending my childhood in a wheelchair, special buggies, or on my dad’s back, as a teenager I strived to be ‘normal’. This, arguably, is the norm for most teenagers, but for me as a disabled person it meant hiding from whom and what I am. For example, I wouldn't attend social events where I knew I couldn't hide my difficulties (I ashamedly still do this now, but with much less frequency and for different reasons), rejected walking aids (a move which has resulted in me experiencing more pain as an adult), stopped walking if I saw a boy I liked (if I didn't move, he'd never be able to tell), not park in disabled bays when I desperately needed to, and generally pretend I wasn’t one of ‘them’. This continued until my early twenties when I began working with disabled people as part of my career, made disabled friends, and began to learn about the extensive political and cultural aspects of disability - for example, the [1]disability rights movement and [2]disability and Deaf arts.

Looking back, there was a real honesty in the way Sally spoke which unnerved me. It not only made me feel uncomfortable about my own past, but also meant I wanted (as arrogant as I now realise it to be) to help her, talk to her, empower her, politicise her, and share with her our similarities. I felt incredibly restrained and powerless in my role as a researcher at this point – I was there to listen, record, and ask questions, nothing more. Our relationship was boundaried, restricted to its context, and, I felt at the time, did absolutely nothing for her.
However, there were other stories which weren’t linked to my own experiences or biography that I also found distressing to hear. For example, Grace, a Deaf woman who chose to share her experiences with me via writing her story down in a journal, had been physically and sexually abused by her partner for many years:

“Over the years he became very abusive. I was treated like meat, raped, sodomised. He told me I was boring and useless, only good for a fuck. I started to almost believe it. My confidence was at rock bottom. In my heart I knew that what he was saying was wrong but I felt helpless. And there was my deafness. I had left school with no qualifications, no career. A dead end job and an early marriage and children meant I had hardly any skills outside the home. He isolated me from my friends. He could not cope with me being deaf; as my deafness increased, he found it harder. He did not want a deaf wife.”

- Grace, 58

Understandably, I found Grace’s recounting of this time in her life very difficult to read. I can vividly remember dreading receiving her (emailed) journal entries as I knew the content would be gruelling to manage. As soon as an update would hit my inbox I would get an unsettling feeling in my stomach. Sometimes I resisted opening them for a few days, hoping that if I left them they may disappear. Suffice to say they didn’t, and that avoidance wasn’t an appropriate, or professional, coping strategy.

I also found I got close to participants who, if it weren’t for the researcher/researched relationship, could have become great friends. One spinally cord injured woman, Lucille, wrote her story via a journal and talked extensively about how (she felt) her disabled identity shadowed her sense of femininity and gender identity: her choices of clothing and footwear were dominated by her body, she felt “less of a wife” as she could no longer carry
out a domestic role in the way she once had, and she felt invisible as a woman. Lucille found writing her story a cathartic activity which gave her courage and allowed her to explore parts of her life she had shut down after her injury. On our last contact, she told me that telling her story had empowered her in ways she hadn't imagined possible; for example, she wore a skirt for the first time since her accident (10 years earlier) because she "finally felt comfortable as a disabled woman". Similarly, another interviewee called Abram got back in touch after taking part to tell me that talking about his oppression had invigorated him to change the aspects of his life with which he had not been happy: he had felt dominated by his overbearing parents who he said controlled his life and didn't allow him privacy. He reported that expressing his thoughts, ideas, and feelings in the interview gave him the strength to take control of his finances and set new boundaries with his parents. While in hindsight I take no credit for these acts of considerable determination and courage, at the time I experienced these (emotional) connections in a very powerful way. I felt as if my research (and therefore, me) had become integral within these narratives of emancipation, or at the very least was experienced as a catalyst for change.

Harm

At other points I experienced hearing the stories of others as harmful in terms of my own well-being. As a person with muscular dystrophy, my work was embraced by the [3]Muscular Dystrophy Campaign which resulted in publicity (see here, pgs 16-18, The Sex Factor 2009) and a fantastic chance for me to gain access to participants. As a result, a significant number of my sample had the same umbrella condition as me. The term 'muscular dystrophy' (hereby MD) refers to a wide variety of conditions which are characterised by a degeneration of muscle in the body over time. Types of the condition differ in terms of speed of progression, severity, particular muscles, time of onset, and trajectory. Many types are life limiting or shortening, though some are not.

Significantly, despite being diagnosed with MD as a baby, my specific 'type' has always been undiagnosed. The fact that I have experienced very little identifiable progression means doctors have estimated that it’s unlikely to be extensively progressive, or at best, that progression will be slow and possibly limited to certain bodily areas/functions. Though, as with anything, there are no guarantees. This is not, oddly, something that regularly enters my consciousness (though I would be lying if I said it didn’t arise when when I think about my future: long-term career prospects, motherhood etc). However, this changed when I began interviewing others with MD. All but one had a progressive form of MD and this often came out in their narratives in a variety of ways – young men like Mark, Robert, and Abram wanting to experience sex before further progression, women like Rhona and Jane talking about avoiding future motherhood, and husbands leaving wives upon diagnosis and/or progression, like Ann. The excerpt below is taken from my personal research diary on the day that I met Ann:

Research diary entry: 6th June 2009

Hearing Ann’s sad story of her husband rejecting her at the onset of her disability because he ‘didn’t want a disabled wife’ was disturbing. She hid nothing from me and it upset me greatly. Later that evening at home I broke down to my partner, partly through relief that the day was over, but more out of insecurity that he could, in theory anyway, leave me in much the same way. Ann reported a strong relationship, a ‘great man’ who loved her very much, yet I had all of these things and so what would stop my partner running should the ‘shit hit the fan’, as Ann put it? I was, for the first time, doubting my partner. “What makes us so different?” “How can you say you won’t leave?”... Realistically and logically, I don’t think that will ever be my life. I genuinely believe in, and have more faith in my partner than that, but when it’s emotively in front of you all day it’s impossible not to be affected by it. It was at this juncture that I suddenly realised that my research could be harmful. Not just for those whose stories I hoped to hear, but harmful to me, my sense of self, my relationships, and those around me. As I heard Ann’s words I realised that she was voicing my worst fears. This was not going to be an easy thing to listen to everyday in interviews, nor to come home with and pretend that my ‘day was fine’. I have to
find a way to manage these feelings better than I did that day. I may find elements of stories that remind me of my worst fears, or echo my feelings about myself and my body on the darkest days... How will I deal with this? Talking to supervisors? Talking to my partner? Talking to a counsellor? This is something I am going to monitor closely.

This diary excerpt was written following a particularly bad day, and while I am cringing at the thought of others reading it, it does raise the issue of where and with whom to share such upsetting experiences while carrying out field work, particularly as postgraduate/early career researchers. The threat of progression had suddenly become very 'real', and it filled me with a terror that I didn't really know how to handle. Unfortunately, my partner took the brunt of it when he shouldn't have done – another problematic coping strategy. I did discuss these feelings with my (incredibly supportive) supervisors, but the supervisor/supervisee relationship is, ultimately, a professional one and is not conducive to such sharing in terms of both context and time. The most productive way of managing the emotions which arose, I quickly discovered, was writing it down in a research diary. This allowed me to express fear, irrationality, frustration, and sadness in a way which didn't harm anybody else or my work. I wrote in the research diary at the points where it became too much. These kinds of strategies, I believe, should be made more public by researchers and that we, as a community, should recognise the importance of sharing our experiences.

A way forward?

To conclude, writing this article has not been easy – five drafts on and I’m ready to be exposed! As, researchers we collect, gather, manage and analyse data, but rarely reflect on how data impacts upon us. We may also experience a range of emotions, from feeling restrained to powerless, powerful, fearful, sad, joyful, and frustrated, meaning we carry out extensive emotional work (Dickson-Smith et al 2009) - yet we rarely share it. While I can accept that both my research and my situation are unique, and that the themes within this article may not be relevant to everybody who reads it (much of it may even seem quite alien), it does highlight a need to reflect on our fieldwork experiences and share these as a community. My (sometimes, clumsy) coping strategies got me through – just – but there must be better ways, and I propose that we can find these in one another. Sharing our emotions, journeys, management/coping strategies and thus creating informal support networks, I propose, may just be the answer towards lessening the burden of emotional work we all experience throughout the research process.

All names have been changed.

Kirsty Liddiard
hi kirsty, i thought this was an amazing piece and a topic i have been thinking about (with others) as well lately. various people i know, including me, are doing fieldwork or are analysing fieldwork data that not only require an emotional investment, but kick back on us emotionally and, indeed, require personal and academic coping strategies. currently i am not in the UK (i am in Brazil for fieldwork), but it would be great to continue a dialogue on this! thanks & succes dyi btw: on a theoretical/methodological level, what approach have you used?

Kirsty Liddiard (2011-03-22 09:28:23)
Hi Dyi, Thanks for the comments regarding the article! Part of the reason I wrote it is that I’m sure many of us are going through/have experienced similar feelings while researching, but it’s not necessarily something we easily discuss. It’d be great to start a dialogue, feel free to email me on k.liddiard@warwick.ac.uk Kindest regards Kirsty

Milena Kremakova (2012-04-07 07:11:34)
Great article, Kirsty. You have managed to put in words the turmoil that accompanies every fieldwork - regardless of topic. There needs to be more work on this.

Kirsty Liddiard (2012-04-12 19:51:32)
Thanks Milena! I wrote this some time ago, and your comment brought me back to it; it was interesting for me to re-read it post-thesis write up, so thank you! I’m trying to write a similar article at the moment, because, as you said, there needs to be more focus on the ‘behind the scenes’. With the current research culture being dominated only by output and impact, being reflexive upon our research process seems to have become (wrongly) considered as less important.

Robert Moorehead (2012-04-19 04:14:09)
Thank you for sharing this. When we’re studying difficult or even abusive situations, the intimacy that comes from fieldwork can be traumatic for the researcher as well. And then if/when we leave the field, we add guilt to that trauma, as our informants remain in their difficult situation while we go off to publish and teach. I think we’ve under-explored the impact on the researcher, in part because our informants are often worse off than we are. But, if we accept the value of reflexivity, then ... in for a penny, in for a pound. We need to continue to push that envelope, in the way Kirsty does here. So thank you again!

Kirsty Liddiard (2012-05-09 20:19:26)
Hi Robert, thanks so much for your insightful comment regarding the article. You summed up really beautifully some of the things I’ve been thinking about since I finished my PhD and began my postdoc; the issue of guilt regarding the fact I’m now, effectively, building a career off the back of peoples’ stories. This is a tricky thing (now I’m starting to see the fruits of my labour, as it were, in terms of publishing etc) that I’m sure many of us deal with. Thanks again for your comments!!
Madness and Civilization? (2011-03-16 08:00)

Perhaps very many of us are on the verge of a dangerous psychotic breakdown, only we don't know it yet. Perhaps we do need psychiatrists on the streets of our cities to stop us before we schiz out all over our co-workers and fellow commuters, to recruit us into their offices where they will have license to feed us mind-numbing antipsychotic medication. Otherwise, how could we ever be secure in our own sanity?

In essence, this is the proposal under consideration for inclusion in the fifth edition of the *Diagnostic and Statistical Manual of Mental Disorders* (DSM-5), which will become the authoritative text of mental health in May 2013.

The definitions of madness are constantly changing. But for psychiatry to call itself a science, it must rely on an authority that represents an official consensus that allows doctors to share a common language about mental illness, and that allows them to diagnose disorders. This is the DSM—the most recent version of it is the DSM-IV, released in 1994, which will be replaced by the DSM-5. (Among many other bad decisions they are making is the decision to drop the roman numerals just as they were getting to a good one.)

Changes in the DSM will not necessarily change the daily practice of good, independent psychiatrists and psychologists, but they will affect the way the field as a whole operates. This is why it is essential to understand the DSM in a broad public health context, not only in the context of individual cases.

This was the source of my objections as I read an article from the December 2010 issue of Harper's, "Which Way Madness Lies" by Rachel Aviv. (Thanks to Harper’s interesting ideas about the internet, I can’t link to the article here).

While it is wonderful to see such good writing appear in the venerable magazine on the eve of its own identity crisis, the article sparked some productive disagreements that ought to be made public. I’m a layperson, an interested citizen not trained in the psych arts. This is an important because psychiatry is deeply invested in its status as a science and discourages non-credentialed opinions, even though—especially as pharmaceuticals are ascendant in the field—matters of professional consensus in the field constitute, in my mind, a in important public health issue.

The article is primarily concerned with the phenomenon of prodromal schizophrenia (also called premorbid schizophrenia/psychosis, psychosis risk syndrome; the number of names alone for the diagnosis should send up red flags)—the condition considered to precede schizophrenia, when the mind might or might not lose its grip on itself. Candidates for the diagnosis might have mild delusions or might, as Aviv’s extremely self-aware case studies do, consider themselves to be losing their grip on reality (a state that seems to imply a firm pre-existing understanding of reality). Or, they might not.

Any individual ought to have the right to ask for and receive help in dealing with their psychological state; there can be no question that the individuals that Aviv interviews should receive care and treatment, especially because they are self aware enough to identify as prodromal. Their experience is valid, their treatment choices are valid. Despite what one might assume from reading the article, their treatment is not threatened by the lack of an officially recognized diagnosis.
Their individual treatment should not cloud the more important question of whether a prepsychotic diagnosis should be included in the upcoming revision of the DSM. Such a proposal has been made—for a new diagnosis of “psychosis risk syndrome” that would include symptoms of

"feeling perplexed, confused, or strange, thinking that the self, the world and time has changed (often in ways that cannot be described), having ideas of reference that are not perceived as directly threatening to the individual, unusual ideas (about the body, guilt, nihilism), overvalued beliefs (about philosophy, religion, magic)..."

If you didn't identify with at least one of those symptoms at one point in your personal development, then you might not be a very interesting person. As a person with creative leanings, I think it’s utterly crucial to once and a while question or even discard my relationship to reality. Moreover, the diagnosis assumes that there is an authority—presumably the doctor, or even the editorial board of the DSM-5—who has the correct opinions of what “unusual ideas” or “overvalued beliefs” are. There is no room for subjectivity in the psych universe.

Aviv does a good job of questioning the condition, but she ends up concluding that premorbid psychosis should be a widely accepted diagnosis, because “doctors [have] no means of finding and recruiting patients who were, for all intents and purposes, still healthy.” I question whether doctors ought to go out and “recruit” fully healthy patients. That seems, at minimum, a strange thing to do. Then, later, she says,

Although the psychiatric literature describes a premorbid personality common to those who later develop schizophrenia—withdrawn, self-conscious, alienated—few of the patients I spoke with at [either of the clinics where the author interviewed patients] fit that description. The only commonalities were that nearly all of them had moved through childhood and adolescence feeling more thoughtful, intelligent, or probing than their family or peers and that there had been an existential tinge to their preoccupations years before their symptoms emerged.

It is not heartening to read that the psychiatric literature is incorrect. But to read her description, we are all prodromal, If you weren’t a jock in high school, you might be psychotic. If you’ve ever developed an interest in philosophy, you might be psychotic. If you watched Daria as a kid, you might be psychotic. If you’ve read Nietzsche, you might be psychotic. Etcetera.

All of which describes me, so I am frightened at the prospect of having "unusual ideas" be considered a disease, an officially diagnosable pathology, with all the undeniable stigma that carries.

Aviv cites Dr. Allen Francis, who is the leading critic of the DSM-5. He was the chair of the task force that created the DSM-IV, and is a very respectable member of the psychiatry mainstream. His [1]article in The Psychiatric Times is essential reading. Aviv ignores Dr. Frances' main complaint, which procedural:

DSM-V has had an inexplicably closed and secretive process. Communication to and from the field has been highly restricted. Indeed, even the very slight recent increase in openness about DSM-V was forced on to an unwilling leadership only after a series of embarrassing articles appeared in the public press. It is completely ludicrous that the DSM-V work group members had to sign confidentiality agreements that prevent the kind of free discussion that brings to light otherwise hidden problems. DSM-V has also chosen to have relatively few and highly select advisors.

Although Aviv does cite Dr. Francis and a few other dissenting voices, she misses this main point, and overall her article leans powerfully toward the inclusion of premorbid diagnoses in the DSM. Especially practitioners in the fields of psychiatry and psychology should be worried about this methodology of the DSM, which could seriously hurt the credibility of their field. This secretive process gives pharmaceutical companies and managed care providers
more latitude to maneuver as they exert their influence to increase their profits.

This would be less frightening if it were not for the looming threat of pharmaceutical companies, who have demonstrated again and again their eagerness to get citizens their prescriptions. Psychiatry is increasingly an arm of the pharmaceutical industry, as has been documented by [2] ProPublica. Citizens like myself have plenty of anecdotal evidence that shows the pharma industry’s [3] eagerness to prescribe and overprescribe its product, from Ritalin to antidepressants.

Widespread diagnoses of psychosis risk syndrome could lead to a similar epidemic of Atypical Antipsychotic prescriptions. Antipsychotic drugs are particularly [4] serious and frightening substances.

They cause major, spectacular weight gain—which is never positive for patients who may already be dealing with a crisis in their understanding of themselves and their bodies. Moreover, these drugs utterly silence creativity. They turn off the artistic impulse. Many of these people who were “thoughtful, intelligent, probing” and who entertained ontological questions in their youth may identify themselves as artists. Often, the pride of being an artist can be an anchor for the whole personality to hang on to. Moreover, their artistic output is valuable for society.

If we are taking a public health perspective—as we should—then we have to consider the effects of mass antipsychotic medication on our culture. It will stifle our collective creativity. Consider your favorite artists and writers. And then ask yourself if they manifested the above symptoms for premorbid psychosis. Consider, even: would they personally have benefited from treatment that would have allowed them to hold down steady jobs and be citizens? Often, yes. But at the sacrifice of their artistic output, which is often the product of intense personal struggle and sacrifice, but which we—the reading public—benefit from. Perhaps Morrison, Joplin, Pollack, Sartre, Salinger, Pynchon, Plath, Dickenson, Burroughs, Baraka, and so on could have been better adjusted as individuals, could have been numbed to the point of being able to hold down a menial job. But would we have been better off as a culture without their work?

Likewise, consider the (political) power that such broadly inclusive diagnoses would give the psychiatric industry (which is increasingly an arm of the pharmaceutical industry) to decide which ideas are “unusual” and to suppress them—not through the judicial system (which, as Foucault would demonstrate, is always complicit), but through the medical establishment. This could usher in an age when dissent itself is a disease. Huxley was never wrong.

In my next post, I want to consider the “paradigm shift” towards neurobiological diagnosis that the DSM 5 is attempting.

Ten Lies of Ethnography: article by G.A.Fine (2011-03-18 08:00)

In his article [1]TEN LIES OF ETHNOGRAPHY : Moral Dilemmas of Field Research (published in the Journal of Contemporary Ethnography 1993 22: 267), Gary Alan Fine discusses the dilemmas faced by ethnographic researchers. He singles out the "classic virtues" (the kindly ethnographer, the friendly ethnographer, the honest ethnographer), "technical skills" (the precise ethnographer, the observant ethnographer, and the unobtrusive ethnographer), and the different modes of the "ethnographic self" (the candid ethnographer, the chaste ethnographer, the fair ethnographer, and the literary ethnographer).

After reading it, you might at first agree with Urie Bronfenbrenner (1952, 453) that ‘[t]he only safe way to avoid violating principles of professional ethics is to refrain from doing social research altogether’. However, the article concludes on an optimistic note which I shall not reveal: it is well worth reading first hand.

Dr. Uncut - Research students analyse cuts in Higher Education (2011-03-19 08:00)

So far, the debate on the increase in tuition fees and cuts in Higher Education has focused mainly on the consequences for undergraduate students. We can all imagine the impact on undergraduates of being saddled with a debt that even the government admits most will not pay back, even over 30 years. However, the government’s vandal measures will have a knock-on effect far beyond that. We believe that the specific problems which will be faced by research students highlight the broader impact of cuts on the way that universities will (or won’t) work in future. For research students, the government’s attack on public universities will bring about a growth in tuition fees and an increase in job insecurity and labour casualization, and will make it virtually impossible to find a job in academia. This is the result of an ideological – not a pragmatic – stance, which views education as a commodity to be bought and sold, rather than a citizen’s right. We must unite and challenge this reduction of education to a marketable commodity. Let’s reassert the public, communal and social significance of our activity as free-thinking researchers! In the words of John Dewey: "Education is not preparation for life; education is life itself."

[1]
Fees. At the moment, fees for postgraduate students are uncapped. Nevertheless, fees for PhD students are set at the same level almost everywhere, on the basis of the recommendations of the Research Councils. This means that British and EU research students are generally asked to pay some £3,300 a year, while fees for non-EU students can be around £12-15,000 a year. Notably, this amount more-or-less matches the fees set for undergraduate courses. It is very likely that an increase in the latter will result in an increase for postgraduate students as well. Furthermore, graduate fees will doubtless be further increased to soften the blow of the near-total loss of funding for all but a few areas of research. PhD students are a valuable resource to university departments, often contributing actively to the research community by publishing articles, presenting papers, doing research for their universities, and supporting full-time staff. The importance of research students to their host institutions is demonstrated by the fact that the number of successful research students and studentships awarded was one of the assessment criteria in the Research Assessment Exercise 2008. This reflected the fact that research students were a source of external funding, as well as providing income through fees. The economic value of PhD students to their university has led to pressure to take on ever-increasing numbers of doctoral researchers, with the result that the quality of provision suffers. Currently, postgraduate fees cover very little tuition, as the nature of PhDs means that doctoral students – particularly in the Arts, Humanities and Social Sciences – tend to study alone. Fees therefore cover supervision from an established academic and access to university facilities. While many supervisors work hard to ensure that their students get all the support they need, others have been pressured to take on more students than they are able to accommodate. This looks set to go from bad to worse as universities look for ways to cover the shortfall left by the funding cuts. In the very near future, students will be graduating from their first degree with almost £30,000 of debt from fees alone. The prospect of that debt more than doubling will deter all but a tiny minority from postgraduate study. As a result, academia will once again become an elitist bastion of privilege, inaccessible to all but the select few. This is a retrograde step that stifles aspiration and thwarts social mobility.

Labour casualization. Many PhD students are already employed as cheap labour, working as teaching assistants or sessional lecturers in their departments. Research students can be easily employed as low-cost replacements for full-time lecturers: a phenomenon that is already widespread in the United States. We have to be aware that
in the coming years this situation will worsen as a result of the cuts. Universities will see in research students “throwaway” academics to employ temporarily in undergraduate teaching and then to get rid of once they complete their doctoral studies. It is true that teaching experience might be beneficial for research students in the long term; however, this is true only as long as there are work opportunities around. If teaching done by PhD students becomes a way to avoid recruiting lecturers, it is detrimental to PhD students themselves, as it substantially hinders their chance of getting a job after completing their PhDs. In general terms, lecturers working on a sessional/part-time basis have less protection, fewer rights and less stability than people working on full-time contracts. We need to make these linkages between job opportunities and teaching by research students very clear, so that we do not ourselves become instruments of university managements in their dirty battle to minimize the cost of labour.

Job opportunities. The 40 % cut in university spending cannot but result in job redundancies all across the country. Entire departments and institutions will default and be forced to close down. According to the University and College Union, some 49 of England’s 130 universities are at risk of closing or being forced to merge as a result of the cuts. In addition, we already know that from 2012, UK universities will accept some 10,000 fewer students than in the past. This crisis will hit particularly those working in the Social Sciences, Arts and Humanities, areas that will experience a 100 % cut in State support for teaching. As a result, many mid-career academics will be made redundant and forced to reapply for lower level positions. This will result in a “waterfall effect”, squeezing young researchers out of academia. At the moment, it seems that many of us have not yet realized the scope and implications of these measures. To state it very loudly and clearly: for researchers at an early stage of their career, it will be virtually impossible to get a job in academia in the coming years. It doesn't matter how brilliant you think you are, these cuts will affect everyone in HE - undergraduates, postgraduates and staff members. We must stop thinking that we can get through this thanks to individual skill or verve. The real struggle is not an individual competition to stand out among other researchers, but a collective struggle to defend publicly-funded universities and freedom of research. We are a generation of young researchers with no future ahead of us, if the government's plans are implemented. If we really believe that what we are doing is worthwhile – not only in personal or economic, but also and mainly in societal terms – we have to say it now, and we have to say it loud.

In addition, these measures are very likely to discourage overseas students from embarking on research degrees in the United Kingdom. This goes against the recommendations made to the government by the independent report “One step beyond: making the most of postgraduate education”, which stressed that, “As other countries invest heavily in their own postgraduate provision, the UK will need to work hard to maintain its competitive advantage. This will mean doing more to strengthen and promote UK postgraduate education on an international stage and to attract the very best students from around the world.” It would be pleonastic to point out that this ambitious goal cannot be met by reducing funding to higher education and cutting employment prospects for UK-based research students.

Although the focus here is on research students, we explicitly refuse a corporatist approach to the problems facing academia. On the contrary, we consider the aforementioned issues to be part of a wider attack on people's rights and the welfare state in Britain. This government is putting forward an ideological view of society in which private profit is the normative principle. This implies the criminalization of all those groups – such as unemployed or disabled people – whose very existence debunks the myth that a profit-led society is the most beneficial to its members. For academics, this also implies that in the future the freedom of research will be under threat, and entire “non-profitable” research areas will be shut. "Priorities" for research funding will be set by the Research Councils according to apparently neutral, economic – but actually ideological – criteria. Many of us will be easily portrayed as nothing more than idle scroungers, as a burden for society. Thus, we firmly believe that PhD students should take part in the general mobilization against government cuts, rather than isolating themselves. More specifically, we invite everyone to take part in the next student protest, which is supported by Unite and GMB and will take place on 29 January, and in the national March for the Alternative called by the Trades Union Congress on 26 March.

If they say cut back, research students say: fight back!

Why Didn’t Japan Expect the Worst? (2011-03-21 00:00)

Japan is used to earthquakes. Japanese children grow up practicing earthquake drills in school; building codes are among the strictest in the world. It goes without saying that in another time or place, the 9.0-magnitude earthquake which struck on the afternoon of the 11th of March could have been much, much worse. Yet media reports of the [1]tsunami which breached seawalls, washing entire neighborhoods away, and the [2]escalating nuclear crisis at the Fukushima power plant make it abundantly clear that no matter how well-prepared Japanese society was for this sort of natural disaster, it was not prepared enough.

It may be true that we live in a risk society, a world where modernity goes hand-in-hand with the proliferation of new and greater hazards. However, Beck’s theory cannot fully account for what is now happening in Japan. Despite being the only nation on the planet that has experienced the human catastrophe of the atom bomb, an [3]article in the Wednesday New York Times notes, ‘[G]overnment officials and executives at the Tokyo Electric Power Company, which runs the nuclear power plants in Fukushima, have offered conflicting reports and often declined to answer hypothetical questions or discuss worst-case scenarios’. One suspects that the reason they obfuscate is because they don’t have any good answers. So why, in a place that ought to understand best the double-edged blade of atomic energy, didn’t they do a better job at expecting the worst?

In [4]Never Saw It Coming: Cultural Challenges to Envisioning the Worst (Chicago, 2006), Rutgers sociologist [5]Karen A. Cerulo theorizes that human cognition and cultural practice are mutually-reinforcing and can prevent societies from fully evaluating worst possible outcomes. She calls this phenomenon ‘positive asymmetry’ and concludes that the United States with its brand of optimism has a surfeit of it. Indeed, her argument seems peculiarly wedded to a point in recent American history, the first decade of the twenty-first century, when traumatic events such as 9/11 and the NASA Columbia shuttle crash seemed to threaten some of the most potent symbols of what the United States believes about itself as a nation. Does her theory apply equally to the Japanese?

The Japanese, by contrast, are [6]reported to be one of the most uniquely pessimistic of modern societies. The Cabinet Office in Japan conducts annual polls asking people about how they view their future prospects. In 1970,
when times were good, 37.4 percent of respondents believed that their life in the future would be better. Only 5.9 percent believed that it would be worse. Pessimism overtook optimism in 1994, and by 2009, the results had flipped; 32.3 percent expected the future to be worse than the present, while only 6.6 percent believed that it will become better. These statistics are well-known among the general population, so it would be hard to think on the face of things that positive asymmetry is Japan's problem.

I do not presume to fully understand the source of Japan's troubles. However, I would argue that we must not reduce this crisis to a freak act of nature on the one hand or the fault of particular individuals and/or agencies on the other. Like the tree falling in the forest that nobody hears, the earthquake that nobody feels matters little in our everyday lives. Thus is a 'natural disaster' like this one actually a socially- and culturally-mediated event, caused by a confluence of geological processes and societal realities. I hope that in the years to follow—after the region has rebuilt and recovered—that we look carefully at the interaction between cognition and culture as we formulate a nuanced sociological account of what actually happened…and how to prevent this tragedy from ever happening again.

English students forced to look further afield to escape higher tuition fees (2011-03-22 09:49)

The well-documented and lamented Higher Education tuition fees rise has forced many English students to consider undertaking their studies at Irish and Scottish institutions as this [1]article suggests. Tuition fees in Ireland prove to
be less costly than those in England following the forthcoming tuition fees hike.

Trinity College Dublin, Ireland looks likely to see an increase in applications from English students wishing to avoid next year’s higher tuition fees.

In Ireland, UK students can secure a top-class degree which would cost zero for tuition. Under EU rules, all students from EU countries who attend EU universities are treated the same as local applicants, who in Ireland, pay nothing. So, English students who wish to attend Trinity College Dublin, potentially, foot the bill only for living costs and an annual administration charge of €2,000 (£1,723) for student services and exams.

This prospect compares favourably with the prospect of facing up to £9,000 per year on tuition fees and potentially £27,000 worth of debt for a three-year degree programme.

Meanwhile, Scottish universities are also drawing-in English students looking for a cheaper but good quality education. An estimated 22,500 English students currently study at Scottish universities and pay annual fees of £1,820 for course typically lasting four years.

With a record 583,500 students applying to university this year, with no extra places created, many of them who are hoping to beat the tuition fees hike in 2012, are more likely than ever to fail to secure a place at university even with the prospect of cheaper tuition fees offered elsewhere.

23 March: International ‘Hug a Sociologist’ Day (2011-03-23 08:00)

...is today! Hug a sociologist - wherever you are!

Fewer applicants for law school: why? (2011-03-24 08:00)

One of the long-haul effects of the credit crunch is beginning to manifest itself: US law schools are registering a notable decrease in the number of applicants, connected to dwindling job prospects for law graduates. This may not be bad news, as rationally-minded young people rationally decide to choose a different career. However, it would be interesting to find out what combination of factors drives the choice: the desire for better earnings, job-stability, career prospects, or something radically different?

Click on link to read the article [1]Law School Loses Its Allure as Jobs at Firms Are Scarce

1. [http://online.wsj.com/article/SB10001424052748704396504576204692878631986.html](http://online.wsj.com/article/SB10001424052748704396504576204692878631986.html)

Facebook, emotion, and the future of media (2011-03-25 08:00)

The [1]Nieman Journalist Lab is a project of the Nieman foundation at [2]Harvard university. In this article, Joshua Benton unravels the meaning of social media for news-sharing, and points out the emotional nature of many of the new tools that new online ecosystems such as Facebook endorse.

Click on link to read the article: [3]"Like," "share," and "recommend": How the warring verbs of social media will influence the news’ future

In accord with Benton’s article, it is somewhat ironic that writing this blog frequently involves cross-posting other people’s articles. Even when you are diligent in acknowledging authorship in each single instance, you still claim to be the author of the blog itself; blogs become modern-day online [4]'salons’ which invite new ad hoc ‘speakers’ as and when they are available, and the blog authors assume the role of ‘inspiring hosts’. This does, however, raise issues of originality Perhaps SI should introduce a new category: [5]listicles? What do you think?

2.
Call for Papers: what does the Sociological Imagination mean today? (2011-03-25 14:16)

It has been over 50 years since C. Wright Mills wrote the Sociological Imagination. In that time the world has changed beyond recognition: the Cold War ended, the Keynesian consensus broke down, a globalizing neoliberalism rose to the ascendancy and the internet began to transform human communication and culture. In recent years, with 9/11 and then the financial crisis, it seems that history has returned with a vengeance. Is Wright Mills' notion of the 'Sociological Imagination' still pertinent today? How can Sociology help shed light on the rapidly transforming world around us and the consequences of these transformations for the people who inhabit it? What does the 'Sociological Imagination' mean today?

Short articles are invited which engage with these themes, or particular aspects of them. Submissions should be 500 – 1500 words and [1]e-mailed as a Word document. There is no deadline for submissions.

The Persistence of Print (2011-03-28 00:00)

Starting today the 28 March 2011, the New York Times will go behind a paywall, following The Times, The Economist, Financial Times, and other subscription-based print periodicals with an online co-presence. For those who choose
not to subscribe, access will be limited to twenty articles per month, excluding articles reached through Google’s news feed and social networking sites such as Facebook and Twitter. Although there may well be [1]some promising workarounds for the tech-savvy, the bottom line is that heavy users of this website—regardless of where in the world they happen to be located at the moment—will be obligated to pay up USD $455 per year.

Note that I write ‘up to USD $455 per year’. There are cheaper methods of gaining unlimited access, even if you are not trying to game the system in any manner. For those living in areas of the United States which are [2]eligible to receive home delivery of the New York Times, $3.10 per week, or $161.20 per year, for a weekday subscription will also provide unlimited access to the website across all digital platforms. The [3]least expensive digital subscription option, by comparison, is $3.75 per week, or $195 per year...and you won’t be able to read the paper on your iPad. What gives? Why, in the second decade of the 21st century, are newspapers printed on pulped up trees still the cheapest consumer option?

The answer to this question is simple: revenue streams. It may seem to the average person as if newspapers are selling news content to their readers, but this is not in fact the case. Rather, they are selling their readers’ attention to advertisers—and print ads pay way better than online ads. The discrepancy between the print revenue stream and the digital revenue stream is so large, in fact, that the New York Times does not consider an online-only, open-access news delivery model to be financially sustainable. Therefore, the new pricing structure exists first and foremost to incentivize print subscriptions and secondarily to offset the loss of ad revenue to those readers who prefer going wholly digital.

The political economy favors print in other sectors of the publishing industry as well. For all the talk about e-books these days, one might think it strange that there are still paper books on the market at all. Granted,
some people, myself included, do not prefer e-books, but reader preference alone does not explain the puzzling persistence of print. Some people undoubtedly enjoyed eight-tracks—and where have those gone? Nope, once again [4]it’s about profit potential: a hardcover book priced at $26 might actually make a publisher more money than an e-book edition of the same title priced at $9.99. Only when e-books are priced at approximately $12.99 or higher do publishers see a revenue advantage in going digital, and consumers may view a trade paperback priced at $13.99 as better value for money. The [5]sales numbers thus far bear this out.

In *Books in the Digital Age* (2005), John B. Thompson theorizes that certain textual forms are more amenable to digitization than others. Items valued for their indexical qualities, such as dictionary definitions and encyclopedia entries, are welcomed by readers when digitized. Ephemeral texts, such as articles in magazines, journals, and newspapers, are the same. But longer forms which must be read end-to-end, such as novels and scholarly monographs, resist digitization. He certainly has a point, as any researcher printing out .pdfs of scholarly journal articles undoubtedly knows. Yet there are other reasons why texts do not go digital which have nothing to do with their textual properties. The habits of markets clearly matter, too.

---

**New column! “Visual Sociology” call for reader submissions (2011-03-29 08:00)**

For all professional and/or novice visual researchers out there: the Sociological Imagination is pleased to announce its **new column dedicated to "Visual Research"**. To celebrate its beginning, we are launching a continuous call for reader submissions.

The call is open to all our readers. **One piece of visual research work will be featured each Friday.** The SI reserves the right to use the submissions on the website at any time after they have been sent to us, after explicitly notifying their authors by email. If you’ve sent us an image and change your mind for any reason, just [1]e-mail us and we promise not to post it. Scroll down for submission guidelines.
Guidelines for submissions:

How to submit: Please [3]e-mail us with 'SI Visual Sociology' in the subject line.

How many: Authors may submit up to three separate pieces of work (we shall consider more numerous applications on a case by case basis – i.e., if we really like them!).

What information: Every submission must be accompanied by the following information:

- title of the work;
- full name/s, or artistic pseudonym/s, of its author/s;
- contact e-mail address and/or other contact details.

What counts as “a piece of visual research”? What ratio must there be between image/s and text? We side with Becker (1995) * in abandoning methodological purism, and leave to your discretion the decision what and why classifies as visual sociology/anthropology (as opposed to documentary, photojournalism, art, or any other visual-based genre). The editorial team also reserves the sole right to decide whether to publish any submission. Submissions may range from image/s with text to text with image/s, as long as images and analysis or story are
integral to one another.

**Type of image:** Any images/photographs are acceptable: black-and-white or colour; new shots or old scanned shots from your archives – as long as you have the rights to distribute them; and there are no restrictions regarding any artistic or photo-processing technologies used in the production of the images.

**Format and size:**

- JPEG format
- 1:1.5 ratio and any resolution suitable for publishing online (the images the SI normally posts are scaled down to 440x294 pixels, or near)

**Legal issues:** Any persons present in the photographs MUST be notified, be aware, and not oppose the publication of the images. If in doubt, consult this guide on photographers' rights:

http://www.sirimo.co.uk/2009/05/14/uk-photographers-rights-v2

**Copyright:** The submissions will be distributed under the following conditions

Creative Commons Licence Attribution 3 (allowing for non-commercial distribution of shared works):

[4]

“This work is licensed under a [5]Creative Commons Attribution-NonCommercial-NoDerivs 3.0 Unported License.”

Critics, Criticism, and Civil Society (2011-04-04 00:00)

I have worked as a critic, and I am socially acquainted with other critics. I have enjoyed many a pleasant meal with critics (the ones who write reviews of anime and manga, at least). I have read hundreds of thousands of words of criticism on topics ranging from consumer technology to scholarly monographs. And as a sociologist, the language of academic criticism has become part and parcel of my daily discourse. Yet despite this critical mass (excuse the pun) of interaction with both the labour of criticism and other critics themselves, one thing has never ceased to baffle me: how critics can believe that something is just a matter of opinion unless it’s their opinion—in which case the opinion is actually true.
Is the manga series *Naruto* gem or junk, and if I write that it is a gem, is this a truth claim, or is just my opinion? Perhaps you have your own view. Perhaps you think this is a silly question that does not merit a column in the first place. I, however, would argue that this question is a red herring. Instead of worrying about the existential issues, we ought, instead, to ask the following question: *Under what conditions is the labour of criticism constructive or destructive?* This is a question that takes on a particular urgency in the digital age, where the proliferation of blogs, online forums, and other social media means that everyone who has an opinion has a place to express it.

In *Human Communication as Narration*, Walter Fisher (1989) argues that there is no such thing as a value-free argument; you cannot separate fact from value. The logic sequences with which we construct our arguments are inextricably bound to our moral and ethical selves. If this is true, then, I would argue, criticism is important not for what is concluded, but rather why it is concluded. In other words, when we read an influential film critic panning the latest blockbuster because all of the female characters are either mothers or whores, we ought to be concerned less with whether or not we believe him to be correct and far more about whether or not we think the absence of three-dimensional female characters is wrong.

This shift in emphasis isn't just about how we might go about reading about entertainment media; it also has important implications for critical political discourse as well. Politicians and pundits, eager to assume a mantle of virtuousness, often [1] call for a 'change in the tone' of political debate. They decry the vitriol, the obscenities, the volume turned up to the maximum setting. They call for civility, for reasoned debate...and strangely it doesn't seem to matter what side you're on. But this too is a red herring. Does it really matter if the politician smiles politely while he passes legislation that makes our society more unjust and unequal? Are his actions excusable, just because he said 'please', 'excuse me', and 'thank you very much'? I certainly hope not!

In fact, polite, civil discourse can be used to conceal positions that, were they to be expressed in the bluntest of terms, would be immediately recognized as utterly unacceptable. I am reminded of an anecdote told by Norman Finkelstein at a conference on academic freedom at NYU a couple of years ago. He proposed a scenario (and I paraphrase here) where a black student appears in a professor's office to ask for some additional academic guidance. Would it be worse for that professor to casually dismiss the student's concerns by saying, 'Good scientific research shows that black people like yourself have statistically significant lower IQ scores than white people', or if he said, 'Stop wasting my time, jungle baby'! The answer is obvious.

In fact, polite, civil discourse can be used to conceal positions that, were they to be expressed in the bluntest of terms, would be immediately recognized as utterly unacceptable. I am reminded of an anecdote told by Norman Finkelstein at a conference on academic freedom at NYU a couple of years ago. He proposed a scenario (and I paraphrase here) where a black student appears in a professor's office to ask for some additional academic guidance. Would it be worse for that professor to casually dismiss the student's concerns by saying, 'Good scientific research shows that black people like yourself have statistically significant lower IQ scores than white people', or if he said, 'Stop wasting my time, jungle baby'! The answer is obvious.

Clegg, Miliband, Balls and Osborn? No wonder celebrity politics focus on trivialities since the popular view is ‘they are all the same’.

A spate of media programmes point to this situation worsening with the idea that a return to grammar schools will restart social mobility and is therefore progressive. It’s true that the official introduction of comprehensive schools in the UK from 1965-on was coincident with the ending of the period of limited upward mobility that occurred during the 30 years of post-war full employment. But that it was not the cause of it can be seen from a comparison with the USA’s comprehensive high schools feeding similarly limited mobility that ended at the same time.

Since then in both countries there has been only illusory social mobility as non-manual service employment has expanded at the expense of manual labour, benefiting mainly women who now pursue careers before having children in their 30s. These new opportunities have been presented as professionalising the proletariat but in reality many of these para-professional occupations are being rapidly proletarianised – teaching and lecturing a case in point.

Bringing back grammar schools would only cement this new social situation since the only mobility remaining for increasing numbers is downward. And the eugenic thinking behind thus ‘saving the bright working-class child’ from this fate is as evident now as it was in 1944, though without (as yet) any coherent ideology of ‘IQ’ to support it. However, what is defined as ‘bright’ is equally narrow performance in repeated tests of largely literary ability functioning from the earliest age as proxies for more or less expensively crammed cultural capital.

The majority are thus failed at every fence and, more importantly, made to feel that they are failures. This principle of academic selectivity has re-imposed itself ruthlessly, marginalising residual republican notions of entitlement, along with any other ‘effort as worthy as that dignified by the name of scholarly study within the noblest of colleges’, as Hardy’s JudetheObscure saw it.

Now the market in universities competing on price for various specialist options becomes the model for schools and colleges. As the former follow further and higher education into a centralised system of ‘fair funding’, it can be anticipated that vouchers for a basic entitlement may be introduced so that parents who can afford it top up their voucher at independent schools as private providers are subsidised to bid into the state system. The academic predominance of ‘The Great Public Schools’ with their long-standing links to Oxbridge Colleges exemplified by Winchester and New College, Eton and Christ Church, is thus also reaffirmed.

‘Nosseled in the grossest kynd of sophistry’

Gillian Evans’ twin histories enable us to understand how this has happened. She has long been a thorn in the side of successive Cambridge Vice Chancellors’ aspirations to turn that institution – at which she holds a doctorate as well as one from Oxford – into a business park. She is dedicated therefore to ‘preserving the medieval democracy which has served it for more than eight centuries’ (p. 76).

The priestly vocation in which this originated was later joined by lawyers and doctors, though not without dispute, for instance over the dispensation of what would now be called dangerous drugs between apothecaries, physicians and the state – a battle that continues on all three fronts to this day. The question is whose knowledge and how is it to be defined. As in the public disputations that remained the Oxbridge method of examination until the mid-nineteenth century, ‘both sides of the question’ had to be presented in a manner that is tediously familiar in today’s journalistic ideal of ‘objectivity’.

Similarly, today’s students are expected to defer to authority but have their own point of view in a debate that is open but which you have to be an expert to enter. These paradoxes confuse the uninitiated and are only
'assimilated', as Bourdieu said, as a matter of 'style' by those who are already 'converts'.

In the Medieval period such dangerous knowledge was guarded as Mysteries by Guilds whose disciplines demanded a Master work to demonstrate initiation into the craft with students taking a *peregrinatio academica* around Latin-speaking Christendom, just as journeymen stonemasons and other apprentices toured Europe's cathedrals.

However, Evans begins her history of 'Modern Oxford' by saying that it was 'shaped by the generation born as Victorians who broke off their studies to go and fight in the First World War, survived the carnage and lived on through another World War to become the generation of aged dons...' typified by the Inkings (Lewis, Tolkein et al). 'Straddlers between Victorian and modern Oxford they may have been, but not includers of a wider social world, or of women' (pp. 11-12). They coped with the grim conditions by withdrawing into a fantasy life, 'writing stories and designing languages for elves' (p. 14).

From the enthusiasm of *John Betjeman’s Oxford* for this Middle Earth of pseudo-medieval flummery and eccentricity – or 'a particularly Oxford form of “celebrity”' (p. 43), Evans turns to ‘our second Oxford “guide book” to the century’ (p. 48), Masterman's 1952 *To teach the Senators wisdom*. This contains such jolly gems as 'There has been no greater mistake made in Oxford than the abolition of compulsory chapel, except of course the admission of women and the abolition of compulsory Greek' (quoted on p. 27).

Nevertheless, Evans sees Oxford’s mission embodied in the figure of Roy Jenkins – ‘an Oxford Chancellor without a privileged background, who had no trouble with “access”, went on to run the country, and came back to enjoy late summer of his life in Oxford’ (p. 77). Jenkins’ port-filled self-parody in those later years was a reinvention of character in the opposite direction to that taken by the Bullingdon Boys who now run the country but who have also disguised their earlier avatars. Yet both – and the long list of Oxford-educated Prime Ministers, such as Bliar, ‘a typical Oxford lawyer, completely superficial’ in the estimation of Peter, now Lord, Hennessey – show the University’s subservience to state and church which Evans’ subsequent chapters trace from its origins in the twelfth century.

In her Cambridge volume the Tudor monarchy drew upon that university at the time of the Reformation, following 'The custom of looking to the universities for likely academics who could be used in the service of the Government [that] was now well established' (p. 149). Thomas Cranmer, for instance, rewarded with Archbishopric for justifying Henry VIII’s divorce, was described by a contemporary biographer as ‘nosseled in the grossest kynd of sophistry’ at Cambridge (p. 148).

Playing off church against state, the academic Guardians asserted their special selection of the powerful through an extension of the unctuous laying on of hands by a priestly caste. The two English universities (as compared with five in medieval Scotland), also enforced a monopoly of defining what was recognised as valid knowledge first noted by the historian Edward Gibbon (p. 199). They ruthlessly snuffed out rivals like Lincoln and Northampton, or Durham University founded under the Protectorate; also other competing centres of legitimation, such as the Inns of Court and later Learned Societies, Royal or Lunar, Dissenting Academies and Mechanics Institutes.

*Trahison des clercs*

25 years ago Oxford students and academics petitioned and voted against Margaret Thatcher’s honorary Doctorate. Now the academic ideal that even the Gove-approved John Dryden regarded in his day as ‘crabbed and subtle’ (p. 210), has re-asserted its dominance. It is no wonder therefore that many Oxbridge students and staff are now so totally ‘up themselves’, as other students put it, as to place their self-interest above any residual dedication to public sector higher education.
That this *trahison des clerks* is true to form Evans shows in her judicious account that illustrates in critical episodes and individuals (More, Wolsey, Cranmer, Thomas Cromwell, Laud) the struggle of ‘an organised body of professional teachers to provide for its own perpetuation’, as Durkheim says of the Paris University Guild in his *History of Pedagogy in France*.

At least Cambridge, nurtured by the puritan ethic of East Anglian trade and property relations, was represented in Parliament by Oliver Cromwell. Thereafter, in the antinomies of the national culture embodied by the Boatrace Universities, Royalist Oxford since the Restoration has endorsed the social ideal of the ruling class, while puritan Cambridge and a few Oxford colleges – such as eighteenth century Exeter, Merton and Wadham, as ‘Whigs’ amongst a ‘Tory’ majority – afforded a second eleven to be fielded as required, like New College’s influence on the 1945 Labour government.

Nevertheless, even at eighteenth-century Oxford, a ‘more plebian and puritanical’, if not ‘middle class’ (p. 193) undergraduate intake necessitated provision that went beyond religion and aristocratic pursuits such as hunting. This turned halls into colleges and raised the age of admission from 15-16 to 18-19. ‘Oiks’ acted as servants to gentlemen students in superior caps. At Cambridge gradations between students were marked by separate dining arrangements. In contrast to Doctor Johnson, whose ‘Oxford career was brief because of shortage of family funds’ (p. 197), many a student was there ‘to say in later life that he has been to university’ (p. 199) or ‘comes here as a commercial speculation’ to increase his earning power (p. 306).

In the same period, Cambridge became ‘duller and more second-rate’ (p. 240) but, in what that volume describes as its ‘nineteenth century transformation’, Cambridge redefined the academic pursuit, following the Victorian Henry Sidgwick, as ‘one whose study is the chief interest of his life’ and who ‘alone can keep the machinery of teaching ever on a level with the advance of knowledge’ (p. 87 in the Cambridge volume). The University was thus well positioned to cater for the alliance of industrial capital and middle-class professions it helped to form against surviving landed aristocracy pursuing more character-building preparation for leadership at Oxford.

Cambridge was also more open to the development of science, putting ideas to ‘the test of Sense’ and moving ‘out of the gentleman’s study and the Royal Society’ (p. 285) to find a home in *de-facto* university research centres organized ‘through faculties and Departments and not by the Colleges’ – partly because it was too expensive for them. Science was therefore ‘fundamentally different from the tutorial system of the arts and humanities’ (p. 47), though making use of existing botanical gardens and museum collections. It followed the Humboldtian model of the professor leading his fellow scholar-researchers that was imported by the new universities of London and the industrial towns as they gradually wrested themselves free from Oxbridge tutelage. By contrast, in Newman’s revival of the tutorial system, ‘A student’s task was to read. His [college] tutor’s role was to direct his reading’ (p. 247).

The gap between Snow’s two cultures of art and science was thus preserved and extended within each institution as well as being reflected elsewhere, particularly through A-levels introduced in 1951 to prepare a minority for specialist study. Abandoning any attempt to overcome this divide, government has now withdrawn state funding for the arts and humanities leaving them as frivolous pursuits for those rich enough to afford them.

**Conclusion**

In the 1960s the Cambridge economics Professor Joan Robinson said, ‘The leading characteristic of the ideology which dominates our society today is its extreme confusion. To understand it means only to reveal its contradictions.’ Since then the academic fashion for postmodernism, first floated in ‘post-structural’ form at Cambridge – ever more open to foreign ideas even if silly ones, has made a virtue of this deconstruction without acknowledging the need for the reconstruction which Robinson implied. The resulting fragmented ‘discourse’ is the obverse of traditionally narrow and arbitrarily subdivided empirical subject specialisation. Neither academic form of knowledge allows for generalisation capable of questioning the purposes to which it is put or the society which uses it.
Why study Sociology? What will I learn? (2011-04-06 08:00)

Here’s the Guardian’s [1] answer to this interesting and important question:

Academics claim sociology is more than a subject - it's a whole way of seeing the world. From the topics studied on sociology degrees, they may just be right.

Sociology is the study of human societies and how they interact to shape people's beliefs, behaviours and identity. The subject is the academic cousin to the more practical social policy, so you will examine different social theories and models (expect mention of Karl Marx at least). You will also explore how society has changed over time, touching on subjects like industrialisation, urbanisation, inequality and globalisation.

You may find yourself investigating consumer society, looking at classic and contemporary (post-modern) theories of consumerism and applying these to shopping, fashion or music.

You could look at work and employment, how these are viewed in societies and how these views have changed over the years. Expect to explore issues of feminism, class and the trade union movement.

You could also study sexuality, religion, or youth culture and identity.

Sociology courses can often be studied alongside other complementary subjects, such as history, social policy, politics, or cultural or gender studies.

However we at Sociological Imagination don’t think this is a particularly good (or inspiring!) answer. How would you answer this question? What’s the point of Sociology? Why study it? What will you learn? How will it change how you see the world?
We'd love to hear your answers to this question. [2]E-mail us your thoughts and we'll compile the answers and post them online.

Straight men kissing more? (2011-04-08 08:00)

An interesting Guardian [1]article which talks to the sociologist [2]Eric Anderson about the decline of homophobia amongst young people in Britain. His findings are rather interesting to say the least:

"I started going through my students' Facebook profiles, with their permission, and was inundated with hundreds of photos of men kissing on their nights out," Anderson reports.

He was intrigued, and decided to investigate further via formal research. He interviewed 145 students, a mixture of men studying sports-related subjects and every third man who left the library on a particular day, from two different universities, plus other male students from a sixth-form college. The results of his survey showed 89% of the polled men saying they were happy to kiss another man on the lips through friendship. And almost 40% added that they had engaged in "sustained kissing, initially for shock value, but now just for 'a laugh'."

"I started telling people about it, but found that a lot of academics literally did not believe me," Anderson explains. "One professor excused it as 'something in the water at Bath' – even though the research covered three different educational establishments. Others flatly told me that they did not believe me. From their 'adult' perspective, this action was unfathomable. They have been stamped with attitudes of acceptable behaviour as a part of their entry into adulthood, and kissing was not permitted between men when they were young. So although they had not been in students' clubs or pubs in 20 or more years, they assumed that nothing had changed. This is known as human plasticity theory; people are stamped with a belief system that they cannot easily shake."

Hal Baird (2011-07-06 18:08:17)
It took a long time but my brother in law and I are finally comfortable kissing each other on the lips. We are both happily married heterosexuals. At the very least we exchange a full body hug whenever we meet or depart and now an occasional kiss has been added. We never end a phone conversation without saying "I love you" to each other. In modern terms were are in a bromance.

David Deutsch on our place in the cosmos (2011-04-09 08:00)

This video is somewhat outside the usual remit of Sociological Imagination but we thought at least a few readers would find it as interesting as we did:

A reminder about our two Calls for Papers (2011-04-10 08:00)

Social Research in an Age of Austerity

A new coalition government pledges an unparalleled age of fiscal austerity and a new universities minister promises radical ‘reform’ of higher education: what does the future hold for the British university in an age of fiscal austerity?

What is this political and economic climate likely to mean for social research? How can social researchers adapt to this climate? How can social research assist in understanding and resisting the imposition of austerity?

Articles and polemics are invited which relate to these themes. See [1]here for submission guidelines.

Contributions also welcome on themes relating to socially and/or politically engaged social research!

Public Scholarship and Private Commitment

Why do you care about your research? What is it that makes you want to spend your time exploring this area of the social world? What does it mean for you to gain understanding of these aspects of social life? Our answers to
these questions often encompass the biographical, ethical and political. However these aspects of our involvements are often relegated to the background, as the factors seen as relevant to scholarship are too frequently construed in narrowly intellectualising ways.

The Social Imagination is intended as a space in which private commitments can be reconciled with public scholarship. Therefore we are soliciting contributions ([2]articles, polemics or research profiles) which explain how the two are linked and thus address the aforementioned questions. For submission details see [3] here

Call for Papers: what does the Sociological Imagination mean today? (2011-04-12 08:00)

It has been over 50 years since C. Wright Mills wrote the Sociological Imagination. In that time the world has changed beyond recognition: the Cold War ended, the Keynesian consensus broke down, a globalizing neoliberalism rose to the ascendancy and the internet began to transform human communication and culture. In recent years, with 9/11 and then the financial crisis, it seems that history has returned with a vengeance. Is Wright Mills’ notion of the ‘Sociological Imagination’ still pertinent today? How can Sociology help shed light on the rapidly transforming world around us and the consequences of these transformations for the people who inhabit it? What does the ‘Sociological Imagination’ mean today?
Short articles are invited which engage with these themes, or particular aspects of them. Submissions should be 500 – 1500 words and [1]e-mailed as a Word document. There is no deadline for submissions.

1. mailto:m.a.carrigan@warwick.ac.uk

Podcast: Interview with Danny Birchall from the Wellcome Collection (2011-04-13 08:00)

In this podcast Mark Carrigan interviews Danny Birchall, web editor at the [1]Wellcome Collection. The interview discusses the process and thinking behind the Collection’s innovative use of digital media, as well as the recent [2]High Society exhibition in particular.

The Anarchist Film Archive (2011-04-14 08:00)

As political theories go, it’s fair to say that anarchism is more misunderstood than most. Often seen as the preserve of nihilistic terrorists, there’s actually a rich vein of [1]anarchist social thought. There’s also an equally rich social and political history of the anarchist movement. In a rather impressive use of digital media [2]Christie Books (an anarchist publisher) has brought some of this history to life through its [3]Anarchist Film Archive.
The Internet in Society: Empowering or Censoring Citizens? (2011-04-16 08:00)

[EMBED]

[...] A fascinating talk by Evgeny Morozov who describes WikiLeaks as being driven by a mix of cyber utopianism and political romanticism. If you find this discussion interesting then check out the animated version. [...]

Communication or Credentialing? On the Value of Academic Publishing (2011-04-18 00:00)

Nobody outside of the profession reads scholarly books and journal articles. It’s become a common complaint in the academic world, and among some disciplines such as sociology it’s also de rigueur to take the complaint a step further: Nobody listens to us. American sociologists, for example, look askance at economist and New York Times columnist Paul Krugman and lament the lack of visibility in the media of their discipline. British sociologists, meanwhile, worry about the impending ‘impact agenda’ of the Research Excellence Framework. Although couched in different vocabularies—in the US academy, ‘impact’ typically refers to narrow quantitative measures such as citation counts and impact factors—what scholars are professing to wanting is to make a positive difference in the world.

Yet the number of monographs, journals, and other publication outlets proliferate by the year, and as the volume of research output increases, the possibility of being read even within one’s own profession decreases by the year, and too often so-called debates within disciplines devolve into mutual appreciation societies who do not deign to read the other side. The great bulk of research is never cited at all. So why do we continue to publish if not for the sake of scholarly communication? The obvious answer to this question, I would argue, is for the sake of credentials, outward signs of cultural and symbolic capital which we then deploy as lines in our CV to achieve particular professional goals.

Usually, these are professional goals as they relate to career advancement within the academy. In the UK, it is important to be ‘REF-able’, the pressure to publish coming in regular cycles throughout one’s career. Similarly in the US, getting one’s first job post-PhD requires publications, and keeping one’s job in the context of the tenure track often requires even more. Understand publications as professional credentials and you understand why the prestige of the publication outlet—a university press with an Ivy League affiliation, for example, or a high-impact journal—becomes paramount: In a world where not even other scholars are wont to read you, prestige of publication outlet, the brand, as it were, becomes proxy for quality.

However, if understood as credentials then publications are also very useful outside of the academic field. In my view, scholarly writing is first and foremost a way of having a seat at the table. Your book will not effect change on its own, but if you wave it around high enough and long enough you might be given a soapbox relevant to your research topic from which you will be able to make your case anew. By these lights, it would be wrong to debate whether or not journalism is a better medium of communication than the journal article. More productive, rather, is to view the journal article as the baseline price of admission to an opportunity that has only just opened for you, an opportunity that is now yours to work or waste. The labour of influence and impact does not end when you’ve written up—it has only just begun.

Previous research has shown that a large proportion of ethnic minorities in the Higher Education system are represented in undergraduate study in the new (post-1992) university sector. More prestigious universities such as Oxbridge and universities under the Russell Group banner continuously show an under-representation of ethnic minorities in their universities.

The Race For Opportunity report published in 2010 by Business in the Community, uncovered with the exception of new universities, only the universities of Birmingham, Manchester, Nottingham and Warwick draw in a representative proportion of all British ethnic groups.

Drawing on this lack of diversity in some of Britain's universities, an [1]article this week in The Guardian, highlights the experiences of under-represented black students at Oxford University.

The article draws on the prime minister’s comments on his alma mater, Brasenose, as having admissions figures for taking students from the lowest socio-economic groups as “disgraceful”.

In 2009, just one “black Caribbean” applicant from the UK out of the 25 “black Caribbean’s” who applied – was accepted for study at Oxford.

Highlighted [2]elsewhere in Sociological Imagination, Oxbridge statistically tends to the choice of the nation's elite and has an overwhelmingly high proportion of white upper and middle class students compared to other groups.

This is nothing new, but given the fact that Oxbridge and Russell Group universities have confirmed that they will be charging the maximum tuition fee, it will prove interesting to see how figures on admissions from lower socio-economic groups in these institutions might be affected in the future given that provision must now be made for these under-represented groups.

1. http://www.guardian.co.uk/education/2011/apr/12/oxford-university-diversity-row-students
In June 2011 the Sociological Imagination will host its first day school at the University of Warwick. Encompassing workshops, seminars, talks and brainstorming sessions, it will explore the potential which social media holds for all aspects of academic practice: learning, research, campaigning, networking, public engagement, teaching, communication and event organization.

Full details, as well as exact date, will follow shortly. The event is free, though due to our budget (or more accurately our lack of any budget!) lunch on the day will consist of a group trip to one of the campus food outlets. There will also be an evening meal at [1]Habibi’s restaurant, though again this is pay your own way.

Places are limited. If you’d like to register then please [2]e-mail with your name, institutional affiliation (if applicable) and particular areas of interest relating to the day school’s themes.

Egotism & Society (2011-04-21 08:00)

What makes our society function? What ties hold us together? These questions have assumed greater importance in a post-modern, morally relative era, an era in which everyone’s beliefs can seem wildly different. At the same time, we find ourselves witnessing the power of public opinion on a mass scale, indicating a greater level of agreement than before. As such, the search for the lowest common denominator within our national community is blurred. I want to suggest that advanced industrialised societies, such as Britain’s, rely on a particular conception of the Self as a purely Egotistical entity in order to thrive. This conception, which I will refer to as the Ego or Egotism, is not conducive to a healthy mind-and-body. Moreover, there is a cultural blindness in the West as to the importance of this Self, and most of us are unable to envision life without it. I want to focus on how and why advanced industrialised societies implement this understanding of the Self, and the consequences of this understanding.

Egotism on a societal level is the product of self-consciousness and individualism, both of which as broad cultural inclinations developed throughout the 19th and 20th centuries. But it is unlike both of them, exhibiting unique features of its own which are at one and the same time timelessly human and grotesquely modern, even dystopian.
Egotism, as I understand it, correlates to one’s self-identity as an individual being, with a narrative of his or her own, a narrative which weaves ambitions, dreams, desires, fears and prejudices together. What I mean by Egotism is the construction, from an early age, of an idea of the Self, an idea which is created in relation to pride and a conception of oneself as a completely separate entity. It is safe to assume that all humans are born with this capacity, and that it is on many levels a natural response to individual consciousness. In advanced industrialised societies, however, this conception of the Self is manipulated for certain ends. Before we explore how this manipulation occurs, it is important to distinguish between Egotism as it occurs naturally and Egotism as it is when manipulated. The Ego is also different from the Self, in that it is a particular conception of the Self. It can go against the mind-and-body of the individual. For instance, if my ego desires popularity, and perceives smoking cigarettes to aid its quest for social acceptance, then if I am sufficiently in the thrall of my Ego, I will take up smoking, at the expense of my mind-and-body, my actual self. So it is important to realise the difference between the Ego and the self as mind-and-body – the Ego is a constructed and ultimately false-identity which drives the mind-and-body to achieve its ends. The crucial thing to understand about the Ego is that it can never be sated. Whatever the Ego’s ends, it will revise them each time they are fulfilled to something harder to attain. Furthermore, many of the desires that the Ego holds are biological desires, such as sex, which are naturally unquenchable. Hence there is a double-bind – the sexual drive is relentless and the Ego continually heightens its desire without end. This means that the Ego cannot be satisfied. By this, I mean that lasting happiness through Egotism is impossible, insofar as the Ego believes on some level that fulfilling its wishes will make it happy. Egotism, I believe, is the core reason behind unhappiness. It creates unrealistic expectations and at its most extreme isolates individuals from those around them, teaching them to see fellow men and women as rivals and threats. This is what I believe has gradually transpired in the West over the past two centuries, although the reasons for this development stretch back to antiquity. Now it is time to look at how and why advanced industrialised societies rely on the Egotistical conception of the Self. Eastern religions such as Buddhism tend to deplore the Egotistical Self, portraying it as an illusion that obscures the unity of all life forms. Those who are aware of this kind of critique tend to be those who want to emancipate themselves from the rule of the Egotistic Self, freeing themselves to simply be. If this is achieved, personal ambitions and desires will to fade away. Imagine such an individual for a moment. He is gradually disentangling what he believes to be his ‘true’ self from his Egotistical Self, and in the process he becomes someone new. This new individual is aware of the unimportance of human lives and civilizations in the face of the unity of the universe. The new individual has no personal motives or wishes, and does not necessarily need or want a social role. Rather than depending on whether goals are achieved or not, happiness is total. There is no need for anything beyond the bare necessities. How would a materialistic, capitalistic economy survive if people attained self-mastery to the extent that they desired no substantial material possessions? Surely, it would simply collapse! There would be no market for the endless products churned out. This hypothesis gains credence when we dissect how goods are sold. The history of advertising offers the most illuminating insight into what motivates people to buy things. In the last few decades, advertisements have tended to sell a lifestyle rather than a product. In other words, the product or service offered attempts to represent a lifestyle, a modus Vivendi, which entices the viewer by aligning itself to his or her aspirations. For instance, a razor for shaving might be sold with an advert that features a clean-shaven man attracting the unbidden sexual attention of an attractive, glamorous lady. The message is simple – if you want to be more like this man, buy this product, and you will be one step closer to his lifestyle. This Egotism extends throughout all media. Music videos exhibit glamorous lifestyles and cool, exciting characters, essentially ‘living out’ the lyrics in some cases. Videogames feature increasingly ‘lifelike’ and ‘cool’ characters as protagonists. Hollywood blockbusters show us as we would want to be seen by others. Surrounded by images of successful, glamorous, sexy, wealthy, cool individuals in every field, and witnessing the sheer coruscating vivacity of these fortunate souls every day through the abstraction of the television, the Egotistical Self is fed and nourished as never before in the history of man. When has there been such a wealth of celebrities to be worshipped and envied, or such a concerted effort to fulfil both of these functions? Looking at the entertainment our society offers, it is clear that most people, having had their Egotistical Selves encouraged unanimously from an early age, require a drip-feed of gossip, glamour and merciless disparagement to feel contented. The ‘lifestyle’ magazines for both men and women display this perfectly – for women, there is Heat, and Closer, and Glamour, and Cosmopolitan, and Elle, etc; all of which either fawn over beautiful, successful and sophisticated women and their whims, or ruthlessly mock and pity those famous women who are anything but perfect in body and soul. Either way,
We have seen how society encourages this perception of the Self; now it is time to examine how it interacts with ideas and concepts alien to her Egotism. She is so used to performing mental acrobatics to justify her Egotistical behavior, and this often is the Self's ultimate fantasy, or it is given a kind of Sadomasochistic thrill at witnessing how pathetic those around her are, and how good its own is in comparison. The magazines for men are fairly similar in their effect, if not their content. I want to demonstrate the psychological and social harm that is risked when people are born into a society that can only conceive of individuals as Egotistical Selves. So, I will examine the 'ideal type' of the Egotistical Self, as she might typically appear in Britain, France, the United States, and so on. Firstly, the Ego tends to become the major or only source of self-esteem for her. If her Ego is built around her being sexier than her cohorts, then she will seek to extract valuable self-esteem through the ego boost her good looks offer her. Let’s imagine that our subject wants to be a lawyer for a top law firm; her Ego has fastened itself onto this aspiration for whatever reason, and for the entirety of her post-adolescent life she has endeavoured greatly, every single day, to reach that goal. Eventually, if this Egotism is her only source of self-esteem, what will happen is that she will be almost unable to feel pleasure in areas that do not concern her Egotistical aspirations. We see this in the rising trend of 'career-focused' men and women, who are willing to sacrifice a staggering amount of their time to reaching a particular level of their corporation, etc. Secondly, there is an innate disinclination at true self-reflection. Instead, a facade of self-reflection is usually forged; the Ego constructs 'turning points' in its existence, which are portrayed as major moments of self-understanding and mental clarity but are in fact illusory. The Egotistical Self is loath to being honest with itself because this might threaten its mission – after all, if you've been striving for a particular position for years and years, you have invested too much emotional energy and time to consider the possibility that it might be fake. Thirdly, there is the mental construction of other Selves as threats. Our subject feels the need to put up emotional defences against those around her. She might do this by denigrating a 'friend' behind their back, to reassure herself of her own worth; she might subconsciously 'put down' friends and acquaintances she perceives as rivals; or she might outright lie to those around her about her taste, talent and achievements to 'save face'. Most of the time, these actions are performed subconsciously, almost involuntarily, as if they are knee-jerk reactions. This behavior is reciprocal – people tend to note it, and often mirror their behavioural patterns back at them. This, of course, reinforces the idea of other people as rivals. Language is twisted to reinforce this illusion. In our case, she can only conceive of others through the Self. In other words, she cannot see them as they really are, but only through the prism of her Egotism. She will project her own behaviour onto others, obscuring the true nature of those around her. Fourthly, our subject is a poor receptacle for new ideas, since she is not accustomed to dealing with ideas and concepts alien to her Egotism. She is so used to performing mental acrobatics to justify her Egotistical goal (whatever it might be) and behaviour, that she simply does not truly open herself to new ideas. It is dealt with through the Egotistical Self, which selectively filters what it deems to be relevant, and what it finds threatening or incomprehensible. Naturally, most new ideas are never given the chance to be embraced. Truly alternative positions are seen in the same old light as everything else, meaning that our subject takes little pleasure in open academic speculation of almost any kind. We have thus sketched our subject thoroughly enough to imagine what her life might be like. She is perpetually stressed out, taking little visible pleasure in everyday tasks. She is focused to the point of fetishism, constantly judging herself and those around her by the standards of her Egotism. With those she is close to, she will discuss her ambitions with rigour but without colour. If you were to ask her why she wanted to be a lawyer, or a pop star, she would fail to give a satisfactory answer, instead relying on tautology before moving on swiftly. She lacks vivacity or true passion, and embraces new movements only cosmetically. Her life is one of constant toil and repression; every now and then, she will experience a kind of emotional breakdown, complete with tears of frustration; but, since she fails to perceive the underlying problem, her only remedy is to redouble her efforts. We have seen how society encourages this perception of the Self; now it is time to examine how it discourages other non-Egotistical understandings of the Self. At an individual level, those who do not take part in society are often seen as parasites, wastes of space. Is this perhaps because 'ordinary', societal people cannot profit from them? Take a homeless person, for instance, or a traveller. The double-glazing salesman cannot sell him double-glazing, for he has no permanent abode. The insurance salesman cannot sell him insurance, because he has nothing worth insuring. Retail outlets reject him because he has no money. Politicians avoid him for fear of being associated with his disreputable kind. They are disinherited, and I have a feeling that the same fate would befall anyone trying to escape the Egotism of this society. Of course, this reaction comes partly from fear; everyone plays by the rules of the game, understandably taking the elaborate pageantry of civic relations very seriously. When someone comes
along who refuses to play along with the game, or who obviously flouts the rules, people are indignant, and clamour for some kind of punishment. Why? Simply because the outsider’s way of life jeopardises the integrity of the game that others have sacrificed their lives to. It is no wonder that people are so touchy. Societies that are made up of a vast majority of Egotistical Selves (from the bottom to the top), then, have a collective desire to protect their conception of the world, due to their innate insecurity. Since it would be counter-productive to try and destroy an alternative position (it would risk discrediting the mainstream position), it is sterilised. This is achieved in two ways. The first way is reliant on the society being Egotistical in sufficient numbers to lack a truly critical faculty. The second way is to caricature the new position until it has become drab, predictable and – crucially – essentially the same as the Egotistical position. This is effective because it neutralises the very reason someone might want to consider a new conception of themselves and others. Let’s examine one of these caricatures further – the Student-Activist. The Student-Activists are young, naive and self-righteous; they squawk ready-made catchphrases about how evil capitalism is, they resort to petty violence to achieve their aims, and they tend to come from comparatively wealthy backgrounds. They have little idea of what the real world is like, and their idealism leads to snobbery. In this description, the Student-Activist is made to seem out for himself. He is only protesting because it gives him an identity – because his Ego desires it. He is just another Egotist, like you or me, so there’s no reason to take him seriously, or to join him in his crusade. So the Student Activist becomes an easy stereotype, and their views are robbed of their potency because they are portrayed simply as sectarian Egotists. Of course, this might actually be the case! But, when these individuals become stereotypes used to represent and discredit the alternative position per se, they weaken the plausibility of the very idea of public protest. Disillusionment is the inevitable outcome. So the Egotistical Self is trapped in a colourless, cynical world of blind submission and pernicious envy in which there is little hope of escape. Once the Ego has settled in, it takes a great deal of dislodging, because the cognitive faculties of the mind become enmeshed with it. It has a canny ability to squirm its way into our every move, our every decision. Meanwhile, since virtually all social positions of privilege are filled with Egotists, from journalism to sports to politics to commerce, society exhibits an underlying, ferocious desire to uphold the Ego and its perception of the world and the human beings who live within it. For these privileged there is often a double gain to defending Egotistic Society – a psychological one and a financial one. After all, only those entrapped by the Ego could feel anything other than disgust when confronted by rampant consumerism (this is not to say that those on the Left are by axiom not egotists; more often than not, they use their political position to form an identity of ‘otherness’ which provides a basis for their activities and ambitions). It is a cycle that inevitably reproduces itself. If we accept this picture of society, the question then shifts to – is it possible to build a society where egotism is discouraged and minimised, or is there something innate in the birth of civilization that makes us yield to the Egotistical force?

Confessions of a Dystopian Marxist (2011-04-24 08:00)

"It was foul, and I loved it," says Saint Augustine for stealing pears along with "some lewd young fellows" adding further "I loved to perish." With the Roman Empire sacked by the Goths on the verge of collapse, it is hard to believe that Saint Augustine attributed such a strong motive as “perishing” to stealing pears – something that Mark Twain in the 19th century would've laughed at as a normal thing that boys do for lack of anything better. In fact most boys do worse than steal pears. Even the self-righteous judges at the International Criminal Tribunal in The Hague whose faces are death-masks and who speak like the God of the Old Testament would not include stealing pears in the list of crimes against humanity. Yet Saint Augustine the Carthaginian, with the poignancy of a true convert and the poetry of the North African sun burning in his veins makes you want to feel with the pain of having stolen pears. Augustine’s Confessions was meant to be a kind of a spiritual autobiography. Mine is a parody of other confessions. If I were my own biographer this would be the title of the book: Confessions of a Dystopian Marxist. A dystopian I always was. The Marxism came later. To be a dystopian is to have no expectations of the world. Marxism is the antidote to such a feeling because it invents expectations where seemingly there are none. Dystopias make you conscious of time. Marxism rejects time except as a man-made category and recognizes only one time: that of the revolution.
Dystopias are about no-worlds or just about the whole universe. Marxism is the rest of the universe seen through the prism of this world. I’m writing about two people in the same book: one is the dystopian and another is the Marxist. Judith Brown called her 1991 biography of Gandhi *Prisoner of Hope*. Romain Rolland called his 1924 biography of the Mahatma as *Mohandas K. Gandhi: The man who became one with the universal being*. To be hopeful in the way Gandhi was could only mean becoming “one with the universal being.” Gandhi was a utopian without being a Marxist. His autobiography *The Story of My Experiments with Truth* is not short of “sins” that might seem irrelevant to the modern reader such as Augustine’s guilt at stealing pears. The cow’s milk versus the goat’s milk is my favorite one. Gandhi of course finally gave in to the immediate need of fighting the British and thus goat’s milk won the day. The issue of course was whether he should take milk at all and more importantly diet control as a means to the ascetic life. Interestingly, I’ve found “saintly” people to be much more obsessed with food and sex than less saintly ones. Their utopias are built on crushing nature within the human person. For someone like me who thinks that being riddled with contradictions is the only way one can come closest to being oneself the dystopian blends rather well with the Marxist. The dystopian in me is a private self and the Marxist a public persona. The former is a metaphor and the latter politics. Politics and metaphor do not go together either in art or in life. Politics – by which I mean a public life – even as metaphor is thankless. The metaphor opens one door of meaning to another. With biting irony, Yeats asks in his poem, "Politics," "How can I, that girl standing there,/ My attention fix / On Roman or on Russian / Or on Spanish politics?" Yeats is responding to a line from Thomas Mann, "In our time the destiny of man presents its meanings in political terms." This poem of Yeats written less than a year before his death ends with the line: "But O that I were young again / And held her in my arms!" Behind the so-called "destiny of man" whose meanings are presented in "political terms" are emotional wants and the need for recognition. There is no politics outside a personal need concealed somewhere although most politically motivated people find this hard to accept. They would like to believe that their concerns transcend the personal. At least that’s what they want the rest of the world to think. This can only be a sign of dishonesty more than anything else. Genet called his last book *Prisoner of Love*. Two of my favorite images are the one when he calls the young Jesus a "joker" and the other when he says that every time he thought of the Palestinians there was a hole in his heart. Love and politics go together with Genet who recounts the time he spent with the Palestinians and the Black Panthers. There’s not a line of nostalgia or sentimentalism in the entire book. All we see is the detached affection of a dying man. It reads like the confession of a prisoner but in this case the man locked himself in with the others and threw the keys away lest he would have to come out of the prison. Hence the adolescent title *Prisoner of Love* as if it were the story of a boy in love. Ironically it is. Genet elsewhere says that a person leaves the world with a secret that is destined to perish with the person. There is something about "me" that "I" and no one else is supposed to know and I leave the world with the knowledge that I am the possessor of a dark secret - a fantasy of annihilation, a dream of conquest, a vision of the end of the world. My view is that the so-called secret that I plan to die with is an affected one. I’m like the actor in a Doris Lessing short story "An Unposted Love Letter:" all affection and no reality. I don’t like to think that a sentence such as, “The mango is the queen of fruits” is a sexist one. A male colleague of mine seems to think that my use of the phrase "queen of" is sexist. I said, what if I said "king of" instead of "queen." He added: that would be chauvinistic. Political correctness is hard to deal with for a confessor and no writing is possible where there are no confessions. Yet, I will stick to the literary mode and no other. I refuse to call a spade a spade. That’s disgustingly prosaic. I’ll use a metaphor and call it the Queen of Spades. The unimaginative of the world need prose to justify their barren existence and their equally barren politics. I don’t. Neither did my hero Marx who figuratively states “force is the midwife of every old society pregnant with a new one.” This is the force that the marginal and downtrodden classes will exert to finally bring the new society into being. I don’t think I could ever tell the truth about myself. To be conscious of lying is a form of truth-telling. I indulge in vain paradoxes to pass time. I wouldn’t mind eating pears from a neighbor’s tree without the neighbor’s knowledge along with a pint of cow’s or goat’s milk. At least that would give me something substantial to confess about.
A New Model for Peer-Reviewing Monographs? (2011-04-25 00:00)

Earlier this month in London at the British Sociological Association Annual Conference, during a panel for early career researchers, I asked John Holmwood why the RAE/REF does not seem to rate scholarly monographs as highly as journal articles. Both a book and an article count as one item, but the latter is only one-tenth the number of words. To a freelancer accustomed to being paid by the word, this does not seem fair. And a book published with a good academic press will be peer-reviewed, right? Holmwood, however, pointed out that an academic press’s peer-review is not the same as a journal’s because a press is far more concerned about whether or not the book will sell. This, he was implying, is not meritocratic.

Although I would be hesitant to argue that the peer review process of scholarly journals is necessarily perfectly meritocratic, either—point taken. Much has been written about how non-profit university presses, once for all intents and purposes the printing arm of their universities, over time have become increasingly exposed to the demands of the market. This puts ever-increasing pressure upon authors to write certain sorts of content in preference to others and publishers to seek out certain sorts of content in preference to others. As an English-speaking researcher writing in English your future book might have a global audience, and perhaps paradoxically that means you probably won’t find too many takers for your elegant monograph on a small town in Northern England.

Ironically, the channels through which book-length scholarship may be disseminated have never been so diverse. Researchers need little more than an Internet connection to make their work freely available on the web, and new technologies have lowered the cost of self-publishing and print-on-demand services. If you are reading this column right now, you also have the resources necessary to publish your own book. Yet most career scholars recoil from such options, fearing lack of quality control and requiring the imprimatur of a prestigious press for professional advancement.

Why do we allow this state of affairs to persist? Why do we, for all intents and purposes, outsource hiring and firing decisions to organizations which need to sell books to survive? Why not disassociate the monograph peer-review process from the monograph publishing process? I could easily imagine discipline-specific peer-review panels, perhaps organized through scholarly associations such as the enormous US-based Modern Language Association. Researchers could submit their manuscript to a relevant panel, which would then adjudicate a rigorous double-blind peer-review process in the usual way. An approved script would receive a certification of some sort: ‘Approved for publication by the MLA Monograph Review Board’, for example. The researcher would be free to publish the work however he or she deems most suitable. In this manner, good books which do not have a sufficiently large market would not be condemned to die in professional obscurity.

Of course, I have no illusions. While such a scheme may be practicable, it would not be feasible without the support of the most respected senior academics. And it is precisely these sorts of people who are most likely to
benefit from the status quo. While some publishers would welcome their liberation from researchers' professional anxieties, others might resist what could be seen as a usurpation of their critical judgement. Perhaps there are other, better solutions. Still, I would argue that we ought to be interrogating the assumptions and conditions of our profession in precisely this reflexive way. If the monograph has value apart from its (typically modest) market potential—and I believe that it does—we must not be complacent. To be complacent is to fail to sociologically imagine ourselves.

Benjamin Geer (2011-04-25 00:27:43)
We younger academics could start our own “autonomous peer review” project to do this. All we need is enough competent (not necessarily famous or senior) participants to ensure a high standard of peer review, and a suitable web site for managing the process. At first, authors might wish to go through this process first, then publish with a traditional academic publisher (which would be free to peer-review again in the usual way). If the project works (by producing books that peers recognise as good), its reputation will speak for itself, and more and more people will want to publish this way. They might then feel that there’s no need to bother with a traditional publisher, because the “autonomous peer review” stamp of approval is enough; once they have it, they could just put their book on the web for free download. The RAE/REF would then have good reason to take monographs more seriously.

Casey Brienza (2011-04-25 04:29:47)
Benjamin, many thanks for the comment! I actually do not think that what I’m proposing should be started by less experienced academics unless they are in a field in which monographs are valued as a primary form of academic communication but in which it is exceedingly difficult to get monographs published in the usual way. Some literature fields might be an example. Otherwise, there is not enough incentive to submit oneself to an additional layer of peer-review above and beyond what an academic press would do. For sociology, I think the imprimatur of respected scholars and/or organizations would be essential for a such an endeavour’s success.

Benjamin Geer (2011-04-25 15:45:39)
Maybe the incentive could be that it would help you get a traditional publishing contract? You could use it as a kind of recommendation letter when selling your book to a publisher. Eventually publishers might decide to require it. Why do you think that senior scholars would need to be involved? As Shelley said, "Ye are many - they are few."

Casey Brienza (2011-04-25 16:11:45)
Many thanks again for the comment. Why do I think senior scholars need to be involved? The answer seems to me like it would be obvious. Let’s say I have a manuscript that academic presses are already interested in publishing. Why would I the author be even remotely interested in this new model of monograph peer review? The likely answer is that I wouldn’t...unless I had reason to believe that such a process would provide additional access/affiliation to luminaries in my field. Without good symbolic backing from so-called Big Names, only third-tier publishers who don’t already have excellent networks in place and the scholars most interested in this new model would be those who have no other obvious recourse to publication. There would thus be little field-wide appropriation of the new practice, and it would quickly become associated (rightly or wrongly) with an unseemly professional desperation, a sign of not of excellence but of mediocrity.
I think you need to take into account the fact that in sociology, as in other fields, there are struggles between orthodoxy and heterodoxy, and that heterodoxy tends to come from younger, less consecrated practitioners who nevertheless have the same professional competence as their more consecrated, more orthodox rivals. Publishers are often forced to arbitrate in these struggles, by deciding whether a radical new idea merits the consecration they would give it by publishing it, or whether it is too risky and might damage their reputation as a publisher. Some publishers tend to play it safe and publish more orthodox work, while others specialise in riskier investments in avant-garde research. For the latter, the trick is betting on the right horse, given that it might take several years to find out whether the bet paid off (in the form of a book that, over time, comes to be seen as a pioneering work) or not. I would think that these sorts of publishers would be very glad to have a sensitive instrument for detecting promising avant-garde trends in the field, and that a system of independent peer review, run by and for younger academics, could be just such an instrument. It would cost them nothing, and would enable them to make a more informed choice than they are currently able to do, because manuscripts would come to them already pre-selected by the avant-garde. For authors whose work is really daring, this could make the difference between getting published and not getting published.

Well, Benjamin, you are officially oceans more idealistic than I am! Have you read Andrew Abbott’s Chaos of Disciplines? Whether or not one agrees with Abbott, though, I suspect that the biggest divide within the discipline of sociology from the point of view of practice is between qualitative sociologists who primarily write books and quantitative sociologists who primarily write articles, not between the ‘orthodoxy’ and the ‘avant garde’...whoever those two groups are. Incidentally, as someone who studies book publishing, I can assure you that the absolute last thing a press that cares even a little bit about selling books wants to hear about a possible book project is, ‘Nothing remotely like it has ever been done before!’

I haven’t read Abbott; I’ll have a look. What I’m suggesting isn’t idealism; it’s based on Bourdieu’s field theory. Since you study book publishing, I think you’d be interested to read his study The Rules of Art. There are indeed presses that seek out avant-garde work as a business strategy. It’s what Bourdieu calls a "long cycle of production": the publisher knows that the book will sell very few copies at first, but if it becomes recognised by peers, and eventually assigned by professors to their students, it will become a "classic" and pay off in the long run. Bourdieu argues, convincingly I think, that some publishers specialise in this. (In France it’s Les Editions de Minuit, which published Bourdieu’s earlier works.) Other publishers specialise in the "short cycle of production", i.e. publishing books that have a high chance of making a profit immediately. These two types of publishers correspond to the the "autonomous" and "heteronomous" poles of the field of authors.

Many thanks for what is has become an engaging discussion! Yes, I am quite familiar with Bourdieu. With regards to autonomy/heteronomy in the publishing field, I am in full agreement with John Thompson here, who argues that it just doesn’t work that way, not even for academic presses. My own research in a different sector bears this out. Since he is also in charge of Polity, which publishes Bourdieu in English, it’s hard to argue that he doesn’t know what he’s talking about. (Full disclosure: John is my PhD supervisor.) Anyway, we are now pushing right up to the limits of what I feel comfortable saying publicly. I’d be happy to continue the conversation in a different medium. Or perhaps someday we’ll run into each other in person.

Lesotho is surprisingly high in world gender equality rankings (8th in the world by the World Economic Forum, WEF, ranking). But does this gender equality translate into the lives of ordinary women? This article explores:

[1] Has Lesotho really bridged the gender gap?
A couple of months ago Steve Fuller posted [1]here about a radical educational project based in Lincoln. The [2]Social Science Centre (SSC) is a not-for-profit co-operative university which will offer a participatory and co-operative education in the social sciences, at the same level as mainstream UK universities, while being organized in a profoundly different way. The SSC is managed on non-hierarchical democratic principles with all students & staff having an equal voice in the functioning and direction of the organization:

The co-operative principles on which the management of the Centre is based extend to the ways in which courses are taught. All classes will be participative and collaborative, so as to include the experience and knowledge of the student as an intrinsic part of the course. Students will have the chance to design courses with the professors and lecturers, as well as deliver some of the teaching themselves with support from other students and the teaching staff. Students will be able to work with academics on research projects as well as publish their own writings. A core principle of the Centre is that teachers and students have much to learn from each other.

Those involved in the SSC are also engaged in fighting the coalition government’s higher education agenda, particularly with regards to the removal of funding for teaching social science in English universities. The SSC is a radical attempt to forge an alternative model for higher education, able to stand independently without being subject to the whims of marketizing politicians and managerial bureaucracies. In doing so, it will reconnect with the academic values which find themselves increasingly under threat within the contemporary university system: critical thinking, experimentation, sharing, peer review, co-operation, collaboration, openness, debate and constructive disagreement.

I’ve been fascinated by the SSC since I first came across it and, last week, I made the long trip over to Lincoln to attend a meeting for the first time. I came away determined to be actively involved in the centre: if you find the current situation within academia profoundly frustrating, as all manner of externalities impinge upon and distort the core functions of academic life, then you should support the SSC. It is a radical, optimistic and most of all practical attempt to discover alternative ways of teaching and learning within the present climate.

As well as those able to travel to the centre regularly and actively involve themselves in its activities, the SSC welcomes associate members who wish to support the centre’s work from a distance. On the [3]website you can join the centre and keep up to date with the SSC’s development.

Casey Brienza (2011-04-26 20:56:31)
Mark, your first link has no URL. It seems like an interesting project...but I figure they are going to need excellent financial backing. This article immediate came to mind: http://chronicle.com/article/The-Lurethe-Risks-of/123724/

Defend academic freedom: Join thousands of UK academics calling for the release of Dr Beltran (2011-04-27 08:00)

Please join thousands of UK academics who have signed an open letter calling for the release of Dr Miguel Beltran: http://www.ucu.org.uk/Beltranopenletter.

Dr Miguel Beltran is a respected academic who has now been detained by the Colombian government without conviction for 22 months and who faces a trial for "rebellion", simply for publishing articles and conducting research on the conflict in Colombia.

Not only is this an instance of imprisonment, seemingly without due process, it is an attack on the ability of academics to exercise critical thought and freedom of expression without fear of retribution from the state.

Dr Beltran’s trial has been suspended on several occasions, once because of allegations that evidence against him had been manipulated. It is now due to begin again on 2 May. Please join thousands of fellow academics in
signing the letter demanding Dr Beltran’s immediate release [1]here.

You can read more about Dr Beltran [2]here.

2. http://www.ucu.org.uk/aboutDrBeltran

Royalty, weddings, gender, and class: What is so middle-class about Kate Middleton? (2011-04-27 12:20)

Don’t miss the Live Chat by Warwick PhD student [1]Sam Lyle at the [2]Warwick University Knowledge Centre (today, Wednesday 27th April, at 2 pm), regardless of whether you are interested, amused, baffled, or repulsed, by the imminent royal wedding.

The live chat will begin at 2pm (GMT), a link will be posted at the event page: [3]http://www2.warwick.ac.uk/alumni/knowledge/projects/live/ from 1.55pm (GMT).

The topics of the live chat will centre around the royal wedding when considered alongside gender and social class, and aim to answer questions such as:

- What has been the media and social response to Kate and William's engagement?
- Are we, as a nation, anxious about middle-class identities?

If you are not able to attend the live chat, a summary will be posted on the Knowledge Centre after the event.

Sam’s PhD work focuses on social class and gender, and in this live chat she will be helping us answer the question: ‘What’s so middle-class about Kate?’.

In November 2010, Sam appeared on local radio speaking about the engagement between Prince William and Kate Middleton (listen to the programme here:[4]http://www.bbc.co.uk/programmes/p00c3gqf#synopsis).
Critical Issues in Irish Society Network (2011-04-28 08:00)

[1]Critical Issues in Irish Society is a fascinating new initiative which aims to connect research students in Ireland. Started in early 2011 by a number of PhD students in the School of Sociology at the University of Dublin, it aims to improve the links in the Irish postgraduate community and provide a forum within which engagement can take place on the crucial issues facing Irish society.

They are hosting a successful seminar series on "Ireland in Crisis" looking at critical issues from a range of disciplines and perspectives - from the labour market to health. The website also features podcasts, working papers, abstracts and photos from the sessions.

Hopefully some Irish readers of Sociological Imagination might want to get involved. Even for those in the rest of the world, it’s a great idea and an illuminating example of the new kinds of connectivity which social media affords academic researchers.

Call for Papers: “The Evolution of Research: Adapting to Survive in the Changing World?” (2011-04-30 08:00)

Canterbury Christ Church University
10th Annual Postgraduate Conference
Friday 17th June 2011

This year’s CCCU PGRA Annual Conference theme explores: “The Evolution of Research: Adapting to Survive in the Changing World?”. Encouraging reflection upon how the ever-changing nature of the world may be mirrored in how we, as researchers, adapt our research in order to evade the possibility of extinction, this theme invites papers from an interdisciplinary range of perspectives. This Conference is free for everybody.

Please email your 200-300 word abstract, or any questions to the organisers of the conference:

Miss Laura Doherty (l.doherty111@canterbury.ac.uk)
Mr Robert McPherson (r.mcpherson147@canterbury.ac.uk)

DEADLINE FOR SUBMISSIONS: Friday 13th May 2011

2.5 May

The future according to Google? (2011-05-01 08:00)

...What do we think the future hold for us? Some of these imagined futures seem ridiculous, others seem possible. XKCD have done a Google search and found out...
The Social Network (2010), directed by Aaron Sorkin, links the genesis of the now ubiquitous social networking site Facebook to an early, adolescent scheme called FaceMash. Developed by Mark Zuckerberg in 2003 during his days at Harvard, FaceMash was a 'Hot or Not'-type website which, with the input of visitors, ranked the attractiveness of female undergraduates at the college. Zuckerberg is also shown blogging about his algorithmic exploits on LiveJournal. Unsurprisingly, cinematic allusion to this now Russian-owned website evoked scattered exclamations and chuckles of nostalgia from the audience when I went to see the movie in the theatre. Although it had been
a mere seven years since Harvard slapped Zuckerberg with academic probation for overloading the university’s network, LiveJournal had already become the online equivalent of a cassette recorder.

LiveJournal is not the only website and online service which seems passé. Remember Usenet? Prodigy? America Online? Yahoo, MSN, and AOL instant messaging services? What about AltaVista, an online search service which, back when I first logged onto the Internet from my dial up modem (downloading at approximately 28 kb per second...when I was lucky and I didn’t get downgraded to 14 kb) in the late 1990s, was better than Google? Although Pets.com, for example, did not survive the bursting of the Dot Com bubble, others did—and although you might not use your AOL email address anymore—heck, if you’re young enough you might hardly use email at all—some people still do. Even [2]AltaVista still exists, albeit powered by Yahoo.

As those people who keep their AOL addresses and resist the rapid pace of change online surely know, there are costs to this lack of continuity. I too was an extremely active user of LiveJournal in the mid-2000s, and I [3]continue to maintain my site, though I am nowhere near as visible there as I once was. I have journal entries there of which I am very proud, and countless hours of effort went into that work. Besides my continued emotional investment in that virtual space, I know that other people are interested in that content, and I continue to get hits daily to certain popular entries. If I were to abandon or delete the site, this value would be lost. I’ve already ‘lost’ my first personal homepage, begun in 2000 or so, and although you often hear people talk about how the Internet never forgets, no trace remains, and no one seems to remember that I have been writing columns about manga since 2001.

There are potentially graver problems with this collective attention deficit disorder in the online space. In [4]Here Comes Everybody: The Power of Organizing without Organizations (Penguin Press, 2008), Clay Shirky argues that social networking tools facilitate forms of social organization which previously could be accomplished solely through well-established institutions. But he also argues that these tools do not realize their full potential until they become boring, so commonly and universally used that they become virtually invisible—and this, I would argue, in the current environment of speedy technological change, simply isn't being allowed to happen. Instead of [5]asking ourselves what the next Facebook will be, we need, rather, to stop following the latest social networking fashions and thinking instead about how we can invest our flighty enthusiasm into faithful stability.

Casey Brienza (2011-05-03 14:34:50)
FYI, some discussion of this column occurs here: http://caseybrienza.livejournal.com/833629.html
Call for Papers: what does the Sociological Imagination mean today? (2011-05-02 08:00)

It has been over 50 years since C. Wright Mills wrote the Sociological Imagination. In that time the world has changed beyond recognition: the Cold War ended, the Keynesian consensus broke down, a globalizing neoliberalism rose to the ascendency and the internet began to transform human communication and culture. In recent years, with 9/11 and then the financial crisis, it seems that history has returned with a vengeance. Is Wright Mills' notion of the 'Sociological Imagination' still pertinent today? How can Sociology help shed light on the rapidly transforming world around us and the consequences of these transformations for the people who inhabit it? What does the 'Sociological Imagination' mean today?

Short articles are invited which engage with these themes, or particular aspects of them. Submissions should be 500 – 1500 words and [1]e-mailed as a Word document. There is no deadline for submissions.

Masculinity, power and height: Prince Charles (2011-05-04 08:00)

Yet another excellent post at [1]Sociological images, this time about the social manufacturing of men's height. It is examined through contrasting formal and informal family images of Prince Charles and the late Princess Diana.

This effort to make Charles appear taller is a social commitment to the idea that men are taller and women shorter. When our own bodies, and our chosen mates, don't follow this rule, sometimes we'll go to great lengths to preserve the illusion.

The Cool Kindle? On How (Not) to Sell E-Books (2011-05-09 00:00)

While wandering through a vast wasteland of over 200 cable channels the other night I happened across a BBC America marathon of Top Gear. While that show is in itself ripe for sociological analysis, what stopped me dead in my proverbial tracks was one of the advertisements shown during a commercial break. It was for the Amazon e-book reader the Kindle, and it showed a photogenic male and female duo debating the relative merit of printed books versus Kindles. For your reference, I have embedded a streaming copy from the company's YouTube channel below.

IFRAME: [1]http://www.youtube.com/embed/0vqeXaa1pw8

The establishing shot shows the two (young, white) actors standing in front of a neutral white background. The woman holds an ordinary hardcover book, while the man holds a Kindle. Cut to a close up shot; the woman looks at the man and says, 'That a Kindle? I only read real books'. 'Well I'm reading a real book,' the man protests amiably. They then debate the relative merits of 'real' books and e-books, focusing on how both can be read in intense sunlight. (A much-touted technological breakthrough of the [2]E-Ink screen used by the Kindle and some other competing e-book readers is that, unlike other laptop, tablet, or mobile phone screens, it is visible in all of
the same conditions that a printed page would be.) They then discuss how both can be used to keep your page. It concludes with the woman asking to see the man’s Kindle.

This commercial is striking for two reasons. First, it does not, as similar commercials from [3] Apple and [4] T-Mobile attempt to do in order to distinguish themselves from their competitors, suggest that the Kindle is in any manner functionally superior to a printed book. Both can be read in the same light conditions; both can be used to keep your place for you so that you can return quickly to your page after an interruption. The ad’s underlying message, rather, may be distilled into on simple message: Using printed books just isn’t cool.

Furthermore, it strikes me as no coincidence that the Kindle user is male and the ‘real’ book reader is female. The tech business is heavily skewed male, as is the proportion of early adopters of any new technology. Even Wikipedia is [5] mostly edited by men; populist suggestions that it is edited by ‘everybody’ is nothing short of symbolic violence. And given that [6] the fiction reader is more likely to be female, it comes as no surprise that coercing women into Kindle adoption should be one of Amazon’s marketing strategies.

The use of the term ‘real book’ to contrast printed tomes with e-books is pervasive; I’ve even heard teenagers use it. And this cultural mindset is only one of the hazards confronting marketers trying to convince people to lay down ‘real money’ for ‘virtual’ books that do not provide a universally superior experience of use. (I write the term ‘use’ because not all uses of books involve reading. One obvious use for which printed books are unequivocally superior is interior decorating...and before you laugh consider furniture company Ikea’s stake in this debate.) So instead, the geniuses at Amazon think it’s better to tell the world that print kinda makes you—yes, you, young lady—look dumb. Can they be serious? Haven’t they heard the pre-e-book era phrase ‘book learning’?

M Sheridan (2011-05-10 14:56:07)
This is AWESOME! My only criticism is that it actually can't happen in "every classroom in America tomorrow." Not all classrooms have the technology to permit them to do so, sad to say.
Case studies: migrant workers in Brussels (2011-05-11 08:00)

Too often the media talk about migrants in aggregated, impersonal terms. This [1]article by N. Nielsen is an exception. It presents several mini-case studies of economic migrants in Brussels and brings to the fore some of the subjective reasons for why the migrants put up with their situation. A lot remains to be said about the problem of adaptive preferences (Elster) which leads people to justify and assess the things that happen to them in relation to their prior experience (i.e., migrants may be putting up with bad treatment because it is comparatively better on some level than their life was in their home country). Still, it is important to acknowledge this side of the story.

1. [http://networkedblogs.com/gjxLw](http://networkedblogs.com/gjxLw)

Yuji Shimohira (2011-05-13 11:36:50)

In Spain, my home country, the ethnostratification is evident everywhere. We have a strong family culture which relies on families for the primary things (instead of relying on the state). However, as women’s employment increases (and they spend less time at home) those primary family functions become weaker, above all elderly care. Thus, migrants (women migrant, double bias) are replacing Spanish women and carrying out the sexist family tasks that Spanish women can no longer withstand but still culturally accept.

Milena Kremakova (2011-05-13 12:36:37)

True! The same has been happening in Italy and Greece, but is only just beginning in the "new Europe" (the 2004 and 2007 accession states). It’s a "wave" that’s going through Europe heading eastwards. There is definitely far more to migration than discrimination (although discrimination is a huge and painful issue). For one, it affects division of labour in the countries of migration in the way you described; and also think of what happens in the countries from which those domestic workers (women) arrive. just two examples - - i.e. children of migrant workers in the host country: [http://margeryosborne.weebly.com/uploads/1/4/2/3/1423738/qsehomeless.pdf](http://margeryosborne.weebly.com/uploads/1/4/2/3/1423738/qsehomeless.pdf) - effects on sending countries [http://eprints.lse.ac.uk/28438/1/GreeSE_No35.pdf](http://eprints.lse.ac.uk/28438/1/GreeSE_No35.pdf)

Yuji Shimohira (2011-05-14 18:58:17)

Thanks for the links. Yes, I agree with you; both origin and destination countries must be taken into account in order to study today’s migration phenomenon, and I would add that it’s inextricably related to what Negri calls ‘Empire’ (probably Wallerstein’s notions of ‘periphery’ and ‘core’ have become inadequate nowadays).

The Sociology of Star Trek Fandom (2011-05-12 08:00)

Daryl Frazetti writes about the culture of Star Trek fandom. Fascinating paper!

Now someone needs to write a paper on Babylon 5 and Star Wars... or have they already?

What goes on the brain of a Buddhist Monk? (2011-05-13 08:00)

In a recent (very unsociological, but fascinating) meditation survey which has been carried out in New York since 2008, the brains of prominent Buddhist monks have been scanned in the hope of detecting any physiological changes that might be occurring during the state of tranquility self-induced during meditation. Dr Zoran Josipovic, research scientist and adjunct professor at New York University, who is heading the experiment, builds on recent research which has found that during meditation brains are capable of changing and optimising its functions in ways that have previously been thought impossible.

Anyone to help work on SI? (2011-05-13 18:50)

Both the editor and the deputy editor are now in the last bits of their PhDs and the workload involved in keeping the site regularly updated is becoming a bit of an issue. Anyone fancy getting involved? If you think you might possibly be interested please do [1]get in touch.

Barry Schwartz on the paradox of choice (2011-05-14 08:00)

A fantastic talk by [1]Barry Schwartz which feels rather profoundly sociological for a psychologist. Or maybe SI is just haunted by the voice of Tony Giddens:

“What to do? How to act? Who to be? These are focal questions for everyone living in circumstances of late modernity – and ones which, on some level or another, all of us answer, either discursively or through day-to-day
social behaviour." (Giddens 1991a: 70)

[EMBED]

Completely agree with Barry Schwartz, but I would also add that many elements conceptualised as 'choices' don’t entail actual alternatives but they are still conceptualised as 'choices' in order to preserve what he calls 'the official dogma of all Western industrial societies' (example: the Republican Party and the Democratic Party in the States).

Lori McVay (2011-05-18 17:21:05)
I loved this lecture. Brilliant observations. But his description of the parent at the soccer game with all the technology distracting them from the actual game was, to me, a reflection of the dilemma women have faced for decades. "If I’m with my family and not at work, should I be?" The difference in this generation is that we now have ways to let our work into our personal lives, which in some ways serves to keep our personal lives further out of the workplace.

Women in science (2011-05-15 08:00)

As ever, XKCD comics make a good point about women in science, even though they don’t touch on the broader reasons why women have been largely absent from science
In a powerful op-ed written for The New York Times back in late 2010, bestselling novelist Michael Cunningham writes, ‘I’ve come to understand that all literature is a product of translation’. He explains, and I quote the article at length:
I’ve learned, from working with translators over the years, that the original novel is, in a way, a translation itself. It is not, of course, translated into another language but it is a translation from the images in the author’s mind to that which he is able to put down on paper.

Here’s a secret. Many novelists, if they are pressed and if they are being honest, will admit that the finished book is a rather rough translation of the book they’d intended to write. It’s one of the heartbreaks of writing fiction. You have, for months or years, been walking around with the idea of a novel in your mind, and in your mind it’s transcendent, it’s brilliantly comic and howlingly tragic, it contains everything you know, and everything you can imagine, about human life on the planet earth. It is vast and mysterious and awe-inspiring. It is a cathedral made of fire.

But even if the book in question turns out fairly well, it’s never the book that you’d hoped to write. It’s smaller than the book you’d hoped to write. It is an object, a collection of sentences, and it does not remotely resemble a cathedral made of fire.

It feels, in short, like a rather inept translation of a mythical great work.

The translator, then, is simply moving the book another step along the translation continuum. The translator is translating a translation.

Cunningham is more perceptive than perhaps he admits to himself; he has learned to live without perfection. Translation isn’t perfect because no form of human communication—from speech to smoke signals—is perfect. As long as we cannot read each others’ minds, some amount of misunderstanding will always be inevitable. And so, seeking to transcend that unbridgeable gap between ‘you’ and ‘me’, ‘writer’ and ‘reader’, we promise ‘faithful’ translations of literary works.

To the same end, we also create new mediated communication technologies: radio, telephony, television, the Internet. Then we invest our hopes in them; witness [2]AT &T’s slogan in the 1970s-80s ‘Reach out and touch someone’ or [3]Blackberry’s much more recent, near-identical one, ‘Connect with everything you love in life’. Then there’s Google’s oft-stated mission to make all of the world’s knowledge universally available (and searchable through Google).

At first, we delight in the new opportunities these technologies provide. Wow, I might think, I can communicate near-instantaneously with friends and family half a world away! Imagine the transformative potential! Yet disappointment is inevitable; none of these new technologies invests us with true telepathic powers, and sometimes we feel even more estranged from our fellow human beings than we were before. And so the cycle repeats; we seek out newer and better technologies in which to invest our hopes, and we are again disappointed.

Anyone who has read the first volume of the Japanese science fiction novel series [4]Kino no Tabi by Keiichi Sigsawa knows that reading each others’ minds is no panacea—and could in fact lead to a total breakdown of civil society. (After all, do we really want to know what everyone is really thinking all of the time?) In [5]Speaking into the Air: A History of the Idea of Communication (Chicago, 2001), John Durham Peters argues that we ought to worry less about communication with others and more about care of others. If perfect communication is not possible (or desirable), we ought to give more focussed attention to the ethical dimension of media and communication. However, that would require that we ask very different questions about our media-saturated age...and quite frankly, I don’t think we’re quite ready.

Genetic Roots of Language (2011-05-17 08:00)

I love peeking into neighbouring fields to see what crops people are growing there. Here is a fascinating (if a little old, from 2003) article by Andrea McColl about the genetic roots of language, based on her research of Williams Syndrome and Specific Language Impairment (SLI). Read article [1]here

(and [2]here is a link to Caltech's Journal About engineering and Science, the archives of which are available and are quite interesting)

Use of a foreign language may seem to exhibit the characteristics of Specific Language Impairment. Kyoto, 2011. Photo: Milena Kremakova (Idle Ethnographer TM)
Breakthrough study: patient expectations affect drug efficiency (2011-05-18 08:00)

Scientific studies rarely venture into the realm of the irrational; yet it seems that that is exactly where we could find answers to many of the unsolved conundrums of modern medicine. A recent paper published in [1]Science Translational Medicine, is a notable, and exciting, exception*. The study claims to have detected a noticeable influence of patients' expectations upon the effectiveness of painkillers: in the words of of Professor Anthony Jones, Salford Royal Hospitals NHS Foundation Trust, 'expectations are a key driver to pain perception and to placebo analgesic effects'. The study also identifies the specific regions of the human brain which are involved in the process.

Read (free) [2]abstract

Read [3]article on the BBC website about the study

Read (somewhat emotional, but nevertheless interesting) commentary at [4]naturalnews.com

Call for Papers: what does the Sociological Imagination mean today? (2011-05-19 08:00)

It has been over 50 years since C. Wright Mills wrote the Sociological Imagination. In that time the world has changed beyond recognition: the Cold War ended, the Keynesian consensus broke down, a globalizing neoliberalism rose to the ascendancy and the internet began to transform human communication and culture. In recent years, with 9/11 and then the financial crisis, it seems that history has returned with a vengeance. Is Wright Mills' notion of the 'Sociological Imagination' still pertinent today? How can Sociology help shed light on the rapidly transforming world around us and the consequences of these transformations for the people who inhabit it? What does the 'Sociological Imagination' mean today?
Short articles are invited which engage with these themes, or particular aspects of them. Submissions should be 500 – 1500 words and [1]e-mailed as a Word document. There is no deadline for submissions.

21st Century Parenthood: two examples (2011-05-20 08:00)

Two interesting websites promoting a new image of parenthood with practical examples. GeekDad’s subtitle is Raising generation 2.0, and GeekMom’s tagline is Smart. Savvy. Social.

What is so interesting is the conscious effort to manage parenting according to certain principles - something that did not happen before when parenthood used to be taken-for-granted as a highly naturalised, and extremely gendered activity (in fact, in many cultures and countries it remains that way). However, this, I think, is also related to the marketisation of life which has to be managed and engineered into an increasingly efficient and structured string of activities.

I’d love to do content analysis and compare the two websites. But, however affable and awesome GeekMom and GeekDad are, they seem to retain a stylised version of the traditional view of moms and dads. My personal preferences are slightly different and go to equal parenting (of which, unfortunately, currently there are still very few public examples). Here’s one:

IFRAME: [1]http://www.youtube.com/embed/9ia3mh1M-Ks
University student folklore...and labour market uncertainty? (2011-05-21 08:00)

SI continues its traditional weekend review of 21st century student youtube-folklore with two songs. Our mums and dads played the guitar in scruffy student dorms full of thick nicotine smoke; today's creative souls practice in front of webcams and flood youtube with their sometimes genius produce. But, although essentially both are the result of the same impulse to make sense of the world (adjusted for the evolution of the technological medium), two things worry me (as a postgraduate). First, both songs in their humorous way deal with labour market uncertainty which has become pervasive. Second, they reaffirm stereotypes of university students as useless and unprepared for the ‘real world’. This was surely not the case in the previous generation.

The PhD song was composed and performed by Frans Prins and the video was made by Japanese students. The Kyoto photos give the rhythm and blues a fresh twist!

The Arts graduate song is less artsy and extremely sarcastic, and is bound to ring a bell with today’s situation in the UK:

IFRAME: [1]http://www.youtube.com/embed/iwcaTMAx18s

The Arts graduate song is less artsy and extremely sarcastic, and is bound to ring a bell with today’s situation in the UK:

'Story of cosmetics' (video) | The Sociological Imagination (2012-09-06 13:00:51)

[...] you remember “The Story of Stuff”? There is no need to extol the importance of historical context for those who want to understand [...]

Who reads poetry? (2011-05-23 08:00)

Jackie Kay of the Guardian argues the case of poetry in a lovely (if old) article. Perhaps she is right (even though I instinctively shudder at the sheer glance of something proudly entitled 'Costa book awards'. It must be the snob in me, and not the poetry-reader or the sociologist. The poetry-reader rejoices: surely, it must be good that anyone sponsors poetry. The sociologist muses on the shifting place of reading in contemporary life).
Who reads poetry? (Photographer: Idle Ethnographer TM)

Helen Ingram (2013-02-26 23:15:33)
I think it is very hard for poetry to be loved now. People don’t seem to value it anymore but let its one of things we study at school.

Milena Kremakova (2013-02-27 00:23:35)
Maybe..maybe not! for example, how about music lyrics? I think people will always love good poetry and a good story, and they come in various forms, not necessarily 'classic' ones

New Contribution to The Comics Grid (2011-05-23 17:30)

In lieu of a new [1]Mediated Matters column this week, I direct you instead to my contribution to [2]The Comics Grid, where I report on the Toronto Comic Arts Festival 2011, the premier indie comics event in Canada. In that context, I
interrogate the rights and responsibilities entailed by public, free-for-all events. Please check it out!

__________

ONS: Gender Pay Gap Narrows (2011-05-24 08:00)

This article by the Office for National Statistics (ONS), published in December 2010, claims that the full-time gender pay gap in the UK (for median hourly earnings, excluding overtime) has narrowed by two percentage points between 2009 and 2010. However, there must be some smart sociologists working at the ONS because they savvily acknowledge that

Although mean and median hourly rates provide useful comparisons between the earnings of men and women, they do not necessarily indicate differences in rates of pay for comparable jobs. Pay averages are affected by the different work patterns of men and women, such as the proportions in different occupations, their length of time in jobs, and whether they work full-time or part-time.

[1]

Gender pay gap narrows by 2 percentage points in 2009 and 2010. (Source: ONS - weblink)
Read the full article [2]here.

Additional screening: Friday, May 27th, 7:30pm at the Frontline Club.

Absolutely superb film. Best documentary about post-Soviet events I’ve seen.

More about the gender pay gap. Blaming women? (2011-05-25 09:00)

Following up on yesterday's post which showed some fresh UK statistics on the full-time gender pay gap in median earnings, today we continue with a more argumentative (if slightly older) piece by psychology [1]professor Hilary M. Lips of [2]Radford University, UK.

The article unveils the catch-22 embedded in women's occupational choices and claims that choice is the problem only on the surface, as:

...using the language of choice to refer to women’s career outcomes tacitly ignores the many subtle constraints on such decisions.

There are also deeply embedded problems such as the fact that childbirth strongly disadvantages working mothers, while it advantages working fathers:

women with children under 18 earn 97.1 % of what women without children earn, whereas men with children under 18 earn 122 % of what men without children earn.

Furthermore, Prof Lips argues on the basis of recent data, that even if women did choose to work more, the gender pay gap would still not be closed.

Read the article [3]here

If you're feeling particularly feminist, also read [4]this news report about ...well, an occasion which may not be typical, but the occurrence of which nevertheless somewhat dismantles the whole idea of gender equality in work. Completely, in fact.
The Trouble With Love and Sex (2011-05-26 08:00)

We’re not sure if this will be viewable to readers outside the UK (suspect not) but nonetheless it’s too good not to post it up here.

The first full-length animated documentary made for British television takes us inside the counselling rooms of [1]Relate, as clients wrestle with fantasies, impotence and infidelity.

Utterly fascinating to see and hear this stuff.

Much Information, but No Context: The Twitter Trap (2011-05-27 08:00)

Enough talk about women and work this week, let’s talk about brains. Just joking. I am a woman, after all. So: a recent article by Bill Keller reminded me that there can never be too many articles worrying about what the new digital media are doing to our brains and behaviours.

[1]
As someone who belongs to that bizarre generation born just before the generation of young cyborgs, I doubt that my own brain will ever adapt to the splintered attention span increasingly required by the constant use of computers. Worse still, I am between both worlds: no longer able to sustain concentration for long enough to write even this short, unacademic paragraph without doing fifteen other things at the same time; yet not agile enough to manage this without succumbing to that contested condition aptly named 'internet addiction', or without bearing the burden of that constant low-level stress that has not even been theorised and understood yet (but which I know exists, because my health has seen its consequences). I like reading articles such as this one. They may contain more moral panic than sociological analysis, but they fulfil an important psychological purpose: I am not alone in being baffled by what 'outsourcing our brains to the cloud' has done to me.

[2]
Draconus: an Atari computer game from 1988, long before the age of Twitter. Atari did manufacture computers. Mine had the whooping RAM of 64 KB. The games came on audio cassettes and took 25 min to load (source of image: Atariage.com)

______________
The Coming Out of Dorian Gray (2011-05-29 08:00)

This year, the original ‘The picture of Dorian Gray’ has been published as an ‘annotated, uncensored version’. So, it turns out that the book that so many have admired had actually been censored!

[1]

Uncensored version of Oscar Wilde’s The Picture of Dorian Gray was finally published by Harvard University Press in 2011 (photo source: Guardian.co.uk)

I am not sure I will return to it, just to trail the text to dig out the amended expressions. Perhaps I will just amend them in my memory (dear colleagues-psychologists, is such a thing as patching your own memory possible?). However heartily I may disapprove of book censorship, in this case I can say that the version available to me back in 1996 was still powerful enough, despite the lack of blatantly overt references to male or female mistresses; and I don’t believe that rereading the full version fifteen years on would make too much of a difference.

What I find genuinely interesting is how this year’s uncensored publication reveals from the distance of time how much change has occurred in what is socially acceptable. To a large extent, our attitudes to sexuality have become more relaxed. However, much of the change seems superficial: sexuality continues to be medicalised (only now it is not only ‘abnormal’ sexuality, but all of it, and even more so - [2] asexuality). The ready availability of ‘uncensored versions’ of adulthood (mainly on the Internet, but also on television and other media) also strongly determines the development of children’s minds. As someone said in a recent radio debate, the really worrying problem is not the sexualisation of children per se, but the fact that an adult view of sexuality is being superimposed too fast, and with too much detail, on the children’s own developing views, and this is harmful (part of the Moral Maze programme from 18 May 2011 is available on Youtube [3]here ).

* *
Look at Dorian Gray’s image above. Today, that image of a young man would most definitely not be universally considered ‘vulgar’ and ‘unclean’. Yet, this is exactly how it appeared back in 1890.

This is why I love images: just like mathematical formulae, they may not ‘speak’ directly at you, but if you crack their code, they will convey in an instant more rich interlinked information than a text ever can.

(which is not to say that text is redundant. It isn’t! The article in the Guardian has provides vital context: read it [4]here).

---

**American Morality and the Strauss-Kahn Affair (2011-05-30 08:00)**

A specified form of death penalty occurs in the following cases:- gibbeting (on the spot where crime was committed) for burglary, later also for encroaching on the king’s highway, for getting a slave-brand obliterated, for procuring husband’s death; burning for incest with own mother, for vestal entering or opening tavern, for theft at fire (on the spot); drowning for adultery, rape of betrothed maiden, bigamy, bad conduct as wife, seduction of daughter-in-law. *The Code of Hammurabi* (1795-1750 BC)

The stand that World Socialist Web Site took on the Strauss-Kahn affair in an article titled "[1]The serious questions raised by the Dominique Strauss-Kahn affair" has increased my respect for the online news center. The main point in the article is that “As of yet, no one has heard Mr. Strauss-Kahn’s side of the story.” That’s the point. No one knows what the alleged victim went through and no one knows what Strauss-Kahn has to say for himself. The stage is occupied by everyone else except the “victim” and the “victimizer” – I put these two words in quotes because they need to be clarified depending on what emerges from the inquiry.

[2] ×

The irony of the American system of life – because it is a "system" where you’re conditioned to be “free” and not a “way” of life where you get to reflect upon the meaning of freedom - is that ultimately there are no human beings in it. There are just empty slots that each one fills on a daily basis. These slots are prepared for the common people who just sit and go through the charade prepared by the government, the media and the corporations as if that were life. Somewhere at some point Dominique Strauss-Kahn, for whom I’ve no particular admiration happened to fall into one of those slots meant for the most unexciting sort you could possibly imagine. An entire system that is dormant and practically dead – "soulless" as Marx says - suddenly is filled with a new zest. The media, the courts, the lawyers, and the bored public – everyone is awake for a change – they’ve something to talk about. Interestingly these are the moments when they’re awake.

They’re not awake when their country is busy looting the non-western world; they’re not awake when the
poor and the working classes are humiliated and left to die without dignity; they’re not awake when the country is fighting wars against innocent civilians, destroying social landscapes, poisoning the environment through excessive use of fire power; nobody wants to speak on behalf of the hundreds of thousands of innocent people who have lost their lives and livelihoods for the kind of a system supported by the American government and industry across the third world; no one wants to know about victims of corporate plunder – all this is less interesting than the Strauss-Kahn affair: the fall of a man from a position of power like Oedipus the king through a tragic flaw. This is the kind of mythology that the Bible Belt reverends in Mississippi, Alabama, Louisiana and Texas desperately need to brainwash their unimaginative audiences.

Suddenly the media and the justice system want to show that they’re “human” and not responsible for millions of crimes committed on a daily basis against the powerless. They wish to show that a poor black woman from West Africa will be treated in a just manner even if it meant sending a rich white guy to prison. No. That’s not what is happening. The black woman from West Africa was already in a position where she was abused on a daily basis working at Sofitel Hotel that takes $3000 a night from its clients and pays the woman peanuts for the soul-killing work she does. The abuse by a racist and sexist system is well in place. The woman is already a victim of a classist and patriarchal society. No one could have apprehended this simple fact better than an IMF chief. Through conscienceless loans given to the worst possible criminals in the third world with the poor having to bear the burden of repayment the World Bank and the IMF have contributed to immense suffering and abuse of the poor in Asia, Africa and Latin America. The terrible poverty of Guinea is what sent the woman to end up as an “alien” working for Sofitel Hotel, New York. The IMF as an institution is the real criminal that we should be dealing with. That’s not what we’re talking about though.

Something is seriously wrong with the US as a society in how it judges a human being. The protestant streak in western morality shows each time there is the possibility of a high ground waiting somewhere to be occupied. The whole system is like a tiger on the prowl waiting for something like the Strauss-Kahn incident to happen for it to prove that it exists and it is not an illusion. It’s a ruthlessly exploitative system that wants to declare its innocence. Its guilt however is beyond doubt. The proof of the latter is the vacuous American leadership which can only be the result of a vacuous social order.

The Code of Hammurabi which says adulterers should be drowned if actually implemented would fill the seas of the world with dead married men. Most of the laws of the Old Testament come from the Code of Hammurabi and are primitive by modern standards. American primitivism which combines Old Testament religion with imperial politics is not very different from what we see in parts of the third world where fundamentalism and fundamentalists prevail. The so-called American way of life is a product of a primitive thinking and this aspect shows in their fanatical obsession with the moral high ground as in the Strauss-Kahn affair. There is no reason on earth to treat the man as if he is already a criminal. There is no reason to treat a criminal either as if he is not a human being.

No matter how great the crime, punishments are meant to make people useful to the society they’ve wronged and not to isolate and turn them into living dead with meaningless sentences spanning decades. If at all it is proved that Dominique Strauss-Kahn is guilty I think the woman should have a chance to express what kind of compensation she deserves and the kind of punishment adequate to the wrong done to her.

I definitely agree with what you are saying Prakash. The American society with its hypocritical way of judgement thinks they are serving justice in society while they are actually doing the opposite. The justice system is blinded by its liberalistic views of justice but never meets the needs of society and individuals and their cultural or religious needs.

Making a Case for Social Science (2011-05-31 08:00)

The Campaign for Social Science was launched in January this year by the Academy of Social Sciences. It aims to raise the profile of social science with the public, media and parliament at a time of great crisis and uncertainty. In this podcast Mark Carrigan talks to Stephen Anderson (executive director of the campaign) and Professor A D H Cook (former Pro-vice Chancellor of the University of Sheffield) about the campaign, the context within which it has emerged and the issues it seeks to confront. The interview covers a wide range of topics including the status of social science vis-a-vis natural science, public misunderstanding of it and the need for public engagement, as well as popularisation, in order to increase its visibility in wider society. Find the Campaign online through its [1]website or [2]twitter feed.

Making the Case for the Social Sciences: Crime | The Sociological Imagination (2011-08-18 12:03:06)

[...] published a podcast interview with two senior people in the campaign a couple of months [...]

2.6 June

Sociological Imagination’s first birthday! (2011-06-01 08:00)

So we’re taking the day off. Thanks to all the readers and, as ever, if you have any suggestions about what you’d like to see on the site or things we could introduce then please do [1]get in touch.
A quick flag up to any interested readers that the Sociology Department at the University of Warwick now has a blog and twitter feed. Although Sociological Imagination has no formal connection to the department, a number of people involved in the site are based there & many of the SI podcasts have been with academics in the department. So do check it out!

(Also out of interest does anyone know of other UK sociology departments that have blogs? If so please let us know either in comments below or via e-mail. Thanks!)

Making New Spaces for Learning in the University (2011-06-02 08:00)

In this podcast Mark Carrigan talk to Kate Arnold, a 1st year student in Sociology at the University of Warwick, about Left Overs, a project setup by undergraduates across a range of departments which is trying to break down the boundaries between speaker and audience, between organisers and attendees, so as to create a new space for intellectual dialogue and discussion outside of the pressures and pitfalls of formal institutional structures. As well as being fascinating and worthwhile in its own right, projects like this represent an opportunity for academics to practice public engagement within the university.
The (lost) soul of the post-92 Universities (2011-06-03 08:00)

The long-term effects of the cuts to Humanities and Social Science subjects are now starting to surface, especially for the Universities that are not part of the Russell Group. In a recent [1]article, Professors Gavin Poynter and Michael Rustin reflect on the case of the University of West London, where the Vice Chancellor has recently produced a Green Paper which in practice proposes to atomise the School of Social Science. The story of the UEL is interesting because it sheds light on the kind of scenario that most of the post-92 universities are likely to face in the near future, whereas university senior managers seem inclined to subject themselves to the agenda of the coalition government by marginalising and disbanding the "low cost disciplines" departments that no longer attract state funding.

In their strive for survival, most of the former polytechnics curricula are now staring to favour vocational training over research and teaching in the social sciences – a choice which seems to be at odds both with the current national economy and labour market and with the ethos of the institutions involved. In doing so, the post-92 Universities are in fact sealing their own fate by reducing the opportunities available to students who may want to study social science whilst charging up to £9000 tuition fees per year. What’s worse, though, is that by yielding to the principles imposed by the government they are also loosing their soul – their primary mission of making higher education accessible to students who are either coming from less affluent backgrounds or unable to enter elite institutions.

[2]

The future of online art? YouTube, the Kaiser Chiefs and Imogen Heap redefine the meaning of ‘audience’ (2011-06-04 11:31)

Two new exciting pieces of music-related news which seem somehow connected.

On 2 June, [1]YouTube introduced the option for uploaders and remixers to use the [2]Creative Commons Attribution license (CC BY).

At launch, YouTube reps told me over the phone earlier today, only [5]the one license option will be available (as opposed to, say, a choice from multiple license classes which include options to disallow commer-
cial re-use). The thinking, they said, is to start simple. Multiple license classes might be overwhelmingly complex for casual users for whom this may be a first introduction to Creative Commons, the logic goes. The folks at Youtube behind the project consulted with people at Creative Commons. Not sure I agree, but it's a step in a good direction, and I applaud that.

As I am not at all an expert on new media, I don't offer you my commentary but instead selections from two polar comments from the article. [6]David Pescovitz thinks YouTube is doing the wrong thing:

I think it's ridiculous that YouTube offers only one CC license, specifically one that permits others to make commercial use of your work. The whole purpose of CC is to provide a very simple framework for a spectrum of "some rights reserved" licenses. IMO, YouTube's approach defeats the purpose of CC. Flickr's CC integration is a good example of what YouTube could have done.

...while [7]radicalbytes summarises a positive view:

[...] the non-commercial option ends up being very useful because it gives me some small amount of leverage to discourage or challenge people trying to leech off my videos in non-derivative, non-critical and non-educational ways. While fair use (or fair dealing) still allows for many of the tangentially commercial uses you mention.

The second piece of news was about the [8]Kaiser Chiefs (by the way, for some unknown reason, their website does not come up in a Google search).
They have just released their new album, The Future is Medieval (sic.), without any prior publicity whatsoever, and using an entirely new marketing concept. Buyers can listen to snippets of 20 songs on the website, compile their own selection of 10 songs, and choose the artwork for the album cover. They also get their own page on the Kaiser Chiefs’ website on which they can share their customised versions with other fans and get £1 for each one they sell. I do not find it surprising that a band wants to give its fans choice, or to sell more albums using a new approach. What is interesting is that fans are encouraged to exercise choice, and they are encouraged to do so using a combination of monetary gain and the opportunity to participate in the production: not only can you shape your album, but you also have the potential (although not overly likely) opportunity to sell it to other fans who do not wish to divert themselves with jigsaw puzzles, but simply want the music here, now. One result is that fans are thus automatically divided into two categories: the active builders and the passive perceivers. Admittedly (even the Kaiser Chiefs admit this in an interview on one of the BBC radio stations yesterday), most probably fewer people will buy ready-made albums. But they don’t know this for sure, and it will be exciting to find out.

Of course, many other artists have already been involving their fans in the creation of their art. [10] British singer-songwriter Imogen Heap is a notable example:
Imogen Heap at Birmingham Academy 2006. Photo: Lee Jordan (Wikimedia Commons, under Creative Commons Attribution 2.0 Generic license)

Imogen communicates with her fans through numerous online channels and shares publicly minute details of the writing and recording of her songs; and in March this year she began preparing a new record based on 900 "sound seeds", or samples of everyday sounds such as a "dishwasher door", a "bicycle" or a "burning match", all sent to her by fans.

YouTube, the Chiefs, Imogen Heap and many other artists are thus, to my mind, contributing to a subtle but powerful shift in the meaning of the concept of "audience". They are not inventing or imposing new responsibilities on the "consumers' of music" * - but recognising the already existing drive towards audience activation through listener's involvement in its creation. On a larger scale, this is also a shift back to syncretic art which has always been around, but was somewhat muted during the industrial peak of the XX century and the rise of the mass-produced culture industry.

I am pretty sure that [12]Adorno and Horkheimer (who wrote that awesome article unveiling the ugly skeleton behind the pretty face of the culture industry) would have bought the Kaiser Chiefs' album. Even I am tempted.
Max Horkheimer (left) and Theodor W. Adorno, notable members of the Frankfurt School of Sociology

While I personally disagree with the pervasive use of ‘empowering’ words such as ‘consumers’ or ‘users’ for anything these days, I use it because music here is clearly a market, as well as art.

Tomorrow: join us to mark our 1st birthday! (2011-06-04 12:25)

Tomorrow, 5 June:
SI celebrates its 1st birthday on the University of Warwick campus, at 12 noon, in the Dirty Duck. All readers are welcome for a very informal lunch/chat/pint/ in the sun! If you don’t know us, look out for a small jolly group carrying an A3 sign saying "Sociological Imagination" written with an orange board marker (in true DIY style, just like SI itself).

Call for Papers: what does the Sociological Imagination mean today? (2011-06-05 08:00)

It has been over 50 years since C. Wright Mills wrote the Sociological Imagination. In that time the world has changed beyond recognition: the Cold War ended, the Keynesian consensus broke down, a globalizing neoliberalism rose to the ascendancy and the internet began to transform human communication and culture. In recent years, with 9/11 and then the financial crisis, it seems that history has returned with a vengeance. Is Wright Mills’ notion of the
‘Sociological Imagination’ still pertinent today? How can Sociology help shed light on the rapidly transforming world around us and the consequences of these transformations for the people who inhabit it? What does the ‘Sociological Imagination’ mean today?

Short articles are invited which engage with these themes, or particular aspects of them. Submissions should be 500 – 1500 words and [2]e-mailed as a Word document. There is no deadline for submissions.

The uncertain future of Higher Education: prisoners in an age of hyper-adversarial political culture?
(2011-06-06 08:00)

Many words have been recently spent on the future of Higher Education under the auspices (and diktats) of the coalition government. However, further attention should be given to the wider political scenario within which this modern tragoidía is taking place.

In this sense, [1]Peter Scott’s article for the Guardian underlines how the real obstacle to a fairer Higher Education system lies in the hyper-adversarial culture which is increasingly permeating the UK political arena. According to the author, in recent years none of the mainstream political parties has seriously endorsed the cause of a “free” and fair higher education system funded out of general taxation.

With hindsight, it is now clear that at the last general election higher education was deliberately kept off the agenda, because none of the competing parties was able to offer a credible policy on the issue. Since then, the situation has deteriorated, policy vacuity has taken over from each side of the political spectrum and, finally, the tragedy of HE has unfolded according to the plot penned by Mr Willetts. Therefore, despite its direct responsibility, the current government is not the only one to blame for the threats posed to the higher education system – rather, what really lies at the heart of the problem is the culture of reluctance spread throughout the entire political class.

Overall, what it would take to get Higher Education out of the slippery slope on which it has been pushed by the coalition government is not a mere change of political direction, but a wider and much more ambitious shift in the modus pensandi of the whole political system.

While we wait for such a cultural change to happen, Higher Education will continue to agonise.

1. http://www.guardian.co.uk/education/2011/may/03/higher-education-political-games
Yesterday I attended a book launch at the Cartoon Art Museum in San Francisco for the new graphic novel [1]King of RPGs Vol. 2, written by Jason Thompson and illustrated by Victor Hao. The launch was a raucous, ad hoc affair in the middle of the exhibit space, plenty of greasy food and alcohol, a roleplaying game in the back room. I became acquainted with Jason several years ago and thought I ought to celebrate the start of my stay in the Bay Area by showing support. Yet what struck me most during the authors’ presentation was this time-lapsed video of Victor at work:

Naturally, I can only speak for myself here, but for me even watching this video from start to finish is exhausting. Victor claims that each page represents between two to three hours worth of work. The entire book weighs in at over 270 pages. You do the math. Victor has a day job, and during some of his busiest months he recalled desperately cranking out five pages over the course of weekend. And this does not even begin to take into account the time it takes to come up with over a dozen unique character designs, or the time that Jason spent writing, plotting, and sketching preliminary panel layouts for the story.

I would challenge anyone who dares suggest that what is documented in that YouTube video is not labour—highly-skilled, time-intensive labour. What is most saddening about spending time with creative labourers like Jason and Victor is how insecure the work is and poorly remunerated they are relative to the value of the work they do. This is a phenomenon has been noted by many researchers in the field of Media and Communication Studies, such as Mark Andrejevic and David Hesmondalgh, though there is still debate over how dire a problem this sort of precarious creative labour is.

In my view, the degree of the problem of precarity in the creative industries is not dependent first and foremost upon the individual’s subjectivity—i.e. ‘I don’t feel exploited!’—but rather upon the wider socio-political system in which this labour is embedded. In the United States, for example, with its gossamer social safety net, it is nearly
impossible for all but the most successful creators to be self-employed full time. Otherwise, you need a trust fund or support of a high-earning spouse. Meanwhile, just across the border in Canada, where health insurance is an entitlement and not a privilege, the bar is lower. In the course of my field research, I have come across American companies relying upon underpaid Canadian freelancers.

Regardless, I think Sennett (2006) is dead-on in his analysis in The Culture of the New Capitalism about branding and new forms of labour. Although King of RPGs is published by Random House, the largest trade book publisher in the world, it goes without saying that Jason and Victor must do lots of heavy lifting when it comes to promoting their published books. That YouTube video, and others like it, is their own creation, and they also spearheaded the production of promotional tee-shirts and jewelry also for sale at the book launch. I certainly think that comic book creators contribute more to society than, say, hedge fund managers, so I hope we will make sure that beneath a slickly branded surface, highly-qualified people like Jason and Victor are not just treading water.

King of RPGs » Blog Archive » King of RPGs 2 at the Cartoon Art Museum! (2011-06-08 18:47:24)

[...] We were still setting up at 5:30 when the crowd started to pour in. For drinks, we had soda and beer. For food, we had a delicious dim sum from You’s on Broadway, donuts from Allstar Donuts (which I used to go to every day when Viz was located on Mission street), and a selection of green vegetables. Victor and I leapt right into a brief talk about how we ended up working together on King of RPGs, followed by a slideshow of King of RPGs art and sketches, with various behind-the-scenes trivia (Sample: “I tried to make the script for volume 2 more than 300 pages, so the editor would HAVE to split it up into two books! It was all part of my evil master plan!”) Maybe the best moment of the presentation was when Victor Hao showed off his high-speed drawing video of King of RPGs Chapter 7 Page 27. The audience applauded, and manga critic/PhD candidate Casey Brienza was inspired to write a post about Victor’s hard work, “Creative Labor is Still Labor.” [...]

COMING SOON on SI: Sociology of Sport Week! 13-19 June (2011-06-07 08:00)

13-19 June 2011 is Sociology of Sports week here on SI. The editors are eagerly awaiting readers’ contributions on any topic connecting sociology with sport.

This could be:

- an article
- a bibliography
- your own research profile
- a book or article review
• a podcast
• a research question you are working on
• an interview
• visual material
• a link to an interesting read
• or any other suitable material.

Please [1]email us any time before 13 June. We are looking forward to meeting you in a game of ...sociological imagination!

[2]

Sport (Photo: The Idle Ethnographer TM, 2006)

Yuji Shimohira (2011-05-31 12:34:27)
Great initiative! I've read very few things about sociology of sport. This can be my definitive chance.
CONFERENCE announcement: Gender and Sport History Symposium at University of Central Lancashire, 10 June 2011 | The Sociological Imagination (2011-06-09 14:40:58)

[...] we have been focussing on the sociology of sport (Next week is Sociology of Sport Week here on SI!), here is a last minute announcement of a really interesting conference in a neighbouring field: [...]
At a critical moment in time when the British Sociological Association has marshalled an impressive cast of luminaries to orchestrate the 'sociology and the cuts' blog and the Con-Dem coalition continues its relentless assault against public service provision, Susie Scott reminds us of the need to explore and elucidate the mundane and habitual aspects of everyday social life.

Making Sense of Everyday Life is a lively and informative deconstruction of three strands of quotidian sociology: ‘rituals and routines’, ‘social order’ and ‘challenging the taken-for-granted’. Scott brings much analytical insight and empirical clarity to these disparate strands across ten relatively short but highly illuminating chapters. Its contents range from the explanatory ‘theorising the mundane’ to the instructive ‘researching everyday life’. In doing so the reader is introduced to the founding ideas of ethnomethodology, phenomenology and symbolic interactionism. It is to Scott’s immense credit that Making Sense of Everyday Life discloses the underlying rules, routines and regularities of everyday life through the prism of an eclectic mix of sociological examples and observations drawn from less rarefied fields. Scott is particularly strong on the sociology of emotion and in discussing health, illness and disability. There is, though, perhaps a casual over-reliance on the pop anthropology of Kate Fox’s Watching the English: the Hidden Rules of English Behaviour and a similar reticence to critique sociology’s drift towards what the amateur pugilist and MacArthur foundation ‘genius’ Loic Wacquant has described as its neo-romantic current.

Scott has produced a clear and concise introduction to the sociology of everyday life. It will appeal most directly to undergraduate students or the ‘lay’ reader with an interest in the overlap between micro and macro levels of social analysis. The book’s weakness, if it is one, is that it is curiously apolitical at the very time when public intellectuals should be striving to expose and make sense of political manoeuvres that seek to radically reengineer the role of the state and recalibrate the rhythms and routines of community life.

Martin Whiteford, University of Liverpool

(updated)CONFERENCE announcement: Gender and Sport History Symposium at University of Central Lancashire, 10 June 2011 (2011-06-09 14:33)

Since we have been focussing on the sociology of sport ([1]Next week is Sociology of Sport Week here on SI!), here is a last minute announcement of a really interesting conference in a neighbouring field: history of sport. thanks to Usha Iyer for bringing this to our attention. If any of you are in Lancaster, you might want to visit this symposium tomorrow:

Gender and Sport History Symposium

Hosted by

The International Football Institute, University of Central Lancashire

&

The British Society of Sports History

Friday 10th June, 2011
The International Football Institute, University of Central Lancashire will host the first Gender and Sport History Symposium which will be held at UClan in June 2011. The Symposium has developed through the Sport and Leisure History Seminar series at the Institute of Historical Research and the British Society for Sports History. [3]

The event has two key rationales. Firstly, it focuses on an area of sports history that has generated a great deal of new research recently, including a special edition of Sport in History, edited by Carol Osborne and Fiona Skillen, on the subject of women and sport, which was published last year and has recently been re-printed in book form. Our conference is intended to showcase some of the seminal work currently being undertaken in the history of sport and gender, highlighting new areas of and approaches to research in this field, which will also be discussed in a round table at the end of the day. Speakers at the round table discussion include Dr Joyce Kay (Stirling), Dr Carol Osborne (Leeds Met), Dr Fiona Skillen (UClan) and Dr Jean Williams (DeMontford). Secondly, the conference is being held in Preston (rather than at the seminar’s usual base at the Institute of Historical Research in London) with the intention of bringing together academics based in the North-West and working in the area of sport and leisure history. It is hoped that this symposium will initiate a series of similar workshops and other academic events in the region. This event has been sponsored by the British Society of Sports History.

Programme

Time

Location: Room 202, Greenbank Building, University of Central Lancashire

9:30 – 9.50
Registration and Refreshments

9.50 – 10.00
Welcome – Prof John Hughson, Director IFI

10:00 – 11:30
Panel 1: Women and Sport: Prejudice and Progress
Chair Prof John Horne
Speakers:

Catherine Budd (De Montfort University):
"Entirely out of Their Sphere, and Calculated to Unsex Them in More Ways than One!" Women and Sport in Middlesbrough, c.1880-1914

Carlos Caracciolio (National Institute for Geophysics and Volcanology, Italy):
Bicycles and Women (without Forgetting Men): Notes for an Italian History

Michelle Sikes (University of Oxford):
Absence, Emergence, Permanence: Conceptualising Social Change through the Prism of Women’s Running in Kenya

11:30 – 12:00
Break

12:00 – 1:30
Panel 2: Physical Culture, Gender and the Body
Chair TBC

Speakers:

Sue Ash (Oxford Brookes University):
'Fit' Women: Aesthetic Movement or Eugenic Exercise in Early Twentieth Century Britain?

Eilidh Macrae (University of Glasgow):
Conflicts of Fitness and Femininity: The Negotiation of Appropriate Female Space in the 1937 Scottish Fitness Campaign

Veronique Czaka (University of Geneva/University of Lausanne):
Constructing Gender through Gymnastics at School: Discourse and Practice in West Switzerland, 1860-1920

1:30 – 2:30
Lunch

2:30 – 4:00
Panel 3: 'Troubled' Masculinities and 'Subversive' Femininities  
Chair Dion Georgiou

Speakers:
Sergio Lussana (University of Warwick) 
'The Great Wrestler Can Win Laurels': Enslaved Fighting Contests and Expressions of Masculinity in the Antebellum Southern United States

Dr Jean Williams (De Montfort University) 
Speaking Softly: Roberta Cowell’s Autobiography, Gender and Identity

Dr Stacey Pope (University of Bedfordshire )
'White Shoes to a Football Match!': Female Experiences of Football's 'Golden Age' in England

4.00 – 4:30
Break

4:30 – 5:30
Round Table: Sport and Gender: Future Directions  
Chair Prof John Hughson

Speakers:
Dr Joyce Kay (University of Stirling)
Dr Carol Osborne (University of Cumbria)
Dr Fiona Skillen (University of Central Lancashire)
Dr Jean Williams (De Montfort University)

CALL FOR ABSTRACTS - youth studies (2011-06-10 08:00)

‘Stuck in the middle with who?’: mapping out and making sense of the missing middle of youth studies

BSA Youth Study Group One Day Seminar

Friday November 4th 2011, BSA Meeting Room, Imperial Wharf, London

Keynote speaker: Professor Rob MacDonald, Teesside University

Over the years, research in the field of youth studies has produced many important insights and has been influential in critiquing, shaping, and changing ideas, perceptions and social policies related to young people’s lives. The focus has, rightly so, oftentimes been on those more obviously situated on the margins of society and possibly at risk of becoming excluded or disconnected. This attention to social disadvantage has often been mirrored by an interest in ‘successful’ youth trajectories, leading to theorisations of the youth period largely dominated by dualistic notions such as ‘slow’ versus ‘fast track’ or ‘linear’ versus ‘nonlinear’ transitions.

It could be argued that not all young people’s lives pertain to this dichotomous approach, neither objectively or subjectively. France (2007) has noted the need to explore and develop our understanding of apparently ‘ordinary’ or ‘unspectacular’ experiences of youth, while Roberts (2011) argues that this gap in our knowledge represents a ‘missing middle’. Furthermore, the concept of ‘ordinariness’ and other similar themes emerged in a number of papers at last year’s Youth 2010 conference.

This one day seminar seeks to explore, analyse and theorise the experiences of ‘middling youth’ and identify the parameters of what might constitute the middle ground. We invite abstracts of 200 words (max) for either theoretical or empirical paper-presentations that will contribute to enhancing our understanding of this issue.

The scope of topics for papers this seminar is very open. Papers can draw on any aspect of research regarding youth identities, cultures or transitions that relate to the main theme of the day.

Abstracts are welcome from researchers at all career stages, including doctoral students.

A call for delegates will be sent out at a later date.

Deadline for abstracts is August 5th 2011

Please send abstracts or any questions to Steve Roberts (s.d.roberts AT soton.ac.uk)

Milena Kremakova (2011-06-10 12:05:45)
I must be getting old... the grammatical error in "with who" is bugging me!

Call for Papers: what does the Sociological Imagination mean today? (2011-06-11 08:00)
It has been over 50 years since C. Wright Mills wrote the Sociological Imagination. In that time the world has changed beyond recognition: the Cold War ended, the Keynesian consensus broke down, a globalizing neoliberalism rose to the ascendancy and the internet began to transform human communication and culture. In recent years, with 9/11 and then the financial crisis, it seems that history has returned with a vengeance. Is Wright Mills’ notion of the ‘Sociological Imagination’ still pertinent today? How can Sociology help shed light on the rapidly transforming world around us and the consequences of these transformations for the people who inhabit it? What does the ‘Sociological Imagination’ mean today?

Short articles are invited which engage with these themes, or particular aspects of them. Submissions should be 500 – 1500 words and [2]e-mailed as a Word document. There is no deadline for submissions.

South Africa In Focus (2011-06-12 08:00)

[1]Andrew Feinstein was elected an ANC member of parliament in South Africa’s first democratic elections in 1994. He resigned in 2001 in protest at the ANC government’s refusal to allow an unfettered investigation into a £5bn arms deal that was tainted by allegations of high-level corruption. Feinstein lives in London, where he chairs the Aids charity Friends of the Treatment Action Campaign, and lectures and writes on South Africa. He is a co-director of the anti-corruption organisation, Corruption Watch. This podcast was produced at the time of the South Africa World Cup and I talked to Andrew about the social and political history of South Africa and how this has shaped the country which was the focus of such enormous international attention during the tournament.

616
Usha (2011-06-13 14:58:38)
Very interesting. It’s an accessible description in a nutshell of post-apartheid South Africa. To most non-South Africans, the Football World Cup also shed light on another symbol of post-apartheid South Africa- the national anthem. Sport was identified as a major catalyst with potential to enable racial harmony and upliftment of blacks. In cricket, quotas were introduced in the national cricket team. Needless to say, the quotas did not meet universal approval. I think a comparative study of the ANC and the INC (Indian National Congress) would make for a fascinating study. From 1947 (independence) to 1977, the INC remained the party in power, winning every general election against a fragmented opposition for the same reasons as stated by Feinstein here.

Usha (2011-06-13 15:03:17)
Oops, forgot to add: There are further similarities between India and South Africa: - the yawning gap between rich and poor - sporting extravaganzas and other displays of soft power - massive regional and growing international influence (I believe BRIC has been expanded to BRICS to accommodate SA now?)

TOMORROW: Sociology of Sport Week on SI (2011-06-12 14:02)

Tomorrow is the start of Sociology of Sport week here on SI with a selection of articles, reading lists, and researchers’ profiles in this field. We hope you enjoy it!

On Visually-Mediated Professional Lives (2011-06-13 00:00)

If you currently live in the United States, or are one of The Daily Show’s horde of global fans, you have surely heard about the latest sex scandal involving New York Congressional Representative Anthony Weiner. If, though, you do not fall into either of those categories, there’s an off-chance that you do not yet know that Weiner recently got caught sending webcam photos of his, err, ‘weiner’ on Twitter to a young female follower. (Cue an interminable parade of puns and penis jokes in the media.) Further revelations of the Congressman’s online dalliances, some of them after his marriage—along with more ill-advised photos—were subsequently revealed.
Much of the resultant debate has focused on what, if anything, Weiner did wrong—and whether or not he should resign as a consequence. Most commentators regard his actions online as private peccadilloes, something between him and his spouse, not between him and the American public. [1] Glenn Greenwald, for example, castigates the media for giving attention to something that ought to have remained private. Others accept the premise that his tweets were his own business but think that he ought to be taken to task for failing to come clean about it immediately; indeed, according to [2] Thompson (2000), sex scandals become political scandals when politicians lie in public about their private lives.

This framing, in my view, is precisely the wrong way to think about 'Weinergate'. It is wrong to think that Weiner’s actions on Twitter as being an extension of his private life. The Twitter user name from which he sent those crotch shots was @RepWeiner. Not @WeinerDawg. Not @TonyIsLonely. It was a verified account and, crucially, an extension of his public presentation of the self as a national-level politician. Thus, this Twitter account was not to be Weiner at play. This was Weiner on the job...and last I checked, waving your wang at admirers you think are sexually attractive is not part of the job.

Those young women who followed him on Twitter? They were following Rep. Weiner, a politician whose platform and policies they admired. Even if they had a crush on him, it was the sort of crush one has on a celebrity, and it was neither incumbent upon Weiner, nor advisable, to respond. Social media makes it too easy for interpersonal interaction to become simultaneous broadcast. Indeed, cyberspace itself has become a quasi public square, and those who are watched most intently are those who are already famous. Anybody can 'streak the (virtual) green', in undergraduate-speak, but only those whom many are already watching will likely attract much attention. If Weiner had even a modicum of common sense, he would have known that.

Clearly, common sense does not seem to be his strong suit. But then neither does impulse control. @RepWeiner should have been Anthony Weiner, the professional politician. Yet there he was, doing very unprofessional things. It begs the question: Does he behave in a similar way in real life, too? An acquaintance in his district who has seen him on the campaign trail has suggested to me that he does, leering at attractive women and taking conversation down to the gutter. Last I checked, the ability to behave professionally and keep one's proverbial pants up in public—in-person and online—is a minimum requirement for most jobs. Perhaps Weiner shouldn’t resign—but I would argue that they shouldn’t have elected him in the first place.
Casey Brienza is a PhD candidate in Sociology at the University of Cambridge and Sociological Imagination’s Mediated Matters columnist.

Sociology of Sport week on the Sociological Imagination (2011-06-13 08:00)

This week is dedicated to sport - from a sociological point of view. We hope this topic unlocks your sociological imaginations and that you enjoy the posts and let us know what you think, or send us short articles to publish.

[1] Sport (Photo: The Idle Ethnographer TM, 2006)

Welcome to the first post from this week! We begin by introducing an important collection on the sociology of sport.

**Sport and Social Identities**

*(edited by John Harris and Andrew Parker)*

[1]

Sport and Social Identities, by A. Parker and J.Harris (image: Amazon)
Andrew has kindly allowed us to post the Introduction to his chapter in the book (thanks!):

‘The chapter is entitled: ‘Sport, Celebrity and Identity: A socio-legal analysis’ and looks at the way in which the English legal system deals with the image rights of celebrity sports personnel. This is a relatively new debate in the sociology of sport and one which is extremely topical given current legal wranglings over privacy issues and celebrity sports stars. Below is the introductory section to the chapter:

Sociological analyses of sport and the law are notoriously difficult to find and, some would argue, urgently needed. Conversely, the theme of sporting celebrity has attracted significant attention in recent times both from social scientists and legal practitioners alike. Evident amidst this literature is the sense that sports stars represent a key site through which social, economic and legal change can be observed. Adopting a socio-legal perspective, this chapter assesses the extent to which current English law protects the rights of sporting celebrities amidst a rapidly changing social context. The central thesis is that whilst sports personalities can look to the law for protection in relation to their identities, the information upon which such legal decisions are based might be further enhanced by a consideration of wider social factors.

Read more about this book on the publisher’s website.
Andrew Parker is Professor of Sport and Christian Outreach at the University of Gloucestershire and founding Director of the University’s Centre for Sport, Spirituality and Religion. He was previously at the University of Warwick and was the Director of the Warwick Centre for the Study of Sport in Society (WCSSS). His research interests include sport and social identity, sport and spirituality, physical activity and schooling, and gender relations. In February 2009 Andrew delivered his inaugural lecture entitled: ‘Sport and Religion: Past, Present and Future’. To listen to the lecture please see the relevant link at the following page: http://www.glos.ac.uk/research/Pages/lectures.aspx.

Dr John Harris is Associate Professor in the School of Exercise, Leisure and Sport at Kent State University, USA. He has published work on women’s soccer and the gendered (re)presentation of athletes in the print media. Current research includes work on rugby and national identity in Wales, and the cultural politics of sporting celebrity.

SI Seminar announcement: Sociology of Sport at Warwick University, 20 June (2011-06-13 11:44)

SI Seminars: the Sociology of Sport

WHEN:

20 June · 16:00 - 18:00

WHERE:
R1.13, Ramphal Building, University of Warwick

As part of the [1]Sociology of Sport Week on SI, we have organized our first ever seminar! Taking place the day after sports week finishes (Monday 20th), it will involve a series of 20-30 minute talks from a diverse range of speakers who have done research into different aspects of various sports. This will be followed by an open discussion about sport and contemporary society.

Don't worry if you can't make it! We will hopefully record the event and post it online on SI, and we will also be live-tweeting from it (@soc _imagination). If you have any questions you would like us to ask, then please get in touch via twitter.

Speakers:

Channel Swimming - [2]Dr Karen Throsby, University of Warwick
Football - [3]Prof Wyn Grant, University of Warwick
Horse Racing - [4]Deborah Butler, University of Warwick
Football - [5]DR SAMAYA Farooq, University of Gloucestershire

SI SPORT WEEK #2-1: The Political Economy of Football (2011-06-14 08:00)

[1] The commercialisation of football is a widely remarked upon phenomena and yet the causes driving this process remain too little understood. In this podcast Professor Wyn Grant tackles the political economy of football. In doing so he explores a variety of topics including: the impact of globalization upon football, the divergence between higher and lower division football clubs, the significance of ever increasing transfer fees, different models of club ownership across the globe and the financial sustainability of football clubs under current conditions.
The Political Economy of Football – Wyn Grant | The Sociological Imagination (2011-08-31 08:01:55)

 [...] this talk from the SI's Sociology of Sport seminar, Professor Wyn Grant, who we also interviewed on this topic some time ago, talks about the political economy of football. If you find this [...]
SI SPORT WEEK #2-3: Black Power Salute 1968 (2011-06-14 16:00)

During their medal presentation in the Mexico 1968 Summer Olympics, the two 200-metre gold and bronze winners, Tommy Smith and John Carlos respectively (both were American and black) gave what became known as [1]the Black Power Salute. It became an iconic political statement.

Forty years later, in 2008, the BBC made a documentary about it featuring commentary from well-known academic sociologists of 'race', politics and sport like Ben Carrington and Harry Edwards and others. It has some excellent interviews with the people centrally involved and substantial footage from the 1960s of the main black people involved in planning these protests, of the athletes themselves and old footage of the racist ruler of International Olympics at that time- Avery Brundage. My only complaint is that it leaves the story of the white Australian silver medallist completely untouched as he also supported their gesture, coming as he did from a racist country himself...

Watch the documentary on googlevideos below:

[EMBED]

SI SPORT WEEK #3-1: Gender Segregation in Sports (2011-06-15 08:00)

Gender segregation in sports is usually seen as entirely natural and a fact of life. Yet in this challenging interview [2]Dr Eric Anderson explores the social and economic roots of gender segregation in sport before questioning whether we have any real grounds for treating gender segregation differently to racial segregation. In doing so he offers an account of the impact that gender segregation in sports has on wider society and sketches out a few ideas about what a gender integrated sports might look like.
Gender Segregation In Sports

SI SPORT WEEK #3-2: Gender in sport. Beware surfing stereotypes! (2011-06-15 12:00)

For all sociologists of sport out there: a new article which discusses the pervasiveness of caricatured gender stereotypes in surfing.

1. http://www.guardian.co.uk/commentisfree/cifamerica/2011/may/20/surfing-gender
2. http://www.guardian.co.uk/profile/cori-schumacher
3. http://www.guardian.co.uk/

SI SPORT WEEK #3-3: Gender in sport magazines (2011-06-15 16:00)

Brilliant short analysis of the differences in representation of sportsmen and sportswomen in magazines. Read [1]here

[2]
Sportsman (Source: Mirror.co.uk)

P.S. The same seems to apply to google image searches for "sports men" and "sports women"... those people writing the magazines are not stupid. They are just exploiting what the public wants. It took SI editors a few minutes of diligent searching to come up with two images that would prove the opposite. Plus, the man’s image is actually more sarcastic than sexy; and the woman’s image is from a 'female focussed sports magazine'.

Usha (2011-06-16 00:29:15)
That was a great read. And the Playing Unfair video was insightful, too. Also, agree with your comments.

jasa epoxy lantai jakarta (2019-09-14 19:49:10)
Simply wish to say your article is as astonishing. The clearness in your publish is just nice and i can suppose you are an expert on this subject. Fine along with your permission allow me to take hold of your RSS feed to stay updated with coming near near
Most people may have heard about Arkle, Red Rum, even Desert Orchid. How many people will have given a thought about the individuals who made sure these equine athletes made it the racetrack, fit and ready to race? It is these individuals, known collectively as 'stable lads' and yes, quite a high percentage of them are women, that I am interested in. Thus my research is investigating the working identities of stable staff who work, for very little reward, in the horseracing industry. Like in many male-dominated occupations and sporting arenas the racing field itself is male dominated, gendered masculine and is struggling to move away from the feudalistic employment relations that once governed the workforce. Women were once excluded from the workforce as entry was controlled by employers, the racehorse trainers through indentured apprenticeship. A knowledge of horses was unnecessary - trainers wanted young boys who were very small and light in weight, no more than 5stone at 14, and no taller, if possible than 5’7”. Indentured apprentices if good enough were given the opportunity to race ride, as apprentices (trainee jockeys) although being indentured did not automatically guarantee the right to race ride. As the supply of
small, light boys began to dwindle employers had to look elsewhere for their workforce which was when women, in
the late 1960’s, early 1970’s started to be seen working as ‘stable lads’ although they were not legally permitted to
race ride. Indentured apprenticeship was abolished in 1976 during a period when wide reaching legislation in the
form of the Sex Discrimination Act (1975) amongst other things was introduced. Racing’s ruling body, The Jockey
Club had to accept the fact that women could now legally be jockeys.

The racing industry now employs migrant labour to help fill its labour force. Young entrants, racing’s potential
workforce, if between the ages of 16-22 must be signed onto a government funded training scheme known as a
modern apprenticeship but, and this is an important but, it has nothing to do with being an apprentice jockey! Rather
it refers to a type of training that was once synonymous with producing skilled craftsmen and in some occupations,
craftswomen. Interestingly 60 % of the intake at the British Racing School (BRS) are women. The BRS is one of the
two specialist training providers for the racing industry where modern apprentices over a nine week period complete
the first part of their training before being found employment in a racing yard. What is perhaps more salient is that
a very small proportion of these young women will become apprentice jockeys and an even smaller proportion will
become professional jockeys when compared to their male counterparts.

Deborah Butler is PhD candidate at the University of Warwick. Her research is on employment and training
in the horse racing industry.

Read more about Deborah’s research here.

Read an article about Deborah and her work on Voices for Horses.

Hear Deborah speak about her research at the Sociology of Sport Seminar (20 June, Warwick University).

   fulfil-dreams-of-becoming-jockeys.html
   ick-university-20-june/
Team sports are often seen a traditionally homophobia arena within society. In a second interview with Dr Eric Anderson, he argues that this widespread assumption is increasingly inaccurate. Through analysing the relationship between sport and wider society he offers an account of how wider cultural and social changes in relation to homophobia are starting to manifest themselves in more relaxed and tolerant attitudes within team sports. Drawing on his extensive empirical research he argues that young people today are increasingly comfortable with the presence of homosexuality and that all the evidence suggests this trend looks set to continue. He also discusses his own experiences as America’s first openly gay high school coach.

Event announcement: Sport and Leisure History Seminar (2011-06-16 16:00)

Sport and Leisure History Seminar Summer Symposium: 'Sport and Leisure in Suburbs and New Towns: Communities, Identities and Interactions'

will take place on Thursday 21 - Friday 22 July at the Institute of Historical Research in London

You can find the full announcement with the programme and other information here at [1]H-net

SI SPORT WEEK #5-2: Confetti of Empire: The Conquest of Everest in Nepal, India, Britain, and New Zealand (by Usha Iyer) (2011-06-17 08:00)

Usha Iyer discusses the conquest of the Everest. Is the story of Everest purely a victory of humans’ pursuit for excellence and physical endurance, or also about British imperialism and decline of empire, nationalism and fluid nationality?

Visit [1]Usha’s webpage.

Read [2]Usha’s other articles on SI.

Click on the title to read on ...
This brief piece seeks to introduce the myriad political narratives that attached themselves to the first-ever successful conquest of the Everest on May 29, 1953. This is by no means an exhaustive discussion or analysis, but an attempt to shed light on the complexities that accompanied the completion and celebration of the historic feat. The references mentioned below offer an excellent start to further research into this area.

The expedition was led by Col John Hunt (later, Sir Hunt). The final leg to the summit was carried out by Edmund Hillary (later, Sir Hillary) and Sherpa Tenzing Norgay.

Tenzing was born in Tibet, raised in Nepal and had lived for over two decades in India prior to the 1953 expedition. Accordingly, he saw his own nationality as fluid. Col John Hunt was Welsh and a member of the British army. He was born in India and had served in the Indian police. Edmund Hillary was from New Zealand and at that time, New Zealand saw itself primarily as British. *Conquest of Everest*, the official film of the ascent, opens with a photograph of Tenzing holding aloft his ice axe, from which the flags of Britain, Nepal, India, and the United Nations flutter in the wind.

Immediately after the expedition, the victorious team arrived in Kathmandu to a tremendous reception. To Nepal, Sherpa Tenzing’s part in the Everest success perhaps suggested an assertion of their Nepali identity in response to European domination and Indian influence on their country. Celebrations had largely nationalistic overtones. In fact, it is reported that some pictures used by Nepali revellers portrayed Tenzing as having reached the summit first with the flag of Nepal in one hand and hauling up an exhausted Hillary with the other.

India also saw Tenzing as her own and appeared to take immense pride in his achievement. The victorious team was feted extensively and eventually also by Prime Minister Jawaharlal Nehru. It has been reported that Nehru rejected knighthood for Tenzing (conferred on Hunt and Hillary) in keeping with independent India’s rejection of British honours, thereby forcing a fierce republican ‘Indian-ness’ on Tenzing and speaking for him.

For Britain, which had led this expedition, this victory came at a time of great flux. The empire appeared to be in decline and Britain’s standing on the post-war world stage appeared to have been eclipsed by the USA and other powers. This victory seemed the perfect recipe to rejuvenate the imperial spirit and pride in Britain’s record of scientific and technological excellence. Coincidentally, news of the successful expedition reached London on the morning of the coronation of Queen Elizabeth II (June 2, 1953). The partnership of Hillary and Tenzing led by Col Hunt seemed tailor-made for the moment when Britain attempted to redefine the Empire as a British-led “Commonwealth”. Newspaper headlines in Britain evoked comparisons with Queen Elizabeth I, Francis Drake and the Golden Hind and hailed the Coronation Day as the beginning of a new Elizabethan era, marked, as in the reign of Queen Elizabeth I, by scientific and technological innovation and exploration. Col Hunt and the other climbers were received in London by the Secretary of State for War, Brigadier Anthony Head, indicating the importance of the event.

In New Zealand, the bee-keeper Edmund Hillary’s personality and success shaped and reinforced perceptions of masculinity and identity in New Zealand.

There was also a press conference in London in which the interviewer asked a pointedly leading question to Col John Hunt about “empty arguments over who got to the top first”. Hillary described how Tenzing had saved him from slipping into a crevasse but both he and Col Hunt were quick to emphasise that the conquest of Everest had been a team effort and that questions about who reached first ought to be dismissed. In order to diffuse a potential crisis triggered by Nepali depictions of the victory, diplomats and ambassadors (especially in Britain and India) worked behind the scenes with the team to ensure that politically correct messages were delivered everywhere.
Col Hunt displayed an ice axe with the Nepali, Indian and British flag on arrival in Kathmandu, New Delhi and London respectively. It has been hinted that there may have been some degree of collusion and agreement between the Everest Committee (Royal Geographical Society/Alpine Club) and the British Pathé news crew at London airport on questions to be asked during the press conference [8]. The question on ‘who reached first’ was clearly designed to dispel any thoughts on one-upmanship.

The British Pathé news clips on the successful Everest expedition of 1953 tell us a fairly straightforward story of courage, excellence and public joy. However, as academic works on the topic suggest, a lot remained untold about the context and implications of events. Besides scientific and technological excellence, the story of the Everest expedition of 1953 reeks of imperial pride and decline, nationalism and fluid nationality. Britain, Nepal and India were all eager to appropriate this expedition to make nationalistic statements. What we hear and see are perhaps approved versions of reports on celebrations. For instance, in spite of the praises heaped on him, Col John Hunt was reprimanded by the War Office for ‘endorsing’ a nationalist party in his native Wales during a ceremony in his honour whilst still a serving member of the British army. What we also don’t grasp is that Tenzing Norgay arrived in London wearing clothes given to him by PM Nehru out of his own wardrobe (see especially, Buckingham Palace garden party clip), thereby adding his touch to the occasion, even if a seemingly innocuous one. All of this suggests to me that whilst frantic efforts were made to prevent politicisation and misappropriation of the event, various political narratives succeeded in attaching themselves to it.

Finally, while top-level officials, diplomats and news-reporters colluded to present a sanitised version of events, how did the common people in these three countries react? Presumably, with joy and pride as clips of crowds in Kathmandu, New Delhi and London show. A glimpse of the position occupied by the expedition in public consciousness that year was revealed by these newsreel clips from 1953 [9].

Notes:

[1] Title borrowed from article by Peter Hansen. See references.

No, they are not the Everest conquerors, just part of a grand fancy dress parade...

SI SPORT WEEK #5-1: Rock Climbing and Gendered Identity (Victoria Robinson) (2011-06-17 08:00)

Today we present a selection of sociological resources on rock climbing and introduce the work of Victoria Robinson on climbing identities.

[1]
Do Not Climb! (Model: M. Mihaylova. Photo: Idle Ethnographer TM)

To begin with, the Special edition of Sheffield Online Papers in Social Research, on ‘Masculinities and The Extreme Sport of Rock Climbing’, August, No. 10, is a must ([2]Link to Journal)

The editor of the special edition, Victoria Robinson, also published an excellent book on the topic:

Everyday Masculinities and Extreme Sport: Male Identity and Rock Climbing

by Victoria Robinson*
‘Rock climbing is one of today’s most popular ‘extreme sports.’ Although many women are involved, the sport retains a particularly male image and culture. Everyday Masculinities and Extreme Sport presents the first in-depth study of rock climbing in the UK, analysing what it reveals about the contemporary construction and performance of masculinity through sport.

One of the key concerns of the book is the relationship between everyday masculinity and the pursuit of the extraordinary through sport. Drawing on insights from sociology and gender studies, the book challenges traditional approaches to the analysis of sport.’ (see more on the publisher’s website)

Victoria Robinson is Senior Lecturer in Sociology at the University of Sheffield. She received her PhD from the University of Manchester and has held posts at the Universities of Manchester and Newcastle. Dr Robinson’s main research interests are in the areas of sexualities, especially heterosexualities; men and masculinities and gender/feminist theory, particularly debates around Gender/Women’s Studies and gender theory in the academy. Other books she authored include Mundane Heterosexualities: From Theory to Practices, with J. Hockey and A. Meah, (Palgrave, 2007) and she has co-edited, with D. Richardson the third edition of the best selling text book Introducing Gender and Women’s Studies, (Palgrave, 2008).

(visit Victoria Robinson’s homepage at the University of Sheffield)

SI SPORT WEEK #6: Sport, history and humour. (2011-06-18 08:00)

As an Eastern European researcher who researches Eastern Europe... you guessed it. The Idle Ethnographer could not stop herself from contributing a tongue-in-cheek (or, rather, ball-in-net) post to the SI Sport Week. This is yet another photo from the long collection of "photos I wish I had taken". It reminds me of the film [1]Goodbye, Lenin! and of [2]Michael Jordan (very popular in Bulgaria in the early 1990s) all at once.

[3]

Lenin scores. image found somewhere on the web, author unknown.

Add SI on Facebook and Twitter! (2011-06-18 08:00)

This is a reminder that the Sociological Imagination has a presence on facebook. Please do add us as a friend and feel free to get in contact. We're always open to ideas and suggestions so please don't hesitate if there's anything you would like to say!

TOMORROW: Sociology of Sport Seminar! (2011-06-19 08:00)

SI Seminars: the Sociology of Sport

WHEN:

20 June · 16:00 - 18:00

WHERE:
As part of the [1]Sociology of Sport Week on SI, we have organized our first ever seminar! Taking place the day after sports week finishes (Monday 20th), it will involve a series of 20-30 minute talks from a diverse range of speakers who have done research into different aspects of various sports. This will be followed by an open discussion about sport and contemporary society.

Don't worry if you can't make it! We will hopefully record the event and post it online on SI, and we will also be live-tweeting from it (@soc_imagination). If you have any questions you would like us to ask, then please get in touch via twitter.

Speakers:

Channel Swimming - [2]Dr Karen Throsby, University of Warwick
Football - [3]Prof Wyn Grant, University of Warwick
Horse Racing - [4]Deborah Butler, University of Warwick
Football - [5]DR SAMAYA Farooq, University of Gloucestershire

A quick flag up to any interested readers that the Sociology Department at the University of Warwick now has a blog and twitter feed. Although Sociological Imagination has no formal connection to the department, a number of people involved in the site are based there & many of the SI podcasts have been with academics in the department. So do check it out!

(Also out of interest does anyone know of other UK sociology departments that have blogs? If so please let us know either in comments below or via e-mail. Thanks!)

Oral History Network at Warwick University (2011-06-21 08:00)

Last week we wrote about a new event that took place at Warwick. Here is a bit more info on this exciting new project:

'The Warwick Oral History Network aims at developing a network of researchers from a variety of disciplines, who are interested in doing oral history research, or who are currently working on an oral history project. It engages both with theoretical and practical issues involved in interviewing and life writing.

Following on the interdisciplinary seminar on [1]'Challenging dominant discourses of the past: 1968 and the value of oral history’, held at the IAS on 23 February 2011, the network brings together established scholars, early career researchers, postgraduates as well as undergraduate students, both from in and outside the University of Warwick.'

Visit the [4]webpage of the Oral History Network for more information, resources, and links.

The Impact Agenda in the Arts and Humanities (2011-06-22 08:00)

In this podcast Mark Carrigan talks to Dr Nadine Lewycky, Arts Impact Officer at the University of Warwick about what her work involves and broader issues relating to the impact agenda for the arts and humanities. For more information about her work see [1]here.

When Sociology Was Cool (2011-06-23 08:00)
I got my doctorate in sociology at the University of Wisconsin-Madison, the exact same place C. Wright Mills got his doctorate in sociology. I know this because we shared some of the same professors there and, even more importantly, because when I had to file a little index card in the Sociology Office with the title of my dissertation on it, I saw C. Wright Mills’ little index card with title of his dissertation on it, tucked away in the exact same metal box.

I couldn't believe that it was there, that someone hadn’t taken it. Graduate students in sociology love C. Wright Mills. He, along with the 1930s Chicago School and Harold Garfinkel are the ones who lure us into sociology, who excite us with the idea that the modern world is this great mystery to be solved and that there is some measured, logical explanation as to why people treat one another the way they do.

C. Wright Mills was a genius at this. First, because he showed us how sociology could lay bare the secret workings of the world, and second, because he believed that everyone, no matter who they were or what their sociological imagination happened to be, had a place in this academic, scientific discipline. That their stories and ideas about the world and how it worked belonged there.

Few sociologists at the time believed this. In fact, in 1959, the year Mills' third major work, *The Sociological Imagination*, was published, most sociologists were preoccupied with refining the methods, which would allow them to analyze and write about people's lives with the least amount of error and greatest amount of certainty; a preoccupation, which left little time to worry about whether or not the things they wrote about were actually reflective of the ways people lived, let alone the ways people thought about the way they lived.

Mills staked his theories right in these complications and contradictions and with this effort challenged sociologists to not so much relax the methodological rules of their discipline, but to allow themselves a little poetic license. And as simple as this idea may seem, it was, for many sociologists, a revelation and a push to make sociology matter.

That, to my mind, is one of the few moments in the history of sociology when the discipline was made cool. That moment when C. Wright Mills told us that our analyses of the world should matter. That moment when someone took a picture of him driving his motorcycle to class.

End Note: Cool is a state of being, which describes the way a person represents themselves to the world. To be cool is 1) to be present in the day and to notice what’s happening around you 2) to search for and recognize beauty; 3) to express this beauty in words and images and especially sounds; 4) to be kind, open, generous and understanding to yourself, as well as the people you encounter, even those who may not be kind, open, generous and understanding towards you; 5) to not only exhibit grace under pressure in moments of extreme hardship or duress, but to figure out ways to survive and in some instances, even thrive in moments of extreme hardship or duress; and, finally, as in that late 1990s Keds Running Shoe Ad posted above, 6) a way to describe people, places and things that are "of the moment," "hip," and notably stylish. I would suggest C. Wright Mills worked to document 1-5 and was 6, especially in the famous photograph of him driving his motorcycle to class. Again, it’s right here.

[...] no working sociologist), would ever dream of suggesting taking a hatchet to sociology if C. Wright Mills were still [...]

Jessica (2013-05-03 21:17:58)
According to my undergrads, the coolness of Sociology is maintained by the freedom to be “the study of anything/everything.” Our respective subjects of investigation must span across every issue imaginable, but with that breadth many miss that the discipline itself is the lens to study the impact of the social world on the individual and vice versa- regardless of what special population or issue we focus that lens upon. So, I do not just study “old people” because I always loved my grandma and think it is ‘cool’ to interview old ladies all day, rather I study the impact of institutions and social processes on old ladies to better understand how they work on all of us, and how that influences how successfully we are able to navigate the hazards of later life. Just as the discipline once suffered from being wrapped up in methodology, I think we may come to suffer somewhat from the reputation that we are everything to everyone, too. The implications outside of academia are pretty clear- if the government, not for profit and corporate managers out there perceive Sociology to be this vague, nebulous thing, our graduates are going to find it tough to be employable. At this stage in our social evloution, we need Sociologists in every institution, so we should be making it easier for them to branch out from academia, not harder.

Charlotte (2013-07-14 19:41:40)
Sociology is cool! It’s the best subject put there, my year 10 pupils are fascinated and love it! From gender to class they’re constantly asking questions about the world around them and trying to come up with solutions for what they see.... That and it gives them a licence to people watch/ be noses too :)

prediksi togel hari ini (2018-04-13 00:37:36)
I have read so many articles regarding the blogger lovers however this paragraph is in fact a good paragraph, keep it up.
Do we live in a post democratic age? (2011-06-24 08:00)

[1]

In this podcast [2]Colin Crouch talks about his thesis of post-democracy. He argues that western liberal democracies are moving into a stage of post-democracy where the formal institutions of democracy continue to exist but the pervasive culture of participation and engagement which sustained an active democracy is increasingly exhausted. The decline of manufacturing and the traditional working class, as well as the advance of economic globalization, has hollowed out processes of democratic engagement to produce an isolated, disconnected and self-referential political class cut off from the public they claim to represent.

We are left with a politics dominated by elites where influential business interests are the only group within society able to make their voice heard. Their pervasive, though often unseen, lobbying activity shapes the priorities of government while engagement with the wider public is increasingly shaped by 'spin doctors' and other advertising professionals. Professor Crouch suggests these are tendencies which suggest that democracy is more a legacy of the past than part of our future.

Call for Papers: what does the Sociological Imagination mean today? (2011-06-26 08:00)

It has been over 50 years since C. Wright Mills wrote the Sociological Imagination. In that time the world has changed beyond recognition: the Cold War ended, the Keynesian consensus broke down, a globalizing neoliberalism rose to the ascendancy and the internet began to transform human communication and culture. In recent years, with 9/11 and then the financial crisis, it seems that history has returned with a vengeance. Is Wright Mills’ notion of the ‘Sociological Imagination’ still pertinent today? How can Sociology help shed light on the rapidly transforming world around us and the consequences of these transformations for the people who inhabit it? What does the ‘Sociological Imagination’ mean today?

Short articles are invited which engage with these themes, or particular aspects of them. Submissions should be 500 – 1500 words and [2]e-mailed as a Word document. There is no deadline for submissions.
Comics and Censorship: Is It Really about You? (2011-06-27 00:00)

[1]News broke this past Friday of an American citizen arrested by a Canadian Customs officer at the US-Canada border after manga deemed to be child pornography was discovered on his laptop. Although no real children were harmed in the creation of drawn images such as those possessed by this man in his mid-twenties, he faces a minimum of a year in prison if convicted.

The US-based Comic Book Legal Defense Fund (CBLDF) is currently raising funds for his legal defense. This is the second time they have rallied around the legal plight of a private US citizen caught with 'obscene' manga in the past five years. The CBLDF was also involved in the case of Christopher Handley, an Iowa man who ultimately [2]pleaded guilty and was convicted for 'possession of obscene visual representations of the sexual abuse of children'.

It is no secret that some Japanese manga (i.e. comic books) can be pornographic in the extreme and that adult-oriented genres such as [3]lolicon, [4]shotacon, and [5]moé can feature children in sexually explicit—and sexually violent—situations. Even characters who are technically adults are sometimes drawn to look like children, for both stylistic and fetishistic reasons.

And it should likewise go without saying that obscenity laws and the ways in which they are enforced differ from country to country. What is permissible in Japan might not be permissible in the United States, and what is permissible in the United States might not be permissible in Canada (or the United Kingdom, for that matter).

I do not want to argue here about whether or not this manga should be illegal. Hopefully it goes without saying that I think we should be worrying about real children, not cartoons. But I do think that we ought to be talking a
bit differently about these cases because, really, it is not about the comics.

Here's an example of the sort of CBLDF-approved rallying cry you hear amongst fans:

If you are a fan of any manga or anime, if you are a fan of comics, if you have even one comics page, anime clip, or “dirty” picture on your computer, tablet, or phone, this is about you (my emphasis).

I do not mean to pick on this particular blogger here—similar examples have spilled from the virtual inks of the likes of writer Neil Gaiman or been published in the e-newsletters of New York publishing houses—but it's a succinct example of the dominant discourse, which is: This man could be you. Yes, you.

If 'you' are a man who reads comics, then this in fact could be you. By all means, watch out. But if you aren't, and many readers of sequential art in the Western world aren't, then this probably isn't you...even if you happen to read precisely the same comics he does. Over the years I have noticed a distinct pattern: The person facing jail time is always a man, and those who have already been convicted are all white men.

Why? One simple explanation is that white men are more likely to possess pornographic manga. This is possible, but I suspect that something else is also at play here. Why were they even looking through Handley’s international post or this latest man’s laptop files? Perhaps they thought they had found what they were already half-looking for. Pedophiles, after all, are known to be mostly men, and among those imprisoned for sexually assaulting children, the vast majority are Caucasian. (This, despite the underrepresentation of Caucasians in the prison system generally.)

In other words, I would argue that reading manga as a white man is rather like driving an expensive sports car as a black man. You are always already a suspect in the eyes of law enforcement authority—not because the car or the comics in themselves are necessarily a problem per se, but because your possession of said items seems to indicate, to our prejudiced little minds, far more serious criminality involving the harm of real people. Do not think for a moment that these cases are only about comics and censorship.

Interestingly, Canadian Customs has also garnered a reputation for being especially hostile to materials of interest to the LGBT community. The feminist bookstore Little Sisters endured a series of court cases over what can only be called institutionalized homophobia.

In any case, this brand of prejudice, the attendant possibility of discrimination, and the way discovery of the already-anticipated misdeed becomes a self-reinforcing cycle—these all need to be discussed at length. Furthermore, we need to talk about how our sociocultural anxieties victimize certain groups under certain circumstances. But that discussion won’t happen as long as comics fans of both genders and all stripes devolve into telling each other scare stories about how it could have been you.

[Casey Brienza is a PhD candidate in Sociology at the University of Cambridge and Sociological Imagination’s Mediated Matters columnist.]

The things which I believe should be illegal are those that are overtly harmful to human beings, so I am coming at this article agreeing that no one should get arrested for possessing any kind of hentai. That said, I still found it absurd. Why do you go from pointing out that more convicted pedos are white male to the argument that white males that read manga are “always already a suspect”? The amount of assumptions that must be made to get to the second point from the first lead me to believe you are either grasping at an uninformed hunch, or forgot to cite a few of the intermediate facts which got you there. The claim that law enforcement is behaving in a prejudiced manner, both specifically and generally, is not the sort of thing that should be casually thrown around. I found your “black guy driving a sports car” simile immensely lacking in tact, considering the latter is demonstrably true and has resulted in the deaths of actual people. What you’re arguing here, as it is presented, is ultimately an assumption. The legitimate potency of the idea that cops are behaving unjustly has been forever lost because of people like you, who carelessly brandish it about when speaking in defense of something.

Christopher Butcher (2011-06-28 17:33:09)
Even a cursory Google examination of Canada Customs issues surrounding manga and LGBT issues exposes the ridiculous assumptions of this “article” to be baseless– A female traveler was detained, searched, and interrogated for having manga on her person in June 2006, and wrote about it here: http://elizabethmclung.blogspot.com/2006/06/to-canadian-customs-x-men-means-x.html. The manga in question? Tokyo Boys & Girls from Viz. Reading that article should hopefully disabuse you of your ridiculous notions about who is being targeted and why. Further, I don’t think the skin-colour or ethnicity of the person stopped at the border has been made public. That’s entirely your assumption, and frankly considering ethnicity is the linchpin of this mess of an article, it seems like something of a necessity to have that be a fact rather than a hunch. edited for inappropriateness

Casey Brienza (2011-06-29 02:10:52)
Chris, If this were a comment on somebody else’s article, it would not have ever seen the light of day. Your rudeness does not improve your argument, and anything you write–to me or anyone else–here in the future that is not civil will remain screened. I am aware of the case you describe and would point out that unlike Handley or the man in question now, this woman was not arrested or charged with any crime. She was hassled, but it went no further. The event she described also occurred on the heels of another case of—a man—caught with pornographic manga, and from her story it was the word ‘manga’ that piqued their curiosity. In addition, since I do not know her personally I would hesitate to presume, but some of the images on her site are yuri-esque, and as I noted targeting of the LGBT community seems to be a separate preoccupation of Canadian Customs…and the fact that among the books seized from Little Sisters includes works by bell hooks (among the most important living philosophers) ought to make it clear that it’s not just about content. Casey
One of the most important decisions in a research life is the choice of methodology. While this may be a straightforward choice in most other disciplines, to declare a fixed ‘methodology’ in the field of humanities is an exercise in indecision, given the fact that the present day humanities is in a state of flux. In the border-defiant field of Humanities the pertinence of a fixed methodology seems to be an anomaly to the discipline in general.

While in the preceding years, a ‘research question’ determined the school, now the method itself becomes a determinant of the school. Since contemporary Humanities encourage cross-disciplinary methods of research, the determinant ironically becomes rather indeterminate. The first issue in examining a research methodology is the discourse involved in the making of the method. Foucault’s ideas in “The Discourse on Language” give a basic idea of the modern – or more precisely the post-modern – researcher’s predicament. Ideology, that forms the kernel of an institution, acts as cornerstone to research method since it directs the modus operandi of research. The angle of the Interpretive Curve is decided by the school and the school gains its delineations from the ideological framework that the institution supports. This ideological context places two key notions of research in juxtaposition: one of accepted rationality and the other of predominant doctrine.

Foucault writes, “Disciplines constitute a system of control in the production of discourse, fixing its limits through the action of an identity, taking the form of a permanent reactivation of the rules” (237). The rise of feminist methodologies is an example. Not only have feminist readings lent themselves to a dismantling of ‘general truths’, but they have also become the foundation to a critical framework and a methodology. In fact it ended up becoming what it challenged – a general truth. The prevailing notion of the ‘rational’ within a certain field of study defines the accepted perspective of the school and consequently establishes the doctrine it puts forward. The delineations of accepted perspectives locate the school within a certain academic structure which in turn allows for the creation of a definite methodology.

However, the rapidly diffusing academic boundaries make the delineation of a methodology based on presumed line-markers impractical. Especially since every added perspective brings in a new element to the accepted ‘rational’. The case of eco-criticism is an elaboration of this point. A scientific field and a humanities-based field overlap to create a knowledge system where both approaches have to work in tandem with each other. Here we come to one of the key concerns of modern research: the relevance and the plausibility of clearly marked schools of reading in the increasingly interdisciplinary field of humanities and the field of literature in particular. If the means are to determine the end, then the clarity of the discipline or school within which the end is located must be established without doubt. This is a particularly delicate task while dealing with issues that deliberately refuse to acknowledge the mediation of language in the construction of reality. When the object of study cannot avail of the agency of language as in case of the “speechless” subaltern, the methodology that governs the study becomes mired in issues of articulation. Can the means of the study bring out an effective and holistic consensus free of an oppressive discourse, thus giving the voiceless the necessary space for articulation?

The evidence of such cross-disciplinary transactions is evident in several sub-sects mushrooming under the canopy of Literature and Literary studies. Areas like ‘Survival Literature’ or ‘Disability Studies’ are multi-disciplinary bodies of thought that call upon a mosaic of approaches ranging from psychological to sociological that find their common factor only in a subject of their focus. Given Derrida’s axiom that there is no ‘outside of the text’, the possible materials that comprise the corpus of a literary study has suddenly widened to include a cornucopia of diverse media. The broadening of literary horizons is characterised by an almost-melding into that field of terrifying and infinite variety: Cultural Studies. The immediate consequence of this is the bifurcation of Literary Academics into two camps: the traditionalists with an adherence straight and narrow, and radicals with an emphasis on border-crossing. The second more insidious effect is the defensive attitude that has begun to permeate literary studies. As a result the
treatment of the subject of study becomes loaded with academic agendas as well.

The process of analysis and interpretation, which is already heavily loaded, becomes fraught with political pitfalls with enforcement of a particular methodology and learning-tack. There is a call for an amalgamation and reformulation methods so as to create an integrated mosaic of intellectual mediation as suggested by James Schwoch and Mimi White their book Questions of Method in Cultural Studies. This same impulse drives the newly revamped order for the study of literatures. Materials that were once considered unliterary have now become inculcated into the schema of literary studies. This is vastly due to the disintegration of the mass and high-culture divide. Jameson discusses this in his piece “Post-Modernism and Consumer Society”. The dismantling of previously accepted notions of high culture and the assumptions that go in hand with such beliefs left the world of academics bereft of the convenient crutch of “theoretical discourse” and opened the floodgates to a deluge of innovations in methods of research in the literary field. Jameson writes,

... the effacement... of some key boundaries or separations, most notably the erosion of the older distinction between high culture and so-called mass or popular culture... is perhaps the most distressing development of all from an academic standpoint, which has traditionally had a vested interest in preserving a realm of high or elite culture against the surrounding environment of philistinism... and in transmitting difficult and complex skills of reading listening and seeing to its initiates... (1847)

The disintegration of power structures will lead to a parallel fall of authoritarian discourses, thereby creating space for a de-marginalised perspective. At first glance such a scenario may seem to entail academic anarchy and loss of an intellectual venue. However one must also consider the fact that several new schools of thought have sprung out of such a supposedly 'anarchic' situation. The key is to integrate disparate ideas and identities that teem under the umbrella term of “Literature” and create a method that is not applicable to all, but one that allows itself to be suitably tailored for each research question.

The Subject with its upper-case emphasis becomes the bone of contention in the discipline wars. The very existence of the subject itself is subject to doubt given that there is no "individual" in the era of Mass Culture and furthermore any projection of a valid Subject is merely that: a projection. Jameson writes,

...not only is this bourgeois individual subject a thing of the past, it is also a myth, it never really existed in the first place; there have never been autonomous subjects of that type. Rather, this construct is merely a philosophical and cultural mystification which sought to persuade people that they 'had' individual subjects and possessed this unique personal identity... (1850)

This idea of a mythical individual with an original identity becomes interesting in the assessment of the means of research because, every new thesis is trying to assert this kind of individuality. While it is representative, it must also put forth an illusion of originality that will allow it to enter the hallowed realms of the Academic Valhalla.

The credibility of academic discourse becomes subject to scepticism especially since the institution is largely a source of doctrine. The “Will to Knowledge” and the “Will to Truth”, to borrow Foucault’s usage, get caught up in academic machinery and emerge distorted and cloaked in a miasma of suspicion. The knowledge industry churning out thesis after thesis of authorised doctrine leaves little room for engaging with unconventional and often un-institutional information and assessing the data without the bias. The qualifications of an accepted mode of research and a universally recognized body of knowledge are mass produced making it difficult – even in a supposedly liberal and enlightened field like the Humanities– for subaltern voices to be recorded to their optimum potential. This is because the pedagogical machinery overwhelms the process of knowledge creation to such an extent that it becomes almost synonymous with knowledge. Given the protean context within which the discourse of subjective narrative and theory are taking place, the idea of a fixed knowledge system becomes the greatest form of academic oppression. In such a scenario, the ascribing of a particular method may become a hazardous proposition.
completely in opposition to the aim at hand. After all, what is interpretation but the proposal of an alternate way of seeing a previously viewed and assessed entity? However, the idea of a “true” discourse which is faithful to a higher academic doctrine effectively erases any possibility of enforcing the validity of alternate claims. Juggling the task of maintaining the position of a dispassionate observing subject, as opposed to the passive, observed object and upholding the sensitive handling of the object becomes crucial to an effective piece of research. Of course this is rarely achieved considering the fact that the Subject colours the Object in the hues of her own “individual” learnt discourse.

In such a situation, the methodology involved becomes the fulcrum for creating a sound argument that can be considered as impartial as possible. Increased research on formerly taboo topics or concerns that were deemed unfit for the study in a field as ‘elevated’ as literature has made the Subject-Object correlative more nuanced since often the divide between the two is almost non-existent. In these scenarios, the ‘individual’ is often subsumed in the greater ideal of voicing a mass concern.

An effective method of study in the literary field must enable the student to return to the true cause of their work: knowledge. Not truth, not ideology but simple knowledge. There is a call for the reinstatement of ‘a need to know’ minus ‘a need to believe’. Belief indicates a sense of blind-faith that need not necessarily stem from a firm foundation of thought. Rather it is like an unproven axiom that cannot hold its ground in the face of an argument. Knowledge implies a dispassionate sense of discovery which requires a need to know for the sake of knowing, cropped of any interest save that of collecting information to render a knowledge system meaningful and functional. This is the aim of methodology; the ideals of discourse, political leanings etc. are merely to this greater cause.

But naturally, shearing off these political leanings is more or less impossible since they are integral parts of the idea of method. The simplest recourse would be to avail of the pastiche method, or rather a pastiche of methods, as Schwoch and White recommend. Using a negotiated model of methodology which places a certain approach at its core while simultaneously employing another approach(es) which may or may not be similar or even of the same school is a viable option. It will allow greater freedom of thought and encourage amalgamation and inclusion of diverse voices into the fabric of academics. Most modern Knowledge Banks are attempting to create a methodology of optimum balance with a simultaneous dismantling of traditional strictures and structures of discourse. However the perfect prototype remains elusive. We await the synthesis of the past and the present to create a possibility for the actualisation of a knowledge driven academy, rather than a power driven one.

LONDON OLYMPICS: WHAT’S IN IT FOR WOMEN? (2011-06-28 08:00)

Wednesday 6th July, Arts Lecture Theatre, QMUL, 1.30-5.30, followed by a reception

The London Women and Planning Forum wishes to explore how much and in what ways gender has been taken into account in planning 2012.

Has the Olympic site been designed to address gender issues relating to ergonomics, safety, transport and accessibility?

Have the competition facilities been designed to raise the profile of women’s sports?

Have the Olympic boroughs used the 2012 opportunity to increase the provision of women-friendly sporting venues?

Will the Olympic legacy result in more women participating in exercise and sport?

What are the wider implications for urban design of policies aimed at increasing women’s participation in and access to sports?”

Speakers:

RIMLA AKHTAR - Chair, Muslim Women’s Sport Foundation

JAYNE CAUDWELL - Senior Lecturer, Chelsea School, University of Brighton

ALISON NIMMO CBE - Director of Design & Regeneration, Olympic Delivery Authority

TIM WOODHOUSE - Head of Policy and External Affairs, Women’s Sport and Fitness Foundation

Discussant:

LOUISE MANSFIELD - Senior Lecturer, Department of Sport Science, Tourism and Leisure, Canterbury Christ Church University

The event will be chaired by Alison Blunt, Professor of Geography and Chair of the London Women and Planning Forum.
Join us for an afternoon of presentations and discussions - all welcome!

This event is free. To reserve your place, book online at www.qmul.ac.uk/events, or email events@qmul.ac.uk, including the name of the event and the number of places you wish to book.
Is a Post-Neoliberal politics possible? (2011-06-29 08:00)

Nick Couldry is Professor of Media and Communications at Goldsmiths College. In this podcast Mark Carrigan talks to him about his recent work on neoliberalism and the possibility of a post-neoliberal politics. The conversation encompasses his last book, After Voice, as well as the broader issues he engages with: how has neoliberalism embedded itself in contemporary society and how can a critical social science help provide the intellectual resources to mobilise resistance to it?

Call for Papers: what does the Sociological Imagination mean today?  (2011-07-03 08:00)

[1]
It has been over 50 years since C. Wright Mills wrote the Sociological Imagination. In that time the world has changed beyond recognition: the Cold War ended, the Keynesian consensus broke down, a globalizing neoliberalism rose to the ascendancy and the internet began to transform human communication and culture. In recent years, with 9/11 and then the financial crisis, it seems that history has returned with a vengeance. Is Wright Mills’ notion of the ‘Sociological Imagination’ still pertinent today? How can Sociology help shed light on the rapidly transforming world around us and the consequences of these transformations for the people who inhabit it? What does the ‘Sociological Imagination’ mean today?

Short articles are invited which engage with these themes, or particular aspects of them. Submissions should be 500 – 1500 words and [2]e-mailed as a Word document. There is no deadline for submissions.

When Sociology Was Cool | The Sociological Imagination (2011-07-06 15:09:15)

[...] Mills staked his theories right in these complications and contradictions and with this effort challenged sociologists to not so much relax the methodological rules of their discipline, but to allow themselves a little poetic license. And as simple as this idea may seem, it was, for many sociologists, a revelation and a push to make sociology matter. That, to my mind, is one of the few moments in the history of sociology when the discipline was made cool: That moment when C. Wright Mills told us that our analyses of the world should matter. That and the moment someone took a picture of him driving his motorcycle to class. [...]

658
The aim of this book is quite ambitious. Namely, developing a theoretical framework for the study of music-related subcultures that departs both from the position of the Birmingham Centre for Contemporary Cultural Studies, which conceived subcultures as class-based and symbolically 'resistant', and from a more recent 'postmodern turn' (Muggleton: 2000) that emphasise the flexibility and ephemerality of contemporary 'tribes' (Maffesoli: 1996). Criticising these perspectives, Webb tries to grasp both the changing nature of what he calls music 'milieux', and their very historical, social and cultural 'substance' (Hodkinson: 2002). Surprisingly, the author never mentions Hodkinson's work on goth culture, as long as the two books show a similar tendency: a counter-postmodern stance that points to the concreteness of contemporary subcultures in relation to their increasingly global dimension and media-dependent relationality (Hodkinson: 2003).

Drawing on traditions as diverse as Alfred Schutz's phenomenology, Bourdieu's sociology of culture and globalisation studies (among others), Webb designs a methodology that enlightens the different but intertwined social forces that shape the structure of music milieux. As in the case of the neo-folk (Cap. 4), music subcultures still emerge as relatively coherent and enduring in terms of knowledge and systems of value. This is obviously nothing new in subcultural as well as cultural studies, but Webb's theory put such cultural density in relation to different sets of structural influences, like subcultures’ groundedness in the local dimension and their place in the wider 'field' (Bourdieu: 1993) of music industry. At the same time, the individual becomes a key site of analysis. People can in fact inhabit different milieux at the same time, and their biography and social mobility will affect the 'stock knowledge' that they carry into such contexts.

Overall, this position has the merit of putting the milieu in relation to a complex range of social activities and contexts. From this perspective, the question of the 'independence' of cultural producers is addressed as well (Cap. 6). In fact, producers belonging to a given musical milieu may have a significant degree of independence from the field of music industry, but this autonomy is 'relative' because the music industry still affects their choices and the institutional rules of cultural production (see Cap. 7). The analysis of Webb, in fact, shows the extent to which emergent labels and producers in UK experienced very different forms of pressure and influence in dealing with major record companies.

If there is any weakness in the book, it is related to the artistic (and to some extent political) value that the author attributes to some music milieux. The book reflects a certain difficulty in subcultural studies about departing from the idea that such groups are necessarily deviant or 'non-normative' (Gelder: 2005) to some degree. In this respect, Webb clearly expresses a sympathy for non-mainstream music genres (like Bristol-based trip hop) and milieux that flirt with radical political ideas (like the neo-folk). However, his theoretical perspective does not answer the question of why such music milieux deserve more sociological attention than the ones supposedly less radical. Also, Webb's aesthetic judgements do not go farther than general statements about the creativity of given genres or producers.

This does not mean that his methodology can not evolve toward a more elaborate reflection about the relationship between cultural/aesthetic values and people's agency (a line of enquiry recently discussed in sociology of culture, see Born: 2010). Moreover, the book remains more than valuable for the ways in which it explores the complex forms of social interaction and organisation produced by people's engagement with popular music and culture. An area of enquiry that, as pointed by Webb in the Introduction (p. 7), is still underestimated in 'mainstream' sociology, despite the substantial influence of popular media on people's life-choices. The greatest merit of the book is to show quite clearly the extent to which other spheres of social life (like politics and work) may be affected by the allegedly less important social activities - as well as fantasies and pleasures - enabled by popular culture.

Rethinking Newman’s The Idea of a University (2011-07-05 12:20)

There is something terribly British about the English Catholic saints and a little of that quaint practicality we see in Thomas More who ironically authored the *Utopia*. They’re not the kinds of saints who you would expect to intercede with God on your behalf. Nothing of the poetic passion of an Italian Saint Francis who epitomizes Mediterranean madness or the Spanish Saint Teresa of Avila with a golden spear on fire directed towards her breast by the angel as immortalized in Bernini’s *Ecstasy*. An English saint is frankly incapable of such excesses and would neither go begging and singing naked on streets nor would angels be allowed to throw them into unwarranted states of ecstasies.

The English saints are a bit too English for such high drama. The idealism however is alive both in More and in the eminent Cardinal Newman (1801 - 1890) who is on the way to canonization by the Roman Catholic Church. Just as More’s *Utopia* is a harsh critique of a classist social order, Newman’s *The Idea of a University* is an idealistic view of what universities ought to be like and thus could be read as an attack on the existing state of the universities. Its idealism is contained by a sense of practicality. That could just be the Victorian style of writing descriptive prose to a society that depends on writers to offer intense imagery for its visual satisfaction.

There is however something deeply sincere in how Newman talks about “liberal” education which these days like “liberal” everything else has suffered the onslaught of abuse of every kind from poststructuralists, post-colonialists, postmodernists, post-feminists, post-Marxists and liberals themselves too afraid for their own good to be seen as liberals. I wouldn’t go so far as to say that Newman’s understanding of the University is a product of a colonial mindset. That’s not the case. His vision is oriented towards the future and I’m sure he’s more than aware that no university comes remotely close to the one he is imagining.

In the Discourse 5 titled "Knowledge its own end" this is how Newman speaks of the University: “An assemblage of learned men, zealous for their own sciences, and rivals of each other, are brought, by familiar intercourse and for the sake of intellectual peace, to adjust together the claims and relations of their respective subjects of investigation. They learn to respect, to consult, to aid each other.” With reference to the student he says: “He profits by an intellectual tradition, which is independent of particular teachers, which guides him in his choice of subjects, and duly interprets for him those which he chooses. He apprehends the great outlines of knowledge, the principles on which it rests, the scale of its parts, its lights and its shades, its great points and its little, as he otherwise cannot apprehend them. Hence it is that his education is called “Liberal.” Whatever the criticism might be of “liberal” education it’s impossible to deny that this is the idea that dominates universities across the world - a universal model of what a university should be like where mental habits are formed whose attributes are “freedom, equitableness, calmness, moderation, and wisdom.”

The Universities I’ve studied and worked at and do so at this point in time have only been a relentless parody of Newman’s idea of a university. Rivals, yes! There is plenty of meaningless rivalry on campuses both among the teachers and the students. The "learned men" are a mockery of learning and they’re interested in everything else except learning. The students are less keen on reading a book than in plotting against each other if not the teacher and acquiring grades and scholarships that they’ve neither earned nor do they deserve. I’ve never seen such hypocrisy and self-centeredness disguised as lofty causes like I do at the university I work at. Political correctness has destroyed the soul of the modern university with the virulence of a bubonic plague. The critics of classism, racism, sexism, casteism or nationalism are themselves guilty of every crime they would like to place at another’s doorstep. Elites and elitism is the order of the day. The oppressors have their elites and the oppressed have theirs as well. Both consume from the same plate of exploitation and both like to talk about social and political change in a language that exonerates them from the accusation of being cynical bystanders to the sufferings of the poor.
I'm aware that opportunism is a global gospel and individuals with social goals whether teachers or students tend to suffer genuine isolation. That’s not the point though. Universities are supposed to be an alternative to the harsh world of real life where one has the leisure to arrive at solutions intellectually that will give everyone a chance to a decent life. I cannot imagine working in a corporate environment for instance though I’ve done it when I had no choice. If I’m in a university I know it is a position of comfort paid for by the working classes of my country. They’re paying that I may arrive at something that will serve as an alternative to a violent dog-eat-dog order. They’re not paying me to articulate views I don’t subscribe to.

Newman’s essay is profound in its beauty. There is something saintly about the aspirations in the essay that we see in Newman the person as well. There is no doubt that liberal education is a product of a political economy where the majority of people are not in a state of want and neglect. However there is something good to be said in favor of those strive towards objectivity and wish to see things without a jaundiced eye. These days in the universities to be unbiased and truthful about how much you know and what you really think are terrible crimes. It’s like you belong to no lobby – so, something seriously must be wrong with you. If you belong to one gender or sexual orientation you must defend it against every other with all the hate you can muster in the minimum amount of time; if you belong to one caste, creed, race or ethnic group you must devour the other fellow who is slightly different from you without any pity; if you’re a rightist you must cook the leftists for dinner every night and if you’re a leftist your goal in life is to burn those cities to ashes where there is one rightist hiding somewhere in a subterranean cave.

Basic decency, consideration towards those who’re less privileged, the recognition of another person’s humanity no matter what – these are qualities of spirit and have nothing to do whether you’re politically inclined or not and what kinds of worldviews you uphold. This is about the kind of person you are and maybe this has nothing to do with being or not being in a university.

The fact that one who is a part of a university should make self-righteousness a way of life is unforgivable. In all sweetness, Newman’s The Idea of a University rooted as it is in a Victorian English society – and even if you did not take seriously its religious parts - gives us plenty to think about as to what kind of a university we would like to inhabit. The title itself inspires a lot of questions and “liberal education” where you cultivate a broad awareness of the world around you and one that aims at intellectual honesty may not be such a terrible evil as it is made out to be on the current-day university campuses.

Naveena P K (2017-08-28 14:53:39)
It’s really true that such idealistic universities do only exist in books. Today universities are places for all sort of activities. But still you are not devoid of option, you can decide whether to be a part of it or to just walk away. It all depends upon the choice you make.

Naveena P K (2017-08-29 03:06:42)
It is true that idealistic concept of universities will exist in mere books. In real what you told, is true universities are place of all sort of activities. But still you are not devoid of option. You can indulge in all these issues or just walk away, it all depends upon option you take.
Generational Sexualities' - University of Oxford, 27th Sep 2011 (2011-07-06 08:00)

Invitation to Participate

'Generational Sexualities' - A one-day event to bring different generations of Sexualities researchers into dialogue

Date: 27th September 2011 (Tuesday)

Venue: St. Antony’s College, University of Oxford

Speakers: Professor Ken Plummer, Professor Jeffrey Weeks, Professor Diane Richardson, Professor Mairtin Mac an Ghaill, Dr. Jon Binnie, Professor Stephen Whittle OBE

Population ageing brings both challenges and opportunities to individuals, communities and societies. At the same time, it has brought into focus issues around ageing, life course and intergenerational relationships. However, it has been argued that only until relatively recently have ‘age’ and ‘generations’ been given explicit attention in the contemporary study of sexualities (Plummer 2010).

This workshop themed 'Generational Sexualities' aims to bring different generations of sexualities researchers into dialogue, to share their experience of conducting research in the respective historical and cultural contexts. It discusses the socialization and research environments that different generations of sexualities researchers find themselves in, and how these may have impacted their research agenda, methodologies and outcomes.

Confirmed speakers include:

- Professor Ken Plummer

- Professor Jeffrey Weeks

Emeritus Professor of Sociology, London South Bank University; Author of ‘Sexuality’, ‘Coming Out: Homosexual Politics in Britain from the Nineteenth Century to the Present’, ‘The World We Have Won’ and ‘The Languages of Sexuality’ and co-author of ‘Same Sex Intimacies: Families of Choice and other Life Experiments’, among many others

- Professor Diane Richardson

Professor of Sociology, Newcastle University; Author of ‘Rethinking Sexuality’, co-author of 'Intersections between Feminist and Queer Theory' and 'Sexuality, Equality and Diversity (forthcoming) and co-editor of 'Contesting Recognition' (forthcoming) among many others
Professor Mairtin Mac an Ghaill

Professor of Sociology, Newman University College Birmingham; Author of ‘The Making of Men: Masculinities, Sexuality and Schooling’, ‘Contemporary Racisms and Ethnicities’ and co-author of ‘Gender, Culture and Society: Contemporary Femininities and Masculinities’, among many others

Dr. Jon Binnie

Reader in Human Geography, School of Science and Environment, Manchester Metropolitan University; Author of ‘The Globalization of Sexuality’, co-author of ‘The Sexual Citizen: Queer Politics and Beyond’ and ‘Pleasure Zones: Bodies, Cities, Spaces’ and co-editor of ‘Cosmopolitan Urbanism’, among many others

Professor Stephen Whittle OBE

- Professor of Equalities Law, Manchester Metropolitan University; Author of ‘Respect and Equality: Transsexual and Transgender Rights’, ‘The Transgender Studies Reader’ and ‘The Transgender Debate: The Crisis Surrounding Gender Identities’, among many others

This event is FREE for BSA members and members of St. Antony’s College, University of Oxford. It only costs £25 for non-BSA members to attend. A light lunch is provided for the participants. Places are limited for the event to facilitate discussions. Please make your booking as soon as possible, via the British Sociological Association website:

Please contact Tung Suen, University of Oxford, at [3]yiu.suen@sociology.ox.ac.uk for any further information.

Directions to St. Antony’s College:

Accommodation:

Accommodation at St. Antony’s College is available for booking. Another nearby option is St. Anne’s College, which is 5-minute away from the event venue. Please note that availability is limited and the organiser cannot accept any responsibility for accommodation arrangement:

About St. Antony’s College:

St Antony’s College is the most cosmopolitan of the seven graduate colleges of the University of Oxford, specialising in international relations, economics, politics and history of particular parts of the world. It also houses 7 area study centres specialising in African Studies, Asian Studies, European Studies, Latin American Studies, Middle Eastern Studies, Japanese Studies, and Russian and Eurasian Studies. St Antony’s 40 Governing Body Fellows all have international reputations in their specialist fields and, in combination, provide a unique insight into today’s global issues. There are more than 400 students from some 77 different countries studying for postgraduate degrees and each year around 100 visiting senior members from the academic, diplomatic, business and political worlds come to
the College.

White Western Extra (2011-07-06 16:56)

[1]

When I was twenty-one I moved to India for what was supposed to be a year, but I ended up staying much longer. For a while I lived in the seacoast town of Vishakapatnam, sometimes called Vizag, where herds of water buffalo roamed the beach. I then moved to the city of Hyderabad where, even though I never surrendered my North American clothes, I started to braid fresh flowers in my hair and wear henna tattoos on my hands and feet. At the time, along with my language skills, I thought it was evidence of my Indian assimilation, though I’d never say that today. Today, I’d say it was at most a temporary fashion statement, like how when I lived in the North Country I’d wear woolen toques and knee high boots and punctuate my sentences with French or the Canadian colloquialism “eh.”
I did my first ethnographic field research in Vizag on the South Asian social custom of dowry and took Telugu literature classes at Andhra University, getting up every morning at 6 am to study Hindi with a high school teacher who lived a few doors down from me across the street. She tutored little kids in English while she taught me Hindi. We’d sit on a wooden bench in her parlor drinking steaming chai made with water buffalo milk and in between gossiping in Telugu, I’d read from a children’s Hindi Primer reciting sentences like "See the red mango Mohan? Bring me the red mango," while a gang of little kids sat beneath us, at our feet. "See Anil play cricket?" they read from their English Primer while I read about Mohan in Hindi. "Anil meets Mummy for tea." Whenever one of the little kids would stop reciting and become distracted or fall asleep my Hindi Teacher would whack them on the side of their head with whatever she happened to have in her hand at the time, a dish cloth, a piece of her sari, and without so much as looking the offending student’s way she’d instead cluck her tongue and gesture with her eyes towards me. “T-cha, T-cha,” she’d say, her warning that I should ignore her sporadic acts of discipline and keep reading.

Besides my Hindi Teacher I made two very good friends in Vizag. A famous painter around 12 years older than I named V. Ramesh and a travel agent named Kip, who was just out of high school and a few years younger than me. Ramesh and I would go out every afternoon for fresh lime sodas or beers in one of the withered and worn out hotels that lined the city’s beach. A lot of Indian movies were filmed there, so we’d sit on the terrace and watch them rehearse dance sequences and dramatic, romantic scenes. I always hoped that if I hung around long enough someone on the film crew would ask me to be what they called a White Western Extra since once that happened to an American friend of mine. But no film crew ever asked. Not even when they filmed a lot of the exterior shots of a movie called "American Ahmaii" (i.e., "American Girl") in Vizag on the beach.

With Kip I’d go out practically every night and spend time with his family, an endless network of brothers and sisters and cousins and aunts all waiting to immigrate to Australia. Kip was an Anglo Indian so he couldn’t speak Telugu or Hindi nearly as well as me and all the women in his family wore dresses instead of saris and watched Beta videotapes of British soap operas played on a black market tape player hooked up to his Aunt Emma’s colour TV.

After about a year and a half I moved to the city of Hyderabad where I continued my field research and literary studies and, for the very first time in my life, fell completely and utterly in love, the only way someone living on the other side of the world from their home can fall in love, especially if they are twenty-two or twenty three. His name was Avi, but he introduced himself by his last name, Jacob, so even though I always wanted to call him by his first name, I could never shake the habit of calling him by his last. Jacob was from the west coast province of Goa, a graduate student in Spanish literature, and never in a million years would I ever have met him had I not been living at the Hyderabad YMCA, a White Western Extra (or what the YMCA called a White Western Guest) among a dormitory full of "Young Christian Men," most of whom were actually Muslim, but who still knew enough English and Telugu to shout out to me every time I walked past, "American Ahmaii, American Ahmaii, please baby, please baby, please, don’t you want to be my girlfriend, don’t you want to be with me?"

I didn’t. Not after I met Jacob, anyway. He lived in the room directly below mine. At least, he lived there until around two or three days after we met, when he gave up his room to a computer science student named Amitava and moved in upstairs with me. Which, didn’t last very long. Only two of three weeks. It was against the rules for an Indian to share a room with a Westerner, especially an Indian Boy with a Western Girl, so we moved to a little flat just underneath the Hyderabad Tank Bund, the only neighborhood in Hyderabad at the time where we could find someone who would rent a flat to a White, Telugu-speaking foreigner and an Indian, Urdu-speaking, Jew.

Our landlord was a fallen Brahmin named Sunnil, who loved our love and let us use his hot water heater for free. He painted advertisements for the movies, dashing out 7 or 8 huge, 20 and 30 and 40 foot billboards each week. He’d copy images from photographs torn out of very old issues American and Australian Magazines and brand new copies of Bollywood Screen. Sunnil always made the American actresses look fatter than they were in the photographs adding an extra chin to Julia Roberts or flabby arms to Meryl Streep. "I have to make
them look more like Indian Movie Stars or people won’t see the movie,” he’d explained to me while he worked, adding to Demi Moore’s head more hair, turning the short haircut she wore in the film Ghost into a long flowing mane.

Every Thursday afternoon a team of boys would show up and carry the billboards away on their bicycles, hoisting them up high up into the air and then resting them flat upon their heads, balancing them as they rode away in tandem, as well practiced as any circus feat. And then, as if by magic, I’d see the billboard somewhere around town the next morning, Brooke Shields in Blue Lagoon, all tanned and glistening and fat, wearing a wet sari next to a billboard advertising Cadbury Fruit and Nut Bars, Marie Biscuits and other Commonwealth Sweets.

It’s been over fifteen years since I left India and over fifteen years since I’ve been back, and even though I remember every detail of my time there, what I ate and what I read, the exact cost of different brands of Indian washing soap, the sweet smell of the bus exhaust, it never is a landscape in my dreams. It’s as if the night I said goodbye to Jacob at the Madras Airport and boarded the plane that flew me back to the West, I lost my footing and my sense of what this terrain felt like beneath my feet. Madras. Bankock. Honolulu. Seattle. Tampa. With every airport I lost a little bit more of the Indian I thought I had become and with every airport it became more clear to me who I was and would always be to this place, regardless of what I wore or who I liked or even loved, a White Western Extra, a White Western Guest.

End Note: Since first writing this essay in 2005, I have gone back to India. Stories from those travels will appear here, in a future ‘It’s Not Rocket Science’ essay.

Boys Named Kip, Not Kim | The Sociological Imagination (2011-08-26 12:40:02)
[...] People (and especially students) always ask me what I think about it because in the early nineties I lived and worked in India and have spent much of my adult life teaching and loving all stories Indian, whether realist or [...]

Three Truths & A Lie (2011-07-06 16:57)
I was never really very good at that game Three Truths and a Lie, the one where (when you're a slumber party or living in a dorm) you're supposed to tell four things about yourself, three true, one untrue and have people guess the untrue one.

I always play it with my students on the first day of any Introductory Sociology course, but often find myself slightly distorting both the truths and the lies. For example, I'll say, for a truth, "My birthday is on May 4, the same day as the actress Audrey Hepburn. Which was a pure coincidence, but when I was in high school I started telling people that that's the reason I'm named the way I'm named" – which if you believe the stories I tell here, is actually a lie, but makes, I would argue, for a near perfect Professor/Student anecdote.

My father always exaggerated, everything, to the point where already by the age of four or five I knew he couldn't be trusted to get straight information on anything, whether it was the day we would leave for vacation or if some story he told me about his childhood was true. To this day I do not know the actual name of the town where he was born.

[2]My mother, on the other hand, never exaggerates – anything; in fact, so seriously does she take the world that if she wasn’t so smart you’d think she was naïve for the questions she asks about the veracity of the gossip in People magazine (is Jennifer Aniston’s daily snack really just a handful of almonds?), the right ingredients for a sauce, the books on quantum physics or calculus or Zen Buddhism she reads. I remember once, when she started taking courses at the local, fourth-tier, state university she’d call me up shocked about the room full of mostly 18 and 20-year olds with whom she shared the class, "Audrey, none of the students in the class seem to do the homework or read!" It took me weeks to convince her that the Professor didn’t expect she get 100 per cent on every quiz or test. "But it's university! she'd say. "Aren’t we supposed to learn the material?"

Being raised by a chronic liar and truth seeker/teller has made me at different times both wildly imaginative and rigidly law-abiding. I remember in Grade Two, the teacher called my mother in for a meeting because the stories in my daily diary seemed too far fetched. I remember my mother, ever the (gentle) truth seeker/teller, asking me, "Can’t you just write that you wished the Prime Minister gave you an award in a piano competition instead of saying..."
it actually happened?"

She panicked every time I became too submerged in some novel's story and starting "living in the book," actually worried that at the age of nine I needed therapy since I seemed preferred the divorced families of Judy Blume and Norma Klein novels to our own two-parent household (true) and at seventeen that because I loved Sylvia Plath's The Bell Jar so much I should choose a university closer to home, in case I started considering suicide (untrue - by my senior year not only was I not suicidal, [3] I was living as far away from the United States as I could possibly be – India).

But my father was different. He seemed to always want a better story than the one I had actually lived (when I received my undergraduate degree he told people I had already finished a Masters and claimed I was a Professor when I had just barely earned my Ph.D).

I know now that their two very different kinds of love, my father's obscured by hyperbole, my mother's salt of the earth, is the reason why today, as an adult, I make for a very good ethnographer, my chosen profession. Yesterday a colleague commented, "The way you live? Don't you get exhausted? You make your whole life a field site." I didn't argue. Because with my little girl habit of making everything that happens to me a better or worse story than it was, while second guessing it a million times to ensure what really happened did happen, he was right.

End Note 1: During my doctoral dissertation defense, three of the four Professors sitting on my committee to decide my fate took serious issue with my assertion that everything an ethnographer does in a designated field site "counts," whether it is asking a subject a question pertaining to the study or sitting alone, ordering a cup of coffee during a break, eating lunch. It was the one point I refused to concede.

End Note 2: The image above is a screen capture from a project I assign in my [4]Introductory Sociology course, where, over the duration of a semester, students create Facebook accounts based on a person (or identity), which is their 'social opposite;' family, friends and other social networks for the person they create; as well as regular day-to-day social interactions. Students also use the personas they create to interact with one another, revealing their 'true,' identity at the end of the course. I based this project on the film [5]Catfish (2010), a smart, deeply engrossing film, which not only documents the narrative process by which people tell truths & lies in their every lives, but in the process of documentary/ethnographic filmmaking itself.

End Note 3: For an excellent cinematic story about the ways a person's first and last name has sociological meaning, see [6]This American Life TV Episode 2.6, John Smith. Based on the article by Laura Blumenfeld ("The Life of John Smith") it documents the lives of seven different people, all named 'John Smith.'

Profiling Life on the Street (2011-07-07 08:00)

As mainstream critics so often allege, the uses to which social media can be at times rather vacuous. Yet they can also be profound and moving, facilitating a degree of insight and communication which was difficult, perhaps impossible, to attain while production and dissemination were possible only for large organizations.

For a case in point check out [1]Invisible People. Produced by [2]Mark Horvath, a former drug addict who was briefly homeless, the site collects video interviews with homeless people in Hollywood and has quickly become a social media hit.

The Social Animal (2011-07-08 08:00)

A fascinating talk from [1]David Brooks, author of the [2]Social Animal who featured on SI a few months ago [3]here, about the new understandings of human nature and their consequences for political life and the social world. He suggests that a revolution in our understanding of being human is taking place, driven by cognitive scientists rather than, as might have once been the case, philosophers and theologians.

[4]Social Animal

I’m currently reading his book at the moment and, at least in terms of this sort of popular social science, it’s one of the best I’ve read in a long time. He synthesises an enormous literature in an accessible and enjoyable way, introducing cutting edge research in a range of disciplines (as well as the historical precursors to these modern innovations) to a much wider public than would possibly encounter this stuff. In fact I’d go so far as to say it’s a model for how to do publicly engaged science - so why aren’t more academics writing these sorts of books?

Call for Papers: what does the Sociological Imagination mean today? (2011-07-09 08:00)

[1]

It has been over 50 years since C. Wright Mills wrote the Sociological Imagination. In that time the world has changed beyond recognition: the Cold War ended, the Keynesian consensus broke down, a globalizing neoliberalism rose to the ascendency and the internet began to transform human communication and culture. In recent years, with 9/11 and then the financial crisis, it seems that history has returned with a vengeance. Is Wright Mills’ notion of the ‘Sociological Imagination’ still pertinent today? How can Sociology help shed light on the rapidly transforming world around us and the consequences of these transformations for the people who inhabit it? What does the ‘Sociological Imagination’ mean today?

Short articles are invited which engage with these themes, or particular aspects of them. Submissions should be 500 – 1500 words and [2]e-mailed as a Word document. There is no deadline for submissions.

1. [http://sociologicalimagination.org/posts/mike-odonnell/charles-wright-mills%e2%80%99-sociological-imagi
2. [mailto:m.a.carrigan@warwick.ac.uk](mailto:m.a.carrigan@warwick.ac.uk)
Last month the University of Warwick hosted a very special conference. Virtual Futures was a 21st century reboot of a path-breaking international conference that took place there in the mid 90s. The new conference looked back to the original, while also developing its themes further, looking at a fascinating range of issues:

It’s going to answer some very important questions such as, what is cyberculture? What impact has the internet had on culture? What impact did the conference have on the work and careers of participants? Has it changed the world in any way? Is this the first movement defined by Cyberspace? And if so where has this taken us?

The ’95 conference attracted performers and philosophers including Stelarc, Hakim Bey, Manuel De Landa and Orlan. The themes discussed included: chaos theory, geopolitics, feminism, nanotechnology, cyberpunk fiction, machine music, net security, military strategy, plastic surgery, hacking, bio-computation, cognition, cryptography & capitalism. Many of these topics are still poignant today with perhaps the addition of genetics, bio-engineering, neuroscience, artificial intelligence, bio-ethics and social media.

Thankfully the [3]Knowledge Centre at the University of Warwick recorded pretty much the entire festival! So over the next few days, we’ll be highlighting some of the best bits of what was a stunningly eclectic range of speakers and participants. If you are as intrigued as we were about the conference, you can find [4]it (as well as its [5]organizer) on Twitter.
VF #1 - Mark Fisher on Communications and Late Capitalism (2011-07-11 08:00)

He talks about the growing 'digital communicative malaise' which can be observed in contemporary society while suggesting that there's still too much reluctance to address this issue on the left. Yet why should attacking a technological development be seen as reactionary? He suggests that digital technologies can be seen as communicative parasites that destroy other enjoyments: it destroys our capacity to attend to the pleasurable (described by others as [5]Continuous Partial Attention) and tightens the grip of disciplinary power on our everyday lives. As he observes, "as soon as you have e-mail you no longer have working hours"

SI was supposed to interview Mark at the conference but unfortunately the editor was ill so consigned to (frustratedly) watching this fascinating talk via the conference live stream. Hopefully we’ll get the chance to do the
interview later in the summer!

VF #2 - STELARC: THE BODY AND THE ARTIST (2011-07-12 08:00)

[1]

[2]Stelarc is a performance artist quite unlike any other. Witness his third ear in the picture above. Take a look at his [3]website for further examples of his work. His keynote at the conference was, for lack of a better term, challenging.

For a year I lived above a pizza parlor, just like the sociologist William Foote Whyte did in 1936, the year he was doing field research for what would later become his famous urban ethnography, *Street Corner Society*. And every time I felt the heat of the pizza ovens seeping up through my kitchen floor I thought of him and the family who owned the pizza parlor he lived over. The *Martinis*, I think, was their name.

That, at least, was the name William Foote Whyte gave to them. All of the people and places in *Street Corner Society* were fictionalized. They had to be. Sociologists often change the names of their subjects in order to keep them anonymous, to protect their identity. This didn’t matter so much in the early, early days of the discipline when there weren’t actual people animating sociologists’ texts. In the early, early days, say, the late 1800s or so, sociologists wrote about things like *class struggle* or *suicide* or the *iron cage of bureaucracy* without an actual person, dead or alive, anywhere in sight. The one exception to this was Sigmund Freud, who often, in his studies, featured the stories of not only real live people, but sometimes, even ghosts, up close.

But all of this slowly started to change by the 1920s, especially for sociologists working in North America, who, from the very beginning insisted that their analyses be timely and rooted in the mundane circumstances of people’s everyday lives. W.E.B. Du Bois wrote *The Philadelphia Negro*, W.I. Thomas and Florian Znaniecki, *The Polish Peasant in Europe and America*, Nels Anderson’s *The Hobo* and the Chicago School under Robert Park, *jack-rollers* and *unadjusted girls*, *taxi-hall dancers* and *street gangs*. From the very beginning, North American sociologists thought it was important to give their analyses a body and a voice and a few of these sociologists, Robert and Helen Lynd, for example, or Clifford R. Shaw, deliberately fictionalized the bodies and voices they wrote about, the Lynds
creating "the X family" in their two classic studies of a small American town, Middletown and Middletown in Transition and Shaw, an entire case book filled with the life histories of an unofficial community of delinquent, juvenile boys.

This, I have to admit is what lured me into the discipline of sociology in the first place, this chance to tell stories about the world that may or may not be true. This is the promise that all sociologists make, whether they cast their stories in words or images, numbers or graphs. They all start from the earthly terrain of people’s everyday lives and struggles or, at least, the idea of people’s everyday lives and struggles, and then, to varying degrees of objectivity, accountability and certainty, try to figure out how these lives and struggles are lived. Social theorists match abstract ideas to places and people and their social problems. Survey researchers turn places and people and problems into populations, then samples. Social psychologists create natural, partly natural or simulated settings, where, just like on reality television, they document the ways people act or interact when they stop being polite.

Which brings me back to Street Corner Society and the very imaginative sociological imagination of William Foote Whyte. He was an ethnographer, which meant he created narrative analyses about the world told from the perspective of his own subjective mind. Much like the way I started this story about living above a pizza parlor, except for the ethnographer, every anecdote must be tallied and accounted for, should their analyses ever be challenged or maligned.

End Note: More on the "imaginative sociological imagination" is [2]right here.

VF #3 WHAT HAPPENED TO OUR OUR FUTURE? (2011-07-13 08:00)

The famous cyber-punk author, [2]Pat Cadigan, was one of the speakers at the original Virtual Futures conference in 1994. At the 2011 conference she returned as a keynote speaker and addressed a range of the themes which link the original conference to its 21st century reboot. You can watch her talk [3]here.

3. [http://www2.warwick.ac.uk/knowledge/themes/virtualfutures/patcadigan/](http://www2.warwick.ac.uk/knowledge/themes/virtualfutures/patcadigan/)

 Responses to the White Paper on Education in England (2011-07-14 08:00)

A few days ago, the UK government publicised the new [1]White Paper on Higher Education in England. (click on the title or on the image below to read the White Paper).
SI recommends two responses to it:

[3] Simon Blackburn’s article in the Times Higher Education debunks the conflation between ‘student choice’ and ‘student need’; questions whether the elusive and emotional category of ‘student experience’ should at all be at the heart of educational policy; and analyses the reasons why research and teaching are ignored in the White Paper, even though they are so obviously entwined with any possible notion of quality of education.
Daniel Nehring’s analysis focusses on the other side of the ‘experience’ which is missing from the White Paper: that of people working in higher education. Nehring makes a strong case that ‘the rise of the research grant as the key indicator of academic prowess and entry ticket for a meaningful academic career’, in conjunction with the recent cuts, are fostering the casualisation of academic labour; and that another part of the problem is that ‘universities and sociology departments [...] recruit too many talented individuals to pursue doctorates without subsequently offering them opportunities to make meaningful contributions to the discipline.

Nehring writes:

The privatisation and full-on commercialisation of higher education currently underway seem likely to exacerbate trends towards a stratification of ‘the lecturer experience’ that have been unfolding for a number of years already. A select few PhD graduates, who have received their academic socialisation in elite universities, will be able to develop academic careers in those same institutions. For them, the integration of research and teaching will continue to be a meaningful concept. Another few will be able to move into permanent lectureships at the new second and third-tier teaching universities. They will spend their careers as teaching drones, reproducing second-hand sociological knowledge from textbooks for a mass audience of student-consumers. The ‘rest’ will either form an academic proletariat of part-time, short-term teachers and research assistants or drop out of academia altogether.

Autonomy of the person from the state: 'pastafarian' wins historic battle (2011-07-15 08:00)

The [1]Church of the Flying Spaghetti Monster has won a small battle for religious tolerance and freedom of appearance in the face (or, rather, head), of Niko Alm, a devout Austrian pastafarian, who was recently granted the right to appear on his driving licence wearing a spaghetti strainer - his religious headgear.

Read an article on the BBC [2]here and Niko Alm’s blog [3]here (in German). Even though it is not directed at any particular issue, but is a more general act of citizen autonomy, Mr Alm’s choice of photograph and his interaction with the Austrian authorities reminds of the [4]niqab-and-hot-pants protest of French students, on which the Idle Ethnographer posted in November 2010.

[5]
Making a point in the name of freedom appearance (Photo: Niko Alm's blog).

____________________

May the Pastafarians make an ever bigger splash. 1) After denying so vehemently that atheism is not a religion the Pastafarian sect of atheism fights for equal rights to freely express their religious beliefs. As Niko Alm states it, his goal is for “Pastafarianism to become an officially recognised faith in Austria.” 2) The Flying Spaghetti Monster actually proved was that some people are utterly ignorant of natural theology / general revelation. These propose the best that science and philosophy have offer as to the universe's coming into being. They propose that the universe had a creator and even identify some of the creator’s characteristics. See http://www.truefreethinker.com/articles/flying-spaghetti-monster-invisible-pi nk-unicorns-et-al-part-1-4

Franz Kafka International Airport (2011-07-16 08:00)
A couple of weeks ago I was due to fly home from Florence to London. Even including the journey back from Stanstead, this should have taken four hours at most. Instead it took almost two days. The first flight was cancelled and it took the airline 5 hours to admit this before they then spent another hour denying any responsibility for housing us or finding alternative flights. Eventually we were taken to a hotel and booked on a flight for the following day. This in turn was cancelled. Cue a four hour coach journey to Rome where, having almost missed the second replacement flight, we had a difficult job convincing the airline we were booked on this one.

680
Suffice to say this was not a fun experience. A seemingly endless purgatory-esque experience of pointless, uncertain and stressed waiting with no reliable information about what was going on & little capacity to communicate with those nominally responsible for our journey. For anyone else who has had airport experiences along these lines please enjoy an [1]Onion classic:

[EMBED]

The Opposite of Crush (2011-07-17 12:54)
Once, in my Introductory Sociology course, I gave a lecture about social oppression. It was fairly abstract. I didn’t talk about any specific kind of social oppression, like gender oppression or racial oppression or sexual oppression. I just talked about oppression, like what it is and how it works and what it feels like or rather what the philosopher Marilyn Frye says it is and how it works and what it feels like.

Using her classic metaphor I paraphrased that oppression was like, as Frye describes it, the wires of a bird-cage, as she writes: Cages... Consider a birdcage... If you look very closely at just one wire in the cage, you cannot see the other wires... If your conception of what is before you is determined by this myopic focus, you could look at that one wire, up and down the length of it, and be unable to see why a bird would not just fly around the wire any time it wanted to go somewhere... Furthermore, even if, one day at a time, you myopically inspected each wire, you still could not see why a bird would gave trouble going past the wires to get anywhere...

There is no physical property of any one wire, nothing that the closest scrutiny could discover, that will reveal how a bird could be inhibited or harmed by it except in the most accidental way... It is only when you step back, stop looking at the wires one by one, microscopically, and take a macroscopic view of the whole cage, that you can see why the bird does not go anywhere; and then you will see it in a moment... It will require no great subtlety of mental powers... It is perfectly obvious that the bird is surrounded by a network of systematically related barriers, no one of which would be the least hindrance to its flight, but which, by their relations to each other, are as confining as the solid walls of a dungeon... And on and on and on. You get the idea. Like I said, the lecture was abstract.

Following the lecture, two of the students taking my course left me a note, which wasn’t very abstract at all. It read, You’re sexually desirable, but a dyke for sure, too bad you’re a lesbian, what a waste, using very coarse and ugly expletives for the sexually desirable, dyke, and lesbian parts. Then underneath it read: She is as gay as they come carpet-muncher! seriously! Part of the note is posted above.

The first thing I thought when I read the note was that in all my years of studying feminist and queer popular culture I had never heard the word carpet muncher before. The second thing I thought was Oh my god, some student in my class today thinks I’m sexually desirable, how can that be, I didn’t even look that good today. Then, after these two initial thoughts, I gathered my books, walked down to my office, locked the door behind me and cried.

This wasn’t the first time someone called me lesbian. Once, in Grade Seven, three of my closest girlhood friends took it upon themselves to tell me I was gay, which at the time I found really confusing, since I thought you had to be a young, cute man to be gay, like Jack Tripper, the young, cute man who pretended to be gay so he could live platonically with two girls on the sit-com Three’s Company.

But it was the first time someone called me a lesbian where I couldn’t see where the words were coming from, where I couldn’t see their face. It was the anonymity of their hate that saddened and, in that moment that it happened, scared me, that made me feel the exact opposite of that slightly self-conscious feeling you might get upon learning that someone secretly loves you, that someone might secretly care.
That’s what a hate crime feels like when it happens to you: Like the opposite of knowing that someone has secretly made you the object of a crush.

To crush is, after all, to press. More from Marilyn Frye: The root of the word oppression is the element press... The press of the crowd... Pressed into military service... To press a pair of pants... Printing press... Press the button... Presses are used to mold things or flatten them or reduce them in bulk, sometimes to reduce them by squeezing out the gases or liquids in them... Something pressed is something caught between or among forces and barriers which are so related to each other that jointly they restrain, restrict or prevent the thing’s motion or mobility... Mold... Immobilize... Reduce...

Which is why, I guess, its so important to name the places where hate comes from. To mark it and give it a name. Then we can start to figure out the dynamics of our own self-hatred and sorrow and fear, which, hopefully might lead to a better understanding of our self.

The sadness and fear didn’t last long, however, at least not in my memory. Since if there’s one thing I learned from Marilyn Frye (and from not caring that April Hamilton and Nan Crawford and Tracey Gilmore, those three girlhood friends of mine, said that I was queer), its that social oppression, as debilitating and burdensome as it may be, can also be defied.

So when people inevitably ask me after I tell this story: Did you ever figure out who the students were who wrote you that note, did you ever figure out their name? Or, sometimes even more boldly: Well, is it true what that note said, are you a carpet muncher, are you queer? I answer them exactly the same way I did when I posed those same very questions to my unidentified haters, who sat hidden in the crowd of students who made up my Introductory Sociology class that year: The answer to one of those questions is – yes.

1. http://3.bp.blogspot.com/-EHXS5zrhDbI/TWZfWV1l0kI/AAAAAAAASKI/pFo0r2g9toQ/s1600/hate.jpg

Anonymous (2012-02-13 05:54:43)
It’s your expertise as a professor that matters; though i’m glad you are brave enough to say ‘yes’.

I know one thing thus, that there are a lot of people who would be considered themselves gay if they could. The fact of the matter is that they fear of the unknown, the uncertainty of what others might say, to go further, they might fear God for following their hearts instead of what was taught to them as right or wrong, good or bad. In fact some of us never live a daring enough life because of all the aforementioned. But if someone has the courage to express him herself in this way, more power to them. If there are consequences after death...some might say: Who cares. Off course I do care..................

The real naked bodies (2011-07-18 08:00)
In this video, Jennette Williams, winner of the 2008 CDS/Honickman First Book Prize in Photography, tells the story of making the photographs in her book "The Bathers."
Review of ‘Soundbitten: The Perils of Media-Centered Political Activism’ by Sarah Sobieraj (2011-07-18 08:00)

In her introduction to [1]Soundbitten: The Perils of Media-Centered Political Activism (NYU Press, 2011), sociologist and Tufts University professor writes, ‘I thought this would be a book about how activist groups use presidential elections as moments of political opening, but as I spent time with activists engaged in campaign-related work I came to realize that first and foremost this is a story about activists and the news media’ (2). While it perhaps comes as no surprise to those familiar with Habermasian public sphere theory that collective attempts to transform or reform civil society become involved with the mass media, her findings may shock the technologically optimistic: Media-orientated activist strategies seeking to draw attention to a political message almost always fail.

This research presented in this book is based upon fieldwork with fifty voluntary associations, interviews with journalists, and participant observation at US presidential campaign events in 2000 and 2004. And with this wealth of information, Sobieraj recounts a troubling story. She shows that activist groups organize mobilizations around national presidential campaign events in order to attract journalistic attention to their political message. Unfortunately, the routines and interests of journalists exist in structural opposition to this desired outcome, and it hardly ever works. Furthermore, a media-centred strategy ultimately ends up compromising the quality of face-to-face
communication with ordinary members of the public as well as harming intergroup solidarity. Worse still, she sees no evidence that the advent of new media and social media tools have in any way reconciled this dilemma. In this manner, activism usually fails to accomplish its goals, and as a democratic society we should be deeply concerned.

The penultimate paragraph of a book review is typically reserved for some sort of criticism of the book being reviewed, for drawing attention to a weakness in its execution, say, or to an opportunity the author has missed. I do not do that here, and that is quite simply because I cannot think of anything negative! Sobieraj's book is as close to flawless as they come, its chapters tightly and artfully weaving ethnographically rich data and social theory together into a single convincing—and compelling—argument. Anyone who wants to know what a book-length scholarly monograph ought to look like need look no further. Indeed, doctoral students of the sociology of culture and media would be particularly well-advised to study Soundbitten closely as they write up their own thesis research.

And although Sobieraj writes about American activist groups mobilizing around American presidential elections, this book is a must-read for UK sociologists of all stripes, and not just social movement specialists, as well. With the advent of the REF's so-called impact agenda, researchers are coming under intense pressure to ensure—and prove—that their work has made a difference. Unsurprisingly, suddenly everybody seems intensely fixated upon attracting mainstream media attention and using new social media tools. Yet I cannot help but wonder if UK scholars are going to be like the activists of Soundbitten, ignored no matter how hard we try and much worse off for even having tried in the first place. In short, this book is both an exhortation to do 'impact' differently...and a dire warning.

The art of lost places: photographs by by Axel Hansmann (2011-07-20 08:00)

The Idle Ethnographer fell in love with these photos and has nothing more to say. This is not yet sociology - but it is certainly food for hungry proto-sociological imaginations. Just wanted to share them - click on [1]this link to see the whole gallery:

Choice! (2011-07-21 08:00)

In this instalment of the wonderful [1]RSA Animate series, [2]Renata Salecl talks about the dynamics of choice in modern societies. The Idle Ethnographer talked about [3]this a few months ago and it’s a fascinating issue - the structural, cultural and personal aspects of choosing are so much more complex than certain views of human nature are willing to admit. Yet social and economic policy so frequently rests on laughably one dimensional views of human nature.

What are the consequences of this? Could more adequate, less truncated, understandings of what we are aid social transformation? As Salecl puts it ‘the ideology of choice ... actually prevents social change’. If so are academics in a place to provide them or, when they clash with the ideological needs of neoliberal society, will they simply be disregarded? Even though she may be overestimating the potential which changing social understandings of human nature holds for social transformation, she’s surely correct that the fixation on the individual (as a corollary of the ideology of choice) hinders political critique and collective action. A point [4]Zygmunt Bauman has been making for a long time.

So entrenched in our most intimate yearnings, home often seems as if it were some universal truth, like it says in all those sayings, home is where the heart is, home is where you hang your hat, you would be so nice to come home to, there’s no place like home. But it isn’t, of course. Since like all universal truths, home varies across the smallest increments of time and space, manifesting itself into a symbolic meaning which some people acknowledge and others fight to escape, some feel controlled by and others struggle to achieve, that hard to grasp essence of identity, which differentiates who belongs in a place, who doesn’t belong, and who has the right to tell.

Many scholars have worked to understand how home is an epistemology or knowledge system. For most of the century, such analyses arose either completely outside or on the fringes of the academy, for example, the critical essays of novelist Virginia Woolfe, the ethnographies of novelist and playwright Zora Neale Hurston, the political philosophies of sociologist Franz Fanon, or the cultural analyses of literary critic Edward Said.

However, in the early 1980s, studying home in this way began to gather force within academic women’s studies departments. Theoretical essays by feminist, post-colonial and queer scholars, most notably bell hooks, Biddy Martin and Chandra Mohanty, Gloria Anzaldúa, Mary Louise Pratt, Adrienne Rich, Trihn T. Mihn-Ha and Clare Cooper Marcus, rigorously incorporated ideas from literature, history and social science to understand people’s homes in the context of migration and immigration, work and poverty, racial, ethnic, and linguistic inequalities, cultural loss and assimilation, as well as the politics of gender and sexuality. Several important anthologies were compiled, including Janet Zandy’s Calling Home, Becky Thompson and Sangeeta Tyagi’s Names We Call Home, Mickey Pearlman’s A Place Called Home, and Hazel Rochman and Darlene Z. McCampbell’s Leaving Home.

It perhaps goes without saying that studying home in this way has always had deep inter-disciplinary roots, ones that often reach far outside the academy and onto more political, literary and artistic terrains. However, it is also important to point out, that regardless of the discipline or medium through which it is expressed, whether memoir or poetry, ethnography or film, every critical analysis of home begins at the exact same starting point, the author’s (or scholar or activist or artist’s) sense of literal and figurative displacement. For example, the first member of a family to find work in the academy; the social scientist who pursues research away from the academy and out in the field; or the scholar settled far a field from the country of their citizenship, because of political exile or personal choice.
For some, losing one’s physical or symbolic footing means feeling at home in many locales, possessing what artist and art critic Lucy Lippard calls a *multi-centered sense of place*. For others, it means feeling homeless in every place, living as, what essayist Pico Ayer calls, a *nowhereian*. Either way, whether the author (or scholar or activist or artist) feels connected to the earth or disconnected, possessing many homes or no home, one thing becomes clear. It is the physical or psychic act of moving from one place to another which shifts the social sediment of the familiar to reveal the space where home exists, in between the desires of the self and the expectations of others, or what philosopher Gilles Deleuze would call the *folds of society* or the *pli*. Poet and cultural critic Gloria Anzaldúa likens this sense physical and psychic displacement to living in a historical and cultural borderlands, namely the borderlands between Texas, the southwestern United States, and Mexico, the place of her birth, childhood and growing up. In her epistemology of home, these borderlands, (a social collusion of Native American, European and Mexican people), become a metaphor for her to rediscover the languages and stories of her past, (languages and stories, which sometimes makes her feel oppressed and alienated and other times comforted and proud), as well as for thinking about healing the social divisions and enmities which this, as well as other borders evoke, with their hostile definitions of us and them and their violent visions of insiders and outsiders. For Anzaldúa, home is a state of being that we accumulate over time and know we possess, but can’t always name, even as it harms or protects us. Boundlessly protean, elusive, and ethereal, home isn’t something we can escape from or return to, like it says in all those sayings, but rather, something we create and negotiate, sometimes making it our most inescapable burden and other times our most saving grace. Novelist and cultural critic Salman Rushdie says as much in his frame-by-frame analysis of the Hollywood film, *The Wizard of Oz*, arguably one of the most internationally known parables about what home means in the twentieth century. Based on a series of children’s books by Frank L. Baum, the story of the film goes something like this: A girl named Dorothy longs to escape the drudgery, loneliness and confinement of her life by leaving her home in rural Kansas and going over the rainbow. This longing is suddenly and unexpectedly realized after an unusually forceful tornado carries her off to a fantastical world called the Land of Oz. However, even though many of her longings become fulfilled in this place, she leads a life of adventure, she makes a gang of friends, Dorothy finds herself deeply homesick for the routines and people she left behind in Kansas. And so, after a very long journey and several tests of character, she decides to return home, a decision made possible through the magical power of a pair of ruby slippers, her recitation of a single phrase, there’s no place like home, and, perhaps most importantly, the sheer force of her own desire. As she stands in Oz still awaiting her fate, Dorothy tearfully declares to a very powerful and kind witch that should she be allowed to return to Kansas, she will never travel any further than her own backyard. An unfortunate ending, argues Rushdie, since with this single scene an important message of the film becomes muted. He writes, *The real secret of the ruby slippers is not that there’s no place like home but, rather, that there is no longer any such place as home, except, of course, for the homes we make, or the homes ... made for us, in Oz ... Which, is anywhere, and everywhere, except for the place from where we began*. It’s hard to say for sure where Oz is located, though, if we are to believe Dorothy, it may, in fact, exist. In the very final scene of the film, when her family and neighbors inform her that Oz was simply a dream, Dorothy argues with them by saying, *but it wasn’t a dream, it was a place*. And in the series of books the film was based on, Dorothy actually returns to Oz again and again after her accidental first visit, eventually choosing to reside there instead of Kansas. Rushdie builds upon this ambiguity to make his main theoretical point: That our homes are something we imagine, something we invent, and perhaps even more importantly, something we are always moving towards or going to, even if the distances we travel in physical terms are never very far. Among some people in the southern United States, a *homegoing* is a funeral and I invoke this colloquialism
here not so much to discuss the ritual where the living say good bye to the dead and the dead are laid to rest, but rather to think about the coupling of the words home and going. It’s a powerful pairing, one, which, draws to the surface what I would suggest is the most definitive quality of home: It’s uncertainty. Rare is the colloquialism, which does this.

As I pointed out earlier, most sayings and idioms about home cast it as if were something fixed or something constant, something we can rely upon or easily predict. Like a home front or a homeport, a hometown, a home team, a home plate, a homecoming. Even when our homes are broken, they still carry with them the implication that they once occupied some sort of location. But a homegoing is devoid of any endpoint. It doesn’t offer us any final destination. And so it lays bare a possible explanation as to why we so often labor so hard to pin down our homes and keep their edges from unraveling.

End Note 1: The image at the top is of me in my first home place: River Road, Peterborough, Ontario, Canada.

End Note 2: I have recently incorporated the idea of 'home goings' in a more narrative work, [2]right here.

From learning to earning – the changing ethos of English Higher Education (2011-07-22 08:00)

The publication of the White Paper on Higher Education emphatically entitled ‘Students at the Heart of the System’ opens the doors to one of the most radical transformations in the UK education system. The perverse and socially destructive potential of the document is vividly reported in a recent [1]article written by Des Freedman and Natalie Fenton. As the authors suggest, in its attempt to introduce a consumer-oriented and competitive market of HE institutions, the White Paper shows its highly ideological and financial nature – whilst the (supposedly essential) educational component is left completely out of the picture. Students are to become active consumers, skilfully searching the higher education market for degrees able to place in their hands a good job after completion. Such assumption is aimed at justifying the raise in the fees to be paid by the student-consumer, since the best ‘product’ may be expensive but cost efficient in the long run.

Unfortunately, this view eludes any consideration of the process of erudition that should be at the very heart of any HE system, as the idea of learning is replaced by that of earning. The simple swap between these two terms in the lexicon of HE is not a secondary matter, whereas the original meaning of learning as a ‘acquiring knowledge of or skills in something by study or being taught’, is changed into learning as ‘gaining knowledge of or skills in something that will buy you a wealthy future’. Simply put, the leitmotif of the White Paper is that the pursuit of profit will become the only determinant of value in choosing a degree, whilst the idea of pursuing knowledge is demoted to the status of a mere means to achieve that goal. Such distortion taints the whole ethos of English Higher Education
to the roots, and epitomises the spineless free market approach endorsed by Mr Willets and his colleagues in the Cabinet.

The Disruptive Power of Social Media (2011-07-23 08:00)

Lectures about marketing aren't going to be a regular feature on SI (promise!) but this one is fascinating:

Dear Dr. Sprenger,

Thank you so much for your article [1]Home Goings on The Sociological Imagination. As a sociologist who left her home in West Virginia many years ago, I have always carried the feeling of being misplaced or unsettled. While recently reading Alessandro Portelli’s book They Say in Harlan County, I was struck by his assertion that mountain people are homesick people. And I found an echo in your work. The truth of the matter is, that for many of us mountain people, no matter where we live, the mountains are home - true north, for better or worse. I have often longed, and feared, to return home; and my exile has lasted now nearly 20 years. Should the day ever come when I am privileged and burdened to return to my original homeplace, I am certain that my sociological imagination would find me adrift in a foreign country in spite of the comforting familiarity of people and place. Thank you again for such a thought-provoking piece.

A Little More On [2]Home Goings ...

I was born in a small city in Ontario Canada, just north of Toronto and south of the Curve Lake Indian Reserve, but when I was seven years old my family started traveling to Florida every year. At first these were just ten-day or two week vacations during the school holiday Canadians call March Break and Americans, Spring or Easter Break, but within a one or two years, [3]my parents bought a place near the beach and a large beauty salon in a strip mall and we started traveling there every two or three months, usually in the off season.

I remember going to Walt Disney World in early November when it wasn’t hot or crowded with tourists and my mom had to buy my brother and me thick, hooded Magic Kingdom sweatshirts since, to us at least, the Florida weather was so strangely cold. Soon, in addition to these trips, my parents started stealing a few days on the ends of our school holidays to make those visits longer and my mother, brother and I would head south for the entire summer, making what we once considered vacations seem more like relocations. By the time I was ten and my brother fourteen we had two sets of games and two sets of clothes, two sets of friends and two sets of favourite television re-runs, an Ontario set and a Florida set.
Finally, when I was thirteen, my parents decided that in addition to the summer, we’d spend the school year there. By now they owned and operated four beauty salons and the Florida, which had once been a vacation destination to me, a *paradise*, was slowly losing its exotic edges and becoming my *home*. I remember that first year I started school in Florida. It was August, much sooner than the Canadian school year started and I’d wait for the school bus every morning roasting in the hip, back to school fashion of that fall, which was way too heavy and layered for Florida during that time of year.

Still, all the girls in my new school were over-dressed, just like in Ontario my friends and I often dressed a little too skimpy, our clothes picked to match what we read in *Seventeen* magazine more than the weather. (Though I’d never openly admit this to my mother, I remember freezing to death every single day of my Grade Seven winter, since I insisted on making a short, burgundy, fur lined corduroy jacket my winter coat that year. I wore it with a huge, burgundy tartan scarf, which I never wrapped around my neck, but left hanging open).

Overdressing was just the first step in my slow cultural transformation from a Northerner to a Southerner and it’s very important to note that in this cultural transformation I wasn’t alone. Many Ontarianians and northeastern Americans, (see Elizabeth Hay’s beautiful novel, *Student of Weather*, especially the character of Maurice Dove) have settled or made settlements in Florida, this utterly indigenous North American diaspora including once a year and seasonal tourists (sometimes called Snowbirds) and entire communities of families, who, often divorced or on their way to divorce, struggle to find their footing in sand rather than snow.

Since I was a little girl, these were my people, the kids I spent my school holidays and summers with on the beach and around the pool, my closest high school friends and their families, who like me were Northern kids transplanted to the South, all of us, as Elizabeth Hay would put it, at home on both northern and southern terrain. Though its taken my almost twenty years to realize this. For most of my adult life I’ve been looking for and writing about home in places often buried in snow: [5]Madison, Wisconsin; Edmonton, Alberta; Winnipeg and Pine Falls, Manitoba; and Potsdam, New York, where, I’m very pleased to report that wearing one’s scarf untied and draped over a thinly insulated jacket seems to still be a fashion trend among Grade Seven girls – at least in 2007, the winter I lived there.

But what I’ve come to learn, however, is often the places where our homes lie, as well as our paradises for that matter, are often not where we think: For me right now, living in and around New York City, (so close to Ontario), seems slightly exotic to me and my quick trips to Florida to visit my mother, (the one landscape, which has stayed consistent throughout every winter of my entire life), slightly un-foreign. Leaving me to wonder if maybe I’ve made both places my *paradise at home*.

Review of Chavs and The Precariat (2011-07-25 08:00)

Among those who understand social classes as things it is acknowledged that they have changed. As Guy Standing explains this change, 'globalisation has resulted in a fragmentation of national class structures' (p.7). Whereas Owen Jones sees change imposed by a deliberate political strategy of successive Conservative/ Coalition and New Labour governments.

Insofar as this is still of academic concern, given the predominance of a 'discursivity' which denies the facticity of class, a sociological spectrum ranges from a world of rationally calculating economic individuals, through sliding scales of status to the eight occupational groups of the soon-to-be-abolished UK Office of Population and Census Statistics. The five A-Es of market researchers with their additional electorally crucial C1s and C2s are reduced in the conventional three upper-middle-working class pyramid, while Marx’s two basic classes have been recast globally as other intermediate classes and the peasantry have collapsed into a proletariat that is possibly now more numerous than ever.

However as Standing sees it, rather than remaining within the ranks of Marx’s proletariat, increasingly large
numbers of people are being pushed into a new and insecure 'precariat'. Drawn from different sections of society, this new, growing and mainly youthful class is also 'dangerous' because it may be hostile to the privileges it sees enjoyed by labourism’s dwindling core.

'First used by French sociologists in the 1980s, to describe temporary or seasonal workers', in Italy precariati implies 'a precarious existence as a normal state of living', though it is not Hardt and Negri’s Multitude. In Germany 'the term has been used to describe not only temporary workers but also the jobless who have no hope of social integration' (p.13). This is close to Marx’s lumpenproletariat, 'that passively rotting social scum' but it is not that either.

For Jones, it is the British working class that has been recast 'From salt of the earth to scum of the earth.' (p.72). 'What the Tories are doing is placing the chav myth at the heart of British politics, so as to entrench the idea that there are entire communities around Britain crawling with feckless, delinquent, violent and sexually debauched no-hopers' (p.80). This follows from 'Thatcher’s ruinous class war' in which 'those working-class communities that suffered most were... herded into an "underclass" whose poverty was supposedly self-inflicted' (p.67). However, where New Labour redefined poverty as social exclusion to focus on a minority blamed for their own 'unemployability', the Coalition (and Miliband?) are concerned with 'the squeezed middle', writing off the working-class majority.

Owen quotes polls showing half the population still describe themselves as working class, a constant figure since the 1960s (p.33) because 'well over half the workforce' (p.144), 'more than 28 million' are still 'in blue-collar manual and white-collar routine clerical jobs' (p.33). The demonization of this majority is 'the flagrant triumphalism of the rich who, no longer challenged by those below them, instead point and laugh at them' (p.269)

Sociologically this leaves out the middle class who are insufficiently differentiated from 'the rich'. So when Owen writes, 'the myth of the classless society gained ground just as society became more rigged in favour of the middle class' (p.167) and 'The result is a society run by the middle class for the middle class' (p.182), typically of most class analysis, he leaves out the ruling class.

Owen concedes, 'Most middle-class people cannot afford to go private, and want good properly funded local schools and hospitals' (p.268) and he adds 'middle-level occupations... are shrinking' (p.152) as 'More and more university graduates are forced to take relatively humble jobs' (p.176). This indicates a polarising class structure going pear-shaped rather than the persistence of the old pyramid with the bottom half disguised as 'chavs'. As Owen confirms, right to buy 'drove a wedge through working-class Britain, creating a divide between homeowners and council tenants' (p.61). It is the formerly unskilled, 'rough' and 'unrespectable' section of the manually working class that has been 'demonized' leaving a new 'respectable' middle-working/working-middle class between the snobs and the yobs, as has been said. These 'hard working families' are the target of politicians' blandishments as they scrabble desperately to run up a down escalator, contributing to the hysteria about education, for instance – another bubble about to burst, so that, as Owen rightly says, 'at the centre of a new political agenda must be a total redefinition of aspiration' (p.258).

Owen’s other answers are similar to Standing’s: 'straddle the internal divisions within the working class that widened under Thatcherism' (p.259) while 'Another core demand must be for decent, skilled, secure, well-paid jobs' (p.260) in a Green New Deal that, 'As well as providing an array of new jobs, would give working-class people a stake in the environment by transforming it into a bread-and-butter issue' (p.262). Similarly Standing: 'In shifting from jobs, the right to work must be strengthened' (p.163) but he ignores the profit motive which drives the dystopia of a self-regulating market system and thus abandons the Utopia of a world free from profit. Owen goes beyond Standing’s 'mild Utopianism' to recognise Utopia is now survival, a future for humanity or no future. There is literally no other way forward. This is the contemporary version of the choice between Socialism or Barbarism.

Both books make us think about the great class transformation that is taking place. Is this creating a new
class, or once again reforming a new working class that will be different from the old one? The numerical (if not yet ideological) feminisation that constitutes such a large part of Standing’s precariat ensures that it will be different, while the redivision of knowledge as well as of labour also bids farewell to Leninist forms of political organisation that united ‘progressive intellectuals’ with manual workers and peasants. Rather than such vanguards, ‘The precariat,’ as Standing concludes (p.183), ‘is not victim, villain or hero – it is just a lot of us’. Or the lot of us!

A sociological blog dedicated to 'Humanity 2.0' (2011-07-25 09:11)

Recently a videoclip of me giving one of the first TEDx lectures at Warwick was posted here on [1]'Humanity 2.0', which is about changing definitions of the human, an issue central to the past, present and future of the social sciences. I have been exploring this line of thought in several forums recently, including the [2]Virtual Futures 2.0 conference at Warwick and[3] a new book, due out in the Autumn.

However, I want to draw your attention to an Australian blog that has been doing an excellent job over the past few years covering this topic, especially bringing to bear a critical social theoretic perspective on various formulations of our emerging post-/trans-human horizons. The blog is maintained by a sociologist whose Ph.D. I externally examined for the University of New South Wales a few years ago. It is especially perceptive in capturing passing media representations of the future of humanity. The blog has the suitably science-fictional name of [4]Acheron LV-426, and I recommend that you trawl through it at your leisure.

Where Children Sleep (2011-07-26 08:00)

[7]
Call for BSA Regional Postgraduate Day Event Proposals 2011/12 (2011-07-27 08:00)

The British Sociological Association is requesting expressions of interest from postgraduate students interested in organising a regional postgraduate day event in 2011-12.

In 2010-11, eight successful events were held throughout the UK. These one-day events express the diversity and dynamism of the postgraduate experience. It is hoped that Regional Postgraduate Day Events will provide a variety of events throughout England, Scotland, Wales and Northern Ireland and that they will become an annual series in the BSA calendar.

We are looking for postgraduate organisers willing to co-ordinate with speakers and the BSA to organise a day event at the student’s institution. The BSA will provide up to £1,000 support for the event, which should be free for BSA members to attend and £25 for non-members. The grant can be used to pay for room hire, speakers, lunch and refreshments. Organisers are encouraged to seek a contribution from the host institution, such as free accommodation or a financial contribution to refreshments. The BSA Office will also promote and publicise the Postgraduate day schools through a number of outlets including flyers in membership packs, the BSA website and member e-newsletters.

Please email all expressions of interest to [1]events@britsoc.org.uk and address all correspondence: BSA REGIONAL POSTGRADUATE EVENTS.

The submission deadline for proposals is: **5pm, Friday 28th October 2011.** Late applications will not be considered.

Expressions of interest should include the following details:

- **NAME OF ORGANIZER(S)**
- **INSTITUTION(S)**
- **PROPOSAL FOR REGIONAL POSTGRADUATE EVENT**
  (proposed dates, proposed themes, potential speakers, anticipated costs)

*Please note the following criteria used to judge applications*

All applications will be considered by the BSA Membership Services Directors and a convenor of the BSA Postgraduate Forum based on the following selection criteria:

- Breadth of appeal beyond the organising group
- Centrality to sociological concerns
- Quality of information provided
• Geographical spread
• Distinctiveness from previous events and institutions

"It has happened to me": the untold and unheard stories of male rape (2011-07-28 08:00)

"Everybody has heard the women's stories. But nobody has heard the men's."

No one talks of male rape - yet it happens - as an instrument of war, as well as outside war. Yet this systemical silence does nothing to resolve the problem - only to perpetrate the social stigma and the physical and mental pain.

Especially in the patriarchal societies found in many developing countries, gender roles are so strictly defined that

"...both perpetrator and victim enter a conspiracy of silence and why male survivors often find, once their story is discovered, that they lose the support and comfort of those around them."

What is terrible is that research on male rape is so rare that it is impossible to say even with how common male rape is, and there has been no research of the psychological or social consequences for the victims, or of the motives of the perpetrators. The article cites one survey, published in the Journal of the American Medical Association in 2010, that found that "22% of men and 30 % of women in Eastern Congo reported conflict-related sexual violence". One of the very few researchers dealing with the problem, Lara Stemple of the University of California's Health and Human Rights Law Project, has found that, for example, 21 % of Sri Lankan males who were seen at a London torture treatment centre reported sexual abuse while in detention; in El Salvador, 76 % of male political prisoners surveyed in the 1980s described at least one incidence of sexual torture; and in a study of 6,000 concentration-camp inmates in Sarajevo, 80 % of men reported having been raped. A documentary entitled [1]Gender Against Men was produced in 2010 by Makerere University's Refugee Law Project (RLP) in Uganda; when it was screened, attempts were made to stop it by ... international aid agencies.

Click here to read the [2]article in the Guardian.

One commentator under the article said:

"I don’t know what’s more shocking - the prevalence of rape and sexual violence, or the fact that so many male victims are ostracised by their own families and communities."

To me, what is just as shocking, is the unbelievable "zero-sum game" mentality of those among the individuals working organisations that deal with sexual violence who restrict the definition of rape to female victims only.
‘The Places We live’: urban photography by Jonas Bendiksen (2011-07-29 08:00)

Visual methods are a great part of research into the mundane, and the area where visual sociology and investigative photography are at their best (and hardest to tell apart). The work of Norwegian photographer Jonas Bendiksen is a perfect example of such a visual exploration of everyday life. Read an article about his work with a fascinating gallery of images of urban dwellings and slums here on visualnews.com.

The British Sociological Association is requesting expressions of interest from postgraduate students interested in organising a regional postgraduate day event in 2011-12.

In 2010-11, eight successful events were held throughout the UK. These one-day events express the diversity and dynamism of the postgraduate experience. It is hoped that Regional Postgraduate Day Events will provide a
variety of events throughout England, Scotland, Wales and Northern Ireland and that they will become an annual series in the BSA calendar.

We are looking for postgraduate organisers willing to co-ordinate with speakers and the BSA to organise a day event at the student’s institution. The BSA will provide up to £1,000 support for the event, which should be free for BSA members to attend and £25 for non-members. The grant can be used to pay for room hire, speakers, lunch and refreshments. Organisers are encouraged to seek a contribution from the host institution, such as free accommodation or a financial contribution to refreshments. The BSA Office will also promote and publicise the Postgraduate day schools through a number of outlets including flyers in membership packs, the BSA website and member e-newsletters.

Please email all expressions of interest to [1]events@britsoc.org.uk and address all correspondence: BSA REGIONAL POSTGRADUATE EVENTS.

The submission deadline for proposals is: 5pm, Friday 28th October 2011. Late applications will not be considered.

Expressions of interest should include the following details:

NAME OF ORGANIZER(S)
INSTITUTION(S)
PROPOSAL FOR REGIONAL POSTGRADUATE EVENT
(proposed dates, proposed themes, potential speakers, anticipated costs)

Please note the following criteria used to judge applications

All applications will be considered by the BSA Membership Services Directors and a convenor of the BSA Postgraduate Forum based on the following selection criteria:

- Breadth of appeal beyond the organising group
- Centrality to sociological concerns
- Quality of information provided
- Geographical spread
- Distinctiveness from previous events and institutions

Call for Papers: what does the Sociological Imagination mean today? (2011-07-31 08:00)

It has been over 50 years since C. Wright Mills wrote the Sociological Imagination. In that time the world has changed beyond recognition: the Cold War ended, the Keynesian consensus broke down, a globalizing neoliberalism rose to the ascendency and the internet began to transform human communication and culture. In recent years, with 9/11 and then the financial crisis, it seems that history has returned with a vengeance. Is Wright Mills' notion of the 'Sociological Imagination' still pertinent today? How can Sociology help shed light on the rapidly transforming world around us and the consequences of these transformations for the people who inhabit it? What does the 'Sociological Imagination' mean today?

Short articles are invited which engage with these themes, or particular aspects of them. Submissions should be 500 – 1500 words and [2]e-mailed as a Word document. There is no deadline for submissions.

The Solitude Trilogy (2011-07-31 13:42)
After he became heralded as one of the greatest pianists to ever play, Glenn Gould stopped performing live. Doing so just didn’t allow him to perfect the way he wanted to play like performing in a studio did, where he could go over the same measure of music again and again, capturing it on tape whenever he got it exactly right. The irony of all this was that even though he was obsessive about perfecting the way he performed, as well as how his performance would be heard, Gould would hum over his playing, a fact easy to hear on any of his stunningly beautiful recordings.

I love Gould’s humming almost as much as I love to hear him play, because, for me, it documents the exact moment he made his recordings, so even though I can play these recordings again and again, every time I listen to them it feels as if I’m hearing them for the very first time, up close and live. Listening to them, I get the very same sensation I feel when I’m listening to improvisational music being created spontaneously in a jazz or hip hop club or a street musician or poet performing in the street: That undeniable thrill of art being created in the moment, that undeniable thrill that that the artist is actually there.

Gould carried his ideas about the best way to perform and document his piano playing to another artistic medium: audio documentary making. In the early 1970s he created a series of three pieces for the Canadian Broadcasting Corporation about what he believed to be the essence of Canadian identity, a major topic circulating in Canadian academic, artistic and popular culture during that time. Titled The Solitude Trilogy, these documentaries were set in three places, the far North, off the coast of Newfoundland and on the Canadian prairies. Gould created them by recording ambient sounds in these places, interviewing a few of the people who lived there and then layering these sounds and interviews over one another along with pieces of found tape and other miscellaneous and often completely unrelated recordings.

Prior to making these pieces, Gould had written about hearing music in the everyday sounds and conversations he’d overhear just going about his day and in one of the stories told in the film 22 Short Films About Glenn Gould, he is shown having breakfast in a rural, road side coffee shop, listening in on all the din. But neither his writings about this topic nor this cinematic dramatization can compare to the beauty of the three documentaries he made.
In the first documentary in the series, titled [4]The Idea of North, sounds of a train clattering are overlaid with the voices of nurses and Native people and road workers chatting as they return home from a brief visit to the nearest outpost of civilization, a one street town to the south. In the second, titled [5]The Latecomers, the stories of two Newfoundlanders, one who was in favor of Newfoundland joining Canada in 1949 and one who was opposed, are edited together as if in conversation, their similarly accented voices separated by the sound of an enormous Atlantic Ocean crashing against the stone walls that protect their respective villages, which we learn would be close to one another geographically, if they weren’t built into the sides of two rocky sea-locked coves. The third, titled [6]The Quiet In The Earth, fuses together a recording of a Mennonite preacher giving his Sunday morning service and a track of Janis Joplin sorrowfully singing have another little piece of my heart now baby, while church bells ring over a vast and barren prairie.

Like other documentary or sociological studies about North American communities, (such as the social ecological studies of the 1930s Chicago School of Sociology, Robert and Helen Lynd’s Middletown, or[7] William Foote Whyte’s Street Corner Society), The Solitude Trilogy makes little distinction between the places it documents and the people who live there. However, unlike these studies, it makes no claims about its objectivity, accountability, certainty or truth. Even its authenticity is left as an ambiguous question. For as much as Gould was enamored by the idea that communities seemed to organically emerge from the world’s earthly terrain, he knew that his documentation of them were simply that, documentations, no matter how real the voices and sounds he recorded might seem.

It was a statement a kin to his decision to stop performing the piano live and like his decision an important reminder to all of us, that whether we are listeners of music or audio documentaries, (or, even readers of sociology for that matter), we have a choice as to whether or not we truly feel or believe the story the musician or documentary maker (or sociologist) tells us, that we alone hold the power to decide whether a story is [8]the truth or a lie.

End Note: To view/listen to/read a recent community study, ("Welcome to Pine Point", by Paul Shoebridge and Michael Simons), which not only captures but elevates many of the theoretical and methodological qualities of Gould’s "The Solitude Trilogy," [9]click here.

End Note 2: To start exploring the differences between audio documentary-making and audio ethnography, [10]click here.

The Coming Crisis of Empirical Sociology (2011-08-02 08:00)

The sound quality isn't great but it's worth persisting with this fascinating account of how sociology must deal with the massive explosion of digital transactions in recent decades, as well as the new data sources which flow from them:
The film is a bold attempt at characterizing our contemporary, increasingly globalized, society through a prism of Zygmunt Bauman's concept of liquid modernity. For decades Zygmunt Bauman has been painstakingly trying to disperse darkness surrounding the existence of an individual in the Western consumer society. He has been relentlessly pointing at the traps of free market economy and showing ugly flaws in the system, which for years have been officially glossed over. Despite his famous irony, he is in fact a passionate defender of some core values which are the prerequisites of a more equal and, simply, happier society. Our film presents in a nutshell Bauman’s vision of the world filled with concern, anxiety, but also - hope. By documenting Professor Bauman’s unique ideas, we intend to popularize his outstanding work and truly prophetic theories, which are concerned with the issues most of us can easily relate to.

Here at SI we think this film is a bloody marvellous idea - stay tuned for more info/content relating to it.

Mark Fisher is a leading light at Zero Books, publishers of a growing stable of short, topical essay-books such as Richard Seymour’s The Meaning of David Cameron and Nina Power’s One Dimensional Woman, soon to be supplemented by Laurie Penny’s Meat Market, Female flesh under capitalism. Written accessibly, without references, citations or index, they discuss in cultural studies style, films and tv more than books and journals. In the virtual democracy of the internet, ‘Contemporary culture has eliminated both the concept of the public’ (turned into consumers) ‘and the figure of the intellectual.’ Instead, ‘A cretinous anti-intellectualism presides, cheered by expensively educated hacks in the pay of multinational corporations who reassure their bored readers that there is no need to rouse themselves from their interpassive stupor... generating a bland conformity.’

[1]

‘Zero Books knows that another kind of discourse – intellectual without being academic, popular without being populist – is not only possible: it is already flourishing, in the regions beyond the striplit malls of so-called mass-media and the neurotically bureaucratic halls of the academy. Zero is committed to the idea of publishing as the making public of the intellectual. It is convinced that in the unthinking, blandly consensual culture in which we live, critical and engaged theoretical reflection is more important than ever before.’

This position statement gives a flavour, though interestingly for readers of PSE, Mark Fisher's contribution is informed, as well as by his extensive reading and viewing, by teaching A-level philosophy in FE. However, his starting point is not the end of transcendence and the death of hope implied by his title, but is another term for postmodernism, which he finds ‘appropriately but unhelpfully, unsettled and multiple’ (p.7) in meaning. No longer contesting modernism as it had developed, including in the form of actually existing socialist realism in relation to
which he notes his title originated, it refers rather to the fact that 'For most people under twenty in Europe and North America, the lack of alternatives to capitalism is no longer even an issue. Capitalism seamlessly occupies the horizons of the thinkable.' (p.8) So that for Jameson and/or Zizek, ‘it is easier to imagine the end of the world than it is to imagine the end of capitalism’ (p.2).

Confronted by such a reality, what is to be done? After ‘the consensual sentimentality of Live Aid replaced the antagonism of the Miners' Strike’ (p.66), which last ‘exposed the fault lines of class antagonism’ in the UK (p.7), Thatcher’s ‘succinct slogan of capitalist realism' became ‘a brutally self-fulfilling prophecy’ (p.8). Even protest re-enacting 1968 was carnivalised, despite conditions for youth being ‘substantially harsher than the conditions they protested against in the 60s’ (p.14), so that today’s French students, for example, demand a return to the past rather than a new future. But against this naturalization of ‘business ontology in which it is simply obvious that everything in society, including healthcare and education, should be run as a business’ (p.17), certain realities cannot be repressed. Fisher focuses on three of them: incipient environmental catastrophe which ‘contradicts capitalism’s constitutive imperative towards growth’ (p.80), the epidemic of mental health problems, including dyslexia (which he suspects is post-lexia, another pathology of late capitalism, like ADHD) and bureaucracy, which, instead of disappearing, as promised by free-marketeers, has changed into a new decentralised form.

This is nowhere more apparent than in FE, which since 1993 has been ‘at the vanguard of changes that would be rolled out through the rest of the education system and public services – a kind of lab in which neoliberal “reforms” of education have been trialled’ (p.20). Here Fisher was met – rather like Tom Sharpe’s Wilt teaching ‘Meat 1’ – by the self-fulfilling prophecy of students’ ‘reflexive impotence’: ‘They know that things are bad, but more than that, they know they can’t do anything about it.’ (p.21) In a society based on debt, you ‘Pay for your own exploitation... get into debt so you can get the same McJob you could have walked into if you’d left school at sixteen...’ (p.26). As a result, ‘Depression is endemic.’ (p.21) or, rather, what Fisher calls ‘depressive hedonia... not so much an inability to get pleasure so much as an ability to do anything else except pursue pleasure.’ (p.22).

‘In large part this is a consequence of students’ ambiguous structural position, stranded between their old role as subjects of disciplinary institutions and their new status as consumers of services.’ Similarly, ‘Teachers are caught between being facilitator-entertainers and disciplinarian-authoritarians.’ (p.26) ‘What we in the classroom are now facing is a generation born into that ahistorical, antimnemonic blip culture...’ (p.25) ‘a retreat into private “Oedipod” consumer bliss, a walling up against the social.’ (p.24) Perhaps, describing the reactions of his students, Fisher misses some elements of realisation and resistance to running up the down-escalator of deprecating educational qualifications!

Trapped in the ubiquitous bureaucracy of the dispersed corporation, managers ‘mediate between the post-literate subjectivity of the late capitalist consumer and the demands of the disciplinary regime (to pass exams etc.).’ (pp25-6) Meeting the meaningless targets of audit culture, they ‘perform self-flagellation as part of a purely formal exercise in bureaucratic compliance’ (p.52). But after the Credit Crunch, we are all the walking Undead of a Zombie Capitalism that ‘without a credible and coherent alternative... will continue to rule the political-economic unconscious.’ (p.78)

Therefore, ‘We need to begin, as if for the first time, to develop strategies against a Capital which presents itself as ontologically, as well as geographically, ubiquitous... the goal of a genuinely new left should not be to take over the state but to subordinate the state to the general will, revivifying – and modernizing – the idea of a public space that is not reducible to an aggregation of individuals and their interests.’ (p.77) ‘This is a struggle that can be won – but only if a new political subject coalesces.’ (p.79) It is the project of Zero Books, although it is not clear at what subject they are aiming. University students, such as those at Goldsmiths’ where Fisher now teaches, must be a large part of its constituency but their’s may prove a flash-in-the-pan resistance.
Something else that has happened since the book was written is the resistance of the medical profession to Coalition plans to privatise the NHS. Admittedly, this has ended in a compromise in which much damage continues to be done to a public service that was already thoroughly marketised under New Labour but it is a sorry contrast with education, where Gove is remorselessly pushing through more marketisation that can only end in the privatisation of state schools, while Willetts is extending New Labour’s introduction of HE fees to substitute price for quality in the increasingly privatised competition of universities and colleges.

Something else too in the organised resistance of a few individuals to the corporate take over of the media that led to the exposure of Murdoch, while it is becoming clearer to more and more people that society has been taken over by the bankers, who in Greece the population at large are refusing to pay. Here, MPs seeking now to distance themselves from Blair/Cameron subservience to Murdoch, are already thoroughly discredited by their expenses scandal emulation of the bankers to whom they gave power. The story of how this all happened since 1979 is not hard to tell. As Mark Fisher concludes, ‘From a situation in which nothing can happen, suddenly anything is possible again.’ (p.81)

Patrick Ainley

Choosing your own culture (2011-08-05 08:00)

Two Britons (believe that they) live the daily lives of Native Americans in... Coventry, UK, in 2011.

([1]link)
Is this a case of postmodern decoupling of biological determinism and socio-cultural traditions? One of the comments mocks these folks and suggests that they ought to explore "their own culture" instead of running after remote culture. But most people find them cool. Another commenter praises them and accepts their choice of self-presentation "they believe in something and help people". So no, I don't think this is postmodern. I am skeptical about such arguments that describe everything that is out of the norm as postmodern. I'd rather agree with Latour's claim that we have not really been modern. The reification of culture, such as its connection with birthplace, etc. is our attempt to appear modern - and its un-reification, such as the choice of culture that is not "biologically" our own, is pre-modern or just... well, it just is. Hm... am I making any sense?

Let's Take Back The Internet!!! (2011-08-06 08:00)

Has anyone else been noticing that public discourse about the future of the internet seems to emerging onto a new level of sophistication? We seem to be finally emerging from asinine debates about whether digital technology is destroying human culture or will bring about a utopia of ideas and connectivity in order to address the real questions. Witness as case in point this fascinated TED talk:
Jeff Emmerson (2011-08-06 15:25:58)
Absolutely FABULOUS!!! Cheers to those with the courage to challenge the powers that be in hope that we CAN return to a better way of life.

Add SI on Twitter and Facebook (2011-08-07 08:00)

This is a reminder that the Sociological Imagination has a presence on facebook. Please do add us as a friend and feel free to get in contact. We're always open to ideas and suggestions so please don't hesitate if there's anything you would like to say!

To the international academic community - Public Greek Universities in Danger (2011-08-08 08:00)

In the last few years, a wave of ‘reforms’ within the European Union and throughout the world has subjected Higher Education to the logic of the market. Higher Education has increasingly been transformed from a public good and a civil right to a commodity for the wealthy. The self-government of Universities and the autonomy of academic processes are also being eroded. The processes of knowledge production and acquisition, as well as the working conditions of the academic community, are now governed by the principles of the private sector, from which Universities are obliged to seek funds.
Greece is possibly the only European Union country where attempts to implement these 'reforms' have so far failed. Important factors in this failure are the intense opposition of Greek society as well as the Greek Constitution, according to which Higher Education is provided exclusively by public, fully self-governed and state-funded institutions.

According to the existing institutional framework for the functioning of Universities, itself the result of academic and student struggles before and after the military dictatorship (1967-1974), universities govern themselves through bodies elected by the academic community. Although this institutional framework has contributed enormously to the development of Higher Education in Greece, insufficient funding and suffocating state control, as well as certain unlawful and unprofessional practices by the academic community, have rendered Higher Education reform necessary.

The current government has now hastily attempted a radical reform of Higher Education. On the pretext of the improvement of the 'quality of education' and its harmonization with 'international academic standards', the government is promoting the principles of 'reciprocity' in Higher Education. At the same time, it is drastically decreasing public funding for education (up to 50% decrease) which is already amongst the lowest in the European Union. New appointments of teaching staff will follow a ratio 1:10 to the retirement of existing staff members. This will have devastating results in the academic teaching process as well as in the progress of scientific knowledge.

- The government proposals seek to bypass the constitutional obligations of the state towards public Universities and abolish their academic character.
- The self-government of Universities will be circumvented, with the current elected governing bodies replaced by appointed 'Councils' who will not be accountable to the academic community.
- The future of Universities located on the periphery, as well as of University departments dedicated to 'non-commercial' scientific fields, looks gloomy.
- Academic staff will no longer be regarded as public functionaries. The existing national payscale is to be abolished and replaced by individualized, 'productivity' related payscales, while insecure employment is to become the norm for lower rank employees.
- Higher Education will be transformed into 'training' and, along with research, gradually submitted to market forces.

The government proposals have been rejected by the Greek academic community. The Council of Vice-Chancellors and the Senates of almost all Universities have publicly called the government to withdraw the proposals and have suggested alternative proposals which can more effectively deal with the problems of Greek Universities. Despite this, the government proceeds with promoting its proposals, in confrontation with the entire academic community. We appeal to our colleagues from the international academic community, who have experienced the consequences of similar reforms, to support us in our struggle to defend education as a public good. We fight, together with our British, French, Dutch, Italian, Spanish and other colleagues, for the respect of the academic tradition of the European universitas in current conditions.

We ask you to send electronically the appeal below, signed with your name and indicating your academic status and institutional affiliation, to the Initiative of Greek Academics (europeanuniversitas1@gmail.com) or sign online at [2]http://www.petitiononline.com/mod_perl/signed.cgi?GRUNIV
The support of the international academic community will prove invaluable for the upcoming developments not only in Greek Universities but in respect to public European Higher Education as a whole.

Initiative of Greek academics

I first came across Dana Williams and his work on an anarchist academics email list about three years ago. I was excited to find another person bringing anarchism and sociology together! There were, I believe, literally only a couple that I knew of already (Jonathan Purkis and Ian Welsh). Over the last couple of years, that number has expanded steadily and I now see that there is quite an upsurge in interest in bringing anarchism and sociology together. Dana’s talk at the North American Anarchist Studies conference last year particularly interested me in this regard. I wasn’t brave enough to travel to Toronto in February and am very appreciative to have been able to take in the talk in comfort via YouTube ([Part 1 http://www.youtube.com/watch?v=AZBtTj2dB4c] & Part 2 http://www.youtube.com/watch?v=OpENVCrGf5s). Entitled “Defining an Anarchist-Sociology [A Long-Anticipated
Marriage)

Dana’s argument intrigued me and I wanted to find out more. The following interview took place by email between March and July 2011.

My first question is, what connections do you already see existing between anarchism and sociology?

I think there are quite a few connections between the two, some major and better made, while other connections are a bit more tenuous and ambiguous. First, both anarchism and sociology are very interested in this thing called "society". That itself is impressive, given how hard it is to often even think about something as complex and abstract as society. Both also agree that societies affect individuals. Within the sociological ranks, this was put most eloquently by C. Wright Mills and his analytical device of the "sociological imagination". But, anarchists have also regularly considered large, macro-scaled institutions like capitalism, states, White supremacy, patriarchy, heteronormativity, etc., rarely losing the forest for the trees. In other words: anarchists are not apt to dwell on how bad a certain president is for a society or how evil a particular corporation is behaving, but instead call-out the entire system for its negative consequences on society. If this sounds a lot like Mills’ sociological imagination, it might not be much of a coincidence. The same Mills who coined the phrase "new Left"—that early-1960s, anarchistic impulse that rejected state-socialism for participatory democracy—also called himself a "goddamn anarchist". So, sociologists do much the same thing as anarchists and focus on society as their unit of analysis (while appreciating it is composed of individuals, groups, and organizations). In fact, sociologists very consciously eschew efforts to develop idiosyncratic theory based on particular people, situations, or events, and instead try to consider general patterns. This focus on society unites the two endeavors in a very immediate way.

Second, I think anarchism and sociology—in their better moments—do a bit of each other’s "typical" work. Anarchism has busied itself with attempts to transform society. Often this transformation is pursued through initially small acts of agitation (the formation of labor unions, community organizations, revolutionary cells and affinity groups), but also the encouragement of and participation in mass social movements, and broad insurrections and revolutions. Sociology, on the other hand, has for much of its history (and definitely during its periods with the greatest commitment to positivism) has tried to merely understand society, sometimes in the broadest, more "grand theory" strokes, sometimes in meticulous detail. Yet, anarchists have regularly pursued some of these more sociological endeavors, engaging in a rigorous critique of society, often very similar to sociologists. Much of the great classical-era anarchist theorists—such as Proudhon, Bakunin, and Kropotkin—were essentially thinking about sociological questions, having to do with social problems that people and groups in societies face. It’s one thing to desire change, but another thing to have a good, solid understanding of why that change is so necessary—anarchists are generally very thoughtful, well-informed individuals, who tend to think sociologically and just happen to want revolutionary change. And, sociologists have occasionally (but with astonishing regularity) wanted to go beyond mere analysis and participate in advocacy and even efforts to change society. Granted, most of the change sought assumes a liberal-reformist character, often focused on changes to particular laws. But, the very fact that sociologists are usually able to (sometimes with great prodding) draw conclusions and personal inspirations from what they study and eventually act, is important. Thus, sociologists do not necessarily always have their noses stuck in books, data, and abstract hypotheses.

A third connection I see is there has often been fraternization between anarchists and sociologists; they have read and considered each other’s ideas, and, occasionally, they have been some of the same people. Consequently, their ideas have—whether the purists in each camp wish it or not—influenced each other. For example, Bakunin intensively studied Comte’s positivism (liking his general impulse, but rejecting Comte’s more messianic pretensions). Weber spent time vacationing around anarchists, especially Europe’s more libertine cultural anarchists. Pitrim Sorokin—the first chair of Harvard’s sociology program—personally knew and admired Kropotkin. Kropotkin himself translated some of Herbert Spencer’s work and later Spencer signed a petition to the French government demanding Kropotkin’s release from prison. More recently, the rebellious tendencies of earlier radical culture—infused with
anarchism—inspired numerous sociologists, perhaps most important Mills who often wrote favorably of rebels, like the Wobblies. Today, the connections between anarchists and sociologists are much more muted, but maybe even more widespread than at any time in the past. The movements of the 1960s and 70s reinvigorated radical sociology and, especially in the United States, led to an explosion in self-identified “Marxist sociologists”. The radicalism of the Black Power and anti-war movements inspired young people with rediscovered/recycled Marxist ideas, some of whom chose to enter graduate school (or who were already there). This new generation of sociologists, helped shift the discipline back towards its progressive roots and (at least partially) away from instrumental positivism and structural-functionalism. Given that many of today’s popular and radical social movements are strongly inspired by and designed on anarchist principles (with a significant collection of actual anarchist participants), there has been a similar in-fill of anarchists into sociology in the last decade and a half. I have heard that approximately one million people in the US take sociology classes each year and surely a few thousands of those people are anarchists (or anarchist-friendly). Hundreds of anarchists are potentially majoring as sociologists and dozens are likely in graduate school. This has resulted in an up-swell of university-trained anarchist-sociologists (whether self-identified as such or not). I am one of that increasing number of people. Consequently, due to this influx of anarchist-movement-inspired personnel into the academy, I do not, universally, receive blank-looks when discussing anarchism or the anarchist movement amongst sociologists. Although there is often still some confusion and misunderstanding as to what anarchism is, many sociologists now acknowledge anarchism as a legitimate school of ideas and the movement as something real that is having a definite impact on the world. This is a clear change of earlier generations (especially from the dismissive generations of Albion Small or Talcott Parsons). As time goes one, I assume and hope that anarchism and sociology continue to learn more from each other.

Following on from that, what connections between anarchism and sociology would you like to see developed further?"

All sorts of closer connections could be developed! And, I think these two different things—anarchism and sociology, whether we consider them to be disciplines, ideologies, or approaches—can also be grown together, in-tandem. Let me tell you a story that I think illustrates this: near where I used to live there was a tree close to a chain-link fence and at some point, the tree began to grow into and through the fence. Not just a branch going through the fence, but the actual rings of the tree merging with the fence! Each new years’ worth of tree-growth emerged, in part, on the other side of the fence. The fence supported and redirected the trees’ growth, and the tree has now sturdied an otherwise rickety fence. Today, that tree and fence are hopelessly intertwined with each other, you couldn’t take down one without affecting the other. That’s sort of how I’d like anarchism and sociology to become (and I won’t say which is the fence and which is the tree!). I think each could not only benefit from the other, but also they could grow stronger together. This is sort of how Marxism and feminism are today for sociological theory. It’s hard to imagine talking about social change, class inequality, gender, and so forth without directly referencing the contributions of those two philosophies (which are of non-sociological origins). And Marxism and feminism have gotten all sorts of validation, institutional support, and proliferation due to their affiliation with sociology. I think it’d be great if anarchism were to intertwine itself, strategically, with sociology. And I think—in my more optimistic moments—that might already be starting to happen.

But to more specifically answer your question: I would like to see a certain sociological appreciation become more commonplace within anarchist circles. In other words, it’s be great if sociological ideas could help support and strengthen anarchist theory and the anarchist movement. For example, anarchists could benefit from an understanding of how people learn, adopt, and maintain their commitments through socialization. Since anarchists want to help people find pathways to a more liberatory future, dealing with all the practices that inhibit better social relations is going to be necessary. It’ll be important for people to more widely adopt radical social norms, which will require intensive resocialization—something anarchists already do, instinctively, but maybe not as reflectively as necessary. Knowing what socialization is and how norms work will help anarchists think more critically about their self-education strategies and also appreciate how really hard long-lasting social change is to achieve. Even insurrections and open-revolts can easily roll-back into counter-revolutionary and reactionary behaviors if a period
of resocialization doesn’t occur. I think that’s an important lesson to be learned from the Russian and Spanish revolutions during the twentieth-century. I suppose another level of sociological understanding that anarchists could benefit from is a deeper understanding of how formal organizations (especially bureaucracies) work. They are neither completely inefficient, nor completely rational. Instead, bureaucracies are somewhere in-between. And since the majority of people in modern societies are trapped somewhere within multiple such organizations, it seems crucial for anarchists to know how this embedding works, the best ways to extricate folks from hierarchical structures, and why radical movements like anarchism meet resistance when trying to do so.

Or, anarchists—and social movements more generally—could benefit from knowing a bit of social movement theory, the kind of stuff that sociologists study about social movements. And, although this research is often imperfect, there’s a lot to potentially learn from it. There’s certain aspects of movement-building and movement-work that activists ought to at least reflect upon in a systematic fashion. For example, questions about framing, resources, political opportunities, and so on. But, as my co-author Jeff Shantz has said, the attention given to radical movements that see the entire social system as inherently off-kilter, self-destructive, brutal, etc., is almost non-existent. So, sociologists ought to start thinking about and studying those social movements that have no interest in influencing the state (except to dissolve it)!

Then, the flipside of this coin is where things might get even more interesting: taking anarchist concerns or subjects, and inserting them into Sociology. I think it would be great to have anarchist ideas pop-up more regularly in sociology classes, within sociology’s many subfields, or be included as references in journal article literature reviews. And, most importantly, have those ideas treated as the serious intellectual traditions they are! What if all those aforementioned college students started encountering anarchist ideas in their introduction to sociology classes or if sociology majors started to discover a highly-libertarian form of socialism that has valid ideas and precepts, that are independent of Marxism?

Imagine if sociological theory classes taught Bakunin alongside his intellectual and activist counterpart in the First International, Marx. Both crafted their words from ideas being generated in the same radical labor milieu, but Bakunin’s warnings turned out to be more prophetic than Marx’s musings, when he predicted Marx’s socialist vision (led by and encapsulated in the state) would become as bureaucratic and tyrannical as state capitalism. Or, more interestingly, imagine Kropotkin’s ideas of “mutual aid” being treated as seriously as Durkheim’s ideas of solidarity. The similarities are, at points, astounding, and to have Kropotkin’s politically-infused analyses of survival, sociability, and justice presented with the same worth as Durkheim, would be an amazing step forward for both anarchism and sociology. Heck, most classical-era anarchist thinkers still, even today, sound like and share a lot of the same concerns as sociologists: folks like Emma Goldman, Gustav Landauer, Voltairine de Cleyre, Errico Malatesta, and Elise Reclus, and so on...

Or, more recently in the anarchist tradition, consider how devastating Murray Bookchin’s focus on hierarchy and domination as the ultimate engines of inequality (not just economic exploitation) would be for students of social inequalities, or students of modern conflict theory. And I think it is high-time to give proper credit to the anarcha-feminists of the 1970s for their role in influencing feminism’s "third wave" (as learned about by countless sociology majors in contemporary theory and gender classes). The crossover between anarcha-feminists, black feminists, black anarchists, and others in nurturing a radical, intersectional approach to inequality is a linkage still begging further exploration.

I suppose another thing that could result from drawing anarchism and sociology closer together would be an appreciation of the horizontal, cooperative social organization that is needed for social transformation. Some of this is being considered along the lines of network theory, but something more deliberate (and, frankly, more anarchist) needs to be considered here. To me, this seems to require a pro-active/positive form of sociology that studies the best avenues for social transformation, with a vested-interest in seeing those changes come to pass!
Those are just some immediate ideas of how anarchism could be sociologized and sociology could be anar-
chized—if those are even appropriate words! Otherwise, some anarchists working in (and around) sociology
have already started to consider what an “anarchist social science” would be: Would it be “applied”? Radical?
Self-critical? Maybe decentralized and autonomous from the academy? Or perhaps it’d be directly in the hands
of everyday people? A lot of these intellectual efforts (both epistemological and ontological) are trying to consider
the revolutionary pathways of social change and how anarchism (and maybe sociology) plays a role in that. So, on
one hand, an anarchist-sociology could illuminate society—as it presently is—for us, but it could also light the way
towards practical solutions for overcoming all the hierarchical crap that keeps people from taking control of their
lives and communities.

You’re in the process just now of writing a book with Jeff Shantz exploring anarchism and sociology. Could you tell
us a bit about it?

I don’t want to speak for Jeff and put words in his mouth, so I’ll just tell you my thoughts about the book. (But, I think
Jeff and I are in very strong agreement about what we’re doing, and I’ve been a big fan of his writing for years. Both
of us have had lengthy activist experiences and both of us are working professionally at mainly teaching-oriented
schools, teaching heavy course loads, but still trying to remain active with research (and with politics)!) I think
anarchism and sociology are both central commitments that we share and we’ve been fascinated at all the points of
overlap. And for me, I’m sort of amazed that these overlaps don’t get talked about more regularly.

At a recent conference presentation to the North American Anarchist Studies Network in Toronto, I joked that
our book—which we are calling Anarchy & Society, I suppose in a sort of bemused homage to Weber’s Economy &
Society—is akin to a blind date. Our book is essentially organizing a blind date, in this case between two very different
perspectives: anarchism and sociology. I think the book is gently encouraging sociology to meet anarchism ("Hey,
you should get to know anarchism. They’re passionate and not nearly as crazy as everyone says they are..."), and also
telling anarchism a similar message about sociology ("Yeah, sure, they’ve dabbled in Marxism in the past, but their
heart is in the right place..."). So, in part, it’s a sort of easing one into the conversation of the other. Conceptually,
anyway. More, practically, for me, I wanted to write the kind of book that I wish existed when I first started graduate
school in sociology. This book didn’t exist then for me! And, I know it’s a bit presumptuous to think a book of yours
will have a big impact in an area, but wouldn’t it be wonderful if it could be a sort of lighthouse, helping to guide
along new anarchist-inclined sociologists or sociologically-minded anarchists? In comparison, Marxist sociologists
can turn to “Capital” or Gramsci’s “Prison Notebooks”. Since we (when I say "we", I mean all those self-identified
anarchist-sociologists out there) don’t have anything like this that is all nice and neatly prepared for us, we’re going
to have to create it ourselves. There’s a long-history of do-it-yourself politics with anarchists. We’re always starting
up small newspapers, mutual aid projects, collectives and cooperatives, or organizing unions—and I think the same
thing is going to have to be necessary for those working in academia, too.

And, I’m sure Jeff would agree with me when I say that I don’t want our book to be the last thing said about
"anarchist-sociology". For me, that would mean the book has been a complete failure! Even if thousands of people
read it and like it. Books only have an impact when they inspire lots of other people to respond to them, to critique
them, to carry-on a conversation. I’d like for there to be an explosion (and I think that growth in anarchist-sociologist
scholarship will come soon enough) of folks writing books like this, who bring their own notions of what anarchist-
sociology is to the table. At the present moment, I don’t think there’s any strategic value in anyone declaring
definitively what the hell anarchist-sociology is... we haven’t explored all the intellectual possibilities yet! We
haven’t thought through all the practical and political consequences. We definitely haven’t experimented enough in
classrooms with students (let alone in the so-called “real world”) to know all the ways in which such ideas could be
used. So, we want our book to be a provocation, a conversation starter.
If I could, I’d like to compare some of what our book does to Colin Ward’s book Anarchy in Action. It’s an amazing work of sociology—or, dare I say, anarchist-sociology! For me, it’s the most important modern work in anarchism ("modern" referring to the post-1960s era, after the Golden Age of Anarchism, with Kropotkin, Goldman, Malatesta, and all the rest). All sociologists (and anarchists, of course) should read it. It might be a bit primitive for some, but it really captures the core impulse of the sociological imagination. And, like any good work of sociology, it destroys a lot of people's preconceptions and makes you think differently about the world. In my opinion, it’s a sociological work on par with Berger and Luckmann’s The Social Construction of Reality or Goffman’s The Presentation of Self in Everyday Life. It ought to be read and debated in theory classes… well, that’s what I think about it anyway. Others should read it and decide for themselves! I’d like to hope that our book continues the mission Ward set out with—to point out examples of anarchy happening around us, regularly in society—by also incorporating a bit more consciously sociological theory and research, all with an anarchist aesthetic and commitment.

Specifically, in the book we try to a number of things. Most importantly, we stake-out a "big tent" called anarchist-sociology, which we think lots of folks—even with completely divergent orientations and projects in mind—could huddle underneath. Then, we do some basic contrasts between anarchist thinkers and sociological thinkers. Here, obviously, the anarchist ideas of Kropotkin, Gustav Landauer, and Ward are key. Jeff has written a great chapter considering Proudhon's unique criminology, which in some ways prefigures today’s "restorative justice" movement. From the sociologist side, there’s a new take on Ferdinand Tönnies and others. We also have chapters dealing with core sociological topics, like social norms and socialization, and social inequalities. In each, we’re trying to synthesize the unique thoughts and contributions together. Then, there’s some lengthy discussions on social movements. Fortunately, both anarchism and sociology have a lot to say to each other.

The book is going to be published by Brill, as part of their Studies in Critical Social Sciences series. It’s a great, critically-oriented series. And, we’re also very excited about the prospects of an accessible version (in terms of cost) being released in paperback on Haymarket Books, so activist and non-academic folks can more easily get their hands on it.

Can you think of any particular examples of ways in which aspects of anarchist traditions have, or might, contribute to sociological imagination?

Sure, there’s lots of ways in which anarchism contributes to the sociological imagination—but I don’t know how conscious anyone has been with it. For example, anarchism’s strong allergy to social hierarchy and domination affects the sociological imagination (nay, improves upon it). Or, its activist or agent-orientation. The sociological imagination itself, as defined by Mills, may be one of the most anarchistic ideas ever developed by sociology. I think this is because the sociological imagination is best seen as a tool (or at some moments, a defensive weapon) to be used practically, strategically—as opposed to a forceful prescription of “you should do this” or “you should do that”. The whole character of the sociological imagination implies that individuals are going to figure out for themselves what social phenomenon has affected them most and how. Being able to realize that, understand that, and hopefully do something about it all, well, it’s classic anarchism! It implicitly trusts individuals to know what’s best for themselves, once they have the capacity to understand their circumstances.

Anarchism has often been bad-mouthed by its leftist cousin, Marxism, for being practice-heavy and theory-light. I’m pretty sure that’s not true, but even if it were, I think anarchism has always been sensible and ethical for placing a strong emphasis upon means. How something gets done is often as crucial to the outcome as is the end itself. In other words: we have to pay attention to how we pursue our objectives and avoid trying to meet our goals at any costs. Sometimes the costs are far too high and violate our principles! Anarchists have always taken for granted the idea that having people in control of their own lives will create a better society than any centrally-planned Utopia.
designed by a few bright minds. If Mills was asking us—asking all free individuals, not just the sociologists—to think critically about our lives, personal troubles, and struggles in a sociological fashion, then he was obviously not asking sociologists to tell the masses what their problems are. Yes, sociologists have some mighty fine and sophisticated tools for exploring society, but these tools ought to be popularized, democratized, and turned-over into the hands of everyday people. People can make good decisions—and will probably act justly, too—if they are given the means to do so. In this respect, the sociological imagination is a tool for participatory democracy and liberation, and its notion of justice and freedom is deeply indebted to anarchist notions of self-determination, autonomy, and anti-authoritarianism.

Unlike many reform movements, which sometimes utilize paid campaigners to stir-up dissent and often must go somewhere very specific, anarchists can act nearly anywhere. There’s always something for an anarchistic-minded individual to do, even in their own milieu, regardless of how progressive it is. A quick look around our workplaces, neighborhoods, popular cultures, or even families will show there’s a lot of authoritarianism and inequality around. Thus, we can always start where we are. What neighborhood isn’t in need of more active nurturing around issues of justice? What workplace—except the rare producer cooperative—isn’t run autocratically, by a small handful of people who do a very narrow amount of the actual necessary work? Or, since a lot of professional sociologists work as teachers, what classroom isn’t in need of radical democratization? I agree with Michael Burawoy here: students really are the first "public" to encounter professional sociologists. But, we spend so very little time actually considering how despotic universities and schools can be, how disempowering the life of an undergraduate can be, especially in a college classroom.

Let me tell a short story that conveys this real need. A year and a half ago I taught a student-requested course, called the “Sociology of Anarchism”. Some students approached me about teaching it and I agreed, since I like both sociology and anarchism quite a bit. Then, I realized that it would be pretty disingenuous to teach about anarchism in a hierarchically-organized classroom. So, I turned the class into a mini-laboratory, a social experiment on how to learn without authority figures (i.e. students acting as anarchists to learn about anarchism). I was still responsible for giving a grade to the students at the end of the semester, but I decided that they should be in charge of deciding how that was to be done. The students were the ones who wanted to learn about anarchism, so they should be in control of that learning. And, since they were all going to be sharing the experience with each other, the class should be democratically-managed. Thus, from the first moment of the class, I turned over the reins to the students. It wasn’t perfect, and my hierarchical-socialization got in the way of the project more than once, but it was an amazing experience. Students designed the syllabus. They spent the first weeks of the semester laying out for themselves what they wanted as learning objectives, what they would require of themselves and each other, how I should give out grades, and so on. They did all of this democratically, and achieving a near-consensus (with a class of over 40 students)! They acted completely different from any other collection of students. They were literally in charge of the class and they took seriously my promise to not act as their boss. Consequently, the students were excited, engaged, and felt in control of their learning.

My little experiment was not perfect, of course, and there's lots of things I would do differently next time. But, it changed my entire perspective on what is possible (and, judging from exit surveys the students filled out, it changed them, too)... students can be trusted with control over their educations. But, it can be scary, since it puts teachers outside of their safe space. I was in a learning environment that all my professionalization suggested shouldn’t be allowed to exist. I haven’t done a class like that since, although I’ve thought seriously about how to democratize many aspects of certain classes. Turns out that I, like most of my colleagues (and higher education itself), are just too invested in hierarchical social forms. But, as an anarchist, I’m trying my best to grow my pedagogical approach and teach more anarchistically, more regularly.

But, if most sociologists are using their sociological imagination to help them teach (and I think the good ones do this), then anarchism definitely has a lot to offer in the classroom. Transparency in the classroom is essential for students to be informed and brought in to the mechanics of a course structure. Giving students the opportunity to
practice new, liberatory skills (especially those they can use later, outside the academy) is important—my classes have used online collective decision-making software, to help prioritize projects, rank preferences, debate options, and so on. Students used all sorts of anarchistic organizing models—from small/affinity groups and large assemblies to formal consensus decision making techniques—to accomplish otherwise formidable, complex tasks. Exposing students to new worlds and new ideas is crucial. As a feminist colleague of mine tells her classes: she’s not there to make students feel comfortable in their old beliefs, but to provoke critical thought, reflection, and action. A sizable minority of my students were often visibly uncomfortable with the control they were given—a few times throughout the semester there were subtle requests to end all the democracy and revert back to a typical, predictable course... with me making all the decisions. But, in the midst of those discomforting moments, students learned a lot about education, a lot about the subject of anarchism, and even a lot about themselves and their own collective potential. Creating a memorable class is important; in the same way that anarchist artists have introduced giant puppets, stencil graffiti, or guerrilla theater into stagnant protest, anarchist teachers need to create novel environments that will create lasting impressions. Doing something anarchistic (or democratic, or justice-oriented) is going to leave a stronger mark upon students and influence them to think differently in the future than just learning about anarchism (or democracy or justice). To follow this logic, civics or political science classes would be better taught as active democracies, just like most sociology classes would be best structured as practical exercises in creating social justice. One last, crucially important thing for teachers would be finding a way to de-center their own roles and voices, especially that as “bosses” and “experts”. This doesn’t mean pushing volumes of empirical research aside or allowing an “anything goes” environment. The best way for a teacher to self-de-center would be to create a more horizontal, democratic course framework. Allow students to select topics that they find more interesting (within the reasonable confines of the course subject, I suppose), let them pick or create projects or assignments that interest them most, and when there are discussions happening in the classroom, especially between students themselves, a teacher ought to play more of a “facilitator” role than that of a “final arbitrator”. The amazing thing is, that any of these things can be done without even mentioning the word “anarchism” (but talking about anarchism wouldn’t necessarily hurt either). In other words, acting anarchistically is often more important to anarchists than self-identifying as such.

Maybe the best anarchist tweaking of the “sociological imagination" is to speak of an “anarchist imagination”. Undoubtedly, lots of anarchists have spoken of such a thing in the past, but I use the phrase in a very sociological sense. The "anarchist imagination" is the capacity for people to correctly identify the structures of domination and hierarchy that they are personally embedded in, and to have strategies in mind for how to extricate and remove themselves from those structures. In other words, it is an anarchist appreciation of the role that structures play in our lives—the impact of capitalism in imposing class hierarchies upon us, patriarchy in imposing gendered roles and sexual inequality. Or, White supremacy’s racial-based caste system, heterosexism’s privileging of straight folks, or any other institutionally-supported system of domination. The position of an employee in relation to their boss, a citizen (or worse, non-citizen) to police, a religious layperson to a religious authority, a child to a parent, an “average” person in relation to a celebrity, and so forth. Once the tight, dense network of these systems are understood, and how they affect even the most mundane part of our daily affairs, then do we have any actual ideas that can help to emancipate ourselves (and, hopefully, others in a similar position)? It’s one thing to know that you are facing the sharp-end of a sword, but another thing altogether to imagine a different sort of social relations and the strategies to pursue them. A key difference here, for anarchists, is to not think in terms of social mobility, like most sociologists do. There’s little justice in finding a way for some women (for example, White, straight middle-class women) to improve their lot in relation to men. Instead, how could the entire ugly, warped table of patriarchy be completely overturned? Thus, how can women (as well as queer and intersexed folk, but also men) find better ways of existing in the world? These are tough questions, often only answerable on a small, intimate micro-level at the outset. But, this is the beginnings of the anarchist imagination.

Thank you, Dana, for taking time to share your thoughts on anarchism and sociology.

My pleasure, Jamie!
Dana M. Williams works as an assistant professor in the department of sociology at Valdosta State University. His research has appeared in a variety of journals including Race, Ethnicity, & Education, Sociology of Sport Journal, Working USA: The Journal of Labor and Society, and Contemporary Justice Review. He is currently writing a book with Jeff Shantz entitled Anarchy & Society (forthcoming, Brill).

Jamie Heckert holds a PhD in sociology from the University of Edinburgh and currently serves as an independent scholar in the south of England. His writings on ethics, erotics and ecology have appeared in a number of books, journals and other publications. He is editor of a special issue of Sexualities and co-editor (with Richard Cleminson) of Anarchism & Sexuality: Ethics, Relationships and Power (2011, Routlege).

#UKRiots and Sociological Imagination (2011-08-10 08:00)

So with London in flames for the third night in a row and, for the first time, disturbances spreading outside of the capital, the British population are asking the natural question - what the fuck is going on? The most frequent, as well as understandable, response to this question has been moral condemnation. Yet calling these riots 'lawless looting' or 'pure criminality' isn't explanation, it’s description. In the last 48 hours of being obsessively glued to coverage of events (on social media and traditional media) one of the things that’s stood out most to me is antipathy to the former response in favor of the latter. Many people seem to assume that attempts to explain the riots are tantamount to moral justification, as if recognizing causal factors beyond the proclivities of particular individuals involved - or a purported culture they share - erases responsibility for their actions.

In extreme cases this manifests itself in outright [2]racism and [3]classism but, in more moderate forms, it merely stands as a refusal to seriously engage with the severity of events. Rather than trying to understand how and why these riots are happening, it’s implied that they’re an inevitable consequence of the characteristics of those involved: given sufficient opportunity criminals will pursue criminal acts. Yet it would be a mistake to jump to the opposite extreme and argue that ‘austerity has caused these riots’, as if that’s all that needs to be said to explain the pretty much unprecedented scenes we’re all watching.

At root, this can almost be construed as a methodological dispute about the central sociological question of [4]structure and agency: should an event like this be explained in terms of the action of people involved or in terms of wider social forces shaping that action? The obvious excluded middle is that it’s both: public policy at both a metropolitan and national level, as well as the wider political and economic environment within which that policy is enacted, has shaped the life circumstances which different groups within cities encounter on a day-to-day basis. A plethora of cultural changes, some driven by these policies and others relatively independent, have shaped how different groups experience, interpret and respond to these circumstances (not least of all the spread of social media and smarts phones, which have been central to [5]the organization, coverage and [6]clean up of the riots).
This might seem an overly abstract way of looking at such extreme events but these questions aren’t going to go away. Over the coming days, weeks and months we’re going to hear many suggested explanations of these events: breakdown of authority, youth unemployment, gang culture, failing educational systems, declining family structures, failures of multiculturalism, local government cuts, police cuts, declining educational opportunities, entrenched poverty etc. The right will invoke micro factors (some entirely accurate, others with a kernel of truth, many which are offensive nonsense) while the left will invoke macro factors (austerity, unemployment and disenfranchisement) and be condemned by the great and the good of the right-wing press for ‘point-scoring’ and ‘political opportunism’. Meanwhile, conspicuous by its absence, will be what C Wright Mills called the Sociological Imagination, the capacity to knit together the macro and the micro - the personal and the historical - through the recognition that:

“The facts of contemporary history are also facts about the success and the failure of individual men and women. When a society is industrialized, a peasant becomes a worker; a feudal lord is liquidated or becomes a businessman. When classes rise or fall, a person is employed or unemployed; when the rate of investment goes up or down, a person takes new heart or goes broke. When wars happen, an insurance salesperson becomes a rocket launcher; a store clerk, a radar operator; a wife or husband lives alone; a child grows up without a parent. Neither the life of an individual nor the history of a society can be understood without understanding both.”

'Community self-defence’ in response to London riots (2011-08-11 08:00)

In Enfield, North London, hundreds of residents took to the streets, with disturbing reports from a journalist in the area:
[EMBED]

In Southall, West London, members of the Sikh community stand guard outside their temple:
[EMBED]

In Dalston, East London, Turkish shop owners aggressively patrol the streets:
In Eltham, South London, rivalries are put aside as fans of opposing football teams ([2]firms?) come out en masse. Lots of reports on Twitter claiming they were [3]English Defence League:

1. https://twitter.com/#!/PaulLewis/status/10100574710984704
Dear All,

The Higher Education Research Group at the University of Southampton would like to invite you to a discussion of the recent White Paper on higher education on 19 August. These government proposals precede actions and legislation which will have a major effect on the higher education sector in which we work and/or study. The White Paper is currently out for consultation. The government welcomes input from anyone with an interest in the proposals.

The meeting on 19 August will start at 10.15am and end about 3pm and will be at the University of Southampton. I attach a copy of the programme as it stands at the moment. It is still "under construction". Professor Ted Tapper, Joy Moloney and Professor Roger Brown will address aspects of the existing White Paper while Professor John Holmwood will propose an alternative White Paper. As well as presentations, there will be plenty of time for comments and questions.

The meeting may remain just a discussion of the issues or may potentially provide input into the consultation through the Higher Education Research Group or a university response or a Student Union response or a UCU response or response from the Campaign for the Public University. These are all options.

If you would like to attend the meeting, please let me know so I can order appropriate amounts of refreshments (B.H.M.Johnston AT soton.ac.uk) I will also email those who would like to attend some reading to do beforehand. I will also be able to let you know which room the event will be in shortly.

Apologies for the short notice and mid-August date of the meeting, but the consultation period for the White Paper is short, ending in September.

Thank you.

Best wishes,

Brenda Johnston
Senior Research Fellow and Lecturer

University of Southampton

Communities Are Social (2011-08-13 00:06)

Note: All the [2]names in this story have been changed. But the photograph above gives a clue to the identity of one of the towns mentioned.

No matter how hard we labor to make our [3]homes more permanent, more stable, we never can truly achieve this goal. Land claims and buildings and borders may bind us to the earth, but they only do so, precariously. Deeds change hands, architecture crumbles, territories expand and contract and the stories and maps we make of these things can easily be distorted or ignored. This doesn’t mean that our homes are something vulnerable or fragile, prone to destruction or easy to break, but rather, that they are something dynamic, something mobile, something
temporary, something alive.

It is perhaps this fact of home’s transience, of home’s mortality, that draws us to other people, that binds us into what social scientists call a community, a common way of living, a common way of life, that works to starve or sustain us whenever our homes prove unable to provide. Communities emerge out of the everyday routines of our homes, what sociologist Robert Park would have called its social ecology, those parts of the earth where people have settled in so deep that that their presence there seems almost natural.

I learned this the winter backwoods of Manitoba doing ethnographic field research for the Canadian Forest Service. Here was where I was actually able to bear witness to the ideas of Robert Park happening. For it was in this place where people would gather together for a community social every time there was some significant shift in their home’s passing, like a wedding or a retirement party, a birth or a graduation or perhaps even more importantly, some kind of emergency or crisis.

That was the reason behind the community social I saw happen there. Money was needed after a house caught fire in Forêt Bleu. Maurice Normandin’s old place. Nobody was really sure how the fire started. Some thought that it was arson. That Yves Bernard was to blame. But it was hard say for sure. The house was old and weathered, long abandoned by its owner and marked condemned by the state so it just as easily could have caught fire by accident.

"You never know," Berthelette Hiebert said to me the morning after it happened. We had both pulled off the road to see what was left of the half charred house. "It could have been the wood stove or a bad wire," she said. "But it sure looks more like a lover’s quarrel to me."

However it happened, it left Crystal Wannemaker without a chimney, without a stove, and only part of her living room floor. That’s what it said on the flyers anyway, the ones posted to every telephone pole between St. Marc’s and Fort McVey. Meet Your Friends! Help Your Neighbors! Come To This Winter’s First Community Social! Cheap Drinks! Dancing! More! The flyers were photocopied on yellow paper and pasted under the handwritten plea were three small faces, the school photographs of each one of Crystal Wannemaker’s three young boys.

The Women’s Guild of St. Margaret’s Church was sponsoring the social. Nancy Chambers, Dorothy Frank, Marjorie O’Keefe. The Women’s Guild of St. Margaret’s Church was always sponsoring some social. They had to. As long as they were raising money to help the needy or the poor, they could bully the Mill into employing a part-time priest. And as long as they employed a part-time priest, they didn’t have to attend the Eucharist in Falls Bridge, the only other place along the Ozhaa River where you could attend a Catholic Mass in English, rather than Latin or French.

So the house fire in Forêt Bleu served The Women’s Guild of St. Margaret’s well. They would rent out the Falls Bridge Hockey Arena, have their husbands cart over kegs of beer and cases of rye and vodka bought cut-rate from the Liquor Store in Poplar Falls, hire the arena’s hockey referee Buckle McGee to hire a few others to sell the alcohol and spin the records and unlock and lock the arena’s front door, and consider their good deed done. None of the women ever actually went to any of the socials they sponsored. The kind of people who actually attended such things weren’t exactly their kind.

Which meant practically everyone else living in or around Falls Bridge. Most forest dwellers wouldn’t miss a community social. Especially in the dead of winter, on a night when there wasn’t a high school or Junior League hockey game. Some drove in from as far as two hundred miles away, through very heavy snow. Truckers and cutters working out in the northern bush camps; kids off attending university in the city; relatives and friends from neighboring townships and Indian territories, so small they were marked by numbers instead of names. They’d all venture out to the hockey arena in Falls Bridge, arriving from every possible direction, entering the traffic of people who traveled much shorter distances. Six miles. Four miles. Two miles. From Fort McVey, from Bunk Town, from
Poplar Falls; from St. Marc’s, from the Moor, from Forêt Bleu; a steady stream of logging trucks and pick-ups, making the dark of the early night bright with light.

By seven the traffic slowed and the parking lot of the arena became full, then overflowing, and by nine someone from one of the houses across the street called in the police, since skirmishes between boys from rival high schools kept brewing. Some were students at the public high school located right next door to the hockey arena; others were students at nearby private schools, L’École de St. Marc’s and Mitag Industrial and Collegiate. Insults were shouted in Mitagwa or English and then returned in French, and punches were thrown between cousins who attended different schools.

The two police constables who arrived didn’t have to do too much to stop the fights. Just make their way through the crowds and beam their flashlights onto faces, threatening to call the offender’s parents, a punishment, they assured them, far worse than arrest. They made several laps around the parking lot, ignoring the swarms of people huddled around Len Charles’ pick-up, as well as Len Charles himself, who sold zip lock bags filled with cheap marijuana and very expensive hash oil doled out in old Coke bottle caps. "Janet bringing the kids over tonight?" one constable asked the other, pulling off his gloves, then tucking them along with his flashlight under his arm so he could dig for a cigarette.

"Yeah," the other constable answered walking towards one of the parking lot garbage cans that some kids were using to stoke a small bon fire. "You going to put that out when you're done?" he asked them, leaning forward slightly to see what they were burning to make the flames. "Yeah, we're watching it," one of the kids answered. He held a cigarette between his second and third fingers and a bottle of beer between his second finger and his thumb.

Eight dollars bought admission into the community social, where alcohol tickets were sold at a table away from a makeshift bar, temporarily set up in the arena’s concession stand. One dollar bought a beer, two dollars a shot of whiskey, and for an extra fifty cents you could mix your beer or whiskey with Orange Fanta or ginger ale. You could also buy coffee at the bar and hot chocolate, slices of banana bread wrapped in plastic and hot peanuts sold in paper coffee cups. A line of people stretched out all along the length of the concession stand, five and six bodies deep, and every so often someone would ask Joss McAdams or Carmen McClean, the two young women working the stand for Buckle McGee that night, if they were going to plug in the hot dog grill or popcorn machine.

"You two going to be making hot dogs tonight," a voice would ask every so often, more often then the time it took for the song coming over the arena's sound system to change. "Grill's broken," Joss or Carmen would shout back, and then sometimes you'd hear one of them ask the other, "Did Terry ever go and get that marker so we could write-up a sign?" "You two making popcorn tonight," the next voice would rise up. "Machine's broken," Joss or Carmen would shout back, and then again, "Where the hell is Terry?"

The arena became packed. People filled the Home Side and the Away Side. They leaned up against the scuffed up walls of the covered ice rink or sat on them with their legs dangling over the walls worn out ledge. They crammed the bleachers and the dance floor, teenage girls and young couples, fathers and their daughters, old marrieds and the occasional ten-year old boy, who would try to break dance or slam dance or slide on his snow-panted knees across the entire length of plywood dance floor.

Mothers gathered in the empty penalty boxes to chat and nurse their babies. Some old men got Buckle to open up the Coaches Office so they could smoke and play cards. And all through the night little kids chased each other in and out of the locker rooms, their screeches slowly subsiding around eleven, when their parents called it night, rounded them up, and then ushered them, bright-eyed and exhausted, out the arena’s front doors.

With every family’s exit, the social grew more raucous and the air more thick with hash smoke, especially after the Rob Roy and Queen's Crowne Local closed and the hockey arena in Falls Bridge suddenly became the
only place along the Ozhaa River that night where you could come in from the cold and get a whiskey or a beer. But by three o’clock all of the alcohol was sold, so again there was another exodus of revelers and for a few minutes people’s shouts and laughter echoed through Falls Bridge, which was dark and quiet with the sleepiness of night.

But by two o’clock every last one of them was rounded up as their parents packed up their belongings to leave, the bleachers and covered hockey rink slowly emptying. With every family’s exit, the social grew more raucous, and the air, more thick with hash smoke. By three o’clock all of the alcohol was sold, so there was another exodus of revelers, and by four o’clock Buckle McGee turned the music off and the lights up, a signal to the very last few people who remained, mostly young women in vinyl miniskirts and men in dark green bush boots who, even without the music and the darkness, lingered on the covered hockey rink to make out, where, just moments before, they had been dancing.

End Note: I have also written of the Canadian backwoods [4] here.

It has been over 50 years since C. Wright Mills wrote the Sociological Imagination. In that time the world has changed beyond recognition: the Cold War ended, the Keynesian consensus broke down, a globalizing neoliberalism rose to the ascendency and the internet began to transform human communication and culture. In recent years, with 9/11 and then the financial crisis, it seems that history has returned with a vengeance. Is Wright Mills' notion of the 'Sociological Imagination' still pertinent today? How can Sociology help shed light on the rapidly transforming world around us and the consequences of these transformations for the people who inhabit it? What does the 'Sociological Imagination' mean today?

Short articles are invited which engage with these themes, or particular aspects of them. Submissions should be 500 – 1500 words and e-mailed as a Word document. There is no deadline for submissions.

[1] CALL FOR PAPER is a big collection of call for papers, journals and conferences. The list is updated daily on the subjects are engineering, medical, social sciences and more. You may also publish journals, conference and call for papers for free.

"Corporations are people too, buddy!" (2011-08-13 10:46)

An intriguing insight into the outlook of the American political class coming from Republican front-runner Mitt Romney:
The Intellectual's Responsibility: the legacy of C Wright Mills (2011-08-13 22:06)

In March 2012 it will be the 50th anniversary of the death of C Wright Mills. In this special series, Sociological Imagination will be considering the life, legacy and ideas of this unique man and what they mean for Sociology in an age of austerity.
"As a type of social man, the intellectual does not have any one political direction, but the work of any man of knowledge, if he is the genuine article, does have a distinct kind of political relevance: his politics, in the first instance, are the politics of truth, for his job is the maintenance of an adequate definition of reality. In so far as he is politically adroit, the main tenet of this politics is to find out as much of the truth as he can, and to tell it to the right people, at the right time, and in the right way. Or, stated negatively: to deny publicly what he knows to be false, whenever it appears in the assertions of no matter whom ... The intellectual ought to be the moral conscience of his society at least with reference to the value of truth, for in the defining instance, that is his politics. And he ought also to be a man absorbed in the attempt to know what is real and unreal."

C. Wright Mills in On Knowledge and Power

Do you want to be a news editor? (2011-08-14 08:00)

The Sociological Imagination is currently trying to recruit another news editor. This would involve identifying news stories relevant to the site, collecting pertinent links, writing a short commentary and e-mailing it in to be posted online. There would be no fixed time commitment for the role. It would literally just be a case of picking certain new stores (relating to the intersections between higher education, politics and the interests of social scientists) and writing a couple of hundreds words about them to provide evaluation and context. If you’re interested or would like to discuss the role then please get in [1]contact.

UK Riots 2011 – A 'social revolution’ yet to take place? (2011-08-15 08:00)

[EMBED] In the chapter titled “Third World,” the historian Eric Hobsbawm writes in his autobiography Interesting Times that, "Columbia was, and continues to be, proof that gradual reform in the framework of liberal democracy is not the only, or even the most plausible, alternative to social and political revolutions, including the ones that fail or are aborted. I discovered a country in which the failure to make a social revolution had made violence the constant, universal, omnipresent core of public life." This is the sad truth of an empire a little more than sixty years ago reduced to ruins in a matter of thirty years or so and being forced into a process of third worldization with its government and people pitted against each other. It needs a life as long as that of Hobsbawm to notice rapid changes that are strikingly historical and yet unpleasant in terms of the role they play in day-to-day life. In a way there is a sinister resemblance between the Norway attacks in July and the UK riots just now. Both have the look of being predetermined and waiting to happen. Somebody had to throw the match for the leaking fuel tank to catch fire and explode. It could be as simple as that. In all such cases of violence of a larger kind which have the apparent look of “suddenness” there is no doubt the tacit support of a significant section of the masses, no matter how hard the corporate-driven media might try to make it look like this is the work of a few fringe “criminal” elements. That’s definitely not the case. Both the Norway attacks and UK disturbances are expressions of individual and collective bitterness and hatred towards a non-responsive and indifferent government that does not hesitate in using violence against them to keep a semblance of order. In the case of UK the difference is that the riots had a forewarning. When the vehement student tuition fee protest was ignored towards the end of the last year the government created the conditions for these riots. I was surprised then that the government dared to ignore a protest of that magnitude, something that would've scared those at the helm of affairs in a poorer nation as well. When it did ignore the warning, it clearly demonstrated to the person on the street that it would not relent to popular pressure and was determined to go against the will of ordinary Britons. When a normal person is violent it is usually because all avenues to dialogue are closed and he or she wants you to hear them out. In cases where it is carefully thought out the violence turns into revolutionary action. In any other case the very fact that all customary restraints are broken down is a sign that there is nothing to stop people on streets from turning into mobs out of anger and frustration. The looting is a symptom of a larger malaise that stems from the fact that most people consciously or unconsciously feel unjustly treated. This is a serious reminder to the David Cameron government on two counts. First, they – this includes the other European governments as well - better wake up and provide welfare measures to a large number of people especially working class whites who feel grieved by the fact that they’re being completely neglected in their own country along with the ill-founded perception that the government sucks up to immigrants, in addition to moving the jobs abroad at their expense. The truth is that the foreign policy pursued by western governments is a treacherous one where corporations draw the blood of cheap third world labor and make massive profits. The multinational companies are colonial in character and not bound by rules that operate in western liberal democracies. The terrible abuse of workers who get paid enough by local standards to barely survive will simply not be accepted in a developed nation. The "immigrant" is another word for cheap labor and the devastation caused by outsourcing to bodies of the third world poor is not a guarded secret as such. I can see where men like Anders Brevik responsible for the death of seventy innocent lives come from. They’re victims in a way no different from rioters on the streets of London and other cities. They feel their way of life has been threatened and the government is prejudiced against them. They’re not completely wrong in feeling that way. An enlightened government needs to understand, assuage and respond to their grievances through positive and inclusive means that will give them a chance to education and a decent life. Economic reservations have to be made in terms of jobs and other benefits to local citizens who come from deprived backgrounds. That’s a practical solution. The world is not a global village and the locals are as local as ever before. Therefore there is nothing wrong in prioritizing their interests and giving consideration to their feelings. The second count is that there is no point in pursuing a policy of vengeance. The arrests and harsh punishments meted out to rioters only convince the people that the intentions of the government are mala fide. As such every section of British society ranging from students to workers has serious doubts about the credibility of the Tory government. The punishments will add to their disastrous resume as the party in power. The violence could temporarily be suppressed. But, if the government has the slightest imagination it should know that they will not be seeing the last of either the riots or the rioters. Back in the 1920s when the young John Steinbeck was ready to embark on his life as a writer, he received a piece of advice from his teacher who asked
him to go to Europe since he had no money. She told him that "in Europe poverty is a misfortune, but in America it is shameful." Globalization, in the last couple of decades has ended up making the whole world ashamed of being poor, and with the weakening of conventional social bonds across the planet the poor are condemned to isolation in addition to the burden of poverty. The result is endemic violence which is "the constant, universal, omnipresent core of public life." While this is painfully accepted as a fact of life in most parts of the third world we're getting to see more and more of it in the nations of the first world as well.

Anthony Giddens on the value of Social Science (2011-08-16 08:00)

[EMBED] A contentious claim towards the end of his talk: it’s not enough to quote isolated examples about the impact of social science, we need systematic data. What do you think? Impact is a hugely contentious issue, particularly when construed in reductively economic terms, nonetheless perhaps making a case for social science necessitates some way of measuring the effects it has outside the academy. Does this measurement necessarily have to be quantitative? Could social, political and cultural impact somehow be measured? Is the whole notion of measurement itself problematic?

Benjamin Geer (2011-08-17 11:59:06)
Giddens is perhaps [1]not in the best position to make claims about how social science can contribute to society.

Ken Robinson - Collaboration in the 21st Century (2011-08-17 08:00)

In this talk [1]Ken Robinson talks about the possibility of making innovation a systematic habit through cultivating the social and cultural conditions for creativity and imagination. Though this is usually the terrain of vacuous management gurus, Robinson brings an enormous amount of intellectual depth to the nature and preconditions for creativity, understood as "the process of having original ideas that have value" - or, as he adroitly terms it, applied imagination.
Call for Papers: what does the Sociological Imagination mean today? (2011-08-18 08:00)

Dan Stokols (2013-09-27 09:16:07)
I teach a graduate seminar in the School of Social Ecology at the Univ. of California, Irvine on Strategies of Theory Development, in which I review several issues and challenges confronting cross-disciplinary theorizing– and at the same time, I encourage students to develop their own original theoretical ideas. One of the most important required readings in my seminar is C. Wright Mills’ Appendix, On Intellectual Craftsmanship, included in his book, The Sociological Imagination. Many cohorts of graduate students who have taken my course have found Mills’ advice on how to cultivate and nurture conceptual imagination and creativity to be extremely valuable as they strive to identify and define new theoretical constructs; and to posit the inter-relationships among sub-types of the construct, and the links between their own construct and other related concepts. Here is the URL for my graduate seminar on theory development fyi: https://eee.uci.edu/12w/50890. By the way, I have found your articles on the Sociological Imagination web site to be very thoughtful and stimulating. Best wishes, Dan Stokols (@dstokols on Twitter and dstokols@uci via email)
thanks Dan!

if you have ever fancy writing a short blog post about the course & related ideas please get in touch - mark AT markcarrigan.net - i’m really interested in how theory development is taught or, at least in the UK, often isn’t.

Making the Case for the Social Sciences: Crime (2011-08-18 12:00)

(SI published a [5]podcast interview with two senior people in the campaign a couple of months ago)

1. http://www.campaignforsocialscience.org.uk/

Positive Psychology (2011-08-19 08:00)

In this fascinating talk Martin Seligman talks about the discipline he, more than any other, helped bring into the mainstream. There are lots of important theoretical, methodological and political criticisms to be made of [1]positive psychology - check out Barbara Ehrenreich’s superb [2]Smile or Die, written while she was undergoing treatment for cancer, for a particularly powerful collection of them.

Nonetheless it represents something powerful and exciting. Not just a science of happiness - which has become an influential idea within the UK political elite thanks to [3]Richard Layard in the House of Lords - but rather a science of human flourishing.

This is without doubt a multidisciplinary conversation. A fascinating literature is emerging within Anthropology and, in the UK, the [4]BSA Happiness Study Group has been active for a year now.

Ken Plummer: Tales of a Critical Humanist (2011-08-22 08:00)

BSA Presidential Event
Ken Plummer: Tales of a Critical Humanist

Monday 17th October 2011
The British Library Conference Centre, London

Book now: [1]http://www.britsoc.co.uk/events/presidential

The BSA President, Professor John Brewer, proudly announces the third of a series of Presidential events to celebrate the 60th Anniversary of the British Sociological Association.

UK sociologist, Ken Plummer, has worked to bring ‘marginal’ topics, theories and methods to the forefront of contemporary sociology and the day will consider the value of such developments. His 'tales' will provide a personal, panoramic view of the state of sociology.

Ken Plummer is Emeritus Professor of Sociology at the University of Essex and has been a doubting sociologist for over 45 years. Since the 1960’s, he has helped to pioneer the sociological study of contemporary gay life and develop a critical sexualities studies as well as playing a prominent role in developing a focus on life story and narratives in sociology. Amongst his key books are Sexual Stigma (1975), The Making of the Modern Homosexual (edited, 1981), Documents of Life: An Invitation to Critical Humanism (1st ed 1983; 2nd ed 2001), Telling Sexual Stories: Power, Change and Social Worlds (1995) and Intimate Citizenship: Private Decisions and Public Dialogues (2003). He has aimed to foster a humanistic sociology that works against the grain through its focus on individuals, reflexivity and political values – a sociology he calls Critical Humanism. His most recent book Sociology: The Basics (2010) is a call to arms for a sociology that will help make a ‘better world for all’.

We are also delighted that the following high profile speakers will join us to reflect on Ken Plummer's work:

Jeffrey Weeks is Emeritus Professor of Sociology at London South Bank University and a pioneer of gay and lesbian studies and the social historical study of sexualities. His most recent book is The Languages of Sexuality (2011).

Liz Stanley is Professor of Sociology & Director of the Centre for Narrative and Auto/Biographical Studies at the University of Edinburgh and a pioneer of feminist epistemology, and auto/biographical studies. Her most recent
book is Mourning Becomes... Post/Memory and the Concentration Camps of the South African War (2009). A new edited collection is currently being worked on (with Ken’s involvement): Documents of Life Revisited.

Rob Stones is Professor of Sociology & Dean of Social Sciences at the University of Essex and a pioneer of structuration theory. His most influential works are Structuration Theory (2005) and Key Sociological Thinkers (2nd ed 2008).

The Quantified Self (2011-08-23 08:00)

In this fascinating TED talk, Gary Wolfe discusses a new hobby which digital technology is giving rise to - people collecting, reviewing and acting upon data about their own lives. With smart phones, as well as the innovative and evergrowing range of applications available for them, it is becoming possible to quantify vast swathes of your everyday life and to do so in a way which is susceptible to review and response. What consequences do these new possibilities hold for being human? Is this something which will remain confined as a passtime for the geeky and curious? Or is it something which heralds real change in the way human beings approach their existence? And what onearthwouldFoucaulthave made of it...?

[EMBED]

Milena Kremakova (2011-08-23 23:37:44)
Utterly fascinating topic, but he did not analyse it at all, only presented some cool new gadgets and at the end appeared to endorse an unfounded opinion that we ought to use those in order to know ourselves better. He did mention that these devices and measuring activities are both a way of extrospection and introspection, but so what does that mean? There are so many more things he could have at least hinted at. This numerical knowledge presumes a very narrow notion of the self. It is also part of the redirection of human activity into the virtual sphere. There’s a whole new area of study about us becoming more like cyborgs due to our increasing reliance on and symbiosis with human-produced tools. In what way are the new self-measurement culture different to previously existing modes knowledge of the world and self-knowledge? How does participating in it redefine the relation between the self and its environment? How do people actually use these tools for self-improvement - and do they perhaps also use them for anything else - as an excuse for communication, or just a past-time, or...or...? Is this a quantitative difference (we have more data) or a qualitative one (we have better data)? Is this knowledge? Is it knowledge for the sake of something - or for its own sake? What about navel-gazing? ... ... ...

The Filter Bubble - How the hidden web is shaping lives (2011-08-24 08:00)

In this RSA talk the pioneering online campaigner [1]Eli Pariser talks about a crucial and, as yet under-discussed, danger facing the the social media web: the expansion of filtering into every aspect of our online activity. Sites collect data on usage patterns, particularly our reactions to being presented with content and the action (e.g. 'like', 'share', '+1') we take in response to what we see.
Without collecting such data any possibility of a semantic web is immediately foreclosed because human meaning has to enter the processing system somewhere. Yet the sheer opacity with which these technologies are being developed, let alone how they are being implemented on the web, demands urgent political debate.

However it would be easy to be alarmist about this and throw the baby out with the bath water. The problem is not filtering per se but rather the private and opaque nature of this filtering. In so far as the development and roll out of the technology is reliant on the corporate structures of capitalism, it’s difficult to avoid the former entirely. But the demand shouldn’t be for liberation from the filter bubble these corporations have placed us in - it should be for them to make their technology available to us so that we can design and implement our own filtering bubbles, as part of our ongoing day-to-day interactions with the internet, driven by our awareness of what we do and do not want to see. Certainly the computational systems they’ve developed allow us to see connections which we might no be consciously aware of: I’ve come across rafts of fascinating reading through following Amazon’s 'other customers who bought this also bought' system. But this should be an opt in system, rather than something imposed upon us.

It could be argued that there are political problems inherent in this as well - as Cass Sunstein plausibly argues in his Republic 2.0 - given the possibility that already politically divided societies are likely to become ever more polarized when individuals self-select for all the content they encounter. However firstly it’s necessary if we’re going to have any possibility of engaging productively and creatively with modern digital technology simply because of the exponential trend of content growth which goes hand-in-hand with the mass uptake of social media tools. Secondly, the problems attached to it are contingent and emergent (i.e. they result from when people in practice doing this filtering badly, often for reasons not of their own making) rather than being intrinsic to filtering itself. Thirdly, the sheer cultural value of web 2.0 demands new proficiencies on the part of its users: we can either retreat from information overload (see the growing trend for going offline, protectively lock ourselves into virtual bubbles of our own making, stay passively within the corporate infosphere) OR we can embrace the challenges that come from this revolution in human communication, using the tools available to us in order to dialogically develop a dynamic
filtering orientation as we negotiate an ongoing path through human culture in the 21st century.

Which I think is the main concern which arises from the filter bubble as it presently stands

3. http://www.youtube.com/embed/6_sim_Wc3mY

M (2011-08-24 10:07:55)
Very few people are aware of this today, even though this phenomenon is nothing new. In fact, it’s been known about for over 50 years, and the fathers of information theory, including Claude Shannon and von Neumann, debated its implications for society and human interaction. At the time they argued that humans, at a basic level, act as receivers and repeaters of information, and this causes ideas to become reinforced over time within social groups, sometimes becoming ideologies. It could be the case the subcultures we saw in the 1960s and early 1970s resulted from attempts to apply this to society, since that was the kind of thing being discussed by information theorists at the Macy Conferences several years before. But how does this fit in with your article? Early cyberneticists believed that this ‘filtering bubble’ is present at the group level. Bearing in mind that ‘information’ is defined as the change in entropy - the degree of uncertainty - we find that very little information is actually exchanged within most social groups. In fact, information and entropy can be quantified, and we have mathematical expressions for the amount of information exchanged. To actually have any flow of information, as opposed to the mere communication of ‘content’, there has to be some disagreement and uncertainty between communicating parties.

Sociological Imagination (2011-10-31 09:28:13)
I’m not sure I’d accept the distinction between information and content on a philosophical level but this is a fascinating response - sorry I missed it at the time. I’ve been trying to sketch out an account of ‘information ecology’ for a while via a couple of conference presentations and a book chapter (relating to protest movements & sexual communities respectively) so I definitely need to follow up the references you’re pointing towards.

An information diet? | The Sociological Imagination (2012-03-06 08:02:09)
[...] of the some of the more radical and collective solutions to the problems he identifies? Such as collective filtering, which is particularly pertinent for [...]

Arthur (2011-08-31 15:52:21)
Not Verso publishers, mind you, but Recto|Verso blog, a project by the staff of F.A. Bernett Books, specialists in rare & out of print art, architecture and cultural history: www.fabernett.com. Thanks for sharing the post!

**Do you want to be a news editor?** (2011-08-26 08:00)

The Sociological Imagination is currently trying to recruit another news editor. Open Culture (2011-08-26 12:00)

It’s easy to be quite sceptical of a website which describes itself as ‘the best’ in its area of specialism. In the case of [1]Open Culture it’s almost certainly true though. Seriously check it out: the range of audio books, online courses, films, language lessons and eBooks on there is stunning.

For other resources which might useful for teaching Sociology take a look at the BSA Theory Study Group's page [2]here. If you come across anything that you think should be listed then please do [3]get in touch.

3. mailto:m.a.carrigan@warwick.ac.uk

Boys Named Kip, Not Kim (2011-08-26 12:39)

There’s an episode of the American television show Seinfeld where Elaine has to hide from everyone the fact 752
that she hated the Academy Award winning movie *The English Patient*. You can watch a clip from this episode [2]here.

For me, it’s been the same scenario since I walked out of *Slumdog Millionaire* several years ago. People (and especially students) always ask me what I think about it because in the early nineties [3]I lived and worked in India and have spent much of my adult life teaching and loving all stories Indian, whether realist or fantastical, tabloid or literary, Indian made or not. But I hated *Slumdog Millionaire*.

I hated it for its relentless and gratuitous violence; for portraying the poverty of Mumbai like some exotic side show oddity, like the photographs American soldiers took of the abuse of Muslim prisoners in the Abu Gharib Prison; for completely obscuring the teller behind the story (a white guy based in London); for all the endless story about the hard and ugly lives of its real life slumdog stars and their one week respite in Hollywood and in Disneyland (where photographs of Slumdog’s adorable street urchins, all dressed up in Kid Gap and gazing at the singing puppets of the *It’s a Small World* ride at Disney World, were published practically everywhere).

So to everyone who asks me: No, I didn’t see *Slumdog Millionaire* and for what its worth, if you want to know how tough going it is for some children in India, I suggest watching Zana Brinksi’s [4]*Born Into Brothels*. Because, as filmmaker Trihn T. Minh-Ha might say, more important than who or what a story is, is making clear where, when and how its from (what I call the ethnographic back-story), *Brothels* makes it clear:

*End Note: Like "Seinfeld’s" Elaine, I also hated the movie version of "The English Patient," except for the scenes that had Kip (played by a rope-y haired Naveen Andrews) in them. See Naveen, with actress Juliette Binoche in the movie still above.*

*End Note 2: For an excellent article about how the Abu Gharib Prison photographs can be read as "tourist snapshots," [5]click here. It was written by the art critic, (or, what we would call in our disciplinary circles, visual sociologist), Sarah Boxer.*

17th October, University House

The workshop is organised through the School of Sociology & Social Policy, in affiliation with Timescapes, an ESRC funded qualitative longitudinal study.

Qualitative Longitudinal methods are used to reveal how change is created, lived and experienced, particularly in policy and organisational contexts where individuals are required to change their behaviour, or where change processes in policy or practice environments need to be evaluated and better understood. This methods training day in Qualitative Longitudinal (QL) Methods has been designed to provide a unique opportunity to experience the highest quality training in Qualitative Longitudinal Methods and Secondary Analysis. Practical issues of generating and managing data using QL methods will be covered, and examples will be given of the rich variety of ways in which time can be embedded in social enquiry and how it can be utilised as both a conceptual category and methodological strategy. The workshop will also give delegates a critical understanding of strategies of secondary analysis, as a key element of QL research. Through a choice of linked practical sessions participants can engage in depth with practical aspects of research, including a bespoke IT workshop using the Timescapes Data Archive. There will also be a Masterclass for those already working with QL methods and seeking training in highly specific and sophisticated aspects in their use. In addition practical workshops linked with the presentations, on Sampling and Secondary Analysis, are also available.

For further details and an application form please visit: [1]http://www.sociology.leeds.ac.uk/

Call for Papers for the Centre for the Study of Women and Gender Seminar Series (2011-08-28 08:00)

Call for Papers for the Centre for the Study of Women and Gender Seminar Series

The Centre for the Study of Women and Gender at the University of Warwick would like to invite postgraduate students from any institution working in the field to present at the Graduate Student Seminar Series for the coming academic year 2011/2012. We welcome submissions from a number of disciplines on any gender related topic. As well as welcoming conventional papers, we also encourage innovative and creative methods of presentation (such as the use of visual or more interactive materials, for example).

The annual Graduate Seminar Series provides a friendly, informal setting for graduate students to give presentations and exchange ideas relating to women and gender studies. Seminars aim to be interactive, and at each meeting students present for twenty minutes each on a topic of their choice, followed by a question-answer session and general discussion. Attendance is open to everyone, both faculty members and students, within and outside the university. Seminars will take place on two or three Wednesdays per term at 5pm (dates TBC).

The goals of the seminar series:
• To provide a safe and comfortable venue for students to present their research, to fine-tune conference presentations/possible publications or to simply get used to the idea of speaking in front of a group.

• To encourage everyone to get together informally to learn about what the student community in the UK are working on in relation to gender/feminist studies.

This centre is interdisciplinary and draws its membership from across the university. It aims to provide a focus for research and teaching on women and gender in the university and to facilitate the development of interdisciplinary research in the area of women’s and gender studies. Women’s and gender studies has been established for around twenty years at Warwick; the Centre itself was established in 1993 and in the summer of 2002 it became a research centre based in the [1]Department of Sociology. For more information about the Centre please visit:[2]http://www2.warwick.ac.uk/fac/soc/sociology/gender/

Abstracts should be:

• Maximum 200 words

• Submitted along with a brief biography of the author; including their institution and department, and research interests.

• Submitted by September 1st 2011

• Email abstracts to Donna Greene: D.L.Greene@warwick.ac.uk

The 'prestige' of journals in a social media age (2011-08-29 08:00)

Prestige:

1. reputation or influence arising from success, achievement, rank, or other favourable attributes.

2. distinction or reputation attaching to a person or thing and thus possessing a cachet

Journals seen as prestigious have a reputation for possessing favourable attributes: they are well managed, have high editorial standards, publish good papers. In fact all these factors are, in practice, related. They’re also seen to be
related – perhaps, once might suggest, to an extent which outstrips the reality. Great faith has been placed in their capacity to filter - with high rejection rates, stringent editors, thorough review process and imposing reputations, the readership can be confident that only high quality papers make the grade (with the often implicit corollary that papers not in these journals aren’t high quality).

As a cognitive category, a presupposition which undergirds our evaluative judgements – meant in a way which encompasses [1]this notion - it's profoundly 20th century. But if you question it too naively, people are likely to construe this as an attack on academic standards. Why would they leap to this conclusion? Because the conceptual architecture of alternative judgemental practices had not, until recently, emerged: this is where social media comes in.

The notion of ‘prestige' – with its hierarchical connotations and intrinsic links to bureaucracy – rests on the assumption that filtering, as a social and culture process, relies on fixed elite organisation and, contingently, commercial motives to meet the inherent costs. But that obviously isn’t true anymore. Social media enables an ongoing process of communal filtering which, depending on the dynamics of participation, can be come profoundly refined – for a trivial example, if you use Twitter in an engaged way, just look through your feed and see what percentage of the links posted are things you find interesting. For me it’s often 90 % or more. Now imagine the same process, working in an organised way, with the radical difference that there are clearly delineable [2]communities of practice within academia (and, if you see this as a venn diagrams, with specific topics and subdisciplinary areas co-existing within disciplinary and methodological clusters, the notion becomes a very powerful one) which, in principle, means the filtering process can be incredibly powerful.

…. which is what open access online journals, run non-heirarchically as collectives, organised thematically in a way which maximally connects with the values and passions of those involved would be.

Thoughts?

Response to Mark Carrigan's "The 'prestige' of journals in a social media age" | The Sociological Imagination (2011-08-29 09:39:01)
[...]

As it turns out, our new dept head has asked us to look over the new REF guidelines for comment this week, so this issue is fresh on my mind.

What you say is interesting, especially if we’re talking about how to represent research interest and activity through journal publication. Yes, social media potentially can provide a better representation of that than the current journal bureaucracy. So no disagreement there.

Unfortunately, as exercises like REF illustrate all too well, ranking people, depts, research specialities, etc. is taken to be one of the important goals of publication, because publication is tied to resources. So the hierarchies
that you decry are actually seen as a good feature of the current system. If those hierarchies were flattened as you suggest, it would be much harder to judge people and allocate resources.

So, on the policy side, you'd have to re-define the relationship between research prestige and resource allocation. So far it seems that you simply want them decoupled.

One way to look at the current fad for ‘impact factors’ is as addressing some of your criticisms of journal hierarchies by saying that what really matters is not where things are published but whether people do anything with them once they’re published. But of course, that really doesn't address the spirit of your proposal because, in the current system, articles can’t have impact unless they’ve been published in the right journals in the first place (which is reflected in how 'impact' is measured).

An interesting test-case for your proposal would be the Science Citation Index, which puts out the Web of Knowledge. Those guys have always maintained that they are not in the evaluation business but are simply mapping the aggregate contours of the knowledge system. In principle, they should embrace the inclusion of all open access journals to get a more accurate representation of the research environment. But of course, in practice, SCI is quite picky about which journals it includes in its citation counts....

Response to George Monbiot’s Rant against Academic Publishers (2011-08-30 00:24)

In the US, we have the phrase ‘waving a flag and kissing a baby’ for somebody who plays to the gallery. And this is exactly what George Monbiot has done in his [1]Guardian rant against academic publishing houses. Running neck-and-neck with the various teaching quality assurances and research assessment exercises we routinely undergo in the UK, publishers must lead the academic hate list. And while I don’t wish to defend – or even explain – the sort of profit margins that Monbiot cites, I do want to defend publishers as an important counterbalance to the inherently conservative character of such time-honoured academic institutions as peer review.

For his own part, Monbiot appears to be a blind believer in the value of peer review. Indeed, his article appears to have been triggered by the costs to his readers who want to check whether the peer-reviewed research he cites in his articles says what he claims it does. This suggests that if Monbiot’s readers trusted him more, he probably wouldn’t have been moved to rail against publishers in the first place. But I digress.

No one doubts that commercial publishers are in the business of making money. But the way they make money is by doing something that academics value but that they would not do for themselves, left to their own devices. What I mean is captured in two words: ‘innovation’ and ‘extension’.

Innovation: Peer review processes are about insuring the quality of knowledge, which is ultimately a backward-looking exercise – i.e. do the results follow from what is presented as evidence and what we already know? In contrast, innovation is about risk-taking, i.e. arguing that if you suspend or replace some of the old assumptions, you get more interesting results. This is classic entrepreneurship (a la Schumpeter) and publishers are always on the lookout for people who can write books and edit journals that will reconfigure the knowledge system in such innovative ways, resulting in new income streams. The success of cultural studies and gender studies in the 1980s was due more to visionary commissioning editors than the then-dominant academic gatekeepers. I speak from experience. Towards the end of that period, I founded a journal, [2]Social Epistemology – still in existence after 25
years – that depended on just such an editor, since I had proposed the new journal while waiting to defend my Ph.D. (i.e. as someone with hardly any academic status).

**Extension:** Publishers, not academics, drive the textbook market. It seems that if academics had their way, textbooks would be abolished altogether as failing to contribute to how either teaching or research are assessed. Yet, textbooks remain very important symbols of the integration of teaching and research that is supposed to distinguish academic life from other forms of knowledge production. They are the most convincing indicator that academics produce a body of knowledge that a larger public should find out about. While it is fashionable to mock Anthony Giddens for having spent his career as a glorified sociology textbook writer, nevertheless that skill made it easy for him to speak to larger publics, thereby demonstrating the relevance of sociology. Indeed, I wonder had commercial publishing not played such a large role in steering the course of British sociology, would a public figure like Giddens have ever emerged, given the relatively parochial character of the discipline as it is institutionalised in this country.

Once again, I do not mean to justify Elsevier’s profits. But simply letting academics self-organize their knowledge flows is no panacea. Publishers provide an important counterbalance.

---

2. [http://www.tandf.co.uk/journals/titles/02691728.asp](http://www.tandf.co.uk/journals/titles/02691728.asp)

alice (2011-08-30 08:54:55)
Surely we could find examples of publishers stifling innovation and extension? That’s not to disagree with you necessarily though, and I wholeheartedly agree that Monbiot is playing to the gallery - I hope his rhetoric at least provokes more nuanced debate on the topic. Something else which is interesting and important (and I wouldn’t necessarily defend, other than note we need to consider...) is the role of publishers in the embargo process. A colleague recently self-published a (peer reviewed) report online. However, when he issued an embargo (so as to facilitate well-researched press on a complex topic) this was broken by a blogger who covered the report in rather a one-sided way, framing debate on it in a way that resulted in many people missing the main point of the report/ even mis-reading it. Journals and publishing firms can enforce embargoes with the threat of pulling all embargoed papers to press, a lone academic cannot do so nearly so easily, unless I suppose they organise with their university or learned society (some won’t give embargoed work to bloggers, but that’s a red herring in this story - many bloggers would happily play by embargo game). Obviously one option is to get rid of embargoes all together. Which there is an argument to be made for. But I doubt that’s going to happen soon.

Ian Sommerville (2011-08-30 08:55:46)
Muddled thinking here. Monbiot wasn’t talking about books but journals. There are lots of textbook publishers who don’t do journals. And while publishers may have been needed to start a journal 25 years ago, anyone can now start a journal on the web.

Hannes (2011-08-30 10:45:43)
Steve, Just a small point. "if Monbiot’s readers trusted him more, he probably wouldn’t have been moved to rail against publishers in the first place" Monbiot writes about issues so controversial that talking about ‘trusting the author’ becomes irrelevant. You might trust the author, but you MUST be able to check the facts if you are to reach an informed position

Joe Dixon (2011-09-14 10:10:52)
Exactly the point I was about to make. Academic research is not (or at least should not be) based on how much a reader ‘trusts’ an author. Rather, it is based on the readers’ ability to follow an author’s train of thought and logic.
Coronal (2011-08-30 14:07:55)
Sorry but indeed, this is muddled, and doesn’t add much to the debate. When reading an article that discusses a scientific research paper, I *always* want to check the original research paper if it’s available, so suggesting that Monbiot is untrustworthy because readers might wish to do the same is a little odd. In addition, the points about innovation and extension seem irrelevant. One example of “innovation” is cited from 25 years ago, and the “extension” is actually about textbooks, an entirely different can of publishing worms.

Steve Fuller (2011-08-30 15:00:33)
All of this is nice, but Monbiot was making a blanket statement about academic publishing, and frankly given that he’s hardly hiding his candle under a bushel, he could simply e-mail the pdfs of the relevant articles to specific people who wanted to access the information. To me his article reads like a pet peeve (i.e. too many people asking Monbiot about evidence) amplified into a major problem. The jury is out as to whether academics can establish serious journals without the help of publishers – outside of perhaps quite narrow specialist fields where the practitioners all know each other. In any case, the entire mentality displayed in Monbiot’s article is wrong: The value of publishers should not be judged primarily by whether they make life easy for academics in their day-to-day activities. The proactive character of publishers as a counterbalance to the regressive tendencies of academics needs to be acknowledged.

Ben (2011-09-01 08:33:13)
Steve, I wouldn’t trust academics to self-manage publishing. But they don’t need to - they just need to make greater use of open access publishing (for which most funders will pay), AND university archives.

Sociological Imagination (2011-08-30 16:04:53)
“he could simply e-mail the pdfs of the relevant articles to specific people who wanted to access the information” Sure you can do that because it’s an entirely private one-to-one communication. But the infrastructure which now exists to do this in a systematic and effective way (e.g. academia.edu) is off limits, assuming that the publishers have any inclination to actually police their pay walls.

Jilly (2011-08-31 18:26:23)
This seems an oddly tangential discussion to Monbiot’s main argument. I assume from the phrasing that the author of this piece is based in the US? I wonder if, because of this, he doesn’t realise the centrality to Monbiot’s argument of the issue of funding. In the UK (and many other European countries), all universities are public, state-funded institutions, and outside of the hard sciences most research funding also comes from the state. Therefore, as a European academic, my salary is paid by the state, and in return for it part of what I do is research and publish. Given that the taxpayer has already paid for me to do my research, Monbiot is arguing that they shouldn’t then have to pay (prohibitive) fees to read my research. It’s an argument which contains a great deal of force in higher education systems such as the UK, though I realise that in the US it may seem less pressing.

Steve Fuller (2011-08-31 18:45:49)
Jilly, I think everyone here works in the UK. I work at Warwick, which is only 23 % funded by the state nowadays, though we are officially still a ‘state-funded’ university. (By the way, that’s about the same percentage as for high-end public universities in the US.) There may be some European countries, where the taxpayer is still the majority funder of academic work but that will disappear too because it is economically unsustainable in the long run. In short, the old welfare state arguments have passed their sell-by date. Of course, there may be more general public good arguments for saying that knowledge should be made freely available to all, in which case academics can go ahead and organize themselves into peer groups and take to the web – and hope they get the respect and attention of everyone else. Interestingly, they’re not doing that in droves or with amazing success, Even though, by the logic of your argument, the taxpayer would have them do so. Clearly the issue is more complicated than Monbiot would have us believe.

“You can’t be too vain to gain if you want to swim the Channel” - Karen Throsby at the SI Seminar (2011-08-30 08:00)

A couple of months ago Sociological Imagination held its first seminar on the Sociology of Sport. Given quite how few people ever want to travel to the University of Warwick (it’s a bit of a hassle and the campus is in the middle of nowhere), we decided to record the sessions and take pictures. Unfortunately audio editing is the editor’s most hated job in the world but, after eight weeks of procrastination, over the next few days we’ll be posting up the talks.

The first one is [1]Dr Karen Throsby, who we [2]interviewed last year, talking about her research on channel swimming.

[3]You can’t be too vain to gain if you want to swim the Channel”: marathon swimming, ethnography and the problem of heroic fatness

[4]

BSA Annual Conference 2012: Sociology in an Age of Austerity (2011-09-02 12:00)

In navigating and understanding the turbulent times in which we find ourselves living, the contribution made by sociology is even more significant. Sociology is uniquely placed to provide insights into the social environment in all its variety, allowing for an enhanced understanding of social movements, political processes and personal troubles.

The papers presented will provoke debate and, through the lenses provided by conference streams - such as social divisions and identities; religion; cities, space, mobilities and place; media, culture and consumption; families, relationships and the lifecourse - will explore the complex interactions which drive social and political behaviour.
SUBMIT NOW! Deadline: 7 October 2011.

Do you want to be a news editor? (2011-09-04 08:00)

The Sociological Imagination is currently trying to recruit another news editor. This would involve identifying news stories relevant to the site, collecting pertinent links, writing a short commentary and e-mailing it in to be posted
online. There would be no fixed time commitment for the role. It would literally just be a case of picking certain new stores (relating to the intersections between higher education, politics and the interests of social scientists) and writing a couple of hundreds words about them to provide evaluation and context. If you’re interested or would like to discuss the role then please get in contact.

Against Academic Pessimism (2011-09-04 12:00)

[1]

The thing is, however bad it gets, we will always have at least a small amount of freedom. It might come at the expense of something else, possibly something ‘strategic’ career-wise - but it is possible to use that freedom to turn the resources of intellectual life toward something that makes a contribution which we can see reflected in the way it improves the lives of others, however small or fleeting that contribution may be. Away from the newsletters, the conference plenaries, the interviews in mainstream media and surnames being used as shorthand in place of ideas, there are plenty of people doing this we hardly ever see. People working in academia who are using their training and experience in positive and vital ways outside of RAF-able impact. It might be through volunteer work, or just by providing informal advice to people in other areas, or a thousand other things.

The pressure to publish despite any links to impact is an issue, but we should also feel glad that although the structure pushes against it, many people aren’t buying in. Everyone working in this environment knows people like this, the type of people who are ethically committed to the people whose lives lie beyond the textual representations that we make of them. The people for whom ethics and epistemology are two sides of the same coin, whose frame of reference for shaping their intellectual products always includes ‘what can I do, and for whom, with this?’. They’re usually the ones who are the clearest in writing, the ones who can make the most sense of otherwise abstruse theories and get them working productively.
My two very favourite American Cowboys are Brandon Teena and Calamity Jane, who were, I realize, quite different from one another.

Brandon, born Teena Renae Brandon in 1972, was a gas station attendant, petty thief and ladies' man who spent most of his life in Lincoln, Nebraska. Jane, born Martha Jane Canary in 1852, was a sometimes-married frontierswoman and professional scout, who eventually settled in the small town of Deadwood, South Dakota. Brandon became an icon of the contemporary lesbian/gay/bisexual/transgender movement after he was raped and killed in 1993 and Jane, has been a mainstay of American history books and museums, since the late 1940s.

Still, despite these differences, both were born and raised as girls, who, upon adolescence decided to dress and live as boys and both have been immortalized by Hollywood actresses in Hollywood films as soulful, heartsick cowboys, brave enough to defy the strict social rules of their small hometowns in the American Mid-West.
In pictures taken just weeks before his rape and murder, Brandon Teena looks like a young Matt Damon (at left in image below), his thin girl-body obscured and made thicker by layers of thermal underwear and flannel shirts. Set alongside his celluloid counterpart played by Hilary Swank, (an actress, who before her Academy-Award winning turn as Brandon was most famously known as a the *new Karate Kid* or maybe Carly Reynolds, the single mother who dated Ian Ziering’s character Steve on the nineties teen soap opera *Beverly Hills 90210*, at right in image below), his story seems utterly ordinary and, perhaps even more importantly, *unsensationalistic*.

He was, quite simply, a boy from a trailer park in Lincoln, Nebraska, just out of high school and out in the world looking for friends and love at the roller rink, in the parking lot of the local 7-11, in the blue-collar town of Falls City, just outside of Lincoln, where he moved and settled in for a short period of time after meeting and falling in love with Lana Tisdel, the prettiest girl in town.

And it’s the same for Calamity Jane, staring out from old black and white photographs or dancing across the movie screen, her cinematic counterpart as sunny and bright as the real Martha Jane Canary looks dark and composed.
In the Hollywood version of her life, Calamity Jane played by Doris Day (see image at the very top) even sings. And why shouldn’t she? Unlike all the other girls in this 1953 movie, dressed in the petticoats and dresses that most women were obliged to wear during Calamity Jane’s time, the Cowboy-upped Doris Day looks as sexy and free as my third favourite American Cowboy Played By A Girl, The L Word’s profoundly beguiling Shane (played by Katherine Moening).

End Note: An earlier Rocket Science post on sexuality is [6]right here.

Flying awkwardly: a year in the life of a first year PhD student, by Amy Louise Webber (I) (2011-09-05 08:00)

Amy Louise Webber is a Phd student in Ageing, Transport & Society at the University of the West of England. She also describes herself as ethnographer, artist, philanthropist, and aspiring Social Entrepreneur. You can read her blog about life in (and beyond) PhD study here: [1]http://amyloisewebber.com
'Successful post graduates emerge with a new identity as competent professionals, able to argue their viewpoint with anyone regardless of status, confident in their own knowledge but also aware of its boundaries...to arrive at this point, is what being a postgraduate research student is really all about...' Phillips & Pugh, 2005.

I’ve started, so I’ll finish.... Magnus Magnusson.

‘Academia: It’s like negotiating the land of OZ ......minus the good shoes’ Webber, 2011.

One year on...

I’ve had some time off from my blog due to work commitments recently and writing this next entry has proved to be a bit of a challenge to produce. Coming to the end of the academic year, and having recently passed my first year progression exam the time is right to reflect on my experiences and attempt to evaluate as reflexively as I can, what’s worked well and also not so well in order to improve and or maintain my performance and experience for the coming year. One thing I am often told is that a PhD is a journey, so as such, this account resembles a snapshot of that journey, taken at a particular point in time. Perhaps my perspectives and opinions will change as I progress. Perhaps they will become more engrained. Who can tell? Overall, I have mixed feelings at the end of year one, and if this was an ofsted report, I would probably grade this year as 'satisfactory'. Here's why:

Great expectations..

So, over 365 days have passed since my application for voluntary redundancy was accepted and I left my consultancy job for a life in academia. After two refused funding applications and many years of wanting to undertake a PhD I arrived at my desk in the Autumn of 2010, full of enthusiasm and high expectations for what was to come and a clear idea of what life as a PhD student would be like. I had envisioned something which was not in retrospect, exactly that realistic.

I had imagined academia as a world of dynamic modern creatives, striving together to battle the ills of society by attempting to solve or draw attention to its shortcomings. Motivated by a passionate and relentless shared altruistic desire for the pursuit of knowledge and together working in a close team in an environment of trust, my supervisory team (perhaps in the manner of the A-team, or the outlaws of Sherwood forest or similar) together with my supervisor (who could impart a wealth of knowledge about my study and was perhaps a combination of Mr/s Majeika and say, Yoda) would form a band of scholarly rebels an together we would embark on investigation of my research topic, in the manner of an apprenticeship perhaps not dissimilar to those taken by Jedi Knights or Starfleet cadets, which eventually after three joyful years, enabled academic enlightenment which would then be passed to me. Of course all this would be supported by numerous mindbending, stimulating philosophical and theoretical conversations with my peers around life, death, love and the universe carried out in the bar until the early hours of the morning. I might even be able to impart my existing knowledge and experience on a group of bright eyed and bushy tailed students.

Okay, so I'm exaggerating slightly in the account above, but it's true to say the reality of academia has not stood up to my initial ideals, which has led me to a lack of motivation in terms of my research, however it's also fair to say the year has not been without its notable achievements.

The good

So what positive things can I take from this year? Just being here I guess is one. The landscape of higher education is undergoing radical change and having a scholarship to undertake PhD training is likely to become even rarer in the times to come. Like most people I certainly would never have been able to afford it otherwise.
taking a PhD will enable me to benefit society, develop new skills, gain a qualification and change my career direction.

On a practical level having the flexibility to manage your own time is a major perk, as is the chance to be completely selfish in terms of your own training. The opportunities for real development at my previous organisations were reasonably limited. This year I have undergone a great deal of training which I just wouldn’t have been exposed to otherwise. I’ve completed 90 credits (three) masters level research modules and undergone valuable additional skills training via seven short courses or workshops which support my development as a social researcher. I’ve attended nine professional/academic conferences and presented my previous MSc research at three of these, which are all at an international level.

I’ve made some amazing friends, been a representative on the postgraduate research (PGR) students committee and volunteered to represent the PGR students at faculty research degree board committee meetings. I assisted in organising the annual PGR student conference and was awarded a first prize for my presentation. Having had a ten year break from any kind of performing, I joined the UWE Centre for Performing Arts (CPA) and auditioned (successfully) for a UWE music scholarship. I then undertook formal singing lessons and I am preparing for my grade 8 musical theatre exam in November. I was genuinely surprised to be cast as a principle role in the university musical (also a journey in itself) which enjoyed a sell-out run at the Redgrave Theatre, Bristol and over the year, in my role as a CPA scholar, I have supported the CPA by singing or giving readings at (approximately) ten public concerts.

I’ve learnt a lot about myself. That sounds dramatic but it’s true, in ways that I couldn’t have anticipated. My skills are improving, although this has been a slow process. Whilst it is a continuing source of worry and bone of contention surviving on a budget has made me richer in other ways. It’s surprising how your identity can develop through creating, observing and appreciating things when you get off of the conveyer belt of consumption that blinds you to them so easily. It’s easy to think when you have been used to earning a certain income that when your circumstances change and you stop work that the world may end. It doesn’t. You have to find a way to adapt, reassess, negotiate but somehow life has gone on. I’m still here. Slightly shabbier looking, a bit fatter but mostly smiling and often covered in paint or glue rather than the trendy (ish) labels.

The bad

So. Where did the struggles occur? For me, concerns began to arise from the outset, as I had not been consulted regarding the appointment of my supervisory team, all of whom seemed excellent academics but I had not been assigned anyone that had in-depth knowledge of the theory I wished to draw upon, or any experience or knowledge in the methodology I wished to use. This has been an ongoing concern and I am told will not be resolved due to resourcing issues.

As I mentioned before expectations were pretty high when I arrived and certain things disappointed me, aspects of the process sometimes seemed ridiculously old fashioned and not the best way to get the best out of students. Some senior academics seemed incredibly blinkered, demonstrating clear bias toward method, philosophy or approach and disparaged the work of their well respected colleagues. All of which is apparently common in academia but not something I had expected or respected. I sort of found it unprofessional and again, old fashioned. Interdisciplinary postgraduate training had previously taught me to have an open mind to various approaches and it came as a complete shock to find that generally this didn’t seem the case in reality. Don’t get me wrong, academics are incredibly exceptional people but I was wondering that if arguing a particular thesis so repeatedly throughout your career actually makes you more blinkered? I lost motivation and the academic pedestal begun to waver as I questioned ‘was I ready to become that narrow minded? The only thing my years of education had taught me was that none of us really ‘know’ anything at all, but it was like nobody actually wanted to admit that. Instead, flags waved from methodological and philosophical islands, and the reality was far different from that I had hoped for. Beneath that I felt was fear and insecurity of difference and the unknown. Suddenly, the emperor was before me, and I could see his dangly bits.
My poor supervisor didn't live up to my expectations either. I am his first PhD student and it often felt like a case of the blind leading the blind particularly in the early months. He is just a few years older than me, and is very nice and kind and we drank a lot of coffee, tweeted and text and ate cake and everything was fine. Fine for months. He was very reassuring, there was no nagging and he often wrote/re-wrote chunks of my text for me. As every PhD student-supervisory relationship is different I didn't question it, until eventually I began to wonder if that's how everybody else's meetings went. Turns out they didn't, and I don't think things are ever supposed to be 'fine' until that last draft has finally been submitted. So we have to renegotiate the way things are done. No doubt I've done nothing but complain and kick and harass various members of staff this year over various things and they are probably all enjoying the break from the crazy Webber girl.

I found the monthly meeting process in general difficult – (this I have been told is in part due to my lack/volume of written output which is a fair criticism). The initial meetings seemed rather odd almost like a kind of role play at times. (cue schizophrenic breakdown as I began to question the reality of the situation – am I in a play within a play?) I was told I was not playing the ‘game’ several times. Which was somewhat confusing for me as I felt I was there for a meeting about my project, and it’s a bit rubbish if I don’t know what the rules are and no one tells me. As Phillips & Pugh (2005) state above, a large part of the PhD process is learning how to negotiate and present your argument with those of high status. So, part of this meeting process involves the big-wigs belittling you as best they can so you can get used to responding in a professional way. I think I’m okay with criticism if the point made can be fully justified, but I have struggled with the way it has been delivered. Currently the sneeriness has me yo-yo-ing between wanting to give two types of responses a) melting into a tearful heap on the floor screaming ‘high status suity man, your words, how they burn’ or b) jumping around throwing tables out of windows shouting ‘come and ‘ave a go if you think you’re ‘ard enough’. Again this type of questioning encouraged a lack of motivation not just because it wasn’t particularly pleasant but also it seemed poorly justified and old fashioned. What exactly is so special about academics/academia which qualifies them to behave in a way which would ultimately be seen as unprofessional in commercial or other types of public practice?

(To Be Continued in tomorrow’s SI)

Max Scheler, following up some clues in Nietzsche, developed a sociology of [1]’ressentiment’, which – as a first pass – refers to the creation of scapegoats to deflect attention from one’s own inadequacies. Ressentiment was meant to explain how the desire for self-transcendence is perverted as the faithful come to believe that others have managed to reach much the same end by illegitimate means. In practice, the concept tends to refer to a rightward ideological turn by, say, working class or petit bourgeois who think that Jews or foreigners have usurped their prerogative. The left has not been traditionally implicated in this spoiler position because of its ‘progressive’ outlook, which was always constructive of the future, even as it laid waste to the past. Ressentiment, in contrast, is meant to be an exclusively negative – even nihilistic – sentiment born of fearful incomprehension.

Enter Nobel Prize economist and NY Times op-ed author, Paul Krugman, who may be the highest profile author to attempt to demonise the Republican Party as ‘anti-science’ in a way that is reminiscent of how US conservatives demonised the political and cultural left as ‘anti-American’ in the 20th century. In a [2]piece originally published in the NYT and reprinted in the Guardian, Krugman scaremongers about the prospects for the US if Republican candidates who deny evolution and anthropocentric climate change manage to get into the White House. Krugman appears to believe that taking a loyalty oath to whatever happens to be the scientific consensus ought to be an entry requirement for anyone seeking elected office.
Perhaps the most odious feature of this suggestion is its appeal to science as a superordinate authority on the democratic political process. Whereas the right might try to co-opt the military under comparable circumstances, the left turns to science to threaten opponents who otherwise appear to be ascendant. Krugman’s suggestion also serves to corrupt science. No doubt Republicans are trying to gain advantage by casting doubt on various policy-relevant scientific views. Nevertheless there is legitimate room for disagreement and the offering of alternatives by scientists themselves, and exaggerated claims for consensus and certainty – simply to trump a group of politicians – does the cause of free scientific inquiry no favours. If anything, it reinforces the stereotype of scientists as an elite class contemptuous of the public.

When it comes to strictly scientific issues, what matters isn’t whether Texas governor Rick Perry (dis)believes in global warming or Darwinism, but what he believes should be taught and researched on these matters. However, even this somewhat misses the point. For when Perry makes statements denying global warming and Darwin, he is not mainly trying to say anything about science at all. Rather he is engaging in [3]’dog whistle politics’, in which scientific opinions are meant to stand ‘metonymically’ (apologies for the old structuralist jargon) for a set of conservative cultural positions that appeal to a wide range of voters. Liberals like Krugman are so completely alienated from these positions that they can only register them as dangerous pathologies of the intellect (aka scientific illiteracy). But unless liberals change their tune, they will continue to fail to deal with the democratic process as it exists in the US today.

Flying awkwardly: a year in the life of a first year PhD student, by Amy Louise Webber (II) (2011-09-06 08:00)

Amy Louise Webber is a PhD student in Ageing, Transport & Society at the University of the West of England. She also describes herself as ethnographer, artist, philanthropist, and aspiring Social Entrepreneur. You can read her blog about life in (and beyond) PhD study here: [1]http://amylouisewebber.com

(...Contd.)

The epiphany...

Oddly enough one of the most difficult things I have struggled with is almost an existential one. Often people say that a PhD starts with research questions, but I say it starts with a person. The researcher. Whilst I’ve managed to pass my first year, my research outputs or study focus is not where it should be due to time lost. Whilst some commentators say this is due to too many other things going on, I attribute it to a basic loss of engagement and motivation due to a) strange relations with my supervisors and my own pre-occupation with my unhappiness about the process and b) having to negotiate this pending ‘new identity’ that Phillips & Pugh (2005) speak of.

I sat in front of a computer, staring at a blank screen unable to write for months before finally being signed off work with depression. It was through therapy (together with a two week arts intervention experience ‘The
the ‘Fortnight Project’ which ran in Bristol as part of the ‘Mayfest’ theatre festival in May) I began to explore my real motivations for doing a PhD - beyond that which was written on the application form or CV. Having got to know more and more students I discovered that behind each of them was a story. All of us were genuinely interested in our subjects and believed in what we were doing, but there was always something else. The expectations of a parent, or the rivalry of a sibling, the chance to escape domestic drudgery in a different country, avoidance of the ‘real’ world, the passions of a working class girl who saw the lawns of Cambridge one day and wanted a different life. There were many stories amongst the research proposals that were not always openly acknowledged. So what was mine?

I realised that education had mostly, done a lot for me on behalf of my parents, and I realise now that it’s how I learnt to grow up. So perhaps this is my final push to do that. I never really totally learnt how to negotiate problems, differences or defend myself well or speak my mind in all circumstances, or believe in myself enough to go for what I want. Perhaps I’m here doing this so I can finally learn. I’m also acutely aware of how, leaving school with just my few GCSES, that for seven years I was often treated as I were stupid, less of a person or (literally at times!) patted on the head and told a ‘girl like me’ wouldn’t need to go to university as I could just find a rich man.

The situation is also a bit of a double edged sword. The new PhD identity will obviously eclipse the old one.. but what will that mean in terms or how I relate to my family? With every course I take I am increasingly viewed as a strange and foreign entity and the title ‘doctor’ will be the final allienatory straw breaking the donkeys back. Whilst my family (complicated) are happy for me, they just don’t get it, or really believe in or value it. So which identify do I use when I’m a Doctoral graduate? The old one so I can relate to them, or the new one, when I can sneer alongside the best of high status professors? Fundamentally, I believe that people should be recognised for their achievements but I don’t really recognise the social hierarchy. Who am I to say that I am higher status due to those words ‘Dr’ before my name? In some way I almost felt guilty. If I go back to the Wimpy now, after however many years it is – am I really so different? and psssst.... most importantly - Am I going to end up being completely boring, wearing elbow patches with no idea how to be silly or fun or believe in anything without reams of ‘evidence’ to substantiate it? (oh okay that’s an exaggeration, no one really wears elbow patches anymore, and okay some academics are fun (my supervisor is that’s half our problem)

The future

So. It seems I have passed my first year, although it’s not been without incident or a few pilot weeks on prescription drugs (I had a bad reaction to them and gave them up for art and theatre instead) I guess there is nothing else I can do but re-address my expectations of the PhD process, plan my next six months thoroughly, catch up to where I feel I should rightly be and try and hope things with my team improve (Although anecdotally it’s supposed to get really hard at this point). Having spoken to numerous PhD students and graduates it is fair to say none of them have really raved about the process and most seem, by the end of their projects to be bloody glad to be rid of their thesis. Academia is indeed a strange creature, and this odd, Oz like journey appears to be just as concerned with endurance and determination and negotiating relationships as it is with actual research. I decided that what I need to survive, (along with a sense of play and embracing creativity and art outside of work) is a mantra, thus quoted by Magnus above:

I’ve started... so I’ll finish.

(repeat twice a day, every day, until thesis completion)

However I feel, (good or bad) today, next week or this time next year, it won’t last forever – the time has flown and I received my bursary payment schedule recently and looking at those 24 payment dates .... well two years does not seem that long at all.
I found this oddly comforting and I like the mantra. I do however worry about the talk of fun, not because I am against it, but because those stuffy professors that sneer and go on and on about evidence often are having fun. I don’t think it’s a front or the consequence of cynicism.

I Shop, Therefore I Am – consumerism and the riots. (2011-09-06 12:00)

The riots that spread across the country this summer have left a strong impression in the public imagery. From London to Birmingham, the British society has showed and shouted the presence of a deep-seated malaise which appears to affect mostly its youngest members. Many commentators have tried to give a name and an explanation to this outburst of social disorder. However, one of the most lucid and precise analysis of the events has been provided by arguably the foremost sociologist of our times – Zygmunt Bauman. In a short yet sharp [1]article, Bauman unfolds the sociological dimension of the riots, explaining how capitalism and consumerism have changed and distorted not only our social values and beliefs, but also the idea itself of (be)longing.

In an era where shopping malls have become our temples and pilgrimage’s destination, and shopping lists are our breviaries, fullness of life can be achieved only by being an ‘accomplished consumer’. I shop, therefore I am. This creates a critical divide between have and have-nots, whereas defective consumers find themselves bearing the stigma of a life un-fulfilled – with no human dignity, no meaning and, consequently, lack of respect for themselves and others around them.

Contemporary have-nots are outcasts banished from the Temple of Consumers. They see shopping malls as outposts of the enemy erected on the land of their exile. Armed, closely watched and haughty, these fortifications bar access to a life accomplished. In this sense, have-nots long for the heavily guarded goods kept inside the Temple in the hope that they will grant them access to the congregation. Daring to force the gates of the temple, thus, seems to signal a forlorn attempt at winning a seat on the pew, a place among the members of the Church of Consumerism.

Asian demography (2011-09-07 08:00)

A new article in the Economist presents a well-researcher summary of recent noticeable demographic shift away from the traditional culture that views marriage as the centrepiece of society in Asia. While it is undoubtedly reductionist to speak about "Asia" as an entity, the article does go on to differentiate among different areas and countries and present a wealth of data. It also discusses key issues that affect the change in marriage choices, such as education, the fact that more women now occupy higher hierarchical positions and cannot (or do not need to any more) marry "up", work-life balance, and... the economic crisis. Will marriage rates pick up again if and when the global crisis ends?

Is this what cultural theorists mean when they talk about 'hybridity’? (2011-09-07 12:00)

IFRAME: [1]http://www.youtube.com/embed/WkdOv9DCuUA

1. [http://www.youtube.com/embed/WkdOv9DCuUA]
Modern radical thinker Slavoj Žižek spoke on the 1st July 2011 as part of the 'Great Minds' series, and affirmed his status as a great mind of modern philosophy and social, cultural and political theory. Starbucks, social solidarity and self-commodification were among the varied and enlightening topics touched upon by Žižek, all grounded by his interpretation of ideology and its continuing importance.

As an overview of the more recent themes from Zizek's voluminous output, this talk cannot be beaten. One interesting take away idea, which he seems not to draw out as explicitly as he could: in late capitalist society we literally fetishise subjectivity in the psychoanalytic sense of the term. The moral importance we place on our subjective life, the sheer significance we accord our subjective disavowal of those things we take to be wrong, actually facilitates an objective complicity in the structures of capitalist society. The sense in which we see ourselves as seeing behind the veil, free from the ideological delusions of earlier times, actually facilitates our continuing participation: a cynical and critical evaluation of the world around us actually functions ideologically to free up our continuing participation in that world.

Once, years ago, the man who lived in the apartment below mine committed suicide. The police came pounding on my door in the middle of night to ask questions: Did I know him? When was the last time I saw him? Did I notice anything strange?

I hadn’t. I told them that I didn’t know my neighbor’s name, except for what was on the mailbox, and that I barely knew his face. That in the past eight months or so that I had lived here I only saw him two or three times, his back to me as he clattered into the building, collecting his mail, tangled up with his dog, then disappearing into his apartment quickly, shutting his front door behind him and leaving the stairwell without a trace.

"Wow," I remarked to the Officer. "This is just like Durkheim said," referencing the French sociologist who in the late 19th century famously studied suicide. "Who?" the Officer asked. "Does he live in this building? Did he know the deceased?"

For days after the police left there was a enormous lock on my neighbor’s door and stray police tape still tied to the banister from when the apartment had to be protected as a crime scene. About a week later the enormous lock was gone and the smell of ammonia and lemon wax seeped out into the hallway as my neighbor’s mother packed and cleaned her dead son's apartment, his dog still alive and well snuffling at her feet.

I peeked through the crack of the front door and saw scuffed and scratched wood floors, laundry stacked in a basket, an opened cereal box and felt the tears roll down my cheeks, thinking for a moment of what my own life upstairs would look like without me, especially to some stranger passing by who looked in and only knew me from the stairwell or the street.

*End Note: The title for this post is borrowed from [2]the unbelievably great Isabel Coixet film My Life Without Me.*

Call for Papers: what does the Sociological Imagination mean today? (2011-09-09 08:00)
It has been over 50 years since C. Wright Mills wrote the Sociological Imagination. In that time the world has changed beyond recognition: the Cold War ended, the Keynesian consensus broke down, a globalizing neoliberalism rose to the ascendancy and the internet began to transform human communication and culture. In recent years, with 9/11 and then the financial crisis, it seems that history has returned with a vengeance. Is Wright Mills’ notion of the ‘Sociological Imagination’ still pertinent today? How can Sociology help shed light on the rapidly transforming world around us and the consequences of these transformations for the people who inhabit it? What does the ‘Sociological Imagination’ mean today?

Short articles are invited which engage with these themes, or particular aspects of them. Submissions should be 500 – 1500 words and [2]e-mailed as a Word document. There is no deadline for submissions.

2. [mailto:m.a.carrigan@warwick.ac.uk](mailto:m.a.carrigan@warwick.ac.uk)
The American tabloid People Weekly was first published in 1974. Mia Farrow, who was starring as Daisy Buchanan in the film The Great Gatsby at the time, was its first cover girl, gazing vacantly out into the world, her hair all done up in 1920s curls instead of the short crop that, in the late 1950s, made her a famous gamine. This was nearly eighty years after Emile Dukheim’s Les Règles De La Méthode Sociologique was first published.

Still, like so many of the practical and narrative sociologies, which came before it, the work of statistical societies and rhetoricians for example, or the work of novelists and poets, People Weekly had all the markings of a classic sociological work.

You can tell by just looking at the cover. It offered analyses of modern social problems, (like the everyday struggles of the modern, nuclear family or the persistent sorrow of the modern, everyday wife), while at the same time celebrating all of the great promise of the modern American dream (Palm Beach Whirl, The Parties, Pets and Personalities or springtime fashion that lets you find your true inner self). It attempted to explain how these problems affected us in both big ways and small (unjust arrests made in Russia or how a fourth marriage can really work) and offered evidence and proof to its well-reasoned claims.

It was, you could say, canonically perfect, right down to its masthead and its celebration of fame, for unlike Les Règles, People Weekly magazine was and continues to be a sociological work where the bodies out of which it is made are clearly acknowledged by its name.

Seafarers' fatigue: new research by Cardiff University (2011-09-11 08:00)

The Seafarers International Research Institute (SIRC) in Cardiff have concluded a large-scale study of fatigue among seafarers and have produced a 30-minute movie which summarises their questions and findings.

The SIRC team studied merchant mariners and fishermen. As Andy Smith (Director of the Centre for Occupational and Health Psychology) and Tony Lane (former SIRC director) mention, not much has previously been known about this incredibly important aspect of seafaring labour: studies of fatigue among seafarers exist, but they are mostly based on anecdotal evidence. The SIRC study’s contribution is in examining a broad range of evidence and focusses on the combined effects of various factors that cause and increase fatigue (including, among others, ship design, port-turnaround times, the nature of work on ships which demands that one can't relax until the work is done, decreased levels of ship manning, shift patterns, the pervasive 'culture' of maritime work, seafarers' and officers fear to lose their jobs if they speak out, shipowners' drive to cut costs due to the fierce and sparcely regulated global competition in the sector, etc.).
This makes SIRC’s study of fatigue at work among merchant mariners and fishermen the first rigorous study of the issue of fatigue at sea which affects not only workers’ psychological well-being, but also the smooth and efficient operation of cargo transport, and which is also one of the main reasons (if not the main reason) for accidents at sea. It is also an attempt to break the culture in which, as maritime journalist and former editor of Lloyds List and Fairplay publications Michael Grey says, "ship comes first" (04:24).

For more details on the research and contact details for the team, please visit: [3]http://www.seafarersfatigue.com/.

The movie, funded by an [4]ESRC knowledge exchange grant, is also an excellent way of presenting the results of a large study in a concise format. Well done SIRC.

Providing meaning: give a little bit of the Sociological Imagination.... (2011-09-13 08:00)

I was once asked by Mark Carrigan, editor of The Sociological Imagination, what I have learnt from studying Sociology, this was my brief response:

“In a nutshell, Sociology has given me specific tools that have become invaluable to me personally and professionally. I think it is a discipline which teaches the techniques and politics behind thinking critically and reflexively in a complex and multi-faceted world. It allows a space in which to develop ideas, theories and discursive understanding of people, practices, processes and institutions in a way in which conflict, bias, exploitation, discrimination (and other forms of prejudice, injustice, discrimination, subordination and control) can be critically analysed and questioned.”

I still agree with these comments I made months ago.

The Sociological Imagination, as Charles Wright Mills terms it, has never been so relevant in making sense of the world as we know it. So, briefly, what did Mills say about the Sociological Imagination? The following quote could be one place to begin:

“Nowadays people often feel that their private lives are a series of traps. They sense that within their everyday worlds, they cannot overcome their troubles, and in this feeling, they are often quite correct. What ordinary people are directly aware of and what they try to do are bounded by the private orbits in which they live: their visions and their powers are limited to the close-up scenes of job, family, neighborhood; in other milieux, they move vicariously and remain spectators. And the more aware they become, however vaguely, of ambitions and of threats which transcend their immediate locales, the more trapped they seem to feel.” (Mills 1959: 3)

There are some parallels in what Mills states above and the reactive action taken in the protests, riots and/or movements witnessed in Greece, North Africa and (arguably) the UK recently. Although causes for the unrest and mobilisation occurred for very different reasons, collectively the result is that ordinary people (that is, those outside the gates of power) have opted in diverse ways to get their voices heard. The parameters and constraints of society have been progressively chipped away through collective mobilisation and people are no longer strictly “bounded by the private orbits in which they live”. A ‘politics of recognition’ as Charles Taylor (1992) terms it, whereby groups in this instance, organise themselves by forming self-empowering collectives which through action receives recognition is relevant. Although Taylor originally uses the concept of recognition in reference to nationalist groups and multiculturalism, it can apply here – rightfully or wrongfully depending on perspective, (especially in the case of the 2011 Summer riots in the UK), globally people are continuing to demand recognition against all odds and costs. The process of demanding recognition, inclusion, political emancipation and equality is nothing new, but has been strengthened in its power through the use of new technology and social media.

With the dominance of Web 2.0 and the rise of Facebook, Twitter, BlackBerry Messenger, interactive blogs etc. protesters have been able to spread word of their action far and wide in real time to mobilise support to excellent effect. A prime example of this was reported in the London riots this summer. In general, protests happening across the globe appear closer and immediate through timeless time (Castells 1996), time space distanciation (Giddens 1991) and compression (Harvey 1989) caused by using new technologies.

Sociology has been long been concerned with the use of technologies and the impact it has had on collective action and mobilisation (for instance, Castells 2001, 2009, Seidman 1998), but this area of investigation has come into its own in recent years. Through the use of new technologies, personal troubles can instantly become public and global.
issues within the faceless flows of communication. In making sense of our surroundings, adopting a Sociological Imagination can therefore be useful:

"Know that many personal troubles cannot be solved merely as troubles, but must be understood in terms of public issues- and in terms of the problems of history-making. Know that the human meaning of public issues must be revealed by relating them to personal troubles - and to the problems of the individual life. Know that the problems of social science, when adequately formulated, must include both troubles and issues, both biography and history, and the range of their intricate relations. Within that range the life of the individual and the making of societies occur; and within that range the sociological imagination has its chance to make a difference in the quality of human life in our time." (Mills 1959: 226)

In brief, the Sociological Imagination in personal reflection provides a critical and reflexive approach to personal and public issues. Adopting a Sociological Imagination can allow ample space to mindfully evaluate and critically explore important processes and practices happening around us: it can create meaning and continuously revise meaning.

Just how exactly this meaning translates into real world solutions in pushing for change is still yet concretely to be seen, but there is movement in the right direction. David Cameron’s call for a Sociological analysis of the 2011 Summer riots has prompted Sociologists across the UK to put forward explanations into the riots thus bringing sociology and the Sociological Imagination into the public glare.

Some sociologists have been criticised for their assumed position in explaining the 2011 Summer riots. In a series of articles by Sociologists published in the Guardian, some readers have responded with negativity, claiming such articles empathises or indeed, excuses the behaviour of some of the rioters. Nonetheless, it must be remembered that the Prime Minister called for a Sociological analysis of the riots which by definition should include some theoretical, causal and empirical considerations as to why the riots occurred. This in itself is not and should not be seen as a vehicle for excusing what was witnessed in Manchester, Birmingham, Salford, Brixton, Clapham, Hackney, Lewisham, Wood Green and Walworth this summer.

Whatever the core reasons for the riots – a response to Mark Duggan’s death in Tottenham by ‘reclaiming power’, an answer to widespread inequality, material deprivation, lack of opportunities, widespread anomie (Durkheim 1897), greed, opportunism etc. - one thing that is clear is the impact it has had on businesses, public sentiment and perception, racial politics - and – as a result, the Government.

In particular, the role that the riots have played on racial politics is still being felt one month on from the 2011 Summer riots. Historian, David Starkey’s claim on BBC’s Newsnight that “whites have become black”, thus blaming the influence of black people and black culture in causing the riots was unfortunately, a predictable response from sections of society. The use of riots as a racialised political football side-steps the diverse collective involved in the protests and implies that black ‘communities’ are homogeneous, uniform and inherently prone to violence, crime and all the negative things associated with such activities. Starkey’s arguments serve to offer a newsworthy soundbite which conflates the multifaceted reasons for the riots into a neat racialist argument furthering the interests of right-wing extremists groups.

In spite of the causes and reasons behind the UK riots and the public unrest globally – in a structural sense, hegemonic forces have no choice but to listen, digest, reflect and respond. Asking for a bit of a Sociological Imagination in the process, could indeed be something is beneficial in the long-run and should be encouraged to develop, not quashed.

Privilege & Oppression, Conflict & Compassion (2011-09-15 08:00)

Privilege & Oppression, Conflict & Compassion
Meg Barker & Jamie Heckert

The political project of learning to recognise and name patterns of oppression has been, and continues to be, an important one. It has helped us to recognise that our own experiences of pain are not just personal; they are also political. And so we have become involved in social movements responding to these patterns and creating new ones. In this way, learning to name oppression can help to create a sense of connection among those who experience it.

At the same time, we notice that an idea (or ideology) of connection can substitute for the more complex experience of direct connection, of listening to another’s stories and of empathising with another’s pain. Political identity based on oppression can assume that experiences are identical: that all LGBT folk, all workers, all women, or all people of colour will have experienced the same oppression and should have the same politics. Of course, this all falls apart when we notice that everyone is characterised in different ways at different times in different contexts. No one is simply LGBT or a worker, or only a woman or a person of colour. Assumed, rather than directly experienced, connections rapidly fall apart when those who are assumed to be identical point out that they are not. Queer, working-class women and transfolk of colour experience all four of these patterns of oppression in particular ways (and, quite possibly others around ability, age, appearance, education and more). No politics of identity can incorporate so many differences.

Tensions around naming oppressions and recognising such complexities have formed the backdrop of a number of recent conflicts which we have been aware of due to living in the UK and being involved in LGBTQ politics. Some have played themselves out publicly, some more privately via emails and social networking sites. All of these cases have involved members of two marginalised groups, one attempting to name the oppression which the other is (unwittingly?) perpetuating due to their (perceived) privilege. Examples include complaints about trans-exclusion and cisgenderism in lesbian, gay and bisexual spaces (due to labeling of toilets, mono-gender workshops, etc.); criticisms of perceived biphobia in the work of lesbian and gay academics; pointing out the ignorance of structural power relations and imperialist narratives in the polyamory and kink scenes and associated literature; and many concerns about the perceived racism and/or ethnocentrism of gay and queer activists and journalists such as Peter Tatchell, Johann Hari and the organisers of ‘East End Pride’. On a personal level we have found ourselves saddened by the divisions and rifts often resulting from such conflicts. At the same time we recognise the echoes of earlier
vital interventions, such as 1960s and 70s black and lesbian feminists pointing out the vastly different experiences within womanhood.

**Naming Oppression**

In one of the most publicised of the recent cases that we are aware of, Jin Haritaworn with Tamsila Tauqir and Esra Erdem (2008) published an essay entitled 'Gay Imperialism' critiquing Peter Tatchell as ‘the central figure’ in conflating Islam and homophobia. Here, Tatchell’s version of naming sexual oppression conflicted with Haritaworn’s (among many others’) naming of intersections of gender, sexual, racial, ethnic and religious oppressions. Tatchell’s response to the critique was defensive. He wrote to the publishers complaining that the book contained lies about him, and stating that he was not racist but anti-racist. The independent feminist publisher responded by publicly apologising and taking the book out of circulation (Raw Nerve Books, 2009). Johanna Rothe (2009) wrote a response to this, calling the act ‘censorship’ and noted the authoritatively defensive tone of the ‘apology and correction’: ‘the statement denounces that the article contains “untruths,” and it proclaims Tatchell “not Islamophobic” and not racist. It quotes brief phrases from "Gay Imperialism" and intersperses them with averments that it is "not" so, or that Tatchell has “never” done this.’

Professors joined the debate. Sara Ahmed (2011) responded to Tatchell’s request to point to the racism in his activism by noting that racism can be subtle and that she saw much to concerns her in his statements and in the letter of apology from Raw Nerve.

Racism in speech, she notes, does not simply depend on the explicit articulation of ideas of racial superiority but often works in ways which mean that such associations do not need to be made explicit. So, for example, politicians might use a qualifier "this is not a war against Islam" and then use repeatedly terms like "Islamic terrorists" which work to associate Islam with terror through the mere proximity of the words: the repetition of that proximity makes the association ‘essential’.

Meanwhile, Jeffrey Weeks (2010:16) defended Tatchell, while also acknowledging the complex challenge of addressing sexuality and religion in our conflicted world.

Peter Tatchell has himself recently been vehemently attacked for precisely those sins – imperialism, racism and Islamophobia – that he has fought against, in a polemical critique of his own recent campaigns against fundamentalist hostility towards homosexuality both in the West and the global South. He has been accused of imposing western standards of sexual rights on an infinitely complex world. And when he sought an apology from the publishers – which they readily gave – for what he saw as a distortion of his views and his record, he was attacked in a fierce cyber-controversy for using his white privilege to censor alternative perspectives.

Now, most of our friends and colleagues have chosen to side with Jin Haritaworn in this conflict and with other critics of racial hierarchies within LGBT politics in other similar conflicts. We can understand why. A great deal of violence by states, corporations and individuals is justified by a belief in the superiority of certain versions of whiteness and masculinity over their Others. This includes, but is not limited to, war, environmental racism, sexual violence and economic exploitation. It also includes prioritising the intellectual over at the emotional. We wish to address this last point with a call for mutual compassion.

This is complex and emotive territory. In this brief article we want to consider our own preferred strategy for addressing such conflicts ('compassionate communication'), and to interrogate its strengths and limitations, as well as the strengths and limitations of an alternative strategy ('naming oppression'). Our aim is to raise questions and to chart where we are currently at in our own – often uncertain and uncomfortable – journeys in relation to these
issues. Clearly these strategies are not mutually exclusive, but rather there is much to be learned from bringing them into an ongoing dialogue.

**Compassionate Communication**

Our preference in these kinds of conflicts, in general, has been to ask how such conflicts grow and how they might be resolved. We appreciate the strategy of naming oppression for reminding us that the personal is also political. Our intention is to remember that the political is also personal.

We come to this as people who have practised, thought, and written about conflict, and who have some ideas, informed mainly by social constructionism, Buddhist philosophy (Barker & Stanley, forthcoming 2012), queer/anarchism (Heckert, 2010a, 2010b) & nonviolent communication (NVC) (Rosenberg, 2003), about what we regard as an ethical and effective way of approaching conflict. Also, we have engaged with issues of identity and the cultural histories of marginalisation and oppression for non-normativity, with which we can find ourselves identifying.

Our position on conflict resolution has, thus far, been as follows: that pretty much whatever the conflict, it is likely that both (or all) parties involved believe (more or less) that they are right and that the other party is wrong. Also, they may well be exaggerating their rightness and the other’s wrongness in order to defend against their own frightening self-judgments (i.e., labelling themselves as wrong, stupid, cruel, or abusive). Each statement that one party has made to the other - feeling it to be balanced and reasonable - has been understood by the other as being an over-reaction and aggressive, generally because it has evoked in them past and/or recent experiences of hurt or poor treatment. They have responded in a way that they believe to be measured, given the perceived attack, but again the other party has perceived this response as over-the-top and deliberately provocative. Thus the conflict has escalated. We certainly notice this pattern in the conflict mentioned previously.

In terms of conflict resolution, on the basis of this we would generally suggest the following strategy:

Each person or group goes away from the conflict and:

1. Listens to themselves with empathy. (How do I feel? What emotions pass through? How does my body react? What tightens? Can I let it release? What do I think I need that I'm not getting in this situation? Do I really need that right now? Could I be okay without getting it?)

2. Honestly and kindly reflects on memories and experiences that they bring to the situation which may be affecting their appraisal of it. (Ah, this situation does remind me of other situations which means my buttons are being pushed even harder!)

3. Imagines the various possible reasons for the other person/group's behaviour - in a similarly compassionate way - so that they recognise the multitude of possibilities instead of assuming that it is because the other person/group just is bad, wrong, or stupid.

Each person/group then returns to the other and:

1. Takes some time to get to know each other as full human beings - what they are all about, separate to this particular issue.

2. Really listens to them when they explain why the issue is important to them, what they think about it, and what their uncertainties are.
3. Is courageous enough to also honestly explain why it is important to them, what they think about it, and what their uncertainties are.

4. Works together to find a way forward which acknowledges both people’s humanity and ability to get attached to a certain version of how things really are. This could be anything from realising they are on the same page after all, to one person shifting, to finding a compromise position, to realising that they do hold on to different beliefs and values on this point (in which case some degree of separation, agreeing to differ, and living with the tension is probably necessary).

Limitations of, and questions for, compassionate communication:
The real danger in this approach, as highlighted by many of those putting forward a more ‘naming oppression’ position, is that it may serve to diminish, erase, or silence experiences of oppression or marginalisation (in which people’s voices are already diminished, erased or silenced). If the initial conflict involved discrimination, X-phobia or X-normativity, then does the equalising ‘we are all human and prone to managing conflict badly’ approach dismiss the existence of such power hierarchies and oppressive acts?

Is giving each person an equal platform to listen, and be listened to, insufficient when one person or group has had so much less of a voice in the past than the other? If we start from a position of unequal power, do we have to further empower one party rather than assuming mutual humanness and any kind of level playing field? And if one party was seemingly discriminatory – from a position of greater privilege – then can’t it simply be stated that they were more in the wrong, however much the process of escalation, miscommunication and faulty appraisals may have been in play?

(Of course, we might question these questions. Is power something that someone has or doesn’t have? Or is it a way of moving, of relating, of doing that can be done in different ways in each moment? How attached to abstractions of identity or hierarchy do we want to be? How might we help ourselves and each other let go of abstractions and habits of power?)

There is also the extremely difficult question of where we position ourselves when the conflict is between other people or groups and we are called upon – or feel we would like to act as – mediators or advisers about potential ways of engaging. It is possible that – perhaps particularly if we are seen to share the privileged position of the ‘more powerful’ party – any attempt by us to help resolve the conflict can act as a further act of dismissal, rejection, or oppression of the ‘wronged’ party. And it is possible that it may stem from our own discomforts, and function to deny a very real experience of marginalisation and oppression. Instead perhaps we might sit with the uncomfortable fact of discrimination and prejudice and potentially also support the person who feels mistreated in this way, and/or call the other person on their discriminatory practices (which they are most likely denying), or even make other people aware of them.

‘Compassion’ or ‘conflict resolution’ can be used as a cover story. Are we drawn to resolution in order to avoid acknowledging (and to maintain) our own (for example, white) privilege? Do we simply find it painful to watch potential allies fighting and want peace? When does desire to resolve conflict stems from compassion and an ethical hope to decrease discrimination and conflict through mutual understanding, and when does it stems from cowardice and a defensiveness about our own possible privileges and problematic prejudices?
Potentials of critical compassionate communication: Reflecting upon being marginalised and upon being accused of marginalising others

Perhaps one way forward lies through further self-reflective practices which focus explicitly on such matters. It could be helpful for all people, in all positions in such situations, to spend some time describing and interrogating their experiences both when they feel marginalised and excluded and when they, themselves, are accused of marginalising and excluding others. Again, this is part of a compassionate opening to how it might be for those on the other ‘side’ of the conflict, and – more pragmatically – to consideration of what might work best in terms of changing the behaviours which we find so problematic.

This is an uncomfortable practice. It requires recognising that we all have the capacity to be victim and perpetrator, to be hurt by - and to hurt - others, to open up and to close down. But in recognising these capacities in ourselves it can become easier to understand that they are also present in others.

The people we are accusing of marginalisation or prejudice are neither singular nor fixed, and they will resist being fixed by us, just as we are resisting being fixed ourselves. The way that they are behaving now is not all that they are, nor all that they will ever be. We can see that if we look at their actions in the past, many of which we may have applauded. Their defensiveness and lashing out is likely very similar to our own response when we are accused of things that run counter to our self-presentation (but which we may well fear may be lurking underneath). We can ask ourselves what enabled us to shift and move when we ourselves felt trapped and stuck in the horror that what we were being accused of might be true. We can catch ourselves when tempted to use strategies that will shut others down or make communication more difficult, such as drawing on theories they are unfamiliar with, intellectualising, or requiring them to read materials we know that they will find inaccessible.

Similarly, when we are the ones being accused, or called upon to mediate, we can notice in ourselves perhaps our aversion to conflict, the attraction to quickly close it down in ways which may leave important things unsaid or shift the blame, our defensiveness and fears that some problematic inner truth about ourselves may be laid bare if we continue to engage. We can encourage ourselves to remember the last such conflict when we ourselves were feeling excluded, marginalised and oppressed, and how important it was then for us to have a voice, to have our rage recognised, and to be listened to. We can also recognise the tendency to present a veneer of X-blindness as a strategy for covering up any X-ism or X-normativity that is inevitably a part of us, given the difficulty letting go of the cultural norms we’ve been raised to believe are simply truth.
Conclusions
Perhaps the greatest opportunity afforded by conflicts within marginalised groups is that fact that we will all have occupied different positions at different times. At these intersections we all benefit from certain privileges and we all can be excluded and silenced by certain oppressions, many of which may not be visible or even very well understood to ourselves. We may also sometimes find that our privileges are the things we feel vulnerable, raw and uncertain about, or that our oppressions are the things about which feel stronger and more sure.

Exploring our own experiences of marginalisation can help us to connect with what we, ourselves are likely to be doing when we are dealing with others who are marginalised in ways which are less familiar to us (e.g. not noticing their experiences, not seeing our own identities because they are 'the norm', assuming these are just individual struggles and issues, wishing to flatten out differences and focus on connections, fearing the loss of friends if we speak of our own X-normativity or X-ism).

Exploring our own experiences of marginalising others can help us to connect with how others feel when they are accused of such things (e.g. dreading the truth in what has been said, feeling unrecognised for all the work we do in other areas, feeling overwhelmed by the time and energy it would take to properly learn about yet another thing and to put anti-discriminatory practices in place, feeling anxiety over engaging at all due to fear of saying or doing 'the wrong thing' and being revealed in this way).

Such strategies involve taking the risk of learning to speak more openly, to listen more gently, so hopefully the danger of further silencing and exclusion is reduced. Also we are required to recognise the uncertainties and complexities of such situations, and this runs counter to simplistic attempts to wrap things up neatly and to close them down. Finally, as we learn to slow down and to observe the ways in which societal discourses flow through us in the quick response that springs to our lips, or our tight resistance to yet another X-phobic remark, we may find ourselves turning less to the current embodiment of the discourse in this individual or group, but to the wider forces at play and flowing through them. We may be able to be more forgiving of ourselves and others, rather than tightening in guilt and/or self-righteousness, and to find ways towards unexpected alliances and collective action (Okun, 2009/10).

Acknowledgments
We would like to thank Shiri Eisner and Camel Gupta particularly for their role in motivating us to think about many of these questions.

With Ten Dollars (2011-09-16 04:27)

---

[1]
I couldn’t have invented an ethnographic field site more perfect than the Winnipeg River. With Clark’s Corner at its center, it was every bit as iconic as William Foote Whyte’s Cornerville, Elliott Liebow’s Tally’s corner or Elijah Anderson’s a place on the corner. However, as perfect an ethnographic field site, as the Winnipeg River happened to be, ethnographic field research was not remotely the reason I wanted to live there, even if that’s what I said I wanted, and perhaps even more importantly, what people were expecting of me.

I wanted to live on the Winnipeg River for one reason and one reason alone, and that was to look for Manawaka, the fictional Manitoba Township beautifully and painstakingly created by the novelist Margaret Laurence through a series of five distinct but interlocking novels, The Stone Angel, A Jest of God, The Fire Dwellers, A Bird in the House, and The Diviners. I knew Manawaka wasn’t a real town. That is, I knew it didn’t exist on any landscapes or appear on any maps. And perhaps even more importantly, I also knew that Manawaka was inspired by the very real town of Neepawa, Manitoba, the landscape town, the map town of Margaret Laurence’s childhood and growing up.

Which was precisely why I was looking for it on the Winnipeg River, a place close enough to the source of its inspiration, but far away enough, to not be reminded of its author and its artifice. There wasn’t any space for Manawaka to exist in Neepawa, with its honorary plaques and museums, celebrating itself as the birthplace of Margaret Laurence, and of course, the series of novels she wrote that forever scrambled its good name. But there was space, however, along the Winnipeg River, where, from the very first time I set foot there, in the summer of 1995, I became haunted by the seemingly impossible suspicion, that Manawaka had somehow, suddenly, become alive. I kept finding myself coming face to face with whole characters and walking in on entire scenes, people’s voices and accents turning into dialogues and story lines, and every stop along the road some fictional setting I had already been. It was unnerving. Like finding the place where all of my readings and re-readings of these novels had been packed and stored away, waiting for me to make my entrance there, as if a stage set for a play.

I was first introduced to Manawaka in The Diviners, Laurence’s fifth and final novel about the town. My mother gave it to me as a gift for my twenty-fifth birthday. This is who we are, she wrote inside the front cover, and by we she meant her and me. It was a particularly appropriate inscription, since The Diviners is a book about the stories people tell to make a place for themselves in the world, and even more specifically, the stories a mother, Morag Gunn, tells herself and her only daughter, Pique. My mother loved The Diviners. The very first time she ever read it, the year it came out in 1974, she finished it in one sitting, and was so sad to reach its end, that she seriously considered getting into her car, driving over to Margaret Laurence’s house, and knocking on the author’s front door. Just so she could stave off the book’s ending a little while longer. Just so she could see if the story could go on a little more.

She never actually did this, of course, but it wasn’t such a far-fetched idea. At the time, we were living in Peterborough, Ontario, less than forty kilometers south of Lakefield, Ontario, the small, one-street town where Margaret Laurence had settled in the early 1970s. Laurence had actually written the entire text as well as set several key passages of The Diviners there, a fact, which for my mother was almost too amazing and wonderful to bear. Further proof, she thought, of something of which she was already quite sure. That this novel about a woman from the backwoods of Manitoba, Morag Gunn from Manawaka, Margaret Laurence from Neepawa, was not just a story she could read and love, but also an ancestry she could share.

My mother wasn’t alone in her passion for The Diviners. In Canada at the time it was a highly anticipated novel, the latest installment of an already nationally adored and internationally known literary series, and within Canadian literary and academic circles, Margaret Laurence herself was already something of a celebrity. She was known for her inventive, sometimes experimental and always politically provocative writing; her talent for blurring the lines between past and present, fact and fiction, biography and autobiography; her deeply complex and flawed characters; her poetic riffs on the joys and sorrows of writing; and, perhaps most famously, for selling an earlier
Manawaka novel, *A Jest of God*, to movie star couple Paul Newman and Joanne Woodward, who turned it into the critically acclaimed Hollywood movie *Rachel, Rachel*. In her forward to the University of Chicago re-release of *The Diviners*, another internationally renowned Canadian novelist, as well as poet, Margaret Atwood, wrote of her profound respect and awe for Margaret Laurence, calling her work an important part of the national pride and feminist fervor that swept Canada in the early 1970s. A pride and fervor, Atwood explains, that for many Canadian women, Laurence later came to symbolize.

So it makes sense to me why my mother loved *The Diviners* the way she did. She had only been a Canadian citizen a few years in the early 1970s, having emigrated there all by herself from the very small town of Frankenholz, Germany, when she was barely eighteen, with ten dollars in her pocket, so the story goes. She had come there partly for the adventure, but mostly for the chance to shed her identity as her parent’s daughter and her boyfriend’s prospective wife. Which was precisely what she did, finding in Canada a new, young nation, itself struggling towards it’s first few decades of self-actualization and cultural autonomy.

![Image](image.png)

I have a photograph of her from those days. She stands on a stark winter day all buttoned up in a corduroy coat. She looks like that girl in that Canadian painting *Julie and the Universe*, that painting by Jean Paul Lemieux (see image at the top of this essay). They were, you could say, the perfect match, my mother and Canada in those days. And *The Diviners*, with its bold and unapologetic Canadian content, fearless independent heroine and brilliant female author articulated all of this, forever sealing into words and sentences everything my mother ever wanted her life in Canada to be: Self-directed. Self-sufficient. Self-governing.

She never wavered, working towards this wanting. Even as the early 1970s slowly faded into new decades and circumstances caused her to leave Canada and immigrate again, this time, to the United States, with my father, brother and me, she still held on to *The Diviner’s* as the truest statement of who she thought she was, and what she believed was the best and most important piece of herself to pass down, as if a family heirloom, to me. *This is who we are*, she wrote inside the book’s front cover.

I had never known my mother to make such a definitive statement about her own, let alone our shared identity. Her life, our life, simply never lent itself to such simplicity. My mother and I share many things, of course, like blood and physical traits and all the years of my youth. But we also share a lot of differences, like the countries of our birth, our first languages and accents, our educational backgrounds. So even though I always knew and thought of us as being a family, I never knew or thought of us of as being socially the same, at least not until she gave me *The Diviners* and in this novel staked for us a common heritage, a common name. *This is who we are*, she wrote inside the book’s front cover.
I took both the novel and her inscription seriously, which was easy, since just as my mother had twenty years before, I fell in love with The Diviners, too. So much so that when the chance arose to do ethnographic field research on and around Clark's Corner I took it, unable to resist making a pilgrimage to the one place in the world I was certain Manawaka could be, the Manitoba backwoods.

Three Truths A Lie | The Sociological Imagination (2011-09-17 13:19:52)
[...] My mother, on the other hand, never exaggerates — anything; in fact, so seriously does she take the world that if she wasn’t so smart you’d think she was naive for the questions she asks about the veracity of the gossip in People magazine (is Jennifer Aniston’s daily snack really just a handful of almonds?), the right ingredients for a sauce, the books on quantum physics or calculus or Zen Buddhism she reads. I remember once, when she started taking courses at the local, fourth-tier, state university she’d call me up shocked about the room full of mostly 18 and 20-year olds with whom she shared the class, “Audrey, none of the students in the class seem to do the homework or read!” It took me weeks to convince her that the Professor didn’t expect she get 100 per cent on every quiz or test. “But it’s university! she’d say. “Aren’t we supposed to learn the material?” [...]

The Legacy of 9/11 (2011-09-16 08:00)
A former Sociological Imagination author, Leon Moosavi, appears in a documentary about the legacy of 9/11:

IFRAME: [2]http://www.youtube.com/embed/7__2xF3VPk

For more of Leon’s media work on similar issues see here. We’re going to be interviewing him next month about his experience of working with the media as a PhD student.
The idea of studying modern social problems in a methodical way emerges in the late 19th, early 20th century through the writings of scholars such as Karl Marx, Max Weber, Sigmund Freud and especially, Emile Durkheim and W.E.B. Du Bois. It's not difficult to imagine why. This was, after all, a time, when the dark side of modernity was starting to become more apparent. People were poor and ragged and often left homeless in the streets, upward mobility through education was reserved mostly for rich, white women and working class men, and the rural, small town edges of the great, new 20th century cities seemed to be finally wearing off.

I learned all this not from the writings of Marx and Weber and Freud and all the rest, but rather, the writings of Betty Smith, an American novelist and playwright, whose classic 1943 book, A Tree Grows In Brooklyn, I read, for the first time, when I was nine. Tree is all about the life and times of Francie Nolan, an Irish-American girl growing up in Williamsburg, Brooklyn just after the turn of the century, who made observations about the world like this: "It was as if this could be a whole life," Francie thought. "You work eight hours a day covering wires to earn money to buy food and to pay for a place to sleep so that you can keep living to come back to this place and cover more wires. Some people are born and kept living just to come to this ... Maybe she'd never have more education than she had at that moment. Maybe all her life she'd have to cover wires."
Or, even better, observations like this, Francie's ideas about a man she sees sleeping on the street outside of Losher’s Bread Factory: "He is old. He must be past seventy. He was born about the time Abraham Lincoln was living and getting himself ready to be president. Williamsburg must have been a little country place then and maybe Indians were still living in Flatbush. That was so long ago ... He was a baby once. He must have been sweet and clean and his mother kissed his little pink toes. Maybe when it thundered at night she came to his crib and fixed his blanket better and whispered that he mustn't be afraid, that mother was there. Then she picked him up and put her cheek on his head and said that he was her own sweet baby. He might have been a boy like my brother, running in and out of the house and slamming the door. And while his mother scolded him she was thinking that maybe he'll be president some day. Then he was a young man, strong and happy. When he walked down the street, the girls smiled and maybe he winked at the prettiest one."

Though Smith didn’t use these exact words, Francie, was what sociologist Charles Lemert would call a *practical sociologist*, someone who sees in the everyday workings of life the larger *social scene*. As Smith herself wrote, "Francie stared (out at the world and) played her favorite game: Figuring out about people." And Smith with her fictional stories about a very real Brooklyn has always been for me the very best kind of what, (again what Lemert would call), *academic, scientific* sociologist: Emotional, soulful and geographically sensitive. In other words, a careful and artful documentarian of place.

One last passage from *Tree*: "Losher's bread factory supplied the neighborhood stores. The bread was not wrapped in wax paper and grew stale quickly. Losher's redeemed the stale bread from the dealers and sold it half price to the poor. The outlet store adjoined the bakery. Its long narrow counter filled one side and long narrow benches ran along the other two sides. A huge double door opened behind the counter. The bakery wagons backed up to it and unloaded the bread right to the counter. They sold two loaves for a nickel, and when it was dumped out, a pushing crowd fought for the privilege of buying it. There was never enough bread and some waited until three or four wagons had reported before they could buy bread. At that price, the cutomers had to supply their own wrappings. Most of the purchasers were children. Some kids tucked the bread under their arms and walked home brazenly letting all the world know that they were poor. The proud ones wrapped up the bread, some in old newspapers, others in clean or dirty flour sacks. Francie brought along a large paper bag."

It’s hard to say whether I would have cared or not about the ideas of the first academic, scientific sociologists had I not read Betty Smith, for she was the one who introduced the social problem of modernity to me. And so I think of her every semester when it comes time to teach the pillars of the sociological canon and think about all the core ideas and concepts it protects. Ideas and concepts, which emerged from the minds of men living so long ago they are difficult to verify and, perhaps even more importantly, difficult to imagine, let alone see.

End Note 1: The image above is the movie poster from Elia Kazen’s cinematic version of "Tree" made in 1945.

End Note 2: Here is a little list of all the things I learned from "A Tree Grows In Brooklyn," very useful for these economically dark times: 1) *Salvage and save everything, but always be prepared to let it go* (from Tree’s heroine, Francie Nolan, who made money gleazing tin and other valuable trash from the street and trading it for money from the neighborhood junkie, i.e., garbage man); 2) *When you spend money on something to eat or drink pick something that lasts* (from Francie’s selection of peppermint wafer candies over all other candies and her mother, Katie’s, recipes for cooking with stale bread); 3) *Take your fair share and do with it what you truly wish* (from Katie, who allowed Francie one hot cup of strong black coffee a day even though Francie chose not to drink it); 4) *Proceed through life steadily and methodically, but allow yourself to regularly stray from your self imposed routines* (from Francie’s weekly ritual of checking out two books a week from the public library, one by moving alphabetically through the stacks and another by selecting one book purely by chance or for pleasure); 5) *Try and love your brother no matter how many unearned privileges from your family and society he receives* (from Francie’s enduring love for her brother Nealy, who, is allowed to attend high school when Francie is not); 6) *Never be afraid to leave home*, (from
New column! “Visual Sociology” call for reader submissions (2011-09-17 08:00)

For all professional and/or novice visual researchers out there: the Sociological Imagination is pleased to announce its new column dedicated to “Visual Research”. To celebrate its beginning, we are launching a continuous call for reader submissions.

The call is open to all our readers. **One piece of visual research work will be featured each Friday.** The SI reserves the right to use the submissions on the website at any time after they have been sent to us, after explicitly notifying their authors by email. If you’ve sent us an image and change your mind for any reason, just e-mail us and we promise not to post it. Scroll down for submission guidelines.

[2]

---

Guidelines for submissions:
How to submit: Please e-mail us with 'SI Visual Sociology' in the subject line.

How many: Authors may submit up to three separate pieces of work (we shall consider more numerous applications on a case by case basis – i.e., if we really like them!).

What information: Every submission must be accompanied by the following information:

- title of the work;
- full name/s, or artistic pseudonym/s, of its author/s;
- contact e-mail address and/or other contact details.

What counts as “a piece of visual research”? What ratio must there be between image/s and text? We side with Becker (1995) in abandoning methodological purism, and leave to your discretion the decision what and why classifies as visual sociology/anthropology (as opposed to documentary, photojournalism, art, or any other visual-based genre). The editorial team also reserves the sole right to decide whether to publish any submission. Submissions may range from image/s with text to text with image/s, as long as images and analysis or story are integral to one another.

Type of image: Any images/photographs are acceptable: black-and-white or colour; new shots or old scanned shots from your archives – as long as you have the rights to distribute them; and there are no restrictions regarding any artistic or photo-processing technologies used in the production of the images.

Format and size:

- JPEG format
- 1:1.5 ratio and any resolution suitable for publishing online (the images the SI normally posts are scaled down to 440x294 pixels, or near)

Legal issues: Any persons present in the photographs MUST be notified, be aware, and not oppose the publication of the images. If in doubt, consult this guide on photographers' rights:

http://www.sirim.co.uk/2009/05/14/uk-photographers-rights-v2
Copyright: The submissions will be distributed under the following conditions

Creative Commons Licence Attribution 3 (allowing for non-commercial distribution of shared works):

[4] "This work is licensed under a [5]Creative Commons Attribution-NonCommercial-NoDerivs 3.0 Unported License."

UCU keeps pressure up on for-profit companies (2011-09-18 12:00)

Thanks to a UCU tip off, the Times Higher ran with the news that Education Management Corporation, the second largest for-profit company in America, is being sued for $11billion by the US government on charges of fraud. UCU drew attention to meetings between Education Management Corporation and universities minister David Willetts in the lead up to the white paper. Read more here: [1]http://www.timeshighereducation.co.uk/story.asp?sectioncode=26 &storycode=417161 &c=1.

UCU also called on the deputy-prime minister Nick Clegg to extend his commitment of schools not being run for profit to colleges and universities as well. 22 Liberal Democrats and 124 MPs have signed an Early Day Motion expressing their concerns at the government’s university privatisation plans. Read more here: [2]http://www.ucu.org.uk/index.cfm?articleid=5713 as well as here:

from the UCU campaigns update

We-First Capitalism? (2011-09-19 08:00)

As much as it’s easy to be cynical about former advertising executives who have mid life crises and then begin to express lofty social concerns, this is a genuinely intriguing talk by ‘social brand specialist’ Simon Mainwaring about what he sees as the rehumanising potential of social media. He describes his fascination when “along came this technology which was allowing people to connect ... with their friends and family, around what they care about, anywhere in the world, in real time, effectively for free”, suggesting that it is ‘reweaving the social fabric’ in a way that is independent of large corporations, political hierarchies and established authorities. Crucially, as he puts it, “we are finally able to talk amongst ourselves about what we care about” and, with this, comes reconnection with our innate empathy and core sociality.

Bob Williams (2011-09-20 00:49:07)
Are you confusing corporatism with free enterprise (i.e. capitalism)?

Sociological Imagination (2011-09-20 07:47:46)
Are you talking to the editors or the person in the video!?
A round up of recent articles on academic publishing (2011-09-20 08:00)

There’s been a lot of argument recently about the sustainability of traditional models of academic publishing and possible alternatives to them. Here’s a round up of posts on the subject either connected to SI or ones that we liked:

- [1] Academic publishers make Murdoch look like a socialist
- [2] Uninformed, Unhinged, and Unfair — The Monbiot Rant
- [4] The ‘prestige’ of journals in a social media age
- [5] Response to Mark Carrigan’s “The ‘prestige’ of journals in a social media age”
- [6] Cite or Site? The current view of what constitutes ‘academic publishing’ is too limited. Our published work must become truly public
- [7] We Ask Martin Paul Eve: Do We Need to Rethink Academic Publishing?

If there are any you’d like to see added to the list, please let us know through the comments box below or get in touch on [8]twitter.

New REF guidelines penalise female academics – send us your views (2011-09-20 12:00)

UCU warned on Tuesday that proposed new guidelines for university research as part of the 2014 REF will penalise female academics. Under the draft proposals, female researchers who take maternity leave will still be expected to produce the same number of high-quality research publications as their colleagues. You can read the full consultation document here: [1]http://www.hefce.ac.uk/research/ref/pubs/2011/03_11/

UCU will be responding to the consultation exercise as well as providing briefing to branches on how best to protect members. We will argue for greater recognition of the disruptive nature of maternity and adoption leave on workloads and publications. Please help us to feed into the consultation by sending us your comments on the draft REF draft panel criteria, including all the elements relating to equality and diversity. Please can you send in any comments to Rob Copeland, policy officer [2]rcopeland AT ucu.org.uk by no later than Friday 30 September.
Neuromania? The possibilities and pitfalls of our fascination with brains (2011-09-21 08:00)

In this great talk, [1]Raymond Tallis, perhaps our last genuine polymath - check out his website and career if you think we’re exaggerating - draws a distinction between neuroscience and neuromania. While he’s all in favour of the former, which given his distinguished medical career is perhaps not a surprise, he’s overtly hostile to the latter: the obsessive exaggeration of the centrality of neuroscience in explaining human nature. Effortlessly combining the roles of philosopher and clinician, he comprehensively and authoritatively takes apart the lacklustre philosophy of science, as well as the science itself, underpinning the current craze for neuromania.
'You either die a hero or live long enough to see yourself become the villain...' (2011-09-22 08:00)

In 1986 DC Comics published a four issue mini-series called Batman: The Dark Knight Returns. While few would have predicted it prior to its publication, this work of Frank Miller was soon regarded as one of the touchstones for the medium and, through commercial success and critical controversy, almost single-handedly reinvigorated a moribund character. Time magazine suggested the portrayal of a ‘semiretired Batman [who] drinks too much and is unsure about his crime-fighting abilities’ was an example of trying to appeal to ‘today’s sceptical readers’.

Regardless of the criticism which the series received in some quarters, it undoubtedly did appeal to readers and the manner in which its ‘dark’ and ‘adult’ approach were progressively taken up by other comics points to the ‘scepticism’ of those readers being a widespread condition rather than the aberrant property of a cynical minority. The same dark approach lay behind the critical and commercial success which Christopher Nolan’s The Dark Knight enjoyed at the box office in the summer of 2008. Why is this kind of approach so popular? What explains its manifest resonance amongst vast swaths of the cinema-going and comic-buying public?

Perhaps the answers lies towards the end of the film when Batman and Jim Gordon attempt to make sense of Harvey Dent’s actions, as the brave and virtuous district attorney was driven to attempted murder by the cruel machinations of the joker. The public regard Bent as a hero, but the public face of heroism becomes a fiction, crafted
by powerful men in midnight schemes because the masses could not countenance the grim truth and social order necessitates the illusion. The heroism of Harvey Bent becomes a cruel joke, which Batman, alter ego of the billionaire Bruce Wayne, attempts to hide in the best interests of the public. If it wasn’t for his own personal biography, as a man forever damaged by the murder of his parents as a child, he might have channelled this patrician impulse into philanthropy. Instead he rushes off into the night, chased by police and dogs, taking the blame for the crimes which Bent committed. His parting words sum up the ethos of the exchange: ‘You either die a hero or live long enough to see yourself become the villain’. This is the bitter truth which the public must be protected from at all costs. The closest thing to heroism which The Dark Knight portrays is the attempted deception of the public towards this end.

Compare this critically lauded portrayal of heroism within that of another popular film series. While The Dark Knight was an enormous critical success, the Rocky films were, with the partial exceptions of the first and the sixth, critically panned. Yet both, in a sense, portray heroism. Once you look beyond the crass jingoism which frames large aspects of the Rocky series, a rather earnest narrative about heroism and virtue soon comes into focus. Each of the films follows the same format, as constancy and courage enable Rocky Balboa to triumph over adversity. The virtues the films portray have a long moral history in Western culture and yet for most of us the narrative which portrays them is one we struggle to take seriously. While the moralisation of professional boxing probably takes some blame for this, it is by no means the whole story.

What we can take seriously however is The Wire, and, its gritty social realism notwithstanding, it comes equally equipped with its heroes. Foremost among these is stick up boy Omar Little. He prowls Baltimore in his trench coat, with his shotgun slung at his side, robbing drug dealers. With his facial scar, ethical code and fearsome reputation, he becomes a mythic figure known throughout Baltimore. He crafts a mythology from the ruins of deindustrialised desolation and he sustains a heroic existence one day a time. Yet he cannot, ultimately, escape from his surroundings, and he dies ingloriously on the floor of a convenience store after being shot to death by a child.

What message can we take from this? Perhaps that when a hero is reduced to a daily struggle for survival, his or her heroism is unsustainable. The Wire’s realism ultimately conveys, perhaps inadvertently, the impossibility of heroism in the late modern age. We can struggle against the constraints of circumstances and the debasing forces of contemporary times. We can craft an honourable life in the midst of violence and suffering. However the effort required is herculean and inevitably, at least in the long run, beyond us. This is the message conveyed by the sudden and pointless death of Omar, as well as by this sort of social realism more generally.

Yet if we accept this realism I think we have lost something important. Though The Wire itself admirably retains the capacity for imminent social critique, this is the exception rather than the rule and it’s primarily a consequence of the sheer talent of the creators of the series. The ‘scepticism’ which Time magazine suggested was responsible for The Dark Knight’s success has only grown since 1986 and it’s far from a positive cultural trend. The cultural theorist Mark Fisher calls it ‘capitalist realism’: the aestheticisation of capitalist hegemony. As Fisher puts it, ‘capitalism seamlessly occupies the horizons of the thinkable’ and, as such, dominates the sensibility and aesthetics of cultural production. However unlike historical instances of a politicised aesthetics, the ensuing cultural style is neither narrowly aesthetic nor superficially political. It manifests itself in a ‘machismo of demythologisation’ which proudly undercuts heroism in the name of psychological realism (‘you either die a hero or live long enough to see yourself become the villain’) and hope in the name of sociological realism (everything ultimately comes down to power and deceit). It counsels suspicion and scepticism in the name of an acceptance of reality which will help protect us against the ideological machinations of the powerful.

In fact its acceptance helps, in a sense, bring about the reality it purports to reflect. The philosopher Slavoj Žižek suggests that, far from being a post-ideological acceptance of sheer reality, contemporary cynicism is profoundly ideological in character because its hyperbolic fixation on the worst the world has to offer (cruelty, corruption, deceit) and its suspicion towards those ideals and practices seen to provide masks for that deceit (heroism, morality, authority) leaves us mired in an apathetic irony (unable to take the possibility of social change seriously or think
beyond present circumstances). The sad truth is that, as he puts it, 'even if we do not take things seriously, even if we keep an ironical distance, we are still doing them'. The error lies, he argues, in an overvaluing of belief. Far from representing an act of resistance, the subjective disavowal of the cynic (eg. 'don't you know all politics is manipulative bullshit?') facilitates their objective complicity (a passive disengagement from political life). This cynicism precludes critique as well as protection. It simply engenders an subjective anger and an objective impotence. It also cruelly erodes the kind of social historical vantage points which would be necessary to address the question of overcoming it. Therefore in their absence perhaps the first step is to take Rocky a bit more seriously and Batman a little less so?

**Is gender studies sexist? This person certainly claims to think it is** (2011-09-23 08:00)

A scandal is brewing at the LSE. Tom Martin was a 39 year old student who signed up to do an MA in Gender, Media and Culture at the LSE. Six weeks later he quit. He has recently [1]initiated legal action against the university for £50,000, claiming anti-male discrimination and false advertising.

You can read his website here ([http://www.sexismbusters.org/](http://www.sexismbusters.org/)) and his twitter feed here ([@sexismbusters](https://twitter.com/sexismbusters)). We're not linking directly because we have no great desire to find ourselves on his shit list (life is too short for it to be worth the effort). It’s worth having a look through some of the interesting claims he’s made on twitter though. At heart he seems to see the law suit as an attempt to, in his own words, "suing gender studies for pretending most men are rapists". He claims gender studies systematically ignores "men’s issues" because of its institutionalised hatred.

This is a video he posted on Twitter to support his case. Draw your own conclusions:
There was a Guardian article by a former academic in the LSE department which you can view [3]here. Read Tom’s response to it [4]here.

Beyond the particular issue in question, this seems an extremely worrying case because of the precedent it sets. As increasingly assertive and vocal student-consumers, now encumbering themselves with massively increased debt for UK degrees, meet a strained, underfunded and stressed higher education system in the UK, what action will they take to try and rectify their grievances? This is undoubtedly an extreme case but perhaps, though an outlier, it is a foretaste of things to come?

Studies in Social and Political Thought (2011-09-23 12:00)

Studies in Social and Political Thought
General Call for Papers - Fall 2011

Studies in Social and Political Thought is soliciting papers from graduate students and scholars working in the areas of social and
political thought broadly construed. SSPT is an inter-disciplinary journal that has published work by well-known figures such as Stefan Muller-Doohm and William Outhwaite. Our main aims are: first, to foster inter-disciplinary and collaborative work in social and political thought; and, second, to provide a high-quality publishing platform for young academics. Since our re-launch last year we have published issues on Theodor Adorno, Utopia and Dystopia, and post-colonialism. Our most recent issue was guest edited by sociology graduate students from Warwick University, helping to further our aim of interdisciplinarity and institutional collaboration.

In addition, we have attracted a prestigious panel of leading scholars for our newly formed international advisory board, including: Martin Jay of UC Berkeley, Robert Pippin of the University of Chicago, Gayatri Chakravorty Spivak of Columbia University, Seyla Banhabib of Yale University, Simon Jarvis of the University of Cambridge, William Outhwaite of the University of Newcastle, Homi Bhabha of Harvard University, Adriana Cavarero of the University of Verona, Alessandro Ferrara of the University of Rome, Axel Honneth of the University of Frankfurt and Fredric Jameson of Duke University.

SSPT will seek to build on these developments in the coming year and we hope you will consider submitting your work for consideration. For more information about submissions, subscriptions, or to download a free copy of the journal, please go to our website: http://ssptjournal.wordpress.com/. Or, for any other enquiries, please email us at: sspt@sussex.ac.uk.

The Editors, Studies in Social and Political Thought

Do you want to be a news editor? (2011-09-24 08:00)

The Sociological Imagination is currently trying to recruit another news editor. This would involve identifying news stories relevant to the site, collecting pertinent links, writing a short commentary and e-mailing it in to be posted online. There would be no fixed time commitment for the role. It would literally just be a case of picking certain new stores (relating to the intersections between higher education, politics and the interests of social scientists) and writing a couple of hundreds words about them to provide evaluation and context. If you’re interested or would like to discuss the role then please get in [1]contact.

1. mailto:m.a.carrigan@warwick.ac.uk
It has been over 50 years since C. Wright Mills wrote the Sociological Imagination. In that time the world has changed beyond recognition: the Cold War ended, the Keynesian consensus broke down, a globalizing neoliberalism rose to the ascendancy and the internet began to transform human communication and culture. In recent years, with 9/11 and then the financial crisis, it seems that history has returned with a vengeance. Is Wright Mills’ notion of the ‘Sociological Imagination’ still pertinent today? How can Sociology help shed light on the rapidly transforming world around us and the consequences of these transformations for the people who inhabit it? What does the ‘Sociological Imagination’ mean today?

Short articles are invited which engage with these themes, or particular aspects of them. Submissions should be 500 – 1500 words and [2]e-mailed as a Word document. There is no deadline for submissions.
Social Media in the Third Sector (2011-09-26 08:00)

Can social media deliver social returns? This is the question asked by Sarah Dyer, director of new media at charity [1]Beatbullying. Within the academy, it can be easy to assume that understanding of social change is something which results form disinterested academic study. Yet perhaps, with something like social media, any real understanding of its consequences from society comes from those who are, so to speak, on the front line: integrating the technology into organisations in order to transform their activity.

BSA annual conference 2012 THEORY stream (2011-09-26 10:20)

The BSA annual conference will be held in Leeds in April 2012. The general theme of the conference is Sociology in an Age of Austerity. The Theory stream welcomes abstracts in all areas of theory that colleagues are currently working on.

We will also organise two themed sessions.

One on 'mobilisation, protest and movements' organised by Dr Ana Cecilia Dinerstein.

The second on 'The return of religion in times of austerity' organised by Professor Gregor McLennan.

Whether you are applying for the theory session in general, or the above-mentioned themed sessions, please make sure you apply via the BSA’s abstract route, and mark your abstract ‘for the attention of the theory group’.

For further details, please see [http://www.britsoc.co.uk/events/conference/home.htm](http://www.britsoc.co.uk/events/conference/home.htm)

The deadline for submission of abstracts is just under two weeks away: 7 October 2011.

-------------
**Zygmunt Bauman documentary (2011-09-26 12:00)**

The Trouble of Being Human These Days, a forthcoming Zygmunt Bauman documentary we highlighted a couple of months ago, is now in its post-production stage. The production team hope to release the film in October this year with a DVD to follow at some point in 2012. Follow the website [1]here for more information.

**Chavs author Owen Jones returns to Stockport (2011-09-27 08:00)**

In this video [1]Owen Jones, author of the superb Chavs which was reviewed on SI [2]here, returns to his hometown of Stockport to investigate views on [3]'chavs'.

817
Are you writing the 'I' into your research? (2011-09-28 08:00)

1. http://owenjones.org/

It was a surprise and somehow a welcome relief when my supervisor at the University of Nottingham, Prof Carol Hall, encouraged me to ‘write the I’ into my MA dissertation about emotional intelligence in teaching and learning. The six (long, tough) years I'd spent between 2000-06 as a mature, part-time under-graduate student at the University of Warwick, had drilled into my psyche the importance of ‘validity’ and ‘academic rigour’: words which, only now, I feel brave enough to include within italics. As many educationalists have noted (e.g. Merrill, 1999; West, 1998; Willis, 1977) because of my age, experience and working-class background, assimilating these methodological concepts was a hard battle and so choosing to subsequently relinquish them produced its own personal challenges.

However, by the end of my Masters, I felt this approach had opened-up a positive, new, creative world. Its reflexive nature promotes a refreshing consolidation of research, instinct and emotions, or as C. Wright Mills (1959) has written: "Scholarship is a choice of how to live as well as a choice of career" (p196). The paradigm change empowered me and provides me with a new sense of confidence and self-identity: yes, I carry my own validity and my academic rigour is provided by my own (and my colleagues’) sheer hard work!

But, as with any change, bringing the 'body' of the researcher - our own personal experiences and perspectives into our research - produces new dilemmas and risks. It creates tensions between the subjective/objective; quantitative/qualitative or the planning and rational thinking that is required in research project design. It can also be a source of disagreement between us and our supervisors! However, it is these very risks which create their own
worth, because, by its very nature, writing the ‘I’ into our research produces unpredictable and destabilizing effects on our data, our work and on us as researchers (Hoult, 2010). Importantly, I believe this allows a voice to be given to the disenfranchised self (and those I represent) from my personal past, or as Aronowitz (2003) puts it: “the ongoing debate about the relationship of scholarship to social commitment”. In our journey towards seeking new knowledge, the elements of risk and uncertainty, and the inherent affectivity within, play a crucial part.

These dilemmas are issues that individuals have struggled with for decades and are only ever resolved on a personal level. It seems slightly ironic that only in the Appendix in Mills’ ‘Sociological Imagination’ does the author provide practical suggestions for ‘beginning students’. But these recommendations are still crucial today, and ones that I always pass on to my own students. For example, by creating a portfolio of personal items, discussing our research with others and keeping a journal of our emotional learning journey we can “...keep our inner world awake” (p197).

So, in this age of increasing multi/inter/cross-disciplinary approaches, and in an atmosphere of increased sensitivities to ethical and cultural issues, writing the ‘I’ into our research provides a creative, valuable and innovative tool that has the potential to stretch beyond barriers, providing new insights. And, although sadly, many sociologists have been “deterred by fear and careerism from following his path” (Aronowitz, 2003), there’s no doubt that Mills’ philosophy has been successfully transformed by the blogging, tweeting and social and academic networking environment that today so many of us take for granted. But we’ve entered a new millennium since Mills’ seminal publication, an era which has also produced a polarisation of inequalities and alarming environmental and economic pressures. I imagine Mills would be fascinated but saddened at this paradox.

In this context of faster technological advances how can Mills’ ideas be taken forward? What practical methods are you utilising to write the ‘I’ into your work?

The Mad Men You Love To Hate (2011-09-29 08:00)

Have you ever noticed that sociologists seem to have the same taste in TV? Or at least that they all seem to love the Wire and Mad Men. Last year a first year undergraduate observed this to me which, given he’d only been in a sociology department for 5 months, left me thinking it was strikingly obvious.

On which note, this RSA talk will appeal to any Mad Men fans reading. An expert panel discusses [2] how advertising has changed since the days of Don Draper and co. It’s fascinating to here some of the most senior people in the trade reflect on changes in their profession, as well as speculate about the future, though be warned that some of their views might grate slightly.

Though there’s a video of the event, it’s worth listening to the audio recording which includes the discussion in its entirety.
Over the last few years, it’s become something of a cliché to argue that the modern web (a.k.a. web 2.0) is transforming the way we interact. This happens to be one of those clichés which is, to a large extent, true. It would nigh on impossible to deny that things like YouTube, Facebook and Twitter are having the sort of radical impact which extends far beyond the internet and into society at large. This is reflected in their usage statistics: facebook has more than 350 million active users, Twitter has 25 million users and the two most popular YouTube videos of all time have been viewed an astonishing 150 million times.

However behind these superstars of web 2.0, with their millions of users and immense share prices, are a new breed of collaborative websites. They have neither vast corporate resources or established hoards of obsessive users. They serve no significant ‘purpose’ and it would be easy for an overly cynical critic to write them off as the sort of vacuous time wasting which a technology like the internet too easily facilities... let’s ignore that critic though because these sites are, well: fun. Furthermore the speed with which they are growing points to a new and, in my opinion at least, rather pleasing direction for the web.

The forerunner of these sites was undoubtedly [2]Post Secret which since 2005 has featured 2,500 original...
pieces of art by users all over the world. Each of these revealed a secret which the creator had never before admitted and these encompass a range which is scary, hilarious and genuinely quite moving. A couple of years later came [3]Passive Aggressive Notes which hosts a seemingly endless sequence of passively aggressive tirades (which are sometimes far more explicit than they are passive) sent in by office workers and internet users the world over. A year later in 2008 came [4]Fail Blog which, as far as I can tell, is pretty much responsible for bringing the term ‘fail’ into its current meaningful-on-its-own form of use. It chronicles ‘fails’ from all walks of life and is now tied up with [5]LolCatz the famous home of “[6]icanhascheezburger?”. Around the same time as Fail blog, on a rather similar theme, came [7]F My Life which, as you can probably guess from the name, provides a space for noting those moments when life isn’t going so well... and for those less pissed off with their day there is [8]My Life is Average. Finally, to bring this in no way exhaustive list to a close, there is [9]Texts From Last Night which, rather unsurprisingly, collects those embarrassing, confusing and funny texts which you sometimes wake up to the morning after the night before.

At this point the vexing critic mentioned earlier might be moved to ask quite what the point of all this is. While on one level there isn’t one, at least not beyond entertainment, on another level I would suggest that the ‘point’ of these sites is, in a way, rather significant. The anthropologist Kate Fox argues that humans have a need for ‘grooming talk’ (the sort of idle chatter which facilitates contact and connection with other people, without serving any great communicative purpose) and that the possibility of such talk has declined radically in the modern world. Fewer and fewer of us know our neighbours, particularly in cities, while the hours we spend commuting (either alone in cars or among strangers on public transport) only entrench our isolation. The small stable communities in which such grooming talk was a regular and easy occurrences are largely a thing of the past and, with this, something is lost. However when you look at some of the above sites on a regular basis, particularly those such as F My life and My Life is Average, it’s difficult not to feel a sense of connection. The internet is allowing us to once more share the minutia of daily life with others and, furthermore, it’s doing so in a way which liberates us from the staid conversations which characterised the sort of ‘garden fence’ and ‘village green’ conversations which Kate Fox cites as examples of the lost grooming talk. Sites like this may not change the world but they are, in a small and subtle way, making modern life a little more enjoyable and a little less isolating.

2.10 October

Inspire your next move. BSA Annual Conference 2012 (2011-10-01 08:00)

Even in the face of adversity, these are exciting times for sociology.

We all know that austerity measures have divided opinion and we’ve all seen what’s followed. Many of us
have been directly involved, or affected by recent events. Expect our most dynamic and vigorous event to date.

This year, we’re exploring sociology in an age of austerity. Our themes are broad and all-encompassing. We’re assessing the impact on law, families, education, healthcare, and so much more. We’ve attracted the finest scholars worldwide to lead the debate. As a postgraduate student, you’re bursting with ideas. Why not come and add your voice to theirs?

The current climate can influence both your research and your life around it. Join us and learn from the world’s best about the impact of sociology in these turbulent times. Our conference could make an invaluable contribution to your studies and inspire your next move.

With this in mind, let’s hear your ideas. We’re now accepting abstracts, so make your contribution to the debate. You’re sure to get out all that you put in and more!

Austerity isn’t just about cuts. It’s about finding new ways to meet the challenges of providing for society on a limited budget. Help us explore those challenges.

As a postgraduate student, you’ll be all too aware of the challenges ahead in your own career. It’s a competitive world out there. Put yourself above your peers with a standout feature on your CV. Get yourself heard amongst world-leading sociologists and policy makers. As the next generation, you’re going to want to know what the future has in store, and play a part in making it happen.

To find out more about the conference, please visit our website: [1]http://www.britsoc.co.uk/events/conference/home.htm We look forward to meeting you and hearing what you’ve got to say.

11-13 April 2012
BSA Annual Conference: Sociology in an Age of Austerity
University of Leeds
Submission deadline: 7 October 2011

BBC Speechless As Trader Tells Truth: "The Collapse Is Coming...And Goldman Rules The World"
(2011-10-01 12:00)

UK Riots: Sociological Perspectives and Civic Responses (2011-10-02 08:00)

Saturday 15th October, 2011, Birmingham Midland Institute
£10 waged, £5 unwaged

The recent civil disturbances across a number of English cities have provoked much commentary and debate. However, there has been little sustained analysis of the events, their causes and likely consequences. This symposium is one in a series of unrelated endeavours to bring public understandings and sociological perspectives to bear upon the events of last month. To this end we have invited a diverse range of speakers to open up the discussion, and combine academics and members of the community on the stage and in the audience. We combine speakers who will present sociological perspectives on the civil disturbances with a discussion of civic responses.

The event is organized by the British Sociological Association’s Theory Study Group in collaboration with the Department of Sociology, University of Leicester and the Social Theory Centre, University of Warwick.

Programme:

10.30-11.00 - Registration

11.00-12.30 - Panel 1: Institutional Contexts

- Karim Murji, Continuities and Contradictions: Race and Policing, Then and Now
- Alana Lentin,

12.30-2.00 - Lunch

2.00-3.30 - Panel 2: Civic Responses

- Malcolm James, The UK Riots and the Criminalisation of Young People in Public Space
- Nina Power,
- John Solomos,
3.30-4.00 - Break

4.00-5.30 - Roundtable: Learning from the past, looking to the future: What now?

- Rob Berkeley
- Sam Farooq
- Maxie Hayles
- Heidi Mirza

£10 waged; £5 unwaged/students/concessionary to be paid by cash or cheque on the day. There are also a number of free places for those unable to pay.

Please note, places are limited and you will need to register to attend. To register for a place, please email: [1]birmingham15october2011 AT gmail.com

Confirmed speakers

Rob Berkeley, The Runnymede Trust

Sam Farooq, University of Gloucester

Maxie Hayles, Maxie Hayles International Consultancy

Ajmal Hussain, London School of Economics
Ajmal Hussain is a PhD candidate in the Sociology Department at the London School of Economics. His research is an ethnography exploring new Muslim identity formation in inner-city Birmingham, where he grew up and now lives. Ajmal also works as a Research Associate within the Centre for Interdisciplinary Research in Languages & Diversity (InterLanD) at Aston University.

Malcolm James, London School of Economics
Malcolm James is a social researcher and PhD student in the Department of Sociology at the London School of Economics. His PhD research is based around three East London youth clubs. The themes for the research are racism, youth culture and how young people live publicly. Over the last decade Malcolm has published work on young people, ‘race’ and racism, migration and xenophobia and structural inequality. Malcolm is also Editor of the online journal Critical Contemporary Culture.

Alana Lentin, University of Sussex

Heidi Mirza, Institute of Education

Karim Murji, The Open University
Dr Karim Murji is a Senior Lecturer in Sociology at The Open University, Milton Keynes, UK, where he has written distance learning materials for courses in Sociology, Social Policy, Politics, Geography and social research methods. His research interests are culture, ethnicity and racism and these are applied to fields such as race and policing, race equality and social policy, and diaspora and identity. Recent publications on these themes appear in the Journal of Transatlantic Studies (2009), the Journal of Social Policy (2010) and Policy Studies (2011). With John Solomos,
he is the co-editor of Racialization: Studies in theory and practice (Oxford University Press, 2005). He is a former member of the Metropolitan Police Authority and is currently a member for the General Teaching Council and a local Safeguarding Children Board. He is also on the Equality and Diversity Forum and has recently served in many advisory roles including the BME Trust and Confidence Group, the Transformative Justice Forum, the UK Drug Policy Commission Equalities review and the Home Office Drugs Equality Strategy group.

Nina Power, University of Roehampton

John Solomos, City University London

Rich will pay less student debt than middle classes, (2011-10-03 08:00)

[1]

According to a new [2]report by accountancy firm Grant Thornton, rich graduates will end up paying less than middle class graduates for tuition fees because they will avoid extensive interest payments by clearing the debt more quickly. In an [3]article on the popular ‘evidence-based blogging’ site Left Foot Foward, Sally Hunt, General Secretary of [4]UCU, argues that this provides further evidence against the government’s claims that their new fees regime
was justified because it was a fairer way of funding higher education.

______________________________

The Chilean Youth Rebellion (2011-10-04 08:00)

Rebelliousness as asserted by Prof. Viterbo Osorio Santelices, one of the most important ideologues of the Chilean University Reform movement of the 60’s, “is eternal and creative and a youth without a rebellious spirit is a precocious servitude…”

So much has been said about youth-led protests in Libya, Spain, France, Germany, UK, and Italy; shaking the status quo this year, but still nearly enough. In Chile the education protest movement led by the president of the Chilean Student Federation (Confech), [1]Camila Vallejo, has organized massive demonstrations of a scale not seen in Chile since the return of democracy in 1990. Last week the protest movement brought together hundreds of thousands of people across the country, demanding better public education and social justice in one of the countries with, according to the [2]Gini index, the highest inequality levels. Protest organizers said around 180,000 people took part in last Thursday’s march, making it the biggest in several weeks. Chilean students, like many others in the world, are refusing to endure any longer the perpetuation of a higher education system that reproduces inequality. According to the [3]12 points presented by the students on August, this will only change by means of a deep grassroots-based transformation of the system rather than with superficial reforms as the government has suggested.

[4]
The root of this problem can be traced all the way back to the Education Counter-Reformation bills promoted by the leaders of the neoliberal project during the 80’s and 90’s in several Latin American countries such as Mexico, Argentina and Chile—the latter being the region’s paradigmatic case on account of the lack of governmental barriers to their application. Indeed, the pillars of today’s Chilean educational system were designed and built during the military regime of Augusto Pinochet who in 1981 and 1990 reformed the country’s higher education system by abolishing free education and delegating the education to the private sector. Beginning with these reforms, Chile’s state involvement in higher education has diminished. There are currently only 25 public universities compared to 36 private ones, with the government providing only 14 % of their funding. This is the reason why even public universities charge tuition fees that are often as high as private university fees. According to the OECD, university fees in Chile are the sixth highest in the world. As a result Chile has developed [6]one of the world’s most segregated education systems, with insufficient state participation.
Being founded upon neoliberalism, privatization, and a climate of over-expectation of social mobility, these bills only deepened existing social inequalities in the country. For example, in the last 30 years there has been a boom of private colleges that ironically are home to many of the poorest Chilean students that failed the Chilean higher education selection test (PSU) because of their education background. Most of them are students that couldn’t afford to pay a private or a subsidized school and therefore had to study in the municipal education system—the only public elementary and secondary schooling available today in Chile. According to experts, this is a “perverse” system that leaves thousands of low and middle-class young Chileans in debt as soon as they finish their studies. In this sense, Education in Chile has become a mechanism that reproduces inequality instead of being a mechanism of social mobility.

In 2006 Sebastian Piñera’s predecessor, Michelle Bachelet, faced a similar scenario with the huge student protests labeled by the media as “The Revolt of the Penguins”. Although the students managed to overturn the L.O.C.E. (the organic law on education established during Pinochet’s dictatorship), the results in practice ended up being very superficial and so did the real change. The students claimed then the same as in today’s protests: the responsibility of the State to guarantee the access of free public education with quality to everyone. Currently only 25% of the education system is funded by the state and the 75% remaining depends on the contributions of the students. The counter-argument of those who critique the student’s movement is based on the dramatic increase of the number of higher education students in the last quarter of the century, however this was only possible thanks to an equal increase of government-backed loans. By now most of Chilean families are highly indebted and university graduates find themselves not earning enough to repay their loans.
Weeks into the latest round of protests, student leader Camila Vallejo expressed their intention to converge with the rest of the social actors such as the miners' movement. Since then the protests have embraced demands for a new constitution that ends privatized education and guarantees quality education at all levels. Other calls include rewriting the tax system and renationalizing important mines. The increasingly political character of the student protests is helping to bring together their grievances with those of many workers. As Vallejo described the goals that students and workers alike are beginning to struggle for: "It’s time to change the political system, the economic system, so there is a fairer redistribution of power and of wealth... All this development model has done is make a few grossly rich."

Following the acceptance of some of the students' demands, including the withdrawal of two education bills sent to Congress with no input from the students, Chile's student federation agreed to talks with the government after nearly five months of demonstrations. After an intense meeting, representatives of 25 student federations from the country's main universities agreed to resume talks but also agreed on going ahead with the national strike planned for tomorrow. According to different surveys, student demands for increased funding for public education have support of up to 80 percent of Chileans, while Piñera's approval rating has plunged to between 26 and 22 percent.

---

i This quote was taken from a message written by Chilean writer Eduardo Galeano showing his support to the Chilean movement. You can find it here.  
ii Public expenditure on education accounts for 4% of the gross domestic product, compared with 7% in developed countries.  
iii According to Raúl Irrazabal, from the Center of Social Studies CIDPA, 70% of students in Chile are indebted either to the State or the private sector.
The Campaign for Public University launches Alternative White Paper

The Guardian have launched CfPU's document, In Defence of Public Higher Education, in the paper today. You can read the article [1]here

As you will see, it has been signed by over 400 academics, a number of professional associations and campaign groups - including the student groups: Education Activists Network and the National Campaign Against Fees and Cuts - and has the support of the Local Schools Network, co-founded by Melissa Benn.

[5]

Of the 1%, by the 1%, for the 1% (2011-10-06 08:00)

In this powerful article [1]Joseph Stiglitz, former chief economist of the World Bank - the ‘rebel with authority’ as a book reviewer once described him - offers a incisive analysis of US political economy. He paints a worrying picture of the effective lock that the elite have on American politics:

Virtually all U.S. senators, and most of the representatives in the House, are members of the top 1 percent when they arrive, are kept in office by money from the top 1 percent, and know that if they serve the top 1 percent well they will be rewarded by the top 1 percent when they leave office. By and large, the key
executive-branch policymakers on trade and economic policy also come from the top 1 percent. When pharmaceutical companies receive a trillion-dollar gift—through legislation prohibiting the government, the largest buyer of drugs, from bargaining over price—it should not come as cause for wonder. It should not make jaws drop that a tax bill cannot emerge from Congress unless big tax cuts are put in place for the wealthy. Given the power of the top 1 percent, this is the way you would expect the system to work.

It’s against this backdrop that we should consider the [2]Occupy Wall Street protests ([3]who are the 99 %) which have emerged, as well as the police brutality which they’ve been subjected to:

Studies in Social and Political Thought (2011-10-08 08:00)

Studies in Social and Political Thought
General Call for Papers - Fall 2011

Studies in Social and Political Thought is soliciting papers from graduate students and scholars working in the areas of social and political thought broadly construed. SSPT is an inter-disciplinary journal that has published work by well-known figures such as Stefan Muller-Doohm and William Outhwaite. Our main aims are: first, to foster inter-disciplinary and collaborative work in social and political thought; and, second, to provide a high-quality publishing platform for young academics. Since our re-launch last year we have published issues on Theodor Adorno, Utopia and Dystopia, and post-colonialism. Our most recent issue was guest edited by sociology graduate students from Warwick University, helping to further our aim of interdisciplinarity and institutional collaboration.
In addition, we have attracted a prestigious panel of leading scholars for our newly formed international advisory board, including: Martin Jay of UC Berkeley, Robert Pippin of the University of Chicago, Gayatri Chakravorty Spivak of Columbia University, Seyla Banhabib of Yale University, Simon Jarvis of the University of Cambridge, William Outhwaite of the University of Newcastle, Homi Bhabha of Harvard University, Adriana Cavarero of the University of Verona, Alessandro Ferrara of the University of Rome, Axel Honneth of the University of Frankfurt and Fredric Jameson of Duke University.

SSPT will seek to build on these developments in the coming year and we hope you will consider submitting your work for consideration. For more information about submissions, subscriptions, or to download a free copy of the journal, please go to our website: http://ssptjournal.wordpress.com/. Or, for any other enquiries, please email us at: sspt@sussex.ac.uk.

The Editors, Studies in Social and Political Thought

The Traces We Leave Behind (2011-10-08 15:15)
For years I wrote about small communities of people who were not famous, but were, at least, breathing, that is, alive. Now I mostly write about one famous, (or, perhaps to some, infamous), man, who, though an internationally recognized, (not to mentioned economically valuable) icon (and commodity), has been, for over forty years, long dead.

And what I have learned from this switch in sociological subject matter is that the very best, most compelling evidence I’ve ever come across, (to tell either kind of sociological story, really), are actual, tangible images or writings or sounds that are both familiar and surprising at the same time.

Like this small fragment of a documentary told by poet Laura Hope Gill about her grandmother, Grace Meadows, who was held in a detainment camp in China during World War II. Or this recently found film footage of diarist Anne Frank, a girl, who, until this moment, most people have only known as a black and white photograph, forever stilled (see image above). As sociologist Avery Gordon would say, some very ghostly matter indeed.

The very best sociological biography I ever read was [2]Kate Moses’ Wintering. In it, she takes Sylvia Plath’s collection of poetry Ariel and then re-orders each poem so they are laid out in the way Plath left them with/as her suicide note. Somehow, through Ted Hughes’ editing and the book’s posthumous publication the poems got ordered in a way that forever cast Plath’s greatest writing into a portrait of despair. In Moses’ reordering of the poems, Plath’s life become soaring, triumphant, the diary of woman unafraid of being so desperately sad.

When we consider a [3]life, Moses’ biography teaches us, especially one [4]heavily documented and fabled,
we must remember that every isolated moment of that life, every incident, every happening, flickers with light, like the beating of a heart and that no one moment or incident is more important than any other. She also teaches us that we can choose the life moments we want to rest on, to rely upon as our first memory, our first talking point. For her the life of Sylvia not the sum of her sorrow and anger at her husband’s philandering and lying, but rather the poet’s own steady burning lust.

There are two other sociological biographies worth noting here alongside Moses’ work, both cinematic biopics: Mark Rappaport’s From The Journals of Jean Seberg and Todd Haynes’ I’m Not There. In Rappaport’s work Mary Beth Hurt plays actress and icon Jean Seberg and [5]spends most of the film talking back to her celluloid image; and in Haynes’, several actors play Bob Dylan-like characters, but the actual subject of the film, Bob Dylan, [6]is never there.

Like Moses’ novel about Sylvia Plath, both of these films teach us the same rule about reading into and telling stories about other peoples’ lives: That such work is by definition subjective, unaccountable, untrue and uncertain, and that we always need to leave room for interpretation or what [8]novelist, playwright and ethnographer Zora Neal Hurston called the real truth of little lies.

1. http://4.bp.blogspot.com/-Ddd4mLPRDUg/TpGpjziBLdI/AAAAAAAAKvM/qPGWSfZEb_k/s1600/Elt200811172013321760885.jpg
The Secret Club at the Heart of Politics? (2011-10-10 08:00)

[1]

In an [2]article over the summer Julian Astle, former director of liberal think tank [3]Centre Forum, suggested that the UK had been governed for much of the last two decades by a 'secret club':

Numbering no more than 15 frontline politicians and a similar number of key advisers, it includes the last remaining Blairites and the “Cameroon” Conservatives and “[4]Orange Book” Lib Dems at the top of the coalition government. Its members, divided by tribe, are bound by a truth they dare not admit - that they have far more in common with each other than with their own parties.

As an empirical claim this is fairly indisputable. Followers of any of these positions might claim significant differences (e.g. New Labour embraced finance capital in order to achieve social democratic aims in a globalised world that was inimical to them) but, at best, these are artefacts of history. The fact these political parties arrived at this point via
different trajectories pails into insignificance compared to the sheer fact of their convergence.

While Julian Astle seems to merely see this as an interesting state of affairs to be analysed, others would see it as an egregious and worrying failure of democracy. The economic sociologist Colin Crouch argues that western liberal democracies are moving into a stage of post-democracy where the formal institutions of democracy continue to exist but the pervasive culture of participation and engagement which sustained an active democracy is increasingly exhausted. The decline of manufacturing and the traditional working class, as well as the advance of economic globalization, has hollowed out processes of democratic engagement to produce an isolated, disconnected and self-referential political class cut off from the public they claim to represent.

We are left with a politics dominated by elites where influential business interests are the only group within society able to make their voice heard. Their pervasive, though often unseen, lobbying activity shapes the priorities of government while engagement with the wider public is increasingly shaped by 'spin doctors' and other advertising professionals. While policy is incubated in secretive 'liberal' and 'centre-right' think tanks, the public is seen as an electoral obstacle to be negotiated, possessed of no agency beyond the ridiculous reifications manifested in focus groups and polling data.

This state of affairs isn't undemocratic but it certainly is post-democratic. The UK is governed by a small clique of free-market politicians, entirely at odds with their own parties, implementing radical right-wing policies which largely failed to feature in either parties manifesto. That’s why Ed Milliband’s recent conference speech, as light on policy detail and as clumsy as the delivery was - rhetorically challenged as he is - ought to win him applause. It was the first time in a long time that any UK politician had departed from the neoliberal consensus that has underpinned the slide into post-democracy.

For so long we have been told that there is no alternative. It’s pretty inevitable the speech would win him enemies on the right, with the inevitable lazy accusations that he is ‘anti-business’ but it’s depressing that it seems to have won him criticism on the left. He’s the first mainstream politician to have suggested TINA be damned, there might be an alternative. Don’t shoot the messenger just because he’s an uncharismatic policy wonk struggling to cope with the destructive legacy of New Labour within his party.

How do our brothers and sisters shape who we are? (2011-10-11 08:00)

In this podcast Mark Carrigan talks to Katherine Davies, a researcher in the Morgan Centre at Manchester University, about her work on sibling relationships and personal identity. Despite the obviously somewhat common experience of sibling relationships, it’s an area that has largely been ignored within social science, which has tended to focus on vertical kinship relations (parent -> child) to the exclusion of lateral kinships relations (child -> child). It’s a weird oversight and one which Katherine’s work is addressing in an interesting and sensitive way.

Perhaps the most demotivating image EVER (speaking as a website edited by two near-to-completion PhD students) (2011-10-11 20:09)

[1]

Dahn Shaulis (2011-11-10 18:38:43)
Academic workers (including adjuncts/post docs/non-tenure track folks) must organize for economic justice in their fields and in society. Some have organized and been active, but against a lot of resistance and fear. Neoliberal degradation of academic work has been going on for several decades. Economics departments have been bought out by business for more than a century. Large state schools rely on serving the military-industrial complex and the prison-industrial complex. And now there is a move toward privatizing public higher education at University of Oregon and Wisconsin. Read E.P. Thompson’s article titled “The Business University” as a starting point.

Sociological Imagination (2011-11-10 18:46:12)
Couldn’t agree more! There’s a great paper about similar issues I quoted some extracts from on my blog you might find interesting: http://markcarrigan.net/2011/11/07/the-myth-of-academic-autonomy/

What’s the point of edited books? A step-by-step proposal for a social media alternative (2011-10-12 08:00)

Given that I’m two months away from being contractually obliged to submit my first solo edited collection to the publisher, this is a rather depressing question. But it’s difficult not to ask it. If my only other experience of editing a book is anything to go by, a volume jointly produced with a number of others earlier in my PhD, it’s going to be prohibitively expensive and the publisher isn’t going to do anything to promote it. As a result of the latter realisation I actually started a website, hosting a mailing list and a variety of other resources, which was intended in part as a promotional tool for the book. Yet for the website to work successfully to this end, it’s going to have draw people to the site: given the particular characteristics of the field in question, the site is likely to be able to do this (assuming I do it correctly)... so, I wonder, surely a website like this renders the publisher rather unnecessary?

A step by step proposal for a web 2.0 equivalent of an edited book:

- Decide on a theme for the project, preferably a much more elaborated one that might be the case were it to be pitched as a straight forward edited book
- Setup a wordpress blog and register a domain name for it
- Write as much as possible about the theme, collate as many resources as possible, link to as many sites as possible on these themes
- Setup a twitter account for the project, connect with as many relevant people as possible (including members of communities being researched if applicable) and actually interact with them, as well as using it to post updates about the project
• Design a CfP (perhaps collaboratively if enough people are interested at this stage?) and direct interested parties to the project site, rather than operating through e-mail (make sure to try and maintain lines of connection, using twitter etc, with all those who express interest but choose not to submit)

• Think seriously about how much of the traditional editorial process (particularly the chronology) needs to be directly reproduced – could the peer review be done openly and/or collaboratively on the site? Could shorter articles be allowed as a basis for final formal contributions further down the road? Could the site itself serve as a basis for connecting potential contributors? Will final reviewed pieces (whatever ‘review’ ultimately constitutes) be posted up on an ad hoc basis or will the pieces be compiled into one volume published online at one time?

• Given no one presumably thinks they’re going to make money out of the project then, without commercial pressures from a publisher, there’s no reason to charge anything whatsoever for the finished product(s). In fact doing so would quite patently defeat the entire point of the endeavour.

• Experiment with ways of encouraging feedback and discussion after publication of final piece(s)? How can the medium be used to build interaction and connectivity in a way which enhances the experience of everyone involved in the project? How can it feed into future projects, either on the same site or through others?

Given the extent to which I’ve been told that book chapters, as well as edited books themselves, lack REF value vis-a-vis papers, credentialisation issues don’t hold here in the same way they do for much online publishing. The above is a bit sketchy but, in part, that’s because I’m tired and haven’t elaborated on it as fully as I could. Also because there's open-ended questions I don’t have answers for.

In essence though, the idea i had for the website promoting the book (it has a mailing list, hosts online seminars, a pack for the media, researcher profiles, a blog) is the basis for this... it's just if the website were to come first, rather than having been an after-thought to correct the deficiencies of the publisher. Now I just wish I’d started thinking this through before I signed that fucking contract.
When Pete Seeger was sociology major at Harvard University, Thomas and Znaneicki’s The Polish Peasant had been published but Talcott Parson’s The Social System had not. Parsons was on the faculty, however, and so was Robert Merton, though they weren’t the reason Pete dropped out of Harvard after one year. He wanted to play the banjo, be a journalist and study art – all subjects not viewed as relevant by the department.

This didn't stop him from reading, studying and practicing sociology, however, and he ended up doing pretty okay (see image above of Pete performing in California in the 1950s, © The Weinstein Company). An earlier post about when sociology was cool, as well as the sociological definition of cool is [2]right here.

End Note: I shot [3]this candid footage of Pete Seeger and composer and musician [4]David Amram at a backyard bar-b-que in Beacon, New York, the week after Pete Seeger’s 90th Birthday party at Madison Square Garden in May of 2009. Right before I took it, Pete ate a piece of cherry pie as if it were an apple and washed down with a beer and David, (who was 79 at the time), three hot dogs on a stick followed by a diet ginger ale. "No bun," he said. "I'm watching carbs." Some more beautiful, candid footage of Pete and David from the summer of 2010 is [5]here.

Enron: the Smartest Guys in the Room was a critically acclaimed 2005 documentary film based on a book of the same name by Fortune reporters Bethany McLean and Peter Elkind. They tell the story of how a whole range of suspect corporate practices (most notoriously mark-to-market accounting) were used to whip up hype and investor confidence around a company with little material strategy. As a quasi-Darwinian corporate culture was imposed by the free market zealots running the corporation, this all began to spiral out of control, with mounting piles of debt being constantly shuffled off the books, ultimately leading to widespread criminality and one of the biggest business scandals in American history.

Stock market bubbles? Assets valuation out of touch with reality? Does this all sound familiar? Remember this was before the financial crisis. In this RSA podcast Bethany McLean considers the financial sector as a whole and the practices of corporate governance which continue to persist within it. Perhaps unsurprisingly the same actors implicated in the Enron scandal are found to be at fault for the financial crisis. Not least of all the rating agencies who, as McLean points out, played a crucial role in validating the Enron bubble, before doing largely the same thing with the portfolios of sub prime mortgages which drove the credit crunch.

Perhaps the most fascinating moment comes 39 minutes in when someone who could easily be the figurative voice of capital - you'll know who we mean when you hear him - condemns the 'greedy people' who borrowed beyond their means. McLean comprehensively demolishes this popular and ideological right wing meme in a way which is profoundly reasonable and non-partisan. All in all, a rather impressive analysis from a rather impressive woman.

The Sociological Imagination (2011-10-15 08:00)

The name Mills gave to this promise was the sociological imagination, defined as that “quality of mind essential to comprehend the interplay of man and society, of biography and history, of self and the world”. The sociological imagination offered the ability to comprehend the significant interrelations between different parts of society. As Mills wrote, "what is specifically 'sociological' in the study of any particular feature of a total society is the continual effort to relate that feature to others, in order to gain a conception of the whole."

The sociological imagination connected individual biographies with larger historical and structural forces; or, to use the terms that Mills employed earlier in his career, charcter and social structure. In concentrating on total social structures, the sociological imagination would not lose sight of the individual, as it contained "the capacity to range from the most impersonal remote transformations ot the most intimate features of the human self - and to
see the relations between the two."

- from [1]Radical Ambition: C. Wright Mills, the Left, and American Social Thought

What does the Sociological Imagination mean today? (2011-10-16 08:00)

In March 2012 it will be 50 years since C. Wright Mills died. To mark the occasion Sociological Imagination will be convening a one-day conference, live streamed over the internet, exploring the meaning of the sociological imagination in the 21st century. If you'd like to be involved then [1]please get in touch.

Till then we’re still looking for written submission exploring this theme. Ideally we’d like to collect these and release them as an eBook but that would require a lot more submissions than we’ve had thus far. Please do circulate the CfP below to anyone you know who may be interested! Thanks.

[2]

It has been over 50 years since C. Wright Mills wrote the Sociological Imagination. In that time the world has changed beyond recognition: the Cold War ended, the Keynesian consensus broke down, a globalizing neoliberalism rose to the ascendancy and the internet began to transform human communication and culture. In recent years, with 9/11 and then the financial crisis, it seems that history has returned with a vengeance. Is Wright Mills’ notion of the ‘Sociological Imagination’ still pertinent today? How can Sociology help shed light on the rapidly transforming world around us and the consequences of these transformations for the people who inhabit it? What does the ‘Sociological Imagination’ mean today?
Short articles are invited which engage with these themes, or particular aspects of them. Submissions should be 500 – 1500 words and [3]e-mailed as a Word document. There is no deadline for submissions.

Steve Fuller - The Posthuman Challenge to Ecological Correctness (2011-10-17 08:00)

This is Part One of an unscripted talk presented by [1]Steve Fuller (in his office at the University of Warwick, UK, in September 2011) as a 'Festvideo' (cf. Festschrift) in honour of Eugene Rosa of Washington State University, one of America’s foremost sociologists of the environment. The video appears in two parts, and centres on Rosa’s long-standing appeal to the ‘I=PAT’ formula for environmental impact. The formula is explained in this part of the talk. Many of Rosa’s papers may be found here: [2]http://cooley.libarts.wsu.edu/rosa/vita.pdf

This is Part Two of Fuller’s talk (see Part One for more details). This part gets more fully into the ‘posthuman challenge’, including the proposal that people may wish to ‘live fast, die young’ in the future. Thanks to Mark Carrigan for astutely observing that people may wish to achieve this state by drugs rather than fast food....
The Paradox of Sociology (2011-10-18 08:00)

In this essay, Wolfgang Streeck, recounts an experience of being at an international social science conference a few years where Michael Burawoy issued his famous call for "public sociology'. Streeck recalls being struck by the paradoxical situation faced by sociologists in the early 21st century: while there has never before been so many people "well trained in analysing and explaining the social life", the most powerful leaders produced by that most sociologically sophisticated generation had been George W. Bush and Dick Cheney. In spite of the "star-studded social science departments from Harvard to Stanford" there was a "progressive decay of the politics and economy of the United States" which continues to this day.

Thus he asks - does US sociology have a problem of demand? Within the 'quality newspapers', there is regular input from psychology, neuroscience, evolutionary biology and, of course, economics. Even what were relatively marginal branches of economic theory (e.g. behavioural economics and neuroeconomics) received media coverage, with their marginality and novelty seemingly a sufficiently interesting 'news hook' to justify their inclusion in some publications. But where is sociology? Why is it absent? At best reports of sociological findings on certain topics make themselves known but not the rationale, theories, methods or methodologies underpinning these conclusions. Rather than summarising his analysis, we thought we'd highlight his key question instead. In our view this is the most
important issue facing contemporary sociology. Why is this the case and how can we fix it?

"Why is sociology absent in public debates ... why do sociologists have so little confidence in their work that they talk about it only to each other, rather than to the world at large?"

SK (2011-10-20 15:09:18)
I also heard Burawoy speak a few months ago regarding public intellectuals. And I was struck by a few things during and after. 1. I think there’s an embodiment of expertise (“rightfully” or not) by him and many others within academia, not just sociology, that creates a (perceived and real) barrier to the accessibility for the public. 2. I think you are absolutely correct to question why much of sociology seems to have hang ups with making material accessible to the public, as I did while hearing him speak. 3. The emphasis of quantitative approaches only also adds to the perceived and real barriers, as again, this pushes “expert knowledge.” 4. To not embody more of qualitative methods, including ethnography, is foolish because these are methods that can give voice to the public, the underrepresented. Yet, these are not necessarily the methods that are celebrated at the forefront. 5. Even today, there are discriminating practices within the field of sociology that are astonishing, because it’s sociology! I’m talking about racist, classist, and sexist practices that prevents field of sociology from being representative of the composition of the society and social issues that we tackle. This is certainly not to dismiss the level of knowledge that is required to perform the studies quantitatively, qualitatively, or theoretically, but the way we present these materials (as we self regulate through journals, awarding/not awarding graduate degrees); what we deem as academic or scholarly, and the lack of effort to actively engage with the public in both production and distribution of our works is what is ultimately detrimental to us as sociologists. What are we if we are unable to utilize our work to engage with the public? What are we if we are not self-reflective enough to understand that everything we do is colored by the lens through which we view the world ourselves? I also understand the frustrations that occur when speaking to non-sociologists, as I often do. I’ve encountered individuals (some academic, some not) that do not truly understand what sociology is, what it does, or the its value. I have been dismissed by non-sociologists despite my own extensive training because that’s not how they see the world. But I think this is part of that vicious cycle where it becomes part of the reason why some sociologists become insular and do not want to engage with the public. And I would say the reaction should be opposite. How do we expect people do understand the sociological perspective, without accessibility to the works? I could go on and on disjointedly as I have been doing so far, but I have to get to campus.

Sociological Imagination (2011-10-20 16:32:01)
not disjointed at all! really interesting response ;) would you be up for writing it up as an article for the site? wouldn’t need to be much longer than it is at present

SK (2011-11-03 02:19:21)
Hello SI, Sorry to reply so late, I had a minor surgery and it’s been hazy. If I were to write one, should I send it through the regular channels? Please let me know. SK

Lorin Yochim (2011-11-03 16:17:06)
It’s an difficult problem, one that has been vexing to me in light of my recent forays into the “public” of the on line world. I am a "non-sociologist," i.e., ABD in a faculty of education, but my work is nonetheless (I hope) sociological informed, my position is slightly different. In general, there is the matter of a field specific habitus generated in a field in which much capital is accrued by those able to engage students and publics without pissing them off. I find that I can be this person (indeed, that I am just such a person when I get out of bed in the morning), but also that being so mitigates against being an public intellectual or teacher educator who makes use of the more "critical" traditions in sociology. As an example, few familiar with the sociology
of education would dispute the connection between middle class values and dominant pedagogy in schools. To bring this up with pre-service teachers, however, is to invite the disdain of the majority of one's students who closely identify with these same values. Put simply, to be critical in this sense is quite often be seen as an poor teacher and to find oneself on the wrong side of students evaluations of instructors. In sum, one will not only have upset students (sign of bad teacher #1) but most likely a file folder full of poor job performance reports. To extend this analysis to my participation in the on line world, I've recently made a decision to read and engage in the blogosphere on a topic directly related to my area of study, Mainland Chinese society and education. I thought that I had some knowledge and/or wisdom to bring to the conversation, but it didn't take long for my comments to be labelled "high horse intellectualism," "poncy BS," and for me personally to be shouted down as a "Professor" and referred to by my full name in replies. I'm not quite sure what this last bit means in the on line world, but I certainly felt like I was being scolded. Perhaps this was my fault for hitting home runs off of minor league pitchers, but I didn't realize that pointing out racist or orientalist arguments (as opposed to calling out racists) would be particularly offensive. Indeed, as a would-be sociologist, to not bring the sociological imagination to bear on these topics feels like a betrayal of duty. Still, the teacher feels guilty. Now, one might argue that what I'm pointing out is a need to be a highly skilled critical educator, but I don't think that being such a creature could ever eliminate the contradictions that arise in the mashing together of these two quite different fields/disciplines. Another possibility is that I'm conflating two different creatures: public intellectuals and teachers.

Sociological Imagination (2011-11-05 14:03:52)
"Another possibility is that I'm conflating two different creatures: public intellectuals and teachers." I think there's definitely a difference between the two – is the difference getting wider with time though?

Review of 'Dear Granny Smith' by Roy Mayall (2011-10-19 08:00)

Granny Smith' is the name given by postmen to the isolated old ladies along their routes for whom the mail service is a lifeline. [1]Dear Granny Smith takes the form of a letter to such women, attempting to explain what has changed in the Royal Mail and what has gone wrong. The pseudonymous author, [2]Roy Mayall, is a long serving postman who is reaching the end of his career only to find that the institution within which he has spent his entire working life is one he no longer really recognises. It is a very short, pocket-sized book that can be read in a single sitting and it is profoundly charming in both its presentation and its content. The book is imbued with the passion of someone who is clearly committed to the Royal Mail and this adds pathos to what is a damning indictment of the changes that are being wrought upon this valued institution.

[3]
Some of the examples of public service Mayall presents in the book seem almost unthinkable to those, such as myself, whose reached adolescence at the start of the New Labour era. One particularly striking story involves a colleague who once saved the life of an old woman (ie, a Granny Smith) on his route. He frequently used to knock on the door of this isolated widow to chat and see if she was OK. One day when she did not answer, he looked through the window and saw her collapsed on the kitchen floor. He knew her sister who lived up the road so he went and retrieved her keys then entered the woman’s house. She had fallen on the floor and had been unable to get up. The ambulance crew subsequently told him that he had saved her life. Not only would this not take place under contemporary conditions but for my generation the very idea that it might take place seems unthinkable. The notion of public service has atrophied to such an extent that the idea of a postman intervening in a life to this extent (being one of the few people who speak to an isolated widow, having the time to speak to her on his route, knowing where her sister lives, being willing and able to retrieve her house keys and thus save her life) has simply gone, as have more mundane instances of public service, such as post arriving by 9am and twice daily deliveries.

One of them most compelling aspects of the book is the author’s informed critique of the day-to-day absurdities associated with the Royal Mail’s modernisation agenda. He pointedly explains the newly introduced electric trolleys which are patently unfit for purpose and require both an entirely new fleet of vans (as they are too large for existing vehicles to transport) and an entirely new maintenance infrastructure (in contrast to the simplicity and efficiency of the old fashioned bike). So too the introduction of ‘starburst’ deliveries where a group of delivery staff attached to a single van service streets one-by-one in a manner akin to refuse collection. Such a service, which he calls ‘McMail’, replaces the long-term postmen with causal and unskilled labour and is sure to undermine any last vestige of the public service culture which he has so poignantly described earlier in the book.
Perhaps the most amusing technological 'innovation' is the introduction of brand new double-decker lorries which, given the extra time they take to fill up, frequently leave depots half-full. Could there be a more striking example of superficial efficiency savings which simply produce waste? The author's account suggests that the problem stems from the imperialistic manner in which ideological modernisers push through such 'savings' with utter disregard for the sort of on-the-ground knowledge which would quickly suggest the manifold ways in which such heavy-handed impositions are often flawed. As well as his criticisms of its practical realities the author offers a scathing condemnation of the concept of modernisation more generally:

It's an interesting word, that. Modernisation. Just roll it around the tongue once or twice. We have to be modern, don’t we? Who wouldn’t want to be modern? Actually, it’s just another euphemism, like ‘flexibility’ or ‘discretionary’. Modernisation means scaling back the service in order to serve the interests of the corporations. It means ‘profitability’ which means ‘cutting costs’ which means ‘cutting back on fixed expenditures’ which means – and I don’t have to employ inverted commas for this - lower standards and lower wages.

The book ends with a plea for the renewal of the Royal Mail as a public service. Mayall argues that the network is still fundamentally sound and that underlying problems could be resolved through a return to full public ownership, adequate investment and a shift in managerial culture. It needs managers who enjoy an appreciation of its history and values, as well as a concern for the public the institution is supposed to serve (eg, the Granny Smiths) as well as the corporate clients. He plausibly observes that ‘the tension here is between the Royal Mail as a profit-making business, and the Royal Mail as a public service’. He suggests that the Royal Mail is, at heart, both, and that the poor state of industrial relations within the organisation is a consequence of that fundamental ambiguity. For the Royal Mail management the organisation represents the first, whereas to himself and the frontline workers it represents the second.

Given everything else Mayall has written in this moving book, it’s difficult not to feel disappointed at the earnest moderation of this conclusion. Why not defend the Royal Mail in unambiguous terms as a public service rather than presenting it in terms of both service and profit? The obvious reaction to this suggestion is to implore the necessity of economic viability, but the acceptance of this kind of technocratic language is a crucial element in the very process of modernisation which Roy Mayall so plausibly decries. The apparent acceptance of the brute reality of economic logic (eg, ‘the Royal Mail has to be profitable in order to function’) suppresses the political decisions underlying the purportedly obvious claims. Why should economic imperatives outweigh universal service obligations? Why should public services be profitable? In a democratic society these are questions which ought to be decided through open and equitable procedures, but instead they are forced off stage through the repetitive siren song of ‘modernising’ ideologues who insist that the public sector should be subject to private sector discipline. While a coherent case can certainly be articulated in favour of this agenda, it should be made through political persuasion rather than the invocation of economic expertise.

The past three decades have witnessed a historically unprecedented depoliticisation of economic life, as a narrowly economic discourse of modernisation is used to present profoundly political agendas (for instance ‘slashing’ public services to produce ‘balanced’ budgets) as objective necessities. In each case empirical factors, such as the actual likelihood of a sovereign debt crisis, as well as political factors, such as the obvious possibility of increasing taxation, are left off stage without being subject to democratic consideration. This trend is exemplified by Margaret Thatcher’s famous TINA formulation which is, in many ways, the motto of neoliberal modernisation: There Is No Alternative. The philosopher Mark Fisher recently argued that ‘nothing is inherently political; politicisation requires a political agent which can transform the taken-for-granted into the up-for-grabs’. A starting point for the exercise of this political agency is an impassioned opposition to the discourse, as well as the practice, of modernisation. The former is a necessary condition of the latter, as the persuasive success of modernising rhetoric engenders support for measures which would otherwise be unpalatable to the majority within society. Rather than engaging with its on
its own terms and playing the language game of profit and loss, we might reject its presuppositions out of hand and confidently assert the moral value of public service and social good.

Such a stance undoubtedly risks inviting accusations of naiveté and idealism (‘Surely the public sector should adopt the expertise and lessons of the private sector? Would it not be wasteful to do otherwise?’) but the apparent realism of this response hides its reactionary and ideological character. The acceptability of profit or loss within public sector organisations is predicated on political consensus rather than an unavoidable logic of organisational management. It’s often not profitable to run bus services outside of peak times or in rural areas. It’s often not profitable to maintain local post offices outside of urban areas. It’s often not profitable to run rehabilitation centres for drug and alcohol problems. Yet all these things possess a social value and, once we think along these lines, it often becomes clear that this social value has economic ramifications. Drug and alcohol treatment ultimately reduces court costs and hospitable admissions. The preservation of local infrastructure ensures the continued viability of local economies outside of urban centres.

The dichotomy between public service and profitability is false one which presuppose ‘profitability’ to be an entirely private phenomenon. It entails the logic of accounting which systematically excludes those externalities which ‘spill over’ and impact on actors outside of the economic transaction. This manifests itself negatively, as in the environmental impact of more individuals driving after unprofitable bus routes have been cancelled, as well as positively, as in the social cohesion and support provided by local post offices without accruing economic gain for any private actor. This inevitable exclusion of externalities means that the purported objectivity of this form of assessment is utterly fictitious because its unable to evaluate outcomes in a way which takes account of all their impacts. It might be possible to argue that this is suitable for the private sector, although the pervasiveness of environment externalities seems to me to a powerful objection to this view. However economic reasoning of this form is manifestly inappropriate for the public sector because it’s intrinsically unable to secure the place of the social goods which constitute the raison d’être of public services.

However an anecdote from the book illustrates this state of affairs better than abstract reasoning ever could. At the very end of Dear Granny Smith, Roy Mayall poignantly describes a staff meeting where the manager made clear that, given their economic centrality to a modernised business model, the new focus of the Royal Mail was on corporate customers. One of the older postmen asked about Granny Smith and was told, in no uncertain terms, ‘Granny Smith is not important. Granny Smith doesn’t matter anymore’. This is why the discourse of modernising public services must be resisted. Unless, that is, we agree that Granny Smith doesn’t matter anymore.

The SI Top 10 (2011-10-20 08:00)

It’s been almost a year of half since we started Sociological Imagination and given how many posts we’ve done since then, we thought it was a good idea to round up the ones that proved most popular. Here’s the top 10 in terms of the number of hits each received:

854
1. [1] A Mexican, a Kiwi and a Nigerian walk into a bar... a dose of (sociological) Xmas humour
2. [2] Car Boot Sale
3. [3] Charles Wright Mills' Sociological Imagination and why we fail to match it today
7. [7] Pathology and Asexual Politics
8. [8] In Pictures: 50,000 March for Higher Education in London

Are there any favourites which haven't made it into the list? If so then drop us a line on [11] Twitter or through the comments box and we’ll feature them in another post.

11. http://twitter.com/soc_imagination
Tripping on acid in the name of science, 1950s style (2011-10-21 08:00)

An utterly fascinating video flagged up on the Guardian website of a recorded experiment with LSD in 1956. An ‘ordinary woman’ is given the drug and her response is filmed. Skip to 1 min 50 secs for footage of her tripping. The researcher’s monologue at the end offers an intriguing insight into the intellectual prehistory of 60s hippy culture.

IFRAME: [1]http://www.youtube.com/embed/V5d4wWGK4Ig

Yet this kind of research would be deemed entirely unacceptable now. Should this be the case? The tradition of [2]pschedelic therapy is now largely lost, albeit with a modest resurgence lately in the exploration of the broader medical value of ‘illicit drugs’.

What does the Sociological Imagination mean today? Conference and eBook (2011-10-23 08:00)

In March 2012 it will be 50 years since C. Wright Mills died. To mark the occasion Sociological Imagination will be convening a one-day conference, live streamed over the internet, exploring the meaning of the sociological imagination in the 21st century. If you’d like to be involved then [1]please get in touch.

Till then we’re still looking for written submission exploring this theme. Ideally we’d like to collect these and release them as an eBook but that would require a lot more submissions than we’ve had thus far. Please do circulate the CfP below to anyone you know who may be interested! Thanks.
It has been over 50 years since C. Wright Mills wrote the Sociological Imagination. In that time the world has changed beyond recognition: the Cold War ended, the Keynesian consensus broke down, a globalizing neoliberalism rose to the ascendency and the internet began to transform human communication and culture. In recent years, with 9/11 and then the financial crisis, it seems that history has returned with a vengeance. Is Wright Mills’ notion of the ‘Sociological Imagination’ still pertinent today? How can Sociology help shed light on the rapidly transforming world around us and the consequences of these transformations for the people who inhabit it? What does the ‘Sociological Imagination’ mean today?

Short articles are invited which engage with these themes, or particular aspects of them. Submissions should be 500 – 1500 words and [e-mailed as a Word document. There is no deadline for submissions.

Talker’s Block (2011-10-24 08:00)

Do you ever get talker’s block? No, we don’t either. This entirely obvious and largely ignored state of affairs is perhaps more significant than you might think. In a recent [article the marketing guru Seth Godin makes a rather plausible case that writer’s block makes no more sense than talker’s block. It’s just that we far more readily get messed up and self-censorious about our writing than we do about our talking.

[2]
Behind the scenes: how objective is photojournalism? (2011-10-25 08:00)

Italian photographer and photojournalist [1]Ruben Salvadori has done an excellent ethnographic study on the staging of action photos in East Jerusalem. Watch the video (in Italian with English subtitles) [2]here. This will change the way in which you view photos from warzones and other live events. You have been warned.

[3]
Tips for writing good survey questions (2011-10-26 08:00)

In quantitative empirical research, what makes a survey good? Well, not perfect, but optimally good - that is, its questions ask exactly what we want them to ask, and the response rate is as high as possible? There are no recipes, but sometimes the survey method, with all its epistemological and methodological flaws*, is still the best method to use for our particular study.

So, if you are using surveys, here is a neat table which summarises some good tips for writing a survey. It lists several criteria for the questions: they have to be simple, specific, individual, exhaustive, neutral and balanced; and sometimes it is a good idea to make questions optional:

Here is a random and by no means exhaustive selection of sources for a first look into these issues (a lot has been written).

For a general discussion see e.g. [2] Marsh 1979 and [3] Bryman 1984 (both are old but good); or any of the many editions of Bryman's book 'Research Methods' (here is a scanned version of the [4] chapter on quantitative research from the 2004 edition).

For a feminist discussion of the merits of qualitative/quantitative research see e.g. [5] Westmarland 2001.

For problems of response, see e.g. [6] this summary.

Classical Pragmatism (2011-10-27 08:00)

In this video [1]John Holmwood gives a great overview of how classical pragmatist philosophy has been taken up and put to use within Sociology, as well as the practical issues it engages with in the process of being used to construct sociological accounts. It's one in a series of videos from a recent conference organised by the Social Theory Forum and Culture, Imagination and Practice Research (SOCSI) Group at the University of Cardiff - check out the rest of the videos [2]here.

1. http://www.nottingham.ac.uk/sociology/stafflookup/john.holmwood
The ‘consequences’ of structure/agency must be ‘gratification’ as an explanatory success of there intimate cohesion, where the dynamic nexus literally manufactures its purposive goals of Interest, even where jointly motivated and especially where cooperative between the Categories. It appears that this lecturer has a critical point to make about the semantics of sociological (as a system) methods of inquiry and definition of the subjective/objective orientations of Perception, as it relates to these very definitions, i.e., are they self-serving constructs of a presumptive science or do they serve better the logic of understanding what’s going on behind the scenes of Agent determinations, cognitions, planning strategies untoward gratification of certain, expressed or sensed, intuited interests (which may in fact be makeshift, somewhat; but have they more convincing explanatory virtue, success)? Good characterizations of the several problems, but unconvincing solutions offered, if indeed any. The true problem here may be the definition of the problem itself, as perceived from his very own perspective, which he certainly possesses. Something about journalism.

Call for Papers - Visual Sociology (2011-10-30 08:00)

For all professional and/or novice visual researchers out there: the Sociological Imagination is pleased to announce its new column dedicated to "Visual Research". To celebrate its beginning, we are launching a continuous call for reader submissions.

The call is open to all our readers. One piece of visual research work will be featured each Friday. The SI reserves the right to use the submissions on the website at any time after they have been sent to us, after explicitly notifying their authors by email. If you’ve sent us an image and change your mind for any reason, just [1]e-mail us and we promise not to post it. Scroll down for submission guidelines.

Guidelines for submissions:

How to submit: Please [3]e-mail us with 'SI Visual Sociology' in the subject line.

How many: Authors may submit up to three separate pieces of work (we shall consider more numerous applications on a case by case basis – i.e., if we really like them!).

What information: Every submission must be accompanied by the following information:
• title of the work;
• full name/s, or artistic pseudonym/s, of its author/s;
• contact e-mail address and/or other contact details.

What counts as “a piece of visual research”? What ratio must there be between image/s and text? We side with Becker (1995) in abandoning methodological purism, and leave to your discretion the decision what and why classifies as visual sociology/anthropology (as opposed to documentary, photojournalism, art, or any other visual-based genre). The editorial team also reserves the sole right to decide whether to publish any submission. Submissions may range from image/s with text to text with image/s, as long as images and analysis or story are integral to one another.

Type of image: Any images/photographs are acceptable: black-and-white or colour; new shots or old scanned shots from your archives – as long as you have the rights to distribute them; and there are no restrictions regarding any artistic or photo-processing technologies used in the production of the images.

Format and size:

• JPEG format
• 1:1.5 ratio and any resolution suitable for publishing online (the images the SI normally posts are scaled down to 440x294 pixels, or near)

Legal issues: Any persons present in the photographs MUST be notified, be aware, and not oppose the publication of the images. If in doubt, consult this guide on photographers’ rights:

http://www.sirimo.co.uk/2009/05/14/uk-photographers-rights-v2

Copyright: The submissions will be distributed under the following conditions

Creative Commons Licence Attribution 3 (allowing for non-commercial distribution of shared works):

“This work is licensed under a [5]Creative Commons Attribution-NonCommercial-NoDerivs 3.0 Unported License.”
In this article, Kristen Howerton unveils some of the secrets behind Halloween treats (and other chocolate). What happens in the modern globalised world is that the products that we consume often have extremely long 'trails' about which the ordinary consumer has no idea. Similarly to the [1]2010 Gap child labour scandal, Howerton argues that 'hundreds of thousands of children in West Africa are enslaved harvesting cocoa beans'.

After reading this, I think I'll opt for home made pancakes and roast pumpkin this year.

Do you dare [2]read the article?

Sociology of Sport: Four Podcasts (2011-11-01 08:00)

It has been a while since we held our first SI seminar on the Sociology of Sport in June 2010, so we thought it would be a nice idea to integrate the several separate posts on one page.

So here they are!

Link to the page announcing [1]SI Seminar #1

[2]
868
The first speaker was [3]Dr Karen Throsby, who we [4]interviewed last year, talking about her research on channel swimming.

[5]You can’t be too vain to gain if you want to swim the Channel”: marathon swimming, ethnography and the problem of heroic fatness

[6]
Professor Wyn Grant, who we also interviewed on this topic some time ago, talks about the political economy of football. If you find this interesting you should definitely check out Wyn’s site Football Economy.
In this podcast from the SI Sociology of Sport seminar, PhD researcher Deborah Butler talks about her research on the Horse Racing industry.

And SI's Sociology of Sport seminar on 20 June 2011, Dr Sam Farooq discusses religious masculinities in sport based on a fascinating ethnographic study she conducted.
Religious masculinities in youth sport

If you have ideas for other seminars, drop us a line! (write to Milena or Mark)
The number of UK-born university applications for 2012 university entry has dropped by almost 12%. This figure is not surprising as September 2012 sees tuition fees rise to up to £9,000 a year.

The first set of statistics on applications for university entry next year, published by UCAs show that 52,321 applicants have applied from within the UK, compared with 59,413 this time last year.

Universities and politicians have shown concern that the tuition fees hike might deter students from disadvantaged backgrounds from pursuing a university education.

Wendy Platt, director general of the Russell Group, which represents 20 of the leading universities in the UK, including Oxbridge, LSE and the University of Warwick told the Guardian that "students should certainly not be put off university by the new fees and funding system. If you’re good enough to get in, you can afford to go".

David Willetts, the universities minister, remarked that "going to university depends on ability not the ability to pay". This argument is debatable to say the very least.

Educational capital in the form of excellent qualifications might not be enough for students in a climate of cold hard cash. Time will tell if adequate financial provision will be made for talented students from disadvantaged groups to realise their potential by getting a university degree.

Wikipedia and Social Science 2.0 (2011-11-03 08:00)

A project like Wikipedia thrives because of it’s ability to harness the efforts of occasional contributors. As Clay Shirky suggests in his excellent [1]Here Comes Everybody, the numbers willing to make a small contribution (e.g. proof
reading an article and correcting typos) vastly outstrip the numbers willing (or able!) to sit and write an entire article from scratch. This dynamic allows collaborative production to spiral into an endless series of feedback loops, as a few who contribute a lot provide raw material which a far greater number who contribute a little subsequently 'mop up' (i.e. rephrase, extend, correct), in turn expanding the scope of the site and increasing both its actual traffic and potential appeal, bringing ever more co-producers to Wikipedia. It's an incredibly powerful iterative process, as can be seen in the statistics describing the site's growth:

In fact the sophistication which characterises the discussion at the above link (how best to model Wikipedia's growth) is testament to the intellectual power of iterative co-production. So the obvious question is: **how can this dynamic be harnessed by social science 2.0?**

One of the obvious problems which Wikipedia raises, particularly within academia, is that of expertise. How can the intellectual outputs of an anonymous and collaborative endeavour be trusted? After all, academic life is predicated on systems of accreditation which have been evolving for centuries. The simple answer is that it's not warranted to uncritically trust any particular article on Wikipedia because mistakes and inaccuracies pervade the system. Expertise is an emergent characteristic of the overarching site but not one (at least not a taken-for-granted on) of any one article.

If this was a commercial encyclopedia then this inadequacy would be something of a deal-breaker. People wouldn't pay money for a series of books that they couldn't trust and, conversely, the manufacturer wouldn't produce a series of books which people would be unlikely to pay for. However what makes Wikipedia unique is a generic property of the web (massively reduced production costs) and a specific property of the site itself (open-ended self-correction). These add up to one very special property: minimal cost of failure. The point at which aggregative failure threatens the integrity & utility of the overarching system is far lower than any comparable pre-internet endeavour.

As a system Wikipedia can survive a great deal of failure and, in turn, this facilitates iterative self-correction. Because there's no central agency which has invested money in the project in the hope of making a profit, there's no incentive to cut their losses because the project ceases to be commercially viable. This lack of a cut off point means that iterative co-production can continue and, through doing so, actually correct the failures which might otherwise have led to its demise. In the process new failures will occur but these too can be corrected.

I find Wikipedia absolutely fascinating when seen in cybernetic terms. There are three properties I've discussed which need to be considered when articulating a concept of Social Science 2.0:

1. Harnessing small contributions effectively
2. Maintaining function in spite of recurrent failure

3. Rendering accreditation and expertise unproblematic

Is Liberal Democracy at Risk? Debate by Bonino, Dworkin, Soros, and Verhofstadt (2011-11-04 08:00)

Is Liberal Democracy at Risk?

[EMBED] [1]Emma Bonino, [2]Ronald Dworkin, [3]George Soros, and [4]Guy Verhofstadt debate the future of liberal democracy in general, and of the European project in particular. The contradictions between liberalism and democracy are widely discussed in both academic circles and the media. This debate does not solve them, but it manages to raise a number of uncomfortable issues in a well argued and comprehensible way. The debate, moderated by Charles Taylor, was organised by the [5]Institute for Human Sciences (IWM) and took place in the Vienna Akademietheater on 6th June 2011.

Sociological careers (2011-11-05 08:00)

So, what do sociology graduates actually do? If you are a sociology student right now, what are your most obvious career routes? Hilary Burrage offers a good overview of what sociology graduates do in Britain in 2011. We at the Sociological Imagination entirely agree with her definition of how sociology makes you better at whatever job you do: Burrage says that sociology teaches you to ‘ask questions, and [gives you] a conceptual and research toolkit to interrogate any situation with which [you] have been confronted.’

Read the article [1]here to get some ideas about your future career!

Add SI on Twitter and Facebook (2011-11-06 08:00)

This is a reminder that the Sociological Imagination has a presence on facebook. Please do add us as a friend and feel free to get in contact. We’re always open to ideas and suggestions so please don’t hesitate if there’s anything you would like to say!

TED talk: Sam Richards on empathy (2011-11-07 08:00)

Sam Richards’ definition of sociology is the ‘study of the way in which humans are shaped by things that they don’t see’. He takes the interpretivist argument to the extreme and argues that empathy is at the core of our understanding of the social world.
In this talk, he insists that, as sociologists, and just as people, we must learn to place ourselves in other people’s shoes, and explores the possibility of human empathy. Personally, I don’t agree with Richards’ choice of term - to me empathy is an insufficient means for achieving that deep understanding of things in their own logic - that elusive but desirable thing that Max Weber called Verstehen. To understand the world in this way, it is not enough to have a gut feeling or to place yourself in someone’s metaphorical shoes. We must also apply reason to understand events in their own logic, without imposing on them our - also partial, unquestioned, and as a result inherently biased - opinions. If we only rely on empathy, we don’t understand, we feel. But OK, perhaps the emotion of empathy is a start and is essential to even begin to understand. It’s nice that a sociologist takes 18 minutes to reiterate its importance to a wide public. Many sociologists, unfortunately, don’t even do that.

Lorin Yochim (2011-11-07 18:32:26)
I suppose this is intended to be an invitation to empathetic sociology, but I’m in agreement with your comments. What kind of sociology of, say, war would we have if we were only asked to step outside of ourselves and feel the world of the other? A pretty inadequate one, I’d say.

Milena Kremakova (2011-11-08 00:28:08)
Indeed! So, Lorin, what is your definition of sociology? :)

Want to deconstruct heteronormative paradigms and cultivate a transformative and emancipatory radical intellectual praxis...? (2011-11-08 08:00)

But don’t know where to start? Then go to [1]automatic insurrection. If you don’t get the joke, click ‘again’. If you still don’t get the joke then there’s basically no hope for you. Sorry.

Technology overload: have we reached a tipping point? (2011-11-10 08:00)

[1]This recent article in the Economist argues that
Today, automation is having an impact not just on routine work, but on cognitive and even creative tasks as well. A tipping point seems to have been reached, at which AI-based automation threatens to supplant the brain-power of large swaths of middle-income employees.

So have we reached a point when we need to consider Asimov's [2] Three Laws of Robotics? There is plenty to think about, but, to take the example of sociology, I am slightly more optimistic. Yes, machines may have become amazingly adept at data analysis; but is this putting sociologists out of jobs? Not really. Firstly, we often forget that behind the hardware and software there are human brains who create, code, programme, maintain and upgrade them. But more importantly, we humans ultimately drive research agendas and make sense of the findings. As Savage and Burrows (in [3] The Coming Crisis of Empirical Sociology, 2007) sociologists definitely need to rethink what and how they do; but doesn't this just leave us with more data for our [4] sociological imaginations to play with? It sure does. And I think this applies to all other spheres as well. Even if some of us seriously dream of a world with less technology, it's too late. We may as well learn how to use it.

3. [http://soc.sagepub.com/content/41/5/885.abstract](http://soc.sagepub.com/content/41/5/885.abstract)

----------

tuli (2011-11-10 21:07:28)

Even if some of us seriously dream of a world with less technology, it's too late. We may as well learn how to use it.

I think this reasoning does not fulfill the basic standards of sociological reasoning. As sociologists we assume that a different society is possible. Why not a society with less technology?

Sociological Imagination (2011-11-10 21:09:28)

I don't think that comment meets the basic standards of sociological reasoning :p Have you read the article on here in light of the Economist article linked above?

=:-] (2011-11-11 17:59:24)

Milena Kremakova (2011-11-12 02:25:36)

Of course as sociologists we can imagine alternative world, as well as try to understand why the world that is, is the way it is. And in the meanwhile, I was just being practical: we can well imagine alternative world, but this doesn't mean that when you wake up tomorrow morning, your colleagues won't be using SPSS. They will. What do you do?
Even sociologists run out of words sometimes during the weekend. Here are a few images [1] the Idle Ethnographer took at the peaceful camp in front of St Paul’s Cathedral in London on 22 October 2011:

In this podcast Mark Carrigan talks to Dougald Hine about the University Project. If you're interested in the project and would like to get involved in something similar in your area of the country, check out our list of radical education projects. Get in touch if there's any other projects you want us to add to the list.

Do you hate e-mail? I do. Can't universities think of smarter ways to communicate internally?

There was a time when I enjoyed e-mail. Before my PhD, e-mail had been largely peripheral to my life and something that was simply a back-up when other options weren’t available. Yet suddenly in my first year, it became ever more interesting. I'd log into my inbox and suddenly I'd find news about an event I wanted to go to, a part time job I could apply for or an interesting discussion on a mailing list I couldn't help but read. There was so much interesting stuff in this new academic world that was opening up to me and e-mail felt like the conduit through which I could access it all.

How naive I was. A few years on, e-mail has become the bane of my existence, as I've become ever more familiar with the endlessly dispiriting Sisyphean cycle of finally clearing my inbox then, before you know it, suddenly finding it full again. Granted, I realise it was an incredible revolution in human communications but an abstract sociological appreciation of that fact doesn’t make it any less dispiriting when you yet again find yourself doing two hours of e-mail before bed just so you can start the next day with a vague feeling of self-organisation. In my brief working life in academia, e-mail has begun to seem like a self-perpetuating machine for constant distraction and over-committal. With this has come my introduction to the feeling of \textit{never quite being on top of everything} which increasingly pervades academic life. In a 2009 article about the 'hidden injuries' of the modern university Rosalind Gil observes how:

In the extract that begins this section, the male professor characterises himself as variously ‘addicted’, ‘obsessive’ and ‘compulsive’ when he might more accurately be seen as enacting quite reasonable strategies in order to cope with an entirely unreasonable workload. ‘Addiction’ metaphors suffuse academics’ talk of their relationship to e-mail, even as they report such high levels of anxiety that they feel they have to check e-mail first thing in the morning and last thing at night, and in which time away (on sick leave, on holiday) generates fears of what might be lurking in the inbox when they return. Again, inventive ‘strategies’ abound for keeping such anxiety at bay eg putting on your 'out of office' reply when you are actually in the office.
How common is this experience? I don’t know and, ironically, I realise I feel too pressured by the need to do e-mail tonight to properly research this question for a short article. Anecdotally though it seems pretty damn widespread. Yet within the contemporary university system, it is too easily framed as a marginal issue of personal productivity: ‘e-mail overload’ to be managed through ‘personal productivity’ strategies and coaching rather than an indicator of structural and infrastructural inadequacies within the university system. Academics are forced to seek biographical solutions to systemic contradictions. The fact universities offer support in better meeting those demands on an individual level is certainly welcome but it doesn’t exactly address the issue.

There’s a need for much greater pluralism and creativity within internal comms strategy. Without institutional support for diversification away from the present over-reliance on e-mail, it’s difficult to see how innovation can be sustained within higher education, given the demands placed on staff to do more with less in the current climate and the limitations of the communications infrastructure drawn upon at every stage of that activity. Paradoxically, it’s these ever-increasing occupational responsibilities which stand in the way of diversification away from e-mail on an individual level, as experimentation with other forms of internal communication is too easily dismissed as something one doesn’t have the time for.

Developing strategies to diversify away from e-mail should be a major strategic priority within higher-education. In order to avoid being yet another occupational pressures, these strategies must have a participatory focus, seeking to expand the repertoire of communicative styles and platforms available to academics in a way which is personally empowering. In doing so the institution would work towards maximising the latent capacity for creative communication and collaboration contained within it. By which I mean that, sociologically speaking, the communications infrastructure an institution relies on functions as both enablement and constraint in relation to the particular projects of the individuals within it (whose projects, in the broadest sense of the term, are very important to the institution because the individuals still enjoy a relatively high degree of occupational autonomy relative to much of the working world).

There’s only so much collaboration that can emerge if the communicative tools available are limited i.e. the latent capacity within the institution. Exactly how much of that capacity contingently gets exercised in a particular time and place is an empirical question but, in principle, everyone wins. Academics connect more seamlessly, autonomously and enjoyably with others. Institutions create the communicative conditions for a thriving, creative and interdisciplinary research culture. Exactly how this works in practice is a complex question. It’s also undoubtedly situational, at least somewhat defined by all manner of internal socio-cultural characteristics and histories of particular institutions. But as research questions go, it’s far from unsurmountable. It just needs time, resources and support at an institutional level.

Scott Grant (2013-09-21 01:46:50)
Great piece Mark. Incidentally, it’s 1:30am, it’s my birthday too, but i’m strangely compelled to check + respond to emails from today (before bed). Oh, and check Twitter too. Oh, and Facebook also. It’s almost become a logic - a somewhat emerging doxa in academic practice. It degrades immersion and leads to partial dilution of good academic values of hard graft. Foucault or Marx would certainly have had ‘out of office’ set for several years at a time! We might be exposed to a plethora of new research, new ideas, new dynamics, but i think we need to slow things down and examine the quality of the information we
already have. Bring back the FAX! Or at least introduce more robust measures of quality control.

couldn’t agree more! :-)  

Emma Rees interviewed about Can’t... (2011-11-16 08:00)

In this podcast Mark Carrigan talks to [1]Emma Rees about her new book Can’t, which explores the strange and confused representation of the female genitalia in contemporary culture.

Sport For Education: A Healthy Balance? (2011-11-17 08:00)

During the recent increase in childhood obesity, Higher Education cuts and our Nation’s continued sporting hysteria, the question of sport’s impact on our educated youth has never been more relevant. While our Government blindly pumps money into sport with the assumed belief – among other motives - that professional, elite sports will magically inspire and excite young adults and children into achieving excellence at school, I propose that such claims remain largely unproven.

[1]
Behind such financial investments as the £162 Million PE and Sport Strategy, as introduced by the previous Labour Administration, there are three main arguments commonly endorsed by PE teachers, coaches and - unfortunately for our current generation - the new Conservative Head of Education. These, as I’m sure you have heard before, are ‘sport is character building’ (self-development through gained personal and life skills), ‘sport is healthy’ (...and a healthy body means a healthy mind) and, lastly, ‘sport is fun’ (enjoyment that energises individuals and provides a helpful break from studying). Indeed, it is not uncommon for such understandings to be used to promote the ‘education value’ of sport. All of these arguments, I feel, lack theoretical and practical grounding, and the reasons lie in the true nature of modern sport.

The institution of Sport, during our current modern era in the western world, has a number of underlying characteristics. Firstly, it is highly stratified, meaning its participants (players, coaches and executives for example) are divided and grouped by status and power; the chairman being at the top of the pyramid and the players at the bottom. This hierarchical system keeps the powerful in control by providing a higher category for each group to strive towards; reproducing itself over time and keeping the lower groups from rebelling. Indeed, this system is the chosen approach for sports clubs and - not too dissimilarly - militaries throughout the western world. The behaviour of authoritarian coaches and corporate shareholders in modern football are prime examples.

Secondly, sport is - as is required for a stratified system to function - primarily focused on performance. The financial rewards, global media coverage and social significance of success in modern sport have meant that winning far outweighs anything else. In fact, even Physical Education or lower levels of competitive sport share these underlying traits, as the talented and successful children receive social status and popularity, while the lesser able children are usually picked last and have to deal with the embarrassment, shame and social consequences of losing that have become part of our mass sporting culture. Unfortunately for both this argumentation and for any potential change to occur, such psychological and social ratifications are, inevitably, very difficult to measure. However, the fact that 70 % of our young people cease participating in sport when they leave school (‘The Wolfenden Gap’) perhaps tells its own story.

Indeed, as my examples have shown, and as much of the general public I’m sure have also experienced, these regimented characteristics are common place within sport and physical education. In view of this, the three primary beliefs behind the naïve adoption of sport as an educational aid are highly ambiguous. ‘Character building’ may be partly true for the minority of highly successful and, therefore, confident and responsible sporting individuals, but for the most part, working within the hierarchical system of sport merely teaches forced conformity and blind faith in one’s superiors; skills that can hardly be considered as positive self-development. Furthermore, due to the pressure of performance, focus on sporting success and conformity to the coach/teacher’s orders, injuries and dangerous play are also a frequent occurrence; questioning the truth behind the assumptions of sport as a healthy activity. The average life expectancy of American Football players, at just 52 years of age for instance, is shocking to say the least. Moreover, in Britain alone, 3.5 million children receive medical treatment for a sports-related injury every year.

Lastly, coupled with the previous arguments, the idea of sport being enjoyable, bearing in mind the social ratifications and potentially dangerous and authoritative environment that children and young adults are placed in within sport and PE, is also largely flawed. The truth is that for in order for one team to win, the other must lose. And if - and quite possibly so - a number of those winning players have underperformed, acquired an injury or have been undermined or exploited by their coach/teacher, they too would experience very little enjoyment; leaving very few feeling satisfied. Never the less, such practices continue to plague youth sport and PE in our country, keeping this stratified system firmly in place.
Clearly, the existence of fun, healthy and rewarding sporting environments is hugely questionable. These, coupled with the already ambiguous idea of sport as a positive influence on behaviours and performances within education, must surely highlight the need for change! If sport and education are to work in tandem, the institution of sport must change its performance-focused, segregating ways, towards a more humanistic and relaxed means of functioning, particularly through PE. At the very least, our political, teaching and coaching populace should think critically about their thoughtless assumptions and, consequently, misguided regimes that have such a prevalent effect on the British public.

Professor Eric Anderson (2011-11-19 11:50:11)
Bravo. Academic research supports all of your arguments. The answer is clear, we need more walking and jogging, and a lot less football and rugby.

pure white kidney x (2013-06-21 16:01:12)
What’s Happening i’m new to this, I stumbled upon this I’ve found It positively helpful and it has helped me out loads. I am hoping to give a contribution & help other customers like its aided me. Great job.

Decrease in poorer students and women applying to university (2011-11-18 08:00)

[1]

Early indications suggest that applications from female students and those from poorer backgrounds have fallen ahead of the higher tuition fees next year. According to the first round of UCAS application figures, applications from men were down by 7% compared with 10.5% by women. Worryingly still, the [2]Guardian states that data available elsewhere provided indications that students from poorer areas are being deterred from applying to university by the higher fees.

Patterns in the data indicate that the application rate among mature students has fallen faster than among 17 to 18 year olds. Elsewhere, data from the Higher Education Statistics Agency ([3]HESA) shows that the age of [4]students on full time undergraduate courses over the age of 21 are more than 50% more likely to come from poorer neighbourhoods compared to those over 21.

Further data indicates [5]regional variations with applications from candidates in the south-east down by 8% compared with 20% from candidates in the East Midlands and more than 17% in Yorkshire and Humber.

Professor Neil Shephard who is research director at Oxford-Man Institute, suggests that the differences in the application rates of young and mature students could be due to variations in the quality of information that they have received: "One might expect young people to be exposed to more information about how income contingent repayment will work than mature students, so they may be less put off than the mature. My own view is that behavioural effects (how we process information) have big short-run impacts and that rational considerations tend
to emerge in the longer term (as we learn from the crowd)."

Sociological Imagination eBook (2011-11-20 17:45)

Just a quick message to say that unfortunately we've had to cancel the eBook project. The idea was to get it done in time for the 50th anniversary of Wright-Mills' death in early 2012 but this just isn't feasible. We're still keen to get Sociological Imagination themed [1]submissions for the website though, so if you were thinking of submitting something for the eBook please do consider submitting something for the site instead! Meanwhile there will be a Wright-Mills themed event at the British Sociological Association conference in April 2012 - stay tuned for further details.

UCAs: Favours Rich Students – Confirmed (2011-11-21 08:00)

[1]

Ucas – The British organisation, through which applications are processed for entry to higher education, has admitted in its review that its admission process favours the rich.
In a review of university admissions published at the end of October, UCAs admits that the current system gives an unfair advantage to students attending private schools. As a general rule, pupils at private schools are encouraged to apply early ahead of the official deadline, and in the case of some courses, applying earlier increases the chances of being offered a conditional place.

As the [2]Guardian states, the current system also assists pupils whose schools employ tutors who are very familiar with the university application process who would be confident in phoning an admissions tutor and pleading the case of a prospective student.

In response to its review, Ucas is calling for the government to make the most radical overhaul of university admissions for 50 years.

Drastic measures could include teenagers sitting their A-Levels and equivalent exams 15 days earlier and exam boards publishing results at the end of the summer term, rather than in August. Students would then apply earlier to university with their results in July.

Another measure under consideration is to have a single date on which universities tell students whether they have been offered a place with the conditions. At present, students hear from universities on different dates up to the end of March. Ucas said the proposals could be in effect by 2016.

Ucas will be consulting on the plans between now and 20 January.

Violence, Inequality and UK Riots (2011-11-22 08:00)

In this podcast Mark Carrigan interviews Larry Ray, a professor at Kent University who has done pioneering work on the sociology of violence, about the summer’s riots in the UK, the media coverage and the subsequent political fall out.

Larry makes reference to a BBC interview with Darcus Howe in the podcast which you can watch below:
Foucault reads Kafka (2011-11-23 08:00)

SI presents an interesting video lecture by literary scholar [1] Brian Artese. It discusses the work of Michel Foucault through the lens of Franz Kafka’s 1915 novel, Der Prozess (The Trial).

Soft skills flourish with Graduates at Liverpool University (2011-11-24 08:00)

With the latest figures showing graduate unemployment at a 15 year high, Liverpool alongside other universities believes that “soft skills” are more important than ever. Recent Higher Education Statistics Agency figures revealed
that more than a quarter of graduates are without full-time work more than three years after graduating from university.
